Steele was not arrested, though his action and the use of guns by his gang were detailed in the newspapers But two IWW members who resisted the attack were jailed, accused of attempts to murder. One was J F. Morgan, a leader in the Tucker strike, where Steele had arrested him. He was speaking when the thugs converged on him and beat him brutally. The other was Tom Murphy, who fired some shots after being struck in the head A deputy sheriff received a flesh wound (For that act of defense Murphy served a year in prison.) Police Chief Grant and Mayor Park said the IWW could hold no more street meetings Steele boasted in the press that he would "assist in breaking up every public meeting the IWW's start in this city."

### Tense Scene at Trial

Hill was put on trial in June, 1914, before Judge M L Ritchie He was represented by two Salt Lake City attorneys, F. B. Scott and E D McDougall After several state's witnesses had testified, the defendant arose and addressed the court "May I say a few words?"

Without sending the jury from the courtroom, the judge gave permission, and Hill said "I have three prosecutors here. I intend to get rid of two of them" He told his counsel they were discharged.

In tense atmosphere, a long, heated argument ensued, involving the court, defendant, the two lawyers, and District Attorney Leatherwood. Despite Hill's protests Judge Ritchie insisted that the two attorneys remain in the case as amici curiae (friends of the court).

Since all this took place in the jury's presence, a fact undeniably prejudicial to Hill, properly the judge should have declared a mistrial, or delayed the proceedings until counsel satisfactory to this man whose life was at stake could have been employed by his friends. Not until later, when Joe made a second demand for discharge of his counsel, did Ritchie send the jury from the room. But Scott and McDougall still were permitted to stay in the case. Placed at a tragic disadvantage by the court's attitude, Hill now attempted, under great handicap, to conduct his own defense Because of that sorry conflict, investigation vital to meeting prosecution testimony was not completed.

### Why Joe Fired Counsel

"I discharged my attorneys," Joe explained in a letter printed in the **Salt Lake Telegram** August 22, 1915, "because they never attempted to cross-examine the state's witnesses When I asked why they did not use the points of the preliminary hearing and pin the witnesses down to their former statements, they blandly informed me that the preliminary hearing had nothing to do with (the trial) and that under the law they had no right to use said records I picked up a record myself and tried to look at it, but Mr Scott took it away from me, saying 'it would have a bad effect on the jury'"

Hill's second demand to be rid of those lawyers came the same day when Mrs Phoebe Seeley was testifying, and had altered the details she gave at the preliminary hearing Throughout her testimony, with both prosecutor and judge asking her leading questions, the accused had no legal protection.

Later another attorney entered the case to represent Hill in a special way Soren X Christensen came in at the request of O N Hilton, noted Denver labor advocate, to take exception to any rulings which might appear to be in error, as a basis for an appeal in the event of a conviction Hilton's aid had been enlisted by Virginia Snow Stephen, daughter of a former president of the Mormon Church.

### Three Alter Testimony

Hill was tried before a biased judge, who caused an "identification" witness to distort her testimony so that it favored the prosecution. Practically all the court's rulings were against the defense No motive for Hill to murder Morrison was ever shown At least three state's witnesses altered their testimony materially between January and June None of those who saw the killers would swear that Joe Hill was either of them The evidence against him was "entirely circumstantial," says the 1915 International Year Book

Morrison was killed by 38-caliber bullets from an automatic pistol, which could have come from a Colt. Hill insisted that his gun was a 30-caliber Luger When Joe's gun, in a holster, fell from his clothes in McHugh's office, both doctors saw only the handle. Dr McHugh testified that he picked up the holstered gun and handed it to Hill On cross-examination McHugh was shown two automatic pistols a Colt and a Luger both in shoulder holsters Dr McHugh could not say which most resembled Hill's gun At the preliminary hearing Dr Bird could only say that it was a black automatic. But at the trial he testified that the handle was similar to that of a Colt automatic 38

None of the witnesses could identify Hill as one of the killers, nor as a man seen fleeing from the store after the shooting All the so-called identification testimony was circumstantial, built up by indirection, by alleged similarities Though the official description of the two slayers gave their height as about 5 feet 9 inches (while Joe Hill was 6 feet tall), height in feet and inches was brushed aside by the prosecutor at the trial Questions then dealt instead with comparative tallness and thinness

### No One Identifies Hill

Merlin Morrison, 13, who saw part of the shooting, testified that the man who fired the second shot at his father was slim, and his impression was that he was about the same height as Hill, and the shape of his head "about the same", but he "couldn't tell his features because of the handkerchief over his face"

Under cross-examination Merlin admitted he didn't see the man's countenance nor the shape of his head, that it was a kind of a guess with him, that his observations were made when he was excited and scared, and that he might have been mistaken. In line with this, one newspaper had stated that the boy telephoned the police about the murders "in a hysterical, high-pitched voice," and told two different stories about the attack

Two women living across the street saw a man run from the store in a stooping position Mrs. Vera Hansen claimed to have heard him say "Oh, Bob!" or "Oh, God!" in a voice full of pain Nellie Mahan who looked through a window, testified at the trial that she heard him say "I am shot," though she had been very uncertain about this at the preliminary hearing Only two or three words were heard, and these witnesses disagreed on what they were It is entirely possible that the two, excited and confused by the shots and rapidity of action, heard the dying Morrison cry: "Oh God, I'm shot!"

Neither woman could identify Hill as the man they saw, though Mrs Hansen thought his voice, heard at the jail in ordinary talk, was like that of the man who cried out in pain Defense objection that she was not qualified to judge voices under the circumstances was overruled.

Margaret Davis told of meeting two men near the store shortly before the crime One wore a cap While others pictured the taller one as wearing a hat, she was "quite sure" that the taller man she saw was the cap-wearer.

### Description is Changed

Mrs. Phoebe Seeley was one of the witnesses who altered her testimony between January and June. Prior to Hill's arrest she told the sheriff's office that she and her husband, returning from a theatre about 9:15 p m. on January 10, passed the Morrison store, saw the owner and his sons inside, and then, about 235 feet to the west, met two men, who crowded the Seeleys off the sidewalk. Mrs Seeley asserted that she turned to look at them, and that one of the pair turned and looked at her. She and her husband both said then that his height was about 5 feet 9 (Joe Hill was 6 feet tall )

At the preliminary hearing, Hill recalled later in a statement to the Pardon Board, Mrs Seeley said that that man "'had small features and light bushy hair' This description did not suit the county attorney, so he helped her along by saying, 'You mean medium colored hair like Mr Hillstrom's, don't you?' After leading her along that way for a while, he asked, 'Is the general appearance of Mr. Hillstrom anything like the men who saw (and she answered) 'No, I won't—I can't say that'"

But at the trial, with both prosecutor and judge asking her suggestive and leading questions, she changed her description to make it more nearly fit Hill, though she still could not identify him

### Judge Aids Prosecution

Here is an example of how Mrs Seeley was examined, cited in the defense appeal brief It shows how Judge Ritchie questioned this witness and misquoted one of her statements made a moment before, causing her to alter it materially

Q How does Mr. Hillstrom, as he sits here, (the judge asked), compare in regard to his thinness with the man you saw that day?

A. His thinness is about the same, but his hair——

Q. You did not pay any attention to the thinness of his body, but the thinness of his face is just the same as the man you saw?

A. **Just the same.**

This is a remarkable distortion of testimony. The emphasis is given to show how the witness was led to change her phrasing.

Mrs Seeley admitted that at the preliminary hearing she had had "an honest doubt" about the taller man's identity and as the Supreme Court decision states, "would not testify positively (at the trial) that the man she saw was the defendant" Her husband, who also testified at the preliminary hearing, did not take the stand. It is a fair conclusion that he would not have corroborated his wife's altered testimony or the prosecution would have used him Or did it reason that such alteration by both would have been too obvious?

Actually, however, the testimony of Mrs Seeley, "the star witness," was unimportant, as she neither saw nor heard the shooting and did not see the killers flee She testified merely that perhaps thirty minutes before the murders she and her husband passed two men on the street near the store, that they had red handkerchiefs around their necks, and that one was tall and slim like Hill. Yet though she professed to have seen his face clearly she would not say it was Hill Even if what she said was true it was still unimportant, and the great lengths to which the prosecution went in getting her to alter her testimony showed how weak its case was.

Conceivably the pair she met could have been railroad men going home from work on the nearby D. & R G. Railway, or other passersby.

### One Masked, or Two?

How many masked men were there one or two? Patrolman Vance found a red bandanna handkerchief in an alley near the Morrison store After Hill was jailed, Detective Zeiss took a red kerchief from a table near his bed in the Eselius home On January 12, 1914, the **Deseret News** said "The red handkerchief (found by Vance) tallies with the somewhat mixed description of the Morrison boy, who said that one of the (killers) wore a red mask" On the 14th that daily recalled that Mrs Seeley told the police that "**one of the pair**" she saw had a red handkerchief around his neck Two weeks later, at the preliminary hearing, this woman testified that both men wore large red handkerchiefs, cowboy fashion.

Immediately after the murders the police sought Frank Z. Wilson, exconvict, seen in town that day. But when Detective Cleveland was cross-examined, the court would not permit him to tell what Wilson looked like, nor how his appearance differed from Hill's.

Testifying for the defense, Mrs Betty Eselius Olsen declared that the faded red handkerchief taken from the table near Hill's bed was one of a lot of such, known as "smelter handkerchiefs," used by the men in her family when at work in a smelter. She said she gave it to Hill next morning after he was shot, but he had used instead a white rag she also gave him.

### Police Attempt Trickery

Following Hill's arrest, she said, policemen repeatedly visited the Eselius home, where she lived. One of them asked for Joe's gun, asserting he had said he had given it to her When the defense sought to bring this out, and show that it was a trick based on a lie, the court would not let her tell what was said about the gun. Then the judge made the improper comment that "it would be remarkable if the state would be bound by every vagrant remark or act that every executive officer might do or say."

Robert Erickson, son of Mrs. Olsen, was arrested after Hill was jailed, presumably because Mrs. Hansen ... she heard one of the killers cry, "Oh, Bob!" or "Oh, God!" Mrs Olsen testified that a policeman told her Robert would be released if she could get Hill to confess. She visited Joe in jail and asked if he had taken part in the Morrison crime; he assured her he did not. Bob Erickson was freed next day when it was established he was in a theater at the time of the killings.

In an effort to prove that Arlington Morrison did not fire his father's gun, the defense called Patrolman Wire as a witness He testified that it was a custom among policemen to load a revolver with five cartridges and leave the sixth chamber empty for the hammer to rest in. But when the prosecutor objected, the court would not let him explain why, even though Morrison had been a policeman and naturally would exercise such a safety precaution E. J. Miller, firearms expert, testified that nine out of ten policemen left one chamber empty.

Supporting the state's contention that Arling had wounded one of the slayers, witnesses related that they found a gob of blood about the size of a quarter at the entrance to a nearby alley, and other blood spots in the alley. The state's chemist said he had analyzed scrapings of this blood, and identified it as "mammalian blood," but could not tell whether it was from a human being. Another witness told of finding blood-stained dog tracks that led to a dog with an injured foot. There was no blood where the killers trod in the store, nor in front of it.

### Gun Odor Not Proof

Detective Cleveland and a newspaperman who had not qualified as an expert examined the Morrison gun on the murder night; they testified that it had lately been discharged. Cleveland said is "smelled fresh with powder" But the expert Miller, for the defense, pointed out that the cartridges in that gun were loaded with smokeless or semi-smokeless powder, and said: "My experience tells me **it would be impossible** to tell with any degree of accuracy when a cartridge was exploded, from either semi-smokeless or smokeless powder. I have found a revolver shot a few weeks previous would show a decided smell of powder. That gun right now has a decided powder smell."

Joe Hill was shot through the left lung, the bullet leaving his body under a shoulder blade. But the bullet holes in his coat, front and back, were four inches lower than the wounds. So the defense contended he was shot while his hands were in the air It called as a witness Dr. F. M. Beer, who had made observations of the effect of bullets on human beings. Examing Hill, he had noted that when he stood erect, with hands high above his head, the holes in the coat coresponded exactly with the wounds in his body.

Then Beer was asked: "Would you then say, Doctor, it was possible for the bullet to have struck him with his arms in any other position than directly above his head and himself in a perpendicular position?" But objection was raised, and the court would not let the witness answer, a ruling unfair to the accused Numerous experiments by friends of Hill while this article was in process, failed to show any other conceivable position in which the defendant's wounds and bullet holes in his coat could have been received, unless he stood on his head.

### Mooning Suspect Seen

Peter Rhengreen, for the defense, testified that a little after 11 20 on the murder night he saw two men about a mile directly west of the crime scene. Snow covered the ground, and there was a moon. The men separated; the taller one walked toward

(Continued on page 4)

## High Spots In Frame-Up

(Continued from page 1)

viction relied on its imagination to assume that such bullet holes could be inflicted on a man perhaps lying on a store counter?

7 That there was no good reason for supposing Morrison's assailant to have been wounded or Morrison's gun fired?

8. That since the bullet that wounded Hill passed completely through him and his clothes it would have been left in Morrison's store if Hill had been wounded there, yet no such bullet was found?

9. That there was nothing about Hill's wound to indicate it was received from the sort of bullet that would have been fired from Morrison's gun if it had been fired?

10. That while all agreed the only possible motive for the murder was revenge, the trial court would not permit the introduction of evidence to show Morrison steadily feared he would be killed, or pointing to those he feared, and the police made no effort to arrest those who had such a motive—and no evidence indicates that Hill had ever met Morrison?

11. That Hill could not say who wounded him, for unless this person was willing to give the facts, his or her denial would only prejudice Hill further; and whoever wounded Hill, if willing to tell the truth, would have come forth anyway?

12. That if Hill were a crook, it should not have been difficult for him to fake a story to account for his wound, and arrange evidence to corroborate it; and if he were a crook would not have gone to a doctor?

13. That William Buskey swore to Seattle police and newspaper reporters that on the night of the Morrison murder he was with Hill up to 15 minutes after the time of the murder, and Hill was not wounded; that they were looking for work at a smelter; that when a detective heard him say he thus knew Hill was innocent, he was held in jail for 41 days and then told to keep out of Utah; that though the Seattle authorities held Buskey to be returned to Utah at the request of the governor of Utah, the authorities took no action to secure his return?

14. That Hill was defended by attorneys so unsatisfactory to him that he discharged them and was undefended during part of his trial?

15 That there was a simple and obvious way to settle the issue whether Hill was properly tried, namely to commute his sentence to life and then try him for the murder of Morrison's son, also killed on the same occasion?

16. That the same Supreme Court Justices who tortured and misquoted the evidence, and supplemented it with their imagination to support the conviction of Hill, also constituted the Pardon Board that could have in this way assured a fair trial, even without setting aside this conviction?

17. That from nine days after Hill's arrest, the local press conducted a campaign to build prejudice against Hill on the grounds of his union activities, and that the local police had previously and steadily shown vicious hostility toward the IWW to which Hill belonged?

Yet such are the FACTS. Hill had no motive to kill Morrison. The authorities had a motive to frame and kill Hill. Who is guilty of murder?

### AFTER 18 YEARS FREE

Cecil Wright is leaving Alcatraz He went there 18 years ago charged with stealing $2 43 in postage stamps He was denied adequate legal counsel at his trial He has spent the 18 years fighting his case as his own counsel On his 10th try he made it Who says justice doesn't triumph—if you can live in Alcatraz long enough and know your law?

## Do You Want a Joe Hill Pamphlet?

*We have set this study of Joe Hill's trial two columns wide to permit reproduction in the more durable form of a pamphlet If we make a pamphlet of it, we will want to include other material, the story of what is known of Joe Hill's life, some of his best songs and poems, the story of his funeral, something of the figure he has become in literature.*

*But Joe Hill said "Don't mourn for me boys — organize!" Accordingly it is not proper to spend one nickel of IWW money on such a pamphlet — we want to spend it all on the job of organizing*

*So if you want such a pamphlet send in the money for it We will give you copies to the extent of your contribution, if we do not publish the pamphlet, we will refund your money How about it?*

THE NEWBERRY LIBRARY

# Guilty of Having an Unexplained Wound!

(Continued from page 3)

[illegible] then either lay down or fell down, moaning This [illegible] Eighth South Street and Eighth West Street; the Mor[illegible] was at West Temple and Eighth South Streets As [illegible] came to where he lay, the man got up and followed [illegible] a block; then boarded a street car. Rhengreen had a [illegible] look at his face; he was certain the man was not Hill.

J R. Usher, conductor, testified that about 11:30 that night a tall man "acting suspiciously" got on his car on the wrong side, near where Rhengreen saw the two. At first Usher thought he was drunk, but though close to him, couldn't smell any liquor on him. Usher understood he was W. Z. Williams, ex-convict, whose picture was shown to him, and which resembled the man. "The defendant is not the man I saw that night," Usher declared.

Hardy Downing, newspaper reporter, interviewed Morrison after a September 1913 holdup. He was ready to testify that Morrison told him it was not for robbery, but an attempt to kill him But the prosecutor objected, and the court would not let Downing tell what Morrison said about the attackers, who they were, nor why he feared them. This testimony, vital to the accused, was denied him.

### Vital Witness Absent: Why?

One grimly ironic circumstance was cited in Hill's statement to the Pardon Board. He told of going with detectives to the pawnshop to verify the buying of his gun, and of learning that the clerk who sold it to him was in Chicago. A telegram to that clerk, he said, brought an answer: "Remember selling Luger gun at that time. What's the trouble?" . . . Why was this all-important witness not brought back by the defense to testify? Was it because of incompetent attorneys, or lack of funds? Certainly Hill would not have cited that incident if it were not true, if false, it could have been easily repudiated.

The defense closed its case without Hill testifying But the prosecutor referred to Joe's story that he was shot in a quarrel over a woman, and assailed him for keeping silent. Attorney McDougall told the jury he had pressured him to tell the details, but that he preferred silence, whatever the consequences.

The court's instructions to the jury included these: "You are bound to presume the defendant innocent until he is proven guilty beyond a reasonable doubt. . . . A defendant has a right to refrain from testifying in his own behalf, and you must not in any manner be influenced by the fact that he did not testify. . . . In order to convict the defendant upon circumstantial evidence it is necessary not only that all the circumstances concur to show that he committed the crime charged but that they are inconsistent with any other reasonable conclusion."

### High Court Inaccurate

Hill was found guilty, and the Utah Supreme Court, in 1915, upheld the verdict. Misstatements occur in its decision. Dealing with Hill's gun, that court stated that "from the appearance of the handle they (the two doctors) gave it as their opinion that the gun was a 38 caliber gun, and that the handle was similar to a Colt's automatic gun" shown them. But both the Salt Lake Tribune and Deseret News reported that Dr. McHugh could not say whether it resembled a Colt or a Luger most.

[illegible] th[illegible] testi[illegible] sente[illegible] [illegible] gave it as their opinion that the bullet causing (it) was shot from a 38 caliber gun." But in the defense brief Dr. McHugh is quoted as testifying regarding the caliber of the gun, as evidenced by the size of the wound, "(I) should judge to be of large caliber, larger than 32, and somewhere from 38 to 40, or 41."

The Supreme Court concurred with Judge Ritchie's instructions that Hill's refusal to testify could not in any way prejudice him nor be used against him, but immediately contradicted itself by asserting that his unexplained wound put him in much the same position as if "some stolen and identified article from the store had been found in his unexplained or unsatisfactorily explained possession." This, however, is a strained and gratuitous assumption, in the absence of any proof that Hill was in the store.

### Protests World-Wide

Following the Supreme Court decision, Hill was sentenced to be shot by a firing squad. News of this was quickly spread world-wide by the IWW and the Socialist Party, and letters, telegrams, and cablegrams poured in on Governor William Spry, until they totalled more than 10,000. Mass-meetings were held in various cities, many labor unions joining in the outcry. President Wilson and the Swedish government intervened. Wilson was no soft sentimentalist, and would not have taken such action without substantial reason.

Meanwhile the defense had appealed to the Pardon Board, submitting a long statement from Hill, who avowed his innocence. He asked only one thing—a new trial, with counsel that he could trust. The board could have commuted his sentence to life in prison, and then he could have been tried for the Arling Morrison killing, without any danger to society, and if then found guilty executed.

The Pardon Board held a hearing, and Virginia Snow Stephen, who stood by Hill to the end, was a witness. Having watched the case closely and studied the testimony, she told the board.

> "I think the records show no true identification, only circumstantial evidence, and that leaving much room for doubt, and also no motive. I think the proceedings show prejudice—the prosecutor often referred to Hillstrom as belonging to that class that would rather kill than work—and in other ways prejudiced the jury. In my opinion certain evidence was ruled out that would have materially aided the case of the accused."

### 16-Day Reprieve Given

Governor Spry granted a sixteen-day reprieve "to give the defense opportunity to prove reasonable doubt" of Hill's guilt. But Joe simply reiterated his plea for a new trial.

All three Supreme Court Justices who had upheld the verdict against Hill also were members of the Pardon Board. In a lengthy decision, written by Chief Justice Straup, the board conceded that "there is no direct evidence, testimony of eye witnesses, to identify the applicant as one of the perpetrators of the crime." But it scored him for his silence, even though no law required a defendant to prove his innocence. It turned thumbs down on his plea, and the execution was set for November 19. Protests were now intensified, the American Federation of Labor convention topping the list. Again President Wilson asked delay, but this time was ignored; both Spry and S[illegible]me Court Justice McCarty resented his "unwarranted inter[illegible]ce."

On the night of the 18th, William Busk[illegible] migratory worker, told IWW members in Seattle he was w[illegible] Joe Hill on the murder date, that Joe had no wound whe[illegible] they parted at 10 p.m., and that the two had sought worker earlier at the Murray smelter. Busky, not an IWW member, m[illegible] an affidavit about this at Seattle police headquarters and [illegible]as telegraphed to Governor Spry. The prison warden asserted [illegible]hat he asked Hill if he knew Busky, and that he said no. Qu[illegible]e possibly, on being awakened and asked about that name i[illegible] those last desperate hours, Joe suspected trickery.

### Innocent, Busky Avows

Spry let the execution proceed, and [illegible] the Seattle police to hold Busky, as the state wanted to p[illegible]ecute him But the Utah authorities made no further move ag[illegible]t the man.

In a newspaper interview Busky said [illegible]met Hill by chance while hunting work He declared that after the murders a Salt Lake City detective heard him tell some one he knew Joe was innocent; and that he was at once arrested [illegible]eld in jail 41 days, then was told to get out the state. Desp[illegible] his charge, which reflected on the Salt Lake police, he was [illegible]ot brought back to Utah. Why?

Why was Hill found guilty? Many factors combined toward his doom—his silence about the wound; the news stories about his supposed "crime record"; the leading questions asked of witnesses by both prosecutor and trial judge [illegible]ltering of testimony to make the description of one of the kille[illegible] more nearly fit the accused; the judge's failure to declare [illegible] mistrial when an acrimonious scene took place in the jur[illegible] presence; and the failure of the defense, because of incom[illegible]nt counsel or lack of funds, or both, to conduct vital invest[illegible]ation of prosecution witnesses and members of the jury panel.

The attempt of Hill, reared in Swede[illegible] [illegible]d unversed in the ways of American courts, to defend himsel[illegible] after his discharged counsel had been given the nominal ro[illegible] of "friends of the court," placed him at the mercy of a relentless prosecutor who knew all the tricks of getting convicti[illegible] on circumstantial evidence.

### Juror's Father Slain

On the jury which convicted Joe, according to the defense appeal brief, was a man whose father had met death "by the same means as that of Mr. Morrison." Yet though that fact had been shown, the court refused to sustain a challenge against him for cause. No matter how honest such a man might be, how could he be expected to judge fairly in a hold-[illegible] murder case? "His own experience," the defense argued, "wo[illegible] always rise up and persuade him to resolve every circumstance against the defendant."

The foreman and two others on the [illegible]ll jury were never subpoenaed for it, Joe informed the Pardon Board A jury had returned a guilty verdict in another case a[illegible] Judge Ritchie discharged them all. "Then for some reason he changed his mind and told three of them to come back and [illegible]o up in the jury box to be examined for my case."

"When the motion for a new trial [illegible] argued," Attorney Christensen said publicly, "Judge Ritch[illegible] [illegible]emarked that if it [illegible] for M[illegible] [illegible]e he dis-[illegible] [illegible]rneys ne[illegible] him. Therefore we take it he became pre[illegible]ced aga[illegible] him

A positive case against Hill was so l[illegible]ng, and the prosecution so dependent on his explaining his wound, that he had been offered his freedom if he would account [illegible]r it. His friends hold that if he had been a crook, or as associate [illegible]f criminals, it would not have been difficult to have faked "e[illegible]dence" of a quarrel over a woman, and to make related [illegible]ture and a wound possible.

### Hill Did Not Flee

Hill's friends point out, too, that he had a good deal of intelligence. If he had taken part in a m[illegible]der, they argue, and had used a red handkerchief as a mask [illegible]ould he not have got rid of such incriminating evidence, and [illegible] left it lying in plain sight in his room? Such handkerchiefs were common in that area Hundreds of thousands of them were, and still are, used by workers in Western states.

It should be noted that Hill remained in the Eselius home and did not seek safety in flight or by hi[illegible]g with other friends. And he did not hesitate to go for trea[illegible]ment to Dr. McHugh, who knew him. Dr. Bird was a stranger. [illegible] Joe permitted himself to be driven all the way to the Eselius [illegible]ouse. If he had been trying to hide he could have had Bird d[illegible]p him elsewhere in Murray, and walked the remaining distan[illegible] He was physically able to do that, for be presently undres[illegible]d and got into bed without aid.

Hill arrived at Dr. McHugh's off[illegible] [illegible]wo hours after the murders. His "undershirt and shirt (were [illegible]turated with blood." (Utah Supreme Court, 150 Pacific 938 [illegible]s coat was "soaked with blood, which was still spurting fro[illegible] his wound." (Deseret News, Jan. 14, 1914.) These details sugges[illegible] an injury much less than two hours old. If Hill had been wou[illegible]ed two hours earlier, much of the blood would have dried an[illegible] [illegible]oked on his clothing. Could a man in such a condition have [illegible]ed about the city for two hours and traveled two and a half [illegible]les without any one seeing him and making that fact public [illegible]and without his collapsing from loss of blood?

### Many Lawless Attacks

Residents of peaceful communities [illegible]y wonder why Joe carried a gun. Many men in the Far West carried guns in 1914 Mining, construction, and lumber camps were "tough territory." IWW organizers had frequently been beaten and maltreated by company gunmen, and countless workers robbed by hi-jackers. Among numerous places where the IW[illegible] had been lawlessly attacked were Salt Lake City, Spokane, [illegible]ash , San Diego and Wheatland, Calif.; Grabow, La., and Lawrence, Mass.

From 1910 on Joe Hill had become [illegible]dely known for his songs and often appeared at public IWW meetings to play the piano and lead audiences in singing [illegible] labor songs he had written. He had been seen and heard by many thousands in Pacific Coast cities, and was too well known to ply the avocation of a hi-jacker.

To further offset the idea, attribut[illegible] by Prof. Stegner to unnamed "close acquaintances," that H[illegible] was a revolutionary Robin Hood or that the IWW tolerated [illegible]evolutionary bandits" or "expropriators," attention is directed [illegible]he war-time prosecution of IWW leaders in 1917-18, when al[illegible] [illegible]he organization's records—its files and account books datin[illegible] back to 1915—were taken from its general office and local u[illegible]ons all over the country, Salt Lake City included. Department of Justice accountants, after long investigation, testified that they found no evidence of any German gold being received by the IWW nor of any financial support to it outside of regular union channels.

### Why Hasty Execution?

Why was there such haste to execute this condemned man? Why didn't the Pardon Board let him be tried for the other murder? Because, Joe Hill's friends declare, the state's case against him was weak. They believe that the execution was speeded up to prevent exposure of the conviction as a frame-up through new evidence which the defense,with competent counsel, would have uncovered had Hill lived. Some of those who altered their original stories at the trial might have recanted, but once Hill was dead no perjurer would confess the terrible crime of having lied away a man's life. History shows only a few who have confessed the lesser wrong of lying away a man's liberty.

Commenting on the Pardon Board decision, Attorney Hilton, who had pleaded for Hill before it, said all but one of its members had already prejudged the case. "I had not spoken five minutes before they were all after me in violent and frequently raucous disputation At one time three of them were talking at once. (Hillstrom's trial) was the most unjust, wicked, and farcial travesty on justice that has ever occurred in the West. To an impartial board of pardons I could easily demonstrate such a fact without argument. Only time would be required to read the record once over."

### Dark Frame-up Record

But since the Pardon Board comprised the three Supreme Court judges who had upheld the jury verdict, the Governor, irked by wide criticism of Utah official practices, and the State Attorney General, denial of Hill's appeal could readily be anticipated. Nowhere in labor history has any murder conviction ever been reversed by an appeals court The Haymarket, Wheatland, Mooney-Billings, Centralia, Sacco-Vanzetti, Harlan miners—all these cases were frame-ups, and in all the appeals were rejected

Experienced labor lawyers and defense representatives realize full well that they must win their cases before the jury, and for that reason jury investigation is supremely important In Joe Hill's case, apparently there was no jury investigation at all. Judge Hilton made the sad mistake of depending on the appeals court instead of participating in the trial

Speaking at a Salt Lake City funeral service for Hill, Representative Emil Lund of the Utah legislature called his execution "legal murder."

Much criticism has been directed at Hill for not revealing the name of the woman, in a quarrel over whom he declared be was shot. But obviously he could not do this without her consent and her willingness to come forward in support of his statements. If he had told her name and she denied being present when he was shot, denied knowing who shot him, and even denied knowing him, his hope of proving his innocence would have been shattered. He would have had to prove the time and place of the shooting, either through testimony by the woman, or through a confession by the man who shot him

### Mystery of the Woman

Many women involved in clandestine affairs will go to any length to avoid admitting such indiscretions, and consider their [illegible] [illegible]thing [illegible]even [illegible]an life. But [illegible] not mean to let Joe be executed, that she waited through the trial hoping for an acquittal, waited for a reversal on appeal, intending as a last resort to come forward and save his life, but that she was killed by accident, died suddenly, or was slain by a jealous husband or lover to prevent her from interceding for Hill. Such a man might have murdered her far from Salt Lake City and disposed of her body, or removed all identification marks from it.

Mr Stegner, in his article, concedes that the state of Utah "hardly proved Hill's guilt beyond a reasonable doubt," yet he asserts that old-timers who knew Joe "admit" that he was a stick-up man But he does not give their names, so there is no way of checking their credibility. On the other hand, long-time IWW members and non-members who were in the West in the days of that case, conscientiously canvassed, never heard any such stories about Joe Hill (except from the Utah prosecution forces) until the Stegner article appeared.

### No Motive, No Proof

No motive for Hill's killing Morrison was ever shown. There was no proof that their paths ever crossed in the past. That revenge was the motive of the killers was evident from their words: "We've got you now!" as they entered the store and began firing. Morrison had spoken of enemies whom be feared to his wife and Police Captain Hempel, and told Hardy Downing, newspaper reporter, that the September 1912 attack was not a robbery holdup but an attempt to kill him. The court would not let Downing tell what Morrison said. Neither of the enemies he named to his wife was Joe Hill.

Their was no proof that Hill was ever in the Morrison store, and no tangible proof that either killer was shot, no blood being found where the slayers trod in the store, nor in front of it. There was no real evidence that Arling Morrison fired his father's gun, for no bullet from it was found. Yet the bullet which pierced Hill's body went clear through his coat. If he had been shot in the store the police would have turned up that bullet in their minute search. There was authoritative testimony of a police custom of leaving one revolver chamber empty. As a safety measure, experienced revolver users generally let the firing pin rest in any empty chamber or on a discharged cartridge.

### Travesty on Justice

None of the five so-called "identification" witnesses identified Hill as one of the killers. Arlington Morrison, 13, who saw his father shot, did not identify Hill. Vera Hansen and Nellie Mahan, who told of seeing one of the slayers flee, did not identify Hill. Mrs. Phoebe Seeley and Margaret Davis, who saw two men near by before the shooting, did not identify Hill.

Joe Hill had the misfortune of being shot on the night of the Morrison murders. The bullet wound in his chest was the only "evidence" against him. Because of it the anti-union elements in Utah were given opportunity to rid themselves of a fiery IWW agitator.

No unbiased person can read the record of the Joe Hill trial without being convinced that it was the worst travesty on justice in American labor history. The shameful and disgraceful action of the Utah authorities in executing Hill has been equalled only by those who now seek, after thirty-three years, to defame his memory with unverified stories supposedly told by a few unnamed persons.

FRIENDS OF JOE HILL COMMITTEE.

## Joe Hill, Worker, Poet

Joe Hill was born in Sweden in 1882 He came to America when he was twenty He knocked around the country making San Pedro his regular stopping place He had a knack for making parodies on popular songs, putting a working class twist to them His parody on Casey Jones, written during the Harriman strike, sometime in the fall of 1911, made a hit and was the front page song in the 1912 edition of the IWW song book

When he had first joined in with the IWW is not definitely established He was active in the fight—on the docks of San Pedro where he was secretary of a longshore strike committee, on the picket line of workers building the Canadian Northern, in mines, and even fighting down in Mexico against tyrnny there

His frame-up in 1914 split America like the Mooney and Sacco Vanzetti case, into those who sought the blood of a victim and those who sought justice. His funeral in Chicago was so vast that it surprised everyone, press, police and even those who had arranged it, there has never been another funeral like it His songs live, his memory lives and his work goes on

## MTW Members Urged to Visit Overseas Branches

Members of Marine Transport Workers entering Stockholm will be cordially welcomed by the IWW stationary delegate there: David Sund, Majstangsvagen 3, Midsommerkransen, Stockholm, Sweden

Those entering the port of London are requested to hunt up the I.W.W. secretary there, H. Hutchinson, at 90 Cranbourne Rd , Barking, Essex, between 6 and 7 p m.

## COMING EVENTS

### Chicago

**Friday, Nov. 12:** People Forum, [illegible]

This forum held every Friday. Current events discussed 7.30 to 8:30; speech of evening starts promptly 8.30.

**Saturday, Nov. 13: IWW Dance** and social at 4219 Lincoln ave , benefit of Industrial Worker. A dinner will be served

### New York

**Friday, Nov. 19: Joe Hill Memorial Meeting** at Rand School, 7 E. 15th St., at 8 30. Speakers will be men who knew Joe Hill personally.

**Saturday, Dec. 11, General Defense Dance** for benefit of Class War Prisoner's Christmas Fund, at Finnish Hall, 15 E. 125th St., dance and entertainment.

### Seattle

**Saturday, Nov. 20, 8 p.m., Meet** Seattle Labor at the I W W Rally at Finnish Hall, 1239 Washington St Speaking, singing, refreshments No admission charge

### San Francisco

**Sunday, Nov. 21, Lecture by J.** A MacDonald on Nature of Socialism at California Hall, 825 Polk st , corner of Turk Time 8 00 p m A series of Sunday lectures of interest to workers is planned.

### Detroit

**Saturday, Nov. 27, IWW Entertainment** at International Center, 2431 East Grand blvd Food, fun, good company. Admission free.

### Cleveland

(Study Class in Theory and Practice—watch for announcement of starting date for next classes.)

**Friday, Nov. 19, IWW Dance at** Sachsenheim Hall, 1400 East 55th st. Proceeds for local organization; admission 75 cents. Good orchestra; bring your friends

### Los Angeles

**Labor Education Class** every Friday evening at 7:30 at 223 W 2nd st., Room 202. All workers invited to study principle and application of Industrial Unionism.

Vol. II, No. 1 JANUARY, 1920 Whole Number 11

# The One Big Union Monthly

WILL YOU LET THIS HAPPEN?

PRICE, 15 CENTS

# I. W. W. LITERATURE

## PRICE LIST

| | Single copies | Lots of 100 |
|---|---|---|
| The I. W. W. Trial—George | $0.25 | $15.00 |
| Vanderveer's Opening Statement (cloth) | .25 | 15.00 |
| Vanderveer's Opening Statement (paper) | .10 | 3.50 |
| Evidence and Cross Examination of J. T. (Red) Doran | .10 | 5.00 |

### FIVE-CENT PAMPHLETS

Industrial Communism—The I. W. W.—Varney.
A clear and concise explanation of Bolshevism and I. W. W.'ism; 24 page, large type and attractive cartoon on front page. Price, 5 cents a copy; in lots of 50, 4 cents; 100, 3 cents, prepaid; 500 copies or more at 2 cents, express collect.

### PAMPHLETS IN PREPARATION

| | | |
|---|---|---|
| Hotel, Restaurant and Domestic Workers—Chumley. Revised and enlarged. (Ready soon.) | .10 | 5.00 |

### LEAFLETS IN STOCK OR IN PREPARATION

Open Letter to American Workmen—Hardy
Eight page; a convincing argument for Industrial Unionism. Price, 30 cents a hundred, or $1.75 a thousand.

Justice to the Negro—Jones
A clear picture of the industrial and social status of the Negro; four page, with cartoon on front page; price, 25 cents a hundred; $1.50 a thousand.

Political Parties—St. John
Four page. A clear exposition of the fallacy of political action as a mass of working class emancipation. Price, 25 cents a hundred; $1.50 a thousand.

An Address to Colored Workingmen and Women.
A clear and forceful statement of working conditions of the Colored workers, as well as a plain and convincing statement of the attitude of the I. W. W. toward all workers. Price, 25 cents a hundred, or $1.50 per thousand.

Note—All prices of pamphlets in 100 lots and leaflets in 1,000 lots are subject to express charges collect.

### SONGS WITH MUSIC

Price: 15 cents a copy; six for 75 cents; ten for $1.00, prepaid; or $7.50 a hundred, express collect.

Workers of the World, Awaken!—Joe Hill
The Rebel Girl—Joe Hill
Don't Take My Papa Away from Me—Joe Hill
We Have Fed You All for a Thousand Years—Music by Von Liebich
Funeral Song of a Russian Revolutionist—Douglas and Von Liebich
The Advancing Proletaire—Douglas and Von Liebich

WHERE IS YOUR HEAD?

VOL. 2, No. 1 CHICAGO, ILL., JANUARY, 1920. WHOLE NUMBER 11

# THE ONE BIG UNION MONTHLY

Published Monthly by the General Executive Board of the Industrial Workers of the World,
1001 West Madison Street, Chicago, Illinois.

JOHN SANDGREN, Editor

Subscription price, $2.50 per year; 25 cents per copy; bundle orders, 15 cents per copy, non-returnable. For sale with news dealers.

Address subscriptions, business communications and remittances to **The One Big Union Monthly,** 1001 West Madison Street, Chicago, Ill. Other communications should be addressed to The Editor.

## Important Notice

**To All Subscribers, Agents and readers of The One Big Union Monthly**

**Beginning with the February issue the price of THE ONE BIG UNION MONTHLY will be 25 cents per copy. To bundle order agents the price will be 15 cents per copy. Subscription price $2.50 per year, $1.25 for 6 months. Non-returnable as before.**

**This change has been made by the Gen'l Sec'y-Treas. and members of the G. E. B. after consultation with the Industrial Union secretaries who have hitherto been handling the One Big Union Monthly at a direct loss, also to cover the great loss sustained through raids and confiscations, as well as through sabotage by the postoffice.**

**This change takes effect on January 15, 1920.**

**At the same time the price of our weekly newspapers has been raised to the uniform rate of $2.00 per year.**

**The change should furthermore not be unexpected, as prices of all materials and labor are constantly rising.**

**Bundle order agents should not allow this raise in price to cause any reduction in their orders.**

**At the same time The One Big Union Monthly is going to add four pages to its contents. In the future we will use a two-colored cover, which will make the volume more striking and attractive in appearance, as well as more substantial to handle.**

**Address all orders and remittances to**

**THE ONE BIG UNION MONTHLY,**
**1001 West Madison street, Chicago, Ill.**

## I. W. W. 1919

"A good soldier never looks behind him," is an old saying. However it might not be amiss to throw a glance backwards over the life of the I. W. W. in the year of 1919.

The year of 1919 has for the I. W. W. been a year of open class warfare from the beginning to the end. The life of the I. W. W. has been a continuous battle from its very inception for that matter. We have never been allowed to sit down and rest for the last 14 years, but in the year of 1919 are crowded more of startling and important events than during any previous year of its existence.

As the ability to give battle to an enemy is a sign of strong life, we are justified in concluding that the I. W. W. never was stronger than in this year.

"The I. W. W. is dead," "the I. W. W. is crushed," is the howl that our enemies have raised time and again. They are raising the same howl now, but with the knowledge we have of the foundations upon which the I. W. W. is built, we can assure our enemies, that at the end of next year we shall have a story of much fiercer struggle and of much stronger life to tell.

The concrete signs of the activities of the I. W. W. during the past year may be divided in **internal organization work, educational work, the economic struggles, the judicial defense work,** all of it carried on under the most severe persecution, official and unofficial.

### The Internal Organization Work

One sure sign of vigorous life is the necessity of holding conventions and the ability to hold them. The I. W. W. has held many conventions this year. There was **the general convention** that met on May 5 in Chicago, lasting for 11 days, and resulting in an immense lot of work being done. In

addition there was a **convention of Lumber Workers** in Tacoma March 2 and in St. Regis, Mont., in the fall; a **convention of Agricultural Workers in Sioux City,** April 21; a **convention of Metal and Machinery Workers** in Cleveland, April 15-16; a **convention of Construction Workers** in Chicago April 24; a **convention of Marine Transport Workers** in Philadelphia May 24-29; a **convention of Agricultural Workers in Sioux City,** Nov. 3, and several other conferences.

The I. W. W. emerges out of the battle of 1919 with 21 Industrial Unions, three new ones having been added during the year, namely No. 1200, 1300 and 1500.

**Its present structure is as follows:**

Marine Transport Workers' Industrial Union No. 8.

Bakery Workers' Industrial Union No. 46.

Metal and Machinery Workers' Industrial Union No. 300.

Shipbuilders' Industrial Union No. 325.

Agricultural Workers' Industrial Union No. 400.

Fishermens' Industrial Union No. 448.

Oil Workers' Industrial Union No. 450.

Rubber Workers' Industrial Union No. 470.

Furniture Workers' Industrial Union No. 480.

Lumber Workers' Industrial Union No. 500.

Construction Workers' Industrial Union No. 573.

Railroad Workers' Industrial Union No. 600.

Shoe Workers' Industrial Union No. 620.

Metal Mine Workers' Industrial Union No. 800.

Coal Miners' Industrial Union No. 900.

The Textile Workers' Industrial Union No. 1000.

Hotel, Restaurant and Domestic Workers' Industrial Union No. 1100.

Printing and Publishing Workers' Industrial Union No. 1200.

General Distribution Workers' Industrial Union No. 1300.

Foodstuff Workers' Industrial Union No. 1500.

Besides, there is the General Recruiting Union.

In round numbers 50,000 new membership cards have been issued, but, due to the severe persecution, the growth in membership has not been startlingly large. In this connection may be added that our organization spontaneously is spreading to other countries, making it necessary to maintain offices in foreign ports or leading to direct co-operation with workers in foreign countries.

Our international connections during the year have assumed very promising proportions. Our ideas and our program are being to a greater or less extent endorsed and adopted by the workers of Russia, England, Italy, Spain, Scandinavia, Mexico, South America, etc., not to speak of Canada and Australia, where the One Big Union movement has got considerable headway. The I. W. W. is at present better buttressed up internationally than ever before.

One of the most important tasks of the coming year will be to further develop international co-operation and organization.

The General Executive Board of the I. W. W. has adopted a recommendation for the joining of the "Third International." This has, however, never been acted upon by the convention, and as the third international is largely a political one, more or less sincerely endorsing industrial unionism, the probalities are that a purely industrial international will develop out of these international connections in the near future.

The I. W. W. is neither asleep nor dead. It is right now about to engulf the whole world. In fact, the world is just beginning to discover that its only salvation from economic destruction lies in the I. W. W. program, which calls for the turning over of production and distribution to the people, organized industrially. These are facts. Do not be deceived by false reports or obituary notices in the kept press.

### The Educational Work

The educational work of the I. W. W. during 1919 is to a large extent depicted on the last two pages of the One Big Union Monthly, in the advertisements of its publications. From these it appears that the I. W. W. publications now number 22 as against 7 at the beginning of the year. Not the least important of these additions is The One Big Union Monthly.

Considering the rough treatment usually accorded to I. W. W. editors, which treatment tends to keep all but "rough-necks" away from us, it is undeniable that the I. W. W. has done very well in this line during 1919.

The list of books and pamphlets is long enough, but it is not what we wish it to be. For lack of financial resources we are at present holding back the publication of "The I. W. W. Handbook," by Justus Ebert, a very important book, designed as an introduction to a series of handbooks for all industries under the comprehensive name of an "Industrial Encyclopedia." The

Agricultural Workers donated $500 for the latter work at their last convention, and as time goes on the General Office will be able to take it up.

The educational work of the I. W. W. is bearing fruit, as witness the endorsement of our principles by workers all over the world.

As for the results of this work inside the borders of the U. S. we have every reason to be gratified, considering the obstacles we meet. During the year the political socialist movement has gone to pieces, resulting in 3 factions, all of which embrace industrial unionism more or less devoutly, or rather adding it to their arsenal of weapons for capturing political power. As a result of our activities the One Big Union idea has been adopted by the advanced elements among the Negro workers of the country in the course of this year, and as for the A. F. of L., it is cracking all over as a result of the educational work carried on through our press and our books and through the spoken word of our orators, delegates and individual members.

Has there been progress during the year? We should smile! For corroboration of this statement we refer to the "patriotic" leagues and the "American Legion."

In this connection let us call attention to another feature of our educational propaganda. We have to acknowledge the great assistance given us by the kept press.

**The I. W. W. Hall in New York as it looked after a police. Piano, typewriters and furniture sma recent "raid" by a department of the New York shed. Damage estimated at $2,500.**

Through the most lurid misstatements about us they have called the attention of millions to our existence. It is from these deceived, and later undeceived, readers of the kept press that our ranks are recruited, and it is among them that the number of our friends and sympathizers is increasing by the millions.

### The Battles of 1919

During the past year the I. W. W. has conducted several strikes and taken part in several others.

The great **general strike in Seattle,** which began Jan. 21, was in the capitalist press

called an I. W. W. affair, and 31 of our members were later arrested for "criminal anarchy" in connection therewith. But the strike was essentially an A. F. of L. affair with I. W. W. co-operation.

Then there was **the great strike in Butte** and other Montana cities. This strike was conducted by the I. W. W.

Both of these strikes were of sufficient size and importance to deserve a permanent place in the records of labor's struggles together with the almost contemporaneous general strikes in Belfast and Winnipeg. All of them were "lost," if it may be said that a strike is ever lost. Strikes are really the Chautauqua courses of the workers.

Next **the Textile Workers** were engaged in a big strike for the 44-hour week. The strike was a long one and a bitter one. Through A. F. of L. treason the workers lost, but what they gained in knowledge was worth much more than any concessions would have been.

The **Furniture Workers** next went on strike, on April 1. They wanted the 8-hour day and increased pay, and staid out for over two months, but did not get it. Still they gained some concessions. The importance of this strike is, that it has aroused a group of workers that seemed almost lost to the cause of the workers.

The I. W. W. **Lumber Workers** won a strike in the Fortine District in the Northwest in short order. It was a strike for 8 hours and $5 a day. In the fall they have practiced the intermittent strike in the Northwest against an increase in charges, etc., with varying success.

The **miners** in Park City, in Coeur d'Alene, in Tonopah and a dozen other places have also been striking, sometimes with winning, sometimes "losing." But no matter what the outcome, the I. W. W. always is the winner, for the workers think and learn while they strike and rest. And when the worker begins to think he becomes an I. W. W.

The last strike of the year in which I. W. W. has taken part with any considerable numbers is the **strike of the Marine Transport Workers** of New York. The strike was "lost," but, as usually, the I. W. W. won, coming out with its membership trebled.

To us the strike is an educational asset, which acts as an auxiliary to our propaganda by word of mouth and writing, much as an excursion to the meadows is an auxiliary to the teacher of botany.

What with the other tremendous strikes of the year, the stockyards' strike, the railwaymen's strike, the steel strike and the coal strike and the printers' strike, this has been a prosperous year for those who rejoice in the awakening of the masses. All these workers have learnt much themselves that they did not understand before, and all other workers have learnt an immense lot by merely observing the strikes.

All hail those strikers, whether I. W. W. or not! They are breaking ground for a complete industrial organization.

**The Business Affairs of the I. W. W.**

The financial condition of the I. W. W. at the end of 1919 is far from good. The general office has about half a million dollars to its credit with the industrial unions, but not a cent in the treasury. On the contrary, the general office has a deficit of nearly $10,000. This deficit is partly due to the purchase of a new printing press for $5,000 and of a new linotype machine for about $4,000, as well as a large stock of printing paper; also to the printing of a large stock of literature. But this unfortunate state of affairs is mostly due to the slowness of the industrial unions in paying for supplies and stamps, the money having been used for the purposes of organization expenses instead of for payment of bills. Unless this matter is quickly attended to by the unions through immediate payment of all bills and a forced sale of the organization stamp of $1.00, there is apt to be a real obituary notice in the kept press one of these days, stating: "I. W. W. is dead. General office is bankrupt. Doors closed. Rats are leaving the sinking ship."

As a matter of fact we know that it is enough to call the membership's attention to this matter in order to have it remedied. For the future great care should be taken that the experience is not repeated. By crippling the general office members stop the educational work of the organization and bring organization to a standstill.

We are confident that the coming year will see these shortcomings corrected. They are partly due to the numerous raids and arrests which have a tendency to upset the work as well as the inexperience of the members. In the future we are better prepared for such experiences.

So much for the positive and constructive work carried on by the I. W. W. during the year of 1919.

We now come to another chapter of our activity, which does not properly belong to the domain of an organization which proposes to organize the workers into industrial unions, but which has been forced upon us, and at the present moment is assuming tremendous proportions, namely the persecution and all that is connected with it.

### The Persecution Against the I. W. W. and the Legal Defense Work

The persecution against the I. W. W. has reached enormous proportions during 1919, and is at an unprecedented height at the closing of the year.

This persecution can all be traced to a common source, i. e., the machinations of the capitalist class for a plutocratic dictatorship, but in its exterior manifestation it has a two-fold character: the "legal" persecution and the extra-legal persecution. We will take up the extra legal persecution first, the one that is not camouflaged with the insignia of law and order.

### The Extra Legal Prosecution

The extra legal persecution has been in the making for years past, but it is only during the last year that it has sprung into full bloom and dared to claim for itself a semblance of moral justification.

It is manifold in its nature, but the forces participating in it are

Wall street, general director and provocateur and secret government of U. S.

The kept press.

The "high tone" clubs.

The "patriotic" societies.

The American Legion.

"Citizens' " leagues.

Chambers of commerce and other profiteers.

Priests and ministers.

Politicians.

"Detective agencies," stools, finks and gunmen.

"The under world."

Labor fakirs.

Knights of Columbus.

Ignorant and deluded people generally.

It is a tremendous apparatus of iniquity, always operating under the cover of the stars and stripes. Its chief weapon is lies and misinformation about the I. W. W. This side of the campaign of persecution is attended to by the kept press, partly through warped news items, partly through venomous and "inspired" editorials, partly by flaring advertisements, which of late are to be found in all big capitalistic sheets. This feature alone must cost the promoters millions of dollars, but it is necessary in order to turn the masses of the people against us, and besides, there is more money where these millions come from, for more wealth is constantly created by the workers. Contemporaneously the promoters carry on an "educational" campaign through the patriotic societies, who approach the people with tens of millions of letters and pamphlets and support same with the hell-slush of blood thirsty orators or hired liars, sometimes with the additional aid of framed up films.

The moving picture theatres offer these campaigners a great possibility, that is taken advantage of to its full extent.

Ministers and politicians and thousands of other mental prostitutes repeat the slander and the lies and the provocatory rantings, each one to his little crowd, out of cowardice, greed or general cussedness.

Thus the people of the country are being incited against us by these "respectables," and the fruit of it is now ripening and is being harvested. By patient work along this line they have brought it to the point where the public is about ready to condone any outrage against us, even if it is the most dastardly infraction of the law and the constitution of the country. Taking advantage of this artificial public opinion, created by the secret government, these spurious patriots don the U. S. uniform and raid our halls, wreck our pianos and typewriting machines, destroy our records and burn our literature, and finally club or murder our members and turn them over to the waiting police to be arrested for "trying to overthrow the U. S. government". Thus is being gradually built up a dictatorship of the plutocracy and a reign of terror by its servants, designed to crush forever whatever democracy has hitherto existed in this country.

We have before us a list of the I. W. W. halls raided during the year of 1919 with particulars, but it would take up too much space to enumerate them. Be it enough to state that this extra-legal persecution is country-wide, and in some parts, as in the Northwest, it embraces every important city and town, and some that are not so important.

The Centralia affair, where 4 "American Legion" men were killed while in the process of raiding the I. W. W. hall, is a typical example. Here these "patriotic' raiders, inspired by Wall street and more particularly by the lumber trust, lynched one I. W. W. member, an ex-soldier from overseas, Wesley Everest, and completely destroyed the hall, and afterwards established a complete reign of terror which still continues in full force.

Through the expenditure of millions of dollars for sinister purposes there has been created an artificial and hysteric public opinion which gives absolution in advance to brutal and rowdy elements who are being manipulated by the hired tools of the secret government for the purpose of

extinguishing liberty and making all the people willing and submissive servants to the secret government. It has gone so far that people no longer dare speak their mind on any question for fear of being blackmailed, bullied, clubbed and persecuted by the crazy or malevolent ruffians, who, like the black hundreds of Russia, drape themselves in the flag of the country, in order to disguise their foul deeds against the workers.

It will take years for the American people to free themselves spiritually and socially from this extra-legal reign of terror and regain their balance of mind and freedom of thought, speech and action.

### The Legal Persecution

The legal persecution may be traced to all the three branches of the government, **the legislative, the judiciary** and **the executive,** which all three are under the iron heel of the secret government. As far as **the legislative branch** is concerned, it has busied itself in a great number of states with the framing of "Anti-syndicalist" laws which on the surface are directed against certain acts of violence or conspiracy against the U. S. government. These laws are framed with the secret understanding that they are to serve against the I. W. W., the courts and the police being depended upon to conspire to bring us within that law. At the present time the congress has under consideration, it is said, 52 federal bills, all aiming at our extermination. It is in order to get a semblance of justification for such laws that all the rioting is being staged, all the perjury suborned, and all the lies in the press manufactured against us.

The secret government is thus preparing to turn a dastardly trick on the American people, designed to throw them in the chains of brutal tyranny for generations.

The part of **the judiciary** in this legal persecution is to do the bidding of the secret government. The trials given our members are outrageous, scandalous and farcical, the judges in nearly every case being unreservedly partial to the prosecution, and, finally, imposing sentences which are plainly acts of oppression and not acts of justice.

**The executive** part of the persecution is openly in defiance of the law. Arrests, raids and seizures, are in most cases being done without a warrant, the raids generally being more like acts of warfare than peaceful acts of law and order. We call attention to the photo herewith of the raid of the I. W. W. hall in New York by a department of the police.

Another feature of this activity is the brutal treatment invariably accorded our members when they happen to come in the road of these executives of both the secret and the legal governments. Clubs and other weapons are used without provocation or cause, and thousands of our fellow workers have been seriously injured by these clubbings and large numbers have been taken to hospitals and have been seriously injured for life.

The latest instance is that of Fellow Workers Kohler, manager of our printing plant, and Cascaden, a newspaper man, who both were present at the recent trial in Kansas City, Kohler as a witness and Cascaden as our press correspondent. Both were foully dealt with. Kohler was taken by court officials to one side, right in the court house, and terribly beaten up. As for Cascaden, a city detective came up to his room and beat him up, breaking his leg, in the brutal assault. The latter assault is admitted by the police, but they falsely state in the papers that the detective "acted in self-defense." Lies are used to bolster up a deed over which they and the other tools of tyranny are openly gloating.

These two instances could be multiplied by the thousands.

As a result of the co-operation between the legal and extra-legal persecution there are now about 2,000 I. W. W. men in jail, of whom several hundreds already are sentenced to terms of up to 20 years. The rest are being held as long as possible without trial, and all our prisoners are in most cases being tormented in a fiendish manner.

One feature of this persecution is the **deportation** of hundreds of our members. But as deportation alone has little terror, the members are wantonly and illegally being held in jails for months and years before deportation, in order to inflict punishment outside the pale of the law. In fact, the secret government is not anxious to deport the workers in mass. They want to keep them here, if possible, and crush them into willing slaves.

### The Defense Work of the I. W. W.

Under these circumstances it is easy to understand that **the defense work** for the organization has assumed large proportions. The General Defense Committee was about to collapse under the burden of its tremendous task, when William D. Haywood was finally released on bail and put to work as secretary and later as treasurer of the General Defense Committee in Chicago. Special defense committees have been active in the Northwest and California. It has been the task of these committees to

secure legal aid wherever possible, but we must admit that many fellow workers have been victimized by our fiendish enemies for lack of proper legal defense. However, many hundreds of thousands of dollars have been raised for bail, and a number of the imprisoned fellow workers have thus regained liberty, pending the appeal of their case. Tens of thousands of dollars have been raised for defense purposes, partly through subscription lists, partly through collections at meetings and partly through the sale of stamps to members. We have been put to the utmost to secure funds, and at the present time the means on hand are entirely inadequate, while many of our resources are being exhausted. Help is beginning to come from the workers in foreign countries, systematic agitation and collection being now carried on in Sweden and Norway and perhaps in some other countries, showing that international solidarity is something more than an empty phrase.

Protests from labor organizations are also pouring in from England and Holland and other countries.

However, in order to keep the defense work from breaking down entirely, the buying of defense stamps by members will have to be made our special order of business for a long time to come, not forgetting the organization stamp for the upkeep of the organization in these trying times.

Unless the defense funds are kept up our fellow workers will have to resort to the dismal tactics of "silent defense" used by our 50 fellow workers in Sacramento with disastrous results.

Such is the terrible, almost incredible story of the I. W. W. in 1919. Never in the history of the labor movement have the efforts of the workers to organize been met with such sufferings.

Freedom is dead in the United States at present and raw-boned tyrants rule.

But it is easy to understand that a society that can maintain itself only through such moral degradation cannot have many days to live. Some day the sufferings of the people will have reached a limit over which they cannot go. Then comes the dissolution like a cataclysm. We foresee this day and in order to save ourselves, our class, mankind generally and whatever is worth saving of our "civilization," we are against tremendous odds going ahead with the work of organizing the workers industrially, so that we may be able to continue production and distribution and keep society going.

That responsibility now rests on the shoulders of the working class.

Watch the I. W. W. in 1920! Our principles are immortal, and no human agency can destroy them, whatever they may try to do to our organization and our members.

# California, Kansas, Washington

On December 5 the McHugo case in California ended with a verdict of guilty. The charge was criminal syndicalism.

On December 18 the verdict of guilty was rendered against 27 of our fellow workers on the so-called Wichita indictment, the sentences ranging from 3½ to 9 years. The charge was conspiracy to interfere with the conduct of the war.

In Washington events cluster round the Centralia affair. Just how many hundreds of fellow workers are in jail in the Northwest we have not been able to ascertain.

It is estimated that altogether over 2,000 I. W. W. men are in jail at present.

There is not much use repeating here the details already known through our weekly papers. The detailed story of the raids and the arrests and the trials would fill several numbers of the O. B. U. Monthly.

After you have read one or two of these stories you know the rest. It is every time a story of trampling under foot of the laws and the constitution, arrests without warrants, brutal clubbings, holding of men for "investigation," formulating of trumped up charges, packed juries and ferocious sentences.

Instead of chronicling the events we wish to call the members to such action as is suitable in every case.

Our efforts at securing legal defense for the imprisoned fellow workers should be multiplied, but still not be made the main thing. The main thing must always be the building up of an organization, for without that there would soon be neither organization nor defense.

Finance the defense by buying the $5.00 Centralia and raids stamp. Finance the organization by taking in new members, prompt payment of dues, buying of the organization stamp of $1.00, and by selling literature **and paying for it.**

Now that many of the halls of the country are closed by force, the activity will have to be thrown almost exclusively on the job and in such business offices as it may be necessary to maintain.

The hysteria of persecution will peter out some time, but our principles and our courage will not peter out.

# The Plumb Plan

Those who read this article should not neglect to read another article in this number entitled, "The Labor Movement in Great Britain," by George Hardy.

A reader of the One Big Union Monthly wrote us the other day asking us if the I. W. W. endorses the Plumb Plan, and why we don't say anything about it. This inquiry, together with Fellow Worker Hardy's article on the Labor Movement of England, give us occasion to take the Plumb Plan into consideration. Our information about the Plumb Plan is derived from a leaflet issued by the "Plumb Plan League" and from the discussion in the press. We cannot here undertake to give a complete statement of the details of the Plumb Plan. We will content ourselves with a few of the most important points. From the leaflet mentioned we quote the following questions and answers:

*"Why is it called the Plumb Plan?"*

"Because it was conceived by Glenn E. Plumb, General Counsel of the Railway Empolyes of America."

*"What is the Plumb Plan?"*

"It is a plan for public ownership and democracy in the control of the railroads."

*"How does it propose to buy the roads?"*

"By issuing Government Bonds with which to pay for the legitimate private interests in the railroad industry."

*"How does it propose to operate the roads?"*

"By a board of fifteen directors, five named by the president, to represent the public, five elected by the operating officials, and five elected by the classified employes."

*"What becomes of the surplus?"*

"After operating expenses are paid and fixed charges are met, including the interest on outstanding Government securities, the surplus is divided equally between the Government and the men. The employes' portion is to be divided between the managerial and the classified employes, the former receiving double the rate received by the latter class"

*"What does the Government do with its share of the surplus?"*

"It invests it in improvements and extensions, thus adding to the value of the railroads without adding to the fixed charges. It retires the outstanding bonds, thus reducing the fixed charges. Ultimately the public will have its railroad service at cost."

*"Who determines the rate of wages?"*

"The Board of Directors."

These are the principal points of the Plumb plan. Summing it up we find that it means that the people should buy the railroads from the present owners, without paying for the watered stock. It further means government ownership and government control, modified by the prescription that ten of the board of directors of fifteen shall be elected by those engaged in railroad operation, five to be elected by the officials and five by the common workers. As a bait or inducement it provides that the workers should divide the surplus with the government and that the bonds be retired by the use of the government share of the surplus.. The reader will please compare this plan with the almost contemporaneous Nationalization plans for railroads and mines, in England, as related in the article mentioned by Fellow Worker George Hardy.

Now, in order to bluntly answer our inquirer, we will re-state his question, **"Does the I. W. W. endorse the Plumb Plan?"** Our answer is, **Most assuredly not.** Is the I. W. W. fighting the Plumb Plan? No. We have for years had our own plans for the taking over and the operation not only of the railroads but of every other industry in the country and in the whole world and we are going ahead with the work for the realization of these plans as if the Plumb plan had never been born. Our plan calls for the organizing of all railroad workers into an industrial union of railroad workers, consisting of local branches. By means of this organization we propose to establish the most far-reaching democracy and the most complete unity in the operation of the railroads. We furthermore propose at the same time that the workers of all other industries should organize in a similar manner to take over and operate their respective industries. The various industrial unions would, in conjunction with the railroad workers industrial union, solve the question of distribution. This is what we mean by industrial democracy, and the principal feature of it is that it entirely does away with wage slavery, making the workers their own masters collectively. As will be seen, our plan makes no provision for, or mentioning of buying the railroads or paying for them. In fact, we consider that part of the Plumb plan which calls for the buying of the railroads by the people a most outrageous proposition. The railroads have been built by the workers and are being operated by workers, but have been stolen from the people by unscrupulous politicians and profiteers. It is a matter of recorded history that the land grants for the trans-continental roads were largely obtained by swindling the government, and the owners of the railroads have ever since the invention of the locomotive been extorting billions of dollars from the American people in the guise of rent, interest and profit on the capitalization of this stolen wealth. To ask that we pay the full

social value to the robbers, in order to get it back, would lead to the most paradoxical consequences.

In this connection let us mention that the new Labor party has endorsed the Plumb plan without reservation. This party platform furthermore calls for the nationalization, not only of the railroads, but of the mines, forests, water-power, telegraphs, telephones, stockyards, grain elevators, natural gas and oil wells, cold storage and terminal warehouses. elevators, packing plants, flour mills and of all basic industries which require large scale production and are in reality on a non-competitive basis, these to be democratically managed.

We are justified in supposing that the reformers back of the Labor party would try to nationalize all these industries, that is, the bulk of the resources of the nation, according to the Plumb plan. That is, we suppose that the Labor party would propose to buy these industries by the issuing of government bonds. Let us consider for a moment what the result would be.

Carried out to its utmost consequences it would mean that the people would be the actual owners of all means of production, thereby precluding for all time the investment of capital in industrial enterprises. In a certain number of years, the capitalist class would be the holder of tremendous capital, the full cost price of all the industries of the nation sold to the government with no possibility of investing it. This means that their capital would be actually worthless. Does Mr. Plumb and the Labor party propose to swindle the capitalist class out of the means of production and distribution, paying them with worthless gold bricks? Of course, we have no objection to treating the capitalist class in this manner. "Go as far as you like." We consider no deal too rough for the capitalist class. But we dare not suspect Mr. Plumb, or the Plumb league, or Labor party promotors of the criminal ingenuity required to concoct a confidence scheme of such stupendous magnitude; at least, not without the secret motive leaking out. We are firmly convinced that it is nothing but a blunder in political economy, comparable to the blunder of the apple woman who was selling 3-cent apples at 2 cents, hoping to recoup her losses by doing business on a big scale at this rate. We class the Plumb plan and all other similar nationalization plans as one of the many quack nostrums which have been concocted since time immemorial by social horse doctors and witches who would evade the main question, namely, justice to the workers who have produced all wealth.

But, at the same time, the Plumb plan of buying back the industries would mean an insufferable burden to the present generation.

As far as the I. W. W. is concerned, we do not propose to come into the possession of the industries by any trick of social confidence men. We state openly and plainly that the capitalist class have stolen all their wealth from the people who produced it, that they are not entitled to the possession of it, that they should be dispossessed by the people without remuneration at the earliest possible moment; and, furthermore, we advise the people to organize industrially for this specific purpose and for the purpose of running the industries. So much for the acquiring of the railroads proposed by the Plumb plan.

As far as control and operation is concerned the Plumb plan claims that it has devised a system of democracy. We maintain that it has not. The control of the railroads would remain in the hands of people that would be controlled by the capitalist class. Even the representatives of the employes on the directorate would probably not differ from the regular type of craft union leaders now elected by the workers, and we refuse to acknowledge that those leaders are an expression of democratic control by the workers.

Democratic control must begin from the bottom among the working people themselves. Every railroad shop and every railroad line and every terminal should be directly controlled by the workers there engaged. And so on, up to the top of general affairs, leaving very few functions for a directorate. Only in this manner can the liberty of the people be safe-guarded and wage slavery abolished.

If you will study the article about the English labor movement, above referred to, you will find that this is no dictatorial ukase from the One Big Union office, but that it expresses the will and sentiments among the railroad workers and miners even in England, where these ideas have developed quite independently of the I. W. W. influence.

This does not mean that we are going to go out of our road to fight the Plumb plan league or the Labor party program for nationalization. As long as we have to swallow the capitalist pill we don't care how it is sugar-coated. We would like to be able to impress our readers with the fact that the solution of the social problem propounded by the I. W. W. is world wide in its scope and, so to speak, eternal in its outlook. Through our plan we do not propose mere-

ly to help the capitalist class solve a very delicate railroad question, which is about to bring a capitalist crisis, but to place the whole human household for all time to come on such a basis that a repetition of capitalism with all its horrors will forever be an impossibility. The thoughtless reader may smile at what he may consider the stupendous conceit of a bunch of ragged hoboes, but let us remind him that while the Plumb plan can claim six million supporters over night almost—supporters who have never delved deeply into the social problem—the I. W. W. plan has tens of millions of supporters throughout the whole world and is a dynamic force which is sweeping everything before it in spite of all the combined opposition of the forces of evil and ignorance. Great things move slowly. The elephant turns round ponderously, while the mosquito zigzags at a terrific speed and covers a large distance.

Our plan is to the Plumb plan as the elephant is to the mosquito. The Plumb plan may be adopted. The people of the different countries may resort to the folly of government ownership and buying out the capitalist class, but this will not solve the social problem. It will only aggravate its difficulties. Sooner or later mankind will, however, reluctantly have to turn to the solution worked out by the I. W. W. The human mind can conceive of no other permanent solution. Plumb plan or no Plumb plan, Labor party or no Labor party, the work of the I. W. W. for the building of industrial democracy goes on as if nothing had happened.

# The Steel Strike and The Coal Strike

The whole country is now familiar with the breakdown of the steel strike and the coal strike. To repeat the details in this magazine would be unnecessary.

Were the strikes lost?

Yes, they were lost to the American Federation of Labor, but to the working class at large they were not lost. The workers in both industries may go back to work under the most unbearable conditions, but they are now a different lot of men from what they were. They have learned that the capitalist class is as perfidious as it is relentless. There may not be any recognition of the steel workers unions, but there will be recognition of the class struggle, and this is the foundation of the work of the future. The miners may not have gained their 60 per cent increase and the 30-hour week, but they have demonstrated to their own and everybody else's satisfaction that there is no community of interest between mine owners and mine workers.

Both strikes have furthermore demonstrated the absurdness of the structure and methods of the A. F. of L. as well as the treachery of their leadership, particularly in the coal strike.

The only ones to benefit directly from these two strikes were the railwaymen, who gained the basic 8-hour day on the strength of the fear of the capitalist class of their going on strike with the rest. In true A. F. of L. style they grabbed the advantage and left the steel workers and the coal workers in the lurch.

The A. F. of L. may be strong in collecting per capita for the general organization, but when it comes to action on a large scale, as in this case, the different parts of this agglomeration stand as foreign to one another as if separated by oceans.

We suspect that the "One Big Union" is beginning to look good to the miners as they cursingly dig their picks into the coal, and also to the steel workers as they take in another hole in their belt. The same thing applies to the Packing House Workers, who recently got an "award" that stings them like an insult.

## BACKNUMBERS

**We are still in urgent need of backnumbers of The One Big Union Monthly for March, April and May. Anyone sending in copies of these will confer a great favor on us. We shall be glad to pay for them if desired.**

**Mail copies to**

**ONE BIG UNION MONTHLY,**
**1001 West Madison st., Chicago, Ill.**

## A NEW BOOK

"Evolution of American Agriculture," by Abner E. Woodruff, is now out and for sale. Price 35 cents per copy. $20.00 for 100 copies. The book has a foreword by William D. Haywood and is richly illustrated by Dust. It is what they call a "humdinger." Published by Agricultural Workers' I. U. No. 400, I. W. W. Every agricultural worker in the country should read it and every other worker as well. We believe it will be the biggest seller the I. W. W. ever had. Send all orders and remittances to MAT K. FOX, Sec'y-Treas. No. 400, 1001 West Madison street, Chicago, Ill.

# The Secret Government

From a circular being sent out by ex-United States Senator R. F. Pettigrew of South Dakota, we learn a few interesting facts which corroborate what we have previously said about the existence of a secret government with its capital in Wall street.

Senator Pettigrew quotes from the report of Chairman William J. Graham of the Select Committee of the House of Representatives at Washington on expenditures in the War department, as follows:

"I have been asked by the committee to prepare such portions of the minutes of the Council of National Defense as seem to be pertinent to the subject matter we are inquiring about. The matter being investigated by the committee at present is the general method that was pursued in the purchase of supplies for the War department during the war.

"An examination of these minutes discloses the fact that a commission of seven men chosen by the President, seems to have devised the entire system of purchasing war supplies, planned a press censorship, designed a system of food control, and selected Herbert Hoover as its director, determined on a daylight saving scheme, and—in a word—designed practically every war measure which the congress subsequently enacted—and did all this behind closed doors, weeks and even months before the Congress of the United States declared war against Germany."

For months before the United States declared war, Wilson was planning war with a secret committee of New York representatives of Big Business that he, Wilson, had appointed for that purpose.

This report proves conclusively that the war had been decided upon in advance by the secret government in Wall street before that government placed the matter before their tools in congress who are supposed to be elected by the people.

It is this secret declaration of war by the secret government that explains how E. P. C. Harding, president of the Bank board of the United States, could, on March 22, 1917 weeks before war was declared, have had the following statement published:

"As banker and creditor, the United States would have a place at the peace conference table, and be in a much better position **to resist any proposed repudiation of debts,** for it might as well be remembered that **we will be forced to take up the cudgels for any of our citizens owning bonds that might be repudiated."**

This corroborates our statement that the United States did not go to war to make the world "safe for democracy," but in order to help collect the bad accounts of the Wall street financiers who had staked many billions on the allied powers, then about to be overpowered by Germany.

In the light of the foregoing it is nothing but natural that peace also should be concluded by the secret government and not by the subsidiary "government" in Washington. That such actually was the case we may conclude from the fact that a copy of the peace treaty was in the hands of the head of the secret government in Wall street, J. P. Morgan & Co., long before the United States senate had a copy of it—a disclosure which created quite a "scandal" at the time.

The real government of this country sits in Wall street. The one in Washington, the one elected by the people is, to a large extent, only a dummy, largely composed of corporation lawyers, which carries out the mandates of the secret government. That the dummy sometimes is balky is more to be considered as play to the gallery, to make the people believe that they are participating in the government.

We are often accused of wishing to "overthrow the United States government by force." We do not wish anything of the kind. Knowing the real status of affairs, why should we waste our time fighting a dummy or reflex government?

The only government we wish to overthrow is the real one, that is, the secret government in Wall street, and that government we do not propose to overthrow by force, but through industrial organization. We propose to put an end to this industrial autocracy and establish industrial democracy. The dummy government will then adjust itself to circumstances and reflect the industrial democracy.

In due time the people will probably find that an industrial administration, based on universal industrial suffrage, better serves the people than a purely political government, and as soon as the majority of the people have come to that conclusion they will probably make a change.

---

**I SEE UTOPIA**

**Far away I see Utopia,**
**But clouds obstruct the view,**
**And a river of blood flows between.**
**From the clouds**
**Machine guns thunder out**
**Death! Death!**
**But far, far away, I see Utopia.**

**—C. O. G.**

# All Together at Once!
# Get the Five Dollar Stamp!

**The General Defense Committee having exhausted all other possbilities for the present of raising funds for the Defense, has recommended the issuing of a**

## *Five Dollar Stamp*

**It is now for sale.**

**If every member buys this stamp AT ONCE, the question of Defense funds is solved for some time. This Stamp gives the members a fine chance to give a big pull in the same direction at once. It strikes everybody nearly alike. Something has got to move when we all get a hold at the same time.**

**The question of making it a day's wage stamp was discussed, but this method of a $5 stamp simplifies things and was preferred. Should the $5 hurt any member, he may feel justified in retrenching on something else until he has caught up. Should any member feel that it does not hurt him enough, he can put the balance in the hat when the hat is passed around.**

**The main thing is that we get a big sum at once so that we can take care of the Defense. The General Defense Committee is swamped with telegrams and letters from imprisoned members all over the country asking us to do something. It seems hard to have to answer "No funds."**

**With a couple of thousand members in jail all over the country, and several appeals pending, we will need a couple of hundred thousand dollars quick. Voluntary contributions and collections do not suffice any longer, BUT THE FIVE DOLLAR STAMP WILL DO IT!**

**Delegates and secretaries should take notice and lay in a big supply at once. Every member should make a rush for this stamp. If you are not near any delegate or secretary, send in your "V" to William D. Haywood, 1001 West Madison street, Chicago, Ill., and he will send you the Stamp. Non-members may send in their five dollars to William D. Haywood, 1001 West Madison street, Chicago, Ill., and they will get a receipt instead of a Stamp.**

**Let no one be a slacker this time! Two thousand members in jail are calling you! They are there for our common cause. The man that dodges his duty will have to take the responsibility if our members are railroaded to the gallows or the penitentiaries.**

**GET THAT FIVE DOLLAR STAMP IMMEDIATELY, EVEN IF YOU HAVE TO BEG OR BORROW THE MONEY!**

**Let no meeting pass without pushing the sale of it. This is no time for quibbling. If a member is absolutely broke and cannot get the five dollars, let him keep his peace until he can get it. Let no one pour cold water over this heroic effort to assist those that have fought for us and the One Big Union.**

**GET THAT FIVE DOLLAR STAMP IN YOUR BOOK! THERE IS NO OTHER WAY!**

---

### OUR RULERS

When Frank Munsey gave a dinner to Lord Northcliffe after the latter had bought the London "Times," he had as his guests all the biggest financiers except Rockefeller, J. P. Morgan, E. H. Harriman, Westinghouse, Widener, H. H. Rogers, and a glorious collection of others.

A newspaper man present said to Northcliffe: "The interesting thing about this dinner is that the President of the United States isn't here; there is no governor of any state, no member of congress, no judge, but the government of the United States is sitting with you at this table."—(Arthur Brisbane in N. Y. American.)

General Wood, presidential candidate, tells the following story: "A parson in West Virginia was asked what he would do with the 'reds.' His answer was: 'I would ship them, and I would send them home in ships of stone, with sails of lead, with the wrath of God Almighty for a breeze, and hell for the first port.'" Some religion to these people!

---

Ole Hanson, the crazy clown who resigned as mayor of Seattle, is preaching revolution. He wants to summarily drive the present government out of office for its sympathy with the "reds." Some rascal put the presidential bee in his bonnet and he can't get rid of it.

# EASTERN AGRICULTURE

## The Farm and the Corporation

By JUSTUS EBERT

(Note—Agriculture is one thing on the prairie, another thing in the marshy lands of Louisiana, and still another thing in the orchard country of California or the Northwest. That agriculture should assume strange and hitherto unknown features around the great industrial centers of the East was to be expected. The writer here vividly portrays these novel features, illustrating them with statistical data. Always ready to adjust itself to conditions, the I. W. W. here finds a new, virgin field of activity.—Editor.)

### CHAPTER I

There used to be a time when the farm was the center of manufacture in this country. Within the farm house, or in little outbuildings erected especially for the purpose, the farmer and his family pursued a variety of interrelated occupations in connection with the cultivation of the soil. Flax and hemp, wool and cotton were spun into yarn, woven into cloth and made into garments for home wear or barter. Everything, from beds and pillows to farm implements and food preserves, was made and put up on the farm from its raw products.

Today there is a marked change—a revolution—noticeable. Textile corporations spin and weave and make garments for sale for profits. And in the matter of those products still held to be typically agricultural, the farm is often an appendage to some packing, canning, preserving, or milk company. Such a company may cultivate its own lands, or else command the products of the farm communities in which its plants and operations are located. These companies are corporationizing and industrializing many functions that were once held to be a part of farm manufacture and inseparable from the cultivation of the soil. They are dominating agriculture, dictating its prices and trend. They are, also, creating a working class in farm communities, are revolutionizing agriculture in fact, in conjunction with the bankers and the controllers of the system of transportation.

The revolution in agriculture is due to the invention of machinery and the steam railroad, combined with the growth of large cities, which have made agricultural-industrial corporations both possible and necessary. This is a significant condition, as agriculture is believed to be impervious to tendencies making for large production and a working class by means of corporations.

New York ranks high as an agricultural state. Unlike the great Western states, with their far-reaching prairies and extensive cereal farming, New York, with its rolling country and varied soil, is more diversified and intensive in agricultural development. Yet, notwithstanding these presumably favorable conditions, New York is acquainted with such widely different phenomena as the abandoned farm and great canning, preserving and dairying corporations. There may be no direct relation between the two, but the fact that they exist, often side by side, is worth notice.

Certain it is that many farmers have made attempts, for instance, to become independent of the big mill companies, whose bottling plants, creameries, condenseries, etc., determine prices in counties throughout the state, and whose corporate activities extend beyond the state into other states.

We recall, in this connection, the Six States Milk Producers' Association, formed in Orange county about 12 years ago. It died shortly after birth, while the "milk monopoly" which it was created to fight lived on and is now larger than ever before, having extended its operations to even more states and even operating its own farms, in addition to all its other phases of activity. Farm operation by corporations is the result of inefficient small farming, due to low prices. The large corporations, having squeezed the small farmer to the wall, is compelled to step in and become for itself the source of supply that the small farmer formerly was. Taken together, with all the other facts mentioned above, corporation farming indicates that farming in New York state is not the independent, self-reliant, self-sustaining pursuit that farming in general is said to be. New York state farming is very much hedged in, encroached upon, and regulated by corporations and corporate activities.

In 1913, the state of New York issued "The Industrial Directory of New York." This industrial directory has since been discontinued. It contains a factory register. One thing that strikes the student of this register is the large number of corporations and firms operating factories in more than one farming community. In New York state, the chain factory system is decidedly conspicuous in the industry where one is taught to expect it least, to wit, in the agricultural industry. This chain factory system spreads across many counties and embraces many branches of the industry.

In the most conspicuous instance, it even crosses into many other states. The Borden Condensed Milk Co., for instance, operates 51 factories, employing 1,638 persons, in 17 counties. A corporation that can operate 51 factories with an average of 32 employees each is not a small proposition even in cities. What then must it be in country places? In a variety of specialized products too! This, in itself, would be impressive enough, but the Borden Co. operates also in many other states. According to "Moody's Manuel," this $30,000,000 corporation operated upwards of 130 factories in the states of Connecticut, Illinois, Maine, Michigan, New Jersey, New York,

Pennsylvania, Washington, Wisconsin and Vermont—or in 10 states, all told. This was in 1913. Since then, the Borden Co., in combination with other companies, has expanded still more.

The Borden Condensed Milk Co. was organized in 1899 to succeed the New York Condensed Milk Co. It has been in the "succeeding," that is, absorbing, business ever since. In 1902, it acquired the plants of the Anglo-Swiss Condensed Milk Co., for instance. It originally engaged in the manufacture of the Gail Borden Eagle Brand Condensed Milk. But a recent booklet issued by it, gives a list of its present products as follows: Unsweetened Condensed Milk, Route Cream, Extra Heavy Cream, Certified Milk, Selected Milk, Pasteurized, Grade A.; Grade B Milk; Buttermilk, Ice Cream, Baccilac (Metchnikoff Scientifically Soured Milk) and Fern Brand Butter. This same booklet pictures the Borden pastures, cow barns, milk cooling houses, and bottling plants, with their big buildings, automatic machinery, various departments, and specialties; the interior of a milk railroad car, and the immense trucks and route wagons used in the distribution of the company's milk and dairy products. In brief, what this booklet depicts is not the old farm supplying only its own needs, but a big agricultural undertaking, that has grown and expanded, until now it controls its own sources of raw supplies, manufacturing plants, transportation facilities and distributive outlets, just as in the oil, steel, iron and other industries, we have similar corporations, with similar histories and functions.

The present indications are that the Borden Co. will broaden its scope still more. It has recently organized a $17,000,000 "Farm Products Co.," which will attend to the development of dairy-farming in all its phases, for the parent company. It looks as if the Borden Co. is taking a leaf from the book of the Armour Co., and is therefore intent on including all the products of the farm in its rapidly expanding growth.

There are other corporations with a chain of factories in New York state that are engaged in the manufacture and sale of dairy products. According to The Industrial Directory of New York for 1913, there are approximately 115 factories, with 3,500 employees devoted to the manufacture of butter, cheese, condensed milk, the pasteurization and bottling of milk, milk sugar, ice cream, casein, dairy products and dairy products preparations. Four companies control 65 of these 115 factories and exploit 2,500 out of the 3,500 wage slaves employed therein.

Many dairy companies exist that own neither farms nor bottling plants, but simply distribute the products of others. The wonder is, that in a city like New York, for instance, all of the dairy companies should be so few. It is doubtful if more than 50,000 persons, all told, supply New York's 5,000,000 mouths with dairy products. To such perfection has machinery and concentration attained in the manufacture, transportation and distribution of dairy products in New York state. Consider the number that the old methods would have required, and then score another one for the modern agricultural co-operation!

If we turn to canning, preserving, grape juice, and other agricultural-industrial fields in the Empire State, we shall witness therein the same inter-city, inter-county, inter-state and interwoven chain of factories and corporations as in dairy farming and dairy products. This we shall do in the next chapter.

## CHAPTER II.

The central-northern end of New York state is its great agricultural-industrial section. Along the Central railroad, from Utica to Niagara Falls, with Rochester as the main center, will be found its packing, canning and preserving industries. Within this territory many corporations operate, most with only a local plant, many with only two plants and quite a few with a chain of plants extending beyond their own home towns and counties; and some with even their own farms. In this article, consideration will be given to those that overflow their own original boundaries and cultivate their own soil. Let us start, in true biblical fashion, with the last first.

For instance, there is "The Fort Stanwix Canning Co." According to "Moody's Manual," this is a New York corporation, organized in 1888 and reorganized in 1912, with a capital stock of $750,000 and assets of $1,058,754. *Also owns entire stock of Fort Stanwix Farms Co.* Makes a specialty of packing fruits and vegeables. Owns and operate plants located at Rome, Fulton, Farnham and Irving, N. Y., Glassboro, N. J., and Hampden, Me.; or in three states.

"The Industrial Directory of New York for 1913" gives the factories of the Fort Stanwix Canning Co., together with the number of employees, as follows, Erie county, Irving, canned fruits and vegetables, 17; Farnham, ditto, 130; Oneida county, Rome, canned goods, 74; Waterville, canned vegetables, 38; Oswego county, Fulton, canned goods, 87. Three counties, 5 towns, 5 plants and 346 employees are thus represented in the New York state factory operation of the Fort Stanwix Canning Co.

Next to claim attention is the Burt Olney Canning Co. Also a New York corporation, organized in 1902; capital $800,000. Owns and operates 700 acres of improved farm lands located, according to "Moody's Manual," contigious to the city of Oneida. Ketchup, peanut butter, porks and beans, and canned fruits and vegetables constitute its output.

The Industrial Directory of New York for 1913 gives the following facts concerning the Burt Olney Canning Co.: Madison county, Oneida, canned goods, 190 employees; Orleans county, Albion, canned goods, 221 employees. Two counties, towns and plants, with 441 employees, are embraced in this company's factory operations.

"The Investors' Information Service" in The New York American of Nov. 24, 1919, shows that the Fort Stanwix Canning Co. and the Burt Olney Canning Co., united in Sept. 1918, with Winters and Prophet Canning Co., Cobb Preserving Co. and the W. H. Osborne Co., to form the New York Canneries Co., with a capital of $3,250,000. The American says of the new consolidation: "It packs and distributes a complete line of canned vegetables, also condensed milk has been added to the company's list of products. It has twenty plants, seventeen of which are in New York, one in Maine, one in Maryland and one in New Jersey."

From all of which it appears that concentration in agricultural-industrial corporations is not confined to those handling dairy products only.

Out of Rochester, two big companies radiate, that are worthy of notice. The Curtice Bros. Company's main plant in Rochester, Monroe county, employs 618 persons. At Springville, in Erie county, 52 more are added to the company's force of profit makers. At Bergen, Genessee county, 57 meet the same hard fate. At Vernon, Oneida county, 40 more wage slaves complete the list. Four counties, cities, towns and plants, with 767 employes make up the total of Curtice Bros. Co's factory operations in the Empire state, according to the Industrial Directory of 1913.

The American Fruit Products Co., a $1,125,000 corporation, has three factories in Rochester, devoted to canning, vinegar making, and apple evaporating respectively, with 312 and 24 and 46 wages slaves respectively, or a total of 400 in round numbers. Other factories are located at Hamlin, Monroe county, evaporated apples, 32 employees; Pittsford, evaporated apples, 21; Gasport, Niagara county, evaporated apples, 24; Lyndonville, Orleans county, evaporated apples, 29; Waterport, evaporated apples, 35. A total of 3 counties, 7 cities and towns, 9 factories and 550 employees.

Two more corporations are also worthy of notice. First, the Fredonia Preserving Company, with plants and employees for the canning of fruits and vegetables as follows: Chautauqua county, Forestville, 92; Silver Creek, 134; Niagara county, Modeltown, 98; Newfane, 15; Wilson, 55. Total, two counties, five towns and plants, and 394 employees. The second is the most diversified company of all, namely, the Merrill-Soule Co. It operates, in Albany county, at Little Valley, a powdered milk and butter company, with 25 employees. In Madison county, at Chittemango, it has a vegetable canning factory, operated by 29 wage slaves. In Onondago county, at Fayetteville, the same sort of plant is run by 17 more people. In Syracuse, same county, the company shows its versatility further, by making mince meat, by means of the labor of 141 wage slaves. In Wyoming county, at Arcade, milk products are turned out by 55 exploited workers. In Chautauqua county, dairy products consume the labors of 29 more creators of wealth. Summed up, the Merril-Soule Co., manufactures 6 different kinds of products in 5 counties, 6 towns and cities and 6 plants, with 296 employees. Some diversity and territory, not to mention the wage slaves.

The Industrial Directory of New York for 1913 tabulates approximately 100 fruit and vegetable canning factories with 5,558 employees. Six corporations, namely, the Fort Stanwix, Burt Olney, Curtice Bros., American Fruit Products, Fredonia, and Merrill-Soule employ 2,900 persons, or more than one-half of all fruit and vegetable canning workers.

The Industrial Directory for 1913 also tabulates 222 evaporated apple, fruit and cider factories, with 4,207 employees; 46 bean and pea sorting factories, with 1,05 9employees, and 8 grape juice factories, with 300 employees. Thus there are about 16,000 persons employed in the five main divisions of New York's agricultural-industrial development treated in this and the preceeding article.

This is not an imposing figure. In view of the immense population fed, it indicates an extensive use of machinery. Also, in view of former primitive methods, a complete agricultural revolution.

This revolution is likely to proceed further. In Chautauqua county, in the so-called grape belt, developments are now going on worth noting. At Westfield, the half-billion dollar Armour Co. has gone into the manufacture of grape juice, in competition with the $1,000,000 Welch Grape Juice Co. and lesser companies. Other "outside" corporations, like Libby, McNeil and Libby, and the H. T. Heinz Co.—of "57 varieties" fame—have also entered New York state and are helping along its agricultural-industrial development.

For one thing, in New York state, they will have no union labor restrictions to contend against. The agricultural industries are notoriously anti-union. "Statistics of Trade Unions in 1914," a book dealing with unionism in New York state, gives absolutely no trace of unionism in either the cities or towns in which these industries are located.

There has been much agitation and legislation affecting hours and conditions in the canneries. In certain seasons, the canneries are large employers of labor, consisting mainly of women and children from nearby cities. They are employed in sheds, at wages and hours and amid conditions that have aroused the indignation and activity of woman and reform societies. The latter have sought to alleviate conditions through legislative enactments, but, apparently, without success. New York has its Wheatland, too. But, up-to-date, it is without its Ford and Suhr.

The dairy corporations, especially "Bordens," also vigorously combat unionism. Their urban factory employees are not known to have ever exerted themselves in their own behalf through their own organization. Only recently have their drivers and city

employees taken the bit in their teeth, with very good results to themselves. Will the city employees' success impel the urban employees to action? It ought to!

Many I. W. W. men are familiar with New York's agricultural-industrial districts. The apple-producing sections especially are not unknown to them. Why shouldn't they renew the acquaintance, and get on the job in the interest of Agricultural Workers' Industrial Union No. 400, I. W. W.? With Rochester as the base of operations, there is a big field for 400 in upper central and northern New York state.

In conclusion, let us repeat a belief, oft expressed, viz., that New York state is leading the way in the revolution of agriculture on a medium-sized scale. There are no 150 mile Taft farms in New York, as in Texas. The development is smaller—more intensive—and more thorough and far-reaching.

# The Passing of the Small Farm

At the present there are two classes of farmers; the well-to-do farmers who have large tracts of land, and the dissatisfied and restless ones, who have very little. The one thing needful to successful farming is more and more land, consequently we see the selling of large tracts of land to capitalist syndicates, and the migration westward, where whole sections can be bought for the price of an Eastern quarter. To find a farmer satisfied with a quarter, which is considered sufficient by Uncle Sam for a homestead, is very rare; in fact, it would be as difficult to find a manufacturer who would be satisfied with a hand coffee mill. So rapidly is the transition from the small farm to the big bonanza farm going on, that soon a homestead will be almost useless to a man, even if he manages to retain it.

A large number of the small farms are mortgaged, but it should be remembered that where the small man loses his quarter, usually the capitalist gets it. Land speculators go into a community and buy up large tracts of mortgaged land, or buy it up as soon as the mortgage is foreclosed. The individual who loses his land often saves enough to get himself a small truck patch or a chicken ranch. This fact has been responsible for the idea that the farms of the future are to be small farms. Far from being the pioneers of a new system in farming, these small truck patches are merely the last despairing effort of the ground-down farmer of the lessor bourgeoise to prevent themselves from falling into the ranks of the wage-earning proletariat.

That the interests of the large farmer or landowner are capitalistic is not hard to discover, and it is easy to see that he will always work in the interests of the capitalist class, but very often the interests of the small farmer is far from being clear, even to himself. If he has little land, he desires to accumulate more; if he is in a position where he can hire but little help, thus getting but little surplus he wishes to climb to a position where he will be able to hire much labor and retain much surplus. But once he is deprived of his property altogether, once he becomes a proletarian with nothing but his labor power to sell, then it is possible to show him that his interests are the interests of the working class, to oppose the inroads of the propertied class, and overthrow property rule.

It is true that one sees as miserable conditions on the small farms as are to be seen in the cities among the crowded proletariat. They have fresh air outside the house—the average farm house is a miserable affair and unsanitary—but their bodies are poorly nourished, for the small farmer must convert every salable article into money, and live on that which cannot be sold.

It is also true that the small farmer is being ground down to an existence as low if not lower than that of the workers; it is a mistake to think that he can set his own price on his products; he has to accept market prices.

And in the meantime the landlord squeezes him for rent, or the money lender squeezes him for interest, and one way and another he gets the worst of it all around. And this all arises out of his property relationship to society. He is small fry, and the capitalists will give him the worst of it.

Capitalist production has been carried on on the farms for some time, although it has not been recognized as such by the farmers or the bourgeois economists. The farmer's largest salable product depends upon the working class to save it. Every year tens of thousands of men are needed during harvest. Where do they all come from? Do men at the call of the farmers drop steady jobs and fly to their assistance? No! It is from the ranks of the unemployed proletariat that the farmer gets his help during the busy seasons of the year, and thus the unemployed "problem" shapes toward the farmer's advantage.

If those who try to tell us that the interests of the wage earners and the farmers are identical would go into the harvest fields and hire out to Mr. Farmer and work from daylight till dark for the lowest possible wage that John Farmer could get men to work for, and then be invited to sleep in a straw pile, he would begin to realize that there was a decided clash of interests. It is an undeniable fact that the farmer gets surplus value out of the hides of his men, just as any other employer; it is true that the commission houses and the loan sharks steal it from him, but that is not our lookout. If we are to be exploited what difference does it make who exploits us? Many will say: "If the farmer got fairer treatment himself he could pay more wages." Undoubtedly, but the question is not could he, but would he? Of course not, unless a shortage of labor power or a strong economic organization of the workers forced him to.

The thinning, weeding and marketing of beets, gathering of cantaloupes, harvesting and threshing of wheat, plowing and gathering corn, picking hops and digging potatoes, all these and many other important duties of the farm fall upon the traveling "hobo."

The farmer is very glad to see the "hobo" when he needs him, but as soon as his services are no longer required, he is very prone to drive him out of the community with a shot gun. As the farmers' machinery develops the need for hired men becomes less; but on the other hand, as the unemployed army threatens to grow larger among the harvesters, the desire for organization, shorter hours, better wages and more sanitary conditions grows also. The harvester organizes in obedience to the law of self-preservation.

But as in other industries, as the machinery develops and becomes more expensive, the small farmer is squeezed out; unable to buy modern machinery, he fails to compete with the capitalist farmer who operates a large tract of land on a machine basis. And as he loses his property he soon is forced to ride the rods in search of those jobs that he knows best how to do.

The farmer of today exploits his wife and children, especially the latter, for in any farming district it is all too common to see children kept out of the schools to pick cotton, plow with a riding plow, mow hay, and perform various other work beyond their years or strength. In this way their bodies are dwarfed and deformed, their minds dulled from the monotonous drudgery, and very often their lives crushed out by the machinery they are incompetent to handle.

Farm life leaves a lot to be desired, even under the best of circumstances, and the chances are that when capitalism fully develops on the farm the land owner will not need to have his own home on the farm at all. The list of absentee employers will be increased.

If the smaller farmer cannot afford to pay decent wages, grant decent conditions and reasonable hours to the men who do his back-breaking work for him it is time for him to go out of business and make room for someone who can. Let him get out and make room for the man with the steam plow and the five ton motor truck. It will not be very long before he will be working for the common ownership of the land and the tools of production.—The Forge.

Uuderwood & Undewood Photo

**DEER COMING UP TO THE HOUSE, DRIVEN BY HUNGER**

Just so are the workers often driven by hunger and exposure to come up to the master, to beg for a chance to live, as long as they are not organized to take over production in order to create what they need.

# The Packing House Industry

By A WORKER

The meat packing industry as carried on in the great establishments of the country is one that deserves some attention from every worker, who at one time or other must depend on such sources for his food supply.

So the writer, in conjunction with some other workers like himself, will here endeavor to give a description in a brief way, and offer some suggestions that may prove helpful to those unacquainted with such matters, and perhaps furnish some information to those already engaged in the industry in one way or another.

As all such establishments handle Cattle, Sheep and Hogs, it will be necessary to take each separately, commencing with the Killing.

We begin with the Cattle, which are driven from the Stock Yards into pens convenient to the "Killing Beds," into which they are driven as many at a time as the "Beds" will hold. When open the "Beds" look like a long narrow alley. When the required number of animals have been driven in, this alley is found to be divided up into compartments, each compartment containing two animals. Then all is ready for the "Knocker," who, armed with a long-handled hammer, walks along a platform arranged for that purpose, smashing the skulls of the animals as he does so. As the animal falls in the pen, by an ingenious arrangement another worker is able to open the doors of the pen, the floor of which rises upward, so that the carcass is dumped out on the Killing floor. Here the carcass is hoisted up by a chain attached to the hind legs, when the head is skinned by a butcher whose work this is, after which the body is allowed to drop down again, when the feet are skinned and the legs broken off at the knee and hock joints. Each function being performed by a different worker. Next the process of skinning begins, "the floorsman" taking the sides, "the backer" the back, "the felse cutter" the hind quarter, and "the rumper" the rump or butt as it is sometimes called. The carcass having been disemboweled, or "gutted," as it is usually called, is hoisted up and the "drop" or neck is skinned by the "dropper". The carcass is next put on a chain carrier, which pulls it along slowly. During its journey it is split into two parts by the "Splitters," after which, still on the chain, it is washed before being sent to the Coolers. The hide is sent to the Hide Cellar to be cured. The entrails being divided up, the Gut Shanty or casing department attends to the cleaning of the bowels and the curing of the same, preparatory to their being used in the manufacture of sausage, while in another place the fat from the same is washed before being sent to the Oleo department. Such scraps as are considered unsuitable for same are sent to the tank to be rendered into tallow. The liver, after being trimmed, is sent to the offal cooler, and the tripe or stomach having been cleaned, is either saved to be used as a food product or sent to the tank to be rendered into tallow.

The head, after being trimmed of meat, which is saved to be used in sausage, and after the tongue is taken out, is sent to the offal cooler. The jaw bone is broken off, the remaining part of the head being thrown into a crusher and there broken up before being sent to the glue tanks. The feet, with the hoofs pinched off, are also sent to the glue tanks, where Neatsfoot Oil is obtained from them. The horns, when there are any, are sent to the Bone House.

The conditions under which men work in this department are trying. The work is continuous and the clothes become wet and dirty, while in most cases an oil apron and rubber boots are necessary, which have to be provided by the worker at his own expense. And then there is the incessant noise made by the machinery and the animals about to be slaughtered.

The beef sent to the coolers, is allowed to drain for some time in a place provided for the purpose, before being transferred to other coolers, the floors of which are covered with sawdust, and there it is allowed to remain until shipped or sent to the Cutting Room. The coolers are usually kept at a temperature of about 38 degrees Fahrenheit. In the casing room are a number of machines used in the cleaning of the casings as well as the fat from the same. Here the Bladders and Weasands are also taken care of, which are used after the same fashion as the casings. To work in this place an Oil Apron and Rubber Boots are necessary. The work in this place is disagreeable, and there is an uninviting smell about the place. Skill and experience are indispensable at the work. Here some women and girls are employed.

In the Beef Coolers, the quarters are kept in lots in the same order as they have been purchased and slaughtered; this is done by means of tags attached to the quarters when they are weighed before entering the cooler. In this way it is possible to trace each animal from the Stock Yards, where it has been purchased, down to the market where it is sold, the difference in price showing the profit or loss in the transaction.

The Offal, that is to say the food parts, comprising Livers, Kidneys, the Heart, Tripe, Cheek meat and other Trimmings, are kept in a cooler until they are shipped out or sent to the Freezer, to be held in Cold Storage for future use. Much of the Cheek meat and trimming is, however, used on the premises in manufacture of Sausage.

In the Hide Cellar, the hides are weighed up in lots after the same manner as the beef, in order to compute their value as part of the product of the animal in figuring out the gain or loss. After weighing they are salted in piles, known as "Packs,"

in building which some skill and muscular strength are required. In those "Packs," they are allowed to remain about thirty days, or longer, before being taken up for shipment to the Tannery, at least thirty days being considered necessary to allow the shrinkage to leave the hide.

The working conditions in the Hide Cellar are bad, there is an evil smell about the place, and the work is hard and continuous. As this is a part of the Packing House that is immune from Government Inspection, no attempt is made to clean the place, so dirt and stench are allowed to have full sway. Like the Fertilizer, this is one Department much avoided by men who know such places.

At the "Bone House," where the bones are only cooked long enough to take the grease out of them without softening the bone, which is sold for the manufacture of knife handles, buttons, etc., it is hot, very hot in fact, especially so in the summer time. It also is strenuously avoided by those who can do so. It is usually conducted as a part of the Tank House and Fertilizer Departments.

The fat sent to the Oleo department, after it has been washed, is dumped into a vat or tub of cold water, where it is allowed to chill before being hashed. After it has been ground up in the "Hasher," which is constructed something after the fashion of an ordinary meat grinder, it is taken to the "Kettles," where it is melted. The product so obtained is run into "Cedars," where it is allowed to chill to the point of softness necessary to allow it to be worked up in the Press Room, where the oleo oil is extracted from it. This oleo oil is used in the manufacture of "Oleomargarine," while the "Stearine" is used at the "Lard Refinery" in the manufacture of an article known as "Compound," while some of it is shipped out to be used in the manufacture of Soap.

At the "Cutting Room" the sides of beef as they left the Killing Room are made into various Cuts. The better grades being made into Ribs, Loins, Rounds and Chucks, in which shape they are shipped. The poorer grades are cut up into small pieces to be used for sausage or canning meat. However, when this is done, the beef hams are usually saved in this process, as well as the beef tenderloins. The Beef ham being divided into three parts: the Inside, Outside and Knuckle.

The working conditions in the Oleo are not agreeable or healthful. In the room where the Kettles are, in which the fat is melted, it is very hot, especially in the summer time, and often some worker is obliged to quit on account of the excessive heat. In the room where the fat is chilled, it is cool and more agreeable. The same may be said of the cellar where the Oleo oil and Stearine is stored. In the Cutting Room it is cool, the place being kept at about the same temperature as the Beef Coolers, 38 degrees Fahrenheit. In these places warm clothes and a white frock are necessary. The work though heavy and cumbersome is not continuous, except in the case of the Beef Boners, many of whom do Piece Work.

From the Beef we now will pass on to the Sheep Kill, this work being usually done on the same floor as the Beef Killing. The animals are driven into the Shackling Pen, where the shackles are attached to their hind limbs, then the shackle is attacked to a large revolving wheel, which carries them up until they reach a rail, on which they drop and slide down to the sticking pen. Here they are quickly dispatched by the "Sticker," after which they are skinned, gutted and washed, before being sent to the Sheep Cooler, which is merely a part of the Beef Cooler. The casings, such as are considered worth saving, are handled in about the same way as the Beef Casings. The fat, such as is not allowed to remain on the carcass, is sent to the Oleo Department, while the Sheep Pelt is sent to the Hide Cellar, where it is salted with fine salt and not with the coarse salt used for the cattle hides. The scraps and other refuse go to the Tank, except the head and legs, which find their way to the glue house, while to the Offal Cooler are sent the cheek meat, heart, lungs, liver and kidneys.

The working conditions in the Sheep Kill are about the same as in the Beef Kill, only that the work is not quite so heavy.

In the Hog killing department the number of animals slaughtered is usually in excess of that of either Cattle or Sheep, and by many considered of greater importance. This is especially true so far as work is concerned, as only a small portion of the carcass is used in a fresh state, which leaves the greater part to be cured and sometimes smoked before being shipped out for consumption.

In the killing process the animals are driven into the pen where they are shackled with chains designed for the purpose. This shackle being attached to a revolving wheel, the hog is hoisted up until it drops on a rail, which runs into the Sticking Pen, where the sticker sticks it in the throat, running his knife clear up to the heart. Having bled to death, or nearly so, it is pushed on to the scalding tub, which is filled with hot water and in which it is kept until the hair is sufficiently loosened on the skin to pull off easily. Then it is run through the scraping machine, which takes off most of the hair, what remains being scraped off with knives. The process of gutting and splitting performed, they are carried on an endless chain carrier to the hog coolers. Here they are usually allowed to remain from 36 to 48 hours before being sent to the Cutting Room. Hog Coolers are usually kept at a temperature of 32 degrees Fahrenheit. Most of the fat from the hogs is rendered into lard. The fat being stripped from the bowels is known as Caul fat and Ruffle fat, and there is also fat from the "Bung Cut" and from the "Pizzles." The stomach of the hog is also used in the lard. The hog casings are cleaned and handled after about the same fashion as those of the cattle and sheep.

When the hogs have been the required time in the cooler, they are sent to the "Cutting Room," where they are cut up into the various cuts, which

have been established as standards by the men engaged in this business. Such cuts are named about as follows: Hams, Shoulders, and Sides, which are again subdivided into pork loins, fat backs and bellies. In the lighter grades the side, after the pork loin is taken off, is split into a fat back and a belly. When only the loin and ribs are removed, such sides are known as "Clears," or "Extra Clears." Where the rib is left in, they are known as "Extra Ribs." In some instances the heavy sides are allowed to go to cure without either the loin or ribs being removed, when they are known as "Rough Ribs," or "Hard Ribs." From the neck or jowl another small piece is saved, which is known as bean pork. All the fat from which the lean has been trimmed, that has accumulated in the cutting process, is sent to the tanks to be rendered into "Steam Lard," as distinguished from "Neutral Lard," which is obtained by rendering the leaf lard and sometimes the fat backs at a low temperature, which varies around about 120 degrees Fahrenheit.

At the Tank Room are the Tanks, which are steel cylinders about six feet in diameter and varying in depth from 14 to 30 feet. Some establishments having the larger sizes and some the smaller. The tank capacity is usually estimated at a thousand pounds to a foot, when such computation becomes necessary. At the top, which usually comes about a foot above the floor, is an oval shaped opening by means of which the tank is filled. When this is done a manhole cover is allowed to pass into the opening by means of a chain. Then it is drawn back in its place, covering the hole from the inside. This done it is firmly bolted on by means of "grabs," so as to be air-tight, after which the steam is turned on and it begins to cook. Tanks are only supposed to be filled within three feet of the top, and are cooked from six to ten hours at a steam pressure, varying from 40 to 50 lbs., the length of time varying according to the matter to be cooked, and the steam pressure varying according to the size of the tank and the steam outlet or feed.

At the bottom the tank is closed by a valve, worked by a long rod having a wheel at the end, while underneath is a vat, usually an iron box-like affair, large enough to hold the contents of the tank. This is also furnished with an outlet leading to the press room.

When the contents of the tank are cooked, and the exhaust steam blown off, the head or manhole cover is taken off, when the rendered product, be it either Lard, Tallow or Grease, is drawn off through a valve, which is placed about the middle of the tank in its side. Such products, before mentioned, are allowed to run into iron containers, known as coolers.

In the press room the tankage which remains in the vat, after the tank water is allowed to run off, is allowed to run out on cloths spread over wooden plates; in this way the press is built up in layers, until it has reached the required height, when it is placed under a hydraulic press and subjected to pressure until most of the water and grease is forced out of it. Next the press is pulled down and the pressed tankage dumped into a carrier which carries it onto the "Dries," of which there are many different patterns. But when the tankage leave the "Drier" it is dry and ground up into a coarse powder, in which state it is sent to the "Fertilizer." The blood of the various animals, which is saved after being steam cooked for a short time, is pressed and dried in the same manner as the tankage.

The tank water, which remained after the tank had been cooked and allowed to run out of the vat before the tankage was taken out, is held in a container from which it is pumped through vacuum pans, by which process a dark, thick fluid is obtained, which is known as "Stick." This is mixed in with the tankage in the drying process. At the Fertilizer, the tankage is sorted out into Hog tankage, Cattle Tankage, Meat Meal or Stock Food, and Steam Bone, which is obtained from the Glue Tanks. Each of these products on chemical analysis must show certain ingredients, and have to be mixed accordingly. The dried blood is either sold separate, or, being rich in Ammonia, is mixed in with the lower grades of tankage to make meat meal. When the tankage shows a too high percentage of Ammonia, Fullers Earth, the waste from the Lard Refinery, is usually added to it, and in some cases coal dust.

The working conditions in both the tank room and press room are of the worst kind. The heat is oppressive and an abominable stench pervades the place. This is true in all seasons, but especially in the summer time, when the temperature in those places keeps around 130 degrees. When the men there can only work in short spells, as it impossible to remain for any length of time in the place. In the Fertilizer, while the heat is absent, the dust and stench in the place make it even worse. As all fertilizer products have to be run through the mill, before being either filled into sacks or shipped out loose, the air in the place is usually so thick with dust, as to make it impossible to see more than a short distance. This dust is injurious to both the eyes and the lungs, so that those who are obliged to go there soon leave, or are obliged to do so on account of the work being injurious to health.

At the Lard Refinery, the lard which has been pumped there from the tank room, is treated to a refining process, which consists in mixing "Fuller's Earth" in with it, after which it is pumped through a filter in which the earth remains and the lard come out cleared of such impurities as this process can remove. Then when cooled to a point where it is soft and thick, it has a fine white color. In this state it is filled into containers of various sizes, ranging from a five pound can to a tierce holding about four hundred pounds, when it is ready for shipment. At this same department is also made an article which resembles lard in appearance,

known as "Compound," which has before been referred to in connection with beef products.

In the way of curing meats there are two distinct processes known as "sweet" and "dry salt" respectively. In the sweet pickle, brown sugar, granulated, white sugar and molasses are used in the brine in which the meat is cured; hence the use of the word "sweet." In this department the smaller meat cuts are cured, such as hams, shoulders, bellies and Picnic or California Hams. During the curing process the meat is kept in large wooden containers known as "Vats," where it is kept for a period ranging from three to nine weeks. During this time it is "overhauled" three times, except in case of the lighter cuts, such as bellies, when the operation is performed only twice, as they cure in a short time. The "overhauling" process, consists in transferring the meat from one vat to another, an empty one being placed in the row for this purpose. When cured, the meat is either shipped out in this condition or sent to the smoke house to be smoked before shipment. In the "dry salt," the heavier meat cuts, namely the side cuts before alluded to, as well as some heavy shoulders and heavy bellies, are put. Here the meat is rubbed over and sprinkled with salt and is then piled on the floor, until it reaches up to a height of some six feet or more. In this condition it is allowed to remain until it is overhauled or shipped out. The overhauling process consists in pulling down the pile and transferring it to another pile in reverse order, so that the pieces that were on top come in the bottom. In the first instance this is usually done after the meat has been salted about a week or ten days, and after that at irregular intervals. In both sweet pickle and dry salt all the heavy meat cuts are usually pumped up with a strong brine prepared for this purpose. Also this is frequently done when the meat is being overhauled.

The pork cuts which are not sent to cure, such as pork loins, pork butts, skinned shoulders and spare ribs, are either shipped out in a fresh state or sent to the freezer, where they are frozen and kept in storage.

As to beef, only a small portion is sent to cure, most of which is what is known as canning meat, beef hams and plate beef. The canning meat consists of small pieces of meat which have been cut from the bones or large pieces, which cannot be used otherwise, and so are cut up for this purpose. Brown sugar is used in curing canning meat, while granulated sugar is used for beef hams. In curing plate beef, sugar is not used.

Meat that is suitable only for sausage, which has not been used in a fresh state, is put to cure. This includes hearts, livers and kidneys, such work being usually done under the supervision of the sausage department.

At the Packing House, it rarely happens that any meat, except trimmings of one kind or another, are used in the manufacture of sausage, there usually being a sufficiency of the same for this purpose. Such meat, of course, is of much less value than regular cuts, but when worked up into sausage, it becomes much more valuable than those same cuts. This is partly owing to the fact that corn meal is mixed in with it. This, however, is shown on the labels under the name of "Cereal." Also a quantity of water is added to it. The amount of "Cereal" varies according to the kind of sausage made, and there are many kinds. The amount of water added to sausage meat in the process of manufacture varies from ten all the way to as high as forty per cent. Nothing is allowed to appear on the labels or containers to indicate its presence. There are of course some grades of sausage in which water is not used, especially in "Summer Sausage" and a few other high priced grades. But that it is one of the most profitable branches of the meat trade is fully shown by the number of outside concerns that engage exclusively in it.

In the Packing House the Dressing Room accommodation provided is simply disgraceful. The writer, from all he has seen and from what he could learn, must say that there are few if any such places that are not overcrowded, so that the men have to take turns in getting a seat to change clothes. In many places there is not even standing room for the number of persons required to use the place. But worst of all are the lockers, in which the men have to keep their clothes. They are made in sets of about six compartments in one piece, having an iron frame, the sides being composed of wire netting. The compartments, which two men are obliged to use for their clothes, measure in dimension about fourteen inches square and stand about forty inches in height. Even though the worker as a rule has not many clothes (and from the accomodation provided by his master, it is evident he thinks he should not have), it is easy to see that those miniature compartments are usually crowded. This, however, is not the only grievance, as, should a worker have some good clothes, he is obliged to put them into the same locker, where he has to keep his dirty, foul smelling clothes, and there they very soon become contaminated with the same bad smell, so that he himself and his apparel become a nuisance when he goes in a public place. Worse still is it for the unfortunate worker whose clothes become wet at this task, and this is especially true of workers in the "sweet pickle" and the "dry salt." Having to wear extra clothing in those places in which they work, their wet clothing cannot dry in the miserable lockers, even when heat is provided in the dressing room, which is not often the case.

The Labor Unions have endeavored to remedy this and some other evils, but apparently without effect, as nothing has been done so far, and at

present the prospects for any improvement are very doubtful.

What the Packing House needs at present, and needs badly, is the "One Big Union," and it is coming, because if any results are to be gained, it must come.

**In so far as the running of the plants by the men is concerned, if it were to happen tomorrow, the change would hardly be noticeable, as the men to a great extent are doing it already,** and for the most part are well aware of the fact, as the foremen and other supervisors placed over them have but little experience, and in some cases none at all. Of course, there are some exceptions, but those are not many. From the point of view of educating the worker, nothing could be better in order to show him his own importance, than to place in authority over him another man who does not know what he is doing. This is especially true where skill and experience are required, something which is indispensable in a great many cases.

As a direct result of such incompetency, there is much waste in the handling of the various products as well as in other material and supplies. An instance of this is the thousands of pounds of meat and meat food products annually condemned by Government Inspectors. A change in system and arrangement would easily save most of this, which can only be done by giving the workers a greater share in the management and in the profits of their labor. In doing this, more men would be employed for shorter hours and a more efficient and economical system would at once arise. The masters knowing this are at present seeking to introduce a profit sharing plan, while of course having only their own interests in mind.

Assuming that the Cattle, Sheep and Hogs would continue to be obtained from the farmers, which of course would probably be the case, as there would be no other way to dispose of them, the next important problem would be the distribution of the food products. The capitalists, however, have already provided for this in having established branch houses in all the large cities, and have records of the amount of such foods used from day to day, so as to prevent anything like a large surplus accumulating at any particular point. The same course could be followed, provided the transportation facilities would be available. On this everything would depend.

Outside of labor power, the Packing House needs coal and water in large quantities, so that their operation depends much on the coal miner. As for water, this is usually obtained from the city water supply of the cities in which the plants are located, though in some instances the plants have their own water system, which usually consists in a number of wells operated by either steam or electric power, which feed into a reservoir, from which the water supply is obtained. In the way of other supplies, a large quantity of lumber is needed for making boxes used for packing, wrapping paper and stationery as well as cordage of various kinds are also indispensable. Also salt, both coarse and fine, is largely used. Cooperage in the way of tierces and barrels of various kinds are also much used, being brought from factories outside and refinished by the coopers of the plant. Hardware and other mechanical supplies are also much used in repair and new work by mechanics, of which every plant has a number.

It will therefore be necessary for the Packing House worker to get in touch with the various workers on the outside, with whom contact will be necessary in order to obtain such articles as may be needed to carry on the business. This ought not to present any serious difficulty, as a mutual exchange on the basis of food supplies will not meet with opposition, provided that such supplies are available. But even the dullest among the workers usually has foresight enough to look ahead in the way of getting something to eat. This he has always done, unless prevented, and will continue to do so. As a last word let us get on the job and learn all we can, no matter when it may be necessary to use our knowledge. Any person wishing further information on the subject will be answered by the writer through the magazine columns, that is if the editor is willing.

Editors Note:—A handbook covering the Packing House Industry is an urgent necessity. While the individual worker, as the writer points out, may know exactly what to do in his particular place, it is absolutely necessary that this group of workers should collectively have a complete understanding of the whole industry as well as its relations to other industries and society in general. Such knowledge is indispensable in order to enable them to take over the whole industry and run it with greatest possible efficiency through their union.

Each establishment should be organized as a branch of the Food stuffs Workers' Industrial Union, and each branch should organize in such a manner that the workers may be able to operate and run it in conjunction with the other branches when that time comes.

What these workers now are familiar with is mainly the technical side of the work. Of the administration of the industry they know little or nothing. This they must learn in order to enable themselves to take the responsibility of feeding mankind. There are at present no books written on this subject. It remains for the I. W. W. to do it.

---

## NOTICE TO CORRESPONDENTS

When sending in reports or news items to the I. W. W. press on matters of general interest, it would be well if the sender would mail a separate copy to each of the I. W. W. publications, English as well as foreign. Everybody connected with the I. W. W. press is loaded down with work to the limit, and the means available do not permit of the employment of a special person for the purpose of writing out a number of copies of such matter. It would greatly help us out if all correspondents would divide this burden between them by sending copy, where possible, to all the publications advertised on the back page of The O. B. U. Monthly.

# Revolutionary Syndicalism in France Still Alive

By GEORGE ANDREYTCHINE

The great massacre that broke out in August 1914 on the European continent swept away all pretense and hypocrisy from the revolutionary labor movement. It produced the high treason of German Social Democracy and the connivance of French Syndicalism, as represented by its officaldom, to the shameful "union sacrée," the emasculation of the working class for the benefit of its age-long enemy—the exploiters.

The war was a stunning blow to all revolutionary groups and only very few of the militants of the labor movement were immune to this scourge that raged and still rages in the ranks of the working class. The honor of revolutionary stability belongs to the Russian Bolsheviki and the Bulgarian revolutionary Socialists, "the narrow," who as bodies can claim it. In Italy a more or less anomalous situation produced the "intransigency" of the "offical socialists," of whom only a small minority is revolutionary and class conscious. "The Italian Syndicalist Union," a small body of insurgents from the conservative Confederazione del Lavoro, who separated themselves from it before the war, was also demoralized by the treason of its most able and prominent militants, Rossoni, De Ambris, Corridoni, Massoti, Maia, Bacchi and their followers.

This cleaverage demonstrated clearly on whom the proletariat can rely in its ardous struggle; and the war, with all its monstrous consequences, has rendered us a great service, taught us a unique lesson: THAT WARS CANNOT BE PREVENTED UNTIL CAPITALISM IS DONE AWAY WITH and that the old slogan—*the emancipation of the working class must be the work of the workers themselves*, must literally be carried out.

In the Confédération Générale du Travail confusion reigned supreme after the declaration of war. Its officials had attempted to secure a promise and definite engagement from Legien and the other leaders of the German Trade Unions for a general strike in case of war and were bitterly disappointed with the openly imperialistic attitude of those "Marxians." To recite the story of Jouhaux' speech on the grave of the assassinated Jaurès, the trip to Bordeaux in the ministerial train and the acceptance of the governmental office by him and his cohorts, will only add to the revolting memory of the past and our disillusionment.

However, there was one man, who formed a nucleus of tempered and tried militants, who held the torch of revolutionary syndicalism high above the foul breath of jingoism; who kept the red banner of the working class undefiled by the hands of Judas. And if France holds the record with Germany for having produced many Judases, it has the honor of having given birth to the first Liebknecht of the world, Pierre MONATTE. To him, Lenin and the Zimmerwald Conference paid tribute as the true son of the working class, who remained faithful to it and its traditions.

His bi-weekly little review *"La Vie Ouvrière,"* published for many years before the war, had in its folds the names, brains and hearts of the most brilliant fighters in the C. G. T. In its annals you will find the classic blow to the Taylor system, written by a powerful intellect of a simple working man, Albert MERRHEIM; the story of the life and work of the coal miners, brilliantly written, illustrated and full of statistics, by the pen of another working man, Georges DUMOULIN; the history, illustrated, of the heroic battle of the Cheminots (the railroad workers) in 1910; the famous accusation, which turned to be prophetic, against the German Social Democracy, by Andler, the thorough and scientific analysis of the "Imperialistic Tendencies in German Socialism," which brought a shower of denunciations against Monatte, from the pen of Kautsky, Bebel and the now infamous Grumbach, "Homo," who used to write for L'Humanité from Switzerland*); the elaborate studies of syndicalist economics by Francis DELAISI.

---

*)In February and March 1913, Monatte published a lengthy article written by Charles Andler, the able historian and student of Marx, author of a "Commentary on the Communist Manifesto" and a volume on German Social Democracy, an article which most astonishingly predicted the shameful betrayal of the working class by the so-called Marxians of Germany. The article bore the title "Le Socialisme Imperialiste d'Allemagne Contemporaine" (Imperialist Socialism in Contemporary Germany). Jean Longuet, grandson of Marx, leader of the fenceriding center of the French Socialist party, a man who voted all the credits of the bankers war, indignantly asked Monatte to publish "the crushing reply" (la reponse ecrassante) of comrade (?) Grumbach which appeared in Neue Zeit, together with some vile attack by Kautsky and Bebel.

Grumbach's "crushing reply" reads in part as follows: "German Social Democracy is done for! Bebel becomes chancellor of the Empire, Scheidemann minister of Foreign Affairs, Gerhard Hildebrand, perhaps anew received in grace by the party, to direct the administration of the Colonies, Noske in charge of the Ministry of War.

The military, colonial and naval credits shall be voted by the socialist deputies without hesitation and with glad heart; Kautsky is charged to justify the necessity of it in theory" * * * etc. All in sarcastic tone.

This remarkable prophecy, made as reproach to Monatte and Andler, is now almost pathetically true. They went so far as to call Monatte's "Vie Ouvrière" "a monarchist review." Albert Thomas defended the German Social Democrats in the Chamber of Deputies. They all, Grumbach, Kautsky, Longuet, Thomas, went on the other side of the barricade, Monatte remained true to the working class.

In *"La Vie Ouvrière"* appeared the story of the General Strike in Belgium and many others, with spicy editorials, by Monatte's faithful co-worker Alfred ROSMER; there the burning questions of education, carried on by syndicalist teachers, were directed by George AIRELLE, women in industry and what not. La Vie Ouvrière was the workshop where the very best of the syndicalist movement was extracted. It was a school for the young and old alike. And in that school Monatte was the teacher, humble, modest, a man that cannot be replaced.

When the bloody thing came, Monatte and "La Vie Ouvriére" remained the only oasis in the jingoistic maelstrom where the ideals and traditions of the Syndicalist movement were faithfully adhered to. At 96 Quai Jemmapes, its headquarters, gathered the remains of the once formidable organism, and now dispersed, revolutionary battalion. There came even the Marxian Socialists Ferdinand LORIOT, LOUZON, Louise SAUMONEAU, and Leon TROTSKY. This group sent MERKHEIM and BOURDERON to Zimmerwald and published the now famous documents, "The Open Letters to the Subscribers of La Vie Ouvrière," the work of Rosmer, Rakowsky's biting pamphlet, the resolutions and proceedings of Zimmerwald, etc. They were printed by the great Metal Workers' Federation, whose secretary was Merrheim, and which as a body opposed the war and issued the famous manifesto for May Day, 1915, calling: "Let us sabotage the war."

Monatte was silenced. He was taken to the trenches, in the hope that a German bullet would put an end to such an obnoxious enemy of the capitalist regime. In the meantime, others took up the battle and the revolutionary workers were again

A GROUP OF REVOLUTIONARY SYNDICALIST DELEGATES AT THE LYONS CONGRESS

Sitting in front row, from left to right, are: Lepetit, lately of Clairvaux prison, delegate from the excavators; Dejonkere, of the railroad workers; Sirolle, of the Left Bank Railways of Paris; Monatte, editor of "La Vie Ouvrière" and delegate from the Teachers of Firminy; Loriot, teachers of Paris; Monmousseau, railroad workers; Sergent.

Standing: behind Lepetit, Louis Bouet, secretary of the militant Teachers Federation; behind Sirolle, Olivier, railroad workers of Perigueux, who read the Russian Soviet's greeting to the Congress; behind Olivier, to the left is Leon Midol, "the man of the one minute strike" on the P. L. M., on Midol's right is Marie Guillot, and still further to the right Julie René and Lucie Colliard, three militant girl teachers.

solidifying their ranks. After the Russian Revolution of March, a wave of strike epidemy sapped the rear of the French army. Revolutionary demonstrations took place in Paris, St. Etienne, Lyons and other industrial centers. The red flags of the many thousands of girl strikers in Paris could not fail to infect the soldiers on leave, who now understood that the strikes were not treason against them, but that they were trying to end the bloody slaughter.

Mutinies happened at the front, in which 75 regiments of infantry, 22 battalions of chasseurs, 12 regiments of artillery, 2 regiments of colonials and other military detachments took part. These are the figures furnished by M. Gaston Bruyant, director of the Moral Service of the army headquarters. Then America came to the rescue of the French bourgeoisie. The revolution was averted.

Next May, 1918, we witness a still greater strike, that of the metal workers, and munition workers, of which 200,000 in Paris were out demanding the end of the war. But this time the French bankers and financiers found an ally in the face of Merrheim, the Zimmerwaldian, or as Lenin called him in his paper after that conference, "the symbol of the class struggle in France." Merrheim assumed upon himself the role of saving the imperialists and war gods. He practically consented to the wholesale arrests made by the military, which included our valiant Fellow Worker Raymond Péricat, once secretary of the Building Workers' Federation.

The revolutionary syndicalists then represented a formidable minority in many powerful unions, especially the metal workers, railroad workers and excavators. But these savage jailings and expeditions to the trenches of "undesirables," weakened their ranks, especially after the shameful desertion of Merrheim and Dumoulin, who wielded a tremendous influence over the workers, thanks to their revolutionary past, Dumoulin having been 13 months in jail during the war, and Merrheim's pilgrimage to Zimmerwald.

A few months later Péricat was released and so were many others who were arrested with him. He started his brilliant weekly *"L'Internationale,"* and it played the role of a magneto. In a few weeks again the shattered forces of revolutionary syndicalism were getting together. We must not omit to mention the splendid work of *"Le Libertaire,"* the anarchist organ of the revolutionary railroad workers, metal workers and excavators, whose four contributors served sentences in prison for clandestine issues of the paper during the great mutinies. Many of its collaborators are still in prison. That paper is one of the most influential weeklies in the country.

Few months after the armistice, Monatte was demoblizied and on May Day this year, he again published *"La Vie Ouvrière,"* this time as a weekly paper. Two weeks later, the railroad workers' federation, counting 245,000 workers, had its first convention since the beginning of the war and the revolutionary syndicalists, lead by Monmousseau, Sirolle, Dejonkère, Midol (the man who called the one minute strike in January on the Paris, Lyons and Mediterranean Railway and was sentenced to one year in prison and immediately reprieved), scored a singular victory when 108,000 railroaders voted the revolutionary motion of Monmousseau, repudiating the officials and their collaboration with the government and masters, and calling for the abolition of the wage system.

Monmousseau is heart and soul with Monatte and contributes stirring articles to "La Vie Ouvrière." Monatte and his nucleus of excellent organizers, orators and writers, started the big campaign for the coming conventions in September. The Metal Workers had their convention just before that of the Confederation of Labor, and here Monatte's Fellow Workers Verdier, Coron, Vergeat, Andrieux scored a great success. One third of the unions completely repudiated Merrheim and Lenoir, their federal secretaries, and as Fellow Worker Coron says in "La Vie Ouvrière: "The vote of confidence to our officials was rather a vote of sympathy." Sympathy and regret for their heroic past.

When the great confederal congress came in the middle of last September, the eyes of the French workers as well as capitalists were trained on Lyons, says "The Irish Statesman." And it was true. Even Russia, struggling and bleeding for the world proletariat, was aware of this congress and sent its greetings to the assembled workers' delegates, which was read by Fellow Worker Coron, and greeted lustily.

Over two thousand delegates, seated in the great hall of the Exposition in Lyons, were quite nervous and agitated over the plans and intentions of the formidable minority, which had called a whole day meeting of its ranks on the eve of the congress and decided on some method of procedure and systematic work.

MILLION opens the congress with a short historic sketch of the growth of the C. G. T. "In 1901 we were only a handful of militants meeting again in Lyons, in the Labor Exchange. Now we represent two million organized workers." Then he pays tribute to the memory of PELLOUTIER, "the most representative man of French Syndicalism." He examines the task of the congress and predicts many passionate and violent battles but counsels calm judgment so that positive results should come out of these deliberations.

The congress sends greetings to all peoples in revolution, to the military and political prisoners, and demands amnesty for all.

In the afternoon session the battle starts over the moral report of the confederal bureau. TOMMASI, the revolutionary delegate of the Aviation and Vehicle Workers, starts the fire. He is a young and powerful orator. Even the bourgeois press pays tribute to his able discourse. He denounces the members of the administrative council for their insidious manoeuvres during the fateful July 21 delib-

eration and the shameful abandonment of the Russian and Hungarian struggling workers. He says that the officals did not desire the strike and they sabotaged the rank and file by sending it off.

Jouhaux then announces that the congress will discuss the whole confederal politics during the war. Monatte demands the reason for the absence of all the proceedings and official documents of the Confederal Committee.

Louis BOUET, the secretary of the Teachers' Federation, declares that ever since the beginning of the war, his federation has joined the minority and has remained true to its attitude. He repudiates the actions of the confederal bureau. He shows the deplorable effects of the abandonement of the July 21st general strike. The organization is now completely disqualified to speak in the name of the proletariat.

When the Credentials Committee reported, they found only one contest: Perrot, the secretary of the Union des Syndicats of the Seine department, allowed only one vote to the 20 railroad workers' unions. The reason was that they represented the revolutionary rank and file and would vote for the revolutionary minority. But Perrot's pretenses were too paltry and the minority scored a victory by compelling the congress to accept the 20 unions.

The next morning the congress opens with a hot critique of the attitude of the C. G. T. during the war, by Meric. But the animation starts with the mounting of the tribune by Fellow Worker Gaston MONMOUSSEAU, the spokesman of the militant railroad workers. He said that he was one of those who in 1918 voted the resolution for unity. He had expected that the C. G. T., pushed by circumstances, would enter again the road of syndicalism. "I gave my confidence to Dumoulin. I thought things would change. But since then, nothing has changed. The same politics continue. Jouhaux we saw sitting next to Loucheur at the Peace Conference. The working class had other things to do: it ought to have exerted pressure on the peace conference from without. Syndicalism has nothing in common with the League of Nations."

"But the revolutionary forces are growing. They are growing among the railroad workers and the metal workers. And the revolutionary spirit is a fact." The congress is warmed up. One feels that the blows are falling on the right place and taking effect. The majoritaires are attentive; the minoritaires applaud warmly their orator.

Then he comes to July 21: "We thought," says he, "that it will mark the beginning of syndicalist action. But once more we were deceived * * * When the C.G.T. had only 400,000 members it could liberate Rousset (a victim of military injustice in Africa) and now we count two millions and still the sailors of the Black Sea mutinies are in prison. As for the Russian revolution, whenever it was mentioned, it was to desolidarize yourselves from it. There was a conspiracy of silence everywhere. And we accuse the C. G. T. of having been, by its silence, an accomplice of the strangulation of the Hungarian revolution.

"Once Dumoulin ridiculed the yellow International and said that on that road toDamascus we shall meet Karl Legien, Sam Gompers and Ben Tillet, in company with the agents (men of affairs) of the international bourgeoisie. We shall go to the workers of all countires and rebuild the Workers' International. But Dumoulin *went* to Amsterdam. And he met Gompers, Legien, Appleton. Together they rebuilt the International of collaboration of the classes. For us there is only one Internationale, THAT OF MOSCOW."

This brings a thunder of applause. Monmousseau ends his speech with an exposition of the minoritaires' conception of the revolution: "Yes, we are revolutionists, but not rioters * * * They tell us always that the masses are not ripe for a revolution. What have you done to enlighten it? Those who have lost faith and have become sceptical, let them get out from the movement. We repudiate the C. G. T. for its attitude during the war, for its new methods which sidetrack syndicalism from its historic mission. We denounce the C. G. T. for failing to pit the working class against our capitalist class and those of other countries, which are trying to strangle the Russian revolution, after the Hungarian, so that they could easier crush our own revolution."

Monmousseau descends from the tribune amidst the cheers of a great part of the congress. After him Le Troquer defends feebly the officials. The majoritaires have a strong card in the person of BOURDERON, ex-Zimmerwaldian, a member of the Socialist Party. But he hardly touches the moral report of the bureau. He speaks of the different periods of the war. "I do not retract a word from what I have said in 1915 and 1916." In 1918, he says, he thought it was his duty to make the two factions approach each other. He recognizes that the hopes he laid in Wilson have deceived him. "One must say whether he is for unity or separation. I do not know whether I am a majoritaire or a minoritaire. Minoritaires, if you are men of action, I am with you."

Fellow Worker VERDIER of the metal workers of Aveyron then takes up the battle against the renegades. "We must go further than Proudhon's formula: *"The workshop must displace the government."* The inside government of the shop must be assured by the union against the master." Then he attacks the National Economic Council and says: "Not this we need, but the dictatorship of the workers' organizations. And this dictatorship cannot be secured but through the general revolutionary strike." Verdier had just come from the metal workers' convention, where he fought the majority to exhaustion and his voice is very low.

Then JACQUEMIN, who by the way belongs to the confederal bureau, mounts the tribune and declares that he does not share the opinions of the majority. "I was an anarchist, and anarchist I re-

main. I have tried to find out why do men change, but I have not found the explanation yet." He believes, however, that the differences are not so great and it suffices only to come again to the old methods of direct action and anti-militarism, in order to bring about revolutionary unity.

Fellow Worker DEJONKERE, of the railroad workers, is one of those who last year voted against the unity resolution. Unfortunately, he says, I have nothing to regret on account of my vote. The same politics of class collaboration and abdication continue.

At this point, the congress decides to limit the number of orators on the moral report to five for each tendency, while in fact the majority had seven, for Jouhaux and Dumoulin concluded the deliberations.

Rougerie, a member of the Socialist Party, acts as the great conciliator. Last year at Clermont-Ferrand he prepared the *rapprochement* of the two tendencies. It took him a long time, he says, to decide whether he was a minoritaire or a majoritaire, for he has taken in the Socialist Party a position that does not coincide with his position in the C. G. T.

After this manoeuvre of the astute politician Rougerie, comes the first orator of the minority, our valiant MONATTE. He reviews the attitude of the officials ever since the first day of discord, which was caused by the jingoistic speech Jouhaux delivered on the grave of Jaurès. Then he mentions the trip in the ministerial train to Bordeaux. On this point Gauthier, of St.-Nazaire, says that this is not true. "It is true," says Bourderon. The congress is on its feet. Arguments are started. One feels that Monatte's critique touches the essential, the sensitive points and he will be without mercy.

Monatte reminds the congress of his letter of resignation from the Confederal Committee and the reasons thereof: Jouhaux commissaire of the nation, his lecture tour on behalf of the government. He reads the letter he had received from Million, the secretary of the Union des Syndicats of the Rhone district, which admirably analyzes the effects of the traitorous attitude of Jouhaux and his clique. "In this period, we are looking at the sabotage of the ideas that were dearest to us and of the working class organism in which we had placed all our hopes and for which we have sacrificed our freedom and our lives. However, I believe that this is only a momentary departure and that the clarity of our international thought will dissipate all confusions brought about by the 'revolutionary neo-nationalism.'

"This letter has its importance and shows that, in the first months of the war, the panic was not general.

"*The war was the condemnation of the capitalist régime and its greatest crime.* It has no more right to lead the world after it has brought it to the slaughter. What bitterness, in this moment, to see Jouhaux on the side of the governments and the co-responsibility charged to our central organism." And Monatte cries: "*The men that have done that are not worthy any more to interpret the thought of the French labor movement.*" The congress applauds him warmly. This part of his speech produces a profound impression. He then goes into the reorganization of the administration of the C. G. T. He accuses the officals of having atrophied the function of the Bourses du Travail (Labor Exchanges), in order to secure them the hegemony over the central organization. He blames the officials of having transferred the direction of the movement from the rank and file into their own hands.

After a skillful blow at the confederal bureau, whose climax was the malicious statement of Marcel Laurent, a joint secretary of Jouhaux, the congress is again in turmoil. Laurent attempts to answer, but the delegates hoot him and he sits down.

"The confederal leaders have associated themselves with the government in its need of peace. We do not desire to help the bourgeoisie to save itself. It has condemned itself and we condemn it."

Some one shouts: "Then this is disorder."

Monatte replies: "Disorder, the capitalist regime is disorder. There is the abyss. We must jump over it. Some people, who like us, know that the bourgeoisie cannot save itself, still hesitate. This is the case of Merrheim."

"We shall follow the wave and will try to be what true militants ought to be. Renan, in 'The Life of Jesus,' studying the psychology of Judas, writes: 'In him, the administrator had killed the apostle.' The administrator and the apostle ought to make one body. Too often does the administrator kill the apostle."

The congress, which follows the discourse with great interest, applauds long. Monatte concludes with the following: "At present we have a great duty: it is the salvation of the revolution which is already in the world. Amongst you has been distributed the appeal of the Central Soviet of the Russian labor unions. The answer that we must give them ought to be the practical conclusion of this congress. For as Robert Smillie, the president of the miners federation of England, has said, *at the present moment there is no greater labor question than the intervention in Russia.*"

Monatte ends. Long applause resounds in the tremendous hall. And then, spontaneously, THE INTERNATIONALE rings out. All the delegates arise, the majoritaires follow reluctantly; only the confederal secretaries remain seated. Whatever the congress decides, says Rosmer in "La Vie Ouvrière," we have scored a great victory.

The Socialist and Bourgeois press pays tribute to Monatte also. They say that no other delegate ever received such an ovation as Monatte. His career, his spotless past and his uncompromising attitude ever since his entrance in the labor move-

ment contribute to the respect and confidence he inspires in the hearts of the workers. Even Dumoulin pays him homage by saying that he has felt the beauty of his discourse. "What you have suffered, I suffered also. What you just did now, I did in 1918."

Marty-Rollan, a majoritaire, does not dare to speak right after Monatte, for his talk will be ineffective, so the congress adjourns for the next day, when he speaks and then Ferdinand LORIOT, of the teachers federation, Lenin's friend and one of the few true Marxians who is a Bolshevik. After him Bidegaray, the conservative secretary of the railroad workers, who makes a naive and humorous speech. Then Fellow Worker Raymond PERICAT mounts the tribune and delivers a philippic against the renegades, accusing them of abandoning him and his co-workers, when they were persecuted by the government.

Bartuel, the miners secretary, defends feebly the confederal politics. After him comes the young and fiery LePETIT, of the Parisian excavators' union, who had served, until last April 10, a two years sentence in Clairvaux. He animates anew the debate. He says that he was one of those who, in the beginning of the war, answered the call of Merrheim and Bourderon. He had worked with Merrheim, who for a given moment incarnated French syndicalism. "I asked him, on my part, why he had repudiated his ideas, why did he repudiate Zimmerwald, and why he deserted his friends of the minority." "Bourderon demands to know if we reproach him with having gone to salute the great democrat Wilson at Brest." Yes, we accuse him of having saluted the man that Lenin calls "the greatest hypocrite." Lepetit finishes his live speech as follows: "We refuse to bring our stone to the capitalist edifice. We desire to create the worst difficulties for the capitalist regime."

The majoritaires have one great trump card in the face of MERRHEIM, whose past role and the beautiful traditions he had left in the C. G. T. make him quite an impregnable fortress. He is, or rather was, the most probable leader of the coming French revolution. Lenin, Trotsky and Tchicherin played him strong, but he proved to be a timid and calculating labor leader, who has no prototype in any other country. If he had remained with the minority, as well as Dumoulin and a host of other younger militants, Clemenceau might have sung his swan song a year and half ago, during the great strikes and mutinies. But Clemenceau was shrewd, and though he hates and fears Merrheim more than any other man and threatened to imprison him while still in opposition, he switched around and left him unmolested. A better policy could not be applied: a Merrheim in prison would have been worth 10,000 Merrheims out of prison.

His defense is remarkably sincere. After Zimmerwald, where he met Lenin and had an eight hour private talk with him, he says: "I did not betray the working class; the working class betrayed me, by following the jingoes and renegades." He accuses the working class of having fallen in materialistic immorality, which is manifested by the demand for wages and more wages, instead of more fundamental principles.

Fellow Worker Henri SIROLLE, the much heralded one by the American yellow press, then, as the last of the minority orators, resumes the attack upon the officials' citadel. He is a young and able orator, an uncomparable organizer of the Left Bank railways of Paris, a man that has done a great deal for the mustering of the revolutionary forces of the railroad workers.

Dumulin and Jouhaux, almost in tears, apologize, equivocate and shrink under the leashing of the militants of the minority. The defense, however, is quite effective, because through a manoeuvre and a trick, they steal the program, a valuable portion of it, any way, of the minority, and put it to a vote before putting to vote the moral report, so that the delegates will think that they have become revolutionary. The deception is quite successful, for few delegates, like Marchall of the railroad workers, though instructed to vote against it, approve it by a large vote.

The resolution of the majority recognizes the class struggle and is for the expropriation of the capitalist class and establishment of the communist order. These are pretentions but very effective for the time being. They defend the Russian revolution and engage themselves to stop all ammunitions and arms for Koltchak and Denikin and condemn in the strongest terms the imperialistic designs of the Entente.

Five hundred and eighty-eight of the largest unions of the most strategic industries vote against the moral report of Jouhaux. The vote stands 2 to 1.

Monatte, Rosmer, Monmousseau and Sirolle think it was a great victory for the minority. Numerically, their victory is much greater than it appears. Our syndicalist friends do not believe in the proportional representation system and thus their strength is not so evident. Judging from later developments, they can claim greater numbers.

Since then their ranks have been flooded with new recruits. Jouhaux and Dumoulin have lost the last vestige of confidence, because they betrayed the workers again by coming to Washington and not keeping their solemn engagements to save the Russian revolution.

The minority have 9 delegates in the Confederal Committee, which is composed of 30. Their delegates are: Marthe Bigot, a girl teacher, good rebel and brilliant writer, Bouyé, of the metal workers, Lepetit, of the excavators, Loriot, of the teachers, Monatte, Monmousseau, of the railroad workers, Roux of the postal, telegraph and telephone workers, and Tommasi, of the aviation and vehicle workers.

They have started a live agitation for a general strike to save the Russian revolution and demand complete amnesty (which was voted but did not include the sailors from the Black Sea mutinies).

Already the "Union des Syndicats of the Seine" (Paris) district has begun that agitation and compelled the whole C. G. T. to consult its members on the question.

The minority is doing a remarkable work and feverishly increasing its effectives.

We can rest assured that they will do thier duty by the Russian revolution by, as Monatte says, making one at home.

# The Labor Movement of Great Britain

BY GEORGE HARDY

The Labor movement of Great Britain presents, both politically and industrially, a complicated outlook. There are no less than eight parties who run candidates for parliament claiming to represent labor alone. Industrially there is the unofficial and official side to the trade union societies, wielding as much influence as either of the above groups.

The Labor Party, to which is affiliated the I. L. P. (Independent Labor Party), cannot be said to be out for any great radical change in the capitalist system. Capitalist exploitation is not denied by the great bulk of its members and representatives in parliament. They do not even measure up to that "alluring" program sent out in 1918, which has helped to deceive lots of progressive workers in the United States into believing the L. P. is a revolutionary body.

State capitalism is about the highest conception they have of what they term "socialism." Hence, Mr. Arthur Henderson does not have the influence imagined by the world of labor outside Britain. The most that can be said for them is that they do draw attention to pending legislation injurious to the worker, as in the case of the "Industrial Courts Bill" recently introduced, but owning to labor's hostility may become a dead letter. (This bill has now been passed. No objectionable clauses were withdrawn. Not even the Laborites in Parliament were unanimous on it. This means that a separate court now will be set for strike cases.)

On the other hand the large unions such as the miners' and railwaymen's have a different conception of nationalism, to that of a bureaucratic state administration through the Ministry of Transport or Mines.

Although the railwaymen's executive seems to have accepted the government's offer of joint control of the British railways by five railway company officials and five appointed by the unions (three from the National Union of Railwaymen and two from the Locomotive Engineers and Firemen's Union), there are many groups of railmen who do not agree with such a program. J. H. Thomas, the general secretary, says: "It is the first step to complete control." It is no exaggeration to say if a campaign had been carried on for the abolition of capitalism equal to that carried on for nationalization and joint control there would have been a possibility of an industrial republic coming into operation in the last rail strike.

The proof that the miners are against even the program of nationalization brought forward by their own executive can be gathered by association with the miners in their homes and lodge meetings (branch meetings) where one hears discussions of control by pit and colliery committees.

The Miners' Federation of Great Britain, headed by Robert Smillie, have embodied in their plan for control and nationalization that the miners' representatives shall control half the committees and the community representative the other half, with the mines owned by the state, even though it is a capitalist state.

The miners on the other hand have issued a pamphlet (unofficially) that is widely read and studied and voted on in branch meetings and conferences. Their idea of control is to abolish capitalism entirely, leaving no evidence of private ownership. They seek to use the M. F. G. B. as the instrument of control. They would appoint a coal controller through the union whose function it would be to deal with distribution at home and abroad.

The coal controller, working through the miners' executive, would place the national production in their hands, who would then distribute the orders to given areas. These areas would also have executives who would allot orders to the various colliery districts in their area, according to their productive capacity. Thus the branches would have jurisdiction over who would elect a colliery committee which would be absolutely responsible to the branch.

The colliery committee which would be elected by the miners would work in conjunction with pit committees which take care of the coal getting processes. Always safety would come before production and the speed up methods of today would give way to the safeguarding of human life. Needless to say the technical management of the collieries would have to be appointed and undergo a rigid examination. These, however, the miners insist should come from the ranks of the industrial workers in the mines.

The government is fully aware of this preparation to run industry for use instead of for profit. It may be added that they are carefully watching the full time teachers of Marxian Economics and Industrial History, who are paid by the miners themselves. The railwaymen also have the same

educational system, which is a part of the Central Labor College.

It has now leaked out that while Auckland Geddes, a cabinet minister, was speaking at a secret meeting of employers in Manchester, he made a very bold statement that was not intended for public consumption, in which he said: "The clash was bound to come between trade unionism and the government," and that "The government would use all the powers of the state." The lord mayor of Manchester was at the meeting and being new at "playing mayor," delivered a speech, later giving out the above statement. Capital is now being made of it to build up a machine to cope with anything the government may do.

It may be said that definite strides are being made for publicity in strikes through the Labor Research Bureau which did such good work during the late rail strike. Machinery was also existing in the railstrike to deliver food to the workers from the co-operative societies' warehouses by the Vehicle Workers' Union, whose members own many thousands of the taxis, etc.

It will be shown that very definitely the workers are formulating a program of industrial communism that will ultimately clash with the Kerenskys in the Labor party. The high feeling is very pronounced at present and must become more and more so as time goes on. So, although the movement may seem complicated, it becomes very clear as you get closer to it. All in Britain ask what are the Americans doing? I say to the Americans, answer them by doing as the British workers are doing, which is identical with the I. W. W. program.

Join the I. W. W. and build the future Industrial Republic.

(Underwood & Underwood photo.)
Ex-service man in England going about in chains, to signify that he is jobless and breadless.

## Song of the Beast

I have dug you deep mines
To the heart of the earth.
And made you sweet wines
To foster your mirth.
I have built you great ships
To master the seas.
I have slaved 'neath your whips,
While you lived in ease.
I have toiled in your mill
And gathered your grain.
I have sweat at your will
In the sun and the rain.
But I am tired of you now;
You must leave me alone!
For myself I will plow
And reap what I've sown!
So give me my right!
Keep out of my way!
The past was my night,
But this is my day.

—C. O. G.

## Two Men Are Leaving the Prison Today

Two men are leaving the prison today—
Two thousand watch them go.
Two men smile as they walk away—
Two thousand caged-in men must stay,
Two thousand still in woe!

Two men are leaving the pit of hell,
But they leave two thousand there,
Who rush like mad at the ring of a bell
And crawl off to sleep in a dirty cell
And breathe in filthy prison air.

Two men are leaving the prison walls
With a five dollar bill to spend—
Two thousand men in the cells and halls
Turn back again to the bugle calls,
Like galley slaves to the end.

Two men shall see their homes again—
Two thousand men shall not!
A few shall go who die self-slain,
A few shall break and go insane.
But all of the men shall rot!

—C. O. G.

# Sowing the Seeds of One Big Union in Mexico

By IRWIN GRANICH of Mexico City

Mexico is a small notion, undeveloped and at the mercy of a larger imperialistic neighbor whose mouth is watering for the rich spoils and resources of conquest. It is from this angle that every thinking worker's sympathy and support goes to the victim. American labor must fight any action that would strengthen the power and plans of the imperialists at home. This is proper, and yet I would warn every labor man to suffer from no delusions as to the revolutionary ardor of the Carranza government. There has been a lot of nonsense on this score printed in both capitalist and radical papers. On the one hand this cry is made a means of blackening the Mexican government in the eyes of American conservatives. On the other side, Carranza press agents are conducting a deliberate and tireless propaganda to capture the sympathy of American labor for their regime. To do this they speak of all the great laws and glorious benefits Carranza has brought labor. They hint at nationalization and other such radical measures, but after a year and a half of personal observations here in Mexico I assure you it is all bunk. Let us all fight intervention in every way for the sake of the Mexican workers and for ourselves, but let us have no false notions as to the radical deeds of Carranza.

I will just give a few details of his attitude toward labor and then pass to the more hopeful story of how slowly and surely a powerful current toward industrial unionism is setting in and how in a few years I believe Mexico will have an I. W. W. organization greater perhaps than the parent body in the United States.

The Mexican revolution was conducted by a middle class element of farm barons and business men who had tired of the feudal autocracy of Diaz and who wanted the usual bourgeois liberties—free press, free commerce, the vote and a chance at office. This class, as in the French revolution, rallied the workers to fight for the victory of this cause by writing all sorts of social promises on their banners. "Land and Liberty" was the catch-word that whirled the workers into the ranks of battle and made them fight and die in thousands for what they conceived to be a social revolution. When the revolution was won and sealed in the blood of the toilers, the bourgeois liberals stepped in and gathered the fruits, as usual.

It is a long and complicated story, and I shall not tell it here in full. Enough to say, not a single pledge of the revolution's program has been redeemed by either Madero or his successors. If the present regime still talks about nationalizing the oil fields, for instance, it is only that the oil fields may be taken from American capitalists and given over to Mexican capitalists. Large tracts of land were confiscated by the revolution, but the peons failed to get a clod of it. It all went to the generals and other saviours—as usual. So on along the line.

A lot of resplendent and "progressive" labor laws were put on the books during and since the revolution, but they are all scraps of paper. They are not enforced. The average working day is still some ten hours in the cities, and the pay is about from $1 to $3 per diem, even for the most skilled labor. Unemployment dogs the footsteps of every worker. There are no statistics on the subject, but talking to hundreds of them, I would estimate that every Mexican worker is out of a job about half his active time. The truth is the average Mexican worker, everywhere, is in about the same fix as the migratory workers of the United States, with the same wages and status, and the same feeling of insecurity—even the same clothes. The revolution

It has brought them, if anything, a repetition of the oppression and slaughter that they met under Diaz. For instance, about five months ago the school teachers of Mexico City went out on strike. They had not been paid for three months, and Carranza issued a manifesto calling them traitors for having struck. All the unions of the metropolis called a general strike in sympathy. The newspapers failed to come out, the cars stopped running for a day—and then ran at normal, every car manned by a scab. They didn't have to import these scabs, either; there are always thousands of unemployed in the city.

Carranza brought out machine guns and police and scabs and broke the strike. He turned the fire hose once on a meeting of women school teachers—something that wouldn't go above the Rio Grande. He acted just about the way Wilson would have acted in a similar crisis, despite what his propagandists say in the United States.

There was a general strike in Tampico among the oil workers. Military and machine guns again, and Carranza troops killed five Mexican workers and wounded many others for striking against the hated American oil corporations.

Yucatan was the only place in Mexico where the social hopes of the revolution were being worked out in reality. Every worker there was organized into a Socialist union, under the leadership of the greatest and most honest man in Mexico—Felipe Carrillo. The red flag waved over the government offices, and the workers did not need to strike; they took everything they wanted in the way of wages and conditions by mere announcement. They were always held back from complete confiscation by the United States on one hand and the central Carranza government on the other. Were it not for these two factors there would be a Soviet republic in Yucatan today.

As it is, Carranza is now busy wiping out by murder and riot whatever little good there was in Yucatan. There is an army of occupation now in Yucatan. They have executed about a hundred Socialists in the past few months. They stepped in

and took over the last election by force of arms. Carrillo has been shot at twice in the streets. The co-operatives have been broken up and the next step all feel will be the suppression of the unions which are organized on industrial lines.

In Tampico all the union halls have been closed by the military. The Casa de Obrero Mundial, which is the Mexican Industrial Workers of the World, has been closed down. A curious phase of the situation is that the suppressions are in charge of a Col. Orosco who was a Huerta general and lately turned to Carranza.

At the battle of Celaya, which was the turning point in the Carranza revolution, he led the Huerta forces. Arrayed against him, fighting for Carranza and the revolution, were the Battalones Rojos or Red Battalions, formed by thousands of workers mainly from the Tampico oil fields. They won the battle for Carranza and now Carranza has sent the old reactionary they fought and defeated to put them down. It is a striking symbol of what the Mexican revolution has degenerated into.

This, however, is the government's side of the class war. On the side of the workers there is something as powerful stirring. The workers had been aroused to a climax of hope by the revolution, and when nothing materialized went through a corresponding reaction of pessimism. In the past two years, however, there has been a renaissance of hope, stimulated directly by the example of Russia and by the influx of hundreds of young Americans of industrialist and Socialist affiliations who escaped here during the war period.

To begin with, one must understand that Mexico has not even an A. F. of L. movement as we know it in the United States. Labor is organized on a regional basis, along almost industrial lines. The workers around the Tampico oil fields, for instance, whatever their craft, belong to the Casa de Obrero Mundial, and maintain relations with the factory workers of the Orizaba section, who have their own industrial union or the farm workers of Zacatecas, who have another powerful sectional union of their own. There is no central national body, and no definite affiliation with the American Federation of Labor.

Every one of these unions is in the control mainly of radicals who call themselves anarchists, Socialists, I. W. W. and what-not. They issue revolutionary manifestoes, make appeals for the class war prisoners in the United States, hang red flags in their halls, pledge their support to Russia, all independently of each other, all in different terms and degrees. Tactics and program are all hazy in the midst of these various groups, and one finds nowhere evidences that there is a clear-cut policy of any sort linking the nation's workers together.

There is utter confusion of doctrines and ideas, no strong central organization whatever, and what is more, not even a knowledge that this is what they need most of all.

The only hopeful element is that the Mexican worker is almost unconsciously radical and ready for the message of One Big Union. He has none of the bourgeois delusions that have been bred into the American worker; he has not the slightest itch to put on a white collar and to strut up and down the plaza on Sundays posing as an "intellectual." He is virgin soil, and what is more he is always a worker and wears his blue overalls to dances as well as to work; and you can't shock him with any new idea. He is willing to learn and listens with native sympathy to anything having a working class dialect.

Talking the situation over with workers here many of us felt that the greatest need of the nation was some sort of solidarity and program on which all the labor forces of the nation could unite. Regionally, they were doing nothing, only winning or losing a sporadic strike here and there. Nationally organized they could present a solid front to the enemy; could take concerted action and determine the revolutionary ends on which they could all work in common.

This step was taken through the First National Socialist Congress of Mexico, held in Mexico City from the 25th of August to the 4th of September, 1919. Delegates from every section of the country came, and from every division of industry. It was like an I. W. W. convention in many ways; the delegates came by freight—some of them; they slept on the benches of the hall, and ate there. It was a workingman's convention—oil workers, farm workers, miners and city proletariat came in their blue overalls and straw hats.

Now the Socialist party, through which the convention was called, was not bringing these workers here to convert them to political action. No worker believes in political action in Mexico, for they have tried it again and again and it has rebounded on them most evilly. Every political party, even the Socialist, in Mexico, is filled with elements who are there merely to swing the workers over to the support of some general or lawyer, not a Socialist, who happens to be running for some office. The workers know this and refuse to be used.

The Socialist party, dominated by I. W. W. elements, had called the congress because there was no union able to call it. It was called for the purpose of bringing to the workers the message of One Big Union and to help them create a national body based on industrial lines.

This it succeeded in doing, despite the sabotage at the convention of such elements as Luis Morones, the Gompers lieutenant in Mexico, a fat, big, bediamonded labor faker on one hand, and Linn Gale, an American adventurer and labor provacteur who has a shady past and has just organized a so-called Communist party of six or seven members for some sinister ends.

This Gale is worthy of a word at this point. Being way down in Mexico, far away from the American movement, he has been able through columns of words to impress good people in the north with

the illusion of his sincerity and radicalism. He is really a nonentity, dangerous only because he is trying to bleed the movement for money, and because he is of the type that will ultimately sell out and turn spy—if he has not already achieved this profitable end, as the Soviet Bureau in New York believes.

He began his career in New York by running a Tammany Hall weekly and working on one of Glynn's newspapers upstate. Then he fled the draft and landed here. He immediately set up a "new thought school" and proposed to heal incurable cases through Jesus Christ at so much a cure. Tnis didn't pan out and he started his magazine with Carranza money, as he himself acknowledges, and professed Socialism. It is needless to go into the history of his career here. He has run a matrimonial agency, a bill collecting bureau, an English school, a real estate office, a book reviewing syndicate, a new thought laboratory, a Church of the New Civilization, a book store for occult literature and so on, all at one and the same time. When he espoused Socialism his first announcement was to the effect that now the Bolsheviks of Mexico had a leader, which made some of the older Bolsheviks a little mad, of course. In his magazine he calls himself the future Trotzky and Lenine of North America, and so on.

Despite his insidious lying, such as telling Mexicans that some of the other foreigners were spies, and so on, and despite Monores and his open sabotage, the convention adopted a revolutionary program which affiliated Mexican labor with the Third International at Moscow, and with the I. W. W. of the United States.

**The first clause of the platform states that the unions of Mexico must organize industrially and nationally and must maintain relations with the I. W. W. of the United States. Later in the platform this is elaborated in detail.**

The delegates went back to their various regions and reports of the congress have been printed in all the regional labor papers, also as a pamphlet. Two new newspapers were started as a result of the congress—"El Soviet" in Mexico City, and the "Industrial Worker" in Vera Cruz. In every section of the republic now the message of the congress has been heard. The general secretary will write for I. W. W. charters when things have been whipped into some sort of shape. The I. W. W. constitution is being translated for the use of the delegates in the various regions, and already several tentative locals have been formed. The big job, however, that the delegates are concentrating on is to get the great regional unions now in existence to unite with the I. W. W. and adopt tactics and aims of this organization.

They are bringing it up at every meeting and in all the labor papers this discussion now rages. The consummation of this work is not far in the future, and when it is accomplished there will be an organization that will fear neither American nor Mexican capitalisms, but will walk steadily on the path that leads to One Big Union all over the world.

(Editor's Note)—In a previous number we published an article sent us by Linn A. E. Gale who is here so strongly condemned. Said article reported the formation of a "Communist Party" in Mexico which also is supposed to have endorsed the I. W. W. The only point upon which the two reports agree is that one Morones is an agent of the Gompers interests. It appears at this distance that the workers of Mexico are having their first experience with the political parties of Socialism. A short period of such experience will probably teach them the necessity of following the example of I. W. W. and organizing apart from all political movements purely as an industrial organization that will include only actual wage workers. Co-operation with political groups will be disastrous in the end.)

# The Elements of the Socialist Movement

BY HENRY VAN DORN

Broadly speaking, the elements which today compose the Socialist movement of the world may be divided into two groups: First, the Socialist patriots, or the reformist political Socialists, who are most prominently represented by the German Majority Socialists and the Russian Mensheviki. This group went on record at the Berne Conference as being opposed to Bolshevism. Second, those Socialist and labor organizations that participated, or at least were invited to participate, in the Communist International which met at Moscow on March 2, 1919. This latter group include the Russian Bolsheviki, the Spartacans of Germany, the Italian Socialist party, the Communist parties of America, the I .W. W. of all countries, and the Syndicalist organizations and Communist parties of various European countries. Here should also be included the One Big Union movements of Canada, Spain and Australia.

In order to properly understand the importance and true status of these various elements in the Socialist movement we must first ascertain the reason for the sudden and ignominious collapse of the Second International at the outbreak of the World War. How is to be explained the appalling fact that after many arduous years of education and organization along these lines of scientific Socialism, the many millions of European Socialists, with but insignificant exceptions, forgot at the first sound of the bugle all about the universal brotherhood of the working class and were swept body and soul into the camps of nationalism and imperialism?

The answer is simple: The Second International was not at the outbreak of the war a revolutionary, militant working class movement. Instead, it had developed into a reform movement led by professional middle class journalists, politicians and theoreticians. Acting as the high priests of the movement, they had by over-subtle arguments led their followers from the highway of direct revolutionary action aimed at the quick and complete overthrow of capitalism into devious zigzag paths of petty reforms, political action and compromise with the powers that be, all of which could end in nothing but perplexity and dismay.

The Social Democracy of pre-war Germany was a gigantic institution with a large treasury, which owned hundreds of newspapers and buildings of assemblage, staged entertainments, lectures and concerts, attended to the people's educational and social wants, sent representatives to the Reichstag and embraced within its membership workmen, peasants, doctors, lawyers, small business men, actors, journalists, politicians, in fact everybody and anybody except bankers, big capitalists and big landed proprietors. Its spokesmen and theoreticians were members of the professional and middle-class who had either long ceased or had never had anything to do with the working class, with its trials and with its misery, nor did they possess, as, for instance, the Russian Revolutionists, the advantage of having suffered for their convictions. Consider the careers of Singer, Bernstein, Kautsky, Scheidemann, Legien, David, Haase. So we see that the German Social Democracy prior to the war was not a proletarian revolutionary movement. This applies also to the reformist orthodox Socialist parties of France, the Scandinavian countries, England, Russia, etc.

Although the leaders of pre-war Socialism constantly cavilled over the interpretation of the teachings of Karl Marx, neither they nor the movements which they represented were Marxian either in theory or in tactics. For instance, they sinned against each of the following three cardinal principles of Marxism: Against the economic interpretation of history, in its practical application to the situation confronting them, against the dictum that the liberation of the working class is the work of the working class itself, and against the postulate that the transition from capitalism to Socialism can only be accomplished through the dictatorship of the proletariat.

The economic interpretation of history clearly shows that the shape which the social, judicial, legislative, religious, political and other institutions of any period of society assume is determined primarily by the economic structure of that period of society, in other words, by its mode of producing and distributing the means of livelihood. The implication from this is that the political state under capitalism exists by virtue of its being of service to the capitalist system of production and that it cannot operate in any way except to the benefit of that system of production. With the disappearance of capitalism would disappear also the capitalist political state, but up to such time that state could not possibly be anything else than a capitalist state. Yet these pre-war Socialists, in direct contradiction to the economic interpretation of history, were naive enough to believe that they could use the capitalist state as an instrument for the abolition of capitalism itself, which end they intended to attain by voting and by parliamentary action.

As for the dictum that the liberation of the working class is the work of the working class itself, surely the middle class intellectuals at the head of the Socialist movement at that time could not be expected to liberate a class to which they did not belong, namely, the working class. The personal equation plays a much larger part in the class struggle than is commonly supposed. When a workingman is sent to congress or to the house of commons or to the reichstag or gets elected a high official of a large labor organization such as the A. F. of L., and thereby attains an income about ten times the size of his wages, he ceases to be a wage

earner and becomes a member of the middle class, his personal struggle with the world for a livelihood has been brought to a successful end. Henceforward he lives in a state of economic security, subconsciously, at least, he works for a continuation of such a blissful state of affairs, and unless he be a man endowed with an exceptionally forceful character and keen intellect, he is bound to become more conservative day by day. The result is that instead of being a help he becomes a hindrance to a progressive working class movement. If this be the case with an official who springs from the proletariat, how much worse would it not be when the man springs from the professional or the middle class?

There are instances without end to illustrate the truth of the above contention. The rank and file of any working class movement is always more radical than its leaders. As soon as Millerand, Briant, Vandervelde, Guesde, Thomas, rose to the position of cabinet ministers they turned traitor to the working class. When it comes to being reactionary, most of the high salaried officials of the A. F. of L. some of whom receive as much as $10,000 per year, outstrip their capitalistic brethren. It is sickening to think of the number of strikes that they have sold out. The A. F. of L. will always be an incubus on the backs of the workers of America until it gets rid of these high salaried officials. None of the American Socialist renegades were members of the proletariat: Spargo, Walling, Russell, Stokes, Bohn, Wright, Sinclair; one and all they were either clergymen, journalists, gentlemen of leisure, or what not, anything but workingmen. What could illustrate plainer than this that a non-union workingman cannot be trusted to fight the battles of the working class when the crucial moment comes? The only solution seems to be the policy of the I. W. W., which pays its officials, from the highest to the lowest, a uniform salary somewhat below the average wage of an ordinary worker. Then one may be assured of the unswerving fidelity of these officials, since they are working for an ideal and not for money. And yet the pre-war Socialist movement was in the hands of high salaried, non-working class leaders.

That there might ever arise the necessity for a dictatorship of the proletariat was considered by these political Socialists a laughable impossibility. Why, said they, we will simply vote ourselves into power and then, being the strongest party, we will abolish capitalism and establish Socialism. As easy as falling off a log, said these "Marxians."

Then came the war and the feeble-kneed bourgeois Socialist parties of the Second International went to pieces. They evaporated, faded away into the atmosphere, were simply nowhere around. There were no longer any German Socialists, French Socialists, English Socialists, Belgian Socialists; there were now only Germans, Frenchmen, Englishmen, Belgians. A sadder, more disheartening spectacle our long-suffering earth had never witnessed.

Of course, there were factions which had not so entirely forgotten the mission of revolutionary Socialism. These minorities of the Left Wing of the Second International convened in the fall of 1915 at Zimmerwald, Switzerland. But the conference again split into two camps, the Social Pacifists, led by Kautsky, and the Communists, led by Lenine. From that time on the Communists gained rapidly in numbers and in power, the climax coming with the Russian Communists, or the Bolsheviki, seizing the reins of government in November, 1917.

The Social Pacifists developed into the Independent Socialists of Germany, who with the fall of the Kaiser, began to play quite an important role in German political life. However, being infused with characteristic middle class indecision they have vacillated between the reactionary Majority Socialists and the extremist Spartacans. In the future they are bound to identify themselves with either the one or the other of these opposing forces.

The Italian Socialist party was the one noteworthy exception to the collapse of the European Socialist parties at the outbreak of the war. Notwithstanding the treachery of Mussolini, former editor of L'Avanti, the party's daily organ, and of De Ambris, leader of the Syndicalists, the party officially never came out in favor of the war. To this day it has unflinchingly stood for the principles of revolutionary Socialism and for the proletarian revolution, war or no war. That is the reason why the Italian Socialists may be reckoned on doing great things once they get started in cleaning their country of capitalism.

Ever since the Bolsheviki came into power the French Socialists have been drifting more and more towards the left. Prior to the war Jean Longuet was the leader of a negligible minority, but from the 1918 party congress he emerged as the leader of a radical majority. He in turn is in danger of being overshadowed by Loriot who is an out and out Communist and will have nothing to do with the moribund Second International. The Berne conference was the occasion for forty-one social patriots, headed by Albert Thomas, breaking away from the radical majority—and a good riddance it was! So we see the Communist sentiment growing stronger in France every day, and the time may not be far off when the French Socialists will stand solid for the proletarian revolution.

The decisive role in France will be played, however, by the Federation Generale du Travail. On its policy depends the future of the revolution. With its two million members who are becoming imbued with the spirit of revolutionary industrial unionism, it will decide the fate of France.

The English worker is also steadily drifting towards Communism. The Shop Stewards' Movement is a sign that the workers are beginning to take things into their own hands. The purely political Socialist group in England is an insignificant one, and we must look to the big industrial unions for the overthrow of capitalism. This cannot be ac-

complished by political action in any country where capitalism has attained a high stage of development.

The Russian, German and Hungarian revolutions proved beyond the shadow of a doubt the utter futility of parliamentary action. The Kaiser, the King were not overthrown by the ballot, but by the bayonet. In other words, by force. And again, when the Bolsheviki superceded the feeble, blundering bourgeois Socialist government of Kerensky they did not vote themselves into power. They simply took that power. Ever since that memorable day of Nov. 7, 1917, the criterion by which to gauge the usefulness to the working class of the various Socialist and labor elements throughout the world has been their readiness to use direct, uncompromising mass and industrial action for the overthrow of capitalism and the establishment of industrial democracy. Let me mention here in passing that Bolshevism or Communism is nothing more nor less than dynamic Socialism, or Socialism in practice.

Even since 1903 when the Bolsheviki became a distinct party in the Russian Social Democracy they have maintained a policy of no coalition and no compromise. Everything or nothing, was the their watchword. But nevertheless they were a political not an industrial organization. Their success was due mainly to three factors: First, the incredible corruption and rottenness of the Tzarist regime, second, that they early recognized the futility of pure political action and directed their efforts toward the seizing and organizing of the industrial bodies known as Soviets. As is well known, Trotzky was the president of the first Petrograd Soviet, organized in 1905. Third, that Russia is an agricultural country with only a small percentage of the population engaged in industrial pursuits, has no middle class to speak of, but had a large, illiterate, inert peasant population which by being given land, bread and peace was won over to the side of the Communists. Under these circumstances the Bolsheviks went over the top for Socialism. However, let us not make the mistake of supposing that the tactics which succeeded in Russia will succeed in other more highly developed capitalistic countries, which present an entirely different industrial and social complexion.

Let us take, for instance, Germany. Upon the overthrow of the Kaiser the Majority Socialists captured the political state. But since the industries continued to be owned and operated by the financiers and capitalists and the land by the junkers, the capitalist political state, which only exists by virture of being serviceable to capitalism, could function only for the preservation of the capitalist regime. Thus, notwithstanding its Socialist office holders, it was an obstacle in the path of the progressing working class. And so we come across the sorry and paradoxical spectacle of the Socialist Noske slaughtering his fellow Socialists by the thousands upon the streets of Berlin and in every nook and corner of Germany. The Communists, under the leadership of Liebknecht, Luxembourg and Mehring, put up a brave fight, but wave after wave of Spartacan uprisings was ruthlessly put down in Berlin, Hamburg, Bavaria, Dusseldorf. From the latest reports it seems that the German workers are coming to realize that by simply following the Bolshevik tactics of mass action they will not get rid of capitalism, and are now organizing in revolutionary industrial unions. When these unions will grow strong and efficient enough to take over and run industry then will the proletarian revolution in Germany become an accomplished fact.

The same cleavage which developed between the Majority Socialists and the Spartacans in Germany, between the followers of Albert Thomas and those of Longuet in France, has developed between the Socialists of every other country. The Socialist party of the United States by its St. Louis platform took a stand alongside the Italian Socialists as being wholeheartedly opposed to the capitalistic war. The social patriots, traitors of the ilk of Spargo, Russell and Bohn, were thus gotten rid of early in the game. Nevertheless, sooner or later the party had to take issue with Bolshevism, with the inevitable result that the Left Wing elements were expelled from the party by its standpat, political action high priests, who are the American counterpart of Ebert, Scheideman, Kerensky, Thomas and Henderson. Thus were born the Communist parties of America.

Slowly, but surely, Socialist workingmen are emancipating themselves from the fallacy that wage slavery can be abolished through parliamentary action. Reluctantly they part with their hope of political power, but as the final collapse of capitalism approaches they begin to discover that industrial unionism is the solution of the social problem.

## EXPLOITERS OF BODY AND MIND

**He who takes life's necessities**
**Because he is strong,**
**And whips into submission**
**With the lash of hunger,**
**IS NO WORSE**
**Than the man with the distorted mind**
**Who raves of hell and damnation**
**And seeks to bind the weak**
**To the fear of God.**

# The Plight of the Clerical Workers

By JOHN SANDGREN

From Harvey's Monthly for November we quote the following:

*"Are there, then, any real sufferers from the war and the war's aftermath reactions? Ask the teachers, the clergymen, the clerks, the writers, the editors, the tens and tens of thousands of professional and semi-professional men, the men and women of small incomes sufficient for their modest needs before this orgie of high prices, but now cut to half and less than half in purchasing power, and at this day spelling deprivation to the verge of want where before they spelled a modest independence. These are the real after-the-war sufferers. Their name is legion.*

*Compared with current living expenses, the salaries paid to clerks, to teachers, to writers, to editors, to clergymen are derisory. Likewise they are an infamy.*

*Where other salaries and other wages have gone up, here they have either stood still or increased by figures that are niggardly. Men and women of learning, of the highest attainments, those on whom depends the education of American children, the moral guidance of the American people, are paid salaries that a hodcarrier or bricklayer or a stevedore would scorn. It is this submerged, unorganized, inarticulate middle group, the very flower of the country's intelligence, the group on which we all depend to maintain the Republic through clear thinking and staunch fidelity to basic American principles and traditions—it is upon these that the present-day burden of living-cost falls with crushing weight. It is they who shoulder their disproportionate share of the ever-increasing load shoved upon the consumer's and the rent-payer's shoulders by the granting of extortionate labor union demands; by conscienceless profiteers; by reckless waste of Government funds wrung from the country's overburdened taxpayers.*

*They have been a patient lot thus far, these real sufferers from the war's inevitable consequences. Their voices are seldom heard in complaint. They are inarticulate and unorganized. But the thing cannot go on forever. Either salvation must be worked out in some way and soon for this vast group, or we shall pay the penalty by seeing them join the turbulent forces of unrest and disintegration. And when that happens, sheer ruin will not be far away. When such Americans as these cannot earn enough money to live their frugal lives and educate their children, then indeed is there danger ahead."*

The fellow worker who sends us the above clipping writes underneath: "Moral: Organize or starve."

For our part we cannot suppress a vindictive "serves you right," even though we should not give vent to any vindictiveness towards any group of wage workers.

Why this vindictiveness on our part against the high-collared gentry?

The teachers we have harsh feelings against because they have refused to organize. As a result of their disorganized state they are not only kept down to starvation wages and abject slavery, but they have also lost something much more valuable, namely their independence as teachers. For fear of losing the pittance by which they live they are helping the masters to poison and warp the minds of our children in order to make them submissive slaves also. It certainly is a crime and a disgrace to allow those who teach our children, to suffer from want and care, but that is what the teachers get for licking the boots of profiteering hucksters and the property owning class in general, with which class they have absolutely nothing in common. The masters always treat with contempt the cringing slaves who do their bidding without protest. They have done the same with us all while we were as foolish as you are. Look at us agricultural workers, lumber workers, miners and construction workers before we started to organize. We were driven to desperation and hopelessness and perished by the thousands from want and suffering and we were hunted like wild animals and a bounty was set upon our heads as vags. We were treated as criminals and outcasts. Since we started to organize this has changed for the better, and we now would "scorn to work for your wages," as the writer in Harvey's magazine points out.

We have not accomplished much yet, but we feel that we owe you no sympathy. Do as we did. "Organize or starve." But we are particularly anxious that you teachers should organize, not merely in order that you might obtain the freedom from worry and care that a teacher absolutely should have, but principally in order that you might regain your spiritual independence in order that you may be able to teach the children the truth and nothing but the truth. If all the teachers were organized, the criminal capitalist class would not be able to pollute and poison the sources of knowledge from which the child or the young people gain their knowledge. In the interest of our children and of all mankind we have the right to demand of you that you organize and make yourselves absolutely independent of all the influences that seek to control you out of impure motives. We want you to to teach our children to seek truth instead of cramming them full of vicious misinformation and crippling their intelligence and enslaving their spirit to the masters.

The clergymen!—Why should we, the workers,

care whether the clergymen starve and worry? Have they not always been the contemptible tools of a criminal master class? Have they not always been trafficking in spiritual values in order to keep the workers meek and contended? Have they not always resisted us when we sought to lift ourselves and our fellows out of the mire of poverty, ignorance and oppression? Have not they nearly always, with very few exceptions, taken the rich man's part against the poor, all the while collecting the widow's mite for their own support?

We will not consent to class the clergymen as teachers. We class them with the other "stools" and the "finks" that the capitalist class employs in order to keep the workers down. By teaching science and honest truth-seeking we hope to shame them out of existence some day.

The clerks!—That's another story. Hundreds of thousands of clerks are entirely unnecessary, but that is not the fault of the individual clerk—it is the fault of the system. When capitalism falls, these clerks as well as their masters will be out of luck, for they will be out of a job. For the present all clerkdom is an important social factor to count with. We for our part have discovered the importance of the clerk, but he has not discovered it himself. As a rule the high-collared pen pusher feels immensely superior to the man with overalls and callouses, but that superiority is all vanished when he steps before the boss. Before his master the clerk is generally the most abject, fawning, humiliated creature on earth. He may be half starved, he may be on the verge of desperation from poverty, but he seldom dares to ask for more pay, much less assert his manhood or independence. He obliterates himself as a rule completely and does whatever the master tells him without a murmur of protest.

And still clerkdom holds it in its hands to dictate terms to the masters. All they have to do is to organize and stand together and the roles will be reversed. They will command and the master will obey.

However, we are not particularly interested in clerkdom for its own sake. We want the clerks to organize with those who work with their hands into the industrial union of their industry. Together the manual and clerical workers could as a body take over and run their respective industries without the capitalist. All alone the clerical workers amount to nothing. Together with the manual workers they could have everything their own way against the boss.

Without the clerks, we, the manual workers, sometimes make a mess of our struggles, but if it comes to the worst we can get along without them. The clerks on the other hand can do nothing without the manual workers when it comes to taking over production. The clerks are collectively in possession of the knowledge required for administering the industries. It will be a great day both for them and for us when they break with the boss, who is working them almost to death for a starvation wage and join the manual workers in the same industrial union.

May that day come soon!

Of course the clerk has not the courage just yet to join the I. W. W. The very idea of it is apt to make him drop dead from fright. Still, that is what it is going to come to some day. The clerk will find no other way of salvation for himself.

The writers and the editors!—Well, "the dirtier the work the poorer the pay," is an old saying. That is why the writers and editors often are miserably paid. They do the dirty work of the capitalist class. They are the ones who dump the dirt into fountains of knowledge in order to deceive the people. What do they expect? Any low-down creature is good enough for that kind of work. Many a time we of the I. W. W. have suffered on account of the lies that these writers and editors have told about us. In fact, the tremendous persecution we are now exposed to is almost entirely the result of the lie-campaign in the kept press. This campaign waged against us by paid mental prostitutes has only one bright side for us, and that is that the vile creatures who carry it on are despised and kicked by their own masters and allowed to suffer want.

However, what we have said of the teachers also applies to the editors and writers. We have the right to demand of them that they organize, not for the purpose of getting "a fair day's pay for a fair day's lying" but for the purpose of regaining their freedom, so that they may become men and be able to speak the truth and refuse to speak anything but the truth.

As long as these wretched workers are employed in commercial enterprises they belong in the Printing and Publishing Workers' Industrial Union. When the dissemination of knowledge has ceased to be a commercial function they will properly belong with the teachers.

The high cost of living is driving millions of people to think. It is to be hoped that it will drive the clerical workers to think and open their eyes so that they may see what miserable slaves they are. It is to be hoped that it will drive them to organize, not only for the sake of the pittance that will keep them alive as slaves but for the purpose of taking possession of the earth in common with their brothers and sisters who do manual labor.

### THE BIRTH

**The Gods had gathered all the blood**
**That for freedom had been shed,**
**And dipped within a cloth of white:**
**Thus came out a flag of red.**

**The gods then gave this gift to man,**
**Bequeathed it unto slaves,**
**That it should strengthen brotherhood**
**In every land it waves.**

**—C. O. G.**

# The Labor Party and the I. W. W.

By JOHN SANDGREN

A fellow worker dropped in on us the other day and laid his spiritual troubles before us much in the manner as a sinner goes to confession. He was under a terrible pressure when he came but he was light of heart when he left. It was all due to a misunderstanding on his part.

"I don't care a rap what the I. W. W. says," it came in a torrent, "but I am going to vote for the new Labor Party. I do not give a rap for the program of the Labor Party either. I don't want any of their government ownership, or their Plumb plan, or their initiative and referendum, but there has got to be a change in the personel of officialdom and pretty quick, too. Look what these tools of Wall street are doing with us I. W. W. men. They are trampling the constitution under foot and openly defying it. They have now put over a thousand of us in jail. They are making a mockery of justice. They are using it to 'sandbag' us with. They are clubbing us and murdering us and are holding us for months and years without trial. Their courts are hotbeds of iniquity where we are given the rawest kind of a deal. I say, we must put this whole bunch out of office, or they will slowly but surely torment our organization to death. They are in cahouts with bogus patriots who raid our halls and club us and rob us and lynch us. Did you ever see one of those raiders punished by the officers of the law? Nary a one! We have got to drive them out soon or they will get our goat."

He paused for breath, and then continued:

"I have no use for the A. F. of L. leaders neither as unionmen nor as politicians, but they can't be worse than those now in office. Most of them have been actual workers so there is always something good in them to fall back on. Besides the A. F. of L. men have been persecuted pretty badly themselves lately, and the rank and file is pretty anxious to get the constitution of the U. S. in force again. I'd like to see them win. They can't be worse than the republican or democratic office holders but chances are they will be better. I believe they will release all class war prisoners and stop railroading more of us to jail. I believe they will sit down on the raiders of halls and restore free speech, free press and free assemblage. That is all I want of them. The rest of their program is all bunk as far as we are concerned, but this is something worth while. I am going to vote for the Labor Party even with the risk of being denounced by the I. W. W. men. That's all there is to it. We can't lose by it, but we might gain a lot if those A. F. of L. men win out with their party."

Having said this, our fellow worker seemed to be greatly relieved. He had confessed what he thought to be an illegal act or a crime according to the I. W. W. law. After a moment's rest he went on:

" I know you are after politicians like the pound man is after stray dogs, so I thought I would come up and tell you, as I don't want to go and vote on the sly."

Now was our chance to answer.

First we read the preamble together. There it said that we must come together in industrial unions to improve our conditions and abolish wage slavery. But we did not find a word about voting for political parties.

We went through all the pages of the constitution, but still we found nothing to stop members from voting for any party they like to vote for. On the contrary, we found in By-Laws, Art. I, Sect. 1, the following: "No workingman or woman shall be excluded from membership in unions because of creed or color."

Now we went on to explain:

"While the word 'creed' probably was intended to mean religious conviction, it may readily be construed to mean also political creeds or ideas, and convictions in any other field.

"All that the I. W. W. demands of its members is that they sincerely endorse the principle of industrial unionism as the frame work of a new society, and that in their actions they act upon the principle that 'an injury to one is an injury to all.' A member should also pay his dues regularly and do his utmost to build up the organization, but for the rest he surrenders none of his freedom.

"You can vote for whatever you like, and expound your beliefs as long as you do not work against the best interests of the organization.

"Any member who thinks he can help the boys in jail by voting, or hopes to stop the persecution against us and restore the constitution into full force by voting for the Labor Party or any other party is perfectly at liberty to do so, as far as the I. W. W. is concerned.

"As an organization we cannot go into politics of any kind, for it would immediately break us up as an organization. Supposing we organize a mining camp of 1,000 men or more and make it 100 per cent I. W. W., as we have in many cases. While these 1,000 men are almost sure to sincerely endorse the industrial union they are very likely divided into several political creeds. Very likely there are those who vote republican or democratic tickets or socialist tickets. There are sure to be many anti-parliamentarians among them. If the I. W. W. were to demand of these 1,000 men that they should all vote for one certain party, we would be sure to burst the union, or we would hold it together only by terrorism.

"You are, consequently, perfectly at liberty to vote for the Labor Party if you see fit."

"If, on the other hand, you were to come out and agitate for the Labor Party program and tell the workers that industrial unionism is no good, but that they should instead work for the realization of government ownership of public utilties as a means of solving the social problem, then you would come in conflict with our program and the proper thing for you to do would be to withdraw from the I. W. W. Should you be in a 100 per cent organized camp you would get into trouble, as your action then would be a breach of solidarity.

But as long as you content yourself with voting merely in order to get a change of offcials, we have no objection. There is a great difference between voting for certain persons and agitating for a program that ignores or combats industrial unionism.

"In regard to the Labor Party we wish to state that in our opinion they really have good prospects of winning out in some industrial centers, provided their votes are counted. Their program has taken up practically every demand made by liberals, reformers and socialists. It is a regular Christmas tree. They will probably get the votes of everybody who is dissatisfied with the republican or democratic party, and that is about one half of the people. For comprehensiveness there never was a program like it. They are even getting at least one I. W. W. vote, namely your own, by taking up in their program 'amnesty for political prisoners, repeal of the espionage law, free speech, free press and free assemblage.' They are apt to get several I. W. W. votes besides your own on this point. You need not apoligize at headquarters for voting for them.

"Whether you will be disappointed or not is hard to tell. We still remember how the 'Labor Party' administration in San Francisco, in 1906, sent a large squad of police to club and disperse a labor demonstration of some 10,000 people, mostly A. F. of L. members, who were protesting in behalf of Moyer, Haywood and Pettibone. Australia has had labor governments for years, and still the I. W. W. and other workers are persecuted. Germany has a social democratic government that is drowning in blood the efforts of our fellow workers as well as of the left-socialists. The Labor Party is apt to be as tyrannical as any. It might go back on its program when once elected.

"To most I. W. W. men the question of voting is of little concern. By looking through the list of our industrial unions you will see that most of our members are migratory workers. These seldom have a chance to vote, as they are unable to comply with the residence qualifications. For the rest a considerable number of our members are foreigners, who now are denied citizenship on account of their membership in the I. W. W. And, besides, the general tendency is to distrust politicians and parliamentary action. But, let us repeat it again, the I. W. W. as an organization does not try to prevent anybody from voting according to his conviction. We simply have nothing to do with politics as an organization.

"The spirit of our preamble drives many of us to give ourselves entirely to the main thing, the building of the new society inside the old, through industrial organization, dropping everything else as non-essential. We have become a world power through this concentration upon one point, but the cost has been terrific. Many thousands of us have lost our liberty in the last 14 years through this spirit, and we have sacrificed it cheerfully, disdaining the use of the ballot to stop the persecution. The situation is now changed, however. We have millions of friends who would like to free us and to stop the persecution against us. It appears that these friends of ours have made common cause with the Labor Party in order to accomplish this and to restore freedom in general. They consider it better to capture the courts bodily than to plead in them. To ask our own members, who have a vote, to refrain from voting with these friends would be to drive our disbelief in parliamentary action in absurdum. It would be like violently resisting those who would save us from a burning house and allow the flames to consume us, just to prove our already undisputed courage.

"However, the I. W. W. members should make themselves no illusions in regard to the success of the Labor Party. There is 'the solid South,' where the workers are mainly black. These cannot vote. Then there is the country population. The farmers are said to control about 40 per cent of the vote. The Labor Party will get little of that. The farmers may be opposed by 'big business,' but they prosper with the profiteers.

"The Labor Party will get the vote chiefly of the workers in industrial districts and of a large element of liberals, socialists and communists from all classes. But as a large part of the workers are disfranchised, the Labor Party vote is not apt to be overwhelming. Besides, there is in the A. F. of L. a considerable American Legion or 'patriot' element who by orders from above will denounce and resist the Labor Party as 'bolshevik' and un-American and thus split the vote in favor of the profiteers.

"The eventual success of the Labor Party may or may not mean the release of some of our fellow workers in jail, and it may mean free speech, free press and free assemblage at least, but in the final analysis we have no reason to deviate in the least from our program of industrial organization. That work must never stop, and cannot stop.

---

**PROPHESY**

**On the face of the rebel**
**Is writ a prophesy.**
**Could the exploiters read it**
**They would tremble**

**Build more machine guns!** —C. O. G.

# The Story of the I. W. W.

by HAROLD LORD VARNEY

## CHAPTER 11.

### Aftermaths of a Great Strike.

The winning of the Lawrence strike was stunning in its significance. It revealed new vistas of opportunity. Ten weeks before, the I. W. W. had been a vaguely defined social theory, emanating from the West and grappling half-heartedly for a hold in the East. In the light of the Lawrence victory, it stood transformed. The innocuousness of obscurity was shed. In less than a hundred days, it had become a household word and a national issue. An editorial writer in the Survey Magazine hailed the Lawrence strike as the greatest victory that labor had ever won.

The result, of course, was soon felt in terms of numbers. The hordes of the faint hearted who are ever on the wait to discover the winning side, began to swarm in. Before the strike, St. John estimated the entire paid-up membership of the I. W. W. as 10,000. After the strike, the membership shot up to almost 100,000. This growth was mostly felt in the East, a portion of America where the I. W. W. had never previously gained a foothold. The natural habitat of the I. W. W. is in the West and the most prodigious efforts had never before succeeded in transplanting it. But, as long as the glamor of the Lawrence victory lasted, the entire policy of the I. W. W. was reversed and turned eastward. The members believed that such victories could be duplicated in all the large unskilled industrial centers of the East. Intoxicated with optimism, they believed that Lawrence heralded a tidal wave which would sweep millions into their organization. It was nearly three years before they fully realized their mistake and its cause. Famous as it was, the I. W. W. had not even yet matured. It was to go through still another transformation.

There were several reasons why the I. W. W. of the Lawrence-Paterson period went down in failure. First, it over-estimated its strength. The Lawrence victory was no criterion of its possiblities although it was interpreted as such. The Lawrence victory was largely accidental. The hideous blunders of the mill owners, gave the I. W. W. an advantage. The fact that the organization was new and unknown, caught the employers' association off their guard. The cleverness with which Ettor and Haywood played for and won popular sympathy, was an immense factor. This favorable conjecture of advantages might win a victory once, but it would be unreasonable to expect it again.

Another reason which many members attribute, lies in the form, itself, of the organization. The I. W. W., like the W. F. of M. in its early days, never signs contracts. When a strike is won, it depends upon the individual action of its members to maintain a closed shop, rather than upon a mandatory contract with the boss. Now these tactics, like all labor union tactics, is of varied value. In the West, where it originated, it is both possible and sufficient. There, employers are small and disunited. The western worker is militant, often migratory, and trained in individual action.

Conditions just the opposite prevail in the East. Gigantic combinations of employers must be defeated. The workers are timid and often cowardly. The unskilled are largely foreigners. Such workers are only militant when they move in groups. For the individual action of the West, we must substitute mass action, when we come east. It was by mass action that Lawrence had been won. Only by a mandatory mass unionism could the fruits be retained.

The mistake of the I. W. W. probably lay in its endeavor to stretch the western tactics to cover an opposite eastern condition. Only the spur of compulsion would have held that great polyglot mass of strikers in the union, once the spell of the strike was forgotten. Their individual initiative was too undeveloped to be relied on.

Perhaps unionism, without contracts, could be secured in the East by a powerful and wealthy union. It certainly could not be won by the I. W. W. as it existed in 1912.

This conflict of the practical and the ideal has arisen again and again in the struggles of the organization. It is a tribute to the sincerity of the I. W. W., to acknowledge that it never has sacrificed the ideal to adopt the practical. But, in the sense that the end justifies the means, perhaps it would have been better had they sometimes done so. The hard fought fruits of Lawrence and McKee's Rocks might have remained in their grasp. The volatile hordes of the mill towns might have been bound to the I. W. W. by chains too powerful to break. Individual initiative, on a great scale, comes after organization; it never precedes it.

As it was, the results of this period were lost by overconfidence. The phase of the I. W. W. that characterizes the years 1912-15 was the revolutionary phase. During this period, the I. W. W. presents itself as a great strike leader, rather than as a great organization. Wonderful and dramatic struggles were waged. But the close of the period finds the I. W. W. just as small as at the beginning.

But, at first, it seemed as though Lawrence was going to be the making of a big organization. Some 7,000 members were initiated in Lawrence, alone. Other textile centers fell in line. The settlement of the strike had automatically raised the scale of wages in all the other mill towns. In Lowell, the I. W. W. had called a strike in the middle of the Lawrence struggle. The bosses in Lowell had immediately granted an increase to all their 25,000 employees. Thousands of workers in Fall River, Nashua, Holyoke and other textile centers found themselves earning higher wages because of the Lawrence victory.

Naturally, these workers furnished a willing field for I. W. W. propaganda. The National Industrial Union of Textile Workers began to boom. A general office was opened in Lawrence with William Yates as general secretary. Locals sprung up in every city in New England. Probably 25,000 to 30,000 members came into this industrial union. Elsewhere, and in other industries, the same spirit of growth was felt. A number of small and successful strikes were waged during this period.

The sharpest and bitterest of these strikes broke out in Little Falls, N. Y. Although the number of men involved was not large, it is doubtful whether any struggle of the I. W. W. was ever waged with more passion and desperation than characterized this strike.

Little Falls is a little industrial city, seated between a mountain and a river in the northern part of New York state. Its sole industry is its big knitting mills. Here, a large foreign population find employment. Everything was peaceful until a reduction in pay stirred up the smouldering fires

of discontent in October, 1912. This reduction came in precisely the same manner as it had in Lawrence, by an enactment of a state law reducing the hours of labor. Learning of the reduction, the 1,500 foreign workers rushed spontaneously out of the mills. Some of the leaders immediately sent for the I. W. W. and Benjamin J. Legere was sent in to take charge. Legere, who had taken an active part in the Lawrence strike, acted as chairman of the strike committee. Associated with him were Fred Hirsch, Philip Bochino, an Italian organizer, and Ben Schrager, a Polish organizer. The strike committee and the chain picket line, the two essential tactics which had won the strike in Lawrence, were here employed again. An almost perfect discipline was instilled into the workers.

Of course, there was little sympathy for the strike among the English-speaking citizens of Little Falls. The majority of the English-speaking workers remained in the mills and scabbed. Chief of Police Long, imported 30 gunmen and commissioned them for strike duty. The old story of brutality was enacted again. But in outside support, the strikers were rich.

One of the first visitors was Mayor Lunn, of Schenectady, who came to Little Falls with a large delegation of Schenectady socialists. Standing up on a box in Clinton Park, near the mills, Lunn endeavored to address the strikers. He was pulled from the box and placed under arrest and a large group who followed him were sent to jail with him. The city officials quickly receded in their policy toward Mayor Lunn, although they continued to be consistently abusive toward all I. W. W.'s. Chief Long blatantly announced, "We have a foreign element on our hands. We have always kept them in subjection and we intend to in the future. We will allow no outsiders to butt in." Thoroughly did he keep his word. He kept away the outsiders at the point of the gun and the club. He choked the jails with his victims. And with the loyal support of the "respectable," he succeeded, once more, in thrusting the foreign workers back into their "subjection" to a $7 a week wage.

On October 30, Chief Long precipitated a riot. One of the young girls was beaten to the ground as she passed the Phoenix mill in the long picket line. Quickly, the other strikers sprang to her defense. A terrible fight followed, in which the strikers, men and women alike, were clubbed into insensibility. Two shots were fired, one of which struck one of the gunmen in the leg.

Using this melee as a pretext, Long raided the strike meeting that night in Slovak Hall. Legere was the man whom he sought but, to his chagrin, he found that both Legere and Schrager had suddenly disappeared. The officers indulged in a regular "rough house." The audience was clubbed and huddled against the wall. Furniture was smashed. The instruments of the Slovak brass band were wantonly beaten and battered. Pictures were stripped from the wall. All the members of the strike committee were arrested and dragged to jail.

A curious incident in connection with this raid was the fact that Legere and Schrager were in the building all the time. Upon the first rumor that the police were approaching, they had rushed upstairs and concealed themselves under the eaves of the roof. The police had completely overlooked this possibility and the two organizers remained in concealment for hours, not daring to climb out for fear that the place was still guarded by police. The next morning, Joe Schmidt arrived in Little Falls and, knowing nothing about the raid of the previous night, proceeded directly to the Slovak Hall. Recognizing his voice, the two fugitives hailed him and he released them from their hiding place. They escaped from Little Falls unobserved and Legere sent away necessary instructions to the General Office from Utica. He then returned to Little Falls, but was arrested immediately upon arrival and charged with being accessory to the shooting of the policeman. Bochino was included with him on this charge. After the conclusion of the strike, Legere and Bochino were convicted of this offense and served sentences of a year and three months in the Auburn penitentiary.

Instead of breaking up the strike machinery by their wholesale arrests, the city officials only strengthened the determination of the strikers. Many outsiders, undaunted by Legere's fate, came into the city to help. Big Bill Haywood came for a few days and helped to shake the strike committee into shape. Matilda Rabinowitz, Legere's sweetheart, came from Bridgeport and did splendid work in operating a relief station. John Macy, the well known author and educator, himself a member of the I. W. W., threw himself into the fight. Helen Keller, the blind prodigy, lent her influence in the fight by writing a beautiful letter of sympathy to the strikers.

The city officials became more and more tyrannical. All parading, all demonstrations, all picketing, was broken up. To continue the picketing, an ingenious scheme was fixed upon by the strikers. Nearly all the scabs were being imported from Utica. Picketing was, therefore, transferred to Utica and was carried on spectacularly, at the terminal.

The evening strike meetings were the only open means of keeping the strikers together. A wonderful skill was demonstrated in the conduct of these meetings. Of oratory, the strikers soon wearied. In its place, programs of amusement were given at which latent talent of the strikers was fully encouraged. All were given a part to do and so, through the twelve weary weeks of the strike, their interest never flagged.

Golden's organization, the U. T. W., reappeared in Little Falls and attempted the same disruption which they had practiced in Lawrence. Several A. F. of L. men joined Chief Long's force of sluggers and tried their utmost to defeat the strike. The outcome of Little Falls was not completely favorable to the I. W. W. In the settlement, the strikers won the wage concessions which they had sought. But in spite of all the energy which was expended, there was no permanent I. W. W. organization left in Little Falls. The active I. W. W. sympathizers were discriminated against and driven from the district.

Little Falls attained a publicity altogether disproportionate to the size of the strike. The significance of it lay, not so much in the number of men involved, but in the militancy with which the fight was waged. In Little Falls, the I. W. W. tactics were developed to an extreme degree of efficiency. Had the I. W. W. gained job control, we could characterize it as a perfectly conducted strike. At least, it helped to diffuse, still further, the fearsome reputation of the new union.

While Little Falls was still in progress, another chapter was being written in Lawrence. The settlement of the Lawrence strike had left Ettor, Giovanniti and Caruso still in the clutches of the law, charged with the unbailable crime of murder. As an aftermath to the strike, the resultant defense campaign was remarkable in its immensity and success. Every resource of the entire I. W. W. organization was thrown behind the defense.

A defense committee was chosen, immediately at the close of the strike. The names of the members

of this committee will give an indication of the ability of its persons. William D. Haywood was chairman, William E. Trautmann was secretary and William Yates, afterwards Fred W. Heslewood, was treasurer of the committee. Other members were Thomas Holliday, Edmond Rossoni, Ettor Giannini, James P. Thompson, Guido Mazerreli, Francis Miller, August Betellemire, Ben J. Legere, Josephine Liss and Elizabeth Gurley Flynn. Great mass meetings were arranged all over New England. Local defense councils were formed in all the large cities. Defense fund tours were made by those members of the committee who were speakers.

A publicity department was established under the charge of Justus Ebert. So efficient did this department become that, at one time, a thousand publications were being supplied with daily copy. Much support was given the case by Italian papers and organizations, who felt a particular sympathy for the defendants because the race issue had been exploited against them.

Political pressure was also employed. Italian socialists rallied to the occasion in Italy. Giovannitti was still an Italian citizen and the Italian government was petitioned to come to his assistance. Socialist deputies brought the case up on the floor of the Italian Parliament and a clever propagandic move was made by nominating Giovannitti for parliament in his old home district. The Swedish syndicalists also co-operated by proposing a general boycott of American made goods, in case Ettor and Giovannitti were convicted. This suggestion was amplified by the transport workers of France and Australia, who voted to refuse to unload American ships. As the agitating progressed, it seemed as though it was fated to develop into an American Dreyfus case. But, through the nine long months, while agitation was raging without, Ettor, Giovannitti and Caruso sat nonchalantly in the Salem jail. Ettor prepared a propaganda pamphlet while Giovannitti employed his time in developing rare abilities as a poet

In Lawrence itself, the sentiment was all for a general strike, for the day when the trial opened. On Sept. 12, 1912, a great mass meeting in the Common was thronged by thousands who shouted for a general strike. But the I. W. W. leaders feared that a general strike would be a body blow to the future of the organization. The union was not yet organized thoroughly enough to secure the support of all the mill workers. Less than half the workers carried cards in the I. W. W. If the strike were called and proved a failure, it would mean the end of the I. W. W. in Lawrence. The splendid organization that they had worked so hard to build, might be swept away.

On September 25, a great general mass meeting of all the workers was called for a discussion of this subject. Thousands packed the streets and surrounded the big hall where the I. W. W. had its headquarters. In view of the inadequacy of the hall, the meeting was held in the street and the speakers addressed the crowd from the open windows. Elizabeth Gurley Flynn and Carlo Tresca, in English and Italian, urged the workers to avoid a strike.

But the infectious temperament of revolutionary unionism is unrestrainable. It broke out into a strike, even over the decision of the central committee of the union. A rumor ran amongst the workers that Ettor and Giovannitti themselves had appealed to them to strike. Although the rumor was groundless, it broke all the bonds of restraint. In a great spontaneous surge, the workers once more burst out of the mills in a three day demonstration. For the first time in the American labor movement, workers struck for an ideal. The sordidness of economic motives was set aside. The political general strike, the famous tactics of European revolutionists, was rearing itself, for the first time, in America. In this respect, the second Lawrence strike, stands alone in its significance.

But, as a general strike, it was a failure. Two reports had gone out, one that the workers must strike, the other, that they should remain at work. In the confusion bred of this contradiction, many of the workers remained in the mills. Only about 8,000 responded. In other textile cities, similar walkouts occurred.

A great memorial parade was held on Sunday, Sept. 29, in honor of Anna La Pizza and John Rami, the two victims of the first Lawrence strike. Hundreds of workers came in from other cities on special trains in order to participate. The strikers turned out en masse. Banners and streamers carrying the words, "No God, no Master." Bands of music marched in the procession. At the head was Carlo Tresca, the famous Italian agitator. The police determined to halt the parade and break it up. A big squad of police were concealed on a side street and deployed suddenly, before the advancing parade. Forming a human wall, they blocked Essex street from sidewalk to sidewalk. The strikers advanced, not a man wavering. Tresca marched along as though the street were as clear, ahead of him, as it was behind. Through the living mass of police, the great body of paraders hurled themselves. There was a riot. Men were beaten into insensibility. Scores were packed into patrol wagons and carried away. The parade broke up in the melee.

Spurred on by their success in this affair, the politicians and mill owners commenced a campaign of terrorism. Hints of the formation of vigilante committees were noised about Lawrence. The conclusion of the three day strike did not quench this movement; it seemed to enhance it. A great so-called "patriotic" meeting was called by Mayor Scanlan, in which an orgy of abuse ended in open incitements to violence. It is a miracle that murder was not committed by the frenzied mill owners and their dupes. Father Reilly, the Catholic priest, incensed by the "No God" allusion on the banners, surpassed all others in the lawless vituperation that he hurled at the "outside agitators."

It was whispered about Lawrence that Big Bill Haywood would be lynched upon his arrival. Every precaution was taken by the I. W. W. to insure his safety. Vincent St. John had sent a message to the city marshal, serving notice that the I. W. W. would hold him personally responsible for Haywood's safety. This had its effect. A great crowd surrounded the station when Haywood arrived. His friends had an automobile waiting, engine throbbing, into which he could leap as soon as he alighted from the train. But a blunder was committed. Haywood got into the wrong car and was whisked away before his friends could reach him. Struck by consternation, the members feared that Haywood had been captured by vigilantes. It was several hours later when their suspense was relieved by learning that Haywood had been taken in hand by a body guard, detailed by the city marshal himself.

In the heat of the crisis, Scanlan and his "patriots" arranged a Flag Day celebration for Oct. 12, Columbus Day. A great parade was held in which workingmen were conspicuous by their absence. To avoid the possibilities of a riot, the I. W. W. called a counter celebration for the same day, at a park, three miles out of Lawrence. Here, in spite of a drizzling rain, 4,000 people gathered and cheered themselves hoarse as they listened to speeches by Haywood, Heslewood, Gurley Flynn, Tresca, Adamson and ex-Mayor Cahill.

Amid these tumultuous scenes, the trial at Salem proceeded. It was very difficult to secure a jury.

Many of the talesmen were obsessed of the idea that the I. W. W. would use violence upon the jury in case the verdict was unfavorable. Three weeks were spent in the examination of talesmen. An unusually favorable jury was at last empaneled. For five weeks, the taking of testimony proceeded. The I. W. W. was splendidly represented, legally. George E. Roeher of Boston, W. Scott Peters, John P. S. Mahoney and James H. Sisk were the local counsel. Judge O. N. Hilton of Denver and Fred H. Moore of Los Angeles represented the class struggle point of view for the defendants. From first to last, it was an I. W. W. case. The organization, rather than the individuals, was on trial. Ettor and Giovannitti recognized this fact in their attitudes.

The prosecution had no case at all. By misquoting and putting incendiary interpretations into the strike speeches of the defendants, District Attorney Attwill endeavered to fasten the accountability upon them. An interesting point developed during the trial, was the fact that, at the Wood mill, a decrease in efficiency of twelve per cent had been noted, since the strike. The effect of the I. W. W. in lowering the productivity of labor has always been held to be the most reprehensible of its characteristics.

It would be mere repetition to enumerate the points brought out in the trial. The evidence was but a resume of the leading incidents of the strike. Judge Quinn revived an old, obsolete custom by permitting the defendants to speak for themselves after the attorneys had made their plans. Ettor and Giovannitti were quick to avail themselves of this privilege and the jury retired with the fervent challenge of the I. W. W. ringing in their ears. The addresses of Ettor and Giovannitti were classics of their kind. They have since been published by the I. W. W. The note of compromise was never even approached. It was vindication that they sought, vindication not only for themselves, but for the great social ideals of which they were spokesmen. And vindication came in the form of an unqualified acquittal. On Nov. 23, 1912, the prison doors swung open and Ettor, Giovannitti and Caruso stepped out, free men once more. They were greeted with an ovation by throngs of fellow workers who felt, as one of them expressed it, that "Ettor and Giovannitti belonged forever now to the working class, because the working class had bought and paid for them."

Back Ettor came to Lawrence, the scene of his great success and the beginning of his great suffering. Everywhere the grateful workers turned out to greet him. On Thanksgiving Day over 5,000 people stood for two hours in a raging snow storm and listened to his address. Ettor followed up his Lawrence reception by a great tour of agitation from coast to coast. Everywhere the significance of the victory in Salem was hailed and celebrated. The I. W. W. had won its second Lawrence battle.

The organization in Lawrence remained intact only a short time longer. The three-day sympathetic strike had drawn the line openly between the militants and the conservatives in the mills. Upon this basis the bosses began a clever discrimination. Group by group the leading spirits of the I. W. W. were let out. A rigid blacklist drove many of these men out of Lawrence. In order to scatter the men still further the Lawrence mills were shut down for a long period of time and the orders filled in other plants. When the mills reopened again there was no semblance of I. W. W. control. Powerless to defeat the I. W. W. in open combat, the bosses had accomplished their end with infinite ease by the astuteness of diplomacy.

The National Industrial Union of Textile Workers was moved to Boston and held its nuclei together in every textile center. But it was finding it increasingly difficult to collect dues from its members when once the glamour of achievement was subdued. Another great textile strike came in the very nick of time and revived the flagging interest. But before we describe the Paterson strike, we will pause to recount the progress of the other branches of the I. W. W.

## Chapter II

### In Which the Author Ventures to Feel the Pulse of the Proletariat's Temper and Scorches His Hand

I realized that if I was to become a great leader of the Reds and was to conduct their revolutionary scheme to a successful abortion, I must mingle with them; that I, to gain readily their confidence, in my external appearance, must resemble one of them. All this necessitated a comprehensive preparation; not only have I ceased to shave, but also to wash and to change my laundry; and I slept with my clothes on. Thus by the first of July, after I practiced proletarian habits for full six weeks, I acquired so wretched an appearance that I resembled the ideal of a Bolshevik even more closely than Nicolai Lenin himself, and I feel that I was in a sufficiently propitious shape to go to Chicago and shake hands with my unwashed "brothers." Everything was prepared for our journey and we entrained for Chicago on July 2. We traveled in an ordinary Pullman car with the common people and arrived in Chicago in due time.

Having ceased socially to exist as one of the great lords of industry I could not have resumed residence in my mansion on Sheridan Road; hence, I assumed a funny Russian name (which I cannot disclose here) and established myself in a regular hobo bunkhouse in North Clark street. In addition to securing these quarters, I had Matys to rent in his own name a respectable apartment nearby in which to conduct my business affairs, and to which I had Matys to transport secretly all my mail, such as required my personal attention.

During three weeks I associated with all sorts of rebelliously inclined working men, attended several of their meetings, but was unable to get a definite conception of their political aspirations. However, at the decline of the month of July, as I was perambulating up Clark street and meditating upon my future glory as the political Moses of the proletariat, and at the same time the saviour of my own patrician caste, my attention became attracted to a soap box orator and a group of men assembled around him at the miniature park in front of Newbery library. The man must have been preaching for a long time already because he showed symptoms of exhaustion. I only caught a few of his words about capital and labor having nothing in common. Then he announced that Miss Leshetitzky was released from the Federal penitentiary several days ago, that she was in Chicago and was scheduled that night to address this audience. "I am tired," he admitted. "I prolonged my speech only to hold the crowd here until she arrived; her time is past due, and it seems that something is delaying her, so if there is a speaker in the audience he is welcome to the soap box until she arrives." In a flash I got an inspiration that this was an opportunity to make my debut as a Bolshevik orator, and I threw up my hand involuntarily and exclaimed that I would like to take the rostrum for a few minutes.

My offer was accepted, but when I mounted the box I realized that I really did not know what to say. I was facing a serious embarrassment when I recollected the concluding words of the professional orator, so I annexed them as a nucleus for my speech. "Comrades and fellow citizens," I cried, "I come from Minnesota. I am a hunter and a trapper. The former speaker was right when he said that we have nothing in common with capital. Strabo and Aristophanes have said the very same thing, only in Grecian language—I won't repeat the exact words because you would not understand them. And when St. Paul commanded the slaves to obey their masters he did not mean to say that their interest was common. He simply was solicitous about the skin of the slaves, anxious to keep it from the harsh contact of the master's whip. If we obey our masters we simply do so to keep out of jail." I noticed signs of impatience in the crowd, so I thought I had better become more radical. "It it like this:" I continued. "When I am attending to my profession in the woods my interest is conflicting with that of the foxes and minks and the beavers—my interest is to get their skins and theirs is to keep them, don't you see?" The audience exploded into a tremendour applause and shrieks of bravo. When the applause subsided, I resumed my speech. "There is a similar discrepancy between yours and your bosses' interest. You ought to be careful how to vote. If I was to be elected to an important public office I would honestly look after the interest of the working man. I would boost your wages; I would fight for your personal liberties, see to it that beer and schnaps is restored to you, so that your could resume your pursuit of happiness. I thank you for your kind attention." I stepped off the box. There was only a feeble applause for the second part of my speech, which I deemed the best and the most important.

A big, black Negro mounted the box immediately after I stepped off. "I want to say a few words to the trapper from Minnesota," he cried, unceremoniously emphasizing his words with both of his fists, "as long as working men will continue to repose their hope of redemption from the hell of wage slavery into the fickle and treacherous hands of the politicians they shall remain wage slaves. Parliamentarism is obsolete. The proletariat has recently discovered a better remedy for its political and economic emancipation. We, the Industrial Workers

of the World, are already applying this new paregoric to all our social abrasions—and I will say to you, brother trapper, that it is as effective as a dum-dum bullet. So magically effective are our politics that the 'captains of industry', who always were after our skin, are trembling with mortal apprehension about their own. Before the props upon which the profit system rests are completely broken, the most effective way of exacting from our industrial vampires a greater fraction of the fruit of our toil is by keeping a brake upon production. On the other hand, we know that the surest way of inviting our enemies to step upon our neck is by creating over-production. I thank everybody who can understand me and who can read the signs of the times."

His speech was applauded with as spontaneous a fury as the first part of mine. I became dumbfounded to hear such anarchistic utterances, and from a Negro. This must have caused George Washington to turn over in his grave.

When the applause subsided the regular pulpiteer announced the arrival of Miss Leshetitzky and introduced her to the audience.

The woman was about 30 years of age. Her pale, haggard face was rendered prominently characteristic by a pair of lustrous eyes blazing forth penetratingly like the eyes of a wolf. Resting upon me, her sight eclipsed mine and made me feel strangely uncomfortable, causing my entire body to shiver. I wondered who could this woman be whose mere look causes me to tremble like a goat confronting a tiger. Were I no longer one of the most formidable sharks in the great ocean of this, Uncle Sam's democracy? "Dear fellow workers," the woman serenely addressed the audience. "Were it not for the black plague of capitalism the world would be a happy place in which to live, because the whole of Nature is a work of sublime ingenuity; likewise the mind of man is treblant with germs of romance and adventure. Naturally, I would like to talk to you about music, poetry or other noble arts; however, I am constrained to propound the old distasteful subject about the epidemic of profits and its, in recent years, increased virulence. I beg you to believe me that I can engage in such dissertation only with a supreme repugnance. The foremost point of my mission is to arouse in you abhorrence for work under the present system, because it is upon your toil that the dragon of capitalism is feeding; should you cease pampering it, that is to say, should you stop all production, the monster would die in a short time and you would be permitted to rise to the full dignity of man, to which you were intended by your creator. All the nefarious acts of capitalism are disguised by some attractive mask; liquor has not been taken away from you to enhance your morality but to make you more efficient. Cannot we summon enough courage to fling the gauntlet into the insolent face of the apostles of efficiency and profit? One by one your scant liberties and the traits of your manhood and dignity are being fed up to the moloch of profit. You can no longer make pretense to social superiority over domestic animals; to make hog or cattle husbandry a profitable business necessitates the unsexing of most of the male members of their breed. A similar efficiency scheme is now being experimented with upon man. I understand that some states have already adopted it, and are even now rendering your brothers into eunuchs. Your masters respect neither human nor Divine laws. They would not hesitate for a moment to extirpate your brains if their profits could thereby be benefited. In fact, hundreds of your brothers have already had their brains clubbed out of their head because they dared to interfere with their masters' profits." The woman paused for breath and immediately a deafening applause and savage shrieks exploded in the audience. I never witnessed such a spectacle before. The whole scene revealed to me the immense scope of human passion. I realized that when the temper in the mob becomes as grouchy as that, only machine guns can quiet it.

The soul of the entire proletariat was so completely possessed with the evil spirit of revolt that I also realized that my ambition of becoming their political pope was a fallacy; only a fool would attempt to pat a mad dog. I elbowed my way out from among the frenzied mob and went to my bunk house.

When I reached the hotel office I telephoned to Matys and ordered him to bring me a decent suit of clothes from my wardrobe at my mansion, and to have my chauffeur appear with one of my closed cars at the eastern entrance of Medinah Temple. (The reader can make a fair guess at my reasons for not having ordered the car to appear at the entrance of my "hotel"). The two hours, which were requisite for the proper execution of my orders given to Matys, I spent at a nearby barber shop. So when Matys came with my clothes he found my personal appearance again resembling a human being. Thus terminated my ambitious Bolshevist career.

(To be continued)

In the next chapter of the great Von Belvedere's autobiography will be disclosed the amazing secret of how his prodigious intellect was enlisted to combat the impending revolt of the steel slaves, and how he advised Judge Albert Garcia to have constructed in advance and stored in readiness a portable wooden bastile with a capacity for 10,000 agitators.

# Has the I. W. W. a Monopoly of Industrial Organization?

## A Letter From An Hotel and Restaurant Worker and the Answer Thereto

Fellow Worker:—

Your letter has been unanswered all this time, due to the pressure of routine work, which seldom leaves us any time at these headquarters for incidental correspondence, however important.

You take exception to a sentence in the report of Hotel, Restaurant and Domestic Workers' Industrial Union No. 1100, I. W. W., in the August number of the "One Big Union Monthly," stating that "the hotel and restaurant workers are deceived into believing that 'The International Federation of Workers in the hotel, restaurant, club and catering industry' is an industrial union."

To disprove this statement of ours, you quote from your own preamble: "The Workers must organize and combine industrially on the economic field on the principle of the class struggle." Further, you state that "the immediate aim of the federation is shorter hours, increasing wages, better working conditions, abolition of tips and 'to co-operate with all other workers who struggle for the abolishment of the wage system for the complete emancipation of labor.'"

You further ask some questions:

(1) Are you depending upon co-operation with us, or do you regard us as an enemy, the same as the A. F. of L.?

(2) What is your official attitude toward our organization? Do you mean to capture us by means of propaganda, education and leaflets, just as "left" tries to capture "right" in the Socialist Party?

(3) Is the I. W. W. holding monopoly in industrial union organization?

In answer, allow us to state the following:

The wording of your preamble, as quoted by yourself, is all right as far as it goes. But it does not go very far. It leaves out the most essential function of an industrial union. It advices the workers to "co-operate with all other workers who struggle for the abolishment of the wage system for the complete emancipation of labor."

We of the I. W. W. hold that there is no way of completely emancipating the workers and abolishing the wage system except by organizing industrially in such manner that these unions will be capable of serving as the productive and distributive organs of the new society, as organs by means of which the workers will be able to dispossess the present owners and take their place in the social system.

The wording of your preamble gives the impression that it was written by and voted for by political socialists or revolutionists without any real appreciation of the possiblities of an industrial union as the productive organ of the future. It leaves the impression that your federation pledges itself to support mainly the attempts of some groups of workers to achieve emancipation via the road of socialist or communist politics. Had it meant that the union was to be built as the productive or distributive organ of the future, it would probably have said so, just as the I. W. W. preamble states. It is in this important matter that we consider that your federation falls short of being a real industrial union.

We still have the impression that it is merely a trades union that is waving the red flag, presumably of political socialism, in its preamble, without taking any practical steps for the organizing of a new social order.

Furthermore we hold that no union can justly claim to be an industrial union in the proper sense of the term as long as it aspires to be a separate or independent body. A real industrial union must be part of a greater organization comprising the whole society. It must be in the ONE BIG UNION, as No. 1100 of the I. W. W. is.

Now to your questions. We will answer Question No. 3 first.

**Is the I. W. W. holding monopoly in industrial union organization?**

Answer: Certainly not. On the contrary, we realize that our resources and possibilities are quite limited, while at the same time we have raised such a storm of resistance against ourselves that we frequently are unable to get a footing in many industries. Not only do we not claim a monopoly of industrial union organization, but we are anxious that the workers everywhere help us to carry the terrible burden which we have taken upon ourselves. We fervently hope and wish that the workers in every industry will of their own accord and through their own efforts re-align themselves along industrial lines in real industrial unions. We positively rejoice in seeing such efforts. We know that when they have perfected their organization to real industrial unions, they will automatically and voluntarily join the twenty-one industrial unions which are now gathered under the battle-worn banner of the I. W. W. But such junction will and cannot take place before such unions have clearly understood that our purpose is to organize the unions as the framework of the new society. Unless and until they are so built and with that purpose, they do not properly belong with us.

Next we will answer question No. 2.

"What is the official attitude of the I. W. W. to our federation?"

"Do you mean to capture us by means of propaganda, education and leaflets, just as 'left' tries to capture 'right' in the Socialist Party?"

Our official attitude toward your federation is that we consider you as an imperfect industrial union somewhat imbued with class consciousness in contradistinction to the regular A. F. of L. trade unions. In fact, we consider it industrial practically in name only, but are happy to note that in your preamble

you give a partial endorsement to the industrial form of organization.

We are not particularly in a hurry to capture your organization. In fact, we never capture organizations. We sow the seed of our propaganda broadcast. In this manner we are making converts to our cause without number, converts who in most cases do not carry an I. W. W. card. You have hundreds of them within your organization. To the limit of their ability these cardless I. W. W. men work upon their surroundings, tirelessly, without end, until they have gained enough converts to either swing the whole body or start a new I. W. W. organization. The campaign of the I. W. W. union most nearly corresponding to yours is countrywide. New locals are being formed everywhere, even without organizers, simply under the pressure of economic conditions and guided by our agitation and education. Thus we foresee the day when your federation will come into the I. W. W., not as a captive of union warfare, but as a triumphant convert to our ideas and principles.

Finally, let us answer your question No. 1:

"Are you depending upon co-operation with us, or do you regard us an enemy, the same as the A. F. of L.?"

First, we want to correct your misconception, that we are the enemy of the A. F. of L. That is only partially true. We are the enemy of the craft union principle and of the principle that capitalism and wage slavery shall continue permanently. We reject absolutely such A. F. of L. principles, as you will understand from a study of our own principles. We are also enemies of such A. F. of L. leaders as have proven themselves traitors to the cause of labor, but as far as the membership of the A. F. of L. is concerned, we are very good friends with them, as a rule. With most of them there is nothing the matter, except that they are deplorably ignorant on the questions that workers above all, ought to know. In numberless strikes we have co-operated with them, sharing the victory or defeat. In numberless battles they have betrayed us and scabbed on us, but we still do not consider them as our enemies. They are just ignorant and therefore, sometimes, vicious. So we try to educate them, and we are making a great success. Craft unionism is breaking up under the incessant blows of our agitation and education. We look forward to the day when the mass of the A. F. of L. will stand on our own platform. It is slowly but surely going that way.

Do we regard your federation as an enemy? Indeed not. Will we co-operate with you? We will not co-operate with you in building up a trade union with leaning toward socialist politics. We will not co-operate with you either in parliamentary action or so-called mass action. But we will as individual members, co-operate with you in your struggles with the master class for the highest demands that you will make. The I. W. W. members and friends always fight to the finish in such cases. But we will not co-operate with you in building up your federation, seeing that it is not built on what we consider the correct principles.

Unquestionably you would all be with us, if we only had succeeded in making your members acquainted with the principles of the I. W. W. But that we have not done yet. As time goes on, your members will learn all about our principles and knowing them is accepting them.

For this reason we shall go ahead with our work as if your federation did not exist. Some day in the near future, we feel certain that you will understand us and you will then voluntarily range yourselves in the lines of Hotel, Restaurant and Domestic Workers' Industrial Union No. 1100, I. W. W., joining with us in preparing the workers of this industry for the taking over and running of this most important branch of human activity, as a part of the department of Public Service.

There are other so-called "industrial unions" and federations similar to yours, and we take the same stand towards them.

With greetings of fellowship to the members of your federation, I am

Yours for Industrial Communism,
ERNEST HOLMEN,
Sec'y-Treas. H., R. and D. W. I. U. No. 1100,
I. W. W.

### GIVE TO ME

**Give me the fire of the rebel's heart,**
**And I'll cleanse the world from shame,**
**And burn like weeds the filthy deeds**
**Of those who battle with the flame!**

**Give me the dream of the rebel's brain,**
**And I'll laugh to scorn the fools**
**Who dare not rise from the bed of lies**
**That the tyrant makes and rules!**

**Give me the strength of the rebel's arm,**
**And I'll have the strength to mold**
**A perfect place for the human race,**
**And freedom for the bold!**

**—C. O. G.**

# The Servant Girl Rediscovered

BY A. DELEGATE

At last the cries and complaints from the overworked and mistreated domestic servant has penetrated to the ears of the Women's Trade Union. They have suddenly discovered that this age-long goat of society is really a human being, and that she doesn't enjoy working fourteen hours a day and sleeping in an attic room or eating scraps.

And she who watched with longing and eager eyes from her attic window the swift march of her sisters in gay, yellow sashes, pushing on to political freedom, felt as one apart. She was not asked to join or take a part. True, on election day, her mistress took her to the polls in her limousine that she might instruct her on the way to vote.

Now this scorned and despised kitchen mechanic finds her wrongs and injustices of years held up indignantly before the public. Small wonder that she finds herself as speechless and bewildered as did the ragged little cinder maid when the fairy's wand had transformed her into a princess.

A few years ago these women who are so righteously indignant over the wrongs of the servant, delivered their tear-drenched pleas before the Illinois state legislature in behalf of their down-trodden sisters and succeeded in getting the nine-hour law for women. This same servant was excluded from the benefits thereof by cleverly prepared wording.

And so she turned, a little sullenly perhaps, to her kitchen, amid the shrieks of victory from her sisters employed in the stores and factories.

So she continued to get up at 6 o'clock and, while the girls employed in the industries were dancing or sitting in the theater, she was still washing dishes or pouring champagne for her master.

But the magic word has been spoken and the proper incantation has been made and, lo and behold, she is the center of attraction!

For the small sum of $2 she can have a real union, everything included, from an official looking card to a place to meet and talk about her mistress.

Has the Women's Trade Union turned "red?" Has the spectre of Bolshevism appeared in its ranks? That is the question that naturally arises to every mind on hearing this astounding news. But such is not the case. The new Housemaids' Union is just as respectable as the League of Nations. In fact, it resembles it so closely in some respects that one almost wonders if Lloyd George did that, too.

The program of the Housemaids' Union (one never says "domestic workers" in the Women's Trade Union), is a case of collective bargaining gone wild.

The conference scheduled between the housewives and the maids is a cleverly arranged affair. Each women's club is to send a delegate. Of course, no one ever heard of a domestic servant belonging to a woman's club. So the maids will be outnumbered to start. In fact, the housewives are bound to get the bargain, while all that will be left for the maids will be the collective. The whole affair is ball-bearing and perfectly oiled.

Some of the housewives and maids belong to the same union. Did you ever hear of anything quite so democratic as a union that includes both the boss and the worker. This is no lion and lamb affair. Both are lambs—twins at that. All differences are to be settled (no; there isn't to be any strike; I have the word of the organizer for that), through these conferences between the housewives and the maids.

One hears just as much, if not more, in these union meetings about the grievances of the housewives. It seems to be their aim to minimize the grievances of the maids for fear they may demand too much.

Can you imagine an official of the United Mine Workers or any other similar organization telling the men that the boss has just as many grievances as he has and getting away with it? But years of "Yes, Maming," has stifled to some extent the domestic's ability to think. And the most remarkable thing about it is that the majority of the maids joining this union are those who have left their youth behind! Their tired faces, lined with age and care, are mute evidences of the years they have rendered service to others.

We are told by the organizers that most of the employers favor such a union, so when the maid goes home and confesses timidly that she has joined the union, the mistress the breathe a sigh of relief and exclaim, "God bless you, my daughter!"

One must admit the strangeness of such a situation. But women are more given to strategy than men. Their social status has made natural diplomats of them.

When the slaves in the husband's factory or mill come to him with such a confession, he answers them with a company of soldiers and machine guns.

But woman is not so crude in her reasoning. In order to thoroughly understand the psychology of the housewife and the steps that led to her indorsal of a maids' union, it is necessary to look back a couple of years in industrial history.

In January, 1918, the I. W. W., under repeated pressure from the workers, formed the Hotel, Restaurant and Domestic Workers' Industrial Union, uniting all the workers in these industries into One Big Union. At first little progress was made, but with the gradual awakening of the workers all over the world to the need of solidarity, this union grew until today complete industrial control in this field is only a matter of time.

We are organizing to demand—not beg—for decent working conditions for the domestic worker, an eight-hour day, and humane treatment. We are a militant organization and are prepared to force these demands on the employers.

The girl who cooks the meals and scrubs the floors has nothing in common with her mistress who gives monkey dinners costing hundreds of dollars and who wears imported gowns costing more than her servant earns in a year of ceaseless toil.

These domestic workers are awakening to this truth and are lining up in the One Big Union. We are organized from New York to Los Angeles.

Now the mistresses are becoming panic-stricken. Something must be done to stop this rise of the lowly servant girl. A hurried conference was called and the result was that the Women's Trade Union launched the housemaids' union to save the servants souls from the hell fire of industrial unionism and the scourge of Bolshevism.

It is a deliberate attempt to frustrate true organization of the domestic workers. Since they must have a union, why not design one for them? is the housewives' slogan.

Wake up, domestic workers, before you are delivered, bound and gagged, into the employers' hands.

The Preamble of the I. W. W. says that the employing class and the working class have nothing in common. As long as society is divided into two classes—the employing class whose business it is to get all the work it can for as little money, and the working class whose business it is to get as much money as they can with as little work—there can never be industrial peace, and any attempt to delude the workers into thinking they have common interests proves that person to be a tool of the capitalist class.

So it is evident that any labor organization which the employers favor can never accomplish anything for the worker. So the fact that the mistresses approve of the housemaids' union proves that there is something wrong with it as a means of bettering the servants' conditions.

The employers of domestic servants do not entertain the officials of the I. W. W. at tea because we are true to the interests of the workers which we represent.

Don't be deceived, domestic workers! Organize you must if you ever hope to better your condition, but it must be into One Big Industrial Union that is prepared to force the employers to grant your demands by a strike in every industry.

You formulate your own demands. We have no business agents to betray your interests.

—Underwood & Underwood photo.

# Finnish and Russian Workers Ask to Be Deported to Soviet Russia

**Finnish Workers Demand Deportation**

WHEREAS, the newspapers and periodicals owned and controlled by the American capitalist class, in their writings continually advocate race and national hatred against all alien members of the Industrial Workers of the World and against all radically thinking workers, accusing them of the broad unrest which is going on in the different industries over the country, the said unrest being caused by the high cost of living and unbearable working conditions, and

WHEREAS, the capitalist class has started a systematic blacklist and open boycott in many industries preventing Finnish members of the I. W. W. and other radical workers from securing work and forcing thousands of workers to the point of starvation because of unemployment, and

WHEREAS, we, the Finnish members of the I. W. W., as well as Americans and other radically thinking workers, have been deprived of all constitutionally guaranteed rights of free speech, press, assemblage and organization, so that the Finnish bloodthirsty Mannerheim government, which is ruled by the few, remains in shade when compared with the American censorship; and

WHEREAS, personal safety, life and property of the members of the I. W. W. and other radical workers are no more protected against such cruel outrages as have been committed by the gunmen of corporations, Liberty committees, Citizens' Alliances and American Legions. Their shameless, violent terror has appeared in Butte, Red Lodge, Everett, Bisbee, Tulsa, and the latest in Centralia; and

WHEREAS, federal and local departments of justice agents have again started wholesale arrests in which members of the I. W. W. and other radical workers have been imprisoned for months without any hearing, said confinement and prison torture excels that of the overthrown government of the Russian Czar; and

WHEREAS, the United States congress, department of justice, and especially the department of immigration has begun deportation proceedings against all alien members of the I. W. W. and other radical labor organizations, and

WHEREAS, we know that notwithstanding the fact that we are to be deported out of the country, the unrest and industrial unionist organization will unceasingly grow among the masses as long as production, distribution and natural resources remain in the hands of the few, so that the ever-growing profits and dividends enrich the said few while millions of able workers are thrown out of employment; therefore, we demand

THAT the United States department of immigration begin proceedings immediately to deport us Finnish members of the I. W. W. and other radical workers who are not satisfied with the American capitalistic profit system and the society which is constructed on the basis of wage and mental slavery; and, therefore, we further demand

THAT the United States government do not send us over to Finland, because the Mannerheim white terror is just as cruel as the above mentioned terror of American plutocracy; but we demand

THAT the United States government deport us over to Soviet Russia, and we will free the United States government from all deportation expenses; the ships of Soviet Russia are waiting to bring us over there; and we further want to impress in our demands

THAT if the United States government refuses to take into consideration our demands for deportation to Soviet Russia and will not free the unjustly arrested members of the I. W. W. and stop persecuting the members of said organization, we are forced to further co-operate with the American working class in constructing industrial unionism, with the aid of which we will form the new society within the shell of the old, finally changing production, means of distribution and natural resources into the hands of the working class.

GIVE US LIBERTY TO GO!

DEPORT US!

We, the hundred Finnish radical workers, members of the I. W. W. and citizens of Russia, representing 6,000 of our fellow countrymen and women in Seattle and vicinity, assembled in mass meeting, held on the 26th of November, 1919, adopted the above mentioned resolution concerning our deportation, threatened by the United States government.

JOHN KORPI,
PETE ANDERSON,
ALFRED LAMPINEN,
EVA RIPIINEN,
KUST KANGAS,
Committee on Resolutions.

These resolutions have been sent to Commissioner of Immigration White and to the department of commerce and labor.

---

**AN APPEAL**

We are citizens of the Russian Federative vicinity in mass meeting assembled, and are voicing our protest against the unwarranted arrest of individual members of said colony for no other crime than their political convictions and natural sympathy with their native land and the Russian Soviet Republic, which convictions and sympathy none of us ever tried to conceal.

We, the Russian citizens, call the attention of the government of the United States to the fact that we (including those arrested for their loyalty to the workers' republic), do not want to suffer in your prisons. And if the government of the United States is inclined to regard us as undesirables, we request

that the boundaries be opened, the bars be lifted, and we be permitted to return to our homes, where our families and friends are longing for our return.

We are citizens of the Russian Federative Soviet Republic and declare it to be our inalienable right and duty to show our loyalty to our chosen Republic, as it is the right of the American people to be loyal to their Republic, and we stand ready to go to jail and even give our lives for the revolutionary proletariat of Russia.

We are proud of our brothers who in the name of honor and justice have fought against the bloody rule of the Czar and are now fighting for the preservation of the Russian Soviet Republic.

We are protesting against those who, in order to gain their personal aims, are trying to crush the Russian revolutionary proletariat, whose chief aim is peace and justice not only for the Russian workers but for all humanity as well.

We are in full accord with our freedom and humanity-loving brothers and declare ourselves to be what is commonly termed Bolsheviks.

If the solidarity with our Russian brothers thus displayed by us does not for any reason meet with the approval of the authorities we, as a committee, ask to be permitted to return to our native land.

PAUL GRIB,
EHIEL LEVITT,
FILIMON MATORIN,
S. CHINEVICH,
JOHN LEBEDUKE OTTO,
Committee.

The above resolutions have been forwarded to local and national government officials.

# Involuntary Servitude Whose Fault Is It?

Samuel Gompers is quoted in the press as follows:

"The government is going to lengths it never dared go before.

"Not only does it seek by injunction to prevent the performance of certain acts on the part of the working people—a thing we have seen before—but now by mandatory order it actually commands men to go out and do certain things, something never before heard of in this country.

*"In other words, the government of the United States is deliberately putting handcuffs on the wrists of American workers and driving them into involuntary servitude.*

"Our patriotism and loyalty has never been in dispute. Before the war, more than three weeks prior to the day President Wilson read his denunciation of the Germans, the American Federation of Labor publicly announced that it would stand with the government in the event of war. And the workers of America kept their word.

"But now, after the war is over, we find that there is not only no more freedom than before the war, but that *the freedom that we enjoyed then is actually being taken from us.*

"We find the government using its power against one side and in favor of another."

We have no fault to find with this statement. But whose fault is it that we now are facing involuntary servitude? Who else but Gompers himself is it that has delivered the workers bound hand and foot to the criminal capitalist class. Who has done more than any other single man in America to keep the workers in helpless ignorance? Samuel Gompers. And here the old rascal comes slobbering all over himself at the result of his life work. The workers will curse him as they rattle their chains.

# Show Your Card!

### SHOW YOUR CARD!

Salt Lake City, Utah, Nov. 11, 1919.

Members should show their cards to delegates or organizers. Many foreign-speaking members are in the habit of refusing to show their cards to delegates. It gives the non-members a chance to say they are members if they do not have to show their cards. It also gives those in arrears a chance of dragging along without being known to be in errears. ALWAYS SHOW YOUR CARDS TO DELEGATES AFTER SEEING THEIR CREDENTIAL.

Charles E. Berger,
Secretary Salt Lake District, M. M. W. I. U. 800.

---

### GET READY NOW

The General Convention of L. W. I. U. No. 500 will take place on the first Monday in February, 1920. The place of meeting has not been decided upon yet, but there is no time like the present to prepare for this event. This will give the membership and the branches plenty of time to prepare their resolutions and instructions to delegates and to study up on the matters that will be passed on at that convention. Further particulars will appear in the Bulletin later.

---

The soldier is an anachronism of which we must get rid. Among people who are proof against the suggestions of romantic fiction there can no longer be any question of the fact that military service produces moral imbecility, ferocity and cowardice, and that the defense of nations must be undertaken by the civil enterprise of men enjoying all the rights and liberties of citizenship, and trained by the exacting discipline of democratic freedom and responsibility. For permanent work the soldier is worse than useless; such efficiency as he has is the result of dehumanization and disablement. His whole training tends to make him a weakling.—Bernard Shaw.

# The Struggle for Emancipation Within the A. F. of L.

The outsider hardly realizes what a strangle hold A. F. of L. officialdom has on its members. The rank and file is in most of the craft unions as helplessly in the hands of the machine gangsters as the New York voters are in the hands of Tammany Hall. Occasionally there is a revolt against the gangster machine, but in most cases the revolt is put down by all the methods known to the rotten politician and the gunman.

At this writing there lies before us two proclamations of such revolts of recent date.

The one is issued by Local Union No. 188 of United Association of Journeymen Plumbers and Steamfitters, this local being located in Savannah, Ga. It is signed by President C. J. Glock of that union, by J. D. Gabe, Chairman of Executive Board, Edw. Ashland, Chairman of Grievance Committee, and by a job committee of three members from the Foundation Yard of that city.

We are particular about mentioning these signatures, as we of the I. W. W. are frequently accused of unjustly villifying A. F. of L. officers.

Now listen to some extracts of the manifesto issued by this A. F. of L. local.

*"Savannah, Ga.*

*"To the officers and members of the United Association of Plumbers and Steam Fitters, Greeting:*

*"The General Officers of the United Association of Plumbers and Steam Fitters have finally developed into an employment bureau and professional strike breaking agency for the employers' association.*

*"The General Officers of the United Association are in partnership with big industries to furnish Union Labor at a minimum wage, and send out its organizers to defeat every effort of underpaid and overworked mechanics."*

*The manifesto then goes on to state how the General Office, at the request of the employers, The Foundation Yard Co., sent one of its "organizers" down to Savannah, ordering the men back to work when they were about to win their strike.*

*It winds up by stating:*

*"Our headquarters are receiving money under false pretenses. We are paying the salaries of our employers' agents. Our organizers are our betrayers. Let us back them off on every occasion. Disorganize the Organizers!"*

*"If 'our organizers' are not on the payroll of the Merchants' and Manufacturers' Association, they ought to be," etc.*

Now this is what the I. W. W. often has said about A. F. of L. officialdom. Such accusations have been called "scurrilous" and false. But here you have the rank and file of an A. F. of L. local repeating the accusations over the hand and seal of their elected local officers and committees.

The other manifesto of revolt that we have in hand is issued by the "Central Committee of L. U. 110, Norfolk, Va.," of "United Ass'n of Plumbers, Gas and Steam Fitters and Steam Fitters' Helpers." It is an argument in favor of certain amendments to their national constitution. On several pages the central committee goes on to show that the officers of the association are in a conspiracy against the rank and file. One accusation is *"that, without a doubt, headquarters have even tried to enlist the aid of Government officials to keep down our conditions so as to break the spirit and create dissension."*

Thus we see how the workers are trying to shake off the vampires on their back who are betraying them into the hands of the master class.

We have only recently witnessed a similar struggle on a larger scale in the printing industry of New York, where the insurgents against boss rule to the number of nearly 20,000 fought for weeks against their own officers, only to meekly return under the yoke.

Such instance should be sufficient to prove that the workers are doubly enslaved, first by the employers and, secondly, by the officers which they are supposed to have elected. The vampire machine is too strong for them.

The only way to shake off these vampires is for the workers to quit their A. F. of L. union and join the I. W. W., where there is complete democracy, where there are no leaders to order the members about, but where the members themselves decide everything.

To all these insurgents against the octopus of the Gompers machine we have only one advice: Without dues coming in the octopus will die—therefore quit paying dues to the A. F. of L. and form a union of the I. W. W. and be your own leaders.

The I. W. W. means emancipation both from labor fakirs and from wage slavery.

## NO FINANCIAL REPORTS

No financial reports of unions appear in this issue. To have had them set up would have meant the delay of this issue for an indefinite time. For this reason it was necessary to exclude them.

## NEW I. W. W. PAMPHLET

Hotel, Restaurant & Domestic Workers No. 1100 has just issued a 40 page pamphlet, written by L. S. Chumley and entitled "Hotel Restaurant and Domestic Workers, How they work and how they live". Price 15c, $10.00 per hundred.

Send order and remittance to Ernest Holmen, Secretary No. 1100, — 1001 West Madison Street, Chicago Ill.

Get it and spread it. It is fine.

# International Solidarity

## SWEDISH SYNDICALISTS GIVE POWERFUL AID TO THE I. W. W.

From a letter of Nov. 4 from John Anderson, a member of the G. E. B. of "The Central Organization of Swedish Workers" (S. A. C.), the Swedish counterpart of the I. W. W., we quote the following:

We have received some subscription lists from your General Defense Committee in Chicago, but as we find it difficult to do anything with lists that have English text, the G. E. B. of "The Central Organization of Swedish Workers" have had printed 2,300 lists of their own with Swedish text, as follows:

**Liberate All Class War Prisoners!**

Several hundred members of the Industrial Workers of the World and other workers are held in the jails and prisons of the United States. Some of these have been condemned to long terms in prison, while others, sick and broken down, still await trial. These men depend on you for their liberation.

Wm. D. Haywood, Secy., Gen. Def. Com.

**To the Workers of Sweden:**

From the Defense committee of our fellow workers in prisons in America we have received two subscription lists with a request for aid. Believing that the members of the S. A. C., as well as all other Swedish workers, wish to contribute according to each one's ability, in order that the American Syndicalists (among whom are many Swedes) shall get the aid they need for their trials and for comforts for those in prison, we hereby are sending out a number of lists for subscriptions.

The collected funds are to be sent to the office of "The Central Organization of Swedish Workers," Box 51, Orebro, Sweden, to be forwarded from there, and will be accounted for in "Syndikalisten" and "People's Daily Politiken."

Fellow Worker! In the name of international solidarity it is your duty to support these fellow workers in their self-sacrificing struggle by adding your contribution.

Central Organization of Swedish Workers,
Per General Executive Board.

## FRENCH SYNDICALISTS IN BEHALF OF IMPRISONED I. W. W. MEMBERS

"La Vie Ouvriere" (Paris) of December 5, 1919, reports that 107.00 francs have been collected till December 3, for our imprisoned fellow workers in Leavenworth. Fellow Worker Godonnèche, one of the most prominent militants of the minority in the Fédération du Livre (Printers' Union), is one of the donators, as well as the revolutionary Union of Metal Workers in Lyons, which gave one hundred francs.

Our thanks to the French syndicalist fellow workers and particularly to "La Vie Ouvrière" and "L'Internationale"!

## NORWEGIAN WORKERS COME TO THE AID OF THE I. W. W.

"Alarm," the organ of the Norwegian Syndicalist Federation, informs us that a "Norwegian-American Defense Committee" has been formed in Christiania, Norway. The committee has issued a stirring appeal in behalf of the persecuted I. W. W. and its members in prison.

The program calls upon all labor organizations to arrange public protest meetings everywhere against the terrorist regime in America; second, to send a protest to the American ambassador in Christiania; third, to appropriate money from the treasury of their organizations for the imprisoned fellow workers; fourth, to start collecting funds in every other way; fifth, to agitate for international action against this persecution.

The appeal is signed by Fellow Workers Eric Boman, Aksel Anderson, Nels Madsen, H. N. Fernstrom and Trygve Aakervik. The address of the committee is Box 4, Christiania, Norway, where subscription lists may be obtained.

## THE O. B. U. IN CANADA

During the first 4-5 months of its existence the One Big Union of Canada has issued some 36,000 membership cards. These cards are universal just as the I. W. W. card. In eastern Canada the old leaders are playing politics and are making a strong resistance to the O. B. U., particularly in Toronto. In spite of this the O. B. U. is making headway even in eastern Canada. Of late the French Canadian workers of Montreal have begun to take great interest in the work. Thus the leather workers have already joined and others are coming fast. O. B. U. literature is being printed in French.

The O. B. U. of Canada differs from the I. W. W. in that it endorses political action in theory. Instead of using a per capita tax for the financing of the organization, they propose to pool all funds in a common fund, thus doing away with separate treasuries, which have a tendency to develop into fences between the unions and frustrate the O. B. U. plan.

## SYNDICALISM IN SWEDEN

That the syndicalist movement of Sweden is progressing soundly we may conclude from the fact that it has during the year increased its membership from 20,000 to 30,000, mostly the same kind of workers as in the I. W. W. They now have their own printing plant from which "Syndikalisten" is issued twice a week. They propose to move their main office, on Oct. 1, 1920, from Örebro to Stockholm, where they have bought a house for 250,000 kronor. They expect to make "Syndikalisten" a daily paper from Jan. 1, 1921.

# Help for the Centralia Prisoners

**An Appeal to Workingmen**

Workers! Once again capitalism has struck at you, at your rights, your hopes and your aspirations. The bloody hand of Everett, of Ludlow, of Calumet, of Butte, Bisbee and every other outrage has reached out again. This time into the town of Centralia and in its murderous clutch it now holds eleven members of the working class whom they intend to destroy. They would destroy these workers because they are members of the I. W. W. and defended themselves against the organized violence of the tools of the Lumber Trust.

They would hang these workers because they by defending their meeting place in deed and in spirit, defended the meeting places of every workingman's organization in the country. They were defending all that is necessary to the onward march of labor, free speech and free assemblage.

The persons who would hang these men—these workers—are kin to those who during the war were lynching and terrorizing the land with their cries of pro-German. They are the same who gorged with the profits of war are now organizing mobs to descend on the halls of organized workers to crush their activities. They have four years of successful terrorism and unchecked murder behind them.

No one need recount their gloating tales in the newspapers during the war; of tar and feather parties, of lynchings and terror. The jails are full of their victims. These persons are the tools of capitalism.

The affair at Centralia in which five lives were lost was the inevitable climax to a reign of terror and murder. Here the natural law of self-defense driven to its furthest retreat, answered for all mankind the terrorism and violence of an insane system. The constitution of the United States, so long trampled under foot by organized greed, had at last found defenders, defenders, perhaps, ignorant of the text of the constitution, but alive to the spirit of freedom that animated its authors. For defending themselves from mob violence, for defending the rights of free assemblage, for resisting the damnable murderous clutch of capitalism the workers in Centralia are now lying behind the bars at the mercy of cruel jailers, helpless. Their only hope lies in you who are on the outside. To you whose rights they have defended they intrust their own defense. Are you going to ignore their trust? Are you going to leave them to the murderous profit-mongers who will murder them as a warning to the rest of the workers?

The workers charged with murder in Centralia must be defended. It is up to the workers to defend them by donating money to their defense.

If you wish to donate to the defense of these workers, these defenders of your rights, you can do so by enclosing your donation and send it to George Williams, 318 North Wyoming street, Butte, Montana, or to Wm. D. Haywood, secretary-treasurer, General Defense Committee, 1001 W. Madison street, Chicago, Ill.

## NIEUWENHUIS DEAD

From Holland comes the news that Ferdinand Domela Nieuwenhuis has passed into the great beyond, at an age of 73 years.

Nieuwenhuis did not belong to our class. He began his career as a minister of the gospel. He abandoned this calling and became a social democrat, but soon found that he was on the wrong path. He broke away from them and for the last many years he was a valiant fighter in the ranks of the radical labor movement.

Nieuwenhuis is sincerely mourned by the workers of Holland, to whom he unselfishly gave all his earthly goods as well as his long and useful life. He will be remembered by the international labor movement as one who sacrificed all for truth and justice, and as a teacher who has helped to shorten the road to a new society.

## NOTICE

Fellow Worker J. Sidney, late of Snohomish county jail, please communicate with J. Jacobson, 115 E. 10th st., New York, N. Y., care of Rebel Worker. Any one knowing of his present address kindly forward to above address. Important.

## ROUMANIAN FELLOW WORKERS WANT TO START AN I. W. W. PAPER

### An Appeal From Roumanian Branch of Metal and Machinery Workers I. U. No. 300, Detroit, Mich.

As you all know, literature is of the greatest necessity for propaganda and organization. For this reason we, the members of the Roumanian Branch of M. & M. Workers' I. U. No. 300, I. W. W., in Detroit, feel it our duty to try to establish a monthly or a semi-monthly I. W. W. paper. We have now in press Varney's "Industrial Communism—the I. W. W.," but we need more leaflets and papers.

For this purpose we need some funds. Our Branch has unlimited hope that it will receive moral and financial support from branches, members and sympathizers.

Roumanian workers! Take note! Wake up and organize industrially!

All letters, checks, money orders, etc., should be addressed to

*John Onika,*
2990 Orleans st.,
Detroit, Mich.

(Seal)

# Who is back of the Persecution?

Some people are apt to think that the persecution now being carried on against us by cut-throats in uniform is a genuine expression of outraged patriotism on the part of brave soldiers who have risked their lives for their country.

The fact of the matter is that these law breakers who invade and wreck our halls and brutally beat our members simply are operating in the guise of ex-service men in order to befuddle the people. They are nothing but the tools of "higher ups" who have made it their aim to suppress what they call "radicalism."

Back of all this persecution stand the same people who are the backers of the National Security League, which was recently investigated by Congress. It was then disclosed that the persons primarily supporting it were J. P. Morgan, Rockefeller, Dupont, Frick and Carnegie, etc. Since then, no doubt, the league has associated with itself a host of other people. Terrorism is its method, whether it is a question of enlisting new members or persecuting the Reds.

The following news dispatch tells the story of how this league has organized and how it operates:

### ANTI "RED" WAR IN 38 STATES

**Director Named in Each for American Education Campaign**

(Special to The Chicago Daily News)

New York, Aug. 18.—The nation wide educational campaign against all un-American radical doctrine, being promoted by the National Security League in association with the other leading patriotic societies of the country, is now actively under way in thirty-eight states, according to an announcement by the Security league today. In each of these thirty-eight states an influential citizen has accepted the appointment of state director for the immediate supervision of the campaign in his state.

This movement, in which the Security league and affiliated societies have the co-operation of prominent men and women in all walks of life in all parts of the country, is aimed at combating the disorganizing propaganda of anarchists, bolsheviki and international socialists by the popularization of the constitution of the United States. The campaign will culminate in the nation wide celebration of "constitution day" on Sept. 17, the anniversary of the signing of the constitution.

Two notable national committees are in general charge of the campaign—the constitutional celebration organization committee, which includes representatives of the National Security league and associated bodies and is headed by Dr. David Jayne Hill, and the constitutional celebration honorary committee, which includes in its membership the governors of twenty-two states and the mayors of more than 100 large cities.

Many of these spurious patriots and profiteers happen to carry the uniform. It is in their capacity of ex-service men that they have succeeded in enlisting the service of other ex-service men for the nasty deeds that they are now committing all over the country with impunity. Not only are their depredations tolerated by the authorities, but these are even directly co-operating with them, boasting of their law-breaking practices.

The raiding squads of soldiers are mostly ignorant dupes on whose avarice or passions the higher-ups are playing.

It is high time that the ex-service men of the working class begin to see how they are being fooled. As to the ex-service men of other classes, we know what we may expect from them. They are criminals parading as patriots.

# Capitalist "Efficiency"

Constantly it is being thrown into the face of the workers that we are "stupid and inefficient." All of us know, however, that these accusations are made to hide the fact that capitalism is a system that "saves at the spigot and wastes at the bunghole," while we at the same time are being prodded to increase production by means of Taylor systems and the like.

Here are two news items from the capitalist press calling attention to one serious, permanent leakage which continues to exist simply because the capitalist countries are largely ruled by ignorant and grasping profiteers. They both refer to the metric system now being used all over the world with the exception of England and America and their possessions.

### THE TWO STUPIDEST NATIONS

**(By John M. Gerry, Financial Editor, San Francisco Bulletin)**

The TWO STUPIDEST NATIONS!
No! Not Russia and Germany!
Nor even Nigeria and Timbuctoo!
But—GREAT BRITAIN and the UNITED STATES!
Now, what do you think about that. YOU don't believe it? They are the most enlightened nations.
They are and THEY ARE NOT!
In some things, YES! In one great vital essential of these times, NO!

For Great Britain and the United States are embarking upon the most colossal world competition in all history, with the WRONG KIND OF EQUIPMENT!

**They are tackling world trade with the wrong tools!**

Two hundred and twelve nations and countries are doing business together under the simple practical and universally understood METRIC system.

Two nations are attempting to do business with the 212 under the old-fashioned, cumbersome, obsolete GERMAN system.

These two old-fashioned, behind-the-times, dozing nations are Great Britain and the United States!

And the system they are using was DISCARDED AS WORTHLESS BY GERMANY half a century ago!

**The two greatest (?) nations in the world are trying to do business with German's cast-offs!**

This, no doubt, is precisely as Germany had planned. Having tied a weight to the heels of her greatest trade adversaries, this cleverly cunning country removes her own weights and skims into world commerce on the wings of a system invented by an Englishman—James Watt in 1783.

Think of the irony of it! An Englishman gives the world the logical, decimal system of measurement which Germany adopts to her tremendous acceleration in commerce and power and enrichment by BILLIONS OF DOLLARS. In return Germany fastens upon the land of the Englishman to whom she owes so much the cumbersome jungle of quantity expression that is a terrible handicap to Great Britain in her world enterprises.

But the REAL TRAGEDY is this:

**The United States slavishly follows Britannia in her weights and measures and retains them, while all the rest of the world, except these two, adopt the decimal system which everybody understands!**

It is under this tremendous handicap that the United States enters world trade. In all her dealings with the Orient, Oceania, Latin America and the remainder of the world outside of British possessions, this country must do business with two sets of measurements—the METRIC, to satisfy her customers the GERMAN, to humor the obstinacy of her own manufacturers. But that obstinacy is calculated to cost those manufacturers TENS OF MILLIONS OF DOLLARS ANNUALLY in lost time and lost orders.

The other item emanates from The World Trade Club of San Francisco, Cal., and reads as follows:

### METRIC SYSTEM WOULD SAVE MILLIONS IN EDUCATION

America's greatest educators are supporting the move made by the World Trade Club of San Francisco to secure the adoption of metric units of weights and measures by Britannia and the United States. "The adoption of the metric system by the United States would facilitate teaching of mathematics and applied sciences in schools," wires President Emeritus Charles W. Eliot of Harvard University. President Nicholas Murray Butler of Columbia has also sent the World Trade Club a telegram of support. Dr. Joseph V. Collins, an eminent educator, declares that the people of the United States lose $314,000,000 yearly in education because of time wasted in teaching a system so much more complicated and difficult than the metric system.

# Another Letter to the Editor

BY COVINGTON AMI

Dear Editor:

I received the Monthly for November today, also Ford's Weekly for Nov. 8. In the last I find this extremely interesting statement: "Less than one-fourth of the soldiers of George Washington's army were native Americans; Scotch, Irish and English born soldiers made up the majority." Query: Suppose the "German King of England" had had a Secretary of Labor Wilson to deport them, whereinhel would we be?

Ford's also gives the reason why the salaried slaves are so hostile to unionization, viz., "Tight collars hinder the normal supply of blood to the head and thus affect the action of the brain," which bears out a Louisiana lumberjack's observation on the same class. He said: "It looks like just as soon as a man begins to wear white collars he loses all his backbone and brain," and now comes Ford with the scientific explanation.

However that may be, I do not wish anyone to get the idea that I am opposing ideas because they originated outside the land of the U. S. A., as some might infer from the publication of my letter, in the compilation of which I would have been more careful had I been writing it for that purpose. My only idea was to insist that we use terms our people were used to wherever possible, and I stand corrected as to your distinction between the terms Industrial Communism and Industrial Democracy. I fell into the error out of the habit we Southerners have of defining Democracy to mean "equal rights to all, special privileges to none," from which, just as soon as we really begin to think economics, we arrive at the conclusion that the only hope of saving Democracy in this country is to make the land, natural resources and socialized machinery of production, distribution and exchange the inheritance of ALL the people. In this connection, I want to say I agree fully with your fine article, "The Importation of Ideas in the Labor Movement," for I have always insisted that the native-born American movement had its roots sunk deep in industrial unionism which, to me, is our great contribution to the world movement.

Varney's article on the steel strike is simply splendid, and it bears out what I've been hunching from the beginning. But I hope Varney is wrong in this statement: "The tendency of the I. W. W. is toward higher and higher centralization. In this respect of form the I. W. W. is more closely akin to the German than to the French labor movement," for the main curse of the world today is too damn much centralization, as I see it, and too little local initiative and control, a thing Varney sees and correctly denounces in the conduct of the steel strike. And, what is the alleged German labor movement but a sublimated offshoot of that British-born insanity—craft unionism? If there's anything the I. W. W. wants to steer clear for good and all it's anything and everything savoring of German unionism, for the present woeful condition of that country is a total condemnation of its "labor movement." The "printer's devil" made me say, in reference to the "race war" over in Arkansas: "These gentlemen (the 'committee of seven prominent business men') are themselves nowise to blame; they never are, for the Proletariat can do no wrong," when what I said was: "For the PROPERTARIAT CAN DO NO WRONG," a thing later reports bear out, since dispatches in the local press state that forty-eight members of the Progressive Farmers' and Household Union had been "tried and convicted in THREE DAYS." Going some for Blind Justice!

Papers down here have been full of wild headlines and articles on the arrest of members of the "Russian Workers' Union" all over the middle west and east and of a "conspiracy" on the part of the I. W. W. to organize "German branches," which last is something new to me, as I always understood that the main "crime" of the I. W. W. was its attempt to organize ALL the workers INDUSTRIALLY, regardless of race, creed or color, into One Big Union, but maybe I have been only dreaming for the last fifteen years. This and the coal strike is taking up all scare space in local papers the last few days and I've got a notion into my head that I cannot get rid of—that the pyrotechnics in both cases indicate that the politicians of both the unions and the states are drawing red herrings across several trails; that it is all mainly a hurrah to hide their futility and failure to better social and economic conditions, a thing they were self-pledged to "after the war." Your article, "The Collapse of Capitalism," is also good, but I've about come to the conclusion that about all we can do is to point out the road out of chaos so that as many workers as possible will have some idea of what to do when the collapse does come, for recent history seems to prove that the declaration of independence is correct where it states that the mass of men never move out of an old order and toward a new one until necessity compels them to do so. Even Russia lost TEN MILLION MEN, dead and totally disabled for life, and her entire political and economic system collapsed before she finally moved out from under and flashed her epoch-making message around the earth. But however all this may be, one thing is certain: The chicken of industrial democracy has at last kicked several holes through the iron shell of capitalism and, however the mother hen may squall and scold, the youngster is destined to soon rule the roost!

## POLITICS DECLINING

### Gradually Giving Way to Economic Administration

A recent newspaper dispatch to The Chicago Daily News from Paris, France, states:

Paris, France, Aug. 1.—On the initiative of the ministry of commerce and industry twenty-one employer's associations, including practically all French industries, have grouped themselves into a big central organization under the name of the General Production Confederation. The first duty of this new organization will be to appoint employers' delegates and technical advisers to the international labor conference of the league of nations to be held in Washington, D. C., this coming fall. It will further appoint delegates to the enemy property commission attached to the ministry of justice, and delegates to visit the United States on the invitation of 1,700 American chambers of commerce.

The correspondent, Paul Scott Mowrer, makes the following observations in connection with this announcement:

Thus another important step is taken in the movement generally known as "syndicalism" and which tends to replace purely political by economic representation. Henceforth both the General Production Confederation and the General Labor Confederation may be expected to participate more and more directly in the administration of the nation's affairs. In the face of these great combinations of labor and capital the farmers have also begun to organize and may soon be expected to have their own big representative syndicate. Some observers believe that henceforth the government will find it impossible to take any important step without the approval of the nation's various great economic organizations.

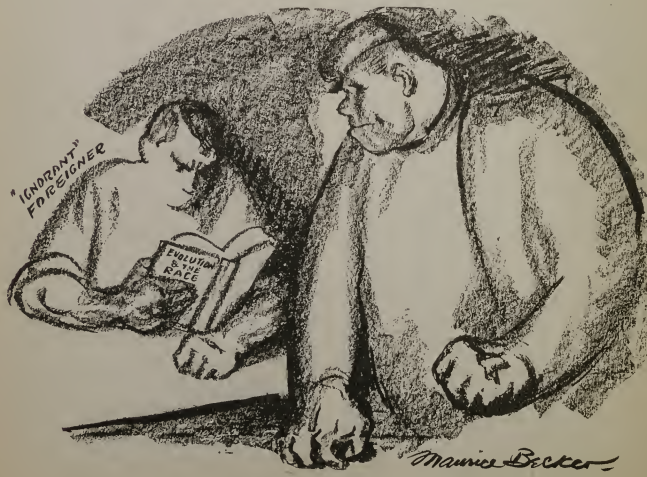
#### Distrust of the Parliament

Concurrently with the development of the syndicalist idea the public seems gradually to be losing confidence in the parliament, which is regarded as a purely political body swayed by "false" political rather than by "sound" economic conditions.

## SPIRITUAL RAPE AGAINST CHILDREN

"Murder will out." Capitalism is trying to clamp the lid down tight, that truth may not be known. One of the latest instances is a plan proposed by the superintendents of the New York high schools, to deny a diploma to anyone who does not sign the following pledge:

"I will reverence my country's flag and defend it against enemies at home and abroad.



"I will respect and obey the President of the United States and the law of the land.

"I will support, in school and out, American ideals of justice and fair play, including the rights of unhampered opportunity under the law for all.

"I will hold the ideal of national patriotism above loyalty to any individual, political party, social class or previous national connection.

"I will actively oppose all revolutionary movements such as bolshevism, anarchism, I. W. W.ism or any movement antagonistic to the laws of the United States or tending to subvert the Constitution of the United States."

Thus the Juggernaut of profiteerdom tries to crush the spirit of the child and enslave it. "Take the oath or starve" is the brutal dictum of these morally castrated servants in the temple of Mammon. They cannot hear the steady tramp, tramp of the advancing proletariat, having punctured their ear drums so they might not hear the truth. Onward with the work to save our children from physical and mental enslavement!

"WHY DON'T YE BE A MAN AND TALK UNITED STATES?"

# PREAMBLE

**of the Industrial Workers of the World**

The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the everyday struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# THE ONE BIG UNION MONTHLY

Published Monthly by the General Executive Board of the Industrial Workers of the World, 1001 West Madison Street, Chicago, Illinois.

JOHN SANDGREN, Editor

Subscription price, $1.50 per year; 15 cents per copy; bundle orders, 10 cents per copy, non-returnable. For sale by all newsdealers.

Address subscriptions, business communications and remittances to **The One Big Union Monthly**, 1001 West Madison Street, Chicago, Ill. Other communications should be addressed to The Editor.

## The 12th Annual Convention of the I. W. W.

By GORDON CASCADEN

"Business, not talk."

If the Twelfth Convention of the Industrial Workers of the World were to hang out a motto to show what it is really doing it would be that quoted.

Fireworks are absent from its deliberations. Delegates differ, 'tis true. They aren't afraid to express those differences, but when they have expressed themselves they go ahead and vote. This does not mean that discussion is cut off without opportunity for debate. Every delegate has his or her chance. Then when all who would have had their say, those who want to clear up their previous speeches or to bring out new matter have opportunity to do so.

The speeches are short and to the point. They are made by men and women who realize that they represent militant wage workers who are in the front line trenches of the fight for industrial democracy.

Numerically speaking the convention is not large. It is representative, however, men and women from practically every industry and from every section of the country attending. They come right from the job and not from "soft," "easy" organizers' positions.

Various important matters are under discussion, the various committees having many resolutions to consider. While certain decisions have been reached, the ultimate result of the convention's deliberations cannot be described at the time of writing this short summary.

The dues question, however, has been settled—so far as the convention can settle it. The membership at large will vote on a referendum to increase the dues from 50 cents to $1 a month. Several of the largest organizations had instructed their delegates to introduce resolutions favoring dollar dues. The vote in favor was large, those voting against it all favoring an incr ase, however.

The Secretary-Treasurer of the General Defense Committee submitted his report, which summarized the activities and also the persecution of the organization from Sept. 1, 1917, until April 1, 1920. It tells a story of persecution unexampled in the industrial history of the world.

Yet this convention, realizing the torture of those who uphold the principles of the movement, refused to let a red herring across the trail swing it from its common sense. A communication came in which criticised the Executive Board for passing, some time ago, a resolution setting out clearly the organization's position in opposition to the advocacy of violence by the Industrial Workers of the World. The convention unanimously decided to reaffirm the position of the General Executive Board in this respect.

**(On pages 49-55 will be found some extracts from the minutes of the convention, obtained at the close of the convention at the moment of going to press.—Editor.)**

RESCUING THE FLAG FROM THE PROFITEERS
I. W. W. Secretary C. E. Lundberg of Minneapolis, a World War Veteran, carrying the Stars and Stripes at the head of May Day parade.

# First of May in Minneapolis

By E. W. LATCHEM

On May 1st, 1919, when the workers of Minneapolis attempted to celebrate International Labor Day, their parade was broken up several times by the police and other willing tools of the money interests, but they always succeeded in reforming and managed to continue their parade until their destination had been reached. All speaking was stopped by the police, but that did not seem to dampen the spirit of the workers, as will be seen from what happened on May 1st, 1920.

Only about two thousand participated in 1919, but as a result of police opposition all unions in Minneapolis took part in one gigantic parade on May 1st, 1920, with the result that close to 10,000 workers were participants in the largest and most enthusiastic May Day celebration that Minneapolis ever had. Not a word was said in regard to this by most of the local news perverters. Only one paper had the decency to mention the affair, in spite of the fact that it was one of the most important events of the day.

The parade was headed by the World War Veterans in uniform; next came a large thirty-foot banner inscribed "One Big Union." Other banners were: "The Kaiser in a Palace in Holland; Debs in Jail in the United States; Is This Justice?" "Political Prisoners Have Been Released in Japan, France, Great Britain and Germany; Why Not Here?" "We Fought for Democracy 'Over There' and Now Have to Fight for a Living Wage When We Get Back."

Most of the paraders marched by industries and left their craft banners at home as evidence of the uselessness of that form of organization. The only exceptions were the Printers, Bricklayers and Wood Workers and Cabinet Makers.

A donkey carried a placard inscribed: "I and all my relatives work in an open shop," which created quite a hit except among those who were put in the "donkey class."

Some of those in charge attempted to turn the speaking into a "campaign rally" to boost some local aspirants for different political offices and relegate all other speakers to the rear and have the crowd tired out before any genuine working class speakers could get the platform, and they succeeded to a certain extent; but when W. F. Dunne, editor of the Butte Daily Bulletin, managed to get the floor he lost no time in explaining how the Workers' International Labor Day had been desecrated by those who had no other desire except to get into office, no matter how, and that those who would stoop to misuse Labor's holiday would need watching.

This parade was handled by the Craft Unions and may be taken as evidence of the state of mind of members of those unions, who are beginning to see the need of a union that will fit in with the needs of present-day society.

The following editorial from the Minneapolis Labor Review, official organ of the Minneapolis Trades and Labor Assembly and Building Trades Council, fits well together with the parades, and the two of them together are additional signs that changed to make the Federation function most effectively. The annual convention of the Federation will be held in Montreal in June. There is among the rank and file of organized labor an almost universal demand for industrial unionism. It is bound to come, and it ought to come from the next convention. Business is organized into great industries. To emancipate itself labor must be organized industrially instead of by crafts.

Your International will have delegates at this convention. Has your organization sent

FIRST OF MAY DEMONSTRATION IN MINNEAPOLIS
"I and all my relatives work in the open shop."

the I. W. W. has not worked and suffered in vain for the last fifteen years:

"THE CHANGE MUST COME"

The American Federation of Labor is the organization which has brought to the workers of America the benefits which they now have. If it had done nothing else than to have obtained the eight-hour day it must be admitted that this is a long stride ahead from the times workers toiled from sun-up to sun-down.

But changing industrial conditions and changes in the organization of industry make it imperative that the form of organization be

them a resolution requesting that they stand for industrial unionism? Have you written the International a personal letter? You should do both. Make it so plain to the next Federation convention that the delegates cannot fail to understand the concerted demand for a change in the form of organization. Make it so unanimous that they can not truthfully say that they did not take the action because the rank and file did not want it.

And meanwhile, don't neglect to explain to the worker near you who may not understand, just why industrial unionism is NECESSARY, AND WHY HE SHOULD ADVOCATE IT.

MINNEAPOLIS BRICKLAYERS IN FIRST OF MAY PARADE
They are proud of the city they have built.

# NOTICE

**The convention has decided to increase the size of The One Big Union Monthly by using print paper of a different kind. Also to add a three-colored cover, making it 68 pages in all. The change will be made as soon as the desired print paper is secured, possibly with the next issue.**

**At the same time the price will be raised to 25 cents per copy; $2.50 per year; 15 cents per copy wholesale.**

**With the increased size and the attractive cover added the increase in price we were compelled to make in order to cover the cost should hardly be noticeable. Double your efforts to spread our magazine.**

**"JUSTICE IS DEAD"**
**Sign carried in First of May demonstration in Minneapolis.**

# The Picket Line of Blood

## Another Red Chapter of Labor History from Butte Mont.

By RALPH CHAPLIN

"The Richest hill in the world" has once more been stained with the blood of workers. Its arrogant industrial autocrats of Butte have again taken refuge in murder to shield themselves from the organized power of the union miners. The lynching of Frank Little has been paralleled by the massacre on Anaconda road. Butte—naked, barren, black—the city of gun-men and widows, of "sweat-holes" and cemeteries, stands out before the world today a blot on what we call civilization. Machine guns and searchlights command the city from the heights. Armed soldiers guard the approaches to the mines and gun-men loiter at every corner, or whiz up and down the streets at all hours of the day and night. There is one place on Anaconda road where everything in sight has been riddled with bullets. The blood of the dead and wounded has hardly dried in the dust. Miners have been told in unmistakable language that their constitutional right to picket means nothing and that the will of the copper trust is mightier than the law of the land. Bloody Butte! It is an ignoble title—ignobly won. But it is a fitting title.

The overlords of Butte will not permit their right to exploit to be challenged. Drunk with unbridled power and the countless millions profiteered during the war, with lying phrases of "law and order" on their lips, the blood of workingmen dripping from their hands and the gold of the government bursting their coffers they face the nation unreprimanded and unashamed—reaction militant, capitalism at its worst. The copper trust can murder its slaves in broad daylight on any occasion and under any pretext. There is no law to call a halt. In the confines of this greed ruled city the gun-man has replaced the Constitution. Butte is a law unto herself.

This huge mining camp is typical of the present stage of capitalism. The parasites of big business,

furious with the realization of their approaching doom, are striking at the working class more blindly, more ferociously and more frequently than ever before. Even their most savage anti-labor laws are proving themselves inadequate to darken the rising sun of solidarity.

The gunman and lynch-mob are more and more replacing the law as measures of labor repression. The old maxim "whom the gods would destroy they first make mad" is finding daily confirmation.

Holy grove, Ludlow, Calumet, Everett and Bisbee still stand as grewsome monuments to the White Terror in America. Butte has been added to the list for a second time. Armistice Day in Centralia is only a few month past yet we can no longer refer to it as "yesterday" but the day before. Yesterday was the massacre on Anaconda road. Nobody knows where the blow will fall tomorrow. Things are moving rapidly these days.

## THE STRIKE

On Monday the 19th of April the strike broke out. The miners and muckers, smarting under the high cost of living, the black-list and speed-up systems left the mines in a body and refused to return to work. They assembled in their union hall and drew up demands for a six-hour day, $7.00 wage and the abolition of the speed-up, black-list and "bonus" systems. Two men were demanded on all machines and workings. The class-war prisoners were not forgotten. The first move was to picket the mines which was done quite successfully. Very few miners had started for work and practically all of these returned home when the situation was explained to them. The strikers also appealed to the several craft unions employed on the hill to show their solidarity by striking against their common enemy. Hardly a man worked either in the mines or above ground during the first day of the strike. The mine operators were wildly indignant.

The following morning (Tuesday) pickets were met by considerable numbers of company gunmen. These thugs, without more ado, ordered the miners to "beat it down the hill". This command was emphasized by blows, curses and an eloquent display of weapons. The picket line was dispersed. An effort to resume picketing in the afternoon was thwarted in a similar manner. Dozens of men were beaten and slugged unmercifully.

On Wednesday morning the 21st of April, the determined pickets again started out to reestablish their broken line. At Park street and Broadway, which is the approach to the Pennsylvania mine, they were assaulted by gunmen and city police and eight or nine were badly beaten with clubs. At Centerville and on the Anaconda road and various other points it was the same story. At the corner of Wyoming and Granite Streets a man was slugged who was neither a miner nor a picket. The gunmen, drunken with license and power, were out to brutalize every workingman in sight. There was none to stop them and the copper trust papers were commending the sluggers for their brave and patriotic work.

The scattered picket lines were reassembled at the union hall. The men came trooping in a few at a time, beaten and bloody. Several had been slugged beyond recognition. Scarcely any had escaped manhandling from the inhuman mercenaries of the copper trust. The armed guards who had done the beating were rushing from point to point all morning in high powered cars looking for new victims. The laws of the state of Montana give strikers the right to picket and the miners were determined that this right should not be taken away from them by private gunmen of their employers. The matter was discussed coolly and thoroughly. The strikers decided to change their tactics. Instead of a number of groups attempting to picket a number of mines in the face of overwhelming odds, it was decided to consolidate their forces and picket one point on the country road and to remain there in a body. The Anaconda road where it passes the Never Sweat mine was chosen as the point of most strategic value. A little after four o'clock in the afternoon of April 21 the miners, almost five hundred strong, marching in orderly formation, arrived on the scene in a body. They were unarmed.

## THE MASSACRE

Almost immediately afterwards big dusty company automobiles loaded with gunmen began to purr up the road. The pickets parted their ranks and silently permitted the sluggers to pass. The gunmen got out of the cars and mobilized a short distance up the road. Sheriff O'Rourke next appeared with a squad of city policemen, plain clothes men and "deputies". These assembled between the miners and the gunmen. Altogether there were between fifty and sixty officers and sluggers.

Sheriff O'Rourke marched his squad down to where the miners were assembled. Some of the pickets had spread from the county road to the railroad tracks. The Sheriff explained to them that the tracks were company property and requested the miners to keep to the county road. The men consented to this and moved down the road below the tracks. The police and "deputies" tried to keep them going by pushing and jostling the crowd and telling the strikers to "keep moving". The pickets remonstrated with the Sheriff, stating that they had obeyed his orders in getting off company property but that they had a right to stay on the county road. Several even produced road tax receipts to show that they had been paying taxes in this very road. Others reminded the Sheriff that picketing was lawful in the state of Montana. Many of the pickets were Irish and the Sheriff being of the same nationality a great deal of witty dialogue ensued. O'Rourke assured the miners that he was there to protect their rights and would see that they got a square deal. When asked why he had not been there to protect them on the two preceding days he stated that he had been to Helena to take in a fight and was unaware of what had been happening. O'Rourke failed to state whether it was a dog fight or a prize fight he had been attending. Both are illegal in Montana.

The Sheriff and his "deputies" made another effort to get the miners started down the hill. One

picket stepped out of the crowd and told him that the miners were either entitled to picket on the county road or it was his duty to arrest them. O'-Rourke replied, "All right, I'll take you." The picket was seized and started for a waiting machine. The crowd, seeing what was happening, demanded that if one was arrested all should be taken to jail with him. Whereupon the sheriff thrust the miner back into the crowd saying "Get back there with you!" Two more cars loaded with gunmen passed through the crowd going upwards. A gate was thrown open in the dull red fence bordering the Never Sweat mine to the right of the road above.

### SHOT IN THE BACK

Mr. Alley suddenly raised his hand and shouted in a loud voice. "Go and get the s——s of b——s!" As if awaiting this signal the entire body of sluggers leaped at the miners, clubbing the foremost with billeys, and the butts of rifles and riot guns. Several of the gunmen fired point blank into the ranks of the pickets. Several miners fell to the road. A few tried to crawl out of the way. The remainder of the miners broke ranks and started to run down the hill in every direction. Volley after volley was fired at their retreating forms. Nineteen men were shot in the back with bullets and slugs from rifles

THOMAS MANNING
**One of the victims of the hired gunmen of the Butte mine owners.**

A number of gunmen appeared headed by Roy Alley, private representative of John D. Ryan in Butte. Roy Alley is a typical Butte mining official. He is at once an attorney and a "gunner". The day the strike started he declared openly:

"The Wobblies have got us tied up again. It wouldn't be so bad if they only quit themselves but they are interfering with our loyal men.

We need some more killings and hangings here, and if there were any red-blooded Americans in the camp it would be done."

Alley is an arrogant cowardly, wizzened-faced creature known to the miners as "Alley Rat". He always makes a point of obtaining with his six-shooter and thugs the things the law will not grant him. This "copper collared" gentleman spoke a few words to O'Rourke. Then he took a start to the extreme right of the company of mercenaries.

and riot guns. In addition to the fire from the gunmen at the railroad tracks a cross fire was opened upon them as they scrambled over gulleys and ditches toward Granite street. Gunmen had been stationed in advance at the Parrott Rustling card office and behind the fence of a nearby mine shaft. No other shots were reported at the inquest excepting those fired by the gunmen from the positions stated. A feeble attempt was made by a copper trust creature, named Templeton, to prove that the shooting commenced from the window of the Simmon's boarding house on Anaconda road, but this lie did not survive the inquest. It was nailed by testimony of O'Rourke's own crew.

A number of startling facts were brought out from the testimony of Under Sheriff Whalen at the inquest who was forced to admit that there was no justification or excuse for the shooting down of miners by company gunmen.

"During all the time that you were there, your attention was fixed on the crowd of strikers?" asked Attorney Donovan.

"Yes," replied Whalen.

"Did you at any time see anything that justified anybody in shooting into the crowd of pickets?"

"I did not," replied Whalen.

"In your opinion, as an officer, was there any justification for anyone shooting into the crowd of strikers?"

"Not that I could see."

"Did the Sheriff or any of his regular deputies or any member of the city police force authorize or order anyone to fire into the crowd of strikers?"

"As far as I know, no."

It was also brought out from Whalen's testimony that no effort was made by the sheriff's office to ascertain who fired the shots or what kind of weapons were used.

## SUCH IS BUTTE

Fifteen men were laid low by the treacherous volleys—each of them shot in the back. The strikers paused only long enough to pick up their wounded and help carry them to the union hall. Seven men were seriously injured from gunshots: Tom Manning, James Sullivan, James McCarthy, Peter Marovich and Fellow Workers Lavus, Falt and De Long. Young Sullivan as he was picked up shot through the spine, whispered this message to his fellow workers: "Tell the boys to fight to the bitter end; tell all the workers to keep off the Hill." About a dozen others were able to be about after the bullets and slugs had been extracted and their wounds dressed. The wounded men were stretched out on the floor at the union hall. The room resembled a field hospital in France. Tom Manning had died before reaching the hall. He was a strong, clean, intelligent young miner who was working hard to save enough money to bring his wife and baby from British ruled Ireland to "free" America. His funeral was the biggest and most impressive held in Butte since the burial of Frank Little. Little was lynched by the same bunch of corporation cutthroats that murdered Manning. Both are lying in their humble graves in the "Flats". Their assailants are still at large—unreprimanded and unpunished—still looking for new victims. Such is Butte.

Realizing that their efforts at peaceful picketing had been made impossible by the brute force of the copper trust, the miners again changed their tactics. Picket lines had been broken up but the blood of miners remained red on the dust of Anaconda Road. Here was the new picket line—silent, accusing, eloquent. "They may prevent us from remaining on the hill but our fellow workers whose blood has been spilled . . . are maintaining a stronger picket line!" So read the proclamation issued from strike headquarters the day following the massacre. And the miners did not return to work but came out in increasing numbers. The latest word from Butte is that the Workingmen's Union has struck in a body completely tying up the street car service of the city.

## THE PICKET LINE OF BLOOD

But the strikers, in spite of their deep bitterness, did not intend to carry on a long drawn out strike. If their demands, or a considerable portion of them, were not granted in due time they intended to "carry the strike to the job." So they returned to work with this intention. This is what the I. W. W. loggers did on the West coast in 1917. It won for the loggers then and it will win for the miners now.

The year after the Speculator mine disaster, when the lives of two hundred of their fellow workers were sacrificed to the god of profits, the miners went down into the "sweat holes" and dug up eighteen million dollars in dividends for the parasitical stockholders. The miners claim the massacre has opened up their eyes and that they will never be foolish to "fall" for the speed up system again. "Slow down" is the new slogan. Only the scab will step across the "picket line of blood" to hit the pace that kills and break his fool back to enrich a greedy gang of murderous mine owners. And if the Butte miners adhere to their resolution their pocketbooks will be just as full and the cemeteries in the "Flats" not nearly so much so—in the long run.

A Coroner's inquest was held over the body of Thomas Manning. Its purpose obviously was not to fix the responsibility for his death but merely to exonerate the gunmen and the sheriff of a possible charge of murder.

Imagine what kind of a verdict can come out of an inquest where the jurors are hand-picked "copper-collared" gentlemen and in which the Coroner himself was afraid to officiate; where one of the corporation lawyers defending the gunmen is a convicted jury briber and the witnesses who testify are miners who know the moment they take the stand they are being spotted for the black-ball or worse. Imagine an "inquest" held in a court-room literally filled with the very thugs who committed the crime—all seated—while the friends of the deceased remain standing because the chairs for their accomodation were purposly removed beforehand! One of the attorneys for the "defense," D. Gay Stivers, was recognized as one of the armed assassins on the hill.

The verdict of the Coroner's inquest was all that had been expected of it. Read it over:

"In the matter of the inquest held at the courthouse and St. James' hospital, Silver Bow county, Montana, from April 29 to May 13, 1920, before John Doran, acting coroner for said county, we, the undersigned jurors, find the following verdict: ...." That Thomas Manning died April 24, 1920, at St. James' hospital, Butte, Silver Bow county, Montana, from the effects of a wound caused by a .32-caliber bullet fired from a pistol in the hands of some person to this jury unknown. We find that there is no testimony tending to show where Thomas Manning was when shot.'

(Signed) GEORGE HAGERMAN, Foreman.
MARK EZEKIEL,
THOMAS DRISCOLL,
M. E. DOUGHERTY,
THOMAS FLETCHER,
R. J. DWYER."

The legal process of our courts, when dominated by property interests instead of traditional American justice, are as rotten as the capitalist system itself. They offend high heaven with the stench of their corruption.

## BUTTE AND CENTRALIA

Butte is in reality the aftermath of Centralia. To one familiar with both cases there is a remarkable similarity. At Centralia the loggers, justified by all the laws of man and nature in defending themselves from a lynch mob, were nevertheless convicted of murder by an intimidated jury. Furthermore, in the reaction that followed, union halls were closed and thousands of union loggers thrown in jail. Unquestionably the copper trust sought to operate on similar lines in this instance. The lives of a few of their gun-thugs meant nothing to them. Troops were called into the district three days before the massacre. The assasins were stationed with riot guns and rifles at three different points on Anaconda road. The stage was all set for a second Centralia. The only thing missing was a convenient shot from the ranks of the pickets. Everything had been done to provoke them into violence beforehand. As it was the copper trust made a weak effort to prove that the miners fired the first shot. The lives of a few of its degenerate mercenaries would have been a cheap price for the copper trust to pay for the orgy of repression and union smashing that would inevitably have followed. But the scheme failed.

As it turned out it was fortunate that the five hundred pickets were unarmed. Had a single shot been fired in self defense or a single gunman killed, there is no doubt the halls of the union miners would have been raided and closed. The capitalist papers would have carried screaming headlines about "I. W. W. outlaws in Butte shooting unoffending mine-guards in the back." Union officers would have been arrested and tried for murder and thousands of miners persecuted and hunted to earth, as was done to the loggers of the West coast after Centralia. Stool pigeons and provocateurs are trying to incite premature and hopeless acts of violence in all parts of the United States today. Patience, iron discipline are more important right now than any small deed of angry reprisal.

As a miner remarked to the writer a few days ago in Butte, "Let them have their inning now. We refuse to stop fighting the copper trust in order to battle with its hired thugs. We have our industrial power. They cannot take this away from us, and we intend to use it where it will hurt the most. Things won't always remain this way. Labor's day is dawning, and as for the 'killers'—they'll keep."

Butte bids fair to be a thorn in the side of American plutocracy for some time to come.

## BLOODY BUTTE

The Butte Building Trades Council has sent out thousands of the following significant handbills, printed in black and red. All union men—I. W. W. and others—will do well to read the message and take warning:

### STAY AWAY FROM BLOODY BUTTE

The Workers (on April 21, 1920), numbering fifteen, were shot down in cold blood by the hired assassins of the Anaconda Copper Mining Co.

In the guise of deputy sheriffs, and in the company of their employers, these men performed their dastardly deeds.

The constituted authorities of the city and county —the sheriff, his regular deputies and uniformed police—not only stood passively by watching the slaughter of the innocent workers, but several of them actually participated in the shooting.

The Workers, peaceably and quietly picketing avenues of approach to the places of employment, and strictly within the law, were mowed down by the incarnate fiends hired for this purpose.

Workers alone being shot, no arrests have been made.

Today tears of the orphans and widows are falling where lately flowed the blood of their loved ones.

Workers, keep away from Bloody Butte, lest you be their next victim.

All Unions of the Building Trades, who have been locked out since February 2, 1920, are standing firm against all odds.

Bankruptcy is stalking the merchants of Butte.

The Workers are withdrawing their funds from the banks of the city.

BUILDING TRADES COUNCIL,
Butte, Montana.

### AN APPEAL

The victims of the Anaconda Road—the men who were wounded and shot down by the hired murderers of the Anaconda Copper Mining Co. and Sheriff O'Rourke and his squad of regular deputies and uniformed police on bloody Wednesday, April 21st, —have been given every care and attention that medical skill and hospital service affords. Young Sullivan is still in a room at St. James' hospital, attended night and day by trained nurses and given every care that that institution can give. Several of the wounded who have been discharged from the hospitals are still under the care of the surgeons.

The charge for hospital services and surgeons' bills will run the expense considerably over a thousand dollars, to say nothing of the funeral expenses of Fellow Worker Manning. Butte Branch of the Metal Mine Workers' Industrial Union No. 800 has been taking care of the bills for these expenses as they are presented from time to time, but the strain on the treasury will be more than the branch can stand.

Besides the hospital and funeral expenses, there is the added expense for taking care of the strike sufferers, at whose homes the wolves of want and hunger have already come prowling. Thousands of the breadwinners of Butte families are on strike and many of them are in actual need now and on the relief list. These workers and their wives and children must not be allowed to starve. It is the hope that the companies will soon be forced to accede to all or a part of the demands of the strikers, but the need for relief exists now and will exist for some time after the strike has been called off.

We are taking this means of appealing to all class-conscious workers to contribute to the hospital and relief funds for this strike. Look up a delegate or member who has the relief lists issued by Butte district and give what you can. If there is no list in your camp or community send in and get a list and circulate it or send in your contributions to Nick Radivoeff, Secretary of Butte District, 318 North Wyoming St., Butte, Montana.

# Report of the General Executive Board of the I. W. W. to the Twelfth Annual Convention, May 10th, 1920, Chicago, Ill.

Fellow Workers—Greetings:

Your General Executive Board in rendering our report to this Twelfth Annual Convention cannot do otherwise than begin by recognizing that this convention is but another milestone on the road to industrial freedom. Many things have happened that have proved to be temporary obstacles in our path the last year. One chief obstacle to the General Office has been the lack of finance at various intervals, due largely to the general draw on the members and also on the workers who contribute funds to the defense of our fellow workers and others who are arrested for their principles of solidarity.

At the first meeting of the General Executive Board, convening on August 14th, 1919, and remaining in conference daily until August 30th, 1919, we found that the total cash in the treasury of both defense and the General Office was on August 1st, 1919, only $7,728.16 (seven thousand, seven hundred twenty-eight dollars and sixteen cents).

From that time on, the General Office funds have been fluctuating, sinking as low as $92.06 (ninety-two dollars and six cents). At the end of November, 1919, a condition existed which did not allow of replenishing the stock of the organization.

### Indebtedness of Industrial Unions

This condition can and must be changed immediately. First, is the indebtedness of the industrial unions, which show enormous figures of over $1,000,000. However, the assets of the industrial unions will probably reduce these figures to some extent, but not below the point of their **"Credit being bad."** If some means were devised to make prompt payments this would alleviate some of the financial stress of your General Headquarters. Another reason for the lack of funds is that the fifty-cent due stamp, with its fifteen cents per capita, has become too small to meet the financial requirements, even if the payments were promptly made. Your General Executive Board therefore recommends that this Convention take up the vital problems of ways and means to raise the necessary finance to meet an increase of between 200 and 300 per cent for supplies, etc.

### Industrial Union Financial Statements

We are of the belief that in order that the General Executive Board and the rank and file of the Industrial Unions may know the exact status of the various unions, in order to take intelligent action throughout the organization, that it is absolutely necessary that a report of the assets and liabilities of the Industrial Unions should be printed in their monthly financial statement at least every three months; we therefore make this a recommendation.

Our desire to have a basis for commencing on a solid foundation can be best judged by the passage of the following resolution, with the added rider, at the G. E. B. meeting held in August, 1919. The resolution was not lived up to:

> Moved by King, seconded by H. Bradley, that October 1 shall be set as date to check up all supplies on hand, in all Industrial Unions. Supplies on hand this date and supplies and stamps actually sold previously but not remitted for will be taken as a basis to start new accounts. Carried. **(Note**—We set this date ahead instead of back, like the Convention, because it is almost impossible to go back and get a check, where it would be easier to work ahead.)

### Publishing Costs

Your G. E. B. thinks it advisable to mention here that much of our literature and supplies are today being sold at an actual loss of from one cent to four cents. In one case we mention the new due book, which was figured out at 12 1-2 cents each, but finally cost between 18 and 20 cents, without overhead expense of handling it. Prices will have to be changed to make a balance on these items.

### Literature

Your G. E. B., while not making any specific statement of the abolishing of certain pieces of literature, realizes how urgent it is for modern, up-to-date pamphlets on industrial unionism. We believe that if each industrial union had a booklet or pamphlet dealing with specific conditions existing in each industry, which shows clearly every phase, evolutionary and economic, together with the human element, and the necessity of changing the system by organizing industrially within the shop, etc., that we would have literature of a more educational value than some of the old theoretical literature. It was intended to get out "Industrial Union Handbooks," but, again finances prevented us from doing so. We did, however, get out revised editions of some of our older pamphlets and a few new ones, together with several pamphlets in various languages and also many leaflets. We must impress on you the necessity for new literature.

New papers were published in the following languages: Bohemian, Roumanian and Croatian. Unfortunately, we had to suspend publication of the Croatian paper for lack of an editor, and the Spanish paper, Swedish paper and Polish paper were suspended for lack of finances. We have fourteen publications at present, nine of which are published in Chicago, four in New York, and one in Seattle. The Board also has given permission (at the request of the "Jewish Unity Conference," made up of I. W. W. members from various cities) to publish a Jewish paper in New York. The reasons are that there are more Jewish people in New York and because the Jewish paper has been a financial loss in Chicago. Your G. E. B. is also of the opinion that Industrial Union Bulletins are a drawback to the regular publications, and we therefore recommend the following, with the note of explanation:

> Moved by King, seconded by Miller, that editors of papers shall be instructed to put the following plan before the membership: That Industrial Union Bulletins shall be published in the various papers instead of each Industrial Union issuing a separate bulletin. Carried unanimously. **(Note**—The issuance of large printed bulletins by separate Industrial Unions tends to keep down the circulation of the Organization papers and takes quite a lot of money that could be used for other purposes. For instance, if the Industrial Worker acts as the official bulletin of the Industrial Unions in the Northwest, Solidarity for Industrial Unions in the Middle States and the Fellow Worker for those Industrial Unions in the East, we will avoid the publication of news items which tend to lower the circulation of the papers and will cut down the expense of the Organization as a whole. We must carry on our work as efficiently as any business firm if we wish to survive. Many leaflets have been printed in various languages at the request of those speaking the language. We find the demand has not been so great after the matter has been

gotten out; so, we recommend that those ordering such supplies should be held responsible for its distribution and the financial indebtedness caused by their apathy in circulating such literature.

In our endeavor to divide the items of literature and supplies into what we termed "direct charges" and "consignment charges" your board made a rule which should be adhered to rigidly, that all literature, buttons, pins, card cases, pennants, charters and seals, office supplies and delegates' supplies should be paid for on delivery, and therefore be classed as "direct charges." This does not include due books and due stamps, which should be paid for monthly, as they are sold. There can be no excuse for withholding charges on the goods sold during the month, which is against any Industrial Union.

### Charters

During the year many charters have been issued. Five Industrial Unions have come into being, namely: the Tobacco Workers No. 1150, the Shoe Workers No. 1250, the General Distribution Workers I. U. No. 1300, the Glass Workers I. U. No. 1400, the Foodstuff Workers I. U. No. 1500, together with the issuance of 115 branch charters to the following industries: 12 to the Construction Workers, 36 to the Metal and Machinery Workers, 12 to the Coal Miners, 3 to the Rubber Workers, 6 to the Foodstuff Workers, 2 to the Shoe Workers, 4 to the Railroad Workers, 5 to the Marine Transport Workers, 3 to the Lumber Workers, 1 to the Fishermen, 12 to the Textile Workers, 2 to the Printing and Publishing Workers, 1 to the Furniture Workers, 1 to the Tabacco Workers, 3 to the Bakery Workers, 1 to the Shipbuilders, 1 to the Glass Workers, 1 to the General Recruiting Union, 7 to the Hotel and Restaurant Workers, 2 to Metal Mine Workers.

### Resignation of G. E. B. Member

During the year three of your G. E. B. members resigned: Fellow Workers Jackson, Nelson and James King. Fellow Workers John Grady and August Walquist having received the next highest number of votes were called in to fill the vacancies. Grady, being under indictment in Washington, has been unable to function, and the balance of the vacancies will be filled as soon as possible.

During the first meeting of the G. E. B. they decided on two questions of international importance: The decision to send Fellow Worker George Hardy to England, and the affiliation with the Third International.

Fellow Worker George Hardy spent upwards of five months in England and Wales and Scotland and did a great deal to create an atmosphere of good will toward the I. W. W. Hundreds of resolutions of protest were sent to the president of the United States and the Department of Justice, almost half a million pieces of literature dealing with the persecution of the I. W. W. were paid for by the Trade Union movement of Great Britain. Fellow Worker Hardy was a delegate to the Shop Stewards' Conference, which resulted in their conference deciding to become linked up with the I. W. W., the official communication having been received by the General Secretary-Treasurer of the I. W. W., which was signed by George Peet, the National Secretary and the London Organizer, Dave Ramsey, of the Shop Stewards" and Workers Committee movement of Great Britain. Much more was accomplished that was reported in our papers, etc., including raising the question on the floor of the House of Commons. Fellow Worker Hardy was also instructed to attend the International Transport Workers' Conference at Christiania, but was prevented from doing so by the British passport office. Other delegates were present in the place of Hardy.

The Board believed in so far as the Third International was the only Workers' 'International that had ever come into existence throughout history that disagreed with the meek and mild parliamentarian programs, that we should show our approval of it as opposed to the opportunism of the Second International, and particularly so because we were convinced that our Russian Fellow Workers in Russia are only maintaining the political character of the first Soviet Government to hold and gain power temporarily during the transitory period from capitalism to industrial communism.

It is hardly necessary to mention that the bitter persecution of our Organization still continues. We know that most of the delegates present have been victims of the wrath of trustified capital. There are, however, many things we cannot leave out, while many very important matters pertaining to this organized persecution (by the various governing bodies, and particularly the state governments, which are using the "Criminal Syndicalist" law) will not be mentioned, as it has become so enormous as to render it impossible to embody it in our report.

Your G. E. B. feels it imperative to report in a general way the fact that the Wichita, Kas., case was lost, with the result of our Fellow Workers being sent to prison at Leavenworth after being held in jail for over two years. Then there was the Krieger case in Tulsa, Okla., with a hung jury and a retrial about to take place, and just as the Organization was making headway in the Northwest the conspiracy of the Lumber Trust, which led a mob of American Legionaries in an attack on the hall in Centralia, Wash., that resulted in the death of four of the attackers and one of our valiant Fellow Workers, Wesley Everest, resulting in the indictment, trial and conviction of seven Fellow Workers at Montesano, Wash., who were sentenced to from twenty-five to forty years in prison. Thirty-six of our Fellow Workers were sentenced in Tacoma, Wash., to from a fine of $250 to as high as fourteen years imprisonment, with several hundred now in jails in the states in the Northwest. In one c se, that of Sand Point, Idaho, we had better luck, having secured an acquittal for seventeen Fellow Workers, only one being convicted, whose sentence was comparatively light. Also an acquittal of three Fellow Workers in Bellingham, Wash., and several hung juries in the Northwest. Many other cases are being tried all over the country.

### Butte Strike

The Butte strike, now in progress, has been accompanied by disaster for our Fellow Workers looking to better their conditions, etc., and demanding the release of the political and industrial prisoners. Sheriff O'Rourke and the A. C. M. gunmen fired into 300 striking miners, resulting in the death of Fellow Worker Manning and probable death of three other Fellow Workers. We urge all the workers to stand behind the Metal Mine Workers' Industrial Union No. 800 in this fight for principle and their demand to open the jail and prison doors.

Your G. E. B. wishes to warn the Convention against such actions as were taken by Harold Lord Varney (the decamped "emotional" aspirant to become a "Great Labor Leader"), who without permission of the Organization Committee of No. 300, while he was functioning as their Secretary-Treasurer, took it upon himself to move the office of No. 300 to New York City. To some extent this caused disruption in the Metal and Machinery Workers' Industrial Union, which has been overcome to a great extent and normal conditions established.

### Industrial District Council

Your Board also decided to leave in abeyance the starting of Industrial District Councils, which were decided on in the last annual convention. This was done because no intimation was given as to

their function or how they were to be made up. The Board does, however, feel that these councils have a function when defined and put into operation and could serve as instruments to bring into existence district solidarity, also a stability of action inside the I. W. W. if adopted generally, with full approval of rank and file as to decisions arrived at.

### Appointment of Secretary-Treasurer of General Defense Committee

Some criticism was given the Board when they appointed Fellow Worker Haywood to the office of Secretary-Treasurer of the General Defense Committee. We wish to state the condition was such in the Defense Office that it was essential that some one with a knowledge of publicity and handling finance should take office immediately. We could not wait to select. We recognized that it was also necessary to have good speakers on the road, so, summing up, between the demand that Haywood go on the road and our urgent necessity for an efficient Secretary-Treasurer for the Defense, we chose the latter. However, we are glad to report that immediately a marked improvement was apparent, as you will notice in Fellow Worker Haywood's financial report. It was our intention to replace Haywood as soon as we had secured some one to fill the position, but, as you know, the events following made a successful tour of the country uncertain.

### Outlook for the I. W. W.

We have had many things happen in the past year that your Board had cognizance of. The many strikes that became national questions, such as the coal miners' strike, the steel strike, the New York Harbor strike, resulting in a break-down of solidarity, there was a marvelous spirit of solidarity shown by many groups. In the New York Harbor strike the M. T. W. I. U. No. 8 was on the job, and with the assistance of G. E. B. Member George Speed, who did good work, M. T. W. gained hundreds of members. The steel strike showed the futility of trying to organize hybrid industrial unions under the camouflage of the A. F. of L. The railroad strike proved the workers are tired of long drawn out negotiations that do not get the results the workers are seeking, and particularly so when, as shown in the recent rail strike, with the Brotherhood officials always on the defensive, while the workers are feeling the desire for action. This is a sign of the breaking down of the craft unions, with their inefficient tactics and methods. The Textile strike in New Bedford is an unauthorized strike, but it is a symptom of the never-ending struggle of Labor and a desire of the workers to do something for themselves.

The above is also a criterion of our own slowness and in some cases obvious apathy to our responsibilities. Your Board has watched this condition during the year and has been unable to move. We feel that if the Industrial Unions had paid their indebtedness we could have met with better results during the year. There is no reason for many thousands of dollars lying in an Industrial Union treasury when they owe General Headquarters many thousands of dollars. If our finances were kept circulating we could attend to many things which would bring results; therefore, we again remind you of the obvious duties of the Industrial Unions, in making prompt payments of their per capita and supplies.

The many O. B. U.'s that are being attempted in many industries are going to prove temporary obstacles to real revolutionary Industrial Unionism if we do not cover the fields open to us. Many attempts in the metal industry are being made to form an Amalgamated Metal Workers, and there seems to be no desire to form such a union by the workers. The same holds true of the railroad workers, but in the railroad shops a few have joined the O. B. U. and in some cases, thinking they were joining the I. W. W. We can meet this situation by perfecting our plans and organization to give the workers a tangible plan of unionism. If we do this, the O. B. U.'s will prove short-lived institutions where they are in operation, and the ones in embryo will never develop enough to be known in the field of unionism.

### The International Situation

Looking abroad, your G. E. B. thinks the international field has never looked better for a realization of a World International of the Industrial Workers of the World. From all parts of the globe come greetings and affirmances of a desire to adhere to the principles for which we stand. In most cases the organizations take other names, such as the British movement, who call themselves Shop Stewards and Workers' Committees; the Syndicalist movement of various countries, and the Maritime movement of South America, who have endorsed the I. W. W. Also an I. W. W. administration has been formed in Chile and Germany. We are glad that the Shop Stewards' National Conference, held at London, January 10th, this year, voted to become linked up with the I. W. W. It shows the prestige the I. W. W. has gained. These actions, and many other things, including the Australian move toward Industrial Unionism, are directly due to the influence of the I. W. W. propaganda. We might also add the O. B. U. of Canada came into existence because of the demands in British Columbia and the Western Provinces for an Industrial Union.

The coming year ought to be one of progress and one which will see the release from prisons of all the thousands of our fellow workers and of class war prisoners. This can only come about with security for the future by the co-operation of all the units of our administration. We leave the General Defense Secretary to give you a detailed statement of the numbers of our valiant fellow workers who have gone within the prison walls, and hope that a bounteous year is ahead for the realization of our aims—the abolition of the capitalist system and economic slavery, and the establishment of the Industrial Commune. With best wishes,

Yours for the I. W. W.,

GEORGE SPEED, Chairman,
CHARLES MILLER,
GEORGE D. BRADLEY,
AUGUST WALQUIST,
HENRY BRADLEY,
Gen. Executive Board.

## SPANISH PAPER REAPPEARS

Our Spanish language organ has reappeared after forced suspension for some months. It is intended to publish it once a month until such time as it can be made a bi-weekly, if not a weekly, with due co-operation of all concerned.

Prospects are good for better support than ever before, and from all Spanish speaking sections.

All bundle agents are urged to send in their orders at once, and all fellow workers or friends who can send us addresses of Spanish speaking workers should do so. We have a larger list than ever, but we want more names and addresses, and contributions will be acceptable to our fund for sending out sample copies.

Address SOLIDARIDAD, 1001 West Madison St., Chicago, Ill.

# More About Communism

By T. R. SPEAKMAN

The advent of the Third International, together with two parties of political communism in the United States, has provoked much discussion and controversy as to revolutionary methods. The significance of a rival in the traditional domain of I. W. W. theory should not be lost.

When the two parties (they are in fact one party, with merely a difference of official personnel) broke away from the Socialist Party of America their manifest object was the repudiation of the reformist and purely parliamentary tendencies of the parent body. The I. W. W. pointed out in a flash that there was nothing to repudiate save political action (here used in the sense in which it has always been used by the followers of the "syndicalist revolt," as meaning the capture of the class state). Perceiving the result of political methods in the stagnation of the movement of which they had been a part, there was only one course left for disillusioned Socialists, to align themselves with us, with the I. W. W., theoretically the product of a previous similar reaction from the same school of political socialism! The "break" was not fundamental and complete; the "Communists" were still obsessed with a political ideology, the product of their sojourn in the bourgeois Socialist party.

Despairing of capturing the state by parliamentary, ballot-box methods, the Communists resolved to capture it by "mass action," culminating in "the dictatorship of the proletariat," and, ultimately, in the industrial republic. But the spectre of the I. W. W. haunted their constitutional convention; they gave us a noncommittal endorsement and vehemently proclaimed the merits of **revolutionary industrial unionism** as a means of waging the everyday struggle and as the foundation of the structure of the industrial state of the future; but for purposes of revolution, of the transition from capitalism to communism, never!

Such a sweeping dismissal of the I. W. W. program of building the new society within the shell of the old, of industrial unionism as a "vehicle" of revolution, can only mean that we, in the eyes of the communists, were reformists. The question naturally arises as to what extent this opinion could have been consistently held in the face of the ability of the I. W. W. to demonstrate the soundness of its position and program. Communism must have encountered a real or fancied I. W. W. impotency to substantiate its belief that we were merely a labor union that made a lot of noise, that I. W. W. revolutionary attributes were due to our personnel and not "inherent" in the organization.

The "communists" are not altogether to blame for the opinions they hold. The I. W. W. has assimilated — and dispersed — many heterogenous elements, rebels and non-rebels. It has done little, if anything, toward actually building "the new society within the shell of the old." Various "conditions," of course, are responsible for this, but man may make his own conditions to the extent of his capabilities and out of the available material, within the limits imposed by forces beyond his control. The I. W. W. can "build," and under the conditions of capitalism, to the extent that it devotes itself and its energy to that purpose and **adapts the structure of the organization to the needs, not of wage slavery, but of the revolutionary transition.** The simply agitational and theoretical propaganda of the past is incompatible with this purpose, and the vengeance it has inspired has caused us to resort to justification and "defense."

"Communism" has also suffered at the hands of the law. "Communism" has no revolutionary and political "program"; its function is agitational propaganda, the negative phase of the revolution. When the national headquarters of the Communist Labor Party were closed by the authorities, there was no effort made to open them up again. "Communism" has taken to itself the function of agitational propaganda; signs are not wanting that it will relinquish its "program," and devote itself entirely to its present methods. In this respect and for this purpose, there is a place for the methods of "communism" in the American labor movement.

"Communism" does not contemplate being forced with the eternal necessity of million-dollar defense funds. This was the phase of the I. W. W. which prevented its being hailed by the Communists as a revolutionary body, the means, the vehicle, and the consummation of the aspirations of the proletariat of the United States. It is utopian to imagine that there is, or can be, free speech and legal guarantees under capitalism, which gobbles up "protests" with unimaginable relish, and with a working class which is impervious to "persecution" unless it feels itself persecuted. This feeling capitalism has prevented by providing itself with innumerable excuses and pretexts for its depredations. To deny it these excuses and pretexts by constructive propaganda, and to confound it with the methods now used by "communism," is the solution the working class will ultimately find for the problems of "defense." The opposition then encountered would present the issue so clearly and squarely that "persecution" would readily bring forth responsive protest and action on the part of the working class. It is a rather flat and empty glory to suffer for the inconsequential sin of carrying a card.

"Communist" objections to the I. W. W. program are ably summarized in an article entitled "Trades Unionism, Industrial Unionism and Workers' Committees," appearing in The Voice of Labor, clandestine organ of the C. L. P., for April 20th:

"Unionism, trades and industrial, must not limit itself to economic strikes, but must acquire the concept and practice of the general political strike —co-operate with the Communist parties to develop

the general mass struggle of the proletarian against the bourgeois state.

"The concept that industrial unionism alone is necessary for the conquest of capitalism must be decisively rejected. It is sheer utopia to imagine that all the workers, or an overwhelming majority, can be organized in industrial unions under capitalist economic conditions. The upper layers of the working class, being the impulse of laborism, will necessarily reject revolutionary industrial unionism, while the lower layers will not move very rapidly until thrown into action by the impact of revolution itself. Moreover, the concept that the workers under capitalism must in their industrial unions acquire the experience and technical management of industry, "growing into" the new society by the industrial unions' gradual acquisition of industrial control, is identical (although inverted in form) with the proposals of parliamentary socialism—that the working class must gradually "grow into" socialism by acquiring experience of state affairs and "absorbing" control of the bourgeois state. Each concept, in its own way, rejects the **fundamental problem of the revolutionary conquest of state power.**

"The conquest of the power of the state is the objective of the revolutionary proletariat. Neither the parliaments nor the industrial unions are the means for this conquest of power, but mass action and the soviets—mass action to rally the workers, organized and unorganized, in the open revolutionary struggle for power, the soviets to constitute the mechanism of the revolutionary proletarian state, the dictatorship of the proletariat. At the moment of active revolution the struggle becomes not a struggle for industrial unions, but for the construction of soviets.

"After the conquest of political power, and under the protection of the soviet dictatorship, industrial unionism comes actually to function in the economic reconstruction of society on a communist basis, and the stronger the industrial unions the easier the process of reconstruction. The government of soviets, of proletarian dictatorship, is political and transitory in character, the necessary agency of repression to expropriate and crush capitalism. While industrial in its constituents and representation, the government of soviets functions geographically and politically; but alongside of itself it constructs a central administration of industry, wholly economic in character, equality in representation and functions, perfecting the organism of proletarian control and management of industry on the basis of the industrially organized producers."

(In this connection the Editor wishes to call attention to the chart and article by George Hardy in this number, illustrating the I. W. W. plan of acquiring gradual control of the industries and absorbing the functions of the capitalist state by means of industrial unions and councils. These I. W. W. councils are the bodies which would make superfluous the "soviets" planned by the communists, thereby also making unnecessary the whole adventurous, nerve-racking program of "revolutionary" mass action., with attendant bloodshed and sufferinz.)

* * * * * * * * * * *

A poltical ("communist" definition) strike can be nothing more than a strike for social, as distinguished from purely economic ends. The general strike, if directed at the release of prisoners, the socialization of industry, or as a protest against governmental tyranny, would be called a political strike by the "communists."

The I. W. W. does not expect to organize all, or a majority of the workers under the conditions of capitalism. It would be a queer twist of mind that could conceive of capitalism as not having developed stratas of ignominy, incapable of organization now or ever. The I. W. W., to be true to itself, must organize with its functions so centralized as to prevent its spirit being smothered by a mere parliamentary majority, such as accompanies a rapid or sudden increase in numbers. New members, or any members, cannot be "educated" unless they are moved to educate **themselves.**

The "aristocracy of labor" have rejected revolutionary ideas. The "impulse" of "laborism," their present expression, is due for a rapid shattering in the face of the loss of skill by technical development and the pressure exerted on all classes of workers, including craftsmen, since the war.

The I. W. W. has put its faith, and will continue to do so, in its capacity for developing a minority with the idealism and ability to direct the movement in revolutionary channels.

The "impact of revolution" is the collapse of capitalism, not a mechanical collapse, but a collapse carrying with it the revolutionary movement of the working class.

The workers must qualify themselves to manage industry. The "communists" evidently intend to monopolize this function themselves, or leave it until the morning after the revolution, when they will emulate the Russian Bolsheviki by paying fabulous sums for bourgeois executives. The proletariat will be able to enlist the support of these bourgeois technicians when the new order is well established, but until that time it will have to depend on the talent from its own ranks. The success of this phase of revolution depends also on the development of a minority qualified to assume the initiative, and can be accomplished thru intensive education and centralization of function.

"Growing into the new society" involves a conception of social evolution, of evolution in general. We are not fatalists; evolution and adaptation may be inevitable—otherwise the universe has labored in vain, so far as man is concerned—but they are not mechanical or regular in the commonly accepted sense of "growth." Evolution is conscious, dynamic and cumulative to the extent of our capacity to make it so, to the extent that the evolution of the past is embodied in us. Theory, to be effective and worthy of the name, must be developed from practice and proven in further practice. The revolutionary climax of growth is analogous to "birth" in the organic sense.

The parallel between industrial and political growth does not exist. The awakening class-con-

sciousness of the workers finds coherent expression in the industrial struggle. Every victory imparts a taste of power of more potential revolutionary value than the desperation sought by exponents of the philosophy of misery. Parliamentarianism, on the contrary, does not merge itself in the life of the working class. Reforms, even industrial reforms, carrying with them a momentary reduction of surplus value, are absorbed by capitalism and turned to its own advantage. Increased efficiency resulting from improvement in the workers' physical and mental condition, is made the basis for increased exploitation by means of the introduction of new machinery and methods for which the loss incurred by the capitalist in yielding the concession furnishes the incentive. Reforms are incapable of concrete realization; their only value lies in the extent to which they can be made the means to the conquest of power and the establishment of working class control. No political reforms have this value (not even prohibition, a gift of the gods which we unscrupulously accept, without forgetting that it is subject to revocation).

The problem of the revolutionary conquest of power, when shorn of its emotionalism, reduces itself to a process of organization, allowing for the development and utilization of spontaneity. Nor is this in contradiction with the principle of centralized organization, anarchism to the contrary notwithstanding. Freedom of the units and cohesion of the whole are complementary, not antagonistic, unless freedom is conceived as a final truth, independent of time, space and condition. The conquest of power is fundamentally the "conquest" of self (or lack of self) by the working class, a development taking its departure from the conditions produced by the collapse of capitalism, deriving its momentum from the capacity and consciousness of the workers and culminating in the workers taking the reins of their destiny in their own hands. All of this is embodied in the fundamental tenets of the I. W. W.

Soviets, political and transitory in character, industrial in constituency and representation, and functioning geographically and politically, are not a genuine improvement on the transitional and administrative structure proposed by the I. W. W. Industrial unions are "political" (in the communist sense), they are industrial in constituency and representation, and they function geographically, or can function by means of local and district councils, already provided for in the I. W. W. program. (See chart on pages 32-33.—Ed.) As for the rest, "communism" admits that the I. W. W. structure and program is feasible **when it has had its day of glory!"**

Much of the contention between "communism" and the I. W. W. emanates from the interpretation of the terms "political action" and "political power." These terms, in a strictly scientific sense, did once mean what "communism" says.

"The army of production must be organized, not only for the everyday struggle with capitalists, but also to carry on production when capitalism shall have been overthrown." "Communism," and,, if reports are credible, the U. S. Department of Justice, sought to interpose a program and official thesis dealing with the overthrow, the "active moment of revolution," when the struggle will be for the extended construction and exercise of power by adaptive industrial union machinery, or "soviets," if "communism" insists on the importation of phraseology. "Communism" has not died; it has retired, and from its present position and by its present methods, forgetting its fictitious dual "program," can exercise functions which a revolutionary industrial union cannot undertake, and still maintain a rallying place for the working class preparing for the realization of its historic mission.

# Hear - Me, War !

**By Covington Ami.**

**Shed your glamour and your tinsel, put aside your braid and plume,**
**The strutting stride of dress parade, the manners you assume;**
**Give orders that the bands shall cease, your chargers all dismount,**
**And in the face of youth for once your naked ego flount!**

**The fanfaronade and flags cut out, the incense and the priest,**
**The praise of perjured statesmen . . . and . . . show the maggots at their feast!**
**The dead boys on the battlefield, their bodies gnawed by dogs,**
**Their eyes torn out by buzzards and their hearts by starving dogs!**

**Appeal for once to reason, fiend, once only if you dare,**
**And let the soldiers in the trenches see the men who sent them there!**
**Yea! let the blinded boys behold the Lobbies and the Rings**
**That profit by the miseries that war to Mankind brings!**

**Quit prating of "democracy", quit making Christ your tool;**
**Let us hear no more of "kultur," "order," "law," or "golden rule":**
**Be man enough to tell the truth, O Mars! if you be brave,—**
**The truth that means you following slain millions to the grave!**

**The truth, and nothing but the truth, in truth's plain language tell,—**
**Of ruin, dearth and slaughter boast, deeds darker far than hell,—**
**You dare not, O dare not! lest to life's alluring call**
**The Soul of Man awakens and your bondsmen on you fall!**

# The Labor Movement in Spain

## "EL SINDICATO UNICO"—THE SPANISH O. B. U.

By GENARO PAZOS

While I was preparing this article on "The Labor Movement in Spain," some other fellow worker appeared ahead of me with parts of what I was intending to add in this article. I was very glad to see in Solidarity, issue of April 3, an article entitled "Liberating Class War Prisoners—How they Do It in Spain," which is very important indeed. This was part of my work which I was reproducing from "La Voz del Obrero" (The Voice of the Worker), a bi-monthly paper published by the Local Syndicate of La Coruna. Also I notice that Delegate R-17 edifies the readers of Solidarity with the revolt in the Ninth Regiment of Artillery, and the Congress of the National Confederation of Labor, held in Madrid from December 10 to 17, 1919.

Many other cases are very interesting, but those two are the most important ones, first, because they show the demoralization in the ranks of soldiers, and, second, because they indicate the remarkable activities of Labor in Spain. I am informed that in many places the soldiers refused to obey orders from their officers when on duty, and when the army of Spain gets ready to revolt against their officials (and the facts below and above show it) then the revolution in Spain will soon take effect. It will be so, because the workers are ready to come out at any time, and when workers and soldiers, all members of the same family, act together, then—good-night, Autocracy!

Here are two facts to affirm my words: In La Linea, a town near Gibraltar, the bakers were on strike. A committee of soldiers appeared before the local federation, saying, "We were ordered to to talk with you first; shall we go or not?" The reply was something similar—"Boys, you know our situation and conditions. You are soldiers in military uniform. Analyzing our conditions and your own situation, act according to your own judgment." That was a reasonable answer, and the soldiers gave a no less reasonable reply: "All right, we won't go and break the strike." They refused to obey orders that were not on their own rules.

In some of the Castilian provinces, I believe it was, stickerettes were stuck up on posts inside the barracks. They were anti-militaristic, of course. The general saw it, and called the entire regiment to the yard. There he made a speech, and when he was through, he commanded: "Those who brought those stickerettes in, step forward!" And how amazed he was when the entire number, as one man, stepped to the front. In other words, every one was in accord with that campaign against militarism. All these things are growing more and more every day, and the blow will come soon, no doubt.

In Barcelona the bricklayers refused to work on the building of a jail, and although it is over a year the work is undone and there is no hope that it will be built.

Another act which is not less important is this: The captains and mates had a union, winning their demands through the transport workers' solidarity. When the longshoremen were locked out in many ports by the bosses, those deck officials showed their solidarity also. A ship arrived in Malaga, and the yellow syndicate was trying to discharge the ship; a "Red" committee went on board to explain the situation to the captain. Rapidly the order was sent to the consignee asking that the cargo should not be taken out of the hold except by men carrying Confederation membership cards. As the consignee was opposed to this, the captain wired the company owners, and the reply was that if the consignee continued refusing to take "Reds" then its consignee commission could be taken away by the captain. Many ships went from one port to another, returning to the port of departure without being unloaded, in order to force the owners and consignees to employ workers from the Syndicate and not non-union men.

These are facts which show the solidarity among the manual workers and technical officials.

As I said at the beginning, my intention was to make a condensed statement of the labor movement in Spain from the start; that is, ever since the first symptoms of organized labor appeared in Spain to this period. But, as Delegate R-17 intends to give information about the National Confederation Congress (which I recommend to every reader interested in labor developments) and also the facts of Zaragoza, I will limit myself to relate, with dates, the real facts of the revolutionary labor movement in that little parcel of land in the European continent, called "Spain."

But before I go any further I congratulate R-17 on his first article—not because we look for "tips," but for the simple reason that in North America the labor movement in Spain is either unknown or those who can get facts aren't willing to publish them. I recalled this because magazines and papers called "liberal" and "radical" never show any inclination to present the true facts of revolutionary attempts inside that country. Even during the miserable action of the Manufacturers' Association, with the so-called "lock-out" trying to force the workers to submission through hunger, they never succeeded in breaking the revolutionary spirit of class-conscious workers; but, even then, I said, nothing was printed. And allow me to say this: that the "lock-out in Spain, especially in Barcelona, was the last weapon used by the capitalist class to destroy the "Sindicato Unico," as the bosses state in a circular published in El Sol (The Sun), January 18, 1919, where they openly state that their aim was to destroy this union, which was a new form of organization adopted first at the Congress

of the Regional Confederation of Catalonia, held in Barcelona from June 28 to July 1, 1918.

A couple of words about this "Syndicato Unico." It is similar to the Industrial Workers of the World, with its industrial unions, but with more local autonomy in general. As a matter of fact, as I will point out later, the doctrine of Spanish labor is not centralization to the point of control by one single body which commands all. That is, in my estimation, the only difference between the I. W. W. in America and the Syndicalists in Spain, under the new form of organization. Which is right or wrong time will show. In tactics they are the same.

Now to give an idea of the working class movement in Spain, and in order to obviate any idea that this revolt of today is merely a spontaneous uprising, it would be advisable to go as far back as before the International. By doing so we can analyze the feelings, teachings and so on of the leading movement, either economic or social.

I will start with the following question:

Does there really exist an economic movement in Spain, or does there not? If it does exist, is it of any importance? I quote a paragraph or two from a series of articles which appeared in the columns of an Italian revolutionary paper in Italy in regard to the revolutionary movement in Spain, written by an Austrian comrade, I believe. He said this: "In Spain the two revolutionary poles, Barcelona and Jerez, are situated northeast and southwest on the Peninsula, as in Europe the two revolutionary poles, Russia and Spain, are at the northeast and southwest of the continent. They are not nations of intellectual culture or compulsory education, but it is true that from these two illiterate countries will spread the flash which will cause the explosion which announces the social revolution.

And what characterizes Spain the most is that, although it may have contributed least to the labor movement in a theoretical and literary way, from a practical point of view it is the best leader of the movement.. It is generally agreed that the Spanish workers were the first to put the general strike into practice, as well as other forms of direct action within the economic struggle.

The labor movement in Spain first appeared in 1840, when the symptoms of revolutionary syndicalism began in industrial centers of the country. The right of association was denied and the syndicates (unions) declared illegal. They were driven underground. In 1847 the first revolutionary Socialist paper appeared in Madrid but was suppressed very soon. The teachings were the Proudhon theory. About this period the first strike was called by the secret organizations in Barcelona and other parts of Catalonia under the banner of "Union or Death." This fight was for the right of assembly, the right to organize, like a few years ago in Seattle, when the free speech fight was on. The "legal" rights were granted but the persecutions went on. It was only a scheme to put the organizers in jail, because as long as they were forced to work secretly the authorities couldn't find a single trace of the movement.

In November, 1847, acts of revolution started in Valencia and Saragoza. The workers at the latter city took control of it, expropriating food and other important necessities of life from the warehouses and ships anchored on the Ebro river. The soldiers were in sympathy with the workers, "infected" with socialistic propaganda. Almost in every Castilian city, mills, warehouses and factories were attacked with a view to "expropriation."

The communistic idea was spreading all over Andalusia, with the theoretical expression of "commune Republic." With this very idea, in June, 1863, over 5,000 men fought under the slogan, "Long live Communism," but were defeated by government forces, who killed twenty revolutionists and deported more than two hundred.

Beside this economic movement, another revolutionary idea appeared. It was the "Federal Republic," with Francisco Pi y Margall at its head. The economic and federal ideas of Proudhon greatly influenced Pi y Margall. To the federalist propaganda the Spanish proletariat owes its opposition to the centralization idea, politically as well as economically.

For the first time in 1868 came to Spain Giuseppe Fanelli, intimate friend of Bakunin. He organized the International in Madrid with Anselmo Lorenzo as one of the first members of that group. In 1873 the opponents to the new organization calculated the number of members to be 60,000. In 1870 the First International Congress (Spanish section) was held in Barcelona, and there the program was "out of politics," thus making the movement a purely economic affair.

The first paper, La Federacion (The Federation), defending the International principles, came out in 1869 with F. Pellicer as editor; in 1870 came another paper, La Solidaridad (Solidarity), and in 1871 the third one, La Emancipacion (Emancipation), with Pablo Iglesias and Anselmo Lorenzo, both anarchists of the Bakunin school at the time. The first issue came out with this motto: "In religious matters we are atheists, in politics anarchists, and in economics we are collectivists."

Owing to this propaganda, and seeing that he was losing ground, Marx, in 1871, sent his son-in-law, Paul Lafargue, to see if he could stop the influence of the Bakunin idea. He attended the general meeting in Madrid, January 7, and, getting in touch with the La Emancipacion editors, succeeded in capturing Pablo Iglesias' sympathy. Pablo Iglesias and others were excluded from the Madrid Federation because they were opposed to the International (Spanish section) principles.

At the annual congress, in Zaragoza, April, 1872, those excluded were admitted again but were expelled for good later, on account of insisting on carrying on propaganda against Bakunin's principles. Lafargue, Iglesias and seven others organized a new branch of the International, the Madrid Federation, and, with a membership of nine, was

recognized by Marx, Engels and the General Council in London, when the old branch with 60,000 was declared false. In the same year (1872) The Hague International Congress was held, approving Marx's proposition to exclude Bakunin, Guillaume and others and recognize the new Madrid International Federation. At the same congress the participation in politics was adopted.

The Third International Congress (Spanish section) took place in Cordova, December, 1872, voting against the decision of The Hague Congress and in favor of the Saint-Simon Congress, which was against political action. The Marx followers were using their best efforts, but in vain. They were disappearing, while the Bakunin side was growing, with its seven radical papers in the field.

In 1874, when the Republic was overthrown, after only a few months' existence, to make Alphonse XII the king of Spain, the persecutions forced the International to work secretly. But in spite of it papers were coming out here and there.

Four years later (1878) Pablo Iglesias organized in Madrid the first Social-Democratic group, keeping it secret till 1881. Iglesias himself affirmed a little later in a review, "Our Time" (Nuestro Tiempo), that "the working class movement from 1869 to 1885 was conducted by the anarchist element exclusively."

In 1881 the reaction wasn't so severe as before, and the movement came out openly, beginning the publication of The Social Review with 20,000 in circulation, which was very strange in a country where the majority didn't know how to read. It looks different today, for, according to a statement by New York Congressman Siegel a few weeks ago in regard to Spanish immigrants, they are now found O. K. in their literary test.

From that time on the Federation was inspired with the modern Syndicalism principles. A year later, September, 1882, the second congress of the Regional Federation was held with 250 delegates, representing eight unions, 218 local federations and 663 sections, with 70,000 members.

Right here I wish to call attention to the fact that up to that time the anarchists were "collectivists" and the socialists "communists," but from that date on, the anarchists became communists and the socialists collectivists (showing the hairfine distinction between these two expressions). In May, 1888, two organizations were formed: "Federation of Resistance against Capital," under the control of Syndicalists and others, and the "Workers' General Union," handled by the Socialist-Democrats.

From 1878 to 1881 only a socialist group was in existence and it was secret; in 1881 there were four, and in 1885 five groups in different parts of the country. The first socialist weekly paper appeared in 1886, El Socialista, with Iglesias editor.

At the elections the Socialists polled 5,000 votes in 1891 and 25,400 in 1901. Barcelona only gave 400 votes for Socialist candidates. According to Iglesias' figures the "General Union" was 3,500 strong in 1889 and 42,700 in 1902.

In 1888 a strike took place in Rio Tinto, where more than 12,000 miners took part. Over fifty-seven strikers were killed and 200 wounded. The first of May, 1890, every toiler stopped work for two days and the authorities didn't make a move. March, 1891, a Federation Congress was held and decided to call a general strike for the eight-hour day. The very same day Pablo Iglesias and other Social Democrats paid a visit to Premier Sagasta to tell him that they had nothing in common with the strikers, and that they were heart and soul against the revolutionists.

From 1886 to 1888 there was published in Barcelona "Acracia," a revolutionary paper, with Anselmo Lorenzo as editor; later on the "Productor", also a review, "Social Science," "Ideal Libre" (Free Ideal), "La Protesta" and "El Corsario," in La Coruna.

In the spring of 1900 a congress was held in Madrid with 200 delegates representing 52,000 members. The Regional Federation was there organized with all the Syndicates in it. Their principles were the revolutionary general strike and "solidarity strike." Before this time, 1898, the "White Review" (anarchist) was published in Madrid with a daily supplement for information about the every-day struggle, and in 1903 a daily paper, "Land and Liberty," was established. In 1901 Anselmo Lorenzo published another paper, "The General Strike." During this period strikes went on in Sevilla, Gijon, La Coruna, etc., etc., where the authorities were using their weapons against the workers.

In La Coruna, May, 1901, the civil guards, without cause, discharged their guns against a group of strikers, killing one and wounding a few others. Next day over six thousand workers attending the burial of the victim declared a protest general strike. When the workers returned from the cemetery martial law was proclaimed, and at the very same minute the guards opened fire without warning or mercy on the workers, leaving eight dead and fifty wounded. Nevertheless, somehow, the workers on strike won out, returning to work victorious, with revengeful feelings against the Socialists for their cowardly denouncing of the rebel workers, while not a word was said against the action of the guards.

In February, 1902, the Metal and Machinery workers of Barcelona went on strike for the nine-hour day, and a general strike in sympathy was declared, including 80,000 toilers. Not a single vehicle was moved, and Barcelona was in the workers' hands. A congressman said at the time: "If this movement spreads to every province of the country the government wouldn't have enough machine guns to settle this revolution."

The general strike idea has been propagated in Spain since the first International group was formed, and every new organization formed has adopted the same method. More than any pamphlet or theoretical program, the general strike idea was in the workers' mind since the important movement in

Barcelona, and from that time on the activities were for general strikes. As usual, the Socialists were against such strike. A committee from the Socialist party went to the military governor to assure him that Socialists have nothing to do with those "outlaw" "revolutionists." They went further, saying that if such strike takes place they would go to the guards' side in order to establish order. This was in 1902, and eight years later, some of them were the worst enemies of the workers during the tragical week of July, 1909, in Barcelona.

The strike over, Barcelona was kept for a year with the constitutional guarantees suspended and the military tribunal functioned often. Despite all restrictions, in 1903 a revolutionary daily paper came out, called "Land and Liberty." There were three scientific and philosophical reviews and twenty weeklies published in a country of 18,000,000 inhabitants, with half of the population illiterate. P. Zancada published a book, "El Obrero Espanol" (The Spanish Worker), in which he stated that nearly 40,000 workers were either revolutionists or sympathizers. The most important centers of propaganda were Catalonia, Andalucia, La Coruna and Cartagena.

Another barbaric move was made by the Spanish government when Alphonse XIII was crowned. Premier Antonio Maure, one of the worst reactionaries in the country, was looking for "honors" and he found them in Alcala del Valle when the agricultural workers were on strike. Using the same old tactics, the guards shot down two peaceful workers merely to find some excuse to kill the movement. The people got so excited that they jumped on the civil guards and disarmed them, thus taking revenge for the victims. Soldiers were sent and more than a hundred young boys, women and old men were arrested and tortured. The methods of Montjuich Castle were put in practice with more vigor than ever. Oh, if the walls could speak. A woman in a state of pregnancy was beaten till she had a miscarriage. Others were condemned to hard labor for life.

A campaign protesting against such atrocities started in many countries of Europe. In Cette, France, March 12, 1904, the harbor workers refused to work on board Spanish ships until the Alcala prisoners were taken out of jail. The business men were forced to send a petition to the government asking to set the prisoners free, as otherwise Spanish commerce would suffer a great loss.

Then, after many minor troubles here and there, came the tragical week called in Spain "la semana sangrienta" (the bloody week), in July, 1909, when the Calatonian workers rebelled, protesting against the sending of more troops to Morocco, Africa. With the Spanish-American war vividly in mind, they were not willing to allow the departure from Barcelona of any more cannon food.

A revolution started in which all the radical and liberal elements took part. During a week the city was in the hands of the workers. Skirmishes were going on between the workers and soldiers without advantage to either side. It might have taken a different phase if the Republicans and Socialists had not deserted the rebel ranks, leaving the revolutionists at the mercy of the military forces then reconcentrated from everywhere in the country. This was the cause of failure, besides the fact that the other cities did not second the movement. In Alcira and Carcagante the commune was declared, being defeated, of course, after Barcelona capitulated.

This tragical week lives in the mind of every worker in Spain. October 13,1909, is never forgotten—the day when Francisco Ferrer, Baro and three other comrades, one 18 years of age, were shot inside the historic walls of Montjuich castle, with many others tortured and exiled.

Year after year ever since wonderful movements were developing, consolidating more and more the workers in their efforts. General strikes were declared against the high cost of living. A special congress was called by the National Confederation and the General Union. A general strike took effect for twenty-four hours, and it would have been longer were it not for the parliamentarian Socialists who were and are handling the General Union.

Many more columns could be used to give in detail the economic and social struggle in Spain. There never was peace. There were always causes that forced them to act.

Of late years the labor papers have been frequently suppressed, but the workers often managed to get out their papers in spite of it. Thus "La Voz del Obrero" of La Coruna, organ of the local Syndicalists, was still published in July, 1919, four months after it had been prohibited. The workers have a way of keeping in touch with one another that the powers cannot break down.

On June 28, 29, 30 and July 1, 1918, the Regional Confederation of Catalonia held its congress in Barcelona. Despite the situation in Catalonia the Congress was a success. After three consecutive sessions and hard discussion the "Sindicato Unico" was adopted. This adoption and its putting in practice brought on eight weeks of "lock-out" by the owners' federation against the newly adopted form of organization, as stated above. This congress was opened with the following declaration: "Taking into consideration the work done by our fellow workers of other countries, we want to prepare a superior form of organization to signalize the advent to power of the workers' commonwealth, and we wish to do this, if possible, before the fight that will undoubtedly soon take place to dethrone the bourgeoisie from their omnipotence.

At this congress more than four hundred delegates were present, representing every phase of work and every corner of the country, even a delegate from the Confederacao Geral do Trabalho of Portugal was present, representing 100,000 members. The number of members represented at the above congress was near to one million. Three months after it the membership reached over the million mark.

Lots of facts are reaching us now, either in capitalist sheets or in the mail from fellow workers, which are very interesting for the workers on this side of the water.

One thing that we are sure of is this, that the rebel spirit is with the workers there; they were, and are growing up under persecution, but despite all they never break down.

News that recently reached us indicates that the workers are determined to stick to their principles. The Sindicato Unico is declared illegal, but, as the Syndicalists said in a document that I have at hand, they will go ahead even if they are forced to work secretly. The Catalonia governor and other authorities were in accord to prevent the delegates from collecting any dues, but no matter what they (the authorities) will try to do, the spirit will exist.

The Sindicato Unico may be said to be the Spanish I. W. W., inasmuch as its program is to unite the workers irrespective of crafts, to enable them to take over production and distribution. From one of their resolutions we quote:

"We are going toward what the money-mad bourgeoisie calls 'Utopia.' We are going toward the liberation of human beings, economically, politically and morally."

## Prison Horizons

By MORTIMER DOWNING

**Beck'ning, beyond these cup like walls**
**Glow bright horizons, where love calls**
**Bravely; but for the self-pent mind,**
**To generous ideals blind,**
**All space is but a sepulcher.**

**Wide as man's hope extends this cell;**
**Jails rot bodies: free minds dwell**
**Where'er sense eagerly gleans seed,**
**Whence fecund thought may blightly breed**
**Unending generation's joys.**

**In dungeons rulers hatch Despair,**
**But Hope invades such fetid air**
**And hushes to a gentle rest**
**This monstrous nurseling of the nest**
**Prepared by Hate for Lucifer.**

**We brought the light! And shall we fear?**
**Why shall we cower at the leer**
**Of Wealth's high priest? Why cringe to fate**
**Invited? We challenged Greed to sate**
**Its lusts upon us! We rejoice.**

**Mind-lighted, wide horizons spread,**
**While verging worldward Labor's tread**
**Stalks on in pace with new found facts,**
**Till workers shout, "Our Might enacts,**
**Their products shall producers own."**

**These portents through the prison shine,—**
**They blaze! tho Law and Rage combine**
**To dim their splendor and to hide**
**From captives' eyes the kindly pride,**
**Socrates, Christ as traitors died.**

## The Last Laugh on Landis

By John E. Nordquist

**News Item—"Judge Kennesaw Mountain Landis last night took the measure of the Reds, Socialists, I. W. W. and others of their ilk in a talk before 400 newspaper men and women. For forty minutes he kept them in a continuous roar of laughter at the expense of the Reds."**

**Forty minutes of laughter,**
**Forty minutes of fun,**
**As they listened to law's greatest grafter,**
**Who'd end every red with a gun.**
**You lickspittle editors grinning**
**With K. Mountain Landis "the great,"**
**Don't you know that we reds are winning**
**As we laugh at your scorn and hate?**

**Ye cringing editor carrion**
**Who bow to the rich and grand,**
**Ye refuse to hear the clarion**
**And side with the just of the land.**
**What have you done for the nation,**
**Or to the proud profiteer?**
**Have you CALLED FOR HIS DEPORTATION?**
**Have you stilled his scornful sneer?**

**Laugh till your white lips redden!**
**Sneer your face out of gear!**
**Threaten with bullets leaden!**
**For the end of your laugh is near!**
**Judge "KILL MEN LANDIS" and his crew**
**Can't stop the REVOLUTION;**
**They'll jail, deport and shoot a few,**
**Still we laugh at their confusion.**

## NOTICE

**You wish you could do something to help put an end to capitalism. You wish you knew how. Well, let us tell you. The only way to permanently put an end to capitalism is to educate the workers in the building of a new society. You can help in doing that. Get subscribers for the I. W. W. publications. Take home a bundle regularly to sell. Take home a supply of our literature for distribution.**

# The Working Class Movement in Mexico

By JOSE REFUGIO RODRIGUEZ
Secretary of the Mexican I. W. W.
(Translated from the Spanish)

While our eternal enemies, the exploiting classes, are utilizing every possible means to deceive and betray the workers of Mexico more shamelessly than ever, a little but growing group of Industrial Workers, banded together under the Mexican Administration of the I. W. W., is carrying on its almost unnoticed work that is bringing results.

It would only tire you, my fellow workers of the north, were I to relate in detail many of the things we are doing, for they consist of little details that mean much to those immediately concerned but are boresome to others. Suffice it to say that we organized last fall a provisional executive committee, which was to take charge of the work of unifying the labor movement of Mexico in a Mexican Administration of the I. W. W. Where existing unions could be induced to alter their constitutions and rules so as to conform with the fundamental principles of industrial unionism, we agreed to try to secure such alterations and to have these unions unite with us. Where existing unions insisted on listening to the treacherous appeals of Gompers, Morones and their ilk, we were to organize other unions along industrial lines. Slowly but patiently and earnestly, we have been proceeding in this manner, and in most cases we have found few Mexican workers who would defend Gompersism. The work of unification continues to be far from as fast as we wish, for the Mexican is apathetic to his own interests and it takes persevering work and much revolutionary fire to stir him into activity. However, we add a union every now and then, and gradually we see a few more working class organizations brought into our movement of unification.

We have, of course, adopted the I. W. W. preamble and most of the rules that are in force in the I. W. W. of the United States, making only such incidental modifications as local conditions required. We constantly seek to instruct the Mexican workers in the importance of the "strike on the job" and of general strikes. We endeavor to impress upon them that while we are always anxious to strike for more wages and shorter hours, wherever an opportunity appears, we regard such strikes as mere practice preparatory to the final, supreme struggle in which we shall meet our enemies on the battle field of the general strike. If more wages are obtained, well; if shorter hours are gained, well also; but in neither case do wo expect any great betterment in the condition of the unhappy, wretched toilers who produce today the riches that others may enjoy and utilize. We know that only in the final, permanent defeat of the vile, abominable system of capitalism, will we find lasting, enduring peace, freedom and happiness.

Unfortunately for our propaganda and work, the presidential election is due to come in the month of July, and in these moments there is spread thruout the country the usual treacherous, deceitful dissemination of lies and smooth stories designed to persuade the workers to vote for one candidate or another. True to the principles of industrial unionism, we have repudiated unconditionally all candidates and warned all workers to keep aloof from all elections. We also warned them to have no part in the revolution initiated in the state of Sonora by followers of Obregon, for we see no difference between the various candidates and we know that all of them—Obregon, Bonillas and Gonzales—have been seeking the support of the American and Mexican financial interests. It appears today that Wall street is financing the Sonora revolution and is, therefore, using Obregon as an instrument; but there is little difference between any of the candidates. We refuse to work or fight or sacrifice for any of them. We will utilize our energies in organizing industrial unions and in no other way.

In a recent issue of your esteemed magazine, you made a query as to the work of Villa, Zapata, etc. This query can be answered briefly and effectively. Villa is no more and no less than a despicable murderer who once served in the American army and there learned completely the science of killing his fellow human beings. He has always been an instrument in the blood-stained hands of the capitalists and financiers of Wall street. His history is well known on the frontier and can be corroborated with little effort. He has, it is true, made various promises to the workers of Mexico at various times, but none of those promises have the slightest basis of truth. Like the politicians who now want the votes of the Mexican workers, he has shamelessly lied to these workers to induce them to fight in his army of butchery and treason.

One of my brothers was a close friend of Zapata and helped draft the "Plan of Ayala," which attracted attention thruout the world and was printed in English, Spanish, German, French and probably other languages. I know something of Zapata, therefore, from the most reliable sources. He was an honest man. He was an able man, considering that he had no education and that his ideas of communism and freedom came from the depths of an humble but unpurchasable heart. Yet the tales published in foreign periodicals about the wonders of "Zapataland" make us laugh and also make us shed bitter tears. We laugh because the tales were ridiculous and untrue. We shed bitter tears because we wish they were true. Probably Zapata's lack of experience with men outside of his own little realm, and, probably, also, his lack of education, would have doomed his experiment to failure, in any event. But as a matter of stern reality, he never had an opportunity. His "Zapataland" only existed over a few

hectares of land in the days of its greatest success. It was very crude, undeveloped, unorganized, and could not, therefore, last long. In the great land over which Lenin is the guiding figure and where Industrial democracy has come to remain forever, there is much of science, order, skill, wisdom and shrewdness, to match that of the capitalist empires without. But there was none of this in "Zapataland"—only honest intentions, high ideals, bad organization, big blunders and inevitable failure. We honor Zapata and we shall always remember "Zapataland" with reverence. But we know it was far different from what the radical world generally believes.

As for Carranza, he was at best only a Liberal. He would probably have nationalized the petroleum and other industries if left alone by Wall Street. This would have displeased Wall street but done little good for the workers of Mexico, who could have been little better off than now. Generals and politicians would have been the beneficiaries. But even the good intentions that Carranza did have—exaggerated as they were—were thwarted by threats of intervention. He would not have done much at best, I assure you, but he could not even accomplish the little that he desired. In the last few months he has made various concessions to Wall street in an endeavor to save his government from destruction, but his concessions have been pitifully useless. It was far too late and Wall street had already decided to support Obregon and to organize a new revolution.

In none of these men are we members of the Mexican I. W. W. interested. I only refer to them to reply to the query in the One Big Union Monthly for information about them. Our sole, only and permanent interest is in the organization of industrial unions in every part of this slavery cursed land of sunshine and shadow.

Permit me also, fellow workers, to say a word about the recent controversy that has raged in the columns of your magazine in regard to Mexican conditions. None of us know much about Irwin Granich. He says that he was a participant in the class struggle in Mexico, but if so, he participated so modestly and harmlessly that none of us knew it. I have seen him in a few meetings of the Mexican Socialists but nowhere else. I have nothing to say for him or against him personally, nor have most of us, for not many of us even know there had been such a person in Mexico until we saw his articles in a few American publications. I must say, however, with all emphasis and sincerity, that his attacks on Linn A. E. Gale were both shamelessly unjust and abominably ridiculous. Friends of Luis N. Morones, the Mexican agent of Samuel Gompers, have persistently tried to slander Gale, who has been merciless in his attacks on the Gompers machine, and the charges of Granich are but the repetition of these lies. We all know that they are false. Gale has made enemies unnecessarily by his fighting disposition and his bitterness toward his enemies, but they are not the kind of people that Industrial Workers would want for friends. His enemies are a credit to him and are a proof of his fearlessness. The Mexican radical movement owes much to Gale, and intelligent, sincere Mexican radicals resent attempts to blacken his reputation.

It is true, absolutely true, that Gale tried to induce the Carranza government to take revolutionary action and to ally itself with Soviet Russia. In this effort, he entered into intimate relations with certain persons in the government. But when he found that nothing revolutionary could be accomplished, and that the Carranza government only was willing to protect political fugitives here, but would go no further, he made no more efforts along that line. We were familiar with his efforts at the time and had no criticism to make. Being Mexican and knowing the Mexican politicians, we did not expect he would be successful, but we approved of the effort, believing that if it had been successful it would have been of great value to the revolutionary movement of the world.

But it is not with personalities that we are concerned. Our interest is in the powerful movement to which we have pledged ourselves and all that we now possess or may ever possess.

We are with you, fellow workers of the North, until the consummation of the dream that we cherish and the ideal that we support—until One Big Union covers Mexico from Sonora to Yucatan and industrial solidarity has stricken from our limbs each and every link of the chain of servitude that holds us in agony.

## Soft Stuff

**By Raymond Corder**

**Say, ol' scout,**
**Honest to Jesus,**
**Doesn't somethin' lumpy an' wistful**
**Rise up outa your chest**
**When you hear a baby laughin'**
**An' cooin' at its mother's breast?**
**Doesn't kinda yearny feelin's**
**Bother you for a while**
**Till you ditch 'em all as soft-stuff**
**With a half ashamed smile?**

### "FAKE BOLSHEVISM OR THE ASS IN THE LION'S SKIN."

After questioning the right of the Department of Justice to interfere with the workings of the Departmentof Labor, Ralston (counsel for Asst. Sec'y. of Labor, Louis F. Post, in impeachment proceedings before the House Rules Committee) said: "I shall offer proof of the fact that agents of the Department of Justice have been instructed, and have been instrumental in forming branches of the Communist party, and of inducing innocent men to join and take part in their work, in order that raids and arrests may be made by the department."

# Australian I. W. W. Activities

The following letter from Fellow Worker Mick Sawtell of Adelaide, South Australia, gives a brief and interesting review of Australian labor conditions at the present time, and brings a cheering message about the twelve Australian I. W. W. men who have now spent several years in prisons. Here the letter follows:

Adelaide, South Australia, March 14, 1920.

Editor O. B. U. Monthly:

Dear Fellow Worker—Thru the kind co-operation of Mrs. S— the issues of your paper have come to hand. The contents and news gleaned about the American I. W. W. in the paper staggered us here —to know that the I. W. W. still had seventeen papers and was organizing in spite of terrible persecution, and with two thousand fellow workers in jail was a revelation to us in this part of Australia.

Since and during the latter part of the war it has been very hard to get any news from overseas. The I. W. W. officially does not exist now in Australia. The jailing of the twelve and declaring the organization illegal was a great set-back for us. Between eighty and ninety did six months for being members of the I. W. W., and as far as I know not one fellow worker denied the organization. All the members who were not Australian born were deported out of Australia. However, the spirit still lives, and we now function under the name of International Industrial Workers. I send you copies of our two papers, "Industrial Solidarity," of Melbourne, and "Industrial Solidarity," Adelaide edition.

The great trouble in Australia is the scarcity of nonpolitical industrial union speakers.

We exist only for propaganda purposes. There are two other organizations endeavoring to function and appealing for membership as revolutionary industrial unions, but both are political. There are the W. I. I. C. (The Detroit I. W. W.) and the O. B. U. (Trades Hall). Altho officially these organizations stand for political action, the rank and file have little or no time for political action.

The old I. W. W., before it went out of existence, permeated the working class of Australia well with the right philosophy. Just at present there is an election on in New South Wales, and the release of the twelve I. W. W. men is one of the big issues of the election. The old conservative labor politicians are standing for a new and "fair" trial, but the new aspirants in the big industrial centers, sensing the workers' discontent, are advocating an unconditional release. The twelve have now done three years of their jail term, and the agitation for their release still continues, and whether the Labor party is returned or not, the twelve have a good chance of release, as the slaves are becoming determined that the twelve must be released. The Labor party would do nothing for the twelve unless the workers in the industries pushed the issue. The Labor party becomes more worthless and corrupt every day.

The workers of this country should have nearly learned their lesson regarding the utter futility of political parties. The price of all commodities is going up and up every day. The price of slaves is the only one that is stationary. Labor power, humanity, is very cheap at present here. Thousands of returned heroes are out of work, and when they paraded their woes before the government the war ministers referred to and looked upon the soldiers as nuisances. The soldiers are fast becoming disillusioned. There is plenty of unintelligent discontent everywhere.

The Broken Hill miners, the most militant trade union in Australia, has been out on strike now for nearly twelve months, and altho the strikers are suffering terrible privations their spirit of solidarity is not broken.

As the economic pressure becomes greater we expect to develop the right working class psychology to act in co-operation with our fellow workers in other countries, for the overthrow of capitalism.

Glad to hear from you at any time.

Greetings to all fellow workers in America from fellow workers in Australia. Yours,

MICK SAWTELL.

76 Pirie, Adelaide, S. Australia.

# I. W. W. in Australian Prisons

By M. S.

(In "Industrial Solidarity" of Adelaide, Australia.)

When the history of the Labor movement of Australia is written, one of the darkest pages will be the long and continued incarceration of the twelve I. W. W. men.

It is a standing disgrace to the working class of Australia that these men are still in gaol. The men have been in gaol over three years now, and the agitation for their release has almost died out. This speaks volumes for the cowardice and apathy of the workers. The case of our fellow workers has now gained international fame, and yet despite the widespread interest and knowledge of the cases, the men are still in gaol.

The "frame-up" against the men was cunningly and well stage-managed. Simultaneously in West-Australia and New South-Wales, just on the eve of the first conscription referenda, members of the I. W. W. were arrested on a charge of "Seditious Conspiracy", whilst the public mind, especially that class from whom juries are drawn, was inflamed against the arrested men, and the organization in general, as destroyers of property, etc.

After the first trial the twelve men, whose names are famous, received sentences of from five to eighteen years.

After a subsequent appeal trial, and later on a Royal Commission, which has proved beyond doubt that the Crown witnesses committed perjury, and that the whole of the case was a diabolical frame-up, the twelve are still rotting in gaol.

Now that the men have been found to be innocent of the charges laid against them, how is it, the average man will ask, that the twelve have not been released? Because, so far, the working class of Australia have not demanded our fellow workers release.

Governments don't mind Royal Commissions. No matter what evidence comes out, the judge, a member of the capitalist class, will give the verdict or finding his way.

Lawyers don't mind Royal Commissions, as it means big business to them.

However, we see in Royal Commissions a criminal waste of time, and a reactionary influence on the working class, debating whether the twelve are "Guilty or not guilty," according to the master's law.

Of course, intelligent workers who are revolting against capitalism are always "Guilty of Conspiracy," or by whatever other name the masters care to call that attitude of mind that does not and can not agree to wage slavery.

The question that confronts us today is: How are we to effect the release of the twelve?

The answer is plain. There is only one way to abolish any injustice against the working class, and that is by industrial action. Some of our political friends accuse us of sacrificing the men for the sake of a fetish or dogma, for, they argue, help us to put the Labor Party in and then they will release the twelve.

First of all there is no certainty that the Labor Party would release the twelve, unless there was sufficient industrial agitation to make the release a popular and burning question.

Again, political parties that are anxious to be returned to power cannot afford to lose votes by advocating unpopular causes.

To make the release popular again we have to fall back on to the workers' only line of defence, namely industrial agitation and action.

The release of the twelve, then, viewed from every angle, can only be achieved when there is widespread discontent amongst the workers.

This widespread and deep-seated discontent may come as the result of an industrial crisis, or it may come, and it will be accelerated, by our industrial union propaganda.

To this task the industrial unionists of Australia have set themselves; it is the only way to hope for a demand for the release of the twelve. In the meantime, on with our agitation inside the workshops of Australia; and let us hope the twelve will bear their cruel servitude with fortitude and without loss to their physique and to their mental and nervous energy.

# The Judge

By Covington Ami

Behold the Judge, my son; impartial, fair,
Unerring as the compass and the square
Are all his judgments. Just to rich and poor,
Alike to all who pass the courthouse door,
Is he. His august eyes mark not your rags,
Nor yet your foe's plethoric money bags.
Equal, before that blackrobed figure there,
The ward-boss, rebel, tramp, and billionaire.
Justice alone he sees, in justice deals,
Beyond her service naught to him appeals.
Benignant, calm, austere, the law his rod,
Legality his one and only god,
Above ambition, power, place and pelf,
He giveth judgment. (He says so Himself.)

# Join the Red Wobblies

By John E. Nordquist

Air: "Brighten the corner where you are."

Don't expect the tyrant bosses to be kind to you,
Do not wait for them to set you free;
Heed the message of the workers, to yourself be true,
Join the red wobblies—join today.

CHORUS

JOIN THE RED WOBBLIES—JOIN TODAY!
Join the red wobblies—join today;
If you are a worker then we need you in the fray;
JOIN THE RED WOBBLIES—JOIN TODAY!

All you toilers who are slaving for the greedy plutes,
Here's the message that we give to you:
Only thru the ONE BIG UNION plutes will shoot the chutes,
Join the red wobblies—join today.

Now's the time to soak the bosses while they're full of fear;
While we've got the critters on the run.
If you want to scare the runners, pitch in with a cheer,
Join the red wobblies—join today.

Do not waste your time in weeping—organize today,
If you want to see true freedom's dawn.
If you want to own the earth and drive all grief away,
Join the red wobblies—join today.

# Only a Gradin' Stiff

By John E. Nordquist

I'm only a gradin' stiff out on th' dump—
By everybody considered a chump;
Only a gradin' stiff—lowdowndest beast,
Who's worked the hardest and paid the least.

I'm only a gradin' stiff skinnin' th' mules,
Handlin' th' wheelers, fresnoes an' tools;
I'm buildin' th' grade fer th' shinin' rails—
When I finish th' job, its me fer their jails.

I'm only a gradin' stiff levelin' things,
'Round me the' pick an' th' dynamite rings.
I live in rag houses—cheerless and cold—
On tainted food an' bread full o' mold.

I'm only a gradin' stiff, but even at that,
I'm learnin' my lesson an' comin' out flat.
Th' rest o' th' gang are with me I know,
Tho they're bidin' th' time an' layin' low.

Every last skinner an' muckstick man
Lined up in The Wobblies with delegate Dan,
An' we're goin' on strike to boost our pay:
Yes I'm a gradin' stiff but no longer a jay!

# Shop Organization the Base of the I. W. W.

By GEORGE HARDY

### British Shop-Stewards

Much discussion is going on in the ranks of labor, as to what is the best form of organization to give power to the workers in industry. This is an indication of discontent with the American Federation of Labor, and all other craft forms of unionism, which in reality is not unionism at all. The primary cause for discussion can be attributed to the advent of the Shopsteward Movement in Great Britain, which was brought about during the war, because the officials of the great trade unions pledged labor's support to the Government, and who afterwards were prevented from participation in strikes, by the Defense of the Realms Act and the Munitions Act, thereby forcing into existence the unofficial movement, due to the abnormal conditions prevailing.

There has been a desperate attempt to make this shopstewards' system fit American conditions by all and sundry. Especially is this true of some of the bourgeois and semi-bourgeois minded people, who claim to be revolutionary; while on the other hand, the members of the Shopstewards' Movement in Great Britain **state frankly, they would be in the I. W. W. if resident in U. S.** However, the Shopsteward Movement does fit British conditions, because of tradition etc.

### Reason for Continuity

The above position of the British militants is absolutely correct, because the "Industrial Workers of the World" is thoroly in harmony with capitalist development and the labor conditions prevailing in America. There are less than ten per cent of the workers organized in this country, as against fifty per cent in the British Isles; with considerably weaker unions existing amongst the American workers, than those of the British workers. The I. W. W. has stood the battle for fifteen years—this alone proves its continuity inevitable and in **conformity** to **Economic Evolution.** The I.W.W. admits of changes necessary to prevent the organization from becoming obsolete, as the craft unions have. This is because its' **constitution** is an **elastic one**— it has changed many times.

### Necessary to Change

Today again we are confronted with the necessity of changing our form and tactics, due largely to the fact, that rapid changes are taking place in the economic world, and the apparent blood-thirsty tactics of the masters of industry. Therefore I submit the following program for consideration—not as "my" program—but as a program evolved out of the accumulated knowledge of the past; gathered by reading and discussion with my fellow workers, and an analysis of the position of the proletariat to the economic necessity of abolishing the system of private ownership, together with the **avaricious, trustified masters**—the **capitalist class.**

During the last two years many plans have been submitted. Some members are willing to stay by the "Old Ship" (the I. W. W.) without applying modern machinery to run it. Others want to change its name. To the thinking portion of the members both plans are equally disastrous—you cannot fool the ruling class! What is necessary now is new machinery to run it. We must abolish that part which has served its purpose, and install the most uptodate equipment the modern mind can conceive of, or we will be operating at a loss of prestige—a loss of membership—the crew will become too small to run the big ship, and we will land in some future storm on the rocks. This is financially evident today. We can, however, insure the future by installing new, modern, efficient and uptodate machinery of administration, to discharge the rotting cargo—capitalism. Let us do it today.

Efficiency calls first for an organization with its basis on the job, **with rank and file control** from the bottom up to the highest office; second, that **administrative councils** be created to admit of joint action from the job to the whole of the organization; third, that a **regional** council should exist to execute business that interests the whole working class community; fourth, that a defense council shall be maintained for the purpose of caring for members who have temporarily ceased to be industrial workers, because of their incarceration by the capitalist class; fifth, that at all times the **prerogative** shall be in the hands of the members on the job; sixth, instead of District Offices for each industrial union, supply stations should be opened jointly.

The above can only be gained by having a Union formed along the lines indicated in the chart. I do not, however, claim its application should be hard and rigid; but, I do claim the principle with slight variations can be applied to all industries which we seek to organize.

### Job Branches and Committees

The job branches as set out are the base of all action, whether, legislative or administrative—the executive power lies always with the workers at that base. The workers first organize the job—a mine, mill, camp or factory—immediately they have seven members they constitute themselves a **Job Branch;** hold meetings; elect a job committee, one of whom may be elected delegate for that job. This would move the avenue of communication from the delegate to the job. When a delegate leaves a job, immediately one is elected in his place, and supplies given him which were left behind by the retiring delegate. It will be seen here, the supplies become the property of the job committee, instead of the delegate. It will also be noticed, there will always be a delegate on the job, and one who expresses the wishes of the group so organized, for they elected him. They have the power to remove him if not satisfactory. With this system in operation there can never be more than one delegate on one job,

and all jobs organized will have a delegate.

The job committee is the administrative committee, and attends to all matters arising on the job between meetings to all matters arising on the job between meetings; such as grievances that may arise; differences prevailing amongst the members etc., and have power to call special meetings by a majority vote of the members of the committee. The meetings then take up the matters on the agenda and decide what action shall be taken.

Organized in this way the territorial divisions, prevalent in the craft unions disappear, for all workers meet together who work together; thus, as the workers gain power, so they are gaining control, and will form the basis of the future **administration of industry** under the Co-operative Commonwealth—Industrial Communism.

There are many workers who work in separate factories and jobs, who will be found to be working for the same master in a given piece of territory or a large city. We also know, that modern industrial capitalists are all organized industrially and territorially, so we must look on them as a class—the exploiting class—with the above divisions for efficiency amongst themselves; so, we must, therefore, unite our forces on the jobs to be able to meet them in open combat.

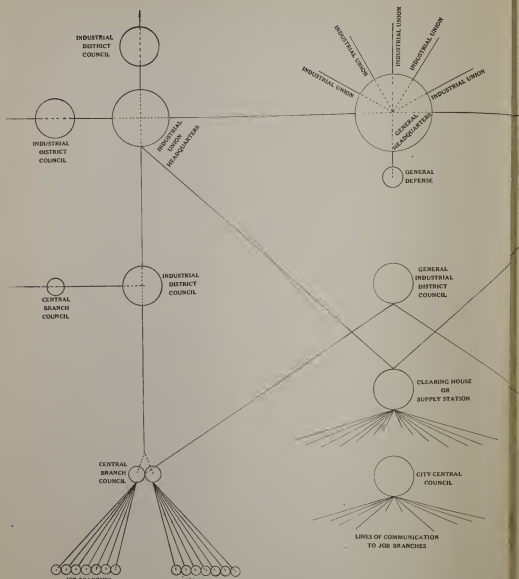
**Central Branch Council**

The **Central Branch Council** is fitted for meeting the opposition, and taking the aggression against the **locally organized industrial groups of capitalists.** The central branch council is made up of delegates from the job branches, who will meet as often as the job branches represented on the council decides, consistent with urgency, distance and expense, etc. They could meet oftener in highly centralized communities than where distance is an obstacle. A council ought to be formed as soon as seven job branches have been organized. If the job branches were large in membership, one could be formed with a less number. Representation could be had on a pro-rata basis, say, one delegate for every one hundred or any part thereof.

The Central Branch Councils' function is legislative. It is to enable the workers to come in contact with each other through their duly elected representatives, who would **receive instructions** from their job branches, and deliberate, with their fellow workers in relation to the issues under discussion. Here we find that one delegate would bring up a question never thought of by some of the other delegates, so without instruction they would use their best judgment and vote accordingly. The decisions would be ratified by the members of the job branch. We must also concede that large bodies of men become unweildy and cannot make the best decisions. They can also be played upon by eloquent popular orators. The central branch council would deal with facts alone, and members would act of men become unwieldy and cannot make the best from the council by the rank and file.

**Industrial District Council**

Several central branch councils could exist in an industrial district like some of the large mining districts, lumber districts, coastal districts of marine transport workers and agricultural districts, etc. This would necessitate an **Industrial District Council** being organized, to co-ordinate all the activities of a district within a given industry. The industrial district council would be made up of delegates from the central branch council, with a delegate for every 500 members affiliated or less. Again we must bear in mind the job branches would **ratify the election** of any delegate to the district council which would meet as often as conditions demanded, say every six months, and consistent with finance, urgency, etc.



This is absolutely necessary for drawing up uniform demands in a district where natural industrial divisions exist, such as in the logging industry where different machinery is used to get out the logs. These districts should not exist with territorial divisions where these natural divisions exist—the uniform methods of industry in the district would demand common council with each other—besides unity of action compels the workers to adopt modern ways of accomplishing Solidarity. Instead of striking separately, the workers would carry their grievances—if not settled locally—to the industrial district council. This would produce efficiency and a stability which would give **ECONOMIC POWER** to the **WORKERS' ONE BIG UNION.**

Today we know that our interests are identical, that is, if we are workers. We also believe, that an organization which still maintains that the workers have interests in common with their employers—the parasites—is serving the masters' interests, as opposed to the workers' interests. Yes, the above is generally true. The workers almost without exception nowadays, admit they are fleeced daily by the profiteer, which means, they are subconscious of the **wolves in sheep's clothing**—the Industrial Kings of the World, who rob us daily at the point of production.

**General Industrial District Council**

In so far as the workers have interests in common, they must organize into a **General Industrial District Council.** This would be done as soon as two or more industrial district counells existed in a district. It would not be necessary for this body to meet very often; say, once a year, if nothing of a critical nature came up appertaining to the interest of the whole district. Representatives or delegates from the central branch councils would meet, and comprise the general industrial district council, on the same pro-rata basis as the central branch council—thus we **create co-hesion** within a district—**District Solidarity.**

There will not be any permanent offices attached to the above councils, as they are purely creative or legislative. They must be so because they come from the job, and only workers who work on the job either by hand or brain are entitled to legislate or create machinery to govern their affairs. They know best! This does not mean that if some specialized work needs to be done, they must place a

**Job Branches are in camps, mines or shops etc., heading into the Central Branch Councils; several Central Councils make the Industrial District Council; and, several Industrial Districts lead into the Industrial Union, with a national headquarters; all Industrial Unions make the One Big Union of all the workers—General Headquarters.**

**Where various Industrial Unions are operating in a District a General District Council is formed to unite the whole body of workers in a District, with City Central Councils formed on territorial lines to care for the communal interests. The Defense Councils is maintained as a local department with a fluctuating importance according to the work that comes under its' jurisdiction. Supply Stations are for distributing supplies to jobs, etc., where several unions exist a long way from Headquarters.**

worker from the job to do it. No, they will hire the most efficient man to do the work.

**Executives of Councils**

The above councils, central branch, district and general, will all have their executives, who will attend to all matters as they arise during the intervals between conferences or meetings, and call into session—with permission of the job branches—emergency conferences, if a critical condition arises which demands immediate and important action that only a conference can settle. The office force of the clearing house or supply station, will be under the jurisdiction of the executive of the general industrial district council, who will go over books from time to time and see that efficiency is maintained, and render a report to the job branches.

**Supply Stations**

In districts which are a long way from the headquarters of the industrial unions, and where two or more industrial unions are operating, supply stations should be opened where delegates elected on the jobs can obtain supplies. All that would be necessary for the maintenance of this supply house would be a supply book and delegates credentials etc., with a **Report Sheet** for the daily supplies sent out and money received, which should be sent to the industrial union headquarters every day. Of course a duplicate of the work done would be kept on file for comparison, should a mistake arise. In this fashion, there would be no need for Index Cards, etc., together with the unnecessary work caused by duplicating the work at this office. The up-keep of this office would be maintained by those using it on a proportionate basis.

**Form Union on Job**

We are inevitably, always forced back to the ground work of organization, which always leads to the job. So we find, to form an industrial union is, not to open an office, but to go to the job and form a job branch—this is the foundation. It becomes unnecessary to open an office to do organization work for a particular industry, since there is in existence a general headquarters of all the industrial unions already organized. The job branch once formed could get its supplies from general headquarters temporarily, where a set of books could be kept under the jurisdiction of the G. E. B. When several small industrial unions exist, one bookkeeper and stenographer could be hired at headquarters to do the work, until they grow large enough to warrant the existence of separate offices with machinery. Then industrial charters should be issued. We come now to the Industrial Union.

**Industrial Union**

After 5,000 members have been attained, Industrial Union Headquarters could be opened. Remember, by the time a union reached a membership of 5,000, there would be in existence many central branch and district councils, therefore, not only would the work warrant the opening of a headquarters, but would be necessary to bring the workers together for common action nationally. The Indus-

trial Union would then do business direct with the general office, distributing supplies to supply stations and job branches, and receiving the finance and paying its debts. A solid front would be forming like an army division, but under no circumstances should that division go to battle before enough recruits have made its strength almost impregnable. Never let the enemy choose the battle ground, especially while we are still weak.

### Bureau of Industry

The General Headquarters of the Industrial Workers, organized into their respective industrial unions, now becomes the center of the whole working class as far as their economic interests are concerned. It is a central active bureau of industry. Each year a conference is held and officials elected. The most important executive of all is brought into being thru a ballot of the membership—the General Executive Board.

Under the jurisdiction of the G. E. B. comes the General Office, with all its subsidiaries, such as the publishing house, etc. They also supervise all unorganized fields where no industrial union exists to take care of it. They assist weak industrial unions, which come under their care because of not having attained a membership large enough to get a charter. This does not mean the G. E. B. would be the dictators to a newly formed union, but would work in conjunction with the rank and file in districts where job branches exist. Under no circumstances would the G. E. B., or the Industrial Union executives, operate contrary to the wishes of the membership of a district, providing they were not violating the principles laid down in the general constitution. Always the job branches, through their central branch councils, would decide who would be the organizer. The general office would finance this organizer until the district had sufficient funds in general headquarters to pay their own way.

### Regional Council

To organize industrially is not enough for a revolutionary industrial organization to accomplish. There are other interests, which are communal in character. It is the working class community that will benefit by class-consciousness; not only the industrial part, but the mothers of the rising generation—the **producers of the producers—producers par excellence.** Therefore, on regional or territorial lines, we must form a city central council.

The City Central Council is therefore made up of delegates from the job branches, augmented by allowing membership to the wives of the fellow workers, providing they agree with the principles of the organization. This ought to be done, as a mother and companion's interests are bound up with the conditions of her husband's, and vice versa.

### Social Center

This city central council would carry on propaganda meetings and finance itself thereby. This would relieve the industrial units from direct participation, which would only be connected by their delegate on the City Central Council. This would allow the industrial units to put in all their energies organizing the workers on the jobs. The council will also be the **Social Center,** where all the units in the industrial arena can find an outlet for their talents; a study could be maintained with a scientific labor library, economic classes and industrial history classes held, concerts and dances, giving an outlet for the musicians and singers; social dramas would be staged for those with artistic tendencies, and a multitude of things done in this direction.

The greatest inspiration of sincerity would be injected into the members of the City Central Council by the recognition that they are participating in a social council, which may be the council that will care for the community interests when capitalism is abolished. A beginning can be made into this work by organizing a system of food stations, also milk stations for the babies and the sick, to be brought into existence during real strikes. They would also during strikes set up a vigilance council to see that no acts of violence or vandalism were committed, and if any such acts were committed, to be in a position to place the responsibility. This may be the nucleus of a functioning body for the future—**a Protective Council.**

### General Defense Council

Attached to the general office is the General Defense Council, which could be made up of the G. E. B. members, and those actively engaged in the responsible positions within accessible distance to the meeting place. A secretary-treasurer would be appointed through the committee. The office is a transitionary one, for, as soon as we gain **power in industry** the masters of bread who now are so urgent in their demands for blood and prison bars would then have to meet our representatives and would be forced to look at a condition unfavorable to themselves—the **withdrawal of our Labor Power** —which would solve the defense question.

There are several important items that come under the control of this transient office, and as long as we are forced into the capitalist courts—their battle ground—we must have funds to defend our members who choose to take legal defense. The raising of these funds, therefore, comes under control of the defense council. Under the direct charge of this council comes the hiring of all the legal talent necessary for adequate defense. It will be the duty of the council to observe closely all cases that are brought to their attention, and to decide whether the victim's case is an organization matter. None but those arrested for doing organization work, or for being a member of the Union should receive defense. We should, however, always keep in mind the tactics pursued by the masters and not allow their camouflage to deter defense of a sincere fellow worker.

### Defense Publicity and Relief

Publicity is a part of the general defense councils' work. They should, through the secretary, get out publicity matter, nationally and internationally, and show the world how capitalism—**the white terror**—

operates to our detriment. Also, the speakers for the defense are controlled by the council, who will devote their attention to the injustices of the capitalist class—imprisoning or killing our members.

Another important item is the caring for the wives and families of those in the dungeons. The assistance of those needing relief should be in proportion to their obligations and necessity for relief; sickness, number in a family and any reasonable obligation; but, in no case, should a self-sustaining person receive assistance. We must, however, avoid driving our dependents to the brink of injurious poverty. We should look upon the sons and daughters of our imprisoned comrades, at least, as an intelligent farmer looks upon his pure-bred stock—perpetuation of the class-conscious — which will assume some responsibility in the future.

### Industrial Departments

The Industrial Departments have been omitted from this chart because of the desire to avoid confusion by extra complications. All that is necessary is to show that which is absolutely necessary today. The industrial departments may be a factor in the future, as there are many related industries which could not run on any anarchical scheme. For example, the tanneries and shoe factories, iron ore mining and the steel mills, and a number of other industries would be found closely related, if we had time and space to go into them. However, this is a matter for the future, as related to our immediate needs for organizing with efficient machinery under capitalism. As we develop our union, probably a need will arise for departments. This need is not here now; so let us deal with the immediate.

### A Real International

With a program such as this being put into a tangible form of unionism in every country, we are reorganizing society to carry on production in a **Free Society.** The Workers' International is in the embryo stage. At the present time messages are received daily from all parts of the globe of a shifting of the industrial scenery. The masters of gold have left the world the ruins of that of which they have always been the beneficiaries; they refuse in all cases to give assistance unless they may still continue to exploit. Their war did this—their greed for gold. The hope of the world's workers lies in their ability to organize this prostrate world.

Great hope and sincerity is shown now, for there are the great revolutionary syndicalist movements in Norway, Sweden, Denmark, Holland, Italy, Spain, France, Portugal and other small countries; there are the revolutionary unions in Germany with civil war reigning; also, the workers of Austria and Hungary, making desperate plans to recuperate since the allied white terror has been introduced; the workers of the South American countries have endorsed the I. W. W. and become a part of the I. W. W. in Chile; the One Big Union movement to our north in Canada, and in Australia, due chiefly to the influence of the I. W. W. propaganda; and, the Shop Stewards' and Workers' Committees movement of Great Britain has voted in conference nationally to link up with the I. W. W. Our Russian fellows have sent out a call. Shall we answer and form an Industrial International?—International Solidarity of Labor—yes, a thousand times yes ! ! !

### A Social Institution

This edifice of human affairs is a revolutionary one, because its very structure, outlined by the chart, leads through all the avenues of industry. for taking care of the industrial and communal life, when capitalism shall have ceased to exist. It is rank and file; that will give them a lever to their own emancipation, and, by so doing, insure the future by the avoidance of chaos. Every member of the revolutionary union; every unit of the **Army of Labor,** so organized, will become a steadying factor in the transitory period; it embodies the forces necessary in the creation of food, clothing and shelter—the maintenance of life itself as well as giving an outlet to all esthetic qualities. There is the nucleus of protection, which, if extended nationally, can become the guardian of the workers occupied in peaceful production, which will be absolutely necessary, for, Lo and Behold the brutal outlook of today!

### Constitutional or Capitalist Right?

An attempt has been made by trustified capital to outlaw any organization that challenges its power to own and control industry. This is all done in spite of the principles embodied in the Constitution of the United States, that all one hundred per centers should learn and adhere to. Article One of the first Amendment clearly states that no law should be made **"Abridging the Freedom of Speech, or the Press, or of the right of the People Peaceably to Assemble."** The fourth Amendment protects persons in their homes and renders inviolate the invasion of homes by any who may take it into their heads to invade—they must state specifically in a warrant the "persons or things to be seized"—this the so-called "law enforcers" hardly ever do. That great freedom-loving statesman, Abraham Lincoln, speaking of the people of America on March 4th, 1861, said, "Whenever they shall grow weary of the existing government they can exercise their constitutional right of amendment, or their **revolutionary right to dismember or overthrow it."** This is a part of the Declaration of Independence.

### Violence and Chaos?

We propose to make the changes according to the above well-defined principles—by peacefully organizing the workers and the jobs. We have a legal right to do this. Judge Landis said in the great Chicago trial we had a right to revolution, "providing we could put it over." Whether the change will be by violence is a matter entirely in the hands of the capitalist class. They are committing violence on every hand! We want no violence and no chaos! The Constitution provides for these changes, and facilities to bring it about, if the Constitution is inviolate. We do not bother about Con-

gress, for it expresses the economic interests of those in control. It will make laws to prevent our representatives getting there; so we must organize to control economically and choose our own institution of political expression—this will be done.

### The Russian Conquerors

The inspiring devotion of our Russian fellow workers to their revolution has given an example to the world's workers. The greatest statesman of the day—Lloyd George, says, "You cannot crush Bolshevism by the sword." This is an admission of defeat by the physical force advocates amongst the international gang of thieves. The same is admitted by Italian statesmen, with an added rider by the British premier that, "the Bolshevist Army is the largest and best disciplined army in Europe." All this with practically no organization on the industrial field when the collapse came—when the workers found th eruins of capitalism's great war at their feet. The Russian Proletariat was forced into the building of the new society with chaos reigning on every hand. Yet they have succeeded marvelously. We must learn a lesson from them. If they have succeeded against a world of vengeance in spite of the apathy of the labor movement of the world, how much quicker could they have succeeded with a scientific industrial structure and a trained industrial army? Let us learn our lessons from the past and never repeat a failure.

NOTE—In this article a statement is made that the writer does not want to claim he alone is responsible for this work. Therefore, he names Roy Brown, with whom he was cellmates while incarcerated in Leavenworth Penitentiary, as one whom he accredits with having a great deal of knowledge along the lines indicated in this article.

# A. F. of L. and I. W. W. — The Difference

By GEORGE SPEED.

The form, methods and tactics of the A. F. of L. differ vastly from that of the I. W. W.

The former is run, you might say without any stretch of the imagination, absolutely by officialdom, the latter by the membership.

The one is simply a dues-paying machine. The participation of the membership in the union's affairs is only perfunctory, and is permitted only so as to give a semblance of democracy. Officials endorse strikes of these unions, or turn them down, as they see fit. As an instance let us mention the pressmen's and the longshoremen's strikes in New York, where the officials of both unions acted as industrial policemen for their respective employers. Major Berry of the Typographical union had advertisements for both union and non-unionmen to take the place of striking pressmen. Such acts of treachery would not be tolerated in the I. W. W. for 24 hours. The pressmen put up a hard and gallant struggle but were defeated by their own paid officials.

When a union allows itself to be used in such a manner it is as much to blame as their officials, or rather more. By their indifference and lack of interest they are shifting the responsibility for the policy of the union on their officials. Carrying a card and holding a job is their whole concern. They say 'Let George do it.' George does it, to their undoing, as many of the members of the A. F. of L. are finding out to their sorrow.

They placed their officials on a pedestal, generous to a fault in giving them a salary, a salary that is very much beyond what they could earn in their respective callings. The official knows what the grind and the muck of the factory is, and he has no intention of going back on the job, so he builds up a machine to secure himself and his kind. Feeling secure in his position he swells up with self-importance, and his happiest moments are when he can shake hands with the boss and contract his union out for a two or three year contract.

These contracts are null and void. Either party to them can violate them with impunity. Having power, no contract is needed to enforce the demands. If you are without power your helpless officials will insist that you live up to the contract. The contract deadens the activity of the members and is harmful in many ways. It causes unions in the same industry to scab upon one another, preventing the solidarity that is so necessary for labor.

The I. W. W. organizes workers in their respective industries. When industries are fully organized industrial departments are formed. These departments united together form the One Big Union of Workers. The officials are only the recording clerks of these respective unions. All power is with the membership. Each industrial union determines itself the advisability of striking, and no official can deny it the right, and will receive the hearty support of its industry, as well as of all industries if necessary, making an injury to one the concern of all, and creating that spirit of solidarity so much required on the part of the working class. The I. W. W. impresses its membership with the necessity on their part of studying, of thinking, of weighing all propositions affecting the interests of the working class, and of feeling that the responsibility for the success of the organization rests on them; to make of them union men and not merely card men; to fit them to control and run industry when capitalism shall have passed away.

This is the mission of the I. W. W. among you workers.

Which will you have? An organization such as the A. F. of L. which accepts capitalism as a finality, or the I. W. W. whose mission is to establish an industrial democracy, in which all workers shall receive the full social value of their service to society.

The labor problem is up for solution. It is the problem of the hour. Its solution is imperative. Upon it depends the life of civilization. Are you with us? If so, join the I. W. W. at once, and don't wait till 'George does it.'

He who will be free must himself strike the blow. Join and be a man.

All power to the working class.

# The gruesome story of American terrorism

## INSTALLMENT NO. 4.

**In three previous installments we have enumerated a total of 1203 cases of I. W. W. members arrested and brought to justice or sentenced of late years. In this number we add 124 new cases, making the total number reported to-date 1327 cases. Keep on sending in missing reports, so as to make the list as complete as possible.**

### Criminal Syndicalism Cases in California

Oakland: **James McHugo,** convicted, 1 to 14 years; **Louis Cavelli,** pending, out on bail; **A. N. Austin, C. Trainer, Mrs. A. B. Cairns, James Cairns,** dismissed; **Axel Nelson,** pending, out on bail; **Masshel, Staats, Graham,** pending, O. R.; **Diaz, Rickwell,** dismissed.

San Francisco: **James P. Malley,** convicted, 1 to 14 years; **Mrs. A. K. Malley, William Burnes, T. McDermott,** pending, out on bail; **E. Levine,** acquitted.

Eureka: **Charles Leese, J. Golden, G. Williams,** convicted, 1 to 14 years; **J. Glickson,** dismissed.

Stockton: **C. F. Bentley, Thomas Hooker, R. V. Lewis,** convicted, 1 to 14 years; **Leo Ellis,** on trial. **L. H. Brown,** case pending, in county jail; **G. Roberts, S. Simons, N. L. Savoy, A. Shoemaker, R. H. Brehmer, J. M. Miller, Martin Powell,** pending, O. R.; **George Macaire, Wm. Cashman, J. Swanson, P. Jacobson, Kelley, F. Tillman, A. Shade,** dismissed; **G. Shannon, John Murry, J. Micken, C. Newman, G. Fernandes,** pending, O. R.

(Total 46 cases.)

### California Cases Pending

Cases now pending are as follows: Stockton—The next case in Stockton will come up for trial June 8th and twelve more cases pending.

Sacramento—Case will start May 3d.

Los Angeles—Fourteen more cases pending. William Stein was found guilty.

San Francisco—Two cases still pending. Case of Thomas McDermott dismissed.

Oakland—Fifteen cases pending.

Ukiah—Two more arrests; full particulars not at hand at present writing.

The appeals of the nine Fellow Workers will come up in the near future. If you are going to help defend these cases send your donation to the California District Defense Committee, Room 219 Russ Bldg., San Francisco, Calif. Make all checks and money orders payable to Louis H. Brown. We remain, Yours for industrial freedom,

CALIFORNIA DIST. DEFENSE COMITTEE.

Per Louis H. Brown, Sec.-Treas.

(Total 46 cases.)

**Some of the 90 Conscientious Objectors at Fort Douglas, Utah. Not exactly bad looking fellows—are they?**

Some of the I. W. W. men at Fort Douglas, Utah. (Left to right, top: Burmeister, Stangeland, Dempsey, Wilson, Gergatz. Bottom: Cage, Sandberg, La Casale, Maki.)

Some internees at Fort Douglas, Utah. Cooks and helpers at Barracks No. 12.

**Partial List of I. W. W. Deportees**

Sent from Seattle to Ellis Island for deportation. Left Seattle Feb. 6, 1919; arrived at Ellis Island Feb. 11, 1919.

"THE RED SPECIAL"

Charles Barnett, John Morgan, Tom Rimmer, William Fields, Herbert Jackson, John Sheenan, E. Kerty, R. Maskelunes, John Berg, Alex Kisil, Sol Erlich, Joe Martin, M. Slusky, McGregor Ross, John Lund, C. L. Johnson Hjalmar Holm, Sam Dixon, Wm. Longfors, Olaf Finnestad, Martin De Wal, Edwin Flogus, Axel Hendrickson, John Levis, E. McDonald, Sam Nelson, Arthur Smith, Aug. Bostrom, Frank Mahalik, James Osborne, Magnus Otterholm, Louis Mische, Gust Lipkin, Fritz Holm, Pete Merta, Mrs. Merta, Charles Jackson, Gustav Mocha, Donald McPherson.

(Total 39 cases.)

**Released from Ellis Island**

March 17—John Berg, Joe Martin, Edwin Flogus, McGregor Ross, C. L. Johnson, Slusky, Arthur Smith, John Levis, Axel Hendrickson. March 23—Gust Lipkin. March 24—Ephraim Kierty. April 11—Sam Nelson. April 21—Sol Erlich. April 22—John Morgan, Charles Jackson, William Longfors, Morgan, Charles Jackson, William Longors, Man-Magnus Otterholm.

Arrived at Ellis Island from Seattle, Portland and other points: March 27—Roy Sisters, Margaret Roy, Janet Roy; John Jacobson, D. McPherson Fraser.

Sailed for Liverpool from Ellis Island, February 27: Tom Rimmer, Herbert Jackson, William Fields, John Sheenan. March 29 — Donald McPherson Fraser.

Sailed for Sweden, April 3—Robert Johnson.

Sailed for Norway March 1—Olaf Finnestad.

---

**Defendants in the Duluth Syndicalist Cases**

January 20, 1920, in the city of Duluth, Minn., the following I. W. W. members were arrested: Frank E. Biltonen, John Ahlborg, George Humon, Topias Kekkonen, John Salo; and A. A. Toivonen was arrested at Minneapolis and brought to Duluth. All the defendants were indicted under the state syndicalist law and with the above mentioned individuals the Workers' Socialist Publishing Co., which publishes the newspaper "Industrialisti", was indicted. Three different nidictment were turned in against the said corporation and Topias Kekkonen. Two indictments were turned in against Frank Biltonen and John Ahlborg and one indictment against George Humon, John Salo and A. A. Toivonen.

On the first indictment, for the article published in the paper under the date August 13th, the corporation and the individuals John Salo, A. A. Toivonen and Topias Kekkonen were on trial, the said trial commencing on March 23 last and closing on March 26th. All the defendants were found guilty as charged in the indictment. At the beginning of the trial the case against George Humon was dismissed on account of no connection with the paper. So far sentences are not imposed upon any of the defendants found guilty.

The two indictments are still pending against the corporation and against John Ahlborg, Frank Biltonen and Topias Kekkonen, and when they will come up to trial has not yet been stated.

All those found guilty are at liberty on two thousand dollars bail and those whose cases are pending are out on bail of one thousand dollars.

---

**FORT DOUGLAS PRISONERS RELEASED**

Just in time to be too late for the May issue we had the pleasure of shaking hands with Fellow Worker J. pleasure of shaking hands with Fellow Worker J. Bauer, who has spent 2½ years in the Fort Douglas, Utah, internment camp, as an alien anemy. He states that all the I. W. W. men are now released from that prison camp after internment for 2½ to 3 years. Some had already been "repatriated." The prisoners are released on a forced parole. Unless they signed the parole papers (which forbids them to join radical organizations), they were deprived of their transportation and subsistence money and other consideration shown "alien enemies." Only low down prigs of the Palmer type could have invented such a parole.

The number of I. W. W. men imprisoned in Fort Douglas were about 70. The names of 48 of these appear in our December issue.

**Alfredo Buzzi, internee at Fort Douglas, Utah, snapped while reading the O. B. U. Monthly, while magpie has voluntarily joined him in prison and sits on his knee.**

# The conscience of a dum-dum bullet

By QUASIMODO VON BELVEDERE

(Copyrighted 1919, by Vincenc Noga)

CHAPTER VI.

**Wherein Matys Voices his Doubt that Seeds of Patriotism Planted in a Musty Sub-basement will Ever Germinate.**

Since the time I discarded my proletarian habit and returned to society I have been approached by several of my colleagues who attempted to interest me in an enterprise of Americanizing the alien and promoting patriotism among the laboring classes. I ignored the subject because I could not see what difference it made to us whether the workingmen understood our constitution or not; in fact, I believed that we can make them serve our interests better if they remain ignorant of the text of our fundamental state papers, as well as our history. There are very few laws in our constitution of which I approve. Moreover, George Washington, and especially Abraham Lincoln, made many utterances which I consider as utterly un-American. Only a few days ago Mr. Morgan sent me two clippings from the Red press, in both of which the constitution was profusely quoted. One of the clippings was an article from the ONE BIG UNION MONTHLY, published by the I. W. W.'s in Chicago; and the other was an editorial from the "LIBERATOR" a magazine published by some Soviet maniacs in New York. Now, if the constitution is good for them, then it is not good for us. Publications controlled by me never quote any of the red clauses of the constitution. And as to Abe Lincoln, we celebrate him for the only reason that he is dead. I never worried my head over the patriotism of the masses until after my last discussion with Matys, in which he brought my attention to the fact that the wars which we have occasionally to wage upon other nations, cannot be conducted successfully with an army devoid of patriotic sentiments. He also pointed out the sad circumstance that our industrial conquests, achieved by more or less harsh tactics as they are, tend to weaken, or totally extinguish the patriotism of a large number of men. Considering all the above circumstances, it becomes at once obvious that, inasmuch as in our conflicts with labor some of the loftiest patriotic sentiments have to be stunned, pulled to the ground and trampled down, that patriotism must be artificially fostered to replenish the waste. Serious reflection upon the above facts led me to the conclusion that the brand of patriotism which my colleagues advocated, and which they considered beneficial to us, must have been inspired by the exigencies of business which, in its character, may be as foreign to the patriotism of the founders of our Republic as the Christianity of today compared with the character of Christ. I was wondering now how such puerile thoughts could have originated in my sensible head that my fellow capitalists desired to spread among the rabble the text of the constitution, or the doctrines of Lincoln, or other hot-heads of the past. I recollected that at the "CHICAGO CLEARING HOUSE" session Mr. Julius Rosenwald introduced to me one of the executives of Rotschield & Co., Mr. Ezekiel Veilchenduft as one of the apostles of the practical Americanization movement, and that Mr. Veilchenduft invited me to visit his "Loyalty School" held every workday at the sub-basement of their State Street store. I telephoned to him and inquired for particulars, and when he repeated his invitation, I consented to visit his show. We set the date for the following morning.

The idea occured to me to take Matys with me; because day from day, I was becoming more dependent upon his opinions. In case the Loyalty curriculum was defective, I knew that he was capable to discern its weak points; and he would indicate them cheerfully. I summoned him and laid the matter before him.

"What do you think of the scheme," I asked him.

"Have little faith in it".

"Why?"

"I presume that, if Mr. Veilchenduft's loyalty seed had any value, he would not plant it in a sub-basement."

"That's a premature criticism."

"It's merely a suspicion. However, I am much interested, and I would like to ask Mr. Veilchenduft a question or two upon this modern subject."

"I am offering you the opportunity."

* * *

At ten o'clock the following morning Matys and myself called upon Mr. Veilchenduft at his office at the store, and I introduced Matys as my friend and a literary man. Mr. Veilchenduft was excessively polite to both of us, he behaved more like a valet than a gentleman. He took us to the elevator and we descended to the basement, where the mechanical service ended; from thence we descended to the sub-basement by a stairway. Before we reached the bottom a musty smell assailed my nostrils; and I was beginning to realize once more that one cannot learn much without incurring discomforts.

The loyalty meeting was held in the shipping room, and was already in progress when we arrived; the assemblage was just saying the Lord's prayer. After the prayer a thinhaired girl with a sickly face sat to the piano, a stern-featured old man seized a fiddle, and the pair set forth to play "My Country" with commendable alacrity; the crowd arose and sang the hymn, their voices were permeated with so much fervor and conviction as if the country really belonged to them. I looked at Matys, but he seemed to pay no attention to the singing, he was studying a wall which was decorated with two Old Glories and the pictures of President Wilson, Abra-

ham Lincoln, J. J. Pershing, Foch and Kitchener of Khartoum; Veilchenduft was singing, his behavior harmonized with the spirit of the crowd so perfectly as to make you think that he was in his own element. After the hymn, the impresario of the loyalty show called upon Mr. Gans to deliver a speech. Mr. Gans was a handsome Jew about fourty years of age. He related the history of his own life; how he was born and raised in dire indigence somewhere in Russia. How he emigrated to England and reached Liverpool penniless. His life was a continuous tragedy until some ten years ago, when his fate drifted it into the merciful hands of Rotschield & Co. With Rotschield & Co. he found a steady job; by and by he fell in love and got married. He started at $9 a week and by now had worked himself up to a position that pays $20. Having thus arrived at the climax of his story, he bowed to the audience and retired to his seat upon one of the benches.

A short fat Negro was summoned next to give a piano solo. He rattled off a lively Fox Trot, and gave the Sweet Home for an encore. The applause he received showed that the crowd had a great appreciation of music.

Following the Negro, Mr. Neuman, the head of the shipping department, made a speech. He appealed for a general co-operation and increased production; urged the employees to be on time, and scored the dishonorable practice of one employe punching the card for another, who happens to be late. His speech was very sensible.

The Star Spangled Banner followed—and finally the oath of loyalty was taken. I will give here the form of the pledge because I think that every child should know it: "I pledge allegiance to my flag and the Republic for which it stands. One nation indivisible with liberty and justice for all." I also found a beautiful prayer in the hymn-book that was handed to me by the impresario, viz: "O allmighty God, Continue Thy gracious protection to those who have gone from among us to battle for the freedom of mankind" etc. This prayer is of no use now, but it shall come handy again in our future wars.

"All this is very nice," I said to Veilchenduft, "but this foul air is suffocating me; let's get out of here."

Mr. Veilchenduft proposed that we go to his office, to which Matys and myself agreed. However, Matys desired to make a closer acquaintance with Mr. Gans, so he would not go with us immediately but promised to join us later. Mr. Gans was coming our way, which made us linger for a while. As he was passing us Matys approached him courteously, shook hands with him and congratulated him upon his fine speech as we moved to go.

I thought well of the loyalty training, but I did not care to give Mr. Veilchenduft my opinion until I had consulted Matys; so when we arrived at his office I engaged him in a discussion upon the League of Nations. Mr. Veilchenduft's opinions upon the subject were very crude. He soon admitted that international affairs were beyond the limits of his intellect, that he left their adjustment to greater minds. Nevertheless he professed an explicit faith in the covenant. "The President had at his command the advice af the foremost financiers of the country," he said, "I am satisfied that they saw to it that the covenant embodied substantial benefits for American business."

At this juncture Matys came in and in his presence I thought it safe to touch upon the loyalty propaganda. "What do you think of the whole affair?" I asked him as he took a seat.

"Like all things human, the system is imperfect."

"I appreciate criticism more than flattery," said Mr. Veilchenduft, "what fault do you find with it?"

"The President is appealing to every patriot to increase production, and here you withdraw the workers from industry for nearly an hour every day and have them sing—and what a singing it is; their lungs must be full of mushrooms."

"Oh, the production does not suffer by this," said Veilchenduft, "we make them work an extra hour in the evening."

"Oh, that's different," said Matys, "but, would it not be more patriotic to turn your slaves out into the street for these fourty of fifty minutes and give them a chance to breathe some fresh air?"

Mr. Veichenduft looked upon Matys thoroughly puzzled. "My dear sir," he said, "that's Bolshevism what you are preaching. If you give the slaves too much taste of fresh air they would want to remain in fresh air all the time. This would ruin our business."

The discussion was becoming tedious and I was becoming hungry, so we left Mr. Veilchenduft, and Matys and myself went to the Congress Hotel to lunch. During the course of the meal I asked Matys what kept him at the sub-basement for half an hour after Veilchenduft and myself left him.

"I wanted to see more of the inferno, and particularly the place where Mr. Gans performed his important task. His department consists of a room about 30 ft. long and 15 feet wide; it adjoins a lavatory. A counter runs through the whole room behind which there are two white men and four Negro wenches packing crockery and chinaware. The stench there is much more offensive than at the shipping room, because there the merchandise is being packed in manure. Of course, officially the material is called straw; however, its filthy appearance and its nasty smell readily conveyed to my imagination the idea that several generation of pigs had been bred and nursed in that straw before the farmer decided to part with it for the price offered by Rotschield & Co."

"The conditions cannot be quite as bad as you present them. Mr. Veilchenduft may be capable of neglecting the interest of his employees, but he is too clever to drive away his customers by sending them merchandise packed in unclean material."

"There you are mistaken. These Jews are catering to the most indigent element. 'Bargain' is Mr. Veilchenduft's motto;—give 'em a bargain and they'll come back. If you want to convince your-

self I will buy there a couple of cheap plates, have them delivered, and then I will open the package in your presence."

"No, thank you, I would not want the delivery wagon of Rotschield's stop in front of my house."

"I did not finish my story. The manure is surrounding the packers and there is always several inches of the compost under their feet."

"Who is to blame for that? Suppose you were one of the packers, what would prevent you from shoveling the manure aside and keep it from under you feet?"

"There is no room to shovel it away; the handy man, whose business is to supply the packers with the compost, brings the stuff in basketfulls and dumps it over the counter until it reaches up to their necks."

"When the crew goes home, do you think the straw is left upon the floor until the following day?"

"Of course it is. This is against the rules of the Fire Department, but rich firms do not have to obey the law. The whole place is infested with roaches, which breed in the accumulated filth. Hog cotes are being cleaned once in a while but Rotschield's packing rooms are never cleaned. To work men under such health-killing conditions, and at the same time, preaching to them patriotism is the limit of moral corruption."

"You did not tell me yet what Mr. Gans is doing there."

"Mr. Gans is a checker. He brings in the baskets with the merchandise, re-counts the items and places them on the counter. His task is arduous. It's perhaps his consciousness of the confidence which the firm reposes in him that renders his work easy. However, I detected a flaw in his character; he may yet become a Red."

(To be continued.)

The next instalment will deal with the physician's report about Woodrow Wilson's Brain being loose; and how Herr von Belvedere prevented the report from circulating among the public.

## CHAPTER VII

**How the doctors looked into President Wilson's head while Secretary Tumulty was asleep; and the appalling disorder they beheld there.**

While the philosophical discussion between Matys and myself was peacefully proceeding at the Congress Hotel dining room our attention became attracted by a great tumult in the street. Several newsboys were shrieking at the top of their damaged voices: "PRESIDENT WILSON"—— something awful about the president, but I could understand nothing beyond the name. The horrible idea occurred to me that he might have accepted the amendment to the X article of the league of nations; or that Senator Lodge, or perhaps Hiram Johnson, threw a bomb at him. I sent out Matys to find exactly what the commotion was about. Matys was almost breathless with excitement as he returned a few minutes later with a newspaper in his hand. **"The president is insane,"** he stammered, and he laid before me the paper containing the following headline in a four-inch type:

### PRESIDENT'S ILLNESS SERIOUS LESION OF THE BRAIN, DOCTORS SAY

Never in my life did I get in such a rage as this piece of news provoked in me. "What incredible idiots these doctors and the editors are," I said to Matys after I somewhat calmed. "Of course, the president's brain is loose, and always was so. I knew that when he was presidential candidate for the first time; that was the very reason why I reversed by policy and contributed to the Democratic campaign twice as much as I did to the Republican. At the bankers' conference in New York when we then arrived unanimously at the opinion that Wilson's mind was weaker and much more plastic than that of T. R. But what's the object of letting the cat out of the bag at this time?"

Matys gazed at me in astonishment. "Do you really mean to say that you supported Wilson in his presidential aspirations despite your knowledge of the cracked condition of his brain? How did you expect him to carry on the business of the country?"

"We never expect the president to conduct the affairs of the country; we do this ourselves. Did we not have Barney Baruch, Julius Rosenwald, Schwab and Redfield helping him? Even in Paris we had our men, pushing our interests to the front. The president devoted most of his time to gambling. He played solitaire for fabulous sums, and, according to his panegyrical biographer, kept an accurate record of his gains and losses. He never kept accurate records of anything else. And yet he became a great president. In popularity he reached a point never attained by a mental weakling before. This attests to the omnipotence of our press."

"Your political machinery is still in good order," said Matys; "you still have the power to elect the president, as well as any other official. I freely concede that you can take any half-wit from an asylum for the feeble-minded and make of him a popular statesman. The process is simple: After you have your man selected you place him in the hands of a skillful politician to teach him several absolutely meaningless phrases. Next, you hire a circus man, who will give him lessons in gesticulations—train him like a monkey. Then you spend a couple of million dollars in having him exhibited thruout the whole country and have him to demonstrate his dignified motions and repeat his phrases like a parrot. Then, if you place a sufficient number of your agents at the polls, well supplied with $1 bills and 'visum repertums' for Scotch whiskey, your victory shall be an easy one (because the American people are intelligent, you know). But what are you going to do with victory? The worker will present to you his claims, **irrational more than ever,** and he will use his **industrial** power to enforce them—you can fool them no more. Governmental cabinets have of late become groups of mere puppets. The seat of omnipotence is now in the process of transition from capitalism and its political

fakirs into the hands of labor. The One Big Union idea is the one big menace to your rule, and you haven't done anything as yet to check its phenomenal growth. There is a big job still ahead of you."

Maybe the warning Matys was giving me was good, but I had no time to analyze it or act upon it; my mind was preoccupied with the administration scandal that was being so thoughtlessly advertised in the press. I realized that if we are to retain the business advantages and benefits derived from President Wilson's administration, the news concerning the interior of his head must be promptly suppressed. Hence, I dismissed Matys from my company, went to the hotel lobby and dispatched a code message to a lawyer who represented my interests in the city of New York. I instructed him to see immediately Mr. William Randolph Bristlebane and offer him a sum up to $200,000 as a recompense for keeping the reports concerning the president's mental state out of his press.

The following morning I went to New York in person. There I called into conference seven of the leading financiers. When I explained the harmful possibilities of exhibiting the mental shortcomings of our chief executive they all agreed to make a liberal contribution to the cause—thus the day was saved.

## CHAPTER VIII

### How the Coal Diggers Spoiled My Winter's Vacation

The steel slaves, who were on strike for several weeks already, have been almost subdued. Judge Garcia and General Wood assure me that they have the situation well under control, that my bastile was doing effective service and our victory was already in sight. So I intended to go for a couple of months to Palm Beach for a rest. No sooner did I give my orders to Okakura to pack my trunks for the contemplated vacation than the coal miners came out with fantastic demands and threw down their tools. The situation appeared very dark, because the fuel supply at hand was hardly sufficient for a month. Fortunately the law was on our side; President Wilson and Mr. Palmer soon discovered that the war was not over yet. Strike was an act of treason, giving aid and comfort to the Kaiser at his wood pile. That was an admirable idea, sufficient in itself to prove that at least 2 per cent of the cells in the president's brain were still alive. While the government's machinery was set in motion in behalf of our cause—to suppress a criminal strike, a funny incident happened which is worth noting here. Mr. McAdoo made a squeal about my 2000 per cent profit during the war. Of course it is a trifle more than he made on the New York tunnel, it is even more than the government realized on the railroads under his management; but there are no limits to profits a shrewd business man can make. Obviously, McAdoo wants to run for president on the red ticket while Debs is serving his penitentiary term.

Well, we soon succeeded in having the strike called off, but the production of coal was not resumed and the situation was assuming an alarming aspect. I was becoming nervous because the officials at Washington would not guarantee that the government would succeed in breaking the strike, illegal though it was. The officials of the A. F. of L., while sympathizing with us as usual, shared the consternation of the government and admitted that they lost control of the rank and file of the coal diggers, that they could not get them back to work without offering them substantial inducements. I was willing to grant them a 20 per cent increase, providing the government would allow us to raise the coal about 40 per cent. To this Dr. Garfield objected. Of course, the government would not break its time-honored custom of allowing us anything we wanted, but he feared that the Reds might interpret this as an attempt at profiteering and cause new complications. Therefore, with the popularity of the fourteen points in our minds, we decided to set the wage increase at 14 per cent and postpone for a few weeks the doubling of the price of coal. It was also understood that the president would make generous promises to the men. Promises of the president will make a good impression, and they will not be binding upon us. Under this arrangement Dr. Garfield thought he could easily induce the strikers to resume work.

Although the outlook for resuming the operation of the mines was fair, the demonstration of the coal diggers' power alarmed me. I could not help but realize that our power was slipping away from us. Of what use shall it be to us to control the government, or dictate laws favorable to our interests, if the working class form the habit of disregarding orders of the authorities, defy the laws and ridicule injunction? because, should the miners resume work, as is expected, the credit will be due to the cunning and chicanery of the president, rather than to their respect for the law. The proper thing for the business man and the government to do now is to keep the workers from becoming conscious of their strength.

Before a week elapsed it became apparent that Dr. Garfield's proposal, and, especially the president's generous promises, were sending the miners back to work. I was anxious to know what Matys thought of the situation now, because when the strike broke out he predicted that the miners would win. I summoned him to the library, where we usually held our discussions upon sociological and economic problems.

I was reading the Chicago Daily News when Matys came in. "Are you following the movements of the strike?" I asked him, as he accommodated himself in the chair on the opposite side of the table.

"Not now any more, the strike is lost."

"Lost for whom?"

"The miners, of course," he replied with disgust. These fools return to work with no more tangible an inducement before them than the word of the president, now, when they needed to wait only three or four days more and they would get everything they wanted: six-hour day, five-day week, and

they could dictate almost any wages they pleased."

"But the settlement we are offering them is fair."

Matys said nothing, but laughed; so I read to him the two ensuing paragraphs of an editorial in the Daily News:

**"The Crisis and the Issue."**

"Chicago now faces a grave condition instead of a mere probability. The coal shortage is acute. Drastic measures of conservation have had to be adopted. More are to follow. Railroad service has been curtailed; so-called non-essential industries—which are essential to those who earn their living in those industries—are deprived of coal. The business day has been reduced to six and a half hours. It is to be made still shorter next week. The daily loss to labor and to those who conduct business enterprises is tremendous.

"Where does the responsibility for all this rest? At the present time it rests with the leaders of the organized miners. The national cabinet and the fuel administration fumbled the issue at first, but the final proposal made by Dr. Garfield and approved on its merits by the entire cabinet was eminently fair, reasonable and sound. It offered the miners full justice, if not immediately, certainly in the near future. It granted them an increase in wages to cover the exact ascertained increase in the cost of living. It provided for a commission to study and remove all other grievances and maladjustments in the industry."

"You are right," he said. "The whole administration agrees with you and Dr. Garfield that your proposal is eminently fair and sound, that it offered the miners full justice, if not immediately, certainly in the near future, and offered them an increase in wages to cover the exact ascertained increase in the cost of living. It provided for a commission (this is very important) to study and remove all other grievances, etc., etc., etc.

"The government offers full justice, but not immediately; of course not—there is now hurry with justice—but, why is it, sir, that if the government takes a notion to do injustice or violence to something or somebody, as, for instance, the I. W. W.'s, why is it, sir, that the brutality is committed immediately?

"Why is it that you offer the slaves an increase in wages to cover the exact ascertained increase in their cost of living?? Suppose the 80,000 toilers who are slaving for you in your coal mines, steel mills, your steamships and a score of other fields, should organize into one big union and appoint a commission to ascertain the exact amount of profits you need, to pay for your three meals a day, the upkeep of your wardrobe, etc., with an occasional dime for movies, and an occasional two bits for castor oil or epsom salts"—

"That's enough," I cried, interrupting him. "You are an anarchist; it's talk like that that's undermining the discipline of labor and destroying the fabric of the government."

Matys apologized. He admitted that he made an irrational digression from the subject. He also admitted that the offer the government was extending to the miners was generous beyond all precedents—"but," he concluded, "what would you do about it should the miners reject Mr. Garfield's correct figures? You are not dealing with justice; it's power you are confronting. Should you become accosted by a lion in the jungle, you would not stop to argue about justice; more likely you would climb the nearest tree. Superior power recognizes no laws or injunctions of a lesser power. The American proletariat is a lion which is as yet unconscious of its power. But Nicolai Lenin, the archangel of the wage slave, is sounding his mighty trumpet day and night. Well, sir, I predict that, before a year elapses, the American slave will be wide awake—then we shall have a new interpretation of justice, a new code of morality and a new aspect upon the purpose of life."

"The only conclusion I can draw from your talk is that you favor Bolshevism. Your radical proclivities are a puzzle to me, because you are above the proletariat. You wear clean clothes, you work less than six hours per day and less than five days in the week, and perhaps you have a substantial bank account to your credit. Why should you wish to wreck a system which is benevolent to you?"

"Surely, this is an absurd guess you are venturing at my conviction. The fact is that I would do everything in my power to save capitalism if I thought that it could still be saved, because I believe that with your patronage I have the chance to become the president of the United States, or shall you yourself take the job? I would become to you what Kernel House is to President Wilson; I would become the American Rasputin. Unfortunately, the doom of capitalism is sealed. Capital and labor are clinched in a mortal struggle; in my capacity of a philosopher, I foresee the proletariat emerging from the conflict victorious, but there exists no affinity between my prescience and my political sentiments; you may wish your friend to recover and at the same time realize that his case is hopeless; on the other hand, you may wish your rich uncle to die and dream about the adventure you would have with the money that he would leave you, even if all circumstances indicate that his lease upon temporal sojourn has a better standing than yours."

"Do you really believe that the One Big Union dragon shall have its teeth fully developed within a year? ? ? ? "

"Yes, sir, the next summer shall be the hottest in the history of our republic."

I was getting an acute headache, so I dismissed Matys and summoned my physician.

The end of the First Part

EDITOR'S NOTE—Von Belvedere is at present on a yachting excursion in the southern waters. As soon as his nerves recuperate from the strain of his strike worries he will commence to write the second and the most romantic part of his story.

# The Servile Press

By Covington Ami

"When last heard from our old friend Gene Debs, who is to be the Socialist candidate for president, had established campaign headquarters in the Atlanta Penitentiary."—From the New Orleans (La.) Daily States, official organ of the "Democratic" party, national, state and city, April 17, 1920.

Disloyal to humanity and traitors to their class,
They curse the great Altrurians and stone them as they pass.
Too slaved to thrill to liberty, too lost for truth to lure.
To them no soul is sacred and to them no heart is pure.
They earn the wage of helotry—they sell themselves for crusts.
They fight for Mammon's garbage and they pander to his lusts;
Yea! cleaner than these wretches who kill Freedom for their bread,
The ghouls that rob the tombs to sell the bodies of the dead.

As the Chicago Evening Post sees the I. W. W.—and

As the I. W. W. sees the Chicago Evening Post and all the rest of the capitalist press.

# A WORKER'S VIEW

By J. H. L., Card No. 700094

I am still young in years, not yet 32. My physical condition is pretty good, regardless of the long, weary hours of toil that my brain and body have endured while being a useful worker in the industries. My usefulness is a great asset to my employers, as they take the products of my labor, for which they pay me the "going wages," which is just enough to bring me back on the job, for the next day's work.

My mentality is a worker's. I see things with the eyes of a worker. I have always been a worker, since I was able to work, and I never want to be anything but a "worker. There are many kinds of workers in present-day society. Some of them are useful, while some are useless. The useless workers could be entirely eliminated and will be, when the workers' regime will have been established and the system of exploitation of men, women and children for the benefit of those who maintain and carry on this exploitation is abolished. How? you ask. As you read on I will tell you how.

Remember, I see things with the eyes of a worker. In my worker's brain I have conceived of and know how the workers' regime will establish itself. The structure of the workers' society is placed on solid foundations, and as the structure is reared within the shell of the present decaying, crumbling, capitalistic system it bears no earmarks of the old regime of robbery and chaos.

The new society that is being built has these fundamental principles upon which it builds: **Real Freedom** for those who work. The full social product of the labor of those who work. No place for parasites! The right to labor (work) shall never be denied anybody. Many hands makes the task easy. The right to choose the industry in which one is best equipped to work and go through the different departments of the chosen industry, just as you become proficient and ready to go a step higher to the next department, and so on until you have gone on through the industry. In the industries as managed today the workers are held on irksome, monotonous tasks until their motions become almost as automatic as the machines which they operate. There ceases to be a co-ordination of hand and brain. Right here is where the workers' industrial progress comes to a stop. Under the workers' management of the industries these evils will be removed. Your inventiveness will be given free play. In other words, you can and will apply the better ways of doing the task. Your ideals will be applied, and not locked up in archives until some one sees a chance to make "a gold brick" with them, at the expense of the workers.

The machine process, the Machine Age, will be ushered in. Not a single task will be done by man or horse, where a machine can do the work instead. Right now there are plenty of machines ready to do the work, but the want must be backed up by that dollar, so it is at the behest of the moneyed class as to how soon the machine should be applied. Then what would they do with the idle workers which the machine displaces? I say the capitalist class are damming up the "river of progress", and at their cost and peril let it be. The river will flow seaward; despite them it will break down their dams and be free.

Yes, we will usher in the machine age. We workers will operate these machines and produce the means of life in abundance, then use them to round out a healthy, happy, a-few-minutes-work-a-day life.

Our products will not be sold! No! You couldn't buy a pair of shoes with all the money you could carry in a big sack. We won't sell anything, not even our labor-power, which is all we workers ever have to sell. We **use** what we produce. We invite you as a fellow worker to come into industry and work; then you, too, will have the right to the full social product of your labor. The aged and the infirm will be well cared for. Yes, come into industry and do your part for a few minutes each day, while some of the workers are on a vacation, seeing the world and meeting their fellow workers in other climes. When they return from their vacation, why, then it's your turn. Oh, yes—the trains, ships, aeroplanes, autos, etc., are all for use. Get on!

Remember these are just a few of the joys that will come from living in an era of workers' management. The new order will give us economic freedom. No longer will we have to place our labor-power (our bodies, our talents) on the altar of Mammon.

We bring about the above described era? how? Why, by organization! What kind of an organization? Just this: a strictly workers' organization, open for membership to all who work—men, women, kiddies, all races, all creeds, all colors of workers. It embraces all of them and will be embraced by all of them. The plan of unionizing these workers is the **industrial plan.** They can't be organized on the craft trade plan because in the main they have no craft or trade. They are unskilled!

The American Federation of Labor has most of the skilled workers lined up in something like 27,000 different local unions, 27,000 divisions! Are they united or divided? There are approximately 40,000,000 workers in the U. S. A. The A. F. of L., after all these years, has a membership around 5,000,000 (?). Why haven't they organized the other 35,000,000 workers? Did you ever try to break into their "job trust"? They have a closed book system when any members are idle. The high initiation fee will usually block you, and if that don't, why, a few catchy questions in examination will fix you.

The A. F. of L. in the main is filled with "aristocrats of labor," who view their fellow workers from

a point of advantage, so they think. Their vision is so limited, their plans so petty, that they can not see that the machine process is putting them on a level with the unskilled worker, the workers who are so much "below" them! Verify the above statements by an honest survey of the machine process, as it daily takes away the skilled worker's job. The unskilled worker, with the improved tool or machine, can do the job that formerly required the skill of the craftsman. Do I have to mention a few of the machines that displace the tradesman, or will you wake up and see the process going on every day in the industries in which you work? The ever-growing power of the capitalist class has put craft unions in the background when it comes to a struggle on the economic field. They are no longer able to cope with the industrial conditions of today and the craft-union members are clamoring for One Big Union. They are ready for industrial organization and will be compelled to break the bonds of craft unionism and come into the union of their class, i. e., the Industrial Workers of the World. And when industrial unionism is numerically strong enough it will take control of industry and carry on production and distribution, doing away with all the crime, poverty and misery that goes hand in hand with the present-day society.

I said before that I have a worker's mentality and see things with the eyes of a worker, and I say once more that I don't want to be anything else but a worker. Will you join me and work for the greatest movement on earth—Industrial Unionism?

# Deportation

By Covington Ami

Eastward bound to the rising sun
To answer Destiny's call
Outlawed by the powers of greed
Because we dared to sow the seed
Of freedom for one and all.

Eastward we're sailing, sailing toward the sun
Tis a bright light, a great light
It shall disperse the shadows of night
Then we'll know our work's well done.

And the puny efforts of plutes and kings
Can't stay the power of light
And in that land across the sea
For freedom we'll unite.

For the sun will rise and rise in the east
In spite of predatory man or beast
And none will fast while others feast
When the world comes out of the night.

Why do you tremble, Master?
Is it because you fear the light?
Are you not secure in your plunder
When you mumble "Might is right."

Bring the brandy and soda, James
He needs a good stiff drink
He may be a useful worker
When his slaves begin to think.

# Yield Not to the Boss

By Eugene Barnett

Written by one of the Centralia defendants in the Grey's Harbor County Jail, December, 1919

Yield not to the boss, boys, for yielding is a sin;
Each concession that you gain will help another win.
Don't stand for long hours, low wages and disdain;
Join the One Big Union, true freedom attain.

Chorus

Be a fearless rebel, class-conscious, bold and true;
Join the One Big Union; you'll win, boys, if you do.

Don't wait for your freedom until you are dead;
Join the One Big Union and get a card of red.
United we are standing, boys; divided we will fall,
For workers' solidarity means freedom for us all.
(Chorus)

The master class are pirates, boys, who rob us by the law.
They tell us it's the proper thing, but that is much too raw.
But let us change the rules, boys, and make them produce, too,
For with the One Big Union it's an easy thing to do.
(Chorus)

# Cries from the Web of Wage Slavery

By D. S. DIETZ

To hades with a system that thwarts our plan,
To live as men ought to dwell,
And drives us to hie from pillar to post,
Our labor seeking to sell.

The art and skill and the love in our ranks—
None can deny it the Rebs—
To the human fold and ourselves, 'tis lost,
Where the human spider webs.

Two million men with a spirit of pride,
All bachelors sadly adrift—
Refuse to burden a wife with the shame
Of a toiler's niggardly shift.

Two million children are caught in the snare
To enhance the spider's play;
And teachers are told to teach that it's right
To do as the spiders say.

And spiders will spend a million or more
To keep a spider from jail
And treble the sum to jail the wage-men
Who seek the unfettered trail.

# Get More Technical Knowledge

By R. BRUNER

"'I do not care to have you think later that I have taken advantage of you, so I'll tell you my terms now, Mr. Pitcairn. I charge $1.00 an hour for this type of work'" I said to the miner.

"He blinked a little but accepted the terms. At that time he typified all that is foolish, if not detestable in a working man—from a lack of class consciousness to the greatest of all, that of truckling and singing the praises of his 'bosses.'

"Therefore I half hoped my price would be too high and I tolerated him only because Old Man Finance was about to turn his back upon me completely. Lessons began.

"Here was a man of about thirty years aspiring to be a mine foreman in a state requiring an examination involving mathematical knowledge in some cases as high as trigonometry and a rather comprehensive knowledge of geology and chemistry. The man claimed four years' high school training, yet he had forgotten the way to operate with decimal fractions. Add to that the amazing fact that he had allowed himself scarcely two months for the preparation and you will have a brief resumé of a situation that can best be designated as 'nervy.' I admired his nerve but was staggered at the part I was to play in it.

"He really progressed so that I felt my discouragement had been partially unwarranted, and one night during lessons (on time he was paying for) when marsh gas and stink-damp were under discussion he almost stunned me by saying: 'We could get better conditions if we were ORGANIZED! The company won't even timber right unless we **make** 'em. We have no organization in this camp.'

"I believe I gave him an extra half hour free that night, but it was worth it to hear what I'd been classing as a 'scissor' utter the statement. It showed me that there was a growing sense of a need of class solidarity—even in this scab camp, and among aspirants to the job of 'mine foreman.'"

* * * * * * * * * * * *

The above quotation is taken from a letter I recently received from a cousin of mine in Utah (with his permission). It seems significant of that need emphasized by the first precept of the I. W. W., **EDUCATION.**

A criticism tendered us by the deceased H. L. V. was to the effect that we were merely a propaganda league and tho all true rebels must share the common contempt his suicide has called down upon himself, at the same time we probably read his "thirty pieces of silver" article more closely and more analytically and more introspectively than any other group of people, and while we bitterly deny his allegations as the pratings of a scared youth, we declare anew that our first great precept does not stop at propaganda work (tho it is of vast importance!) but includes a thoro study of the technique of all industry. If the understanding of your industry involves a knowledge of mathematical formulas, as does mining, then there is a point of departure for following the precept, "**Education.**" If a study of physics is needed, as it is in scientific agriculture—then study physics. If a knowledge of any scientific principles have a relation to your industry, grasp at an understanding of those principles—for, "tho no man knoweth the hour," it surely is approaching rapidly, when an industrially democratic world must call upon every reliable man or woman with sufficient technical knowledge to be responsible for industries controlled by workers.

Unfortunately, at present, too many of the people who possess this scientific skill are with the enemy, the bourgeoise. Some, a few, would come over rapidly if the turn were obviously made by others, by us more lowly of the proletariat who do not know the technique so thoroly—but many more of these—of our class—who draw soul-subsidizing salaries, would hold back stubbornly while we who are ready and waiting, shouting ever, "It can't come too soon to suit me," would be forced to see our boasted industrial era of democracy halted by our own ignorance of technique. We may paraphrase a statement of the Crucified Wobbly by saying, "The wages of Ignorance is Chaos," and as long as ignorance exists we are sure to have a wages system, with the wages paid in chaos and delay.

Similarly to the way many red rebels refuse to read capitalist papers, we eschew as "non-revolutionary" the appropriation of the sort of knowledge needed by heads of our industries. What matter, if under our present system we haven't a ghost of a chance, and could never consent to acquiring some of the **qualifications** needed? Get the knowledge, which differs from the despised remaining qualifications. Technical skill is the very pulse of industry; you have what your specialized portion of your industry requires; get more, so that when our historic mission is achieved we will have the required number of pilots to steer us thru the sea of transition. To refer again to the comparison between the man who sneers at the necessity of knowing "why his boss is his boss" and the rebel, who refuses to read the capitalist press, it must be stated that the editors of our own papers have in their editorial rooms and on their desks piles of your despised papers of capitalism and they recognize in them the pulse beat of the enemy. They are diagnosing and simplifying what they find there and presenting it to you. How can you fight your enemy successfully unless you know his position? and how can you conquer and revolutionize industry unless you thoroly know its technique? **Education!** apply it. Learn your industry with a view to being one of those captains who will be able to correlate its various achievements when capitalism shall have collapsed.

# The 12th Annual Convention of the I.W.W.

### A Few Extracts From the Minutes

The Twelfth Annual Convention of the I. W. W. adjourned just as we were about to go to press. The following are some extracts from the minutes, s lected while the forms were held open.

### May 10, 1920

Convention called to order at 10 a. m. by General Secretary-Treasurer Thomas Whitehead, who, after a few brief remarks, called for nominations for a temporary chairman. Fellow Workers James Rowan and Tom Doyle were nominated. F. W. Rowan elected temporary chairman.

Nominations for temporary recording secretary. F. W. G. Hardy elected.

Number of delegates present: G. R. U., one delegate, 15 votes; M. T. W. I. U. No. 8, five delegates, 17 3-5 votes each, total 88;M. M. W. I. U. No. 300, three, 10 2-3 votes each, total 32; S. B. W. I. U. No. 325, one, 8 votes; A. W. I. U. No. 400, five, 15 2-5 votes each, total 77; L. W. I. U. No. 500, six, 40 1-2 votes each, total 243; C. W. I. U. No. 573, five, 15 3-5 votes each, total 78; R. R. W. I. U. No. 600, one, 13 votes; M. M. W. I. U. No. 800, three, 37 1-2 votes each, total 112; T. W. I. U. No. 1000, one, 27 votes; H. R. & D. W. I. U. No. 1100, two, 6 1-2 votes each, total 13; P. & P. W. I. U. No. 1200, one, 2 votes; F. S. W. I. U. No. 1500, one, 1 vote. Total number delegates, 35; total votes 694.

The rules committee recommended the election of the following committees: Resolutions committee, ways and means committee, grievance committee, constitution committee, education and literature committee. Carried.

Fellow Worker George Hardy was elected permanent chairman and Fellow Worker R. . Brown permanent recording secretary.

### Second Day—May 11

Moved and seconded that stenographer's report be taken and placed on file and that a condensed report be made from the stenographer's report and published.

The following telegram was ordered sent to the class war prisoners:

**Delegates assembled at the Twelfth Annual Convention of the Industrial Workers of the World extend their hearty greetings to all class war prisoners now suffering in the jails and penitentiaries, and resolve to do all in our power to the end that all will be released.**

The report of the General Executive Board (see pages 14-16 of this issue) was then read, accepted, and recommendations referred to the various committees.

Moved and seconded that Gordon Cascaden be seated as the press agent of the convention and that no delegates' names be published. Carried.

Moved and seconded that a referendum committee be elected. Carried.

### Third Day—May 12th

The general secretary-treasurer rendered his report, as follows:

**Report of General Secretary-Treasurer**

It is vitally important that practical problems confronting your organization should occupy your foremost attention, both at this, or any convention of the I. W. W.

Past conventions have been chiefly occupied in tinkering with the constitution, to the neglect of those problems, the solving of which alone is the best guide in constructing a constitution suitable for a revolutionary industrial organization.

**Finances**

The funds of the organization are to it as the blood to the body and must freely circulate or disastrous results must inevitably follow. No hoarding of funds in order to show a large bank balance, while obligations to other parts of the organization are neglected, should be tolerated.

Our motto, "An injury to one is an injury to all," is applicable in a case of this kind, as well as in the usual sense we generally apply it.

The question of increasing the dues will come before you for consideration and should be considered from all angles. A remarkable exchange relation between commodities has taken place during the last few years, in which the purchasing power has declined, while all other commodities have soared sky high.

However, in considering this question we must never lose sight of our object, namely, to organize the workers for emancipation from slavery thru industrial organization; therefore, while it may be found necessary to raise the dues, let us endeavor to keep the amount within the reach of all workers.

We should just as carefully consider if our funds are being used in the best possible manner. Take, for instance, the printing of bulletins by the industrial unions, one industrial union issued three bulletins, one for each district; another industrial union printed a paper once a month for a time, no effort being made to replace their cost. It would be interesting to have the data, showing the cost to the industrial unions for the year, for if it could be shown that the increase in membership by their aid did not cover the cost, it would virtually mean that funds were used that should properly go to paying their debts, and I feel confident that this is what actually occurred. Another angle to be considered is to what extent the bulletins given away free influence adversely the sale of our papers, thus causing them to be run at a loss, because this affects the general office two ways; first, because the general office is called upon to meet the deficit of the papers, and secondly, to the extent that publication of bulletins cause the industrial unions to be unable to meet their obligations to the general office.

Another great drain on the funds of the industrial unions is the present method of running industrial union district offices. We have had ample opportunity to discover that they are nothing more than a duplication of offices for the duplication of the same work, entirely unnecessary, and the only advantage gained that I can discover is that duplicate cards can be supplied to a member quicker—surely a tremendous price for so small an advantage. Surely supply offices could obtain the same results with from 50 to 75 per cent less office help and considerable less office furniture required.

In my financial report you will be told of the various debts of the industrial unions to the gen-

eral office. These figures cover total debts, which includes large amounts of supplies that have from time to time been confiscated in many raids during the past few years, including Freedom certificates, Defense stamps of all kinds, as well as organization supplies and literature.

As it is impossible to know what amount of each item as charged on the books have been confiscated, it appears to me that there are only two practical ways to deal with this question. One is that each industrial union should take an inventory of supplies on hand, in the main office, district and branch offices, and in the hands of the delegates at a time of the year when there is the smallest amount of activity in the field, or, if this method is considered too expensive, then set a date, say December 31, 1918, and the debt as shown on the books on that date be cancelled and deducted from the total debt.

During the past year the industrial unions have also become indebted to the general office, but they have a great deal of supplies on hand, which are an asset against this debt, and we need not worry about that part of the debt.

What we are concerned about is the actual debt owed for the supplies sold, and the bigger the industrial union the larger the actual debt for supplies sold for which they have received payment.

While these industrial unions are behind in their per capita by thousands of dollars, the greatest debts are for supplies that cost the general office the heaviest to replace, such as buttons, literature, card cases, etc.

Anticipating the question, "Is 15 cents per capita sufficient?" I would answer decidedly yes, provided prompt payment by the industrial unions of the per capita and all supplies sold during the month, as shown by the monthly statement issued by them, is made. No secretary should be allowed to please himself about remitting for same while funds are on hand to cover same.

Should district offices still be operated as they have in the past, they certainly should be prevented from acting like Seattle District Office of the Lumber Workers did a year ago, keeping month after month from four to five thousand dollars in the bank for the bank to get benefit from, while the main office needed the money to meet its bills, but could not get it.

Twice the main office sent an organization committeeman half way across the continent to try to get them to loosen up, but without avail, making a further great loss to the industrial union.

With the above system put into operation, and no laggards allowed to tamper with it, the general office would have ample funds to keep up its stock of supplies, get out fresh and up-to-date literature, and be able to place organizers in the field to aid the young and weaker industrial unions and break new ground in other industries not organized at all.

We are getting nowhere by building a few large industrial unions while others are left weak, and in a great number of industries no field work attempted.

If, I repeat, the above system is adopted and enforced, any increase in dues should go to the industrial unions and this would aid them to meet the above requirements and the amount of increase determined with this end in view.

### Publications

The Hungarian, Russian and Croatian papers have at all times during the year been self-sustaining; several were gradually reducing their deficit until the Centralia tragedy, and the raid on the general office that occurred in January. Others that were continually going behind had to be dropped, as the financial drain became too heavy. The Croatian paper stopped for lack of an editor, after Fellow Worker Verbanac, upon persistent calls for his services as organizer on the Iron Range and elsewhere, finally left with the intention of returning after two weeks, but never did return.

This paper has $500 in the general office funds. Every effort has been made to get the papers to the subscribers at a very heavy cost, and it seems almost impossible to get bundle orders to the Pacific coast, so that the deficits are becoming alarming, Solidarity, for instance, during the month of March going $400 to the bad and during April $600. The One Big Union Monthly has had some varied experiences. At one time it was over $1,000 behind, but during the summer months it overcame this handicap and had several hundred dollars to its credit, but the reverse is now true, as shown by the April report. The condition, however, is not as bad as it looks, because a large edition of the May issue was paid for in April and the returns should materially reduce the deficit. I presume Fellow Worker Sandgren will give you a more detailed report concerning this magazine.

The General Executive Board in its report touches on a number of subjects, making repetition unnecessary; also the secretary-treasurer of the General Defense committee, I believe, will give you a report for the committee, so I shall not touch on Defense matters except to say that after the last convention there was no defense committee, so that I am solely responsible for any mistakes, if any did occur, till Fellow Worker Haywood was released from Leavenworth, when a committee was organized consisting of industrial union secretaries and editors located at the general office and the general secretary-treasurer, and at our first meeting Fellow Worker Haywood was elected general defense secretary, and this action was ratified by the executive board at their August meeting.

In conclusion it is my desire that you above all things make provision to relieve the financial strain on the general office, so that my successor, whoever, he may be, shall not be hampered by troubles of this nature.

We have a bright future before us. We have stood the test of the most brutal persecution, thus providing the virility of the I. W. W. beyond question. Yours for Industrial Solidarity.

(Signed) THOS. WHITEHEAD,
General Secretary-Treasurer.

Moved and seconded that report be accepted as read and that same be printed with a synopsis of report of this convention in full, subject to any correction.

Amended, that secretary-treasurer furnish the delegates with a copy of financial report as soon as possible and have same published in the I. W. W. papers and magazines and that it be turned over to new business also. Amendment carried.

### ORGANIZATION RECEIPTS AND DISBURSEMENTS FOR FISCAL YEAR APRIL 1, 1919, TO APRIL 1, 1920

| 1919 | Receipts | Disbursements |
|---|---|---|
| April 1, cash balance on hand | $ 8,230.51 | |

| Furniture, fixtures (main office) | 1,208.05 | |
| Total inventory | | 16,075.27 |
| Accounts receivable— | | |
| Individual or personal ledger | $3,853.01 | |
| Intl. Ptg. & Typstr. Co. acct. No. 1 | 2,255.60 | |
| Acct. No. 2 | 1,778.28 | |
| Due from publications— | | |
| gross deficits $8,756.01 | | |
| Less credit balances 1,625.56 | | |
| Balance due | $7,130.45 | |
| Bohemian Branch | 5.50 | |
| Total outstanding accounts | | $15,022.84 |
| Due from committees and unions: | | |
| Gen. Def. Com., Wash. | $ 204.000.00 | |
| Balance due from industrial unions | 1,057,558.82 | |
| | | 1,261,558.82 |
| Total | | $1,297,972.23 |

**Liabilities**

| | | |
|---|---|---|
| Bureau of research fund | $500.00 | |
| Due on individual accounts | 350.00 | |
| Current accounts payable | 78.18 | |
| Linotype loan account | 735.00 | |
| General Defense Committee | 7,702.19 | |
| | | 9,365.37 |
| Net resources or surplus | | 1,288,606.86 |
| Grand total | | $1,297,972.23 |

Among the great amount of business transacted this day we note:

Resolution No. 2. "Whereas, the Russian workers have sent out a call for an Industrial International Conference of all radical labor organizations of the world, therefore be it

"Resolved, That this body goes on record as being in favor of the Industrial Workers of the World sending representatives to said conference."

Moved and seconded that Resolution No. 2 be concurred in and turned over to ways and means committee for immediate action. Carried.

Resolution No. 3. "Resolved that the dues of the I. W. W. be raised to one dollar ($1) per month."

Moved and seconded that esolution No. 3 be concurred in. Carried.

### Fourth Day—May 13

The referendum committee submitted the following voting blank in the matter of raising the dues to $1.00:

**Special Referendum**

Issued by the Twelfth Convention of the Industrial Workers of the World, May 12th, 1920.

OFFICIAL BALLOT

Mark an X in the square (yes) if in favor.

Mark an X in the square (no) if opposed.

That dues in the I. W. W. be raised to $1 per month.

YES ☐ NO ☐

Vote on this ballot and return it to the delegate or to your industrial union secretary in time to be tabulated and sent to the General Headquarters.

Name..... Card No.....

Dues paid for month of....., 1920

Card inspected by.....

The tabulated returns of the vote of industrial unions must be in the General Headquarters, 1001 West Madison street, Chicago, Ill., July, 1920, in order to be counted.

(I. W. W. Seal) THOS. WHITEHEAD,
General Secretary-Treasurer.

Moved and seconded that this report of referendum committee be accepted. Carried.

In the matter of assessment stamps the following resolution was adopted: "That we go on record as in favor of having only two (2) assessment stamps throughout the organization; first, a Defense stamp, the total proceeds of same to go to the

General Defense, for defense and relief purposes; second, a General Organization stamp, for organization purposes, 50 per cent of same to go to the General Headquarters. All other assessment stamps, industrial union as well as general stamps, to be called in and be discontinued."

In the matter of selling **intoxicating liquors**, the following resolution was adopted:

Resolved, That any person carrying a membership card in the I. W. W. who is upon sufficient proof found to be engaged in selling intoxicating liquor (bootlegging) that their card shall be taken up.

Resolution No. 25. Pertaining to **Defense Committees:**

Resolved, That the G. E. B. shall be responsible for the proper conducting of all defense work and shall devise ways and means of getting co-operation and proper centralization of effort in all cases. Local or district defense committees shall make complete report of all local affairs, including finances, in the same manner as branch secretaries and other officials of industrial unions. The general defense committee shall keep a complete index of all cases, which shall include date of arrest, date of trial, bondsman, and other information necessary to the handling of the defense. This shall be for the purpose of putting the defense in a position to properly handle all cases without overlooking any case and put them in a position to locate members out on bonds at any time.

Moved and seconded that Resolution No. 25 be concurred in. Carried.

### Fifth Day—May 14

Moved and seconded that we send a wire to **Fellow Worker Charles Krieger,** pledging the support of the delegates of this Convention in his trial now going on in Tulsa, Okla., as against the Standard Oil company, and that all members of the I. W. W. will remember Krieger while on the job. Carried.

Here the **Secretary-Treasurer of the General Defense Committee** rendered his report. The report was accepted subject to further reference.

Resolution No. 31. Whereas, the Unity Conference of the **Jewish Speaking Members** of the I. W. W. have succeeded in stopping the quarrels between the different factions of the Jewish speaking members of this organization; and whereas, it succeeded in an harmonious co-operation of all the Jewish speaking members throughout the country with the exception of Chicago, where they so far refused to participate and are working against the efforts of the Unity Conference by publishing a paper of their own; therefore be it

Resolved, That the delegates of the Twelfth Annual Convention of the I. W. W. go on record endorsing and favoring the work of said conference and will recognize only those publications and literature in the Jewish language which are issued under the supervision of the Unity Conference; and be it further

Resolved, That the G. E. B. shall withdraw all the financial and other support and refuse to issue the labels to any publication which is published by individuals or groups that are not a part of the Unity Conference of the Jewish speaking members of the I. W. W. in the U. S. A.

Moved and seconded that Resolution No. 31 be turned over to the incoming G. E. B. Motion withdrawn. Moved and seconded that we endorse the Jewish Unity Conference. Carried.

Resolution No. 32, **Foodstuff Workers Industrial Union No. 1500,** is made up of five industrial subdivisions, as follows:

1. Comprises all workers in grain and cereal mills, bakeries, biscuit factories, candy and confectionery shops, sugar refineries, fruit packing and canning plants.

2. Comprises all workers in butcher shops and meat packing houses, dairy and milk depot workers and deliverers, fisheries and fish packing houses.

3. Comprises all workers employed in making beverages (beer, soft drinks, etc.).

4. Comprises all workers employed in the manufacture of tobacco goods.

5. Comprises all workers in restaurants, lunch rooms.

Each subdivision includes all engineers, coopers, clerks, salesmen, etc. Each subdivision again is divided into branches, as many as may be necessary. All workers handling a certain product shall form a branch, as, for example, subdivision 1 shall be composed of five branches: Branch 1—All workers in flour and cereal mills. Branch 2—All workers in bakeries and biscuit factories. Branch 3—All workers in sugar refineries. Branch 4—All workers in candy and confectionery shops. Branch 5—All workers in fruit and canning plants.

Subdivision 2, Branch 1—All workers employed in meat packing houses. All those handling meat products and all by-products.

Branch 2—Dairy and milk depot workers and deliverers. Branch 3—Fisheries and fish packing houses.

Subdivision 3—No plans have been worked out. Subdivision 4—No plans have been worked out. Sudivision 5—Only one branch.

All workers in restaurants and lunch rooms.

Moved and seconded that the three unions, 46, 1100 and 1500, be consolidated into one union. Carried.

Moved and seconded that the Tobacco Workers be included in Resolution No. 32. Carried.

Resolution No. 36. Whereas, reports received from delegates of **Coal Mine Workers** Industrial Union No. 900, as well as resolutions received from certain branches of said Industrial Union No. 900 who were not able to send delegates to our Second Convention, are asking that headquarters for Industrial Union No. 900 be established; therefore be it

Resolved, That it is necessary to establish headquarters for Industrial Union No. 900. This will help to enlarge the industrial union mentioned, by bringing into its folds large bodies of workers who are dissatisfied with the A. F. of L.

Moved and seconded that we endorse the action of Industrial Union No. 800 in regard to No. 900 headquarters. Carried.

Resolution No. 42. Whereas, there is constant demand on the I. W. W. for **legal defense,** some of our members being arrested daily; and whereas, there is a difference of opinion among some of our members about legal defense; therefore be it

Resolved, That we, the Resolutions Committee of the Twelfth I. W. W. Convention, urge upon the membership of the I. W. W. to speed up the work of organization in order that we may be able to use the general strike to open the jail doors and give our fellow workers back their freedom; and be it further

Resolved, That in the meantime we perfect our defense, so that we may get the best legal defense with the least expenditure of funds; and be it further

Resolved, That in raising funds our Defense Com-

mittee shall also carry on an agitation for the release of ALL Class War prisoners, and a campaign of publicity favorable to our organization.

Moved and seconded that Resolution No. 42 be concurred in. Carried.

Resolution No. 43. Whereas, the struggle of the working class for bettering its condition, ever since the earliest days of this class struggle, prove that **reforms** for the workers by leaders of the workers never have accomplished anything for them, but, on the contrary, reforms and leaders have always had the effect of keeping the workers in subjection and obedient to the wishes of the ruling class, thereby hampering the progress and diverting the true course of the inevitable change in society, therefore be it

Resolved, That we always preach and practice our only weapon—**Economic Direct Action**—in order to abolish the present system of exploitation.

Moved and seconded that Resolution No. 43 be concurred in. Carried.

---

**Sixth Day—May 15**

Chairman reports sending wire to Charles Krieger. Wire read as follows:

Delegates in convention send you greetings and wish you every success. If adverse we urge members to slow up on the job, produce less, thereby curtailing the profits of the masters.

Chairman reads cablegram from Buenos Aires, Argentine, which reads:

Greetings for O. B. U.
(Signed) M. T. W. F. O. R. A., by Campo.
(Federation Obrera Regional Argentina.)

**Report of the Literature Committee**

Recommendation No. 1. We believe the I. W. W. needs entirely **new literature.**

Moved and seconded that Recommendation No. 1 be concurred in. Carried.

Recommendation No. 2. We believe this literature should consist of only a very few pamphlets of considerable length but should be mostly in the form of short leaflets, written in language that every slave can understand, and that new leaflets should be turned out all the time, dealing with every new development in the industrial field as fast as it arises.

Moved and seconded that Recommendation No. 2 be concurred in. Carried.

Recommendation No. 3. We suggest two pamphlets or booklets that should be written and published at once: (1) An analysis of the history, structure, ideals and methods of the A. F. of L. and other craft and so-called independent and industrial unions, and of the I. W. W., showing by comparison why the former is bound to fail and the latter to succeed.

Moved and seconded that Recommendation No. 3 be not concurred in. Motion Lost. Recommendation No. 3 concurred in.

Recommendation No. 4. A simply written description of how the I. W. W. will transform capitalism into the new society; how each individual fits into the scheme, and how the administration of all social processes will function precisely along the lines laid down by the I. W. W.

Moved and seconded that we concur with Recommendation No. 4. Carried.

Recommendation No. 5. An explanation of the attitude of the I. W. W. toward political action by labor. Carried.

Recommendation No. 6. The writing of **pamphlets** and booklets addressed to workers in **particular industries** should be initiated by the respective industrial unions, under the supervision and with the co-operation of General Headquarters.

Moved and seconded that we concur on Recommendation No. 6. Carried.

Recommendation No. 7. **Names of authors** should not appear on any literature put out by the I. W. W.

Moved and seconded that we concur with Recommendation No. 7. Carried.

Moved and seconded that we go on record to provide for a committee of three to act as an **educational board.**

Amended, that this matter be handed to the G. E. B. and that they be given power to create a committee of three for general education and propaganda if necessary. Amendment carried.

Moved and seconded that we take up report of editor of O. B. U. Monthly. Carried.

Report of editor of O. B. U. read. Moved and seconded that report be accepted and filed for future reference. Carried.

Recommendation No. 13. The chairman of the G. O. C. of each industrial union shall send out **questionnaires** to the members on the job, and endeavor in every possible way to gather information pertaining to his industry, with the object of compiling a handbook of industrial unionism as applied to that particular industry.

Moved and seconded that we concur with Recommendation No. 13. Carried.

Recommendation of **Ways and Means Committee:** Moved and seconded as substitute for the whole, that all industrial unions pay all money collected for the Defense since the inception of the I. W. W. and pay all per capita tax and cost of supplies sold since January 1, 1920. Substitute carried.

Moved and seconded that we return fraternal greetings to the Federacion Obrera Regional Argentina. Carried.

---

**Seventh Day—May 17**

In the matter of **wages** to officials of the I. W. W. the following was carried:

New amendment to amendment: That all officials of the General Organizations elected by referendum shall each receive for their services $5 per day; and other employees shall be paid according to the discretion of the Secretary-Treasurer.

Moved and seconded that the O. B. U. Monthly be printed with 64 pages in increased size, using No. 1 print paper, and have three-color front cover and to sell for 25 cents. Carried.

Moved and seconded that financial statements be not printed in the O. B. U. Monthly. Carried.

Moved and seconded that we cease to print the names of all members arrested in the O. B. U. Monthly. Carried.

Resolution No. 17. That we go on record as being opposed to issuing **foreign language charters** to branches and that same be recommended to General Convention.

Moved and seconded that we concur with Resolution No. 17. Carried.

Resolution No. 18, I. U. No. 573, Seattle Branch. That **Chairman of G. E. B.** shall be the alternate

to the General Secretary-Treasurer and shall take his place in case of vacancy until such time as said vacancy is filled through proper channels, and shall be in headquarters at all times, except in emergency. Amended (He shall sign all checks with the Secretary-Treasurer.

Moved and seconded that we concur with Resolution No. 18. Carried.

Resolution No. 20. Resolved, That the following be entered in the by-laws: "That no member of one industrial union shall participate in a **business meeting of another Industrial Union**, except he be given special privilege or under "good and welfare."

Moved and seconded that we concur with Resolution No. 20. Carried.

Resolution No. 44. From M. T. W. to the General Convention. Resolved, That **M. T. W. I. U. No. 8** members working afloat other than river or harbor work shall be considered in good standing providing the member was in good standing at the time of leaving the port of shipment and has a paid-up card at that time; further, that all members must pay up dues to the nearest office or delegate immediately the member is paid off on the ship on his return, in order to be considered in good standing.

Moved and seconded that we concur with Resolution No. 44. Carried.

Communication from fellow workers in Leavenworth read.

Moved and seconded that this body instruct the General Secretary of Defense to send the necessary cash to fellow workers in jail.

---

### Eighth Day—May 18

Amendment that all Class War Prisoners be given $1 per week (if needed). Carried.

#### International Relations

Recommendation No. 4. That an interchange of cards be adopted immediately, on the following basis:

A member of the **Shop Steward** and the **Workers Committee Movement** of Great Britain coming to the United States be given an I. W. W. card and be recognized as a member in good standing in the I. W. W. from the time he becomes a member of the Shop Stewards and Workers Committee movement. The same conditions to apply to a member of the I. W. W. entering Great Britain—providing he becomes a member of the Shop Steward and Workers Committee.

Moved and seconded that we concur with Recommendation No. 4. Carried.

Recommendation No. 5. Any **speakers** who may enter the United States from Great Britain will be given an open platform in the I. W. W. to advocate Revolutionary Industrial Unionism, the same condition to apply to the I. W. W. speaker in Great Britain. Note—All speakers should have the endorsement of their respective organizations.

Moved and seconded that we concur with Recommendation No. 5. Carried.

Recommendation No. 6. That we take immediate steps to have an **International Union Conference** called to bring together I. W. W. and Shop Stewards and Worker Committees of Great Britain and all organizations who believe in Economic Direct Action for the purpose of mutual assistance and further, to take what international action the workers see fit to take to prevent international calamities brought on by the economic contradiction of the capitalist system.

Moved and seconded that we concur with Recommendation No. 6. Carried.

Recommendation No. 7. That the Ways and Means Committee recommend that this Twelfth Annual Convention of the Industrial Workers of the World send this Resolution as the immediate basis for the **affiliation** of the I. W. W. and the **Shop Steward** and **Workers Committees of Great Britain** preceding the International Industrial Conference, which will take place as soon as possible.

Moved and seconded that we concur with Recommendation No. 7. Carried.

Recommendation No. 8. Whereas, the struggle of the working class throughout the world forced capitalism to internationalize in order to crush the mighty power of the workers and to prolong its existence on the back of the workers; and whereas, realizing the fact that the working class is the only class who will have to take possession of the means of production and distribution; therefore we recommend that the Industrial Workers of the World **support the Industrial International Conference of all Revolutionary Economic Bodies,** and do all within our power to bring the International Conference to action and the G. E. B. be given power to appoint said delegates to the conference.

Moved and seconded that the bringing about of an International Industrial Conference be left to the G. E. B. to be acted on immediately. Carried.

#### Industrial District Councils

Moved and seconded that General District Industrial Councils shall not use any dues or initiation fees as revenue. Carried.

Moved and seconded that **Industrial District** Councils shall be established to function in an industrial union in the same manner as the General Industrial District Coucil functions in the entire district, Industrial District Council to be composed of delegates from all the job or shop branches of one industry within a district. Its functions are the same as that of the district convention of an industrial union. It shall convene as often as conditions in its locality shall make it necessary. It is not necessary that a charter be granted. Carried.

In the matter of finances it was decided that the **financing** of the Industrial District Councils be left to the industrial unions.

---

### Ninth Day—May 19

Resolution No. 51. That the incoming G. E. B. and Secretary-Treasurer take steps to bring about a **Unity Conference** of all labor unions in the United States and Canada which are squarely based on the principles of the class war and of revolutionary industrial unionism.

Moved and seconded that we concur with Resolution No. 51.

Amendment, that the incoming G. E. B. send **invitations** to all different radical and semi-radical organizations to send fraternal delegates **to our next convention,** with voice on affiliation matters only.

Amendment to amendment, that only fraternal delegates who are elected by the rank and file of other organizations be admitted to our convention.

Substitute for whole: That we make the motion

and amendment to read that we extend an **invitation** to all economic revolutionary organizations of the world **to send fraternal delegates** to the next I. W. W. convention, to be seated with a voice but no vote. Substitute put and carried.

Resolution No. 54. That shop or **job branches are the basic unit of the I. W. W.** and that wherever there are seven or more members on a job, they shall constitute themselves a shop or job branch, elect a job committee and job delegates to attend to urgent business meetings. No members should serve permanently on a committee. At each business meeting a new committee should be elected. All members should take their turn at serving on committees.

Moved and seconded that we concur with Resolution No. 54. Carried.

Resolution No. 56. Resolved, That we support the **Work People's College,** and urge industrial unions to send students to this college.

Moved and seconded that we concur with Resolution No. 56. Carried.

Constitution committee reports:

Resolution No. 26. Resolved, That **editors be chosen by the G. E. B.** instead of elected by referendum.

Resolution No. 26 concurred in.

Moved and seconded that we do away with **unnecessary duplication** of work in industrial unions' district offices. Carried.

Moved and seconded that the G. E. B. be instructed to send **speakers through the harvest fields** while harvest is on. Carried.

---

### Tenth Day—May 20

Moved and seconded that the **General Defense Secretary be appointed** by and at all times be under the supervision of the General Executive Board. Carried.

Moved and seconded that the **chairman of the G. E. B.** sign all checks with the General Defense Secretary. Carried.

The roll call on raising the dues to $1 showed: **Yes,** 531 2-3; **No,** 144 1-3.

Moved and seconded that the old **G. E. B. leave two members in office** until the newly elected G. E. B. members get familiar with the duties of the office. Carried.

Moved and seconded that no member be elected as delegate to the general convention for two consecutive conventions. Carried.

Moved and seconded that we go on record as authorizing the G. E. B. to appoint a committee to be known as the **General Agitation Committee,** with power to raise funds, employ speakers, publish literature, and hold meetings for the purpose of agitating among all unions **to bring about a general strike** as a protest against the imprisonment of our fellow workers, i. e., the class war prisoners, and that we carry on this agitation along the same line of the Tom Mooney agitation; and that we invite all other labor organizations in each locality to co-operate with us in organizing the general strike committee. Carried.

### Nominations and Elections

Nominations for candidates for **General Secretary-Treasurer:** George Hardy, No. 8; A. S. Embree, No. 800; M. K. Fox, No. 400; John Grady, No. 500. John Grady, 19 votes; M. K. Fox, 11 votes; A. E. Embree, 13 votes; George Hardy, 23 votes. George Hardy, A. S. Embree and John Grady elected as candidates for General Secretary-Treasurer.

Nominations for **candidates for G. E. B.:** I. U. No. 8, R. J. Bobba, Jacob Sanock, P. F. Maclykin; I. U. No. 300, Otto Justh, M. Novak, Patrick McClellan; I. U. No. 400, Albert Bare, Joe Fisher, E. W. Latchem; I. U. No. 500, Roy Brown, P. J. Gorman, M. Daly; I. U. No. 573, M. H. Patten, W. W. White, Jim Clark; I. U. No. 800, Tom Bones, M. C. Sullivan, Joe Condoti; I. U. No. 1000, Adolph Lessig; I. U. No. 600, Martin Carlson; I. U. No. 1200, Justus Ebert.

### Editor of Solidarity

James Cronan, H. R. Richards, Myer Friedkin, George Andreytchine.

Moved and seconded that nominations be closed. Carried.

Cronan, 8 votes; Richards, 27 votes; Friedkin, 19 votes; Andreytchine, 10 votes.

Richards, Friedkin and Andreytchine elected as candidates for editor of Solidarity.

### Editor of O. B. U. Monthly

Frederick A. Blossom, John Sandgren, Billy Walden, C. W. Sellers, C. L. Chumley.

Moved and seconded that nominations be closed. Carried.

Blossom, 12 votes; John Sandgren, 20 votes; Walden, 7 votes; Sellers, 11 votes; Chumley, 4 votes.

Blossom, Sandgren and Sellers elected as candidates for editor of O. B. U. Monthly.

The Convention adjourned sine die at 6:30 p. m., the delegates and visitors singing "Hold the Fort."

---

# NOTICE

**Some of the financial reports have been sidetracked to make room for the above report of convention. Please note that, in accordance with the decision of the convention, the financial reports will not be published in the One Big Union Monthly in the future.**

# Lumber Grades and Grade Bureaus

(By D. S. Dietz)

Of the many intricacies of the Lumber Industry, no single feature is more important than grades. It requires a skilled workman to grade lumber, in all its details. The skill is acquired after much experience and study. A more general knowledge of the necessity of proper grading should be known by the Lumber Workers in general and the graders in particular.

As a log is sawed into lumber it is seen at once that the product is suitable for a great variety of uses. All grading is, or should be, based on the lumber's adaptability to those many uses. (Value, is a term the masters use largely while discussing grades. It is purely a capitalistic term and has no place here. Use, is a fundamental term and conforms to the New Order). As mortar is to a brick building, so is grader's technique to the knowledge of manufacturing lumber. The more knowledge the sawyers, edgermen and trimmermen have of grades, the better qualified are they to saw, edge and trim to the best advantage; that is, produce the highest use standards from the raw material. The same is true of the machine men in the planing mill.

Aside from all machine men there must be general graders of wider technical knowledge. In the process of producing the finished product, lumber is graded, not less than three times. First, at the sawmill, so that it may be piled, approximately, according to its future uses. Again, when sent to the planing mill. In this step more technical points become involved. It is necessary now that the grader knows just what it is to be "run" to and if properly suited to the purpose; as, flooring, siding, ceiling, etc.; also, what size and what grade. After it has passed through the machine processes it is again graded for the purpose of laying out pieces which show defective milling and such other defects that may develop from planing, which were not noticeable in the rough. It is now ready to be placed with the finished product; or, loaded into the car for shipment.

There are, what we call hand-books of grades. These are necessary. The different associations have them printed. They are known as: Mississippi Valley Grade, Western Pine Manufacturers' Association Grades (Spokane District), Pacific Coast Lumbermen Association Grades, etc. As we have stated before, grades should be known by the timber to which they apply. Fundamentally, it is the difference in timber that compels the variation of grades. (Not the alleged owners; they are all one grade, eventually to become obsolete). The universal feature of grades will be adjusted in the event of Workers' Control of Industry. It will be a very simple matter to a special committee of expert graders.

The grade bureaus engaged those who are known as Inspectors. They visit the various plants to see that a uniformity of grades is maintained among the members (corporations) of the association. This function is largely necessary and will, eventually, be taken over by the Committee of Lumber Technology; together with such other matters as proper care peculiar to different timber and climatic conditions; also, looking foward to world-wide standardization of sizes, for the purpose of eliminating present waste of labor energies.

These bureaus, like all other capitalistic organizations, have their little tricks of intrigue and ways to hoodwink and outwit the other fellow. The associations have their king leaders—their Sammy Gompers)—who profit by their ability to fool the membership—the many lesser-light corporations. That is, emphatically, one of the purposes of their bureau. We must state here, that the graders and inspectors are, generally, innocent. The machination is beyond them.

It has been our aim, in this article, to show just what part of these organized bureaus are necessary to the scheme of production. It should be remembered by the workers that the masters make use of scientific technology necessary to production, to some extent; and, in some ways, scientific organization. To that extent their schemes will be logically "taken over" along with "the tools of production".

The other elements of those bureaus are merely instrumentalities necessary to the protection of swag and the competitive system. Industry, generally, is overloaded with that sort of machinery; growing ever more unwieldly and topheavy and will be very easy to topple over in the not far remote future. In that event, the Working Class will emerge from the industrial dark ages of the twentieth century and BEGIN to CIVILIZE MAN.

---

### FORD'S FATAL ADMISSION

I take the following fatal admission from Ford's Weekly (2-24-20): "No one has the right to disemploy, starve and freeze great multitudes in a free country—no right whatever, moral, political nor economic. Nor should any group of men have the right to withdraw themselves from the economic unit of production thereby crippling their fellow men, unless they are willing to forego the benefits of those commodities produced by men who remain at work."

The foregoing is from an editorial in which the recent Railroad Yardmen's strike is bitterly criticised. I agree to Mr. Ford's right to freely criticise this strike or any other economic phenomena that develope here or elsewhere on Earth, for without the freedom to criticise the phenomena of society, there can be no real progress but I claim also the right I concede to Mr. Ford.

Hence I ask him, if the statement above quoted is true, AND IT IS, if he will mind telling me where the Capitalist Class gets either its "divine" or "vested right" to close down the industries of this Nation simply because it CANNOT MAKE PROFIT out of the operation thereof; thereby starving and freezing millions! (Ami.)

## MARINE TRANSPORT WORKERS INDUSTRIAL UNION No. 8, I. W. W.

The spring organization drive is on, and with the M. T. W. Conference in session on May 6th plans will undoubtedly be made to carry on an intensive organization campaign for members in all branches of the marine transport industry.

At the present time, with three traveling organizers in the field, the ground is being broken for a membership drive from which good results are expected.

Ben Fletcher is doing well in Baltimore and the branch has taken on new life. A polish organizer is needed in this port and the M. T. W. Conference will probably place one here.

Jack Walsh reports that there is considerable dissatisfaction among the members of the old unions in Boston. That the workers have received a raw deal from their old organizations. He has submitted many suggestions on the matter to the M. T. W. Conference.

Gust Kangas is covering all the towns on the Upper Lakes and putting out delegates. There is a good chance to establish several live branches in the Superior District.

The Pacific Coast is improving slowly and the situation there looks better than it has appeared since the January raids.

South America is holding its own. But they are badly in need of a few live wires to help them keep the organization intact as an industrial union.

Fellow Workers Tom Barker and Muhlburg are in Europe and will establish branches of the M. T. W. there. Two branch offices have been opened in Australia by the Marine Transport Workers of South America.

Now is the time for all members to boost the O. B. U. with the many strikes lost by the I. L. A. and Harbor Boatmen, with the Seamen about to demand better conditions. All workers in the marine industry are ready for the message of the O. B. U., and with a little effort No. 8 can become a mighty factor in the marine industry of this country.

All members who are not carrying credentials should get them at once. Job organization is the thing. The I. W. W. is an Industrial Union. Unions function on the job. No union can be built up in halls. Carry on your agitation on the job. Get busy in the industry and function where you work.

The General Convention of the I. W. W. will be held May 10th at Chicago, Ill., and many constructive plans will be presented by the delegates. A stronger, better and more powerful organization will result. With best wishes, we remain,

Yours for the O. B. U.,

JAMES SCOTT,
Sec.-Treas. M. T. W.

Elmer Kennard,
Chairman G. O. C.

TIME TO PUT AN END TO WORLD BRIGANDAGE

PRICE FIFTEEN CENTS

# Preamble of the Industrial Workers of the World

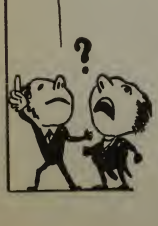
The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

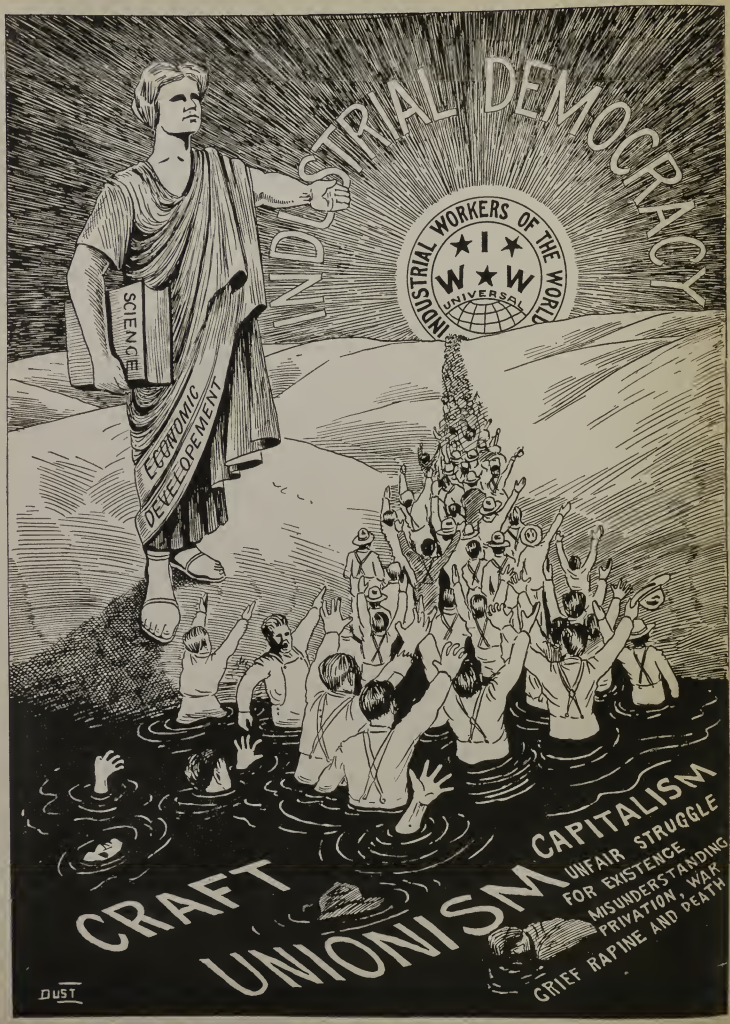
We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interests of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."



It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.



By organizing industrially we are forming the structure of the new society within the shell of the old.

## I. W. W. Longshoremen Tie Up Water Front in Philadelphia

By E. F. DOREE

**Strike starts**

"Order! Order! I will now put the motion," thundered Chairman White to the assembled I. W. W. longshoremen of the port of Philadelphia. There is silence. The air is tense with excitement and expectation. The next words of our colored chairman fell like hammer blows. "The motion is, 'Shall we go on strike immediately'. We shall take a rising vote. All those in favor will stand up." The silence of a moment before is broken by deafening cheers as the entire body rose to its feet. Cheers followed cheers. Hats went into the air. Pandemonium reigned supreme for several moments. Doubts and uncertainties of a moment before were swept away. All are happy. All are enthusiastic.

Some, thinking business over, start for the door. Order, order," "Fellow Worker Chairman," "Order," "Fellow Worker Chairman, what are we going to do with the night gangs who are now working." And, from every corner of the large hall come cries, "Pull 'em out, pull 'em out" and "Knock 'em off, Knock 'em off, NOW!" The chairman announces that the meeting stands adjourned and suggests that everybody go to the docks.

The strike is on.

And, the enthusiasm of that night has grown each day since. The strike started on May 26th and now, nearly a month later not ONE man has broken from the ranks. The solidarity is remarkable. It is 100 per cent, the kind of 100 per cent that we like.

The strike started over the refusal of the Employing Stevedore and Shipping Interests of the Port of Philadelphia to grant an increase in wages. The longshoremen on foreign trade shipping demanded $1.00 an hour in the place of the 80c. that they were receiving.

**History of the strike**

To those who doubt the growing solidarity, let them read what follows and read it well, for here is told exactly just what has actually happened. It is history, the history of but yesterday and not the wild dream of a fanatical soap-boxer. It is the dream come true.

The strike was called 10:30 o'clock on the night of May 26th and immediately covered 3,700 members of the I. W. W. employed almost entirely on the loading and unloading of foreign trade ships.

At midnight all members were off the job.

The following morning the non-union docks at Spreckel's Sugar Refinery and the American Line Piers were tied up tight.

Members commence to pour into the union. By night more than a thousand had filled in application blanks and the foreign trade shipping was shut down with not a man working.

Two things happened on the first day of the strike to show the wonderfully fine growing solidarity of the workers.

The first was when the delegates of the Marine Firemen advised our secretary that the firemen will not produce steam for scabs.

The second was the fine action of the crew of the British freighter Haverford, at Pier 53. These fellow workers refused to handle scab cargo or coal, and when a couple of scab gangs were secured, they turned off the steam on the ship making it impossible for the scabs to work.

When the ship left the following day without a full cargo, the Ship Delegate assured us that they would not permit the ship to be taken out into the stream and there loaded. In appreciation of their fine action, the following letter was given the crew:

"We would feel negligent in our duty if we failed to extend our word of thanks to the crew of the S. S. Haverford for refusing to handle cargo or coal while members of the Marine Transport Workers' Industrial Union, No. 8, of the Industrial Workers of the World, were on strike.

"Fellow Worker John Gannon, Ship Delegate, and his gallant crew have welded another link in the chain of solidarity which is bringing the workers of land and sea closer together into the ONE BIG UNION of the Workers of the World."

**Shop Stewards of England support strike**

After the ship left port, the following cablegram was sent away: "Shop Stewards' and Workers' Committee.

"10 Tudor Street, London, C. F. 4.

"Industrial Workers of the World completely tie up water front Philadelphia. Crew British Freighter H .verford organized Shop Stewards refused handle cargo or supply steam. Magnificent international solidarity. Congratulations.

"Marine Transport Workers, Industrial Workers World."

The loading and unloading of ships came to a complete stop when the coast-wise longshoremen joined in the strike on May 28th.

On the next day they presented, to their employers, demands calling for 80c. an hour for straight time of eight hours a day and for time and one-half time for all overtime, Sundays and holidays.

The coastwise men surely had reason to strike. All during the war they were paid 65 cents an hour, but no sooner had the armistice been signed than the bosses rewarded them by cutting their wages to 54 cents an hour. Needless to say, they were unorganized. They have learned their lesson.

On the 29th, the American firemen faced the test and were found not wanting. A few scabs had been secured at Pier 46. The delegate of the Marine Firemen, Oilers and Watertenders' Union was notified. In half an hour the steam was cut from the winches. As we say now—"no steam—no scabs."

### Scabs hard to get

May 31st, the Merchants & Miners Company started a free taxicab line. It wasn't exactly what they intended, but it is really what happened. This concern sent men about town and to the several employment agencies to pick up men to scab. The intended strike-breakers were then brought to the dock in taxis, where they met the pickets. None went to work, but as it was close to the hall a good many went up and joined.

On June 2nd, the firemen on the sugar ship at Spreckels' refinery cut off the steam from about forty scabs. Steam was then brought from the power house of the refinery to the ship through a large hose. Scabs were reported to be eating on the ship. Cooks and stewards were notified, and the scabs did not eat. That afternoon the scabs were paid off.

Finding that they could not get scabs, the employers made their first big attempt to break the ranks of the strikers by sending a circular letter to the homes of almost all those on strike. It is a mess of misstatements and carries with it their threat. A portion of the letter reads as follows:

" * * * The steamship and stevedore interests feel quite sure that the calling of this strike was due largely to outside influences, and that the majority of the longshoremen are not in sympathy with this strike, and that if they knew the true conditions they would return to work.

"There is in effect at the present time an agreement between the steamship and stevedore interests and the longshoremen of the port of Philadelphia which does not expire till September 30, 1920, which guarantees to you the same basic wage as is now being paid at other North Atlantic ports for stevedore work.

"Practically all the steamers in port have been idle for a week. This situation cannot continue, and unless work is resumed by the regular longshoremen on or before Monday, June 7th, in addition to the steamers already diverted, every possible steamer in port and to arrive will be sent to other ports, and steps will be taken immediately to work the remaining steamers to the best advantage * * *"

To this letter the strikers answered in the following language in their strike bulletin, which they issue every four or five days:

"Outside influence? Never was there a strike more local in influence. The strike was called by a general meeting of longshoremen, at whch no one was admitted except a member in good standing in Branch 1, M. T. W. I. U. No. 8, I. W. W. Since the strike has been on, no one other than longshoremen, except the delegates from the S. S. Haverford, have addressed a meeting of longshoremen nor done any publicity for them. The strike was started and is handled absolutely by longshoremen employed on the water front of Philadelphia. The strike vote was unanimous. No strike-breaker has been mistreated.

"The Marine Transport Workers' Industrial Union No. 8, Branch 1, has never signed an agreement with anyone for any period of time. The union is willing to pay $10,000 reward for anyone locating any agreement between Branch 1, M. T. W. I. U., No. 8, and any stevedore. Come, Mr. Boss, whoever you be, and show us that agreement. We are, indeed, surprised to learn that we possess such a thing as an agreement. * * *"

On June 3rd, a captain from a ship at Pier 98 came to the hall and wanted men to unload his ship. He said he was willing to pay the price demanded. He was referred to the office of the stevedoring companies. The members refused to work one ship unless it is so settled that we work all ships.

The second British crew refused to accept cargo or coal from scabs. They are the crew of the freighter Henderson. These fellow workers are organized in the Shop Stewards and Workers' Committee in England, which has recently joined hands with the I. W. W.

On the same day a company wanted "to pay any price" to get 4,000 cases of lemons unloaded. Matter put up to membership. Unanimously decided to let the lemons stay there till the strike was settled.

On June 7th the delegate from the Marine Firemen notified us that the firemen have officially gone on record against furnishing steam on any vessel where a strike is on. On the following day a committee from the longshoremen went to their meeting and extended the word of thanks to their members.

June 8th, the White Star Dominion Liner "Virginia," of Liverpool, arrived in port at the American Line piers. After the crew stood examination

at the quarantine station, and had docked, they were denied shore passes. The crew were told that they would have to be examined by another doctor.

They saw, however, that something was wrong, as the cargo was not worked as usual. They inquired if a strike was on, and were informed that they might expect one in a few days.

Two firemen went ashore that night and located the union hall, and there learned that a strike was on. They refused to furnish steam.

**Foreign workers refuse to betray**

At the Spreckels sugar refinery the firemen have refused to furnish steam to strike-breakers. The Spreckels company has now laid steam pipes along the edge of the dock, and are running hoses from these pipes to the winches. The hoses stand a pressure of about forty-five pounds. This amount of steam will lift about two bags at a time. The ordinary draft is eight bags.

colored boys had met up with this game before, and there was nothing doing.

On the same day, other bosses went to the Italians and offered them $1.20 an hour if they would scab. They refused, to a man.

**Fellow Worker murdered by lone scab**

Then came the tragedy of the strike. Fellow Worker Stanley Pavzlack was murdered by an armed scab, shot through the heart. Our fellow worker was standing in front of his home with his wife and two children when he heard shooting. Seeing that danger was coming in his direction, he attempted to get his family to a place of safety. While thus engaged he was murdered.

The trouble started when Louis Townsend and two companions were leaving the dock where they had been scabbing. Leaving Delaware avenue, they walked up Queen street to Front street, where pickets attempted to talk to them. The scabs did

## I. W. W. LONGSHOREMEN TIE UP SHIPPING IN PHILADELPHIA

## "HOLD FAST, BUDDIE, WE GOT 'EM"

An Italian ship at Pier 19 is unloading lemons with scabs. Having no steam, these scabs are passing the cases from one to another from the hold to the dock. At the rate that they are going it will take them a week to dispose of the lemons.

Having failed to coax the workers back with their circular letter, the bosses tried out the nationality game, with absolutely the same success.

On June 9th, the bosses went to the Polish workers offering them booze and telling them that if they returned that they would employ only Polish workers. The fellow workers saw through their game in a moment, and none went scabbing.

**Negroes cannot be lured**

Other foremen went to the Negroes and urged them to return to work, with the solemn promise that the stevedores would employ none other than Negroes, because they had always done the best work and were the most desirable workers. The

not seem to be in a talking mood and continued down Front street. After going on a few steps, onlookers believe that Townsend went mad. He stopped suddenly, pulled his gun and, wheeling around, fired a shot at the union men standing on the corner. He then broke and ran up Front street, followed by his comrades, shooting at everyone in sight.

His first victims were Edward Tarcyloski, 12 years old, and his brother, Louis, 3 years old, who were seated on the steps in front of their home when the three scabs passed. Stopping momentarily, Townsend fired three shots at the children. The elder of the children was struck in the thigh and the younger had his abdomen grazed by a bullet.

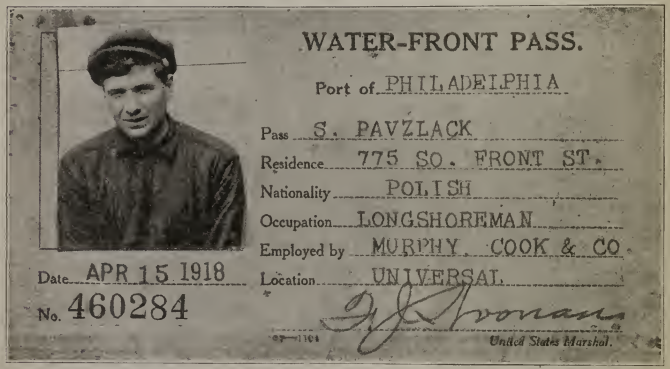
Further along Front street the crazed scab encountered Joseph Carcrewski, who had just come out of a barber shop. Before the man had time to duck he was dropped by the scab with a bullet in his leg.

Continuing his wild career, Townsend made his way to Front and Pemberton, where he killed Fellow Worker Pavzlack.

The shooting took place within a block of the Longshoremen's Hall, at 121 Catherine street, and in a section where hundreds of our members live. During the whole murderfest not a shot was fired at the scabs, bent upon "cleaning up" the whole South Side. Scores of persons attempted to catch them and Townsend was finally captured at Front and South streets, four blocks from where the shooting started. A gun and forty-two cartridges were found on Townsend when he was searched at the station house.

**Strikers demand law and order**

The day after the murder the union issued and



"The I. W. W. is doing all in its power to keep violence off the waterfront."

Fellow Worker Pavzlack was buried on Saturday, June 12. Hundreds of his fellow workers were present at the funeral services, where they paid their last solemn respects to the fallen battler in the class war.

Fellow Worker Pavzlack is the second member of the I. W. W. murdered on the water front of Philadelphia. Three years ago Fellow Worker Martin Petkus was shot to death at Front and Reed streets while picketing in the sugar strike.

**Employers seeking negotiations**

The first attempt to bring the strike to an end failed. The strikers were notified by one of the employing stevedores, Mr. Joseph Mooney, that the

**MURDERED BY AN ARMED SCAB. HIS BLOOD IS OVER THE EMPLOYERS.**

distributed thousands of the following notices:

"Employing Stevedores, Attention!

"Disarm the scabs!!! Cut out the booze!!

"Shootings must stop. There is no room for drunken men or armed men in a strike situation. It is reported that scabs are armed by bosses. This must stop! Bosses are offering to buy booze for strikers if they will scab. This must stop! The bosses want violence—the union does not!!! The practice of strike-breakers shooting down union men and their families must stop!!! And stop at once!!!

"This is a strike—not a war.

"Workers have a legal right to strike. Strike-breakers have a legal right to scab. Neither have a legal right to kill or carry concealed weapons.

"The law is enforced against the strikers—enforce it against the scabs.

bosses wanted to see a committee on June 14th. The strikers chose a committee of fifteen, representing the longshoremen on foreign trade, the longshoremen on coastwise trade, the checkers and the grain ceilers, all of whom were on strike, most of them having lined up since the strike started. The employers stated that they could see only the representatives from the longshoremen on foreign trade and that they had nothing to do with the others. The committee refused to deal in sections, so the employers with whom the union has formerly dealt will try to get together all bosses on the river front so that they can deal with all the strikers at one time.

The committee presented their argument to the employers in written form. A portion of it, that part dealing with the increased cost of living, is quoted below:

Your recent reply to our original request for increased wages states that it is your belief that the cost of living has already started to decline; . . . therefore, we come now, armed with the figures and facts compiled by Uncle Sam.

Unfortunately, the Monthly Labor Review of the Bureau of Labor Statistics of the United States Department of Labor is seldom complete. For instance, on retail prices of food, it lists only twenty-two articles, these being about two-thirds of all the staple articles ordinarily consumed by a working class family. . . . They are: sirloin steak, round steak, rib roast, chuck roast, plate beef, pork chops, bacon, ham, lard, hens, eggs, cheese, milk, bread, flour, corn meal, rice, potatoes, sugar, coffee, tea and butter.

The figures show . . . that the total increase in the price of the above-named articles, from Nov. 15, 1919, to Feb. 15, 1920, was 8 per cent. For March, 1920, we have no figures. . . . We would like to have them, as we are sure that they would show an increase in food costs. From March 15th to April 15th, 1920 . . . retail food prices soared upward 5 per cent.

**This makes a total increase in retail food prices of 13 per cent from Nov. 15, 1919, to April 15, 1920, with figures lacking for the period of Feb. 15th to March 15th.**

No figures are available on rents, but surely no one will hold that they are on the decline in the city of Philadelphia. Indications are that they will continue to go up.

No retail figures are available for clothing, etc. Wholesale figures, however, are complete. . . . From these figures we find that for the period Nov. 15th, 1919, to Feb. 15th, 1920:

| | |
|---|---|
| Farm products declined..... | 1.25 per cent |
| Foods increased..... | 11.4 per cent |
| Clothing went up..... | 9.6 per cent |
| Fuel and light jumped..... | 4.5 per cent |
| Housefurnishings soared .....10. | per cent |

**. . . from March 15th to April 15th, 1920, the wholesale prices on foods increased 4.75 per cent, thus making the total increase in wholesale food prices for four of the past six months, namely, December, January, February and April, more than 15 per cent over what they were in November, 1919.**

Further, a perusal of the financial pages of the daily press forces us to believe that prices are not destined to come down.

The day following this parley, the secretary was called up and informed the committee was wanted by a member of the U. S. Shipping Board. The committee went and they were asked to request the members to unload five ships laden with flour at Pier 98. They would work directly for the steamship company and not for the men against whom they were striking. Matter taken up. It was decided to unload the flour after the strike was over.

Another day passed, and the stevedores asked to see the committee again. Same trouble as before. No settlement in sight.

As this is being written these messages are coming to strike headquarters:

**The last news**

The British Red Star Line S. S. "Makinaw" was moved from Pier 55 to Richmond. No scabs. No steam. No work. All's O. K. Firemen aboard her threatened with arrest if they did not furnish steam. No steam. No arrests.

Grain elevator men at Girard Point have refused to scab on longshoremen. Will not handle grain in the hold of the ship.

Harbor boatmen refuse to haul scabs from Chestnut street pier.

Three coal hoisters quit giving coal for scabs to work with.

The following message has just gone to England:

Dock Workers Union, Corner Lamb, off Commercial Road, Liverpool, England.

S. S. "Regina" lying at American Line Piers, Philadelphia, Pa., U. S. A. Grain being loaded in Hatch No. 3 by scabs (blacklegs). Firemen have refused to furnish steam. Interview firemen on arrival at Liverpool. Firemen members of N. S. & F. U.

At this time there are over 150 ships listed in the harbor. All are idle. Not a ship is working, and the strikers have made it plain that not a ship will work till the strike is over.

**The high points of the strike**

The high points of the strike may be summed up in these words:

The strike is nearly a month old. Not a ship has been loaded or unloaded in that time.

Every one of the 3,700 members of the I. W. W. walked out on call. Not one has returned.

Every unorganized longshoreman in the port of Philadelphia came off when requested. Not one of them has broken ranks.

Over 5,000 members lined up in three weeks.

With the exception of the scab running amuck and killing Fellow Worker Pavznack, there has been practically no violence. Until that murder there was not even a fist fight. Less than a score have been arrested to date.

Union firemen aboard ship have refused steam to scabs.

Union cooks and stewards have refused to feed scabs.

Union boatmen have refused to work with scabs.

Union coal hoisters have refused to supply coal to ships loaded with scab cargo.

British crews organized in the Shop Stewards movement of Great Britain have refused to accept coal or cargo from scabs.

The Grain Ceilers' Branch, M. T. W. I. U. No. 8, I. W. W., presented demands for $10 a day, with double time for overtime. They are on strike.

Four hundred unorganized sugar house men quit before they would take the strikers' places on the sugar docks.

All the checkers on the water front of Philadelphia have lined up in the I. W. W.

The foremen, with the miserable exception of three or four, have refused to boss scabs. The vast majority of them have notified their employers that they will not return to work even if some of the original strikers break ranks, unless the strike is settled through the union.

We have assurances that ships which may be loaded here by scabs will not be unloaded if their destination is Liverpool, Buenos Aires or Rosario. A great deal of Philadelphia shipping goes to these ports.

So stands the strike, the greatest in the history of this coast.

RIOTING IN OMAHA, NEB., 1919. POLICE TURNING HOSE ON OMAHA MOB.

# Sowing the Wind and Reaping the Whirlwind

By JOHN SANDGREN

The morning paper brings the news that the city of Duluth, Minn., is in control of a mob of 5,000, who have subdued the police by force, broken into the jail and taken out and lynched three Negroes, alleging that they were guilty of attacking a white girl of seventeen. It is the old, old story.

This event comes right close upon the attack by an unruly mob of mostly ex-soldiers upon the Negroes of Waukegan, Ill., only a couple of weeks ago. That time nobody was killed, but the occasion for the riot was correspondingly insignificant: a couple of small Negro children are supposed to have thrown rocks at the glass windshield of an officer's automobile and broken it.

These two serious riots of the year should be seen against the background of the past as well as of the happenings in the South.

In the South the pot of Negro hunting and lynching keeps boiling right along, but the disquieting fact is that these collisions between the races are moving northward rapidly instead of decreasing. Only last year we had the terrible race riots in Washington, D. C., where a great number of lives were lost and many persons wounded; the still more serious race riot in Chicago, which cost several times as many lives, and finally we had the disgraceful outburst in Omaha, Neb., where events were very similar to those in Duluth of yesterday. In Omaha, as in Duluth, a mob of about 5,000 people gathered about the City Hall, fought and conquered the police, had twice the noose round the mayor's neck, wrecked and burned the magnificent City Hall and took out a Negro accused of attacking a white woman and hanged him.

The three accompanying photographs tell part of the story.

One remarkable thing about these riots is that in most cases those responsible for them are trying to blame them on the I. W. W.

In Chicago the unspeakably foul capitalist press time and time again sought to fasten the responsibility for the bloody riots and the burning of houses on I. W. W.'s, who are supposed to have blackened their faces to look like Negroes! Of course, the police and others who studied the situation knew better. It seemed that the Chicago press was lending its aid to those who wished the wrath of the rioters turned on the I. W. W. Maybe they thought

it would lead to the killing of some I. W. W. men. It was evident that there were provocateurs at work with a purpose.

Then came Omaha. The capitalist press reported that General Wood, the now beaten presidential candidate, had officially declared that he thought there was red activity behind the riot. The provocateurs were at work again, trying to turn the fury of the mob on the I. W. W. and at the same time trying to get rid of the blame for the nasty deeds.

Then came Waukegan. The Chicago Daily News came out and insinuated in the news columns that there was a mysterious influence at the back of the riots, presumably the I. W. W. There were some civilian people leading the soldiers on to deeds of violence, and these civilians were Wobblies, according to the Daily News insinuations. The criminal provocateurs were at work again.

We have not heard from Duluth yet, but we shall not be a bit surprised to see this race riot also blamed on the I. W. W.

While reading proof of the above we get "The Herald-Examiner" of Chicago of July 21, one of the Hearst papers. In glaring head lines it accuses the I. W. W. of being the inciters of a Chicago riot on Sunday, July 20th, in which two men were killed and eight more or less severely wounded while trying to arrest some members of a Negro religious sect that had run amuck. The paper says that these religious fanatics were burning the American flag, but seeing that the paper comes with the lie that the I. W. W. is behind it, one cannot believe what the paper says. On another page the paper publishes a photo of a mixed crowd of Negroes and whites and states that they are "a posse hunting the guilty I. W. W."

This is, of course, nothing but a dastardly attempt of this honorless paper to incite the ignorant mob against the I. W. W.

**It is journalistic work of this kind that keeps the flame of rioting alive.**

What is the significance of it all?

We are absolutely certain that in neither crowd of rioters could be found an I. W. W. man or a socialist. In every city where these riots occur the participants are people outside of our ranks. There are the clubmen and other keen sports with murder in their hearts who enjoy hounding a Negro to death, the same as they would hunt and kill a 'possum, a fox or a coyote. It thrills their degenerate nerves and satisfies their vile passion. Whenever there is a call for that kind of action they pour out of their hiding places, these monsters. Of course, they do not want to publicly stand for their deed. They are ashamed of it, they fear the punishment and they add to their crime by trying to roll the crime over on some innocent people's shoulders—people whom they hate.

By blaming it on the I. W. W. and thus inciting ignorant people against us, they feel that they have killed two birds with one stone: They had the ghastly "fun" of killing a Negro and blame it on the hated I. W. W.

(While this was being set in type one of our member dropped in from Duluth. He had watched the hanging from beginning to end and barely escaped the same fate, when he tried his best to stop it. We asked him, what the crowd consisted of. "Were they working men," we asked. "No," he said, "they were the bourgeois and their dependents. The lynchers poured out of the shops, offices, drugstores, barbershops, pool rooms and joints of the business district. It was not working men. It was the element that is hostile to workingmen.")

The fact that these riots occur so frequently shows that we are living in a hair trigger society. Immediately below the surface, barely under control, there is a spiritual monster which dares not show itself in daylight. It is the free-masonry of bad men, and they number thousands and thousands in every city. Most of them wear good clothing, but many wear workingmen's clothes. Making a random survey of the rioting mobs, we should say that they consist of the same elements that made themselves most conspicuous as "patriots" during war times. It is the pupils of the patriotic leagues and of Ole Hanson, the malodorous ex-mayor of Seattle, the hired thuggery of employers' associations, the gunmen, the cowardly and murderous braggarts of the brothel-saloons and gambling halls, the scabs, and the self-styled 100 per cent American dupes of the profiteers, who are happy to see the two races fighting one another. The agents of the "National Security League" and other monopolists in patriotism have worked on the feelings of the rowdy elements until they are crazy for blood, like youngsters reading dime novels. The rioters are hyper-patriotic.

That same element which will on a moment's notice set civil authority at naught and "take charge" of a city, that same element is one we have to count with in these revolutionary times. When capitalism can no longer stand on its legs, it instinctively falls back on this element of thugs and murderers and general law-breakers. And this element of bad men just as instinctively turns to the capitalist class. They are in spiritual relationship and feel as friends, though of different social standing. The capitalist is at heart a thief, a murderer, an all-around crook and an immoral, bloodthirsty degenerate, ready to do anything to defend his booty. The rioters and the capitalists as naturally fall in with one another in troublous times as two countrymen will fall in with one another if they meet in a foreign country.

As capitalism collapses, as production and distribution of one commodity after another breaks down and people begin to lack the necessities of life, these bad men come into prominence. These rioters are anti-social beasts who immediately resort to violence when hunger comes. They will naturally find one another as in these race riots and flock together and plunder and murder together. They have friends "higher up" who will gladly use them and protect them.

THE WORK OF THE OMAHA RIOTERS IN THE CITY HALL

Recent events in Chicago show that a good many of the American Federation of Labor unions in Chicago are under control of such thuggery and "sports." Through the murder of such labor union thugs as Enright and Coleman, other names, such as Tim Murphy and Carozzo, and a dozen more have become prominent enough to show that these bandits and gunmen are worming their way into powerful positions. It is openly hinted that they have friends in prominent political positions as well as wealthy protectors. The events of late years have favored them. These thugs and robbers and murderers have played the patriotic game to a charm and elbowed themselves into position and wealth by terrorist methods. The shipbuilding and aircraft profiteers and arch patriots, the war contract patriots, the intellectual prostitutes following the trail of gold that these bad men leave behind, all of them are prominent just now. Carrying concealed weapons is illegal in most states, but these bad men by mutual consent all carry arms. The peaceful citizenry has been disarmed, but this profiteer and riot thuggery is allowed to keep their guns, so as to better be able to terrorize the law-abiding. In case of a general outbreak the good people are defenseless, and the capitalists and the crooks are armed to the teeth.

These gunmen and patriotic braves are a silent force right under the surface. It takes only the rape of a white woman by a Negro or the allegation of stonethrowing by black children as in Waukegan, in order to bring this element out in revolt against law and order. They are practicing for revolution—for a reactionary revolution.

We, the I. W. W. men, are organizing people industrially to enable them to take over and carry on production and distribution, so that the change from the new to the old may take place without violence and bloodshed. From the I. W. W., the socialists, and from the average worker, society has nothing to fear. The element which society has to fear is the same people who riot in Chicago, Omaha and Duluth, and those provocateurs higher up, who stand behind them and prod them, egg them on, encourage them and protect them.

We, the I. W. W., have everything to lose and nothing to gain by participating in riots. Anyhow, we have the mild spirit of humanitarians and shudder at these terrible, ghastly deeds. The intelligent Negroes know very well that they have no better friend than the I. W. W. and they are organizing together with us and fighting with us against the capitalist class, as witness the present strike on the docks of Philadelphia, where whites and blacks are united in friendship and solidarity for a common, beautiful aim.

The thing for us to do in these troublous times is to hurry and get our organs of local administration ready; that is, our city central councils. Seeing the ease with which the murderous mobs suspend the activities of the civil authorities and terrorize one community after another, it becomes incumbent upon the workers to take steps to protect themselves and society from a complete breakdown at the hands of these bloodthirsty mobs. Having made temporary revolutions with impunity in St. Louis, in Washington, in Chicago, in Omaha, in Waukegan, in Duluth, they are getting more daring, more courageous. Before we know it, this cut-throat element, with a General Wood at the top as the man on horseback, and Morgan, Rockefeller, Dupont, and the hundreds of other trust magnates as the financial backers, will take complete control. Under the guise of suppressing rowdyism, they will systematize it and enthrone it on the mangled carcass of so-called democracy.

With so many dangerous elements snooping round, knife in hand, ready to cut the throat of civilization and establish the autocratic rule of banditry, it is time for the useful working people to wake up. If the civil governments of today are too weak, too cowardly or too crooked to prevent these riots or to punish those who participate in them, it is time for the big mass of peaceable, law-abiding, useful citizens to create institutions which have their roots so deeply among the people that no criminal element dares to raise its head.

Only by changing from territorial representation to industrial representation will society be able to create an administration which will be able to function with the combined strength of all the citizens added together. The present administrations have little or no backing. They are as a rule the product of the activities of utterly corrupt political machines, dominated by the same slum element that does the rioting. They can uphold their authority only by hiring men and arming them with clubs and guns. These gun-and-club men sometimes fail to function or are overpowered, and there is banditry supreme.

The I. W. W. form of local administration, of which there is as yet little to be seen in this country, is a city central council drawn from the shop, the place of work, from living life itself. It will consist of the trusted men and women of every occupation instead of as now of real estate sharks, brothel and saloon keepers, shyster lawyers and professional politicians and grafters of the lowest type. Our administration, springing directly from the people at work, can call upon the whole people for assistance at any moment, and would be able to completely suppress any criminal element.

The moral of it all is the same old one that we are repeating until we are wearing it out: Organize every shop as a branch of the industrial union of that industry. Organize every human occupation along industrial lines. Select your Central City Councils everywhere and get ready for the collapse of capitalism.

The strikes are the signs of the inability of the capitalists to supply mankind with what it needs. They signify the collapse of capitalism industrially. The riots are the signs of the inability of capitalism to protect the citizens from violence. They signify the collapse of capitalism politically.

Get ready for the big crash like sensible men. Let all the good elements in society, whether white, black, red or yellow, male or female, get together to down the capitalistic bands of robbers and murderers and other criminals and save society.

Let capitalism collapse, but let us save civilization.

WHAT THE OMAHA RIOTERS DID WITH THE MAYOR'S AUTOMOBILE

# What is Bolshevism?

On pages 25-32 of this issue we have reprinted several articles, in full or in part, from "Soviet Russia," the official organ of the Russian Soviet Government Bureau here in the United States. These articles on the reconstruction in Russia answer the question pretty well what bolshevism is and what it is not. They are authoritative.

There is a large element of "bolsheviks" in this country who are making the Russian Bolsheviks ridiculous by claiming for them something that they do not claim for themselves. These "American Bolsheviks" are, figuratively speaking, running round with a big club, and, like the hold-up man during the night, they ask you: "Are you a bolshevik or are you not??" Yes or no. No explanations accepted. If you say yes, you will pass. If you say no, you are spiritually murdered on the spot, being called a traitor to the working class. If you start to explain you meet the same fate.

In their revolutionary ardor (with their jaw), they have plumb forgotten to look up what bolshevism really is, what it has done and what it tries to accomplish. Should this magazine fall into the hands of some of these soviet maniacs, they will have a good chance to enlighten themselves by reading these official accounts.

As you will see for yourselves, these articles treat mainly on the socialization of agriculture, and on the socialization of distribution of commodities. We did not have the space in this issue to treat on the socialization of big industry and the position and function of the unions. That will come in a coming issue.

But agriculture is the main issue in Russia. Eighty per cent of the population, at least, are engaged in it.

These articles will answer some of the following questions:

Is private ownership abolished in Russia?

Is private control of the means of production and distribution abolished in Russia?

Is wage slavery abolished in Russia?

Is socialism established in Russia?

As far as private ownership of the land is concerned, it is abolished on paper, but exists in fact. As you will see, 95 per cent of the land is divided into one-peasant "economies." Socialization has merely started on a small scale as an experiment and as an example.

As far as agriculture is concerned, the Russian revolution of 1917, like the French revolution of 1789, consisted in driving off the old land owners and allowing the peasants to divide the soil between them. That was a mighty fine thing for the Russian people and for the French people, but it is not socialism.

As far as handicraft and small industries (employing less than ten workers), which were so important a part of Russian life, there is no talk of socializing them. They continue to function as private enterprises, run for profit, with governmental co-operation.

When we come to commercial distribution we find that the bolsheviks even here have adopted the inheritance from pre-revolutionary days and adapted it for their purposes with much success. The co-operative movement of the consumers, built up already under czarism, has been made an integral part of the state machinery and has been extended to include all. Thus distribution has been socialized in a most surprising manner. If we are not mistaken, the co-operatives are not the least surprised.

As is very natural, the efforts at socialization are most noticeable when it comes to the big industries. They are more suited, more ready for collective operation, than agriculture and handicraft. As to the arrangements in detail of large industrial production and the functions of the unions, we refer the reader to our next issue.

We now come to the question: Should the workers of other countries proclaim themselves bolsheviks and slavishly follow in the footsteps of their Russian namesakes. Only a crazy man would insist on such a course after reading the facts as given here.

It is plain that each country will have

to work out its own solution of its own problems. The work of reconstruction will vary as the material at hand varies.

Agriculture in this country is largely carried on with machinery which is entirely lacking in Russia. This lays the basis for a system of co-operation which makes it impossible and absurd to divide the land into one, two or three horse farms like in Russia.

The solution of the agricultural problem in this country seems to be along the lines of the "agricultural commune," planned, and to some extent put in operation, by the bolsheviks. Only it must be done on a much larger scale from the start in this country. We cannot start dividing up the corporation farm or the bonanza farm, and we cannot possibly start to split up the other farms, thereby losing the benefit of the progress of the last 100 years. Russia may have been compelled to solve the agricultural problem by dividing the soil into smaller parcels, but we have to solve our problem by combining the smaller parcels into bigger ones and by making agriculture one great national enterprise instead of disintegrating it into innumerable small enterprises.

As for handicraft, it plays no important part in American life. Where it serves its purpose it will probably have to be left untouched as in Russia.

As for distribution, the co-operative movement is so insignificant in this country that it would be almost impossible to use it as a basis for distribution as in Russia. However, we are sure to do like the Russians; that is, incorporate it in the large machinery of distribution. The commercial machinery of this country is so highly developed that it would be inconceivable that we should discard it. The hundred million dollar wholesale houses and the department stores are so intimately interwoven with American economic life that it would probably mean disaster to dispense with them. The thing for us in this country to do would probably be to organize the commercial working force industrially, as the actual productive workers, and train ourselves for the taking over of commercial distribution by means of these organizations. Of course, great changes would have to be made on account of our eliminating competition. But these simplifications could easily be made by the commercial workers, working in conjunction with the co-operatives.

When it comes to our long list of trusts, such as the steel trust, the oil trust, the coal trust, the copper trust, the lumber trust, the rubber trust, the leather trust, the shipping trust, etc., there is no way open except to take them over bodily by means of industrial unions. To dissolve them or break them up would mean utter ruin and destruction.

While we may to great advantage watch the experiments in Russia, the Russian workers can teach us very little, because industrial conditions are so different here and there.

In Russia we could probably do no better than help to carry out the bolshevik program of nationalization and fight in the red army to save the revolution. In America we must resist any attempt at following bolshevist lines and insist on having the problem of reconstruction solved according to the I. W. W. program; that is, industrial unions with their shop branches for productive purposes and city central councils for administration purposes, eliminating private ownership and control almost entirely as an outgrown form.

The thing to do under the circumstances is to help the Russian revolution along in every conceivable manner — including speaking the truth about it—and at the same time go right ahead and build up the I. W. W., that is the framework of the new society. All people who neglected this have had to pay a terrible penalty.

# The General Defense

**By Wm. D. Haywood**

The General Defense Committee has become a real factor of the organization and was so recognized by the last convention, which made provision that the General Defense should continue, and that local Defense Committees should function with the General Defense Committee in the same manner as branches do with Industrial Unions. In this way the best possible results will be obtained.

The work accomplished by the General Defense Committee during the last ten months has counted for itself. Some of the work was reviewed to the last convention in a report by the General Secretary-Treasurer of the Defense Committee with a complete financial statement accompanying the report.

Since May 1 the second trial of Fellow Worker Charles Krieger has taken place and has resulted in an acquittal. This case was framed up by emissaries of the Standard Oil Company, who were responsible for holding Krieger in jail for over twenty-two months on a charge that they knew was absolutely false.

The case involved the organization in a tremendous expense for lawyers, investigations and trial costs, as many witnesses had to be brought to Tulsa, Oklahoma, from long distances.

Krieger when first arrested was held for investigation. Finally, he was put to trial last October. There was a hung jury. His acquittal came with the second trial. Kriger is now speaking for the General Defense Committee.

John Grady, charged with criminal syndicalism in Spokane, Wash., whose trial hung fire for so long, was finally acquitted.

The Butt Stevens case was vacated.

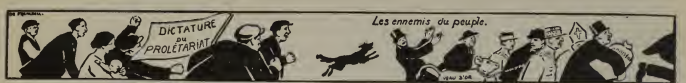
John Shank, who was tried at Pueblo, Colorado, on a charge framed by a Walsenburg bank, is still in jeopardy, as two of the jury stood for conviction while ten were for acquittal. However, George Vanderveer feels that this case will not be tried again.

Three members, E. J. MacCosham, W. H. Lewis and Charles Ashleigh, have been released from the Federal Penitentiary at Leavenworth, Kansas, on bond. All three were of the Chicago group and have spent nearly three years in prison.

MacCosham, for a minor infraction of the penitentiary rules, was kept in the dungeon and chained to the bars every day for over six months. His release came like a benefaction.

The argument before the Appellate Court, involving ninety-four members in the Chicago case, began on June 16. George F. Vanderveer argued the legal questions of the case in a masterly way. The court held a night session, at which time Vanderveer concluded his argument on the law, and the hearing was continued until the following Wednesday or Thursday, when Otto Christensen will argue on behalf of the defendants the evidence and the facts in this, the greatest labor case in the annals of American jurisprudence.

The assignment of errors in the Wichita appeal was granted by Judge Pollock. The bill of exceptions is being heard before him at this time. Bond for the Wichita defendants also will be fixed at this hearing, and an application will be made for a joint bond. Members and friends are requested to keep this fact in mind and send all available bonds, so that an early release of all the men confined in Leavenworth Penitentiary can be brought about.



The argument in the Sacramento appeal will be heard some time during the latter part of this month.

The appeal in the Centralia case is being taken care of by Vanderveer.

All members who were indicted at Omaha in September, 1917, have been dismissed.

There are hundreds of members still confined in jails and penitentiaries, so the defense work must be kept up. A day's wage stamp will be issued. All returns from the sale of this stamp must be sent to this office.

At all entertainments, meetings and picnics held during the summer good speakers should be provided who will outline the defense as well as organization work, and have a good supply of defense literature on hand.

The Final Conflict—the Workers' driving away the "Enemies of the People": capitalists, generals, clericals and politicians.
—From "La Vie Ouvriere."

# Revolutionary Strikes in France

By GEORGE ANDREYTCHINE

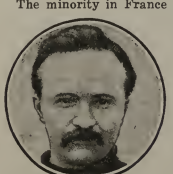
**"Qui veut manger doit produire!"**

Great and heroic days have just passed in France; days in which the revolutionary will of the vanguard of the proletariat attempted to assert itself in no dubious way. The revolutionary syndicalists of the Railroad Workers' Federation called a general strike on all lines on the eve of May Day. The dock, marine and mine workers struck in solidarity with the militant "cheminots" (railroaders). Later on, the gas workers and electricians, the street car and subway workers of Paris were called out by the General Confederation of Labor in support of the striking railroaders. The metal workers of Paris, the rank and file, also struck, ignoring the pleas and supplications of their conservative officials. At a certain time the country was face to face with spontaneous insurrectional outbursts here and there.

But the time was not propitious for a revolution, for revolutions are not decreed by executive committees or union militants. It is evident that the causes of this strike were not deep-seated; were of no elemental nature.

**The Struggle for Supremacy in the C. G. T.**

The leaders of the railroad workers knew thoroughly well that a revolution was an impossibility at this particular moment. They declared the strike more against the conservative leaders of the General Confederation of Labor and of their own organization rather than against the capitalist regime and its government. They hoped to create the necessary sentiment and class solidarity, to awaken the pre-war militancy of the French proletariat and demolish the machine that is sapping the revolutionary will and energy of the working class—Jouhaux, Dumoulin, Merrheim, Bidegaray and their associates.



This strike was a challenge to them. If they refused to support it, their goose would be cooked; if they supported it whole-heartedly, the revolutionary syndicalists could wrest it from their control and give a new direction to its forces, possibly attempt a revolution. But the shrewd politicians of the C. G. T. chose neither of those courses. After seeing the folly of opposing this tornado, which would have meant suicide, they reluctantly "sympathized" with the struggle of the railroaders and stabbed them from behind. The unions they called "in sympathy" with the railroad strike were allowed to make their own choice of striking or not.

Some of the leaders of the railroad workers' unions actually scabbed and carried on an insidious propaganda against the new "bolshevist regime" of their federation. Especially notorious were the leaders of the Northern Railway, who called off the strike just then when it was assuming a general extension.

**The Consolidation of the Militants**

During the war, as in all European countries, the majority of the syndicalists and socialists gave their support and connivance to the capitalists in the great murderfest. But in each country there remained an incorruptible and brave minority which rejected the infamous "union sacree" with the eternal enemy of the working class and held high the red flag of the workers' International above the treason and odious compromises of the majority.

The minority in France was grouped round our valiant Fellow-Worker Pierre Monatte, editor of the syndicalist review, "La Vie Ouvriere" (The Toilers' Life). All of the readers of **The One Big Union Monthly** know already the picturesque revolutionary career of Monatte. The men and women who joined his group are destined to play an important part in future events; nay, they have been in the thick of the battle against capitalism for many years and have carried the brunt of it ever since the armistice, when syndicalism of pre-war times assumed its function once more in some of the most important unions.

PIERRE MONATTE,
Editor "La Vie Ouvriere"; born 1881.

The railroad workers and metal workers were the center of all syndicalist action and propaganda. Since the defection of Merrheim, the Zimmerwaldian pilgrim, and of Dumoulin, the man who had pitilessly unmasked and denounced Jouhaux and his clique, the railroad workers' union became the arena for the death-or-life struggle of the two tendencies. Monatte's group was strengthened by the adherence of several important figures who had a considerable influence in this key industry: Gaston Monmousseau, a young and powerful orator, writer

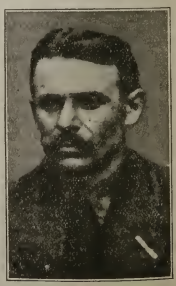
and organizer, leading spirit of the revolutionaries in the State Railway; Leon Midol, a man of forceful character and determination, who time and time again has harassed the railroad companies and their government with his "personal strikes" ("the one minute strike" on the P. L. M. in January, 1919, and the February railroad strike, 1920), a great student of transportation and production, general secretary of the most important railroad union, the Paris, Lyons and Mediterranean line; Dejonckere, of the State lines; Delagrange and Olivier, of the Paris-Orleans lines; Totti, of the P. L. M.; Leveque, of the State lines; Chaverot, of the P. L. M. We must not fail to mention here the capable and fearless anarchist Sirolle, who is very close to Monatte's group.

### Class Struggle Against Class Collaboration

These militant syndicalists worked ceaselessly for the triumph of the principle of the class-struggle as opposed to the class collaboration practised by the officials of their general organization and the C. G. T. In the congress of their federation in May, 1919, Fellow Worker Monmousseau's revolutionary motion was supported by 108,000 members as against 130,000 for that of Bidegaray, the conservative secretary of the federation.

In July, 1919, Bidegaray and the officials of the C. G. T. sabotaged the general strike called for protest against intervention in Russia and Hungary, and that was considered as an act of treason by the "minority," who were in no mood to allow their government to stangulate the Russian revolution. The strike was called off on the eve of July 21st; Hungary was invaded and the intervention in Russia given an impetus. But that spelled the doom of Bidegaray's power. The propaganda carried on against him and the other social traitors was very fruitful. In February, 1920, the workers of the State railway held their congress. By an overwhelming majority of 57,047 Monmousseau defeated Bidegaray in his own union, who rallied only 8,030 votes. The blow was stunning to the conservatives and an inspiration to the "bolshevist minority." One by one the unions have been repudiating their "leaders" and the contingent of the militant syndicalist tendency was being reinforced with fresh recruits.

### The February Railroad Strike



The companies and the government also played into the hands of the revolutionary minority; they delayed the granting of the demands of the railroad workers in spite of their solemn promises. The arrogant railroad magnates and directors were dreaming of crushing the revolutionary minority who constantly interrupted traffic and transportation; one line strikes today, another tomorrow. This, of course, means curtailment of profits and dividends. Besides, they were never too sure of their power if the revolutionary syndicalists were at the helm of the most important and powerful union. These "agitators" were never satisfied, and their battle-cry was, **"the railroads to the railroad workers!"** The plunderers of France and their political dummies, Millerand, Lefevre (both ex-socialists, and now henchmen of the bourgeoisie), Steeg and Le Trocquer, knew that if Monmousseau, Midol, Sirolle and their fellow workers ever captured the Railroad Federation (or, as Monatte puts it masterfully, "render the organization to the rank and file"), the day will not be far off when they and their tactics will reconquer the General Confederation of Labor with its 2,500,000 members and "render the land to those who till it and the factories to the workers!"

The air was charged with disquieting portents; a shop delegate in the yards of Villeneuve-St. Georges, Campanaud, was suspended for forty-eight hours from work for unauthorized leave of absence. He had gone to Dijon to a shop delegates' convention in spite of the refusal of the superintendent to grant him the necessary leave. The shop repairers at Villeneuve immediately struck in defense of their fellow worker; they considered the suspension an insult to their union and an invasion of their syndical rights, conquered with so much sacrifice.

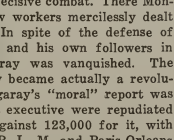
Campanaud happens to belong to the most militant railroad union, the P. L. M., and in a few days Fellow Worker Leon Midol called out on strike the whole line. The order was obeyed by all; not a train moved on the main railroad artery in France. The Paris Central Railroad Committee, comprising delegates from all railroad lines (representing the **rank and file,** and not officials) decided to call out all other lines. Their jurisdiction did not embrace so much authority, but they knew where Bidegaray and his clique stood. The strike, a purely rank and file affair, was a marvelous demonstration of solidarity and class consciousness.

### Mobilization Order Ignored

The officials were completely discredited by their compromise with the government and companies. The victory of the "minority" was assured for the next congress. Chaverot, Sirolle, Sigrand, Leveque and Hourdeaux, who were arrested for inciting the military to disobedience and revolt, were released. The Millerand government had learned a lesson from the other ex-socialist, Briand, who in 1910, broke the railroad strike by calling the strikers to the colors. Mobilization orders were issued but less than 10 per cent responded. At Lyons the strikers piled up their mobilization orders in the Bourse du Travail, thou-

GASTON MONMOUSSEAU
**leader of the Railroad militants. Born in 1883.**

sands refused to accept the registered letters with the orders; at other centers they were burned.



The French workers have had enough of war and militarism. Besides, in 1910 they were only 40,000. Now they are over 300,000.

This "outlaw" strike accomplished a threefold mission: It dislocated and undermined the authority of the officials of the Railroad Federation and ultimately all the conservative leaders of the C. G. T.; strengthened and gave a momentum to the left syndicalist movement and beat the companies and government to a frazzle. The effects of the strike soon became evident: One by one the unions of the various systems began "cleaning their house," getting rid of the cumbersome and timid "leaders," and the rank and file, through the militant and young "extremists," became masters of their own destiny.

### The General Congress in April

The final **coup-de-grace** was delivered at the annual congress which lasted from April 21 to 24 in the famous Japy hall. That congress will be a landmark in the future revolutionary history of France. The two tendencies, revolutionary and evolutionary (not to call it reactionary), of syndicalism, which have relentlessly struggled for supremacy in directing the policies, tactics and ideals of the formidable union, met there for a decisive combat. There Monmousseau and his fellow workers mercilessly dealt with their Gomperses. In spite of the defense of Dumoulin and Jouhaux and his own followers in the federation, Bidegaray was vanquished. The "minority" of yesterday became actually a revolutionary majority. Bidegaray's "moral" report was rejected and he and his executive were repudiated by a vote of 196,298 against 123,000 for it, with 16,031 abstention, the P. L. M. and Paris-Orleans voting almost unanimously "against," while the Alsace-Lorraine unions voted en bloc "for" the report.

Thus the policies and conduct of Bidegaray were condemned and the criticisms and attacks of our fellow workers, Sirolle, Monmousseau and Midol, justified; they were contemptuously sneered at and told to keep their mouth shut, for, forsooth, "the majority had confidence in our wise and careful (read **criminal**) inaction!" This reply was always on the lips of the so-called majority, who camouflaged with it all their double-dealings and unclean business of strangulating the revolutionary tendencies of the rank and file.

HENRI SIROLLE
delegate to the C. G. T.
Born 1886.

The resolution on action of the new majority, which is a splendid declaration of syndicalist principles, reminding us of the pre-war C. G. T., is a classic document. " * * * **the workers' organization repeats that its final goal is the disappearance of capitalism and the wage system;** it prepares the complete emancipation of the proletariat, which cannot be realized except through the expropriation of the capitalists, and it extols the general strike as the means of action; it considers that the union, today an organization of combat, in the future shall be the organ of production, the basis for social reconstruction." It calls on the "cheminots" not to respond to the order of mobilization in time of strike.

**Goods stocked on the quais of Joliette.**

### "Complete Transformation" Their Demand

"Considering the lamentable situation of the economic life, which demands a profound modification of the actual state of affairs, and that the complete nationalization of the great public services, the land and water routes, the mines and the great industrial enterprises, will facilitate this transformation for the exclusive benefit of the collectivity, the congress decides, in the face of government provocations and the postponement of indispensable decisions, to commence an immediate strike action by putting forth the following demands:

"1. Nationalization.

"2. Immediate reinstatement of the revoked to their posts.

"3. The abandonment of judiciary prosecutions.

"4. Recognition of the syndical rights."

This resolution was adopted by a vote of 171,037 (147,282 against, with 13,593 abstentions), the P. L. M. voting 65,248 for the resolution of the revolutionary syndicalists, which was read by Fellow Worker Totti of Marseilles, and 5,425 for that of the conservatives; the Eastern, 22,163 for it, 6,346 against; the Orleans road, 26,170 for, 20,000 against; the State lines, 42,091 for, 10,699 against; Alsace-Loraine, 23,000 for, 26,000 against. The biggest vote for the conservatives comes from the Compagnie du Nord, 41,491 against Monmousseau's motion and 9,337 for it. This union is the most conservative and it scabbed during the first and second (May) strikes. They are helping rebuild the devastated regions and evidently are against all strikes hampering that task.

But at the final session in Aubervilliers, the con-

gress unanimously adopted the following resolution:

"The congress, leaving aside all questions of tendencies and conceptions, and in complete accord upon the general demands presented by the federation, (1) nationalization, (2) reintegration of the revoked, (3) suspension of all judiciary prosecutions, (4) the recognition of syndical rights,

"Decides to call a general strike on all systems, leaving to the federal committee the care of fixing the date and examining if May First can be the pivot for action in accord with the C. G. T."

**The New Administration of the R. R. Federation**

On May 26th the federal council of the "cheminots" elected the new executive commission. By a vote of 28 against 18 for Bidegaray, Fellow Worker Edmond Leveque was elected administrative secretary; Fellow Worker Gaston Monmousseau, secretary of the propaganda bureau; Leon Midol, editor of the official organ (which has a circulation over 300,000) and documents. Fellow Worker Henri Sirolle was elected as delegate to the C. G. T. The majority of the executive committee is frankly revolutionary, and that makes the work of propaganda and agitation so much easier.

When the new administration, hailed by the venal press as "extremists," "bolsheviki" and what not, assumed its duties, they immediately put themselves to the task of calling the railroad workers on strike for the above mentioned program. The C. G. T. opposed any such move, but the militants of the Railroad Federation rammed down their throats the declaration of April 27, which could not be revoked. The glove was already thrown in the face of the insane government and arrogant railroad magnates.

The C. G. T. had to accept this bitter truth; once again they have been outmaneuvered by the "bolshevist elements," as "**Le Temps**" put it.

The strike, according to the Associated Press, was a complete tie-up on four systems out of the five. On May 6th the "Chicago Journal" published the following special cablegram:

**"The Extent of the Strike**

Marseilles and Havre were completely tied up today by the strike of dock workers, while railroad service was greatly reduced. Only fifty-two trains were dispatched from St. Lazare station yesterday, while in normal times 562 leave this terminal daily.

"Everything tied up at Port Vieux."

**Ninety-four Ships Stranded at Marseilles**

Developments of the French strike are assuming alarming proportions. The position of the seaports is becoming increasingly serious.

Ninety-four ships with over 10,000 passengers are stranded at Marseilles, unable to continue their journeys.

The strike, which has hitherto been confined to railroad men, dock men, seamen and miners, now threatens to overrun the metal and building trades. The metal workers declare they will throw down their tools tomorrow and the building workers have been instructed to be ready for the labor federation to call them out.

Strikers attacked express trains near Lyons with rifles and stones, and the labor leaders assert that another important additional strike became effective today."

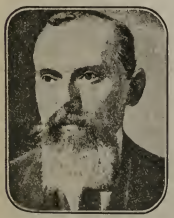
**Persecutions a la Palmer**

The government and the capitalist regime were in a state of hysterics.

LEON MIDOL
Secretary P.-L.-M., not arrested yet.

In spite of the fact that Jouhaux and his clique, who control the C. G. T., its press and unions, are as harmless as Gompers, and that on May 19 they called off the "sympathetic" strike, the ruling class felt a foreboding storm which might sweep them off with the rest of the useless dust and filth and make a clean slate of the bloody reign of the bourgeoisie. "Soviets" began to be talked of; the general trend of thought began drifting toward a communist revolution. The fear and terror of the bourgeoisie might have been groundless, but it began reprisals by striking at the noblest and bravest worker—Pierre Monatte. He was arrested on May 3rd, early in the morning, for "plotting against the internal safety of the State."

The papers, the yellow, stinking prostituted press, began vomiting its sterile accusations. "Lenin's agent, who has taken money for his influential weekly, 'La Vie Ouvriere'." They told us that Monatte was once a teacher, but dismissed for revolutionary propaganda; that ever since the war has been occupied in fighting Jouhaux and all social traitors and that he is the leader of all French communists, recognized by Lenine and Trotsky and supported by them.



Just fourteen years ago Monatte was arrested and charged with the same "crime" for having incited the miners of Pas-de-Calais to rebellion. That time Clemenceau had his hands full when Monatte, Broutchoux and Griffuelhes were in prison. We hope that this time, too, Clemenceau's successor, Millerand, will soon be compelled to release our heroic fellow worker and his associates.

After Monatte, Fellow Workers Totti and Ver-

dier were arrested, one in Marseilles, the other in Decazeville. The latter was forcibly taken from the hands of the police by 500 railroad and metal workers and so far has not been rearrested. Some solidarity! Then Henri Sirolle, railroaders' delegate to the C. G. T., was arrested. After these, Fernand Loriot, another prominent militant of the Teachers' Federation and leader of the communist wing of the Socialist party; after Loriot, Fellow Worker Edmond Leveque, secretary of the Railroad Workers' Federation; after him Delagrange, Courage, Briard; then the arm of "law and order" reached for Comrade Boris Souvarine, editor of the "Bulletin Communiste," who, together with Monatte and Loriot, form the executive secretariat of the Third International in France; and on May 19 our brave Fellow Worker Monmousseau joined the above-mentioned in the famous "Sante" prison.

**A Parallel Between France and Russia**

The capitalist press informs us that seventeen arrested "bolsheviki" will be tried under the infamous anarchist laws, commonly called "lois scelerates" (rascally laws), in spite of the fact that only a few of the accused are avowed anarchists and they are arrested for activities in connection with a purely syndicalist manifestation. Sirolle, Leveque, Sigrand and Chaverot, all railroaders, are members of the Anarchist Federation and the **"Libertaire"** group; Monatte, Monmousseau, Delagrange, Totti, Rey, Briand, Verdier and Midol are "pure" syndicalists; Loriot and Souvarine — Marxians. But what does it matter to the hysterical bourgeoisie? It wants to get rid of them, and one law is just as good to them as another. But we are sure that the French proletariat will have more to say about the imprisoned fellow workers than the capitalist judges.

FERNAND LORIOT
Teachers Federation;
Born 1870.

In the summer of 1917 the Russian Bolsheviki made a great demonstration in Petrograd against the useless and criminal murder of Russian soldiers by Kerensky and Kornilov, at the behest of the Allies' agents in Russia. The same day, on the insistence of the same Allied agents, Kerensky and the "comrades" Mensheviki issued an order for the arrest of Lenin, Trotzky, Mme. Kollontay, Kamenev, Zinoviev and others.

EDMOND LEVEQUE
Secretary Railroad Federation,
Born 1884.

Zinoviev and Lenin went into hiding, while the rest were immured in the infamous Czarist fortress Sts. Peter and Paul. But they did not stay there very long. Two months after their release, Trotsky, Kamenev and Mme. Kollontay were at the head of the first workers' government.

The French bourgeoisie is in the same boat as the Russan was at that time. The productive and distributive organs of France have long ago ceased to function normally. Persecution of militant revolutionaries will not make them run any better. The capitalist system is completely discredited. Its end is nearer than we suspect. But a conscious revolutionary action and organization is necessary to accomplish the great transformation—the revolution.

Monatte and his fellow workers have looked into that matter and they have devoted not in vain their lives to the education and organization of the workers in industrial unions. They have well merited the love and devotion of the working class the world over. We wish them freedom and realization of their ideal, which is, as Monatte puts it: **"Syndicalization of industry; the factories to the workers, the land to the peasants!"**

The next encounter with the bourgeoisie will spell the doom of the rotten and criminal, bloodthirsty capitalist class. The Communist Revolution will succeed, thanks to the ready organization of our fellow workers, the syndicalists.

# A Capitalist's Prayer

By L. Sweet

God, give me priests (with pay decreased)
Who shield each worthy grafter,
And workers keep in silent sleep
By talks on the hereafter.

Pray soldiers give who on hardtack live,
With purpose but to fight,
Whose willing hands serve all commands,
And murder, their delight.

Let children read and backward speed
In imitation schools,
Taught by stale minds on crooked spines,
And economic fools.

Pray workers send, world without end,
Whose work is all they know,
With wooden brains on husky frames
That never on strike go.

Who can contrive to keep alive
On less than living wages,
And all their days can sing my praise,
Shut up in filthy cages.

Then all good slaves, beyond their graves,
May join the angels' cheer;
But as for me—well, let me see—
I'll take my pleasures here.

Two fortresses to capture—the Bank and the Factory."
From "La Vie Ouvriere" of May Day.

# "All Power to the Unions"!

By G. VERDIER

(Translated from the French in "La Vie Ouvriere" by George Andreytchine.)

The great question now put before the world is: Who shall organize production in the future?

The bourgeoisie has been at the helm of society and has been regulating production for its own benefit until today. It hopes, we all know, to still conserve this supremacy and power. To this end it is maneuvering, in spite of the superficial concessions which it is preparing to make in the actual crisis. But its privileges of direction are disputed bitterly. A gap has been made in its power already in Russia, Germany and Austro-Hungary. Its fear is no less in other countries.

From one end of the world to the other, we might say that a struggle is going on between the capitalist class and the working class with the organization of production and exchange at stake.

In a congress of the co-operatives held at Dezaeville I put the following question to the manager of the wholesale warehouse: "Having in mind the events that make a social transformation inevitable, what relations do you think of establishing with the productive organizations?"

"That's very simple," he replied. **"We shall abolish them!** We shall declare that only the consumers can organize the production."

If we add to these "partners" the traditional socialists who preach that this organization of production) ought to be left to the collectivity, i. e., to the State, we can well understand that three "candidates" are disputing the heritage of the bourgeoisie.

The harm these "candidates" have caused in Russia is very evident; they were the cause of the profound divisions among the proletariat. This division is being enacted now in the Central Empires. Knowing what position our own C. G. T. takes, we can safely affirm that we are living through the same experiences and that we are traversing the same confused periods in which our own Kerenskys, Scheidemanns and Noskes are looking for fish in troubled waters.

Science teaches us that **the function creates the organ.** In virtue of this natural law it should follow that a society which takes upon itself the function of organizing the production and exchange of a country creates its own proper organs for that function.

The bourgeoisie created its proper organs, the commune and the parliament, in the bosom of a feudal and monarchist society, in order to found the society that it had conceived and which has for its base the equality of political rights and universal suffrage as a principle.

Today the working class wants to assume this function. Like the bourgeoisie before '89 (the great French Revolution), it has created the organs that will assure its exercise. If it is so, if it has created the functional organs of the proletarian society, it remains only to give them the power and attributes of the bourgeois state and the prerogatives of capitalist society.

Thus the question of the revolution is squarely put before us.

Well-known syndicalists will answer to this by saying: **"We are not ready!"**

A hole to creep out of! The revolution exists today in the facts more than in our dreams. In spite of us, it imposes itself on our preoccupations. Whether we are ready or not, it is there. What shall we do? What position must we take? Shall we seize the occasion that it offers us to realize our goal or shall we shrink before it as one shrinks before a frightful ghost?

Let us have a definite goal and the action shall lead us to it itself. This goal is **the seizure of power in the shop and in the commune in order to suppress the authority of the master and the bourgeois State.** These are the conquests that we must assign to our action. This must be our whole program.

The conquest of power once made, how shall we organize production and exchange and which are the organs that must enter into function to assure the life of the proletarian society?

Do these organs exist in advance?

They cannot be improvised, to my conception. They must exist preliminarily and be well in the hands of those who will make them function.

Syndicalism derives its force and its revolutionary value, not, as some try to make us believe, from the number of its adherents, but from the capacity of these organs of production—the unions (les syndicats). They form those organic cells where the producers will group themselves in order to unite their efforts and to create the necessary product for the needs of the social life.

The union, therefore, appears as the principal organ of production which will make the shop to function. It must displace the master in regulating

and directing the production in the factory, the yard, store, exploitation, etc. All power, all authority, all attributes and all prerogatives of the master must pass into its hands. It spreads its radiation of power in the whole factory by its **shop delegates**, who constitute its council (soviet). It studies the needs of its factory of raw materials, manpower, and distributes the latter according to the interests of production. Thus, the individual command of the master is displaced by the direction and authority of the union assembly.

All unions of a locality, united, form the communal organism. They constitute the communal council (soviet) whose mission shall be to study the needs of the locality in raw materials, manpower and products for consumption. It shall study all the resources of the commune and shall exploit them for the benefit of the community. It shall displace the municipal council, an organ of the bourgeois State, and shall take over all its powers and attributes.

It will be the same with the departmental unions and the Confederation Generale du Travail. The last named must take the place of the State and take over all its powers and national attributes.

The bourgeois constitution the C. G. T. must substitute with a federal and confederal constitution, starting with the commune as the base, and thus erect a social organization built on successive and harmonious levels on the principle of authority and the plural direction of its assemblies and congresses.

The federations, grouping in their bosom the unions of all the branches of production, form an institution having at its head technical councils. The interfederal union of these councils of social economy, composed of competent technicians, receives from the central proletarian powers all orders which they will distribute to the several centers of production by way of the federations.

The products, once created, shall be taken over by the **Labor Exchanges (Bourses du Travail)**, which shall store and exchange them with the exchanges of other centers. Therefore, they will be the office of exchange and distribution.

Thus shall be formed the cycle of production and exchange by syndicalism and its ramifications in the whole land, in the city as well as in the village, allowing the working class to exercise its function of an organizer of the social life.

The proletariat cannot realize its revolution, administer and direct society, without calling into action **the direct power of the workers', peasants' and soldiers' unions.**

Our motto for May Day must be: ALL POWER TO THE UNIONS!

To the unions of producers, workers and peasants must be united the unions of soldiers and marines.

Every regiment a union; every garrison a soldiers' committee.

Thus organized, the proletariat will be certain to come out victorious from the struggle.

# The Watcher at the Ford

**By Gerald J. Lively**

**There's a watcher; there's a watcher at the Ford,**
**Where the sentence of the centuries is stored;**
**Be ye high or be ye lowly,**
**Be ye infidel or holy,**
**Ye've got to stand the judgment at the Ford—**
**It's the court of high revision at the Ford.**

**There's a watcher; there's a watcher at the Ford.**
**He's delivering the judgment of the sword.**
**See the Kings and Kaisers crawling,**
**See their tinseled crowns a-falling,**
**There's no regal guard of honor at the Ford—**
**There's no "King can do no wrong" down at the Ford.**

**It's a court of calm inquiry at the Ford,**
**On the conduct of the Warden and the Ward;**
**There's no time to give excuses**
**In the court the Watcher uses—**
**In the court of cold-drawn justice at the Ford.**
**And ye'll take your sentence, silent, at the Ford.**

**As the bowl is bitter, certain as the cord—**
**For the heroes, old and hoary,**
**Of painted song and story**
**Are losing all their honors at the Ford.**
**It's reversal of old judgments at the Ford,**
**For the lowly persecuted, hounded, harried, executed,**
**They are drawing crowns of glory from the Watcher at the Ford.**

**There's a Watcher; there's a watcher at the Ford,**
**And he's dealing in the logic of the Lord;**
**And ye and I are going**
**On the stream that's ever flowing**
**Through the last great house of justice at the Ford—**
**Have ye aught to show the Watcher at the Ford?**

**'Twill be worth the world's damnation,**
**It will spell a soul's salvation, be it but a single word;**
**Just a word of acclamation from the Watcher at the Ford.**
**So ye'd best be up and doing with no hope for a reward,**
**For the Ford is called TOMORROW, where ye pass for your award,**
**And POSTERITY the title of the Watcher at the Ford.**

THE RED TERROR IN RUSSIA.

# Russia in Reconstruction

## The Socialization of Agriculture in Russia

By V. VASILIEV.

**(From "Soviet Russia", May 15, 1920)**

The first land decrees of the Soviet Government, those of November 7, 1917, and of January 27, 1918, **abolished the right of private ownership in land, but they left in effect the private use of the peasants' land by the peasants themselves.** Even of the National Land Reserve, created from the expropriated lands of the nobility, of the appanages, of the monasteries, and of the churches, and comprising in 1918 in 22 provinces of the Soviet territory an area of 15,800,000 dessyatines, some 12,800,000 dessyatines, or 81 per cent, were distributed amongst the individual households of the peasants. Of course, **such a policy was far from being a socialization of agriculture, in any sense, but it was inevitable at the beginning of the Soviet regime in order to destroy the landed nobility, and to secure for the Revolution the support of the majority of the peasants.**

However, already in the first half of 1918, the Soviet Government made the first attempt to socialize agriculture by the organization of **Soviet estates and of agricultural communes,** and by the **promotion of other collective forms of rural economy.** Already in August of 1918, the People's Commissar of Agriculture, S. Sereda, published a decree on the organization of agricultural communes, and on November 2 of the same year the Soviet Government promulgated a law on the establishment of a money fund of one milliard rubles for loans to communes and similar agricultural enterprises. As a consequence, toward the end of that year **a number of Soviet estates, as well as some 500 agricultural communes,** were in existence, and, besides, **several rural communities** had started to practice a collective tillage of certain lands belonging to the community.

All these preliminary efforts towards the collectivization of agriculture were to a large extent lacking in unity and in a strict elaboration scheme of the work to be done. Even the territory of each branch of the collective rural economy was by no means defined, though as a rule the Soviet estates were organized on the undistributed land area (some 3,000,000 dessyatines) of the National Land Reserve. To eliminate these defects of land policy, the Soviet Government convened, in December, 1918, an All-Russian Congress of the rural committees of poor peasants, and of the agricultural communes, a congress which elaborated a project of a fundamental law on socialistic land organization. On the basis of that project, **the Soviet Government promulgated, on February 14, 1919, its most important agrarian law—the very comprehensive "Decree on Socialistic Land Organization, and the Transition to Socialistic Agriculture,"** which established the basic Soviet policy in the socialization of agriculture. This decree has been in effect up to the present time. Its essential features are as follows:

**First of all, the decree proclaimizes that all the land constitutes a single national reserve,** under the administration of the appropriate people's commissariats and local Soviet institutions. **The decree acknowledges, for the ends of socialization, the necessity of the organization of large Soviet economies, agricultural communes, collective tillage, and other phases of the collective utilization of land.** From individual use there are entirely excluded, except in extraordinary cases, all the lands which at the time of the promulgation of the decree, were not allotted to the individual rural households, and, in particular, the lands upon which there have already been or are to be organized the above-mentioned collective forms of agriculture, or the lands with rural industrial enterprises, experimental stations, experimental fields, and other agricultural-educational establishments.

All the work on the socialistic land organization is to be conducted by the **county and provincial land departments** (composed of representatives of the Soviet Government and of various labor and peasants' organizations), under the supreme guidance of the People's Commissariat of Agriculture.

**The Soviet Estates**

The decree contemplates the **Soviet estates as model agricultural enterprises,** purposing to get out of them the maximum of productiveness, and to make them serve as large agronomic centers of agricultural instruction for the surrounding peasantry. For the Soviet estates are particularly designated and reserved: the former private highly cultivated large economies; estates with granaries, orchards, vineyards; tea, tobacco and beet plantations; with complicated technico-agricultural arrangements (cheese factories, buttershops, dairies, corn-mills, wine-producing plants); with highly developed stock-farming; with rural industrial enterprises (agricultural repair shops, etc.); and with ponds and lakes for fish-breeding.

For the ends of agricultural instruction the decree provides for the organization on the Soviet estates, of experimental stations, experimental fields, workshops, agricultural courses and exhibitions, agricultural schools, libraries, museums, theatres and other cultural institutions.

**The Soviet estates are placed under the supreme authority of the People's Commissariat of Agriculture,** and locally their affairs are directed by special provincial, regional and local boards of the Soviet estates. The technical and administrative business of each separate estate is conducted by a steward-specialist or by a council, appointed by the People's Commissariat of Agriculture and the corresponding provincial board. A labor committee elected by the laborers of the estate from their own ranks regulates the internal arrangement of the work and supervises the economic and sanitary conditions of the life of the laborers.

**On the Soviet estates only state laborers are employed, at a wage fixed by the Labor Unions** and approved by the People's Commissar of Agriculture. The decree urges the sending of experienced industrial workers from the cities to the Soviet estate.

Finally, in order to render material assistance to the surrounding poor peasants, the decree obliges the Soviet estates to establish on their territory veterinary posts, to improve the local roads, to organize agronomic assistance, and, in general, to act in close contact with the remaining part of the rural population.

The **agricultural communes,** according to the decree, **are voluntary associations of rural producers** on the basis of communal land, its collective cultivation, and communal use of the produced good. The land area and the inventory of a commune are made up of the individual land allotments and of the inventories of its participants, or of land and inventory placed at the disposal of the commune

by a land department from the Land Reserve and from the inventors of the expropriated large estates.

For the convenience of production two or more adjoining communes are obliged to combine into one, while scattered communes must unite in a union of communes.

**The communes are under the supreme supervision of the People's Commissiariat of Agriculture** and must adapt themselves to certain working plans and regulations elaborated by the land departments. **Work in a commune is to be performed by its members. The only permissible hired labor is that of permanent salaried specialists and of temporary hired workers during times of pressing work** (harvesting, etc.)

All the administrative, technical, economic and sanitary affairs of each commune are managed by a council elected by the members of the commune from among themselves; the salaried specialists and the temporary **hired laborers having an advisory voice** in its business. The provincial boards of the Soviet estates may place their representative on the councils of the communes, which in such cases enjoy the privilege of sending their delegates to the boards.

Of the products of the communes, first; a certain amount is used for satisfying their own needs; second, the surplus must be delivered to the supply authorities of the Soviet Government, in exchange for loans received, agricultural implements, artificial fertilizer and other modes of compensation, which should be utilized for the improvement of the communal economy.

**The communes also are obliged to perform educational work among the surrounding rural population and to help the poor peasants against the village profiteers.**

A commune may be dissolved by the decision of the majority of its members or by an order of the Soviet authorities, if it has not operated productively and successfully.

As **"collective tillage"** of land the decree designates collective ploughing, sowing, harvesting, etc., of certain lands, by the collective application of the labor, the inventories, and the working cattle of a whole village community or of a portion of it, the decision to that effect being made by either of them. The decree suggests for collective tillage: the lands of a community not distributed amongst its individual households; of its individual members who, for some reason, are not able to till them; and those of the Land Reserve which temporarily cannot be utilized by the Soviet estates or the agricultural communes.

The participants in the collective tillage combine in associations and partnerships, taking equal part in the collective work. **The use of hired laborers is allowed** only **temporarily,** during urgent work that requires haste, they have the right to an advisory voice in the partnership and to be admitted to full membership in it if they so desire.

In addition to the personal inventories of the participants, used for collective tillage, the partnership may expropriate with or without remuneration, for its exclusive ownership the superfluous inventories of its well-to-do members, or secure inventory from the Soviet authorities.

Each partner must carry a fixed amount of manure to the field constituting the collective tillage. From certain contributions by the partners, and from subtractions from the annual crop, a fund is formed for seeds to sow the collective fields and another one for their artificial fertilization.

A part of the crop from the fields of the collective tillage is subtracted for seeds, for fodder for the domestic animals owned collectively, for the securing of manure and agricultural implements, or for repairing the latter. A part is to be distributed among the members of the partnership for their private use; and the surplus must be delivered to the Soviet supply authorities, and from the income are to be paid the allotted loans and public taxes.

A group of peasants or a whole community may gradually apply collective tillage to all their land allotments, simultaneously transferring all their inventories and working animals into collective ownership.

All the affairs of the partnership in collective tillage are managed by a committee elected by the members from their own numbers.

In conclusion, the decree lays upon the People's Commissariat of Agriculture and its subordinate institutions the duty of supplying all these and similar agricultural organizations with seeds, inventories, agronomic aid, money loans, and, in general, with every kind of assistance.

### Extent of Socialization

As to the merits of each branch of collective agriculture which are provided for in the decree, **only the Soviet estates represent completely socialized, or nationalized, agricultural enterprises, operated by the state** for the good of the whole people. **The communes are producing primarily for the needs of a group,** though closely connected with the state, but they are supposed in the course of time to transform themselves into state organizations. The great **significance of the collective tillage of land** lies in its power to draw into the process of collectivization the most numerous masses of the peasants, as each village community possesses some lands suitable for collective tillage, and may, in turn, transform the whole partnership into a commune. **Thus, both the communes and the partnerships for collective tillage are only transitional agricultural steps, leading from individual cultivation of land to a complete socialization of agriculture on a national scale.**

The land law outlined above was dated January 30, 1919, preceded by a decree placing at the disposal of the state all the lands which formerly were cultivated for sowing, but were at that time—on account of the tremendous destruction of agriculture caused by the war, not utilized any more by either the individual or the collective economies. Thus, the decree extended considerably the land area for the socialization of agriculture.

To create a single policy in the awarding of loans from the one milliard fund to the collective agricultural enterprises, the Soviet Government published on February 20, 1919, regulations to that effect. According to these regulations, the fund is permanently replenished from the repayments of the loans and from government resources. All the operations of the fund are handled by a special Central Committee, composed of representatives of several commissariats and of the unions of co-operatives and of agricultural communes in the provinces. The business affairs are transacted by local committees of analagous composition.

The loans, in money or in implements, manure, and other supplies for modern agriculture, are awarded to agricultural communes, partnerships for collective tillage, and other rural productive associations for the organization, the improvement, or the restoration of their collective agricultural enterprises. The loans are repayable, without interest, except in cases in which a fine of one per cent a month is imposed for a delay in the refunding of a loan.

The receivers of the loans are under obligations to fulfill in their agricultural enterprises certain requirements of the land departments, aiming to secure a successful and productive operation of the

FIRST OF MAY IN PETROGRAD.

respective collective economies.

To place all branches of the collective agricultural enterprises, and agriculture in general, on a modern scientific basis of intensive operation, the Soviet Government passed several decrees to that effect, designed to nationalize agronomic instruction and the application of agricultural knowledge. By a decree of January 30, 1919, all agricultural specialists with elementary, secondary, and higher agronomic education, or with practical experience instead, were ordered to register themselves at the People's Commissariat of Agriculture, which was empowered to mobilize them at any time for agricultural service in any locality of the Soviet territory. On the basis of that decree, the Soviet Government on March 20 of the same year for the first time called into the national agricultural service all the respective specialists of twelve Soviet provinces, and subsequently the mobilization was extended to the other provinces. On March 12, 1919, a decree nationalized all experimental stations.

Of course, the nationalization of agronomic instruction and of scientific agricultural labor is not meant only for the Soviet estates and other collective forms of rural economy, but it is for the good of all the individual peasant holdings, also, as the peasants, in consequence of the land laws just outlined, enjoy the privilege and opportunity to take advantage, in full measure, of the agronomic instruction and of the practical lessons in model agriculture which are offered to them by the Soviet estate, agricultural communes, experimental stations, and experimental fields. Besides, the agronomic education in general was nationalized already in 1918, and thus made public and free for all.

**Introducing Communism by Voluntary Methods**

With reference to the methods of inducing the masses of the peasants to collectivize and communalize their agricultural households, it should be emphasized that **the Soviet Government does not favor the employment of compulsion or force.** This is proved, among other things, by the attitude of the head of the Soviet Government, Lenin, who, at the Eighth Congress of the Communist Party of Russia (a month after the promulgation of the fundamental law on socialistic land organization), made the following statements on the agrarian question:

"There can be no greater stupidity than the mere thought of compulsion in the sphere of the economic relations of the middle peasants. Our decrees regarding the economy of peasants are substantially right * * *, however, it is wrong to force them upon the peasants. We must convince the peasants and convince them by actual example."

This spirit of education, of endeavor to convince in matters of agricultural collectivism, has dominated the policy of the Soviet Government during the past year (1919). The Soviet authorities believe that collective agriculture is technically superior to the individual small agricultural economies, and that this superiority in the course of time will gradually draw the middle and poor peasants into the process of agricultural collectivization and communalization.

Such was the socialistic land policy of the Soviet Government until recently. After the promulgation of the land decrees, analyzed above, the subsequent work of the Soviet Government on socialistic land organization consisted mainly in the practical realization of the principles laid down in those decrees. Many Soviet estates were organized, and agricultural communes promoted. As a result, toward the end of 1919, the cultivated land area of the Soviet estates amounted to some 1,000,-

000 dessyatines, and almost in every Soviet province tens and hundreds of agricultural communes have sprung up.

**Results Obtained**

**However, the results achieved are not impressive: only a small percentage of the vast agricultural area has been nationalized or collectivized in respect of cultivation. The main causes of the slow process of the agricultural socialization as yet have been: the ignorance and the prejudices of the masses of the peasants; the lack of live and dead inventory in particular of agricultural machinery; and the employment of hundreds of thousands of the best agricultural producers in the military service.** But as soon as—after the inevitable conclusion of peace—Soviet Russia will be able to employ in productive work all its laboring forces and to get the needed agricultural implements, the socialization of agriculture will proceed more successfully. The Soviet economists purpose to increase in 1920 the territory of the operated Soviet estates to 2,000,000 dessyatines, not counting the eventual organization of additional agricultural communes. Altogether it will form a deeply rooted and safe foundation for the further socialization of Russian agriculture.

# Economic Reconstruction in Soviet Russia

**(From "Soviet Russia," May 22, 1920)**

## PRODUCTION

The basis for the socialization of the means of production and transportation must be solved in Soviet Russia by a process of **adaptation to the economic conditions exiting in the country.** Whereas the **large industrial undertakings could be transferred by one stroke into the possession of all engaged in work,** that is the proletarian state, **the small and the home industries as well as handicrafts must travel only gradually upon the long road toward socialization.** The chief role will have to be played by the formation of producers' and consumers' organizations and by supporting the state in the domain of marketing and obtaining raw materials. The **methods of expropriation or compulsion are here completely inapplicable and purposeless.** These considerations have been laid down as a basis for the decree of April 26, 1919, pertaining to small or so-called **home industries. Owners of home industry undertakings (which employ ten workmen at most and use one-horse power machines) are granted a right to use the raw material supply of the state.** The articles manufactured by the workmen in home industries from the state raw materials must be delivered to the same organizations which delivered the raw materials. The articles manufactured of the raw materials monopolized by the state are to be distributed among the population according to a plan that must be endorsed by the state. As to articles that are manufactured of raw materials obtained by the home workers themselves, the latter are permitted to distribute them in the whole domain of Soviet Russia. **Small industrial undertakings of home workers and artisans are subject neither to nationalization nor to municipalization.**

While the **Soviet power grants the small industry a right to an independent existence by the side of the large industry,** it is endeavoring to form an organic connection between the two. The principles for such union are well indicated in a report which is a contribution to the study of the home industry region of Pavlovsk. There, the large industry must provide the small industry with experienced foremen and managers and must assign to it steady, not incidental, orders and for such articles as those, the production of which in a large undertaking would cost considerably more. Furthermore, the large industry must supply such half finished products as those without which the small industry in most cases is helpless; besides, rejected articles and pieces that cannot be used in large scale production but which are desirable for the small industry. On the other hand, the large industry is entitled to demand of the small industry the preparation of a staff of workers and employes possessing a sufficient degree of practical training to bring forward a demand for relieving it from superfluous workshops of secondary importance, because the latter complicate and increase the cost of administrative apparatus, and to ask that such shops should be taken over by the small industry. Finally, the large industry may demand that such orders as require for their execution personal initiative and skill be taken up by the small industry. The approach of harvest time compelled the consideration of measures necessary for the best possible realization of this task. In order to relieve the situation arising from a lack of labor forces and to hasten the bringing in of the crops, special harvesting detachments were formed, composed of the workers and peasants of the provinces in greatest need, and sent to the producing provinces. In the meantime, the provisioning organs were busy taking hold of the surplus crops and administering measures for the supplying of the villages with manufactured products by way of exchange.

This process has brought to life in many places a method of dealing with peasant communities and co-operatives which has developed into a system. A computation is made of the crop figures, on the basis of which the community gets a request for a certain amount of products. For its own part, the supply committee of the particular province assumes the obligation to place at the disposal of the community a certain amount of wares. The merchandise is delivered in the same degree as the contract is lived up to. In this manner the peasantry feel in reality that the receipt of the products of urban industry is connected with the delivery of the grain surplus to the city at maximum prices. A trial of this method was made last year in the province of Tula, and was crowned with success. Within the period of six weeks there was collected there 1.600,000 poods of grain in a single district.

## DISTRIBUTION

A high degree of elasticity is required by the actual organization for **distribution.** An organization that is to serve for supplying the whole population can be produced only through the efforts of the whole population. Such an organ is the co-operative organization.

The decree of March 20 carries out the principle of uniting all co-operatives that are found in one locality into **a uniform co-operative organization of which every grown up person is bound to become a member.** To this organization is assigned the most far-reaching task of supplying the population with the products of every-day use. The kernel of this co-operative association is naturally made up of the workers' co-operatives.

The Moscow Co-operative, built on the basis of this decree, represents a commune with the right of self-administration, to which belong all citizens who have the right of suffrage in accordance with the Soviet constitution. According to the statute, the co-operative takes over, outside of regulating distribution, a number of other creative and cultural tasks. It attends to the procuring of the various products of every-day consumption and of daily needs, organizes agricultural undertakings, dairies, vegetable gardens, creates for the members of the association organizations for the spreadin[illegible] of culture and education, carries on the stu[illegible]

**RECONSIDERING THE 14 POINTS.**

the manners and customs of the population, etc. An all-Russian union of all such organizations, combined with the productive associations, will form the kernel of that organization which is destined to replace the state.

In order to get an idea of the basis on which the Moscow Co-operative is built let us produce some figures showing the development of the Moscow Central Workers' Co-operative. The returns for the first six months of the year (1919) reached the sum of three and a half billion rubles (for the whole of 1918 it amounted to 1,033,000,000 rubles). The membership was, on January 1, 1919, 130,000, on August 1, 1919, 321,000. The organization owns 147 food stores and five stores for manufactured products, besides eight department stores. It possesses thirty-two agencies in Great Russia, Turkestan, White Russia and Lithuania. During the past year the agents of the co-operative bought merchandise for the sum of 321,000,000 rubles.

The co-operative has at its disposal tens of thousands of dessyatins of land which is used for horticulture; owns dairy farms; oil mills; a few drying lofts for vegetables, of this number four with machine appliances for drying and working capacity of a million poods. Outside of their own undertakings, the Moscow Co-operative imports the products from the gardeners' **artels** (small artisan co-operatives), vegetable gardeners and fishers, with whom it has concluded contracts for delivery. The non-commercial part of the co-operatives possesses eight district clubs, two libraries, six children's homes and six clubs for juveniles.

Such is the organization which is now being used as a basis for the Moscow Uniform Co-operative Organization. Its example will doubtless find imitators elsewhere in Russia.

## The United Consumers' Society

**(From "Soviet Russia," May 22, 1920)**

The Soviet Authority has had to solve the extremely complicated **problem of unifying the whole system of distribution,** to destroy parallelism and the chaos connected therewith which is prevalent in this field, **and to create new forms of distribution**—such forms as would be consistent with the fundamental principles of Soviet policy—in the sphere of economics and food. **The difficulty of solving this problem lay in the fact that nothing new could be set up—the old co-operative apparatus had to be made use of and adapted, with the least possible disturbance, to new methods.** Co-operation, in its day, grew up from the depths of capitalism, as a means of self-defense and struggle for existence used by the petty owners, uniting against organized capital. The European war facilitated the growth of the co-operative movement. All were thrown into it—all those whom the growing appetites of big capital threatened to turn out of the bourgeois world. The number of co-operative societies grew with remarkable rapidity, and, since the number of consumers' societies was increasing, a contradictory element was beginning to be felt, the beginning of which formed itself by its very nature of capitalistic co-operation.

At first only shareholders could take advantage of the co-operatives, whose members were thus distinguished from the rest of the population. But it was to their own interest to attract more and more members, to expand the limits of their activities, and, finally, a network of all kinds of co-operative societies embraced nearly the whole population. The difference between shareholders and non-shareholdrs was eliminated. **The co-operatives became the organ of the whole population,** and the state could, and really ought to have taken advantage of this

organ of distribution. **By the decree of the 20th of March, 1919, the State took over this co-operative apparatus, which has taken deep root, and proved its utility, and is adapting it to the uses of social distribution.**

**Distribution, in this manner, is placed in the hands of the population itself.** The fundamental principle of this system of supplying the population with all that is necessary is that of **self-activity**. But this principle of co-operation, which was formerly the motto of the egotistic, individual, privileged shareholder, in the hands of the Soviet State acquires a different meaning: **all the population** participates in procuring and distributing the products. In fact, all the population of the Soviet Republic is in one way or another bound up with the co-operative organizations. **The decree of the 20th of March has made the registration of the whole population in the co-operative societies compulsory.**

Having in this manner placed the distribution in the hands of the population itself, the State has taken steps by which the system of distribution should bear a strictly organized character. With this aim in view, it has **united all the individual co-operative societies into one co-operative society, having one stock, one fund, one administration, its members being the whole population.** Having created this single distributing apparatus, the State removed its own organs from the direct participation in distribution, retaining only the function of supervision and control.

What is the reorganized co-operative system? We will try to give a general explanation. All the population of each district is a member of one **United Consumers Society**. All the citizens have the right to vote, in accordance with the Soviet Constitution, have the right to elect and to be elected in all the organs of the administration and control of the United Consumers' Society. All the citizens supervise the activity of this society through their representatives and the administration elected by them. **The smaller districts merge into governments (gubernia) "Alliances of Consumers' Societies"** at the head of which are provisional administrations. These government alliances are the organs of supply and distribution among the groups of consumers' communes of a given district. The units of factory, works, and town consumers' communes, so-called government sections, enter, as autonomic sections, into the government alliances with the aim of immediate and direct distribution of food and articles of primary necessity among the workmen. In this manner, the workers' co-operative, as it were, operates on its own, and does not mingle with the other general co-operatives. This is explained by reason of the fact that the workers' co-operative does not contain any indirect outside elements, is more energetic and can serve as an example in the bringing into life of the fundamental principles of the decree. All these government sections unite into one Central Section, entering on an autonomic basis into the union of all government alliances, the Central Alliance.

**The administration of the Central Alliance is in this manner the administration of the United Consumers' Society of the Republic. The United Consumers' Society, being an economic-technical organization, with the aim of carrying out the task of supplying and distributing, has in its possession all the stores, transport means, productive enterprises, farms, gardens, preparatory offices, agencies, distributing points, shops, institutions for public feeding, and medical and cultural institutions, which formerly belonged to private co-operatives, workers' co-operatives and the food organs of the state.** Thus, owing to this unity, the Moscow distributive apparatus has in its hands 1,300 shops, 107 warehouses, 268 feeding points, and 23,000 employes. With regard to the finances of this huge state apparatus, in the first place all the property and funds of all the co-operative societies have passed over to it; secondly, the society can take advantage of state credit; and finally, the advances received from the members can be counted on for the future. The reform is now being completed. By the 1st of November this unified distributive apparatus must start its activity. **The state has laid the supply and distribution of food and articles of primary necessity on the shoulders of the consumers themselves**—in the hands of the consumers' organizations, retaining the right to supply such products as are obtained by state requisition (bread), leaving its distribution to these co-operative organizations. The decree of the 20th of March has opened a new path; great new perspectives in social construction have been opened, and, at any rate, such forms of capitalism as were expressed economically by the old co-operative societies, competing with each other, each taking the best for itself, without any system whatever, in every sense of the word "populist capitalists"—have been destroyed. By uniting all the separated **societies into one united system, and by drafting all** as members of one single co-operative, the institution of a new life, closely bound up with the interests of a social state, to which it is united by ties of blood, and from which it must logically emanate, has been created.

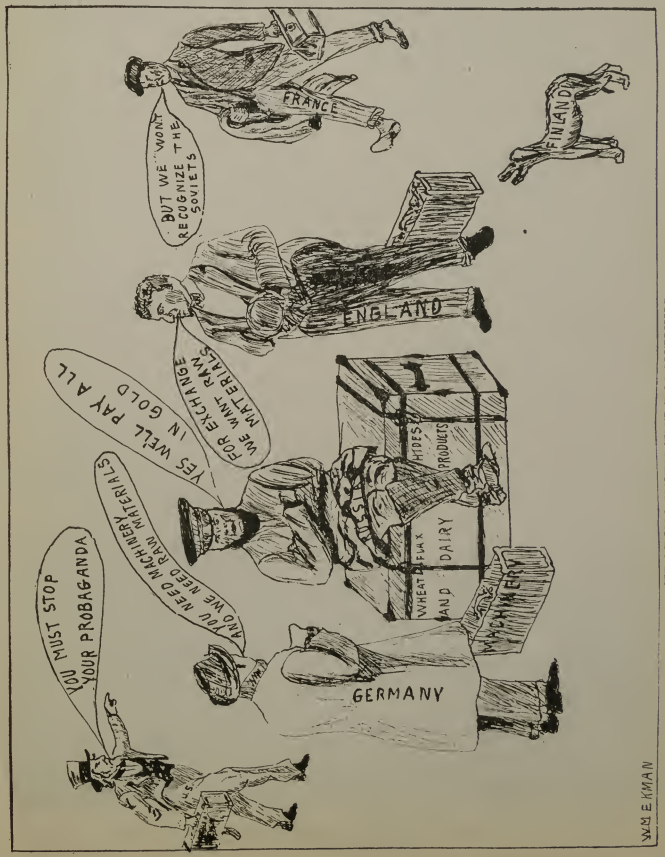
## The Decree on March 20, 1919

**(From "Soviet Russia," April 24, 1920)**

The decree of March 20, 1919, aimed at laying the foundation for a state machinery of distribution, making use of the existing distributive stores, with a view, in the words of the decree, "of utilizing the experience accumulated by distributive co-operation in the interests of the whole of the laboring population."

The decree provided for the association of all consumers' societies and stores in every locality into one "Consumers' Commune." As a basis for this commune, in towns the local labor society was designated, and in the villages the rural distributing store. The management of such distributing communes is entrusted to a board and to a controlling council elected by the voters entitled to a vote in the election of the members of the Soviets. The local communes are federated into district, provincial and regional unions, and the provincial delegates are charged with the election of the central body—the "Centrosoyuz."

This communal organization is charged with the distribution of food and indispensable commodities. It has taken over the assets of all the distributing stores, whether co-operative or not. The payments made by the former members of co-operative stores on their shares were returned to them. All the employes of the co-operative societies became civil servants. This step made the distributing co-operatives of Russia the Department for Distribution of the Soviet Government. The final step, however, was taken on January 30, 1920, when the agricultural co-operative organizations of the producers were brought into the system. A new Central Co-operative Board was created, comprising delegates from all the central co-operative organizations of producers, the labor co-operatives and the consumers' communes. As a result the co-operative organizations became a sort of branch of the Supreme Economic Council of the Russian Republic, charged with the collection of agricultural products and the distribution of consumers' goods and agricultural supplies.



# The Rural Commune Convention

(From "Soviet Russia," May 8, 1920)

(We reprint the following article from "Ekonomischkaya Zhizn," the official organ of the Supreme Council of National Economy at Moscow, of December 5, 1919.)

The conference of the agricultural communes was opened on December 3, in the former Shanyavsky Building of the University; 140 delegates were present at the conference, among them 93 communists.

Pointing out the reasons for the creation of a strong movement in the villages towards organizing agricultural producers' communes, Comrade Sereda developed the basic problems of the revolution as follows: to collect the scattered land, to

make it a foundation for the welfare of the people and thus raise the productivity of the agricultural economy to such a degree that there will be no occasion for supply problems or shortages. It is the task of the commissariat to outline practical measures for the work of collecting the land.

The collectivist economies—Soviet economies—communes, co-operatives, as yet occupy a very insignificant part of the whole agricultural area—only 5 per cent in all 31 provinces; **95 per cent of the arable land is in the hands of one-man peasant economies.** It is impossible to get hold of this unsocialized land with only the help of Soviet economies and communes, therefore the Soviet Government has introduced other transition forms for the socialization of the land, a communal cultivation and co-operative scheme in agriculture. In the future, all new forms of socialization which may come up will be accepted by the Soviet Government; it is the endeavor of the latter to keep up with the demands of life.

The improvements in the communistic economies will draw the peasants to these communes. But the People's Commissariat of Agriculture also bears in mind the individual peasant household, by the improvement of which the country as a whole will benefit. In this line, the interest of the People's Commissariat of Agriculture—both have before them the problem of assisting the local peasant's economy. Many of the communes are already accomplishing this, and it is an important condition in bringing the communes into closer touch with the local peasant population.

The communes must try to enlarge their economies—establish agriculture, gardening, art and craft production. The broader the scope of the communist economies—the stronger the influence they can exercise over the neighboring population. And only in this case may the communes become real strongholds of agriculture in Soviet Russia.

At the present time, the number of communes and peasants exceeds six thousand. The amount of land in each commune is rather small; in the average commune there is about 300 desyatins. Isolated communes will therefore be unable to solve their own problems; it is necessary that they be united first according to countries, later to provinces, and finally, in **one vast All-Russian Agricultural commune.** The present conference is called upon to organize a union of communes and artels for the purpose of uniting them into one economic whole.

At the evening session, Comrade Lenin took the floor.

In greeting the first conference of the communes and the artels, in the name of the government, Comrade Lenin pointed out that the whole legislative activity of the Soviet Government indicates the tremendous significance of the communes, peasant cooperatives, and all organizations which tend to facilitate the transformation of small individual economies into communal partnership, or co-operative economies. The importance of such a transformation cannot be too highly appreciated, because it is needless to say that a Socialistic society cannot be firmly established without changing the old conditions of the peasantry.

We know too well, said Comrade Lenin, that only by gradual, careful steps, only with practical examples and successful adaptation of the new experiments may we influence **the millions of small peasant owners;** because the peasant has a too practical mind and is too closely connected with the conditions of the land to agree to radical changes in his economy. **Only when the necessity of socialized agriculture will be proved to the peasants in a practical way, will we be able to say that an important step has been taken towards the development of Socialism in agriculture; and this in a peasant country like Russia.**

The communes must teach the peasants to see in them not only the recipients of governmental subvention, but the gathering of the best representatives of the working class, who not only preach communism for some one else, but are able to realize it themselves; they must prove that even under the worst conditions of the present communal economy they are able to carry extra "Saturdays" and "Sundays" (when they work without pay, for the common welfare) in order to relieve the local population. No concessions may be made on this point, some sort of proof must be offered to determine how far we have grasped the complex problem which we have set ourselves.

In conclusion Comrade Lenin pointed out again the fact that **only by skillful management of the agricultural communes and by their high standard may they become centers for the growth of communism in the villages. A lasting victory over the dark masses of the peasantry will be achieved at the moment when the majority of the peasants will understand the advantage of the communal economy in comparison with that of the individual.**

SOVIET OFFICIALS IN MOSKVA ADDRESSING THE PEOPLE IN THE OPEN.

# The Awakening

## A History of the Child Slaves, the I. W. W. and the Migratory Workers

By JACK GAVEEL

Here I began my life. It was a beginning which no child must be suffered to endure. I can still see before my mind's eye that sordid environment under which everything which was to decide later on what kind of a man I should be, grew up and developed.

Can you expect a pig to be anything else but a pig. Denied space to move about in, a pool of clean water to cleanse the filth off his body, nay, even compelled to stand and wallow in his own dung, the inevitable result is a creature besmirched and fouled in body and soul.

Here, in the hell made by man for man, I received my early impressions of the world and the beings peopling it. In fact the world to me was the mill and its soul and body destroying toil. Man to me was a beast to be feared and propitiated if possible. There were big beasts and small beasts. The big beasts were continuously encroaching on and devouring the weaker ones. So the latter wanted to get up to where the former were that they in their turn might devour so as not TO BE devoured.

It was a battle for existence. Not only that. In this battle there was not even the prosaic fellowship forced on the brutes of the jungle in their battles with an ever hostile nature for each individual had to fight his own battle with claw and fang, maiming, killing, betraying and slandering.

I heard the remark made once that the world can only be redeemed, that the curse which lies on it can only be lifted, and the sun of happiness shine, if men will tear out of their hearts the black hatred which now burns there, damning and cursing the world. But let me tell you that I speak from bitter experience when I tell you that in a capitalist mill one has no time to pay any attention to the teachings of a higher and nobler life for the law is that he, who in this terrible battle falters, so much as stops one second to think, crushes down the brute in him if only for one fleeting moment, shall be borne down and trampled to death by those who are steadier on their feet. Brutality and stupidity, that was the price demanded as payment for a crust of bread. To the existence of brutes I and millions of my little brothers and sisters the wide world over were doomed and brutes we were in body and mind.

If other children commenced their existences amidst flowers and grasses, greedily drinking in the life giving flood of sunlight and smiling on the world with happiness, no such pleasure was vouchsafed millions of little wage slaves. For them only the long black night, stretching away interminably in a future holding no hope. Thus the years dragged on with never a change ever so slight to shed the faintest ray of light in our dark and cursed lives. Endless seemed the line of emaciated and shivering bodies which year after year in the winter morning's bleak and dismal light wound its way towards the mill gates. True, countless numbers fell by the roadside, too weary to ever rise again, but what did that matter when gold was to be coined out of the life blood of the workers' children.

And still, in spite of all, at that time I took the world as I knew it, as an inevitable fact, established perhaps by the inscrutable will of some Supreme Being. This does not mean, however, that in those days I ever sat down to ponder about my existence and its nightmarish realities, concluding therefrom that all was as it should be. Oh no, far from that. Thought would have been required for this and such there stirred not in my abused and stunted child's mind. No if I took everything for granted it was done unconsciously without ever inquiring into the why or wherefore of things. That is, if I was on an intellectual level with the brutes and savages of the jungle, yet I at least knew one thing positively. This fact was continuously forced on my mind, nay, it was lashed there in ugly, indelible scars by the master's whip of hunger. This I knew; I must work, and work I did, blindly, hopelessly, sweating and bleeding ten long hours a day for a beggar's pittance not even sufficient to keep from starvation. A machine I was without thoughts beyond this one. What did I or the beings working alongside of me care for the how or wherefore of things when there was no time for aught else but work. And so it happened that I became a slave of habit, unconsciously adapting myself to the existence of a wretch. Brutality, misery, starvation, yea, even untimely or violent death, from now on because inevitable evils of the sheme of things, to be accepted without so much as a murmur or thought.

Oh, the maddening idea that I have wasted the best years of my youthful life denied an opportunity for my mind's development. Never then did I suspect the existence of a treasure house full of knowledge, such wisdom as enables man to live the life of all universal existence from the lowest and humblest to the highest and proudest. But, alas, this pleasure like all others was denied me. In those days I did not even understand the meaning of this hell, the flames of which scorched and ate into the tender flesh of my writhing child's body. Little did I fathom that I and my little brothers and sisters, wage slaves all, suffer as only brutes know how, gasp and spit out our lungs in the poisonous miasma of the mills so that wealthy robbers may squander the fruits of our toil on the pastimes of their degeneracy. It was not known to me that all those little working class children died so that their in-

nocent blod might be coined in the golden baubles and tinsels of debauched parasites. I knew not and I cared not, for my environment had made me a brute.

However, Evolution knows no limits in time or space. It never stands still but moves, (although imperceptibly) slowly doing its work, tugging here, pushing there and finally shifting the rock foundations from under the most time honored conceptions. True the world seems to move along much the same as it always did, especially to those benefited by the present social arrangement. Men come and go the same as always. There still is suffering, death and disease, also riches and poverty. Now as before workers are jobless, are denied life and happiness, work—like beasts and die in the gutter appealing dumbly out of hunted uncomprehending eyes. Yet no man at birth ever finds the world exactly as his predecessors left it and whether he knows this or not does not matter, for the fact remains. Birth and death succeed each other in a cycle of eternal change. Nothing issuing from the womb of time escapes the embrace of death. If men only knew this how much sooner would the Sun of Liberty rend asunder the thick curtain of dark clouds and shed its golden warm lovelight on the world.

One day came the awakening. I want to tell you how it happened. One night many years ago I was sitting in front of a little campfire in a clearing in the brush and close to the bank of a small stream. Such a place as is called by the migratory workers "A Jungles." The night was cold and I could well afford, therefore, to move in close where I could get the full benefit of the cheering warmth emanating from the red glow of the fire. As I sat there I watched the play of the crackling flames. Now fluttering low as if in agony, then leaping high, apparently endowed with the most abundant and exuberant life, they reminded me of the tide of Life. Did not that also ebb and flow, sinking under the crushing weight of misery, surging forward if this weight was removed? Thus I thought and I could see passing before my mind's eye all the episodes of my blighted and dark youth. It seemed to me that I could still hear the curses men showered on each other and see the light of hatred shine balefully in their eyes. Again I was bending over a racing machine, trying to keep up with the mad and soul racking pace. And I knew that it would only be a matter of a couple of years at the most, when the grind would kill me. My whole body aching with the exertion of this deadly toil, my head swimming in the roar of whirling wheels and the screech of trembling belts, I thought at times that I must go mad. A hell it was, such as no diseased preacher's brain ever concocted.

And then the terrible winter nights without so much as a stick of wood in the cold stove, when the storm used to howl outside like a demon gone mad, with the cold, a hostile beast, creaping in thru the cracks in the walls and winding its icy fingers around our bloodless and shivering bodies. In vain we hugged each other in close embrace shifting now to this, then to that position but always failing to keep warm under the filthy and torn rags covering our bodies. If only we had had plenty of rich food in our wretched frames so that new heat and energy might have been generated in our tissues and cells, enabling them to perform the functions necessary to our existence! But food there was not. Was it a wonder then that I saw my little brothers and sisters die, one by one, and their bones being carted away to a hole dug in the frozen ground.

So I meditated till all of a sudden the sound of voices put an end to my wanderings in a world which was of the past. A group of men assembled around fire, whom I had noticed earlier in the evening but paid no particular attention to, were discussing together in vehement, excited tones. I had seen these men before, not the same individuals but their type. Their manners, features, talk, the clothes they wore, all were familiar to me, for with them I had frozen in the ice and frost of the bleak north, the same as together we had had our flesh scorched under the glare of the tropics. Together we had battled hunger and thirst, and if their hands were gnarled and twisted out of all semblance to anything human, so were mine. I knew just as well as they did what it meant to be hounded and hunted by the bloodhounds and cutthroats of the laranorder gang; and to be worked like beasts, robbed and exploited, only to receive kicks and blows and curses, and nothing but abuse in the end, was an experience which we shared in common.

These men were migratory workers. They were sturdy and brawny, each and every mother's son of them! They were sons of the open plains. Their lungs had never known what it was to gasp and choke in the suffocating breath of the mills. In their bodies burned the fires of an untamed creation, and so they were fierce and rebellious the same as those fires. Homes or families they had none, nay, not even the small and ridiculous possessions, which make the wage slaves of the cities so conservative, hampered them in the war they are continuously forced to wage on a society which has declared them outlaws. And let me tell you right now: a mighty good thing it is that they have no ties to bind and gag them in this battle. For do you know that of all battles this is the most brutal, the most inhuman? It is not a struggle waged between men on one side and beasts on the other, not even between men of different tribes. No, it is a war to the death between brothers of one nation speaking the same language, holding dear the same customs and traditions, and with the same blood coursing thru their veins. Yes the same society which has given birth to these men has classed them with the wild beasts of the jungle and as such they must be shunned and exterminated if possible.

Therefore, good Christians, slide in place your bars and bolts, teach children to give them a wide berth, tell your police spies never to take their watchful and distrusting eyes off them and, above all, if

out of a job and unable to find other employment, they starve—make it none of your business os long as they hide their misery from the sight of your mansions and palaces.

On these workers rested the curse of a castrated and denatured society. On their head was continuously poured out the self-righteous wrath of all respectable people. It was the custom to hold them up to other workers as horrible examples of what laziness and degeneracy would do to a man. Also it used to be said that they never saved their money and it was considered great fun and an irrefutable vindication of the system's methods to ask them (when in the winter time they were starving and freezing, because out of work and unable to get any; "What did you do with your last summer's wages?"

And let me now tell you what their greatest crime is. "They are propertyless." This is a fact which utterly passes the comprehension of all god-fearing and law abiding people, because it turns topsy turvy such hoary, respectable well-beloved delusions as "Equality of Opportunity," "The Land of the free", etc., etc.

It is considered a self-evident fact that the migratory workers must take gratefully all the abuse and vituperations which daily rain down on their heads. If they show any symptoms of revolt or a tendency to organize for mutual self-protection, the yellow press owned by the Property Clique is set in motion to be used against them. This organ of slander, hysteria and intimidation is always willing to prostitute its lying and filthy sheets to the will of the moneyed interests. It is a very convenient arrangement. For do not think that the migratory workers never stir in revolt. Their hands may be gnarled and knotted, their language unpolished, their features hard and cold, their clothes soiled and worn. Yet underneath this outward appearance, the result of brutal neglect and abuse there throbs a heart which knows how to rejoice, love and suffer. Thus it happens that sometimes they flinch and quiver under their cross. A blind revolt it is. Still it shakes the foundations of Society, ror at such times the workers down their tools, climb out the mines, and desert the fields and forests. Then it is that the yellow press howls the loudest and of all the poisoned darts that at such times it sticks into the helpless flesh of the men without a home or country there is not a one so deadly as the letters "I. W. W.," appearing in big headlines on the front page of all the leading newspapers in the country.

Bending and swaying under the storm of prejudice and hatred which then sweeps the entire country the outcasts are forced to once more suffer the chains of slavery to be forged around their legs. After such outbreaks those who had escaped the jails and the bullets of the gunmen would find themselves blacklisted. To these the "Road" beckoned, and so one after the other they would vanish away without anybody ever knowing nor caring. For they had to fight the awful battle themselves.

The sheriff, the farmers, the posse, mosquitoes, alkali water, the rockpile, and roadgang, of these they thought nothing. They were evils to be tolerated as the inevitable accompaniments of the struggle bread. Much more serious, however, were the bloody battles with the hi-jacks, those hyenas of the harvest fields, who at night would sneak up on sleeping men in jungles and boxcars, flash a light on them and at the point of a gun take away their hard earned wages, the result of a whole season's killing toil in the blazing fields. And last, but not least, there was the battle fought with the shacks on tops of box cars, swaying and rocking fiercely in their lightning-like descent down the mountain slopes. Sometimes death, swift and sure, would strike unexpectedly and snuff out a life in the twinkling of an eye. No record was left to tell the tale to anybody who might have cared, except for the bloody and mangled remains sticking to the hard unfeeling steel and scattered along the tracks.

And yet these men support the weight of the world on their broad shoulders. Their Labor Power creates all wealth. They have done the pioneer work on the American Continent. They have laid down their lives and today sleep in unknown and forgotten graves that the people of this country might have the America as we know it to today. You can find them in the timberlands of the North West, cutting, hauling and sawing the lumber of the world's dwellings. In Colorado and Pennsylvania they dig the coal which supplies Society with its activity. They have left their tracks on the blazing deserts of Arizona and Nevada. They have laid the steel which now connects two oceans over a distance of two thousand miles and much more steel besides, that Society's great and throbbing Industrial Heart might not perish that it might have arteries thru which to pump its blood, railways along which the products of mine, mill and shop may be shipped to the remotest parts of the Social Organism.

Still, in spite of all, nobody had any use for them, except on those occasions when wealth might be amassed from the use of their physical strength and prowess.

Thus abused, trampled and spat upon, what shall the wealth creators of field, mine and forest do if they still want to be MEN.

Along these lines my thoughts had been running for the last hour ever since the discussion, the men were engaged in, had interrupted and put a stop to my earlier meditations. I had been thinking quick without any effort because in picturing to myself the life of the migratory workers I had only been living my own experiences over again.

I was watching. The men were engaged in a lively conversation. They were all talking, at the same time waving their arms wildly. I could see their gigantic formless shadows flitter hither and thither in the pale light shining on the surrounding brush. in the red glow of the flames they presented a weird spectacle. The picture seemed unreal. It did not match with the artificial and glttering life of big

cities. It was primitive and reminded one of a time when the world was young, when men had hairy bodies, slanting skulls and big jaws.

All of a sudden there was a lull in the loud chorus of voices. I got up and walked over, for the migratory workers had gathered around in a circle. In the centre of this circle were two men. One of them a tall young fellow, easily knowable by his whole appearance as a man who had camped in the open his whole life, was talking. The other fellow, apparently an interested listener, was thin and weak looking. He was one of those workers on whom the factory has left its indelible mark. As I listened to the young fellow this is what I heard:

"So you have come to this part of the country because you expected to find nothing but milk and honey. They told you about the good job, the healthy life in the country and the big money you would make, and like a boob you believed it all, didn't you? Listen, why did you come here? Because you are sick and tired with the life in the factories of the big cities, arn't you? But let me tell you one thing. If you expect to find conditions any better down here you are sadly mistaken. You have been fooled by the labor sharks back east with the most glowing promises, so that they might flood the labor market and beat down the wages.

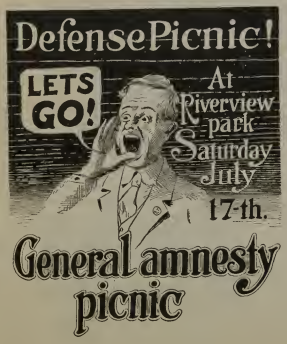
"Do you know what it means to work in the harvest fields for John Farmer. Take a look around at all these men. They know what I am talking about because they have done this work all their lives. They will tell you what it is. There is nothing but harships and misery, I tell you. You work long hours, from sunrise till sunset. If the threshing engine breaks down for only a few minutes you are docked. You walk to and from the job on your own time. The straw stack is good enough for a man. I used to think myself that I could make a few hundred dollars in a short time working in the harvest fields, but now I know better for with the wet weather, the money spent on railway fare and the high rates paid for food and lodging in the expensive hotels of the small country towns, there is damn little left, and you may consider yourself lucky if you come out with any money at all."

Here the youthful speaker stopped and making a wide sweeping movement, with one of his hands, taking in all those standing around, he presently continued:

"But you get all that is coming to you, all of you. Nobody ever gives you anything. The good things of life have to be fought for and as long as you are willing to be slaves no matter where you go, you will find the same conditions, long hours and low wages. Say, let me tell you, under this system a worker is nothing but a slave. A wage slave. He owns nothing but his labor power. The boss owns it all. The mills, mines, and shops, all the world's wealth (which you and I create) are his. The only way, therefore, that the worker can live is by his work. But he can only work with tools and on a job. So he goes to a job and packs his labor power with him. But as you remember, the job is owned by the boss. So it is up to the boss whether the worker shall work and eat or not. Generally the boss gives him a job because he knows that out of the worker's labor power he can extract all the luxury and wealth which enables him and his kind to live like parasites on the backs of the toilers, and here is the way it is worked. The capitalist puts the worker to work to create wealth for him. But the hen who lays the golden eggs must be fed to enable her to lay more eggs. So the boss pays his worker a wage. The size of wages is determined by the amount and quality of the necessities of life required by the workers to live. If they are satisfied with little and with inferior values, wages will be correspondingly low. On the other hand wages rise when the workers are determined to live like men instead of beasts. But no matter how high or how low the wages, as long as workers sell their labor power (and incidentally their bodies) in the open market to the highest bidder, they are slaves, for they never receive the full value of what they produce, because . . . let me tell you what happens after the worker has sold his labor power to a master.

"When the boss buys the worker's labor power, say, by the day, he uses it by making the worker work eight, ten and twelve hours a day for him as he sees fit, always taking care, however, that the worker works long enough to produce a value many times that of the wages which he was given for the use of his labor power. That part of his product which the worker creates over and above his wages is called surplus value, and herein lies the origin of all of the wealth of the capitalist class. They got it by robbing the workers and no other way. There is a struggle on, a class struggle, between capitalists and workers, the workers fighting to raise their wages and cut into their masters' surplus value the capitalists trying to increase their surplus value and beat down the wages.

I told you that the capitalists rob the workers of all they produce and I say: You cannot blame them because it is human nature to hold onto power. The fault lies wholly with the workers. If a start in the right direction is to be made it must come from them because they have nothing to lose but their chains and a world to gain, while the masters have a world to lose. As long as you and the other fellows ALLOW your masters to crush you, YOU and nobody else are to blame.



And yet, look at the power you hold in your hands if you only knew how to use it. For, being the creators of all wealth, if you stop work and lay down your tools, the nation dies and your mastres are ruined economically. Let me ask you one question. What will you do about it? I am telling you that you cannot hope to ever start up in business and become capitalists, because, as I already told you, your masters have a monopoly on all the wealth of the nation, and it would therefore be ridiculous to expect that your few nickels

and dimes can compete successfully with their millions and billions.

Listen, do you know that the capitalists are organized and by their organization get the best of you because it enables them to dictate to you what conditions you shall work under? Do you know, furthermore, that they set the price on the commodities they sell also through their organization? Now, remember what I told you about the commodity you are selling, your labor power. I said that you leave the price for which you sell it to conditions. That means, if labor is scarce you receive high wages. Now, if that is so, what is the matter with making your labor scarce artificially by all agreeing not to sell your labor power until you get for it the price you demand. This is what your masters do, too, when they are selling their commodities. But to do this you must organize, organize into One Big Union of all workers, for then only will the masters recognize your power and see that it is impossible to replace the millions upon millions of you with other men. And the One Big Union I have been telling you about is the I. W. W. You have heard all about it. It is as wide as the world and growing still. It is your organization and you can make it what it ought to be, an organization which will shorten hours, increase wages, and, finally, put the workers in control of their jobs, thus setting them free from slavery and misery. For, as I told you, as long as the capitalists are in control of the jobs and a worker is compelled to sell his labor power, then, no matter how high his wages, he is not free; he is still a slave, a wage slave.

So far the I. W. W. has already accomplished wonders for the workers all over the country, and the very fact that it is hated and feared and lied about by the master class and all "respectable" people proves to you that it is an organization which fights for the workers and not the capitalists. And let me tell you one more thing before finally concluding. If you want good conditions this coming summer in the harvest fields, if you want to make enough money to live next winter, when the work shuts down, if you don't want the hayseed to dock you every time his old engine breaks down, if you do not like to sleep with the pigs, if you want shorter hours, ham and eggs and porkchops for breakfast, and if, finally, after your season's work is over, you want to ride home on the cushions instead of the bumpers, do not expect Jesus or anybody else to do it for you. You must fight for yourself if you want to be worthy of the name of men. You must join the I. W. W., and, as soon as you have joined, line up the other man working alongside of you on the threshing rig, so that, if necessary, we may make our labor scarce to enforce our demands. This will have to be done, because the way things look, there will be many men in the fields this year to harvest the crops—yes, too many, the way things look."

Here the young fellow ceased speaking. And as for myself, I went up to an I. W. W. delegate and told him to write me out a card in the Wobblies, for at last I had risen from my deep and dark slumber. I had seen the light.

*This is the Place Where Chicago Workers Will Go on JULY 17th to Demand the Release of Our Prisoners*

**Among the speakers are**

**W. F. Dunne,**
**Editor Butte Daily Bulletin**
**Wm. D. Haywood**
**Ralph Chaplin**
**Charles Krieger**

**A wonderful program assured.**

# What I Read in the Paper

By Card No. 41894
Los Angeles County Jail (San Quentin-bound), April 30, 1920

I read in the paper today
All about Bluebeard Watson
And his twenty-five wives
And how he killed four of them
And that the Los Angeles teachers
Are all "for" Hoover,
Who will bring down
The price of sugar
So "they" say—
The mysterious "they"—
And then I read
How a bank robber
Attempted suicide
In the county jail
And that agents of
The Department of "Justice"
Were going to catch
All the "Reds"
That they had not caught
In previous raids
On May first.
And I saw
(By the same paper)
That Jack Dempsey
Is in trim
For his picture was there
Four times,
And I wondered how
He is coming out with
That charge about evading
The draft
And why he was not in
Leavenworth or in
The County Jail with me.
And there was a whole
Lot more in the paper
About bankers, and workers,
And work, and economizing,
For the latter.
And all about Baseball
And Golf and other sports
And sugar hoarding and
Potatoes. And
A good many divorces
And all about the
Conference at
San Remo, where
All the world's troubles were
Settled. And all about
Mexico. And more
Divorces. And pictures
of wives, and society "belles"
And Hoover's platform
And a great deal more
Sugar thirty-one cents
A pound.
Switchmen on strike
Trying to keep up
With prices set
By profiteers
And miners put in jail
For striking,
And switchmen, too.
For interfering with
Production and Distribution
Of the Necessities of Life.
But in Louisville
(Kentucky) The profiteers
Went free
Because the Lever act
Could not be applied
To THEM.
But there was nothing
(In the same paper)
About any arrest
Of any profiteers,
Exploiters of Labor
(Same family)
Who are the cause
Of all the chaos,
Strikes and suffering.
And there was nothing
At all in favor
About the One Big Union,
For all the workers,
Which will cure
Their ills.
But it is true
There is a scarcity
Of newsprint paper
And space is scarce,
And the workers are
Too tired anyhow
To read it.

WE ARE IN HERE
FOR YOU, YOU ARE
OUT THERE FOR US

# The Ideals of the I. W. W.

By JUSTUS EBERT

*("The Ideals of the I. W. W." is Chapter VI of a new 100 page book by Justus Ebert, which the I. W. W. is going to issue immediately. It is already half set up in type, and will be out as quickly as our printing plant can turn it out. It is part of the book which we had originally intended to call "The I. W. W. Handbook." The Educational Board provided for by the last I. W. W. convention, recently appointed by the General Executive Board, has, however, after considering the matter, decided to name this book "The I. W. W. in Theory and Practice." The price will be fifty cents for single copies and $25.00 per hundred for bundle orders. We know that all I.W.W. organizations and many other bodies, as well as the individual members and great numbers outside our ranks, will want this book. It is going to sell by the tens of thousands from the start. In order to enable us to better judge the size of the first edition we hereby urgently request all concerned to immediately take up the matter of ordering a supply. Make your order as big as your means will allow. Cash with orders is not required except for individual copies, but would be greatly appreciated. It will facilitate the financing of the publishing of this book and many other to follow in the near future.)*

The ideals of the I. W. W. are ethical in character. They are ideals of justice, fraternity and brotherhood the world over. They spring from the injustices of capitalism, which require the surrender of labor's product to capitalist profits, interest and rent, and, further, compel the subversion of all of labor's genius and aspirations to the support of the system that viciously despoils and destroys them, as the occasion demands. Against the injustices of capitalism, with their exactions of labor's product and labor's life, working class organizations have always warred, until, now they realize, as never before, that it is only through the abolition of capitalism itself that they can escape from them.

The I. W. W. attempts to give this realization practical form. The I. W. W. ideal is that of a working class so organized industrially as to be in a position to take over industry and thereby abolish the Prussianism of the capitalist class the world over; when the necessity for such a course arises, as it appears to be doing more pronouncedly every day.

The ideal of the I. W. W. is industry by, for, and of the workers—in a word, industrial democracy. Through a democratic industrial system, the I. W. W. aims, not to destroy industry, but to eliminate its capitalistic exploitation, thereby making it a more actual social institution in every respect than it is at present. Such a system throws the responsibility for its maintenance directly on the bulk of society engaged therein, viz., the workers themselves. Thus, the industrial democracy of the I. W. W. means working class liberation from capitalist thralldom. It means untold benefits to society.

### A New Social Rebirth

Every class liberation has caused a vast social awakening and rebirth. When the embryonic capitalist class shook off the trammels of the guild system and the divine rights of kings, social development took a mighty leap forward, the greatest in history. When the working class shakes off the incubus of capitalism and the divine rights of the capitalist class, it, too, will give an unprecedented impetus to social progress. For then will be released the flood of latent possibilities now dammed up by the limitations and proscriptions of capitalism—sweeping many so-called problems before it.

### Industrial Democracy Already Forming

Already is the organized working class regarded as the forerunner of the new industrial democracy, in which the extremes of privileged wealth and power for the few and the poverty-stricken slavery and denial of opportunity for the many will be transformed into the greatest development of all on a basis of economic and social equality.

Already is the working class showing great executive and organizing ability, great grasp and understanding of weighty problems, in its co-operative, political and labor movements. These involve billions of capital and human happiness untold.

Already is the working class demonstrating the possession of great statesmanship in its conferences and conflicts with governments and capitalists, on strike issues and questions of national and international importance. The increase in ability in this respect is only matched by the increase in determination to prevail.

Already is the working class developing great personalities that in other times might have been the engineers, generals, orators, pets, etc. of those times, men, whose names glow with pride in the imagination and heart of the working men who appreciate both the greatness and the weakness of mankind.

Already is the working class creating a press, a forum, a drama, a literature, an art of its own—a network of institutions and activities, a many-sided culture, a dawning epoch, whose penetrating influences bring ever more talent to its expansion, to the great detriment of capitalist culture and the slow destruction of the capitalist epoch itself.

### Labor Able to Re-create Society

It will not do for capitalism to cry out that labor is not competent to undertake the great task of social transformation, for it is on the competency of hired labor of all degrees and kinds that capitalism now depends. Only, capitalist policy destroys the competency of labor, just as it destroys the products of the soil, in order to keep up profits.

Nor will it do for capitalism to say that labor is without either ability or genius. For capitalism, in order to secure labor's support, by bribes of place and position, parades the names of railroad presidents and inventors who originally sprang from the ranks of the working class. The working class is

now as always a mine of ability and genius—a pay streak that always pans out well for the capitalists, and that will pan out well for future society.

Nor will it avail capitalism any to claim that the working class is lacking in either morality, responsibility or thrift. Without these virtues in the working class capitalism itself could not endure a moment. It is working class honesty and fidelity to duty that keeps capitalist billions intact and enables the railroads and all the other enterprises to run on schedule time and in due order. As for thrift, whose are the savings in banks? who pays the industrial life insurance premiums? who joins the building and loan associations, the co-operative societies and the credit unions? The capitalist press answer is, the wage earners!

All that we can say is "God help capitalist property if ever the working class get the capitalist idea of morality, responsibility and thrift. For then society will be an even worse chaos and slaughter house than capitalist virtue has already made it."

### I. W. W. Ideal a Well-Rounded One

The ideal of the I. W. W. is one of more rounded development for all. To this end, it aims to secure more leisure and diversified employment. Just as many able men find recreation and expansion in the pursuit of many vocations and avocations, so it is the ideal of the I. W. W. to create conditions admitting of a many-sided growth in the average worker. By these means, the average worker will become a better judge of questions affecting industry and life in general. Combined with his own varied abilities, will be other and like abilities, to the advantage of all concerned.

This rounded development is already beginning in the working class. In working class life, many workers may be found who are not only proficient in their own particular industrial specialty, but who are, in addition, organizers, speakers, parliamentarians, editors, writers, poets, musicians, etc. etc. The varied requirements of industry, with their seasonal and uncertain employment, give rise to another variety of many-sided workers. So also does the ambition to escape wage slavery give rise to students of all kinds among the working class.

In brief, it may be said that the more highly developed worker of the future is already in the making. The ideal of the I. W. W. is to continue the tendencies thus begun, especially so as to transform the workers now employed in brain-benumbing and soul-destroying occupations into better material for the new society.

Education is not the only I. W. W. function. Preparation is another one.

### Capitalism Itself Helps Revolution

Capitalism itself helps along the revolutionary process, though unwillingly and unconsciously. Its profits must ever be replenished, its property abnormally increased. To these ends, it educates even the lowest strata of the workers. And higher up on the mountain tops, it makes scientists and technicians of those who toil in order that it alone may accumulate and become all-powerful.

The process of educating the worker under capitalism is revolutionary. It not only transforms the brain of the workers but also their outlooks and aspirations. They soon perceive that on them depends capitalist civilization and that without them it could not exist. Consequently, the modern working class tends steadily to wish to possess the entire contents of capitalism, power and all. Not for themselves alone, to the subjugation and degradation of others, but for the good of all; for the fraternity and brotherhood of all.

Where, in ancient Rome and Greece, the philosophers and geniuses, like Aesop, became slaves, under capitalism, the slaves—their name is Legion—become philosophers and geniuses. They labor for a new social rebirth, that, in the very nature of social evolution cannot be denied to them, except at the peril of a reversion to savagery for the entire human race. Humanity rises and falls with the working class.

### Emancipation Rich in Possibilities

The liberation of the working class from the thralldom of capitalism is rich in beneficial possibilities. Consider the harm now done to productive labor by capitalism. Capitalism coerces labor. It denies to labor the right to organize or to bargain collectively. The result is a continuous warfare between capital and labor, that tends to the increased demoralization of industry, and incredible losses to society. Remove capitalism, give to labor its own products, and the incentive thus created will be productive of greater industrial output and social security. It will save society from the chaos now threatening, because of the increasing intensity of the struggle between the capitalist and the working classes.

Society must, perforce, recognize that coerced, dissatisfied labor is never efficient labor. Nor is the labor that intuitively, perhaps unconsciously, feels the degradation of capitalist paternalism. Nor, further yet, is monotonous, machine-driven labor. Labor that is without incentive, self-respect or prospects of development, is wasteful labor. It is discontented labor, perhaps not turbulently nor violently, but instinctively. Capitalism is sabotaging itself in the creation of modern, discontented labor. And though it lashes labor with whips of scorpions —nay, because it so lashes labor—will its own sabotaging tendencies increase. Capitalism is itself, automatically, destructive of labor's productivity and labor's loyalty.

Release labor from thankless capitalism! Release labor from paternalistic capitalism! Release labor from oppressive capitalism! Release labor from degrading, enslaving capitalism, and you release forces for social good that only the workingman who knows, in his own person, the repression of capitalism, can dream of!

Give labor its own mastery! Throw labor on its

own responsibility! Give labor a sense of manhood and womanhood of infinite possibilities—do all this, and you give to society an impetus to productivity that will be unprecedented. History—the history of the abolition of chattel slavery and of feudalism—approves such action in advance. For such history is the history of great social impetus, thanks to class liberation!

### I. W. W. Not State Socialism

The ideals of the I. W. W. are not the ideals of state socialism. State socialism is based on political representation. It is bureaucratic. Its function is not to administer but to govern. Its aim is to raise the levies needed for army and navy expenditures. It tends to replace the oppression of the private capitalist with that of the authority of the state. It makes the state the employer and capitalist. It makes the politician the ruler. It insures the income of the capitalist bondholders who finance it. It is pro-capitalist and anti-proletarian.

### I. W. W. Industrial Administration

The ideals of the I. W. W. are the ideals of industrial administration. The industrial republic of the I. W. W. is based on occupational or industrial representation. Its function is to bring together all the factors of industry, in order to meet industrial needs and fulfill social requirements. Its concern is not to repress, but to develop; not to govern, but to adjust—to administer according to the wisdom of the workers most basically and directly concerned. It makes the workers their own employers, their own capitalists, their own beneficiaries.

The ideals of the I. W. W. are not ideals of mob government. To scientists and technicians will go the problems of chemistry and management, to be worked out in co-operation with all the labor elements involved. Artists, sculptors, architects, will concern themselves with art, sculpture, architecture; teachers with education, railroad men with transportation, the factory workers with the factory. All will be organized according to their industry and entitled to representation in the industrial republic on the basis of their employment.

### I. W. W. Encourages Industrial Study

The ideals of the I. W. W. are such as to encourage and require a study of industry in all its phases. It has given a new interest to technology, as a result, that cannot fail to be of far-reaching value to the new society coming. As a beginning, several of the I. W. W. industrial unions have organized a Bureau of Industrial Research to prepare handbooks on each of the great industries of the world, simply written and sold at cost price.

This work has already taken practical shape in the woolen industry. The I. W. W. members employed therein have classified all of the woolen factories in the country, together with their location, nearness to sources of supplies and markets, annual output, etc. They have classified these data with a view to their practical use, believing that they will be necessary to enable successful management by the workers, when the occasion requires.

The conclusion of I. W. W. textile studies is that many of the woolen factories may be disbanded or consolidated, and an increase of 40 per cent in output effected. They refuse to give this information to employers now, as they want its benefits to go to the workers' industrial democracy instead of the capitalist exploiters of their genius.

The slogan, "Get wise to your industry," is one repeatedly sounded in I. W. W. press and discussion.

### I. W. W. a Tendency, Not a Theory

The ideals of the I. W. W. are not the ideals of theory, but of tendencies. In this country, for instance, before the war, the teachers' union demanded "democracy in education and education in democracy." Education, in other words, should be more by, of and for educators, in the interests of all, than by, and of politicians, business men and intellectual slaves, for the perpetuation of capitalism. Since the war, the Plumb plan has appeared, with its provision for the part management of the railroads by classified railroad workers.

Other and more striking phenomena, indicating the rise of I. W. W. ideals in the tendencies of the day, are to be observed in the extra-political round-table conferences at Washington, D. C., called to allay labor unrest. But still more striking is the 1919 coal crisis, wherein we saw a titanic struggle whose sole issue was the administration of the coal industry on a basis satisfactory to labor. This issue required the setting aside of the usual legislative and private procedure, and called forth extraordinary measures. In fact, industrial problems tend to become ever more extra-political, legal and ethical in their adjustment and solution.

This same development toward the realization of the I. W. W. idealism is world-wide. What the teachers and railroad workers are striving to do here, the railroad men, postal employes, miners, teachers, actors and others are striving to do in England, Italy and France. In Russia, they have achieved what their brothers elsewhere are yearning to do—the latter now more than ever before—thanks to the stimulation of Russian example.

### Italian and U. S. Railroaders Sustain I. W. W. Idealism

The urge toward the idealism of the I. W. W. is to be found in the increasing self-knowledge of the workers. To this may be added an increasing recognition of the inefficiency, corruption and inhumanity of capitalism. In Italy, in 1910, the Union of Italian Railroaders, inspired by Socialist ideals and the bad conditions of the railroad system, proclaimed themselves ready to operate the railroads. Their contentions sound almost like those of the United States railroad men of the present day. In their manifestoes they alleged that the state had proved its utter incapacity for managing the railroads, because, primarily of graft. Our railroaders say, because, primarily, of looting by private finan-

cial groups. The Italians further stated that the technical incompetency and deficiency of the bureaucratic administration called to run the enterprise had demoralized the whole passenger and freight traffic and caused a growing deficit in the treasury of the state. Our railroaders allege the very same condition, which, they say, was created for the purpose of causing a sentiment favorable to the return of the railroads to private control. The Italian railroaders of 1910 go on to declare that while the state has created thousands of new sinecures and highly paid offices, it has utterly neglected the technical part of the system. The American 1919 repitition is almost identically the same. The Italian railroaders clinch the matter by contending that, on the other hand, the industrially organized railroad men have learned through continuous discussion of the details of the system, the principles of organizing, managing, and combining its factors. Their constructive and analytic criticism disclosed all the flaws of the railroad administration, proved that the state is an uneconomical institution, and demonstrated all the detail necessary to a successful reorganization of the railroads. They indicated that they must get back, above all, their whole liberty, and that in order to secure from the railroads greater benefits for the public they must become personally interested in the enterprise. This is practically the American railroaders' approach to and solution of the railroad problem, also. It is the way labor approaches all modern problems, through its own direct participation and solution on the job—its own direct action, growing out of its own contact with conditions and the recognition of the need for its own organized initiative.

### Capitalism Forces I. W. W. Forward

In this country, labor is not organized to take over and run industry in order to overcome capitalist inefficiency. American labor, outside of the I. W. W., is organized only to bargain with the capitalists, according to crafts. It is not organized industrially to take over industry. However, it will be forced, nay, is being forced, to abandon that misconception of labor organization. Its own defeats are causing it to recognize the closely knit character of the modern industrial system and to organize accordingly, within it, for its control and management in the interests of society by the industrially organized workers. In this work, labor everywhere will be aided by the growing paralysis of modern life, through capitalist incompetency and principles. The latter, in the face of increasing technical knowledge, tend to increase social dangers by stimulating high prices, inflation, strikes, overproduction, unemployment, crises, and, last but most important and sinister of all, wars.

The prospects of the future, judged by the horrors of the past, are that society will either have to overturn capitalism or be overturned by it. With the same capitalist tendencies at work in world struggles as formerly, with Japan taking the place of Germany as the imperialist-capitalist goat, because of its grasp on Asia, there is need for a constructive evolutionary plan by which society may be saved and civilization actually restored once more. American labor, as represented by the A. F. of L., has no plan. So far as the A. F. of L. is concerned, society can go to hell. It is the I. W. W. only that foresees and prepares against just such a disaster.

The I. W. W. plan is evolutionary, peaceful. Capitalism alone will make it revolutionary and violent. All signs point that way. The age-old struggle between the new and the old it being repeated once more on an unprecedented scale. The brand of Cain will be on capitalism's head in the future as in the past.

### I. W. W. Idealism Colossal

The idealism of the I. W. W. is immense in its magnitude. It strides more continents than the Colossus of Rhodes. Its heralds are the seafarers on the waters of the earth, the cables beneath, and the aeroplane in the heavens above. No transatlantic engineer throws a throttle but what he puts steam not only into his engine but into the boiler of the I. W. W. No Leviathan plows the ocean except to carry the argosies of the I. W. W. to a world constantly growing smaller and more neighborly in its popular inclinations. The world was Tom Paine's country, to do good his religion. The I. W. W. has the same fatherland as Tom Paine, the same ethical aspirations.

To subjugate the world was the dream of Alexander, Caesar and Kaiser Wilhelm. To free the world from subjugation is that of the I. W. W. To carry on, not in world-slaughter, but in world-emancipation, is the I. W. W. object. To create, not a world-republic of letters, but one of labor, such is the I. W. W. mission, aided by world development.

### I. W. W. Comes to Build Up, Not Tear Down

The ideals of the I. W. W. let it be said again and again, are constructive, not destructive. The I. W. W. aims to build up, not to tear down. It erects the new society on material provided by the old. It carries progress to higher material and ethical planes. It retains giant, co-operative industry, with its profuse wealth-production, for all, because it is only made possible by all, and not by the few who now exploit it and grow powerful and tyrannical from the exploitation.

The ideals of the I. W. W. are co-operative, not competitive. They are social, not individualistic. The I. W. W. views man as at war with nature and compelled to unite to wrest from nature the secret of its forces and the means for man's own subsistence. Only as man ceases to war with man will nature yield up her secrets and man triumph over necessity. To the degree that man does this does man pass from the stage of beastly materialism to a far-flung brotherhood, unsurpassed and unsung in all history.

The ideals of the I. W. W. aim to develop well-being in all of its phases. The I. W. W. aims to abolish poverty. To poverty, the I. W. W. opposes the increasing fecundity of nature under scientific exploitation and the increasing productivity of the mechanical genius of man. The I. W. W. aims to abolish class hatred. To class hatred, the I. W. W. opposes a society made one by common, fraternal interests. The I. W. W. aims to abolish war. To war, the I. W. W. opposes the cementing influences of world-industry, aided by the growing world-consciousness of the world's workers.

The ideals of the I. W. W. are real, not utopian. They have their origin, their embryo, in capitalist development. They aim to continue this development further for the good of all instead of the aggrandizement of a few. The capitalists are now the only romanticists, the only utopians. They believe the impossible and imagine the impossible. Though they know their system evolved out of previous systems, they hug the fond delusion that evolution will stop with it. And they are called "hard-headed men." That's what they are, indeed. Their "ivory domes" are so hard that the absurdity of their ideas will never penetrate to their alleged brains, or so-called vision.

### The Immortality of Idealism

Idealism is irrepressible. It never dies. The idealism of the I. W. W. cannot be repressed, because it is the idealism of a new epoch already challenging and overthrowing that of the old. The I. W. W. has suffered martyrdom and still thrives. Its attempts to revitalize the initiative and the energy of tens of millions the world over is an attempt to which it gives foremost expression but not birth. It is the working class themselves the world over, reacting from the futilities and horrors of capitalism, that have given birth to the movement for industrial democracy, industrial fraternity and industrial communism. On them, and on the forces behind them, depends this great movement. You may kill the I. W. W. but you can't kill them.

History should cause the oppressors of the I. W. W. to pause. The scaffold never yet killed an ideal, or throttled a movement inherent in the nature of events or in the hearts and heads of mankind. The early Christians were massacred. The Appian Way was lit up by torches made of live Christians. The Christians were butchered to make a Roman holiday. Despite this fiendish, diabolical treatment, Christianity flourished and grew. And though Constantine, in order to destroy its revolutionary features, made a state religion of it, the communism of Christ now reasserts itself on a more practical and grander scale in the communism of Lenin.

### John Brown's Soul Still Marches On

Lovejoy's press was thrown into the river and he himself was afterwards murdered. William Lloyd Garrison was dragged through Boston streets with a rope around his neck. John Brown was hanged. Yet his soul marched on, not only to the abolition of chattel slavery, but of wage slavery, too; John Brown still lives, reincarnated in the abolitionists of modern times.

For over 700 years has Ireland been oppressed and devastated. Yet Irish idealism lives unconquered. The Emmets of yesterday are replaced by the Connollys of today. During the past year, British imperialism claimed forty million victims in India. Instead of destroying Indian idealism, this staggering murder but increases it, giving it a heroism and grandeur unparalleled. Tens of millions more have died in the world war, on the battlefields, and as a result of the various economic blockades. Nevertheless, despite this appalling blight, humanity everywhere raises its crushed spirits and aspires to end such monstrosities once more. To the communism of capital the world over, with its rapine and slaughter for profit and property, it opposes the communism of labor, with its brotherhood of all and its peace for all.

### Idealism Always Inspiring

Idealism is historic. Though it never teaches oppression anything, it always inspires the oppressed. And it is the idealism of the ages that inspires the I. W. W., backed by modern imperialist-capitalist tendencies. So long as the latter have nothing but a huge slaughter house to offer humanity, for the profit of a few, so long will humanity endeavor to end them, in the interest of all.

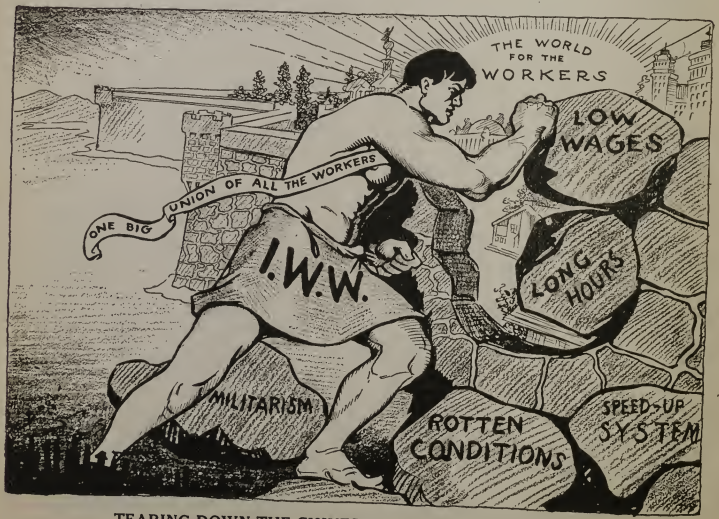
Notwithstanding all the slanders cast upon it, by oppressors who misuse and coerce it, human nature is not so vile as to tolerate the foulness of capitalist "civilization' indefinitely. Capitalism has been weighed and found wanting. The handwriting is on the wall. The new era already casts its shadows before.

So the I. W. W. looks forward, not backward, buoyed alike by the sacrifices of the past, the prospects of the present and the possibilities of the future. It believes that, no matter what happens, evolution will continue to evolve and revolution to revolve. All things live, run their appointed course and die. Life is a transition to a better existence. So says theology. So says the I. W. W. Brief has been the span of capitalism's existence, barely 150 years since its first pronounced appearances. And today sees it nearly undone, struggling desperately to survive, and taking on the look of galvanic life rather than new vitality. And the new society looms up large ahead. History may write its grandest records on its pages.

The present cannot long endure. Its antecedents are against it. All precedents, as the lawyers say, are against it. Co-operative in character and depending on all for existence, capitalist exploitation must be eliminated from co-operative industry, in the interests of all.

Under all of the foregoing circumstances, to lynch, tar and feather, outlaw and otherwise maltreat the I. W. W. will avail capitalism nothing. Persecution warms the hearts of men toward the

I. W. W. Persecution causes men to lend ear to the I. W. W. Persecution makes proselytes for the I. W. W. more numerously than it makes martyrs. It is this overproduction of proselytes that makes the business of ideal extermination humanly impossible. And it is this overproduction that will finally submerge capitalist exploitation everywhere.



### The I. W. W. A Call to the Best in Man

The I. W. W. is a call to the wise, the kind, the generous of all mankind, especially to the working class. It is not a bravado's defiance to social development, but the cumulative reasoning of many great minds, perhaps crudely applied, but at least possessed of all their elemental strength. It is germinal, rather than full-grown. It is a beginning rather than a completed article. It is raw rather than refined, real rather than sophisticated. Apparently intricate, yet simple; reckless, yet with reason. It is a wonderful manifestation, a multi-compound of psychology, economics, sociology, government, art, poetry, ethics and religion. Yes, religion! Fanatical, sublime! The religion that makes living its creed, that would endow men with the attributes of Gods instead of monsters; that has its Christs in its Littles and Everests and its Calvary on the railroad bridges from which they were dangled; that knows first causes, appreciates the inner personality, the soul, of labor and that seeks the Kingdom of Heaven here on earth in a more beautiful existence for all men.

Dreamers! yes! So were the communists of the early Christian church. So were the abolitionists of chattel slavery. So were the builders of the capitalist structure, now cracked at the foundation and in danger of collapse, for, what is it to dream if not to achieve?

The I. W. W. is destined to achieve, unless all signs fail.

---

TEARING DOWN THE CHINESE WALL OF CAPITALISM.

# International Impostors

By JOHN SANDGREN

"The Executive Committee of the Amsterdam Sub Bureau of the Communist International" is the name of a body which some time ago sent out a circular on the arrests of communists in the United States.

In the course of this circular occurs the following phrase: "It is the glorious task of the American Communists to carry on, on broader lines, **the task that the I. W. W. first took in hand**, to lead the masses against capitalism; to become the nucleus, the heart and the brain of a strong and determined working class movement."

This circular, when read by American workers who are familiar both with the I. W. W. and the so-called "communist" party, will provoke only a faint smile. The reader immediately recognizes under the statement the work of the faking unscrupulous politician who far away from home has tried to bluff people into accepting him as a powerful man with a powerful movement behind him. He considers it merely as a piece of harmless self-boost, in style with what we hear from self-possessed and assertive street-corner vendors of trick cuff buttons, etc.

In foreign countries the paragraph in question is apt to have a different effect on the unsuspecting reader. He is apt to get the belief that the I. W. W. is a back number, a has-been, while the "communist" party is "the whole cheese." And that is what the statement originally was intended for. It is a piece of unscrupulous self-advertising at the expense of truth.

How did the international bureau in question happen to get this conception of the situation in America, assuming that the statement was made in good faith? The following is probably the explanation:

Louis C. Fraina, "International Secretary" of the "Communist" Party of America, has recently been in Amsterdam and participated in a sort of international conference, of which he renders report in the First of May number of "The Communist." From his report to his constituents we gather the following:

> The conference adopted a thesis on Unionism which I prepared and introduced in the name of the Communist Party of America and which was adopted unanimously. This thesis constitutes the first authoritative utterance of the international on the communist conception of unionism (in general it agrees with a declaration of G. Zinoviev on Unionism), and it indicates, moreover, that the conception of unionism developed by the Communist Party of America **(which has been misrepresented and stupidly attacked equally by the I. W. W. and the Socialist Labor Party)** is the identical conception of the communist international. * * *

Then follows a retraction of the delegate's previous stand on trades unionism up to a year ago as a member of the Socialist Party (for the "communism" of these chickens is no older than that parts of the old shell are still sticking to their back) and an endorsement of industrial unionism to a certain extent.

And then come "the broader lines," on which "the American communists" are going to carry on "the task that the I. W. W. first took in hand." Listen:

> This struggle against trade unionism must proceed by means of the communist party's general agitation to drive the unions to more revolutionary action, the formation of extra-union organizations such as the shop stewards, workers' committees and economic workers' councils, the organization of direct branches of the communist party in the shops, mills and mines, and the construction of industrial unions.

It must be admitted that these lines are broad enough, and they would be impressive, also, if it were not for the fact that it is all the merest bunk and bluff, the mouthings of impostors who are desperately trying for a place on the back of labor.

Everybody here in America knows the "communist" parties and who they are. It is only about a year ago that they were part and parcel of the Socialist party. In a word, the leaders were and are politicians, scheming and intriguing politicians, always fighting for place and power. For the labor unions they had no use. They distracted the workers' attention from their little red card scheme with 25 cents a month, and from the petty political game they were playing. However, they tried to keep in the good graces of the craft unionists for the sake of their vote. The I. W. W. being non-political and mostly voteless, was treated with the contempt that these word-mongers know so well how to bestow on all they can get no benefit from.

Well, **the big thing** happened in Russia. This influenced greatly the foreign membership of the Socialist Party, which was practically voteless, particularly the Slavic language federations. They became unruly. The example of the events in Russia made them believe that all that was needed was to repeat in America the events of Russia. They became "bolsheviks." They became industrial unionists, seeing that the Russian bolsheviks were compelled to suddenly endorse the I. W. W. program for the purpose of social reconstruction.

This trend of events forced the ambitious, career-hunting, notoriety-seeking leaders of the Socialist Party to conceive a sudden love for industrial unionism, particularly as the persistent I. W. W. agitation was increasing in favor with the A. F. of L. membership. Not a love for the I. W. W., no, indeed, but for industrial unionism in the abstract. Not for the unions which American workers under the I. W. W. banner had formed in the last dozen years or more, nor for their methods and institutions, but for some foreign (and on American soil untried) committees and councils. The I. W. W. is being

referred to in slurring tones as being "stupid," etc. Industrial unionism became a plank in a political platform, designed to attract industrial unionists to the political mass-action scheme. The "communist" politicians are like any other politician. They incorporate in their platform the demands of those whose support they want.

Here we are, we the men of the fields, of the mines, of the forests, of the docks, of the factories of this country; here we are, we, the originators of an industrial union movement which is sweeping over the world at the present time; here we are, we the men who have borne the brunt of the class battle all these years, while the Socialist politicians betrayed us and threw mud at us; here we are, forging along with mighty power—and here comes a little, hitherto unknown, political gnat, draped in the red flag of communism and strutting with Lenin-whiskers, to make the duping game more sure, only twelve months out of the Socialist Party mud-puddle, and never to our knowledge a bona fide wage worker or a union man, and proceeds to tell us, in fact, that we know nothing about industrial unionism, and that he and his clique of political adventurers and agents of the department of justice are going to build a union system in competition with us, on broader lines; furthermore, carrying this bluff to foreign countries. Never was the red flag so abused by impostors.

Everybody here in America knows that these self-styled "communists" have no footing outside a small number of soviet maniacs of whom most are unable to read English. How is this conglomeration, which enjoys no confidence among the American workers, going to carry out their so-called union program?

Their union program is a fake; it is not seriously meant; it is not conceived in the interest of the workers; it is merely a cheap bid for the support of the ignorant masses who are so easily led to follow any faker who screams "One Big Union." What these adventurers want to lead the masses into is insurrection; in other words, they want to lead them up against the machine guns in order to capture the government buildings for political adventurers who have gotten tired of the slow process of the ballot box.

They unconsciously admit the bluff when they propose "to organize direct branches of the 'communist' party in the shops, mills and mines." We are inclined to believe that when the dupes and agents of these impostors begin to collect dues for their "communist" party in the shops, in the woods and the mines they will be told to get to a very hot place.

We have used quotation marks around the word "communist" simply because we do not recognize them as bona fide communists. The I. W. W. proclaimed itself communist long before these fellows usurped and disgraced the name. Our program is one of industrial communism, and we hate to have our fair name used by such impostors.

We need go no further in exposing these parasites on the labor movement. We will now quote from their own paper, in order that our readers may know what the "communists" in the communist party think of one another.

It appears from the First of May issue of "The Communist" that the "communist" party is in a crisis. In fact, the party has split. There is a "majority," to which the above-mentioned international impostors belongs, and a "minority."

This is the way the official communication describes the difference between them:

> **The minority** (which is referred to as merest tyros and unsophisticated neophites) conceived of mass action as of some nebulous economic power of the working class, organized industrially and exerting pressure industrially on the capitalist system, in order to topple it over. They believe that the use of FORCE (armed revolution and civil war) may or may not be necessary in order to accomplish the overthrow of the capitalist state, depending upon circumstances. They are opposed to propagating the inevitability and, consequently, the necessity, when the time will come, of the USE OF FORCE to conquer the power of the state—as premature at the present time. They claim they are not even certain on that score, and therefore object to propagating this doctrine to the workers. Mass action to them means only the use of general strikes and mass demonstrations—they contend that the manifesto and program adopted at Chicago nowhere implies anything else beyond this point.
>
> With this conception of mass action **the majority** completely disagrees. Our conception of mass action is that expressed by the manifesto of the Third International. We maintain that if the lessons of the history of all revolutions—and particularly the proletarian revolutions—means something and teaches us anything, we must propagate to the workers THE USE OF FORCE AS THE ONLY MEANS of conquering the power of the state and establishing the dictatorship of the proletariat. And that, instead of remaining silent on this question, we must constantly STRESS it, in order to show the workers the utter futility of hoping for any peaceful revolution, accomplished either through the parliaments, as the opportunistic socialists teach, or by mere general strikes, as the syndicalists teach.

There we have it. The boastful international impostors have "busted up" on the very point where they were going to show the American worker how to act. The "minority," represented by about one-half on their national committee, has withdrawn, evidently because they believed more in industrial unionism than the above-mentioned "broad-liners" and because they declined to be led up against the machine guns by provocateurs and irresponsible adventurers. For the rest, we know nothing about the controversy. We only quote the official organ, which naturally gives a version favorable to the ruling faction. The district organizer and the district committee for Chicago have been officially deposed and new men sent to take charge, "but the membership won't stand for it." The minority refers to Fraina's (and his friends') trip to Europe as a "junketing trip" of "international politicians."

It further accuses these politicians of having "packed" the Chicago convention. They are further accused of merely scheming, while in office, to keep party control; that certain members have mulcted the party of funds, and that, since taking office, the Central Executive Committee "has been completely taken up with forwarding personal schemes." "At no time has the committee considered questions of propaganda policy and the relation of the party to the working class movement." In other words, Mr. Fraina seems to have been largely representing himself at the international conference, where he grandiloquently promises to lead the American masses against capitalism. He is being rapidly repudiated by those he claimed to represent as a self-seeking career hunter with little or no interest in the welfare of the working class. While we take no pleasure in thus branding a professed socialist or "communist" as an importor, we are compelled to do so in order to remove the misunderstanding that he has insidiously tried to create about our organization, and find it singularly fortunate that he should at the same time have been disowned by his own people to such a large extent. That his party has been overrun by secret service agents, every man knows, and recently the counsel for Assistant Secretary of Labor Post has before a House committee promised to prove that agents of the Department of Justice have been active organizing locals of this party and contributing to the shaping of its program.

Taking it all in all, we feel justified in repeating the accusation of a year ago, that this kind of "communism" is nothing but "fake bolshevism" and that their movement is but another case of "the ass in the lion's skin."

* * *

**P. S.**

Since the above was set up in type there are new developments tending to strengthen the evidence that the left wing or communist movement in the United States was largely a provocateur movement manipulated by the United States Department of Justice.

Under a full page heading, reading "FRAINA IMPLICATED AS U. S. AGENT," The New York Call," official daily organ of the Socialist Party, has the following:

**Communist leader is charged with endorsing his pay checks from Department of Justice.**

**Palmer spy confesses that "radical" was in Attorney General's employ.**

Louis C. Fraina, editor of the brief-lived "Revolutionary Age" and a leading spirit in both the Communist and Communist Labor Party movements in this country, was at the time of his intensest activity in these movements a paid agent of the United States Department of Justice, according to evidence made public here yesterday by Santeri Nuorteva of the Russian Soviet Bureau.

Nuorteva's statement was called forth by Attorney General A. Mitchell Palmer's somewhat involved disclaimer, uttered before the Senate investigating committee, of any slightest connection between Fraina and the governmental department of which Palmer is the head.

The statement, which bristles with sensational details, constitutes one of the most serious and detailed challenges yet issued to Palmer's excited denial of the charge—already made by the twelve attorneys who have been investigating the Department of Justice methods in the public interest—that agents provocateurs have been employed by that department in its wholesale, nation-wide crusade against what the Attorney General so piquantly denominates as "reds."

**Facts Speak for Themselves**

In the course of his statement, Nuorteva scrupulously refrains from making any direct charges against Fraina. He confines himself to an objective recital of the facts of Fraina's contacts with the Russian Soviet Bureau here as they came to his attention. He lets the facts speak for themselves. Inferentially, though, these facts would appear to be even more damaging to the repute of the United States Department of Justice than are those already cited by the delegation of lawyers headed by Dean Chaffee and Professor Felix Frankfurter of the Harvard Law School.

"Mr. Nuorteva's restraint is far more impressive than any mere denunciation could be," said a well-known liberal to whom the contents were shown.

"Anyone familiar with the nature of Fraina's activities cannot, despite Mr. Nuorteva's unwillingness to draw conclusions, read this statement without a very lively suspicion that, besides trying to trick and intimidate uneducated aliens into saying they subscribed to communist principles which they obviously did not understand, the **Department of Justice has simultaneously been implicated in the organized formation of the very bodies which it loudly proclaimed itself dedicated to exterminate in the name of 'Americanism.'** If this is indeed the case, it constitutes as serious a charge as has ever been brought against a United States official."

Extending over a long series of months, the details disclosed by Nuorteva trace as sordid and degraded a chain of events as ever leaked out of the pigeonholes of American officialdom. They begin with the entry of an ex-soldier, a Finn, in the employ of Mr. Palmer's department, and an attempt to obtain Soviet documents by "doping" Nuorteva.

They end with the complete disappearance of this Finn after he declared to Nuorteva that Louis Fraina was in the employ of Palmer's department, with the picture of Fraina—while his late comrades in the communist movement were being raided, herded into jails, brutally treated and deported by Palmer agents—sailing to Europe safely under the chaperonage of one of the busiest attaches of a big British steamship line, who was obviously a police agent.

In between, Nuorteva's narration of objective facts tells of Fraina appearing at the Soviet Bureau trying to get letters of introduction to Russian officials and facilities for reaching Moscow **while at the same time he was reported as having been seen in the offices of the Department of Justice; of having pay checks there indorsed by his signature.**

The narration shows Palmer with a letter addressed to Ludwig C. A. K. Martens, purporting to have come from S. Rutgers of Hol-

land, a prominent European communist, which Palmer could not have come into possession of except through the instrumentality of Fraina or the attache of the British steamship line and police agent with whom Fraina later left these shores.

This information came to Nuorteva and the Russian Soviet Bureau without their seeking, most of it from the Finn who was employed by the Department of Justice. And there is a hint of tragedy in the simple details with which Nuorteva recites the disappearance of this Finn. Curiously enough, he was en route to Washington to testify before the Senate committee which had had Martens before it when he passed out of the ken of all the actors in the affair.

So far "The New York Call".

Of course, we do not want to say that the rank and file of the communist parties, which are said to have recently combined into one, is crooked and in the service of Attorney General Palmer. They are no doubt honest "revolutionary socialists," as they claim to be, but that does not alter the fact that they have been led by the nose by smart impostors in government employ whose only aim was to wreck the real working class movement, represented by the I. W. W.

Strenuous and innumerable have been the attempts of these buccaneers and their agents to get control of the I. W. W. and its publications, and when unsuccessful they have accused us of "trying to stab the Russian Revolution in the back." Perhaps the members of the "communist" parties will now see that the only ones we tried to stab were the false leaders, who, with government connivance, tried to lead the workers up against the machine guns in order to get a chance to utterly destroy them.

There is a time and place for Bolshevik programs and Bolshevik tactics, like for everything else. There was a time and place for it in Russia. They made the Russian people happy and free. But to try to make the workers of America repeat Bolshevik history on American soil with American industrial and historic conditions is absurd, but is good enough tactics for impostors and Okhrana men.

Society is pregnant with the child of revolution. These impostors and secret service men would try to cause a miscarriage by throwing society into convulsions, thereby prolonging the rule of the capitalist class.

# TRAPPED!

By ROBERTA BRUNER

I followed a trapper's tracks through the cold forest. I came upon a trap wherein had been caught a glossy-coated mink.

"A fine pelt," thought I, as I observed the wild creature. Untrapped he would have run from me. Trapped, he heeded me not at all, but behaved as any mere animal might behave. He beat about in a maddened effort to free himself from the prison into which he had been decoyed. He struck his head, to rebound broadside across the trap.

"Poor beast!" thought I, "he seeks freedom but has no plan, which can come only from power of thought!" But even as I thought thus, he gave one last tremendous lunge, the force of which broke the thin wall around his brain. In blood he died and dead was worth as much to the hunter as though he lived. **He died in vain.**

I walked on and came upon another trap which also held a mink, a sleepy fellow who lay and dozed. His pelt was soft and fine. It would not e'en be marred by blood when it was taken off. It could not be he liked captivity; he merely offered no resistance in his apathy. I did not linger long near him.

Not far away there was a third, more cunning than the rest. He caught my glance and stopped and looked at me until I disappeared behind a tree and then, with a skill almost human-like, he sent a forefoot investigating the trap which held him. It was like a wonder tale from natural history. I grew almost anxious for the search to be rewarded, and as I stood tense the exploring paw struck the clicking catch. He drew back as if startled! I craned far out to see, so much I feared he would withdraw his paw, but with his alert eyes centered on the spot which held the key to his freedom, head slightly turned to one side, he loosened the latch and stepped out into his world, the forest! He never rushed, but still he made great speed, which grew with the distance between himself and the cell that e'en had held him fast. He of all the three had saved his pelt!

So like the workers, held in cages built by commerce, cruel and greedy. There are those who sleep in apathy and make a pretty picture. They hold no interest for the passerby beyond a passive sight. But still, they lose their pelts!

Then there are those who dash and rush to their own extermination. Their pelts are also taken, and of their blood-soaked carcasses, held as great examples, horrible fears are made. They die in vain.

And then there are the constructive, eager ones, consciously planning ways of winning their freedom. They find the plan, but being humans, possessed of intelligence, they know the days of individual freedom are gone. They seek the apathetic! They seek to show the hysterical madmen a plan, that all may yet be free.

Fellow workers, will you not, like the cunning mink, press the latch we show you, that we may have collective freedom?

Imbibe the philosophy of the I. W. W.!

Practice its principles!

Carry its card!

Be a believer!

And gain freedom and safety for yourselves and your class!

# The Wobbly Editor Helps the University Student with his Thesis

The following is a letter we have received from the Journalism Department of the University of Michigan and the answer thereto:

Dear Editor: In connection with our research work in a journalistic seminary class at the University of Michigan, I am investigating several problems relative to the newspapers and their relation to the present-day capital and labor disputes. As you know, charges very serious in nature have been made against the press by both factions, and it is my task to learn as far as possible how the newspapers feel about the situation. It is with this purpose in mind that I am venturing to ask for a few minutes of your time to answer some of the questions that confront me. Would it be too much to ask you to answer the following for me? All matter secured will be held confidential in every respect. It is merely my purpose to gather data for general conclusions for my thesis. I assure you that our entire journalistic department as well as myself will greatly appreciate the favor of an answer.

1. What do you believe **should be** the attitude of the press toward the unending capital-labor disputes? Should it favor either side, vary in cases, represent the neutral "consumer," or attempt to end trouble by mediating and educating?

2. What do you believe **is** the attitude **of** most newspapers?

3. Are Jim Jam Jems and other radical papers right in their charges that the press **is** governed by capital through advertisers?

4. To just what degree does the average advertiser control the policy of a newspaper? Do you think he gets capitalistic propaganda printed?

5. What is the influence of the labor and other radical papers? Should they be censored, suppressed, or supported? Do they stir up trouble unnecessarily?

6. What do you believe to be the solution of the labor disputes and the ultimate reduction of H. C. of L.?

7. What does **your** paper do in this matter? What is your policy?

You may answer these as briefly or at as great length as you will, if you will only please say something about them. It is only through the opinions of such great papers as yours that we may judge the situation, and study accordingly. We feel that the proper knowl-

**KEPT PRESS: Oh, I'll get you. I'll destroy you. I'll discredit you before the World.**

**I. W. W. MAN: Sure. Just like you captured Petrograd.**

edge of this problem will greatly assist us to be true journalists when we are on papers.

Thanking you in advance for your trouble,

I am, Very truly yours,

STUDENT,
Journalism Dept., Univ. Michigan.

**The Reply**

Dear Sir: In the interest of suffering humanity we will help you out with your thesis.

Below we repeat your questions one by one and answer them separately:

**Question 1.** What do you believe should be the attitude of the press to the unending capital-labor disputes? Should it favor either side, vary in cases, represent the neutral "consumer," at attempt to end trouble by mediating and educating?

**Answer**—The attitude of the press on any question should be to speak the truth and nothing but the truth. The I. W. W. press makes this its aim, and, as a consequence, its editors are in jail, with the exception of the last set, which is out on bail and not yet brought to trial. With the exception of a few hundred labor papers and idealist magazines, the papers all lie. In fact, that is their purpose. The press is "kept" by the profiteers and the exploiters, that is, the capitalist class generally, for the purpose of trying to control the minds of people in the interest of their "business" and to act as a safeguard for private property and their continued existence as social parasites.

As far as mediating is concerned, it may sometimes be good business policy for the exploiters of labor, but as far as educating is concerned, the kept press cannot do it. It would mean intellectual and financial suicide for the controllers of those papers. They can not be used as mediums of education, only as channels of misinformation and advocates of the interests of the few.

**Question 2.** What do you believe is the attitude of most newspapers?

**Answer**—Being a professional reader of exchanges, we can truthfully state that most papers, aye, all capitalist papers, resort to all sorts of frenzied logic and intellectual imposition in order to prejudice the "public" against the workers in all disputes. They most outrageously plead the cause of the "oppressed" capitalist and they pretend to be solicitous for the dear, suffering "public." The deception is so plain that it is strange how anyone can fail to see it.

**Question 3.** Are "Jim Jam Jems" and other radical papers right in their charges that the press is governed by capital through advertisers?

**Answer**—In regard to this matter, we beg to refer you to Upton Sinclair's recent book, "The Brass Check," which can be obtained by sending 50 cents to Upton Sinclair, Pasadena, California. In this book we learn that the most important papers and magazines have been bought up by capitalists to serve as mouthpieces for certain financial interests. Others are controlled by advertising, others can exist only by currying favor with those who rob the people and therefore have money and patronage to give.

The I. W. W. press, poor as it is financially, does not accept advertisements at any price. Back of this old rule is, naturally, the conclusion, based on experience, that you cannot speak the truth and at the same time keep the good will of such people as are in the habit of advertising commercially. In order to have a free hand against the oppressors of the people, we are compelled to refuse to accept money from them or in any way being "patronized" by them.

We have never heard of "Jim Jam Jems," but if he says that the press is governed by capital through advertisements, we agree with him, though we must add that that is not the only way in which the capitalists are polluting the sources of information, thereby making it misinformation.

**Question 4.** To just what degree does the average advertiser control the policy of a newspaper? Do you think he gets capitalistic propaganda printed?

**Answer**—The details of this nasty business are extensively treated upon by Upton Sinclair in "The Brass Check." For our part, we want to add, that if the paper is not owned outright by the capitalists, the owner will either have to surrender completely to the capitalists or go to the wall. Without their support the paper can not exist, unless it be kept alive by an organization, like the I. W. W. papers are.

**Question 5.** What is the influence of labor and other radical papers? Should they be censored, suppressed or supported? Do they stir up trouble unnecessarily?

**Answer**—The influence of the labor papers varies. The influence of the A. F. of L. papers is on the wane, while the influence of the I. W. W. papers is on the increase, as witness the world-wide demand for "ONE BIG UNION" or INDUSTRIAL ORGANIZATION, as distinguished from craft organization. The labor papers are markedly influencing the working class toward accepting the responsibility for taking over production and distribution through their unions when capitalism ceases to function, or functions so badly that it imposes too great sufferings upon the people. Thereby the labor press works for a peaceful, final and permanent solution of the social problem. This solution, of course, implies the complete elimination of the capitalist class as an economic factor, and brings the whole series of questions propounded in this questionnaire out of the world.

Do these papers stir up trouble unnecessarily? We should say not. Through the education they manage to get out to the ignorant masses in spite of all resistance and all persecution, they do what they can to save society from a social cataclysm. By censoring or suppressing the real labor press, the capitalists and their tools are doing the greatest injury imaginable to society as a whole. The greatest danger of our age lies in the ignorance and irresponsibility of the masses. There is no

factor making for enlightenment and responsibility more than the labor press. The lowest strata of society are rising by their own strength in the modern labor movement. To muffle its voice or to choke it off is to invite a catastrophe.

Instead of suppressing the labor press, all human agencies should be set to work along the lines we are following, in order that the forty million workers of this country may as quickly as possible fit themselves to take over and run production and distribution. That is the only salvation of mankind in the coming crisis, which is already gripping us, the greatest crisis humanity has so far encountered.

**Question 6.** What do you believe to be the solution of the labor disputes and the ultimate reduction of the high cost of living?

**Answer**—The labor disputes may temporarily be settled by concessions to the workers, by "throwing out a bone" to the discontented, but these disputes will increase in number and extent, until the whole country will be in a chronic state of general strike, a stage which we are now rapidly approaching. Capitalism is a logical and mathematical absurdity, and cannot last beyond a certain point. By attempting to collect rent, interest and profit on an ever-increasing capitalization, and recently by suddenly adding the war capital to the industrial capital and forcing the people to pay interest on it, the capitalists are making it impossible for people to exist. The sleeping millions are thus awakened, and then there is no solution to the "disputes" except the abolition of capitalism, the abolition of private ownership, rent, interest and profit.

As for reducing the H. C. of L., it cannot be done as long as the capitalist class insists on collecting rent, interest and profit out of the products of labor. Failing to get that rent, interest and profit in the accustomed manner, they try to collect it by mercantile conspiracies, which are nothing but robberies, and by tax-dodging (such as freeing from taxes income in the form of shares), etc. To save themselves from an early destruction, the capitalist class would have to voluntarily give up hope of collecting these items. Only a complete back-down by the capitalist class, taking the shape of a reduction in prices of the necessities of life to a pre-war level will save them from destruction within a few years. If they do back down, the transition will be gradual and peaceful. If they refuse to back down it will be sudden, violent and destructive.

When the workers take over production and distribution through their unions, the high cost of living will be an expression without a meaning. With rent, interest and profit removed, there is no such thing as high cost of living.

**Question 7.** What does your paper do in this matter? What is your policy?

We are at the top of our voice screaming to the masses: "Economic doomsday is approaching; the end of the capitalist world is near. Capitalism is collapsing on all sides. It ceases to function in one place after another. It no longer supplies mankind with the necessities of life. Life is becoming unbearable. This is only a prelude to the great storm that shall sweep everything before it. We are all of us in danger of immediate destruction. Society is on the verge of dissolution. Chaos and disaster stare us in the face. The only salvation for us is to organize new organs of production and distribution to take the place of the old ones which are ceasing to function. Get together with all other workers in your industry or other useful occupation, organize yourselves into industrial unions, by means of which you can take the shock when it comes. Hurry, if you want to save yourselves and your children from a terrible fate. Only organized co-operation for the welfare of all can save us."

Our policy is thus, to organize the workers into industrial unions, by means of which they can first of all save themselves from going under in the battle with the high cost of living, and which they can later use as organs of production and distribution when the collapse of capitalism shall have occurred. Yours truly,

EDITOR OF THE O. B. U. MONTHLY.

P. S.—This is not confidential. You may publish it.

## TWO I. W. W. PAMPHLETS IN SWEDISH

Secretaries and literature agents, and particularly the Swedish Fellow Workers, will please note that two I. W. W. pamphlets have now been issued in Swedish, namely:

**Industrial Communism—I. W. W.** Ten cents per copy; $6 per hundred.

**I. W. W.—Its History, Structure and Methods.** Fifteen cents per copy; $10 per hundred.

Order immediately from Thomas Whitehead, 1001 West Madison street, Chicago, Ill., and go after the Swedes.

## JEDNA VELKA UNIE

Is the name of our new Czeko-Slovak monthly. It means "One Big Union." It costs $1 a year, 10 cents per copy. Bundle orders 7 cents per copy.

Wherever there are any Bohemian workers let us help the Czeko-Slovak propaganda committee to get a start. The May number of their paper is a great success. Get some of it and order of the June issue at the same time. If they get a good start the race is half won. Address all orders and remittances to Jedna Velka Unie, 1001 West Madison street, Chicago, Ill.

When in doubt—please remember that there are still a few hundred of our fellow workers in the jails, waiting for you to bail them out or free them. Correspond in such matters with Wm. D. Haywood, 1001 W. Madison St., Chicago, Ill.

Renew your subscription when it runs out. If you do not receive the magazine regularly, please notify us, and we will supply the missing copies.

**SAMMY GOMPERS IN GOOD COMPANY**

# The A. F. of L. Convention

## GOMPERS STILL CAPTAIN ON THE DRIFTING SHIP.

By the time this reaches you, you will have read in several weekly labor papers and in all the dailies, that A. F. of L. has been holding its 40th annual convention in Montreal Canada, during the earlier part of June.

Labor's program as outlined by the convention demands:

Ratification of the peace treaty.

Government ownership with democratic operation of railroads.

Curb on profiteering and high cost of living.

Jailing of food and clothing profiteers.

Right to strike and abolition of compulsory arbitration and anti-strike legislation.

Hands off in Mexico.

Indorsement of the Irish republic.

Right of collective bargaining.

Advances in wages wherever necessary to maintain the American standard of living.

Shorter work day, if necessary to prevent unemployment.

Support for the Co-operative Movement.

We shall not attempt to rehearse the program. We shall merely make a few observations.

The convention met under a heavy black cloud. During the year The American Federation of Labor has suffered some of the heaviest shocks in its history.

During the year Gompers and his men had gone into the so-called National Industrial Conference with the biggest capitalists and exploiters of the country, two of whom appear with Gompers and his chief secretary, Mr. Morrison, in the photograph above, namely Judge Elbert Gary, chief of the Steel trust, and John D. Rockefeller Jr. It was the supreme test for Gompers and the A. F. of L. They were completely beaten and withdrew. And Gary and Rockefeller rule the country, and Gompers and Morrison are their vassals.

During the year The A. F. of L. suffered defeat, first in the steel strike, thereupon in the coal strike and in many other strikes. Finally, the much heralded accession of the Railroad Brotherhoods turned out to be nothing but the gift of a civil war, large masses of the railroad men being in open rebellion against the brotherhoods. Furthermore, it is a fact that the opposition this time was strong enough to place one of their representatives, Duncan, of Seattle, in the chair.

When Gompers faced the crowd of delegates this year, it was as a general who has lost many battles and with forebodings of coming collapse and disaster.

But the Gompers machine throughout the country is still very strong. The A. F. of L. terrorists control the nominations and the elections. The spirit of Moss Enright, Coleman and Tim Murphy, the labor leader-gunmen, recently prominent in Chicago, is still strong in the A. F. of L. It is their kind that controls the A. F. of L. machinery in many cities. The decisions of the convention reflect largely the Gompers machine.

In two measures it took exactly the same stand as the United States Senate. It approved armed insurrection in Ireland as well as the Irish republic, attesting again to the fact that Irish politicians and the Catholic church hold sway over both. For that it was not love for freedom as such, is proven by the fact that in the next breath the convention refused to recognize the revolution in Russia and the Soviet Government. By this decision the convention again went on record as antisocialist and in favor of the continued existence of capitalism.

So far the old A. F. of L. hulk obeyed the rudder beautifully. But there was evidence abundant that the crazy craft is losing steerage way in its effort to buck against the strong tide of human progress.

Not that the ship at any time was in real danger of going under. Oh, no! The pirate crew, the friends of Enright, Coleman and Murphy with a gun in

one hip pocket and a flask of hooch in the other, have too much experience in dirty ward politics to be ousted so easily.

Only on a couple of occasions did the tide of progress become so strong that it swept the craft backwards, sideways, for some distance. The convention, we are happy to state, adopted two resolutions which reflect honor upon those who fought for them and carried them over all resistance. The one was a resolution demanding amnesty for class war prisoners. The other one was a resolution demanding free speech, free press and free assemblage. That two such resolutions could get a majority is very likely due to the fact that the A. F. of L. men have had some experience of the same kind as the I. W. W. particulary during the steel strike and in the coal mining regions. We doubt strongly that the friends of Irish Capitalism and enemies of Russian Bolshevism adopted such a resolution with a view to helping the I. W. W.

Gompers appears to still be working at his political perpetual motion machine. It is a wonder he does not go completely "nuts" over it, like other perpetual motion cranks.

He would like to curtail the political liberties of his followers by denying them the right to follow party lines. On the other hand he does not want to endorse or repudiate any party, except socialist parties, of course, which are tabooed, on account of their nonsensical talk about abolishing wage slavery. For Gompers still holds that wage slavery is all right. No, but he reserves the right to pick the candidates himself for the workers to vote on. See what a power that gives him. See Sammy Gompers actually picking out the members of congress and legislative assemblies as well as the officials. He has been working on this perpetual motion machine now for 40 years, and see what we got!

The convention adopted a Gompers resolution which declared that "the platform of the republican party has betrayed the working people" Gompers is right. But he still insists on picking rulers among the traitors instead of advicing the workers to rule through their unions.

In thankful recognition of his services as their Moses during the 38 years in the desert, the delegates re-elected him, at the same time raising his salary from $10,000 to $12,000. The children of Israel were 40 years in the desert, and their Moses saw the promised land from a hill top before he died. Here is hoping that the A. F. of L. members stay no longer in the desert than the children of Israel, and we also hope that their Moses will get a lucid interval before the 40 years are up, so that he will see the contours of our promised land.

That the convention was held in Canada, was naturally an effort to counteract the ravages of the One Big Union of Canada, which has all but driven the A. F. of L. out of that country.

We may have occasion to return to the subject of this convention, as more detailed reports come in.

# A Warning for Provocateurs

After the article "International impostors" in this issue was already off the press, we obtained through first class mail paper called "The Communist", supposedly underground paper of the "United Communist Party of America". This paper bears the date of June 12, 1920, and is numbered Vol. I, No. 1. It claims to be the official organ of the recently united "communist parties", from which unity however several federations are said to have seceded.

The paper is largely gotten up in the wordy style of Fraina and Ferguson and we suppose the element which they lead are the supposed unity.

In their program there is a qualified endorsement of industrial unionism, and the I. W. W., though condemned for trying to peacefully make a change from capitalism to industrial communism, is recommended as the vehicle for their plans of smashing the A. F. of L. It is recommended to the members that they join the I. W. W. for that purpose and to carry on their so called communist "education" in the I. W. W. ranks.

As a sample of the education they are to carry on, allow us to quote verbally from the first page of said paper:

> The program of the United Communist Party declares that the final struggle between the workers and the capitalists, between exploited and exploiter, will take the form of civil war and that it is the function of the United Communist Party systematically to familiarize the working class with the necessity of armed insurrection as the only means through which the capitalist government and the capitalist system can be overthrown.

Civil wars are a calamity which sometimes occurs, but to deliberately preach it is nothing short of criminal.

Only madmen or hired provocateurs could preach such rank nonsense. If the writers and adopters of such a program are not on the verge of a mental breakdown as a result of the numerous mental saltomortals of the last year in their evolution from harmless socialist party politicians to insurrectionists, they are the agents of Palmer and the Department of Justice or some other equally unscrupulous institution.

It is hardly necessary to warn the membership in general of such provocateurs, who evidently are working only for the purpose of fooling some workers to walk right up on the machine guns. Most of our members are wise to them and know how to treat them or anybody else who would try to run the I. W. W. on the rocks. But there are constantly thousands of new members coming into our ranks, and there is danger of some of these being misled by the Palmer agents and lunatics.

This warning should be enough.

HUMAN SACRIFICES ON THE ALTAR OF MAMMON

# Can Woman Stop War?

The women of all countries are circulating a pledge, with space for signatures, binding women to efforts to make war impossible. It is a world-wide female conspiracy to compel nations to keep the peace. We doubt very much that they can do this, but we wish they could. That is why we here publish the following call to women:

May 13, 1920.

To the Editor: This pledge comes from the Woman's International League for Peace and Freedom, whose headquarters is in Geneva, Switzerland. The pledge has been widely circulated in European countries, most notably Germany, and is now being sent throughout the United States. All signatures received here will be forwarded to the Geneva headquarters.

We would welcome any publicity which can be given through your paper.

Yours very sincerely,

JENNIE MINNICK OTIS.

Acting for the Palo Alto Branch of the Woman's International League for Peace and Freedom. Address, Palo Alto, California.

**To Women and Mothers:**

At the International Congress of Women in the spring of 1919, all the women present solemnly pledged themselves never again to support future wars by help of any kind. The universal international strike of women in the case of war was unanimously voted. But this strike must be prepared long beforehand in all countries in order that in the hour of danger there may be a united force against which the will of those in power, who lust for war, shall be shattered. It is for us women and mothers, who have been through the unspeakable suffering and horror of the world war, to crush future wars in the bud. If we are united, war and peace are in our hands. Against our will, without our readiness to fill all the gaps at home and to keep business, transportation and industry going, the cannon on the fields of slaughter could not carry on their work of death for an hour. Therefore, women and mothers of all countries, sign your names below, bind yourself by this world-embracing pledge and hold faithfully to it, if the time of danger should make it necessary.

Recognizing the great responsibility of each one of us for the fate of millions upon millions, we, women and mothers, declare by our signature that to us the sacredness and inviolability of life is the supreme law, that we therefore repudiate all organized killing as unworthy of humanity and that never again will we render any support to war, including civil war, whether, through money, propaganda or work.

Name
Address

Lists can be obtained from the above-mentioned address.

---

Having fulfilled this duty, we might as well proceed to state our own position on the question of world peace and the role woman is destined to play in it.

We do not in the least desire to pour cold water on the noble and inspired efforts instanced in the above call, but we wish to respectfully point out that there are two sides to this question, the psychic and the economic, and it is a question whether the economic side does not entirely dominate the psychic side. In other words, it is very possible that woman's abhorrence of bloody strife and intense desire for peace has its root in economic reasons. In the final analysis, the object of woman in creation is motherhood, just as that of man is fatherhood, and for that reason everything that interferes with motherhood is repugnant to her, while everything that furthers its normal and

peaceful consummation as well as the welfare of the offspring is attractive to her. This being so, we submit that the proper way to deal with this question is to directly attack it from an economic approach instead of merely appealing to the pacific instincts of the women. Unless these instincts are led into the channels of practical economic effort with a view to making war impossible, it seems to us that they will merely lead to a sex conspiracy against warlike men of propertarian instincts.

The pledge to "never again render any support to war, including civil war, whether through money, propaganda or work," is beautiful and surely has a great agitational value, but being purely negative in nature, it will be insufficient to secure permanent world peace.

In order to strike at the root of the evil we would have to abolish the cause of wars, the struggle for private property. That can be done only by abolishing private property in the means of production and distribution. This, in turn, can only be accomplished by organizing society on a communist basis. In other words, to secure permanent peace we must abolish capitalism and introduce communism.

We would therefore suggest that women of high ideals should not stop with the anti-war agitation embodied in the above pledge, but take steps toward forming a communist society.

And how should that be done?

Here is the way:

Those women who are already actively engaged in productive or distributive pursuits, in factories, mills, offices, hotels, restaurants or in domestic service, should immediately, with complete forgetfulness of all sex lines, organize together with the men, making an industrial union branch of each establishment, with a view to taking it over on a communist basis. Those who are not actively engaged in production but are "merely" mothers and housewives, had also better straighten their back and look up for a moment from their drudgery, and get together and devise the new forms of family life, of social housekeeping that corresponds to a communist system of production and distribution.

Only by thus adding the economic feature to the agitation here planned will the women succeed in extinguishing for all times the flame that periodically bursts out in conflagrations devastating the world and wreaking misery on all mankind.

Summing it up, the I. W. W. position on this question is: By all means carry on the anti-war agitation to the limit of your inspiration, and in consonance with your pacific nature, but do not forget that in order to obtain permanent results you will have to organize the industrial workers industrially and have the mothers and wives organize the housekeeping and family life on a communist basis.

As long as private property exists there will be wars, in spite of the most heroic efforts by the comparatively few women who think.

## Enumerating Our Prisoners

In our March, April, May and June issues we published names of our prisoners of late years. The total number of cases enumerated to date are 1,327.

The Twelfth Annual Convention decided to have the publication of the names discontinued, as it is apt to result in victimizing of our members by employers and others.

Since our last issue three minor lists have come in. One from Bellingham, Wash., containing four names, gives the information that one of the four, who was suffering from stomach trouble, was fooled into signing some sort of "confession," with the promise that he would be taken care of and get his stomach all fixed up. He was given a $2,000 fine instead and is now serving his time on the Whatcomb County Farm. The other three were given a jury trial and were unanimously acquitted.

The second list covers the Scotts Bluff, Neb., cases and contains ten names of members of I. U. No. 400, 450 and 573. All of these were arrested on Sept. 29 and released on Dec. 8, 1919, with the exception of one who was arrested on October 3 and discharged on November 1 on writ of habeas corpus. The others were released on account of the sugar trust being unable to frame up a case against them. Several others were taken and held a few days.

The third list contains fourteen names and covers the arrests in Kansas City, Mo., on March 2, 1919. All convicted of vagrancy and sentenced to eleven months and twenty-nine days of hard labor. They were released on April 2, 1919, on unconditional parole.

We have also been informed that our Leavenworth list in the March number is short ten names.

In this number we have, consequently, accounted for thirty-eight additional cases, making a total up to date of 1,365 cases.

As we can now no longer publish the names without breaking the rule laid down by the convention, all concerned are requested to send their reports to the Secretary of the General Defense Committee, William D. Haywood, who is gathering the material for a complete story of the persecutions against the I. W. W. Be sure to help him out with the cases that you know of, so that the story may be complete, when it is printed, some time in the future, and becomes part of United States history.

The total number of cases has been estimated at about 2,000 since the beginning of the war, not counting the Bisbee "deportation" cases. Give us the names and facts in the remaining 600 cases.

### FINANCIAL REPORTS

The absence of financial reports in this issue is in compliance with decisions of the Twelfth Annual Convention of the I. W. W.

---

Our circulation is now 15,000 copies. Did you stop to consider that if you got only **one** new reader each this month, it will jump to 30,000?

# The Bureau of Industrial Research and its Work

By RALPH CHAPLIN

The one question that confronts the organization at the present time is the publication of new literature. Everyone is agreed that new books and pamphlets are vitally necessary. The point to consider is where these are to come from.

The last convention arranged for the organization of the much talked of Bureau of Industrial Research. A secretary was employed and the work of producing the new publications was started at once. Already the booklet for Industrial Union No. 400, Agricultural Workers, is hammered into shape. It is held up at present because the members of No. 400 have not taken hold of the questionnaire as they should.

A booklet for No. 573, Construction Workers, is also started and the questionnaire published. If members of this union will send in for questionnaires and answer the questions, or a few of the questions on the list, the matter of putting out a splendid pamphlet for 573 is as good as settled.

But both 400 and 573 will have to get back of the Bureau of Industrial Research and support it with their experience and energy if these booklets are to appear in proper time. The booklets will not make themselves. Either the rank and file will have to get busy and produce its own literature or we will have to wait month in and month out for new literature, as we have in the past. Immediate action is necessary.

Any worker anywhere who knows anything about either the Construction or the Agricultural industries is urged to send for the questionnaire. Full instructions are supplied with each one. Branches and industrial unions are also urged to see that wide circulation is given the questionnaires and that members are encouraged to help make the plan a success.

Please don't delay. We have simply got to get the 400 booklet out in time for the harvest. No. 573 should come out in a short time also. Get busy at once. It's up to you.

Send all mail to Bureau of Industrial Research, 1001 West Madison Street, Chicago, Ill.

**Can the Rank and File Write Its Own Literature?**

The time has come when the Industrial Workers of the World must produce a statement of its true principles. The capitalist press has vilified us until the public is sated with lies. A great many working people are looking to us to learn from our own lips of the things we believe. These are willing to listen to our side of the question. What literature have we got to offer them?

Unfortunately, our meager supply of pamphlets has always been inadequate from every point of view. The war has made much of our printed matter out of date. Some of it has been garbled and misinterpreted until it is useless. The Publishing Bureau must cease to function as an open forum. There is a crying need for new literature—our I. W. W. literature. We need one clear, strong and attractively printed pamphlet for each of the Industrial Unions. We need a number of general pamphlets as well. We need them quickly.

The question is, must the Industrial Workers of the World be dependent on a few "high-brows"—whether sympathizers or members—or can the rank and file take the matter into their own hands and tell in their own words what the organization means to them and what the organization has done for them?

The idea of the Bureau of Industrial Research and the new literature for the organization was conceived in the Cook County Jail in 1917. Imprisoned workers from many different industries found they could learn a lot from one another. Cannot the entire membership do likewise?

Five hundred or a couple of thousand members can write a better booklet than any ONE man that ever lived. Let's collect the knowledge and experience of our many members in various industries and preserve them in printed form for the benefit of all who care to investigate.

Questionnaires are already prepared for all the principal industries. Ask for the one you are interested in today. You don't have to write a lot. If each member would write only a little—and that little the best there is in him—we would have results that would be astounding. Do your part. Get busy at once. Send in any good photos or illustrations you may have. Each booklet will be well illustrated. Send in also any suggestions you may have about the plan. But DON'T DELAY. Let's get in action for the greatest educational campaign the world ever saw. Address

BUREAU OF INDUSTRIAL RESEARCH,
1001 West Madison Street, Chicago, Ill.

**SAMPLE OF QUESTIONNAIRE**

Note—Pick out as many of the following questions as you feel qualified to answer. Write distinctly and briefly on a separate sheet of paper. Mail to above address without delay.

CONSTRUCTION

1. How is the Department of Construction divided? Explain the importance of the general construction workers.

1. Explain how impossible civilization would have been without the labor of men employed in this industry.

3. What was construction like in primitive times? (Dwellings, bridges, etc.)

4. What was construction like in ancient times? (Public buildings, irrigation works, monuments.)

5. What ho you know of the construction of castles, cathedrals, etc., of Mediaeval times?

6. What was the condition of construction workers under primitive communism? Slavery? Serfdom?

7. How have changing methods of construction affected the construction industry and its workers? (Wood, stone, brick and steel and concrete.)

8. Have modern methods of construction tended to eliminate the skill of the workers? Give general outline of evolution of tools and materials.

9. How is the modern construction industry interrelated to other industries? (Transportation, steel, concrete, lumber, etc.)

10. How are present-day construction bosses different from those of ancient days? Fifty years? Have the workers and employers interests in common?

11. Have great fortunes been made by the master class in the construction industry? (Give details showing the concentration of wealth into fewer and fewer hands.)

12. What are the conditions of the construction workers of today? (Need for organization.)

13. Contrast conditions in organized and unorganized districts in this and other countries.

14. How and when did craft unions first start to organize general construction workers?

15. Is the craft form of organization suitable for the construction industry?

16. When did the I. W. W. first start to organize construction workers? (Show strength of the One Big Union form of organization, solidarity, job tactics, etc.)

17. How has the I. W. W. bettered the conditions of construction workers? How can it better conditions still more? (Give examples and contrast with previous conditions.)

18. How are construction workers exploited at the point of production? (Give immediate aims of I. W. W. in construction industry.)

19. What are the principles, tactics and ultimate aim of the I. W. W. in construction industry?

20. How is the One Big Union of construction workers related to the One Big Union of related industries? Of all industries?

21. Why are construction workers necessary to a program of social change?

22. How is the I. W. W. helping to build the structure of the new society within the shell of the old in the construction industry?

23. How will construction workers function in the new society?

24. What does solidarity mean to construction workers organized in the I. W. W.?

25. Give your best reasons why construction workers should join the Industrial Workers of the World and suggest how best to work for the organization. (Lining up members, distributing literature, getting subs, etc.)

26. Have you any suggestions for the improvement of the pamphlet to be published on the construction industry?

**Answer these questions and mail your papers to us.**

# I, The Fourth

By Covington Ami

I am the Fourth of July—
I celebrate "Sedition," "Treason" and "Disloyalty"—
I fired on my country's flag—
I rebelled against its government—
I flaunted the Crimson Banner in its face—
I committed sabotage—
I overthrew "law and order"—
I wrecked the Feudal System—

Not a single one of my superheroes was a Christian—
Leagues of Nations—
"Holy Alliances"—
Formed against me—
But—
The Spirit of the Age was with me—
I marched with evolution—
They failed and fell—
I won—
And now, great God!—
I am RESPECTABLE.

**CHARITY**

# A "Gummy Goo" Story

**(Having to do with Charity)**

**By ROBERTA BRUNER**

A man stood on the street showing how a bit of cement from the tiny tube in his hand would "mend" rubber bags. Many people were buying, for the demonstration showed that the cement p ched the leaking hot water bottles. Few realized that a patch is but a patch and may not stand real service as well as it appears to. Very few speculated on the fact that water bottles are made from "junk" rubber. Such speculation would merely have explained the cause of the frequent leaks, however, and would not have mended the bags. Perhaps none knew that the contents of each of

the tubes they were buying cost less than two cents, or that the tube itself cost more than the cement and that the total cost of all was less than three cents.

"It is a fake," was someone's comment. "Yes," thought I, "it is a fake."

* * * * * * *

Two blocks more and the identical article was being "demonstrated" under the protection of a great store—but it was none the less a fake. The faker who sold here was merely paying a large tribute to a respectable—no, **respected**—business house, for prestige. More people bought here, and more "respectable looking" people.

* * * * * * *

On the street a woman stood holding a bunch of tags and a box with a slot in the top.

Many more such women picketed the streets of the famous loop of Chicago. Other cities were also being panhandled.

"May I tag you?" Her endeavor brought a gleam to her eye not unlike the "Gummy Goo" faker. She, too, was selling at 900 per cent profit (not to herself but to the charity to old folks—or was it babies?—it was for something that brought a universal heart-throb, anyway). She was selling a patch for the rotten water bottle of our present form of society, the capitalist system.

Her customers bought tags for voluntary prices; some bought because their hearts were touched; more bought to purchase protection from being molested by further benevolently inclined solicitors, but all who bought bought a patch for a fast decaying rubber water bottle which no amount of patching can hold together much longer.

Few who bought or sold realized they were dealing in mere patches at all—and that a patch is but a patch at best and proclaims the oldness of the thing patched. Very few speculated on the fact that a system of society which urges competition to the extent of slaying the more poorly fitted and which crowns only him victor who has gained gold and crowns any victor who has gained, by any means "within the law"—few speculated that such a social system is a "junk" rubber bottle which can but burst and leak.

Perhaps none knew that less than 10 cents of every dollar they contributed to the "Aged Adults" or "Orphan Children," or whatever it was, ever reached those for whom it was intended. More than 90 per cent was used for the overhead expenses of the professional charity workers.

None said this was a fake—but it was. It was a "Gummy Goo" fake.

If rubber bags were made of virgin rubber patches would not be needed. If society were decent, old folks and babies as well as fine, strong, commercial age people would be safe. It would not be necessary to patch and prop a worm-eaten profiteering treasure chest to which only a few hold a key, in order to keep the most brazen robberies half smothered.

(Now I suppose the wilful misinterpreters of truth will say that the I. W. W. does not believe in taking care of old folks and babies, because one member sees in almsgiving a strong resemblance to the "Gummy Goo Gip" and writes upon it. But this is the truth: The I. W. W. is opposed to a system which **causes a need of almsgiving**, and the I. W. W. is dedicated to destroying that system. Then "Gummy Goo's" will no longer be needed nor tolerated.)

Long live the Industrial Republic! Death to capitalistic tyrants!

## Hon. Quasimodo Von Belvedere is Criticizing the Government

Tampa, Fla., May 29th.

One of our clever correspondents obtained from Von Belvedere two important political statements which we present here in full:

The President deems that the adopting of the Knox Peace Resolution would be an ineffaceable stain upon the gallantry and honor of the United States. He goes on, saying:

> Have we sacrificed the lives of more than 100,000 Americans and ruined the lives of thousands of others and brought thousands of American families an unhappiness that can never end, for purposes which we do not now care to state or take further steps to attain?

To a sane business man this statement appears ridiculous. All that was attainable from the war we have already attained; we got more than our share of Germany's trade, and we do not want any cash indemnity; in that respect our national honor is very scrupulous, you know.

Furthermore, Germany is now reduced to a naked skeleton; why should we waste any more of our time upon her? I count the President among my most devoted friends, and it would be unkind on my part to make any further derogatory comments upon this curious epistle of his. God knows that there is not a single individual within the borders of our fair country who has a letter knowledge about the true reasons for which we went to war than the President himself.

Our correspondent then asked Mr. Von Belvedere if he did not think that the natural resources of Mexico were too precious an asset to be left in the hands of such barbarians as the Mexicans are. Quasimodo gave him an admiring look and commended him upon this truly American mode of reasoning. "That is my motto." he said. "Make peace with Germany and then devote all of our spare time to disciplining Mexico and establish an American protectorate over her."

After this the conversation was switched to the presidential race, and our correspondent quoted the ensuing aphorism from Mr. Gary's after dinner hallucination:

The next President of the United States

must be able, wise and well informed; of unquestioned honesty, morally and intellectually, eminently fair and impartial, frank and sincere, broad-minded, deeply sympathetic, courageous, sturdy and well balanced (this is not a slam at Woodrow Wilson) and, above everything else, loyal to the constitution and the law of the land.

Quasimodo laughed at this. "Such a President," he said, "would have been all right a decade ago. If these thirteen points of my friend Gary's were a sufficient qualification now—then we should elect him, or Mr. McAdoo. These are the only two honest souls I know. However, I see trouble ahead; such a situation as we are confronting can successfully be coped with only by a good soldier."

"I see," said our scribe. "You are going to vote for General Wood."

"Not only that," says Quasimodo, "but I shall have two hundred thousand of my dollars vote for him also.

# Was it Murder?

By EUGENE BARNETT

They had come to America, the land of the Indian, and had settled in a colony for mutual protection. They were exiles from England, men who had been imprisoned for their political and religious beliefs, which were not in accord with those sanctioned by the ruling class.

The overlords of England had hit upon a fine plan. They had said to these malcontents: "We will give you your freedom if you will go to America. If you are so dissatisfied here and know so much about the way things should be run, go to America and run that country and we will leave you alone."

So they came to the wilderness that was to be the New World. And they built themselves homes where they could be free to speak their thoughts and to worship God in their own way. For these things they had been persecuted and imprisoned, and for these things they were willing to brave the dangers of the then uncharted sea.

In the new and unknown world in which they found themselves they built their humble cabins near to each other, for they had faith in the maxim, "United we stand, but divided we fall." Savages were everywhere about them, so they built a block house out of dreams and determination and stout logs, where all might find shelter in case of a raid from their hostile neighbors.

Just over the hill was a fine meadowland, and John Smith (not necessarily Captain John), having seen the possibilities it offered for whiteman's cultivation, said: "What a fine home I can make here for the colony and myself." Being of a brave and progressive nature, he proceeded to build his house and moved over in the midst of the waving grasses.

All went well for a few weeks. But one day a painted Indian saw the new home and promptly carried the tidings to the Big Chief of the savage Red Elks. When the Big Chief heard the news he called a pow-wow in the Red Elks' lodge or teepee. The savages discussed the situation. The Big Chief's name was Hub-Hub, and he told his tribesmen that the white men were a menace and must be driven out. "These settlers are a bunch of ignorant foreigners," he told them, "and if we let them go on like this our hunting grounds will disappear and we will be compelled to go to work earning our living with the sweat of our brows." A wail of angry disapproval greeted his remarks.

Another befeathered leader also made speech at the pow-wow. He was called Scales, after the skin of the rattlesnake, whom he resembled in more ways than one. Holding a string of red, white and blue medicine beads in his upraised hand, he said: "I won't tell you to raid the block house, but if you touch this magical wampum before starting on the raid no white man's bullet can ever touch you."

The savages started out to appoint a committee to find out how many white men there were, to lay plans to destroy the block house and to decide what to do with the scalps of its occupants. The first Indian appointed on the committee refused to serve. The Big Chief called him a "pale-faced skunk." A secret committee was appointed. It took for its totem the scorpion, because it is all sting and no brains, and the sting is always located in the right place. The Indians flourished their tomahawks, chanted a war chant and danced the war-dance until far into the night.

Now it happened that the Indian who had refused to serve had enjoyed some of the good things that the toil of the colonists had produced. He recognized in them the builders of a higher form of civilization. So he stole away to the colony and warned the white men and they carried the warning over the hill to Smith. Smith said, "This is my home; I have done no wrong; I will stand my ground."

"All right; we will help defend you," said his fellow settlers, "if we know when the Indians are coming."

By this time the secret committee had finished its plans. They had decided to raid Smith's home and massacre the family as a warning to the others of what would happen if they tried to progress further. So they started north toward Smith's house, marching one abreast (Indian file). A war-whoop was to be the signal for the attack.

But once again the friendship of the one Indian was stronger than the tie that bound him to his tribe. So again he warned the colony of the impending danger. The men hurried the women and chil-

dren into the blockhouse. They took their guns and hurried to the top of the hill. When they got in range of Smith's cabin they trained their guns on the approaches to the clearing and waited.

Soon they saw the savages crawling up to the house, saw them spring up in a body and rush for the doors and windows, which were smashed in the rush. Shots rang out from the cabin where Smith was defending himself. The men on the hill began firing also. The savages scurried for cover. Four of them were killed. WAS IT MURDER?

One of the colonists was captured by the Indians as he was leaving the scene. He was horribly mutilated (as the victims of savages always were) while he was yet alive. Later he was hanged. WAS THAT MURDER?

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interests of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.

By organizing industrially we are forming the structure of the new society within the shell of the old.

## The Agricultural Workers Campaign

The high spots in human history are not the story of the reign of emperors and kings, nor the story of the battles they have fought. Even the phenomenal carreers of an Alexander "the Great", an Attila, a Djenghis Khan, a Napoleon, form no mile stones along the path of mankind from savagery to civilization. The world war itself, a ghastly wound as it is upon the body of the human family, will hardly leave a scar behind to remind future generations of its horrors. Our great-grand-children will have to dig deep into old records to find the outlines of it.

The milestones of human history are of a different kind, and they are as numerous as the inventions and discoveries that go to make up civilization. These are the living facts of human history, known to even the illiterate. They are the front side of civilization, and therefore of history, while the chronicle of kings and wars is the back side of it.

The invention of the spade, the plow, the hammer, the ax, the needle, the sail, the loom; the discovery that the dog and the horse could be tamed and used, and that the cow could be domesticated; the discovery made within reasonably modern time that children of blood relations tended to degeneracy; the discovery of improved methods of tilling the soil and making the tools; the discovery of improvements in the organization of the work—these are the mile stones, these are the high spots in human history.

For that reason the agricultural workers campaign in the United States in the year 1920, as well as of preceeding and coming years, is an event that far outshadows in importance America's participation in the world war.

These ragged, unkempt, penniless and persecuted men who quietly are enlisting their fellow workers into Agricultural Workers Industrial Union No. 400 are, consciously or unconsciously, doing the most important work of the ages. They are taking the initial steps towards a rational organization of the production of the food-stuffs of mankind. They are preparing the workers to do away with all antiquated methods and to begin producing the food stuffs in accordance with a well thought out, detailed plan embracing the whole world. In fact, they are engaged in the stupendous task of merging the millions of small and independent human households or economic units into one great human household, into one world-embracing economic unit.

That is why this campaign of I. U. No. 400 of the I. W. W. is a high spot in history. In fact we believe that when this campaign has been carried to its final and successful conclusion it will be the central monument of all history, for in the changes it embodies lies a complete regeneration and transformation of all mankind.

The work that the harvest worker performs is almost sacred, for on it depends the welfare of all from year to year. We wish that each and every one of them, as they are being hounded from place to place, would be able to rise to this religious view of the task they are performing. It would serve the same purpose as chloroform at an operation. It would take away the spiritual agony of jail and the bodily pain of the hired slugger's club; it would give that elementary, irresistible power possessed by the Saracens as they smilingly threw themselves against a thousand deaths, certain of being in paradise the next moment. We wish they would all wake up to grasp the full importance of the task they are performing. If they did they would become iron men whom nothing could resist. Their names may not be spelled on the pages of written history, but the memory of them all will live to the end of time. Wherever the men of the future shall turn they will run across the pioneer work of these early strugglers intertwined in all social institutions. Each single one of their efforts becomes a stone in that magnificent structure which soon shall house all mankind—the structure of Industrial Communism.

In this same issue will be found part of the entrancing story of the battles of the agricultural workers and other slaves of 2,000 years ago. Their heroism was sublime, but they failed. Lack of solidarity and organization among the workers resulted in the slavery of centuries for their class. The 100% Roman, "free" workers, corresponding to the "100% American" workers of today, just as the Roman ruling class corresponds to our Wall street, considered themselves better than the slaves, and helped the masters to crush them. As a result both went down. Only through mutual aid and cooperation can our class master the world and establish the rule of the good spirits on earth.

May the workers of today never lose sight of that important fact and they will solve the social problem and bring heaven down on earth.

# The Leaning Tower of Capitalism is Swaying

## THE RAIL AND COAL SITUATION

Almost in every number of this magazine we speak of "the collapse of capitalism." Some have objected to this term as not being aggressive enough for a 100% I. W. W. member, especially as the preamble distinctly speaks of the **overthrow** of capitalism. But still we repeat the term and with more emphasis than ever. Capitalism is being overthrown by the capitalist class itself through the inherent inconsistencies and the mathematical absurdities underlying it and it is now collapsing over our heads.

Somebody has calculated, for fun, that if someone had put a penny in the bank in his favor at the time of Christ, and allowed compound interest at current rate to be added to the original capital all the time, he would now not only be the richest man in the world but the sum would be so tremendous that the world would be unable to create the interest on it.

It is something of this kind that has really happened. The amount of rent, interest and profit that the capitalist class is now trying to collect is such a stupendous sum in the aggregate that the world, already staggering under the burden before the war, now is entirely unable to carry it. The capitalist class is trying to collect these three items by any and all means. In order to do it, the capitalists are raising the prices without regard for the people's ability to pay. They are dodging the taxes and, finally, resorting to violence in order to make the people submit to the impossible extortion, and they have lately made a general scramble for the pile of wealth that is about to capsize the ship of society.

They are like the farmer who thought the horse was too expensive to feed. He quit giving him his feed, and finally, one day, the horse died. "That's too bad," he said. "I was just making a success of breaking him from his habit of eating. If he had lived a little longer I would have broken him from the habit of drinking too."

That is just what the capitalist class is doing with the workers. They cannot collect the rent, interest and profit they desire and at the same time pay the workers living wages, so of the four items it starts, like the farmer above mentioned, with paring down the living of the productive people, the social work horses. It is in this fact that the collapse of capitalism consists. It has come to the point where, in order to exist a while longer, it is killing the goose that lays the golden eggs, by refusing to feed it. Thus the tremendous upheavals of the big American strikes for the last couple of years are symptoms of the collapse of capitalism.

**Greed and Money Madness are Wrecking Society**

When capitalism cannot produce steel and coal, these prime necessities of man, without grinding the producers almost to death, then capitalism is a failure. When it cannot turn out the food supply of the people without driving the packing house workers to desperation, then capitalism has proven itself unfit. When it cannot transport its wares without almost destroying, socially, the men who work on the docks, then capitalism should go and another system be given a chance, which does not destroy the people.

These and many other similar symptoms of the progressive collapse of capitalism are culminating in the present rail and coal situation which is so terrible that the capitalist class themselves stand aghast at their work—only too late to remedy it.

In their individual and collective attempts to accumulate wealth they have overlooked the elementary requirements of the system as a whole. Private interest has taken precedence to public welfare, and as a result we stand at the very brink of a country-wide disaster, a national calamity. The people are about to pay the penalty for having turned down the appeals of the I. W. W. to organize for the purpose of taking over the railroads and the coal fields in the name of the people. The collectors of rent, interest and profit have been given a free hand so long that they have finally scuttled the ship of society, threatening to sink us all.

Lest somebody may say that we are overdrawing the picture, we will here reproduce parts of a report of the rail and coal situation written by **Richard C. Burritt in the Chicago Daily News** (July 20), a paper which cannot possibly be suspected of overdrawing the picture for purposes of red propaganda:

Says Mr. Burritt among other things:

> "The industrial United States today is a cripple. In the broad sense business is either limping along or is beginning to stagnate. The shop, the factory, the home, the comfort, the welfare of practically every man, woman and child are threatened.
>
> "Railroad congestion is a menace. It has brought about a shortage of cars at loading points necessary to distribute the nation's wealth. The shortage has slowed down the production of bituminous coal which in turn is slowing down the production of essential commodities and **may bring business to a dead halt next winter in many states.** Drastic measures alone can save the nation from a severe depression with hundreds of thousands of wage earners unemployed, with bread lines in many of the great cities, with cold homes, lightless days and all the accompanying misery * * *
>
> "To fill the requirements of coal for the country this year 550,000,000 tons are needed, and the railroads must distribute 11,500,000 tons each week * * *
>
> **"Since April 1, the country has been running short of that amount by more than 2,425,000 tons weekly,** because the railroads have not supplied the mines with sufficient cars.
>
> "Chicago and Illinois commerce and industry are on the ragged edge. They are being squeezed by the car and coal shortage to such an extent that **it is only a question of time before plants will be shutting**

**down and wage earners will be walking the streets for employment** * * *

Chas Piez (formerly of the U. S. Emergency Fleet Corporation) is quoted as saying that he sees "terrible times ahead." * * *

"Illinois and every other state of the union will be badly hit by the reflex action from **the crisis now confronting the Northwest.** The Northwest is even now in a desperate plight. The coal shortage menaces 'the bread basket of the world' there. In fact, great quantities of bituminous coal must be moved to the head of the lakes in the next 60 days, or next winter **the Northwest will run great risks of being closed down entirely** * * *

"Montana, North and South Dakota, Minnesota, northern Wisconsin, northern Iowa, parts of Nebraska and northern Michigan are becoming frightened. They have reason to be. The lake season is rapidly passing. It is on the great lakes that the Northwest must depend for coal * * *

"Fuel that will turn the wheels of industry in the Northwest and move the grain and ore has to be shipped to the storage docks when navigation is open. If it is not, the Northwest will close down and freeze and the world will be crying for bread. That's as simple as the proposition that two and two make four. Is that an alarmist cry? It is not. As a matter of fact the farmers are now moving grain that should have gone to market sixty days ago. Last year's spring wheat is not yet marketed. Why? Because the farmers could not get the grain cars they needed. There is nearly as great a shortage of grain cars on western roads as of open top equipment or coal cars on eastern roads, and **it is unlikely the grain men will get anywhere near as many grain cars this fall as they will need** * * *

"Northwestern railroads must have more fuel at once. Some are in a bad way, particularly those that haul most of the grain. The Northern Pacific for instance, is but two days ahead of the fight for existence. **It was admitted by one of the road's chief executives that he fears the coal shortage will tie up the railroads of the Northwest and keep them tied up this winter** * * *

"It is doubtful whether the situation can be entirely saved. The Interstate commerce commission must act as a czar * * *

"There is plenty of coal in the mines. There are mine workers to mine it. There are enough boats to haul it to the northwest. The dock companies can load and unload it. They have the facilities to store it. There would be no coal shortage if the railroads could supply open top cars at the mines and afterwards move them. **They are doing neither to an extent greater than 45%** * * *

**"The Northwest is up in arms for grain cars** * * *

"Everyone knows that the strike of outlaw railroad switchmen injured the roads. Everyone does not know that **the harmful effects of that strike are far worse than have ever been admitted in print.** Switching districts throughout the east are clogged with goods. Many switching districts within striking distance of the minefields are clogged with coal * * *

"Many railroad men, coal operators and others are declaring that the manufacture of pleasure cars and other non-essential industries should be stopped at once. It may be forced to stop. James B. Walsh, vice president of the Pittsburgh coal and associated companies, the largest coal operating company in the world, goes much further. In Pittsburgh recently he told the writer that **all industry on either side of Pittsburgh, the United States Steel Corporation as well, should be closed down at once** * * *

"The steel corporation is inclining to his view and it will not be strange if the corporation should suspend the last of this month or the first of the next month for a period of from 30 to 60 days. The eastern steel mills are choked with unshipped products, despite the fact that the railroads have been deliberately favoring them, and **the corporation is hanging on to the open top equipment that it should not have at this time.** Some of the mills have borrowed to their eyebrows, and **the banks cannot hope to carry them much longer.**

"Canada, or that citizenry of the Dominion which has to furnish fuel is nearly crazy. Canadian railroads hoped to get much of their coal from the lakes. All round the lake region people are crying for coal.

"Bituminous coal now being exported is but a very small proportion of the coal being mined.

"These exporters are hogs and they ought to be run out of business' many a big operator has told the writer."

**HOGS is right.** But it should not be applied to the exporter of coal alone. It applies to the whole rent, interest and profit collecting capitalist class. In their hoggishness they have created a situation in transportation that is equal to a log jam in timber driving. Only the transportation jam cannot be relieved with a stick of dynamite like the log jam. Only a dictator from the ranks of the workers can now solve the problem satisfactorily.

If any one of us were making such a failure at our work as capitalism is making of transportation, bringing all of us to the verge of destruction we would get fired from our job on the spot as incompetent, and a better man would be put in our place.

Let us fire the capitalist class from the ownership and the control of the means of production and distribution and take charge ourselves.

Hogs should no longer be in control of the affairs of mankind. They should be run out of business, every one of them.

But we can take over the industries only by means of industrial unions with their job branches.

Therefore the morale is:

Organize in industrial unions with the I. W. W. and let us take over everything ourselves before we all go down with the scuttled ship. There is no other choice.

The collapse of capitalism is a ghastly, overhanging reality.

We have warned and warned and we can do no

more. Before many months perhaps the storm has broken loose.

The capitalist class, realizing what they have done, are armed to the teeth and have the machine guns oiled up to be used against the starved and freezing people this winter.

Their last devilish desire is to slake the thirst of their murderous souls in innocent blood. Do not go to slaughter like innocent lambs. Organize, organize every place of work as a job branch in an industrial union of the I. W. W. Then we need not fear the machine guns.

# FEAR

By Pacific Red

Panic!
Fear of death by starvation and freezing!
It is gripping the nation, it has chilled the hearts of all.
Those who have a home are afraid of losing it,
Those who have none, fear to be ousted by steel faced landlords.
No wheat; no coal; no oil, sugar milk, hay,
Nothing for man or beast.

Yet the land has plenty of resources,
Only capitalism has none.
It is broken down, busted, kerflummuxt, gone blooey, smasht.
It can't provide cars to haul goods,
Can't pay men a living wage, on land or sea,
Can't function on the farm, in the store,
Can't deliver f. o. b., C. O. D., or P. D. Q.
Can't do nuthin'! It is dead.

And the graveyards of capitalism were the last two conventions,
Where the platforms were mere epitafs,
And the candidates corpses dragged out of the charnel house.

Come on and imprison me for conspiring to change the gov't by force!
I see my shack taken away from over my head and the heads of wife and bairns,
I fear sickness, separation, starvation, freezing,
Therefore I am guilty of treason against the gov't!
Because to ask the gov't to provide life, liberty, and plenty,
Is to be guilty of criminal syndicalism.
The gov't isn't doing any such a job,
It is protecting the interests of Wall Street, whatever they are,
With one last expiring puny effort,
Before it gives up the ghost.
It will arrest some more radicals,
And incite mob violence against others,
And sing gospel hymns,
And kiss itself goodbye,
And die.
Amen!

The taking over will occur before another four years.
This winter will be hell,
Next one heller, and so on until endurance ceases.
Revolution comes not thru conspiracies,
But thru the failure of the powers that be,
To feed its parasites.
When you starve a soldier you dampen his powder;
When you freeze a policeman, you soften his club;
When you fail to provide the necessities of life
To those who hold the gun you get all shot up.

That is all there is to conspiracy!
Conspiracy means the recognition of the collapse of capitalism
One day in advance of the daily newspapers' latest dispatch.
I'm afraid; but I am willing to suffer
So as to carry on after the smash-up.

# The I. W. W. and Politics

This is the political season and the open season on politicians.

The old members of the I. W. W. are fully conversant with our organization's stand versus politics, but there are great numbers that know nothing about it. For their benefit let us restate it, lest somebody come and say that we are too cowardly to come out and show our hand.

The key-note speaker of the mishappen Third-party used an illustration in describing the Republican and Democratic parties which is apt to survive the party he helped to form. He said: "The Republican and Democratic parties are merely the right and the left wings of the same bird of prey."

No truer words have ever been uttered.

He who would learn the truth about the various groups of the ruling class had better keep his ears open about election time, for that is the time it leaks out.

What the republican factions contesting for the presidential nomination at the late convention in Chicago said about one another leaves nothing further to be desired. The corruption and the crookedness they uncovered about one another would be enough to make a responsible citizen lose hope for the future, if it were not for other factors, outside of politics, that are stronger. It became plain that the "republican party" is nothing but a corrupt political machine run by Wall street, a villanious and sinister conspiracy against the liberties of the American people.

The Democratic convention in San Francisco proved practically the same thing about that party. It is apparent that it is an utterly corrupt machine dominated by the wealthy men of the country. That Sam Gompers is flirting with it, does not alter this fact.

It passed lightly over the aircraft steal of one-half billion, the ship yard swindle, and the thousands of cases of graft and profiteering on an hitherto unheard of scale, threatening to continue the same policy of terrorism against the workers.

The ruling class has to maintain these two machines in order to preserve a semblance of political democracy. The people must be deluded into believing that they are actually sovereign, while they are in fact merely voting cattle. It does not matter much to Wall street and their groups which party wins. They control them both. Wall street wins in either case.

They are really "the right and the left wings of the same bird of prey."

But every bird needs a tail to be well balanced. The political bird of prey could not fly without a tail, and we maintain that the tail feathers are supplied by—The Third Party, and the other minor parties such as the Non-Partisan League and the Socialist Party, Single taxers, the Liberal Party, etc.

We do not want to charge that either of them is subsidized directly by Wall street, but nevertheless they perform the function of steadying the flight of the capitalist bird of prey.

They help to foster and maintain the illusion that we can solve our social difficulties by electing a new set of officials, and as long as the people are suffering from this delusion the capitalist battle is won, no matter what set of officials is elected.

The minds of the large masses of the people of this country are now set on politics. Having ascertained this fact the robber knights of Wall street feel calm and satisfied and go to enjoy their vacation. The people will have the fun and the excitement of the contest, the outcome of which can in no case alarm the capitalist class. They will enjoy it like a prize fight or a great ball game. As long as everybody gets a party that suits him to vote for, the river of discontent runs out in the sand of politics, and the exploiters are safe.

The thing that the capitalist class is in deadly fear of is that people will get together and attack their ownership and control of the wealth of the country. None of the political parties threatens that ownership and that control.

We do not take seriously the economic program of the third party. If we did we should be terribly alarmed, because we consider it the bungling work of social quacks and hold that it would be disastrous if carried out.

Nor do we take seriously the platonic declaration of the socialists in regard to the means of production and distribution. We have seen what their fellow political socialists of Sweden and Germany and other countries are doing, now that they have power, and we refuse to listen to the noise made by these socialist politicians. It is all campaign buncombe peddled for the purpose of rolling up a vote among ignorant people. Neither of them stands a ghost of a show of winning, so it does not matter much.

The Socialists have nominated Debs in order to help free him. The Third party has a platform plank about free speech, free press, free assemblage and amnesty for class war prisoners, and that is about all that an I. W. W. man can endorse in their program.

Now, then, should an I. W. W. man vote for either of them or for both of them, if possible, on this account, in order to show appreciation and give encouragement?

The question is not of great interest to the I. W. W. members.

Nearly one-half of our membership are foreigners, and of these only an insignificant percentage are citizens, particularly as we are of late being denied citizenship. Of the native-born half of our membership only a small number are able to vote, due to residence and tax qualifications. They are harvest workers, railroad construction workers, lumber workers, miners, marine transport workers, etc., that is, migratory workers, and a large part of our members in other industries are industrial float-

ers, due to one reason or another. Another large group is disfranchised by being convicted or indicted for sedition, etc. The small percentage of our members who really have a vote and intend to use it will know how to use it without being told by this editor.

Nearly all of our members admit that we have nothing to gain through political action, but some may entertain a glimmering hope of being able to vote down the gang of terrorists that are now oppressing the people and get a change of officials. The I. W. W. does not intend to interfere with such harmless pastime on the part of individual members, but we positively refuse to endorse any political party.

As an organization we cannot take any political stand. The first attempt to do so, in favor of one party or another, would immediately tend to burst our organization into fragments. There is just one point we all have in common, and that is our economic interest as wage workers, and on that basis alone can we unite the masses, and it is a slow and difficult task at that.

We intend to set up a complete administration of society of our own, both local and regional and industrial, but we have to bide our time about it. That administration, based upon representatives elected by the shop branches or corresponding units, may give rise to new "political" parties within the industrial organization, just as now there are contending factions and somewhat conflicting currents within the I. W. W. Most of our members will postpone their political activities until the day comes that these elections assume a national importance to the people in general. They will refuse to have their interest and their attention diverted from the all important industrial struggle to the sham contest between the wings and the tailfeathers of the capitalist bird of prey as it swoops down upon the workers. They plan and scheme how to deprive him of his prey.

Every time our thoughts happen to be drawn towards politics we dig in with more determinatic than ever in the work of industrial organization as our only salvation.

Instead of hitching ourselves as draft horses to the wagons of the political parties, we call upon all sensible citizens to quit that kind of nonsense and unite with us in creating new organs of production, distribution and administration. We will need them right away. The fall of capitalism is dangerously near.

In consonance herewith, the sum total of our editorial wisdom on this point is:

"To hell with politics!" "All together for industrial organization!"

# Poland and Italy

The breakdown of capitalism in Europe continues. The combined allied and Polish forces have crumbled before Soviet Russia's armies. Another capitalist dream has gone a-glimmering. The Polish people are desperate and only await a favorable opportunity to throw off the parasites which have bled them for centuries. There can hardly be any doubt that Poland will soon join Russia in ousting the capitalist class to the limit of its ability. The people, ignorant and untrained to organization as it is, may be no more capable than the Russian people was to take immediate charge and establish industrial democracy. Like the Russians they may have to establish a communist dictatorship, consisting of the more advanced elements. These will probably in a few years set things right in Poland and get production and distribution started on a communist basis, at least partially.

Of course, one should not sell the hide before one has shot the bear, but we are already interested to see whether the Polish peasantry will be able to solve the agricultural problem without breaking up the great estates into small holdings. We hope they will enlarge them instead of breaking them up. That means a higher state of civilization.

As for Italy, the capitalist press of America has almost given up hope of saving it for capitalism. The kept papers have as much as acknowledged that capitalism is over in that country. It has ceased to function. In order to live, the workers have been compelled in some places to resort to makeshift substitutes for private ownership and control. The Italian workers are experimenting and learning. The revolution is ripening. Capitalism having broken down, the government is also crumbling. The king is said to have engaged lodgings in London. Dissolution is imminent.

The Italian Workers are considerably better prepared to take over production and distribution than the Polanders or than the Russians and Hungarians or even the Germans were, but they are far from ready. Due to the influence of the Unione Sindacale Italiana, The Italian I. W. W., a few hundred thousand workers are organized industrially, thus being able to continue production and distribution without interruption, but here as elsewhere the political leaders have succeeded in deceiving large masses up to the last moment, telling them that the people could come into possession of its own by means of political action. These political minded people will now find out how helpless they are before the crumbling giant.

The Italian masses are far better situated for taking control locally through their camere del lavoro (labor exchanges—our City Central Councils) than the workers in many other countries.

The landslide of the world revolution is in progress.

Who is next?

# City Central Councils

In the past we have been so busy building the productive and distributive organs of the future—the industrial unions with their branches and councils—that we have had little time to devote to another equally important function of the job branches, namely as the basis of local and regional administration.

But we need not only organs of production and distribution. We must also have local administration to begin with and regional administration in the second place.

Such an organ is the City Central Council, pictured on the Hardy chart as a representative local body, drawing its members from the various job branches. This council will have nothing directly to do with production but will function as intermediary between the job branches for purposes of local administration.

It will take over most of the functions of the present city councils, but will in addition have many functions growing out of the change from private ownership to communism.

So far we have had little use for these City Central Councils except as a body to handle the question of joint local propaganda for all the branches, such as renting of a common hall and office, handling literature and arranging meetings and entertainments, etc. But these functions are apt to be immensely widened almost any moment without any particular effort on our side.

That capitalism is about to collapse completely nobody denies. Production and distribution are breaking down daily. Capitalism is making a failure of almost every branch of human activity. Particularly dangerous is the railway and coal situation.

The capitalist press is making no secret of the fact that even if a railroad settlement is now effected, which is by no means sure, the railroads will not even approximately be able to get in shape in time to handle the crops. Famine stares us in the face in the near future. If railroad transportation breaks down all industries will suffer. They will have to shut down, and more particularly for the reason that there is little or no coal available. People in an authoritative position are repeatedly warning us that there will be a coal shortage this winter, that factories will have to shut down and that people will freeze. It is these very things that constitute the collapse of capitalism. Add to this that conditions in Europe are much worse and tend to drag American capitalism along to destruction, and we may without drawing too much on imagination say, that the collapse here is impending.

No chain is stronger than its weakest links, and the rail and coal situation are two links that are ready to snap.

All modern governments depend for their existence on taxes. If capitalism collapses, taxes will soon cease to flow. There will be little or no revenue for the governments. No capitalist government, local, state or national, can exist without revenue. When capitalism collapses the various governments will soon follow. They will be unable to function. The administration of our cities will go to pieces. Streets, light, water, schools, courts, institutions—all of these items of local administration will be stranded.

In Chicago f. i. the local government has been in a state of collapse for some time past. City employees of all kinds, including police and firemen have repeatedly gone on strike. The city had insufficient revenue to keep going.

People will become desperate from suffering and disorder. The bad elements, the same ones who lynch Negroes or start race riots or raid I. W. W. halls, will get out their guns and begin a reign of terror like in Centralia, with this difference that they will have no organized production and distribution to fall back on. Banditry itself on a large scale (such as Villa's) will be impossible. Then people will grasp at straws for their salvation. They will try the A. F. of L. labor councils in many cities as an organ of local administration. It will be better than nothing, but unless it speedily regroups the workers industrially so they can take over production and distribution through their unions, they will make a failure of their administration.

Only a council elected by the workers in the shop or the place of work, penetrates with its power to the bottom of society and draws its inspiration from the whole people, and is in touch with living life. The modern governments are not in touch with the masses. Only such a City Central Council will enjoy the confidence of the people as a whole sufficiently to restore order without bloodshed. Only such a council will have the means at hand of running a city administration without collecting taxes. It will base the administration on an exchange of services.

While we may have no immediate use for such councils in some places, the question of organizing them should be taken up, to be ready for an emergency. We must not allow capitalism to crush us in its fall. We may not have time to organize any considerable portion of the cities before the great crash. But the start we have will serve as a nucleus around which we can in an emergency manner group representatives from all occupations until such time as we have a chance to thoroughly organize them for productive and distributive purposes. Thus the City Central Council will not differ very much from the Russian soviets at the time when capitalism and capitalist government broke down in Russia.

These City Central Councils are bound to become the basic units of the local administration of the near future.

In England the workers have suddenly awakened to the necessity of immediate action in this regard. They are now organizing the same kind of bodies under the name of Social Committees in Scotland and Social Soviets in England.

In Sweden the syndicalist organization has from the start built for local administration rather than for productive and distributive purposes. The local samorganizations of the Swedes will serve like a charm as organs of local administration, while they still have a good deal to do before they get their productive and distributive organs in shape.

In Germany the Labor Exchanges correspond most nearly to our City Central Councils, the English Social Soviets, and the Swedish Local Samorganizations. In Latin Europe they also have their labor exchanges. (Bourse du travail, camera del lavoro, etc.) Everywhere the workers are getting ready for the great crash which they see coming. The penalty for neglecting it will be severe.

There is one danger attending this work.

Some people may become so captivated with the idea of making a body of local administration, no matter how it is made up, that the professional politician will get too much play and precipitate us into revolutionary adventures a la left wing. It is always a good rule to keep the politicians out. All they want is power and wealth without going the legitimate way in getting it.

The proper way to go about it, is to organize one shop after another, one place of work after another. As the number of job branches grows, the City Central Council grows by having new members added. Every shop branch that sends delegates adds to its power. Thus we secure a natural and organic growth of the future organ of administration, which leaves no room for the professional politician to get in, except he works as a useful producer.

Henceforth we have, consequently, to build in two directions. We have to hurry to build our industrial unions, in order to have new organs of production and distribution when capitalist production collapses, and we have to build City Central Councils so as to have organs of local administration when capitalist administration, built as it is on private property and taxes, comes down in a heap.

# STOOLS AND FOOLS

Things are coming to light which make us believe that the mock "revolutionary" events in this country during the last two years, as well as the r-r-r-r-r-revolutionary propaganda now being carried on above and "under ground" can all be traced to the so-called Department of Justice and Attorney General Palmer.

Every one you meet seems to be convinced that the bomb "outrages" of last year were all frame-ups by the Palmer stools, and that Palmer's porch was blown up at his own suggestion, to make political capital for himself, to make him a martyr, and to give a plausible back ground for the suspension of all laws and constitutional guarantees in dealing with "the reds."

The propaganda for insurrection and civil war carried on in certain quarters also very likely has its root in the secret service.

Events are daily taking place which strengthen this supposition.

In the trial of Bross Lloyd and 19 other communist labor party members in Chicago, there are two witnesses which attract special attention, namely Ole Hanson, ex-mayor of Seattle and Harry Wilson, a government agent or a "stool".

From the newspaper accounts our enemies appear to be gloating over the fact that Harry Wilson and Ole Hanson had "the reds" completely duped during the great strike of 1919 in Seattle. Harry Wilson is said to have been at the head of the "Soldiers' Sailors' and Workingmen's Council" or "soviet" which is supposed to have been the body that was staging a revolution in that city, a revolution which brave Ole nipped in the bud. It now appears that Ole and Harry, the two pals, together staged the "revolution" and they "suppressed" it, much to the glory of Ole. He has been traveling all round the country ever since lecturing about his wonderful deed to simple minded people who have not the slightest idea that the whole thing was a stage revolution. As such it, no doubt, had a twofold purpose. First to make the "reds" hated and suspected and to facilitate illegal measures against them. In short to create a hostile public opinion against them. Secondly it had for its aim to, if possible, inveigle the masses to some deed of violence which would give Ole an occasion to play the machine guns. Wouldn't that have been great! To kill, say, a couple of thousand wobblies led by the Father Gapons of today, the government agents. What Hanson and the lumber barons and the stools seem to have been playing for was a "Bloody Sunday" similar to the one in Petrograd 1905. Only the common sense of the workers saved the day.

Thus it goes in every part of the country. Whenever you hear of any "revolutionary" act somewhere, don't ask as they used to do—"ou est la femme?" "where is the woman," but ask "where is the Palmer stool pigeon?"

We learn that the secret service has 133,000 men at work. These hyenas have got to earn their blood money some way, and they do it by staging fake revolts, bomb plots, riots, effectively aided by the thugs employed by private detective agencies.

They worm their way into the workers organizations and begin their provocateur agitation. Soon they will gather round them a small bunch of fools. Together they will start knocking anything that is successful and anyone who is doing useful work. To the limit of their ability they sow dissension, voicing suspicion and spreading slander and lies, and creating disorder and pessimism, That is what they are hired for.

Stools and fools are both a nuisance. We should be on our guard against both and never let them make any headway.

# The Stoolpigeon and His Sphere

In a previous issue of The One Big Union Monthly we mentioned the "Sherman Service, Inc." We related, after the daily press, how State's Attorney Hoyne of Illinois, the same official who recently caused our headquarters to be raided and had numbers of us arrested, found himself compelled to make a raid on the offices of the said firm. It had become a matter of public knowledge that it was the "operatives" of this firm who started and conducted the rioting in the steel strike zone, this "work" being paid for by the steel capitalists.

We pointed out that "sabotage" and "inciting to riot" and "violence" is a regular business carried on by such firms, supported by the capitalists but generally blamed on the I. W. W.

Herewith we publish a letter from another firm of the same kind, "The American Detective Service Co.":

Chicago, Dec. 10, 1919.

Dear Sirs:

Our Field Superintendent will be in your territory for the next few days on special business and will be at leisure to call.

The HOLIDAY business is approaching and we suggest that you confer with him relative to our improved method and system for protection of Dry Goods, Department Stores and Sundry Mercantile Houses against:

Dishonest employes
Shoplifting
Petty thieving
**Acts of disloyalty by employes**
**Conspiracies**
**Labor agitation**
Systematizing—efficiency
Leaks and other irregularities.

No charges are made for consultation. Please appoint the time and place by return mail when it will be convenient to see him.

Your prompt reply will be greatly appreciated. by

Yours very truly,

AMERICAN DETECTIVE SERVICE CO.
John W. Weccard, General Manager.

From the letterhead it appears that this firm has office connections in twenty important cities.

How many other firms of a similar kind there are throughout the country we do not know, but we suppose there are many. As will be seen, this extensive firm supplies not only the regular store detective, who watches for thieves and shoplifters, but also "stoolpigeons," who report on "acts of disloyalty by employes," "conspiracies" and "labor agitation."

From the size and number of these firms we must conclude that shops and stores are honeycombed with stoolpigeons. We further know that the big trusts, such as the lumber trust, the copper trust, the steel trust, etc., maintain their own secret police and corps of gunmen.

As a matter of fact the capitalist class has now come to a pass where it can maintain itself only by employing hundreds of thousands of individuals from the very dregs of society as spies, informers and provocateurs, while other thousands are hired as gunmen for downright murder.

Only recently we noticed an advertisement in a Chicago daily paper calling for big and resolute men weighing not less than 180 pounds to enlist for guard duty in the northern forests. This means that a regular gunman rule is going to be established in the woods. In the forests of the northwest "suicide" by hanging is becoming alarmingly common of late. It is the hirelings of the lumber trust that handle the rope in these cases of "suicide" and the victims are men who talk One Big Union. The advice of ex-Mayor Ole Hanson is being followed.

At the same time police and soldiery are working overtime in all parts of the country suppressing and oppressing the workers.

Such facts as these go to prove that the capitalist system is about to collapse. When production and distribution can be carried on only by such extreme, anti-social and abhorrent measures, it shows that the people as a whole are out of sympathy with the system and want it removed and replaced with a better one.

At the same time the capitalist class is making a ghastly failure of supplying the needs of mankind. Hundreds of millions are deprived of the necessaries of life, while other millions can buy them only at outrageous figures.

In these various manners the capitalist class is rapidly alienating the good will and the loyalty of the great masses and driving them to despair.

No system of stoolpigeons, no companies of gunmen, no regiments of soldiers will then be able to prevent disaster. The welfare of mankind rests primarily on the uninterrupted flow of products from the various industries, produced with mutual good will. The One Big Union movement, that is, the I. W. W., is the only force in present-day society which strives to protect mankind from this overhanging disaster, but this movement the capitalist class in its criminal career seeks to break down with stoolpigeons and gunmen.

Thus these hired stoolpigeons and gunmen and their masters are the worst enemies of mankind and should immediately be curbed through the collective action of the people.

---

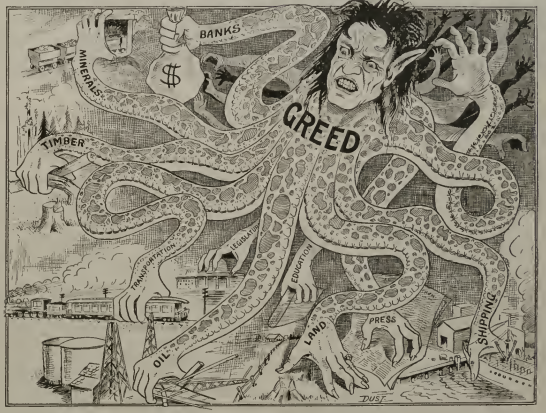
Does your conscience hurt you? Are you dissatisfied with yourself? Do you want to get peace with your ego and become happy?

All right! We will tell you how. Become an I. W. W. agitator. Begin with ordering a bundle of the One Big Union Monthly.

# MONEY MADNESS

By

## W. C. Weber



Greed! Greed! Greed! What horrors are properly laid at its door! Crime and bloodshed, tyranny and oppression, poverty and prostitution, — in fact all the evils known to mankind, can be traced, directly or indirectly, to greed.

In greed there is no reason nor sanity. Can we conceive of greed existing in a balanced mentality? Must not one who is swayed by greed in the very nature of things, be of abnormal mentality? How otherwise can we account for the inhuman cruelties practiced by him upon his fellow man? How else account for his total disregard for human suffering, misery and death? The practices of big business are evidence plain to the student that the leaders of Wall Street are mentally unbalanced. The Stock Exchange in New York, as viewed from the balcony, gives all the evidences of madness one could possibly find in a madhouse. The individual who resorts to unscrupulous means and methods to obtain money, or to further his business interests, which is the same thing, is in identically the same class as the thief, the burglar and the highway robber, they are all mentally defective.

Insanity is either functional or organic. That is, there may be actual physical injury or deformation of the brain, preventing certain parts from functioning; or, the brain being perfect in all its parts, from some other cause than physical injury or deformation it may fail to function normally. Money madness may well be called a kind of hysteria, a functional nervous and mental disorder. Fixed ideas, dominating impulses and motives may come to hold such absolute sway over the mind as to produce actual derangement of function. An insane man is one of illogical or irrational mentation. Illogical or irrational mentation produces loss of function or improper functioning, the resultant thought and action which follows is abnormal or supernormal or insane. Of course there are degrees of insanity. Many really insane people pass ordinarily for sane because of very slight degree of derangement. However derangement in any degree is insanity. An individual may become so wrapped up in the pursuit of wealth as to seriously interfere with normal functioning of all the mind when there follows, as naturally as night follows day, the loss of a sense of justice and a proper understanding of right and wrong. The pursuit of selfish interests induces a perverted reasoning which excuses even inhumanity and cruelty.

There is a parallel in cases of dual personality. In such cases certain portions of the nervous system wherein are stored memories of past experiences or sensations are cleft off and lose their connection with the rest of the nervous system. These memories can not be recalled or brought into connection with the rest of the brain and therefore remain outside of consciousness. The individual possesses a limited power of mentation while actually possessed of a perfect mentality. When some nervous crisis, such as shock, worry or physical accident has caused such a state to come into existence the individual seems to have changed his personality. The amount of isolated experience may be so great as to make this change of personality most profound and complete. The previously retiring, timid man may become bold and brazen, and cruel. The psychological explanation of this lies in the theory of the complex. A complex is a group of associated sense impressions retained in the nervous system, — the nerve centers and association nerve paths. All sense impressions tend to group themselves together in the brain according to associations of contrast, similarity or contiguity in time or space. The word apple may suggest an orchard or a fruit store. Its shape may cause you to think of an orange; its color of a rose. These suggestions follow the laws of association. Things seen together each recall the others. All connected thoughts centering around one idea are called a complex. The mind is made up of innumerable complexes normally all possible of being brought into consciousness and linked together. Insanity is the result when any number of these complexes are cut off and thus rendered inaccessible. Because of the lost or severed connection the experiences stored in these several complexes are not available for use and do not come into consciousness at all or for as long as the abnormal condition lasts. The thoughts and actions of the individual not being the result of the functioning of the whole mind, but of only a part of it, these thoughts and actions are the expression only of part of the real personality. With so much of the individual's mentality missing it is no wonder that his character is changed and his habits are different from the habits of the whole,

normal man. If we voluntarily or by chance, continuously think and experience sensations along only one line of endeavor to the exclusion of all other lines, the complex thus formed, because of frequency of stimulation, soon tends to dominate the mind. It will soon be unnecessary to voluntarily exclude extraneous matters. The nature of the mind is such that when one complex has become dominant, it automatically excluded such extraneous matter from consideration. In time the individual becomes a man of one idea, all other complexes, by reason of their disuse, will have entirely lost their connection with the main line of thought. It is like a stream having many channels. The channel through which the most water flows becomes steadily deeper and deeper until sooner or later the other channels will

dry up and all the water will be running through the one channel; even the very location of the other channels may be lost. A sensation, like water, tends to pass through the path of least resistance — where the channel is deepest — all new sensations therefore, instantly pass into and through the dominant complex and are inexorably kept within these bounds. Resultant thinking, after the formation of a dominant complex, is not as broad as the whole mind, but is narrowed down to conform to the ideas embraced within the complex.

A specialist — an individual who has necessarily confined himself to one line — is narrow. He cannot see all of life for he must narrow it down to his viewpoint if he is to succeed in his calling. We all know the man who talks nothing but shop. The truth is, — that's all he thinks. It is veritably true that any certain landscape appears much different to an artist than to a farmer. A tailor sees the clothes one wears, a shoemaker sees the shoes. A money-hog viewing the same landscape with the artist mentioned above would be very likely to narrow down his vision to the possibilities of exploitation of real estate values, oil rights, mineral rights, timber rights and food products. The more a money-hog he was the less of anything else he'd see. The broad, normal minded man viewing the same landscape would see a thousand things in it no money-hog could possibly see. He'd see all the possibilities of human happiness in it, not his own only, but of others. He would be inspired to picture the joy and comfort to be derived for humanity from the beauty of the scene and the products of its fields, its mines, its wells, its timbered hills and flowered dells. These things he would see from the viewpoint of a sane and normal mind, and a lot of other things would appear to him too numerous to mention. The money-hog is limited in his appreciation to personal, selfish interests by reason of his lifelong thinking and scheming for financial advantage and personal aggrandizement. This complex has been reinforced over and over again until it has become a dominant passion. All opposing ideas are excluded, hence right and wrong are but relative terms with little meaning; and reasoning is biased because of the limitation of his mental content. Everything in his life's experience which would help him form logical and correct conclusions is outside the circle of his customary thought, stored away in the inner recesses of his brain where they are altogether inaccessible. It is very easy, in fact most natural,

for him to justify himself in all sorts of dishonest and inhuman practices, which are very patently dishonest and inhuman to all sane, right-thinking men.

The small number of men in this country who own all the tools of production and command all the sources of raw material and even control the government, are not fit mentally to hold any positions of trust at all. It can be easily proven that they are all insane, money mad, mentally unbalanced. Witness only their inhumanity, dishonesty and horrible atrocities. Like all other criminals, they should be placed in institutions where they can be restrained for the protection of society. Fining them does no good. Restrictive laws do less good, for they are seldom enforced if passed. Laws serve only to make such men more crafty in order to evade punishment and their subversion makes our country the laughing stock of the world. Even under an entire change of system, which is inevitably coming, they will be dangerous if left at large. The only safe place for a money-hog is in an asylum. Here they can be treated, and by a process of re-education and psychological training it may be they can be cured of their disorder. They should never be released until competent alienists and psychological experts have pronounced their cure complete. Only in that event will there be any hope of them becoming worthy and honest citizens.

---

NOTE: — The above is a phychological explanation of a lawless, dishonorable, inhuman being of the present master class. When we have done away with the present system and removed all possibility of profits and wage slavery there will be no more MONEY MADNESS.

# THE GENERAL DEFENSE

By Wm. D. Haywood

It was agreed with the Attorneys for the Government, before the argument of the Chicago Appeal, that a fifty thousand dollar joint bond would be accepted as bail for all of the remaining members of the Chicago group now held in the Penitentiary at Leavenworth, Kansas.

An effort is being made to raise this sum at the earliest possible date. Fifty-five hundred and fifty dollars has been received from Los Angeles, California; Nine Hundred Dollars from the Ladies Sewing Clubs of Hoquiam and Aberdeen, Washington; Three Hundred from Minneapolis; Two Hundred from Baltimore. Several thousand was raised at the Picnics held at Seattle and Portland. The Bail and Bond Committee of Philadelphia has Seven Thousand Dollars in hand. There are several thousand dollars on hand in this office, and as soon as the necessary amount is collected, it will be deposited in the Appellate Court.

All persons interested in the members of the I. W. W. are urged to get busy now in behalf of these men who have been so viciously persecuted—men who have suffered long years of imprisonment, men who were arrested, convicted, and sent to the penitentiary because they had opinions and because some expressed those opinions.

It must be remembered that no member of the I. W. W. was guilty of any crime. The only charge against any of them grew out of the extraordinary laws that were enacted during the war period.

Money and Liberty Bonds for the Chicago group are not all that is necessary. Bail for the Sacramento group has been fixed at $1,000.00 for each year's sentence imposed upon the defendants. Bail will be set for the members comprising the Wichita group as soon as the transcript in their case is presented to the Appellate Court at St. Louis, Missouri.

When bond is secured for all, there will still be more money needed as there will be large expense for transportation of the men to their respective homes. There will also be a need in many instances to purchase clothes, as most of the men wore out their clothes while confined in the county jail and what little they had left were destroyed upon arrival at the penitentiary.

The only authorized General Defense Stamp now is the new day's wage stamp—$6.00. Members can help by getting one of these stamps in their membership book. Do not neglect this—it is important.

Attorneys Mulks and Lowe have been looking after the interests of delegates and members of the Agricultural Workers Industrial Union No. 400 in Kansas, Oklahoma, and Missouri. In these states many members have been arrested and in some cases held indefinitely; at times without any warrant or any charge having been preferred against them.

Here is an instance—Robert Barker, an eighteen year old member, was grabbed by a brutal thug who was burdened with a little temporary authority at Wichita, Kansas. Fellow Worker Barker was attending to his own business when the big, two fisted idiot with star and club arrested him without a warrant. After beating the lad severely he threw him into jail and then stole his overalls, shoes, and supplies.

Barker had been held in jail several weeks when he was released by the court and immediately re-arrested on the street as he was going to the office of our attorneys. His release was again secured through a writ of habeas corpus and a warrant has been sworn out charging the officer who first arrested him with unlawful imprisonment, assault, and battery.

George F. Vanderveer, Attorney, has several criminal syndicalism appeals pending and is also looking after the Centralia appeal.

There are twenty-one criminal syndicalism cases pending in California, also 10 cases under the same law coming up on appeal.

Now is the time for all members and friends to get their shoulder to the wheel. The reaction is coming. Let us be prepared to take advantage of it.

# The "Harvest Stiff" of Ancient Days

## A CHAPTER OF SUPPRESSED HISTORY

*(The following is a portion of the first Industrial Union Handbook soon to be issued by the I. W. W., prepared under the direction of the Bureau of Industrial Research.)*

Agricultural work has been looked down upon by the lily-fingered gentry of the idle classes, and agricultural workers have been despised thruout the ages as "menial" and "low"; yet the human race never could have survived without such labor and such men. Theirs are the hands that have nourished alike the brawn of the builder and the brain of the dreamer of dreams. Agricultural work is the most ancient and the most honorable of all work. It is the "man with the hoe," and not the fabled Atlas, who has always carried the world on his shoulders.

Harvest workers in all countries and all times are surprisingly alike. They swelter today in the hot fields of golden grain just as they did two thousand years ago, and longer. The implements they use are different at present, it is true, but the sweat, the backache and the old, old spirit of revolt, are identical.

Few modern harvest workers are aware of the fact that the branded slaves who garnered the Roman crops of twenty centuries ago were organized into unions, went on strike, slept in the "jungles" and sang rebel songs, much as the "400 stiff" is doing at present. But these things are true.

The chattel slave of classical days was not migratory. In fact, he usually went about with an iron collar and a chain. But he was a rebel, and he has written a page of history that bourgeois historians have seen fit to ignore. Labor disturbances have always been unpleasant things for social parasites to consider.

Few people know that the strikes and revolts of ancient agricultural slaves were so huge and so powerful that they shook the proud aristocracy of Rome to its foundations and, eventually, helped to shake it down. Few people realize that the harvest "stiff" of bygone days waged mighty warfare against the hated institution of slavery and, in places, actually emancipated themselves from its yoke. What is more, they forced the release of thousands of their fellow workers from prison; confiscated great estates from their parasitical "owners," and "made the boss don overalls." At one time 300,000 of them marched against Rome, the vicious center of the ancient slave market, and caused the mighty to tremble in their seats of power.

The "Dictatorship of the Proletariat" did not originate in Russia, but in the island of Sicily—the granary of the ancient world—one hundred and forty years before the rebel hobo known as Jesus is supposed to have been born. On one occasion, under the leadership of a runaway slave named Eunus, this dictatorship endured for a dozen years and successfully withstood the strongest armies the landed aristocrats of Rome could send against it.

### Ancient Labor Unions

There were countless slave strikes and uprisings in ancient days, but only a meager few have been recorded. Our limited space makes it necessary for us to confine ourselves to the most spectacular of these. Old inscriptions and fragments of history have proved that agricultural and other workers

were organized as long ago as one thousand years before Christ. In ancient Greece these unions were called "therasoi," in Rome "collegium." These unions were of three varieties: brotherhoods, burial societies and communist. All were, no doubt, the product of the old communal mode of life. At first they were used by the free workers against slave hunters, afterward by the slaves against their "owners." The active resistance to the raids of slave merchants and the subsequent displacement of free labor on vast estates, that had been stolen from the common land, gave rise to much discontent and many uprisings. These occurred ever more frequently as the aristocrats seized the lands and sought to break up the unions. The discontent reacheda climax in 58 B. C., when the Roman Senate sought to pass a law outlawing labor organization. During this time a series of gigantic labor disturbances swept great portions of Asia Minor, Italy and the whole of Sicily. It was during this period that the gladiator Spartacus made his gallant stand for human freedom. The Spartacan movement in Germany, of which the martyred Liebknecht was the head, was named after this heroic rebel.

It must be remembered that slaves in those days were branded like cattle. Like beasts, they were not supposed to have human souls or human feelings, and like beasts they were compelled to toil for their "owners." They were in the condition that the master class of today would like to see all modern wage workers in. But these men were closer to the period of primitive communism than we are, and the memory of freedom was fresher in their minds. The efforts of the patricians to drive them into slavery and to keep them there were always resented and always resisted.

### A Revolt Against the Slave Trade

In ancient Spain, 149 B. C., a great revolt against the Roman slave trade occurred. This uprising is connected with the name of Variathus, a rebel sheep herder. The slave market had made terrible inroads upon the population of agrarian Spain, whose sturdy population was admirably adapted for agricultural labor upon the great estates of the Roman grandees. So the spearmen of Rome were dispatched thither to carry off the strongest and best into bondage. This plan worked flawlessly for a while.

THE FREE HARVEST WORKER OF GAUL

The ancient Gauls harvested on the communal plan. They invented machinery to make their work lighter. The man in the picture knocks off the heads of the grain as they come between the comb-like teeth which project from the box. Slaves were so cheap in Rome that labor-saving machinery "didn't pay".

Variathus rebelled against the cruel custom from the time he was a young man. The Romans looked upon him as an agitator, his fellow slaves as an efficient and daring leader. No doubt, like Spartacus, he was an organizer for the "collegium" of agricultural workers. Variathus kept himself out of the clutches of "the law," bided his time, and when he struck, he struck hard.

Thousands of Spanish workers were slaving in foreign harvest fields. Many were sweating under the lash of tyranny at home. After the battle of Pydna the Romans sacked or destroyed seventy cities and took a hundred and fifty thousand free workers into captivity. Variathus continued to agitate until Spain was fairly sizzling with rebellion. A Roman general named Galba perpetrated a massacre in order to intimidate the population. It had the opposite effect. Variathus, who fortunately had

escaped, marshalled the agricultural workers into an orderly force and told them the hour had come to choose between resistance or slavery. They chose to resist. He then proceeded to drill and discipline his forces.

When the next slave-hunting expedition reached the shores of sunny Spain it was met by a determined host of sun-burned huskies armed with swords made out of sickles and spears fashioned from scythe blades. The proud invaders were ingloriously defeated. During the following twenty years Rome sent six great armies to Spain. Each one was annihilated. Slavery was a thing of the past. The fertile fields of Lusitania were tilled by free communal labor as they had been for centuries past. The black cloud of slavery had vanished.

Eventually the rebel sheep herder was murdered by Roman stool pigeons from his own ranks. But the slave market had been cheated of hundreds of thousands of victims by his twenty years of valiant struggle.

### The "Dictatorship" in Sicily

The story of Eunus, the Syrian runaway slave, and the great revolt of agricultural workers in Sicily, is one of the strangest and most romantic in history. Sicily, in ancient days, was noted for its wheat. Oil and wine were produced also, but wheat was the chief product. From it much of the bread of the then known world was made. Sicily was a place of great natural fertility and beauty. Even today, travelers state, the rich, spicy odor of the island can be detected at sea, miles before its shores are sighted. But, in the days of Eunus, land monopoly and slavery had made a hell out of what should have been a paradise. Every inhabitant not of noble blood was a slave. The possessing class was becoming more greedy and vicious all the time. Also, the wealth of the island was being concentrated into constantly fewer and fewer hands. The city of Leontini, for example, had but 88 property owners, Mutice but 188, Herbita but 257. Other large cities counted its property owners by the dozens. There were absentee Roman land owners also. The main part of the population was composed of slaves—mostly discontented slaves.

All histories state that Eunus was a union man. Even in Syria he belonged to the "thiasos" of Dionysian artists, which is the ancient name for actors' union. Eunus' "stunt" as an entertainer was fire spitting and wonder-working by means of conjuror's tricks. The Romans looked upon him as a dangerous agitator, but the agricultural slaves considered him a messiah. He was an organizer for the "eranos" or union of agricultural workers in Sicily.

A harvest strike started near the city of Enna over demands for better clothing and more food. The rich land owner, Damophilus by name, warmed the hides of the strike committee with a "scorpion" and sent them back to the fields.

This action, characteristic of the greed-blind exploiters of all ages, was the signal for a strike. This strike grew into one of the greatest labor rebellions the world ever saw. The outraged slaves,

**BREEDING SLAVE REVOLTS IN ANCIENT ROME**

**Entire cities were often driven into slavery by the Romans. The slave market was the backbone of ancient commerce. It is not surprising that such workers not only organized, but revolted.**

after working summary vengeance upon Damophilus and his equally cruel wife, took to the mountains and "jungled up" in the vine-clad security of the craggy heights. News of the exploit spread rapidly and soon the agricultural workers of the entire island had downed tools and joined the revolt. It was then that Eunus, the agitator and worker of wonders, took command.

His first step was to urge the rebels to trample human slavery underfoot, appropriate the estates of the idle land owners and build up a free society on the old communal plan of common ownership and equal labor. One after another these estates were taken over. Their rich and idle "owners" were uniformly put to work or thrown in prison if they refused.

### Class War Prisoners Released

The jails of the day were called "ergastula." These were underground workhouses similar to the "solitary" at Leavenworth where Uncle Sam punishes workingmen for the crime of thinking. The "ergastula" of Sicily were full of recaptured runaway slaves and other workers who had committed offenses against the law-buttressed land owners. No doubt they contained their quota of union organizers, just as do the prisons of today. These gruesome holes were of course hated by the workers. One of the first things they did after the revolt was to batter down the iron doors and free the inmates. Sixty thousand slaves, mostly class war prisoners, were released in this manner to serve in the rebel forces. It is not reported that the rebels in ancient Sicily used lawyers to force the release of fellow workers unjustly imprisoned.

A great number of freedmen had become tramps, owing to the labor market being continually flooded with slaves. These joined the revolt also. The rebellion grew in strength and numbers. Small cultivators, willing to work, were spared, but the great landed parasites were summarily dealt with. During the following years most of Sicily was farmed co-op-

PLOWING IN MODERN SICILY

**This is a recent picture. The method of plowing has changed but little since the days of Eunus and Athenion.**

out the world. Like the lumber barons of today, the Roman patricians did not intend to permit their human beasts of burden to organize and put a stop to the process of exploitation. The law permitting slaves to organize was being fought with extreme ferocity by the land owners and their tools in the prostituted Roman Senate. Then came the gladiator, Spartacus, and the rebellion that bears his name. Capitalist historians have tried to suppress the facts about this monumental revolt but it stands as one of the greatest labor struggles of history.

From all accounts Spartacus, although a physical and mental giant, was born a slave, and he was a rebel, every inch of him. There is a legend to the effect that as a boy of fifteen he stood beside his dying father, who had been nailed to a log for the crime of agitating, and swore lifelong vengeance upon the enemies of labor.

It was probably because of his powerful physique that Spartacus was sent to Capua to become a gladiator. Compared with Thracian Greece, where he had been born and had always lived, Capua appeared in anything but a favorable light. Life here was cramped and crowded. The amphitheatre, with its bloody arena, the incessant battles between men and beasts or men and other men, and always the great circle of patricians for whose amusement he was forced to fight. Capua was a hateful place. Only one thing Spartacus desired more than to return to his native hills; that was to punish the cruel aristocrats for the evil they had done and were doing. In Thrace the sheep herders and harvest workers were organized. Why not try to organize the gladiators? Then some day things would be different.

### Freedom, Battle and Victory

All about Capua the communal land was covered with vast private estates which had been illegally seized by the land grabbers. The old agricultural unions, which for centuries had dealt direct with the cities in supplying food, had been broken up. The right to organize had been abrogated at last. Organization was outlawed. Thousands of slaves, in the last stages of desperation, were only awaiting an opportunity to fly at the throats of their oppressors.

In ancient days when slaves exhibited fighting instincts they were seized and sent to the arena. They might there fight with other slaves or wild beasts while their masters looked on from safety, but they must never think of fighting with the masters themselves. The Roman aristocrats were as crafty as modern imperialists in this respect.

Spartacus, although a seasoned and unvanquished gladiator, loathed the killing of his fellow slaves for the perverse amusement of the drunken overlords of Rome. Also he hated the dishonored weapons with which he was compelled to fight. He was a fighter by nature and longed to battle with the sword of honor in a cause worth while. No Roman soldier would ever touch the detested weapons of the gladiatorial butcher-house. Spartacus abhorred them also. If only he could rig himself out in shining armor, with a Roman sword in his skillful hand —surely no mere soldier could stand before him!

So the dauntless Spartacus and 200 gladiators whom he had lined up for the project made a burst for freedom one fine day just as the bloody games were starting. Due to the duplicity of a stool pigeon, only 78 of them managed to escape. These broke impetuously through the guard of Roman sentries, fought their way to the gates of the city and escaped down the Appian Way. Seizing weapons on the road, the brave bond did not stop until they reached the vine-clad heights of Mt. Vesuvius. Three thousand Roman troops were immediately dispatched from Capua to hunt them down. That night the legion camped underneath the cliff where the gladiators were hiding. The situation was desperate.

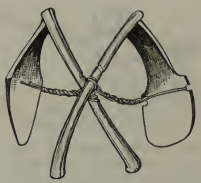
Although vastly outnumbered, Spartacus and his heroic men made a surprise attack in the dead of night. The legionaires, too confident of their numbers, were caught off guard and put to flight. A great number were killed and a large supply of arms and war material captured. The following day the gladiators adorned their mighty limbs with the polished armor of Roman centurions. The barbarous gladiatorial knives were thrown away in disgust. Multitudes of slaves flocked to the rebel forces as soon as the story spread abroad.

Another army was sent forth to capture or kill the rebels. The gladiators, eager to try out their new weapons, made short work of their pursuers.

### Revolt Sweeps Onward

Each of the original seventy-eight was well trained in the use of arms. These men made splendid officers. After the little army had been well drilled it began to move forward, sweeping everything before it. The "ergastula," or prisons, were opened along the way and all class war prisoners were invested with full military dignity. The rebel army of Spartacus soon numbered 70,000 freed slaves, desperate, determined and well armed.

With these forces Spartacus met and defeated one of the greatest pro-consuls of Rome. Afterward he overran the rich territory of Campania, freeing his fellow workers from slavery and dungeon wherever he went. Labor organizers and agitators were dispatched to all parts of Italy. Unions sprang up like magic in all the industrial centers. Cicero, the notorious Roman labor-hater, after contemplating the successful career of the brave young rebel, exclaimed in despair to the Roman Senate: "Not only these ancient labor unions have their right of organization restored, but, by one gladiator, innumerable others and new ones, have been instituted."



By 74 B. C. the rebel forces numbered 120,000. These were supplied with armor, weapons and supplies. The labor unions of all Italy were secretly working to keep the army equipped with war material and food. Victory after victory perched upon the red banners of the rebel slaves, for the red flag was the ancient and honored emblem of Labor long before Spartacus became a rebel. A march on Rome was started. It failed because of dissensions within the revolutionary ranks. Crixus, a lieutenant of Spartacus, envious of the success and prestige of his chief, sought to induce a portion of the army to make a premature attack on the mighty city. He managed to lead 35,000 slaves to defeat and death. Spartacus crushed the army that had vanquished Crixus. All the Roman aristocrats who were captured were forced to fight each other in the arena with dishonored gladiatorial weapons, just as Spartacus and his men had been compelled to do in days gone by. The situation was completely reversed; the erstwhile slaves were the spectators and the haughty aristocrats supplied the amusement.

Consternation reigned in Rome. Another huge army was assembled. Like its predecessors, it was demolished. The degenerate patricians, most of whom worked from one thousand to ten thousand slaves on their local estates, began to see visions of themselves going to work for a living, or else being thrown in jail for their crimes against labor. They were now thoroughly aroused to the seriousness of the situation.

**"Better to Die a Man Than to Live a Slave"**

By this time Spartacus was in command of 300,000 veterans. The often defeated Romans had now become cautious as well as determined. The slave army was harrassed for a long time but not given an opportunity to fight in the open. Finally Spartacus broke through the iron ring that surrounded his army and made a break for Sicily. No doubt his intention was to re-establish the free society that had been overthrown twenty-seven years previous. But it was too late. The land owners of Rome had massed three great armies under three of its most famous generals, Pompey, Crassus and Lucullus. Spartacus and his huge army were now outnumbered. The combined forces of the Roman legions totalled nearly half a million, nearly all of them veterans of foreign wars.

A terrific and desperate battle occurred. But the

ANCIENT HOES

gladiator and slave who had outgeneraled and defeated eight Roman armies was this time doomed to defeat. The great Spartacus, witnessing the rout of men with whom he had fought for freedom from slavery, rushed into the fray with indescribable fury and heroism. He was determined to sell his life dearly. His one aim was to meet the hated Crassus in personal combat before dying. "It was a fierce struggle. Long after victory was hopeless, Spartacus was traced by heaps of slain who had fallen by his hand, and his body was lost completely in the awful carnage which closed that day of blood."

Most of the rebel heroes were butchered without mercy on the spot. Some managed to escape to the mountains. Thousands were crucified on the highroad to Rome. The sacred right to exploit had once more been made secure. History says that Spartacus, like all his predecessors, was considered a savior by the great masses that fought under his command.

**"Pie in the Sky"**

The wave of terror that followed the last and greatest of the slave rebellions of ancient days lasted until long after the birth of Jesus—the last of the "saviors" of the class.

All the ancient labor unions merged into primitive Christianity. This was originally a communistic and revolutionary movement. Its early adherents were lynched and persecuted just as the I. W. W.'s of today are lynched and persecuted. And, like the I. W. W., their movement thrived on persecution.

Communistic Christianity became more powerful as the years passed by. Its doctrines of equality, brotherhood and justice were all drawn from the three types of unions out of which the movement sprang. The early Christians sought to establish "the kingdom of God on earth"—not in heaven only. They expected to see the millenium with their own eyes. Jesus, the rebel carpenter, was crucified as an agitator like thousands of other rebels of his day. Like Eunus, Athenion, Spartacus and other slave leaders, he was said to have been a wonder worker and a messiah. Today he stands as an imperishable monument to the fact that unpopular movements cannot be crushed with force.

Three hundred and twenty years after the death of Jesus the Roman empire, under Constantine, adopted Christianity rather than be overthrown by it. As a state religion it became harmless as far

TYPE OF PLOW USED BY ANCIENT AGRICULTURAL SLAVES

as its menace to the established order was concerned. The "kingdom of heaven" was placed somewhere up above the clouds and the equality of man came to mean the equality of the grave. From this time onward the once revolutionary movement has simply stood for submission on earth and "pie in the sky when you die."

Neither primitive Christianity or the horrible and bloody uprisings that preceded it overthrew the system of slavery. History had not yet sounded the hour for this hideous institution to disappear. Slavery ceased when changing conditions of society demanded another form of productive labor. When slavery became unprofitable it was abandoned. But the great labor revolts of ancient days did show the world that millions of noble workers lived in those times who would rather face death than endure the infamy of servitude. The productive system of the ancient world probably made it impossible for slaves to organize on industrial lines and achieve real solidarity on the job. Had it been in their power to do so they could have gained far more than they did with far less cost. A general strike of all harvest workers, organized into one mighty agricultural unit, might conceivably have forced the exploiting class from their backs. But these brave rebels deserve no blame, even if they fought blindly. All honor to their memory! They proved by their gameness that they were worthy to be called men!

**Rotten Rome**

The slave empire of Rome was dying of its own castes and its own corruption. In her last days the concentration of wealth into the hands of the idle few was only a little greater than it is in the United States today. Toward the end, torn asunder with labor troubles within and wars without, she sought to placate the rebellious slave population with free corn and amusements. "While the Egyptian fellah and the Moorish peasant were laboring in the fields, the sturdy beggars of Byzantium and Rome were amusing themselves at the circus, or basking on marble in the sun." But this could not last for long.

When the slave market went to smash, Rome went to smash with it. The inevitable law of social chance demanded a new foundation for society. Rotten old Rome, as hide-bound as the capitalist nations of today, could not do business on other than a slave basis. Goth, Vandal and Hun swept down on her, fat, senile and defenseless. All that survived was the church that had amalgamated with her once despised labor unions. Rome had become nothing but a name.

Feudalism became the next step in human progress. The agricultural worker became a serf instead of a chattel.

# The Skookum Boy

**By D. S. DIETZ**

We see a great big handsome boy,
Of earnest mien and poise;
He's clean of face and bright of eye,
As nature meant all boys.

He sings the new and wholesome strains
Wherever he's at play—
"Oh, all our daddies must come out
Of dungeons dark and grey!

"They're only in there just because
They love such boys as me,
And by the great big bunch of us,
We'll get them all out free!"

He has a wondrous physique, too,
And wallops thugs of strife—
Those, bred by Mammon's greedy god
To crush the workers' life.

He swings an awful uppercut
For one so young as he,
That 'ere he's one-half adult size
He'll jolt us wage slaves free.

His name is known thruout the land—
Now you can surely guess
Who lights emancipation's way—
The Industrial Workers' PRESS.

# Renunciation

**By Joachim Raucher**

When hungry millions are unfed
And little orphans weep,
I cannot eat in peace my bread,
Nor sing my grief to sleep.

When thoughts arising from the heart
Are hampered in their flight,
I cannot sit and muse apart
Upon a dreamy height.

When craven lies oft seek to blind
The eyes of shining Truth,
I cannot turn my maddened mind
To songs of love and youth.

Nor can I sing in lyric strains
Of private, little woes,
When Greed is reaping golden gains
From bloody seeds it sows.

("Freedom")

# After the War

After the war is over,
After the slaughter is done,
After the people are ruined,
After the victory's won,
Labor will go on drudging,
Wondering what it was for,
Paying for generations,
After the war.

# The I. W. W. in California

*(Some time during the fall of 1919 the social science class of the Stanford University of California sent out an investigator in the Santa Clara Valley in central California to study the I. W. W.'s in that vicinity. The following is the investigator's report.)*

## PART I

### Existing Economic and Social Conditions

Each county in the United States has its more or less peculiar industrial and social development. Santa Clara Valley in California is one of the largest fruit raising sections in America. Now, there is no special reason to assume that the working class as a whole are worse off in this rich fruit growing region than they are in the average county throughout the nation. Quite to the contrary, there is every reason to believe the condition of the worker to be as good as, if not better, than in most other counties thruout our country.

Yet, strange to say, in Santa Clara County a feeling of social unrest, an undercurrent of dissatisfaction, seems to exist among the workers. As evidence of this discontent, a number of strikes and threats of wage disagreements have taken place just within the last three months. And wages have been higher than ever, in fact raised considerably during the last nine weeks. But in most places the situation seems to be at a boiling point between the worker and his employer. The relation between them is anything but one of co-operation and mutual confidence.

## PART II

### Revolutionists at Work

Into the causes for the prevailing murmur of discontent I intended to inquire, but my attention was called to a far more interesting and human study. In this widespread condition of grumbling on the part of the workers, I, to my surprise, came across a well organized party of revolutionists. Continued investigation led me to find these radicals in the shops, in the hay fields, in the mills and factories, in fact, I met them in nearly every place in the county where a large body of workingmen were employed.

According to newspaper authority, I was convinced that the I. W. W. was practically non-existent. What I discovered though, only served to bring back to my mind the well-known dictum: "You cannot believe all you see in the newspapers." For I found this much disliked and publicly hated group of revolutionists not at all broken up in their organization, but on the other hand, better organized than ever, and busy in the solicitation of members, together with an active spreading of their propaganda.

My first interview with a member of the I. W. W. was at the Co-operative Cannery in San Jose, where I first started out to find from the workers themselves the reasons for their discontent. It so chanced to happen that the first individual I questioned was a member of the "Wobblies," as he said.

J—— was a tall, red-haired member, an Englishman by birth, so I learned. "How many followers have you in this county?" I questioned.

"I do not care to tell you just how many members we have in this county," responded J——. "You see, the government agents will not allow us to meet. There is much bitterness and prejudice on the part of most people against us at the present. Many of the boys, therefore, do not want it known that they carry red cards. We are subject to arrest on most any pretense. I can only say since the authorities will not let us come out in the open that we are quietly increasing our membership daily. If you want any of our literature or desire to know anything about our organization I will be more than glad to be of service to you."

"What is your main idea?" I asked J——.

"You will understand," replied J——, "that we are a labor union that is also a revolution and the germ of a new social order. Our philosophy is based upon modern science and the Marxian analysis of economics and history. We propose a more sensible and orderly arrangement of society than the present. We urge that the shop, mill, industrial plant, or college hall, shall be the repository of the ballot box and that the worker shall declare his will according to his immediate economic interests rather than through the vague and confusing electoral district with its conflicting interests."

"But," I replied, "a number of your members have been tried and found guilty of violence and destruction of property."

J—— then told me that he would give me directions so I could find SB, who was working at Santa Clara. According to J—, SB was a graduate of the University of Texas and better informed on the violence side of the question than he was. SB had been at the famous trial in Chicago.

Two days later I met SB at Santa Clara. He was a heavy set, dark complexioned young fellow. I soon learned that he was very well informed on economics and sociology.

"What is your answer to all these convictions and charges of violence and destruction of property by your organization?" I questioned SB.

"Take the trial at Chicago," said SB, "that is a fair example of the numerous charges that have been brought against us. I have in my possession a full copy of the evidence given on both sides. You can examine it for yourself, and I challenge you or any one else to find one iota of testimony that connects our organization with the charges made against us. Deputy Sheriff Gole of Colfax, Washington, told how scores of threshing machines had burned. But both the State Agricultural College and the United States Department of Agriculture had proved that smut in wheat exploded by electric sparks from gearings was the cause. Why, they might have convicted the Women's Christian Temperance Union of these things—it

would have been just as logical. But we were picked on simply because we advocate a form of labor organization which the capitalist interests don't like. The newspapers started a campaign of slander to stir up public sentiment against us, then we were grabbed when the patriotic feeling was at its height and railroaded through."

"Let me read," continued SB, "a few extracts from the testimony to you. Vanderveer was our attorney. He is here examining R. J. Whittaker of Missoula, Montana, an ex-sheriff and owner of a 640-acre ranch. Whittaker had two sons in the army and owned liberty bonds galore.

"VANDERVEER: Do you do your own threshing?

A. Yes, and my neighbors' as well.

Q. Have you and your neighbors employed I. W. W.'s?

A. Why, yes; we employed them the same as anyone else.

Q. Did they ever throw pitchforks through your machine, or iron or rocks?

A. No.

Q. Did they ever destroy property or raise hell?

A. Not that I ever heard of, except in the papers. The newspapers are always full of it.*

"The testimony of a man named Burdell," added SB, "was remarkable. In broad daylight, one noon, back in 1913, an I. W. W. had deliberately, so the "cookee" told him, picked up a 1,500-pound horse by the tail and thrown the critter down a well! Had added insult to injury by saying 'the bugger ought to have been down there long ago'! Witness had rescued the animal from a watery grave by means of a derrick and a slip-noose cast round the horse's neck."

"What is your objection to the American Federation of Labor? I see the newspapers say your organization is bitterly opposed to it?" was the next question I put to SB.

"We condemn the American Federation of Labor," answered SB, "because it associates the workers in such a way that they are rendered ineffective as an economic force, either to help themselves or to safeguard humanity, and at the same industrial and social responsibilities. We hold that the new organs of production and administration must be developed within the body of the present society, so that upon the birth of the new society it will be able to function immediately. The American Federation of Labor has no vision of a new society. The federation, by the craft form of organization, lifts men out of their natural industrial context and groups them artificially. We hold that the shop is the cell of the new organic life and the worker must be organized in the terms of production (industrially), rather than in terms of tools (by crafts). Thus organized, the natural industrial context is preserved and the workers will be able to continue production and guarantee the fundamental needs of life in the transition period that would follow the breakdown of the present system."

I next inquired of SB about the form of their organization and how they worked. He told me I had better go out to Los Gatos and have a talk with one of their delegates. He explained to me that their organization had perfected a wonderful delegate system. One of their delegates, K., was now going the rounds of the California District, and happened to be stopping at the present in Los Gatos. Delegate K. would explain to me in detail the workings of their organization.

"I met delegate K. by arrangement. He was a great big fellow, highly tanned, and had dark curly hair. He had been a lumberjack most of his life, so he told me. He seemed to be a man about forty-five, and to possess a remarkable bodily vigor.

"You are a delegate," said I, "what is the purpose of your delegate system?"

"At the present time," he replied, "it performs several functions. You see since the government agents have been arresting and persecuting us we have had to raise money for defense funds. For a long time we sent this money thru the mails. But our mail was held up and our contributions never reached our attorneys. Consequently, we are using the delegate system to collect our defense funds, to line up members and to issue them cards, to carry our literature from place to place, and to act as the connecting link and reliable information bureau to our members scattered throughout the nation. Once and a while they pinch one of our delegates but we always have another one to take his place."

'Do the authorities know about this delegate system of yours," I asked.

"Oh yes," answered delegate K., "but they cannot put us all in jail, and every one of us is just as capable of being a delegate as the other fellow. What we are going to prove is that our idea cannot be suppressed by force and that if we are denied our constitutional rights we will need methods that are quiet an dpeaceful to carry on our propaganda anyhow. As long as the present social injustice exists we are bound to grow, and tarring and feathering us and jailing or deporting some of our members, is not going to remedy matters one bit. The Czar of Russia sent every one to Siberia that did not agree with him, or who dared to speak out their convictions. But where is the Czar now? There are a lot of people in this country who have not learned the lesson of history, that the domination of those in power is not eternal, that some day those whom they persecute may come to power and then think of the reprisals!"

"To make this thought clear to you," continued delegate K., "let me read to you the closing remarks of Gustave Herve at the close of his trial before the Jury of La Seine."

He then opened the pamphlet, which he pulled from his inner coat pocket while talking, and read the following:

"It will require great courage on your part to acquit us. It will be necessary for you to act contrary to your every day belief, which has been imposed upon you by your newspapers and which paints us as demons, passing our lives in insulting

*Seventh Circuit Court Records, Report 1918.

the military, and trampling the flag in the mud.

"It will be necessary for you to overcome the temptation to crush the adversaries you have in power.

"It will involve your exposing yourself to the reproaches and railleries of your friends, who will never forgive you for having freed 'the man with the flag on the dung-hill.'

"To those who reproach you with our acquittal, you will say: "It was impossible for us not to acquit men for having expressed frankly and regardless of the consequences their opinion. We were unwilling to throw upon the twentieth century the ridicule and the odium of having condemned men on the pretext that they were heretics, and their doctrines dangerous."

"Yes, gentlemen, I say it in all sincerity, it is in the interest of your own class itself, to bring in a verdict of acquittal. Although we do not belong to the same class, although we consider our class as an enemy to yours, our drawing of class lines has not killed in our hearts all sentiments of humanity.

"We know that under your bourgeois broad-cloth beats the heart of a man, like ours. We entreat you, in the interests of your class, even the men and women of your class, our brothers and sisters in humanity, not to exasperate further, by verdicts of ill will, our class, which is already sufficienly exasperated against you. We desire to save you from terrible reprisals. You are today the stronger, but your domination is not eternal. I have an inkling that it will not last a great while. Perhaps you do believe it. No more did the Czar, when he came, some years ago, to his full glory, believe the time so near when he would have to settle accounts with his people. In the day when our class will settle scores with yours, it will be a pleasure to us, your prisoners of today, to plead extenuating circumstances in your favor.

"Do not mistake my meaning. I do not threaten you with reprisals. I am not trying to frighten you. Fear is no nearer your hearts, I imagine, than it is ours. But, as we do hold you individually responsible for the crimes of the present society, we would wish that the Revolution, which is gathering, should seize as few victims as possible among you. When it shall be our class which judges, in its turn, the class to which you belong, we shall be happy to be able to say to the more exasperated of our members, that, at the time of your might, there were brave men among you—which is true. We shall be happy to say that there was a good judge Magnaud and a good judge Sere de Rivieres among your magistrates, that there were court presidents, like the present one, to preside over the Court of the Assizes; that there were advocates general who did not seek in the mire for insults to hurl at the heads of the defendants, and that there were good jurymen like those of Auxerre of Troyes, and even of patriotic Paris who would acquit their political opponents".

"Yes, I see your point," I replied, "but you speak of the social injustice now prevailing. Just what do you mean by that?"

"I mean," answered Delegate K, "I mean the great gulf between the poor on one hand and the rich on the other. Let me go into the house and get my copy of the Industrial Relations Commission Report, the commission that was appointed by President Wilson, and I will give you the government's own words to support my contentions."

Delegate K then read to me two statements from the report, which are as follows: "It is a sad commentary on our system that 79 per cent of the heads of our working families are utterly unable to support their families and to educate their children on a plane of civic decency." . . . "Two per cent of the people of this country own two-thirds of all its wealth, real and personal. Sity-five per cent of the people, comprising the working class of the country, own less than 5 per cent of the wealth of this country, and this wealth is represented in the mines, in the forests, in our national industries, and stands over and dominates all our industrial and social life."

"Now when we I. W. W.," continued delegate K, "hold, as we do in the preamble to our constitution, that there are two classes in this country which have nothing in common, you see we do not rely on fiction for our statement."

"What does the preamble to your constitution state?" I immediately asked.

I was given a copy. It reads like this:

"The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working class and the few who make up the employing class have all the good things of life.

"Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

"We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

"These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

"Instead of the conservative motto, 'a fair day's wage for a fair day's work,' we must inscribe on our banner the revolutionary watchword, **'Abolition of the wage system.'**

"It is the historic mission of the working class

to do away with capitalism. The army of production must be organized, not only for the every-day struggle with the capitalists, but also **to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old."**

Delegate K excused himself, saying he had to catch a train. Another member, who had come up to where we were talking, took me by machine to Lawrence Station to meet "Fellow Worker" Conrad. Conrad had been a school teacher and was well informed on all matters, according to this member. At the time Conrad was working on a threshing machine crew.

I soon learned that Conrad was well informed on literature, especially was he fond of Milton, Shakespeare, and Ben Johnson. Our conversation drifted to the "free speech fights" the I. W. W. had engaged in. Conrad said that the I. W. W. took the position that Milton did when he wrote in the "Areopagitica" "Give me the liberty to know, to utter, and to argue freely according to conscience, above all liberties."

In response to a few questions Conrad went on to say, "Now we I. W. W. firmly believe our ideas to be correct. Those who oppose us are afraid that if too much light is turned upon them they will take hold of the working class and act in a way detrimental to the interests of the employers. Consequently, they are trying to crush us by lying about us, by using brute force against us, and by throwing our leaders in jail. But we expect this. Any new movement is subject to misrepresentation and its leaders are bound to be abused. You remember history tells us of a heretic named John Huss. A century in advance of Luther he heralded and demanded the Protestant reformation. For the crime the council condemned him to be burned. As the first martyr of Protestantism ascended the pile, an old devotee of the town of Constance came bringing yet another faggot, which she threw on the heap, evidently thinking it not high enough. 'Sancta simplicitas,' said John Huss, shrugging his shoulders in gentle pity.

"I tell you, young fellow," added Conrad, "that same devotee's spirit is exhibited in America today against the I. W. W. One of our able speakers, James P. Thompson, now sentenced to serve twenty years in Leavenworth Penitentiary, once said, 'The very people who are abusing the I. W. W., if they had lived in the days of our forefathers, would have been licking the boots of King George. They would have said of the boys fighting barefoot in the snow at Valley Forge, "Look at them! They haven't got a shoe to their feet and they are talking about Liberty!" The people who are knocking the I. W. W. are the same type who dragged William Lloyd Garrison through the streets of Boston with a halter; who killed Lovejoy and threw his printing press into the Mississippi river; it is the same type who murdered our comrade, Frank Little.' You will find this statement true a few years hence, mark my words, young fellow."

I asked Conrad as to what he thought was the effect of adverse public opinion upon the membership of the organization.

The reply was, "Well, of course we have lost some; it has had a cleansing effect, on the whole; the sheep are gone. On the other hand, we have greatly increased our membership so that we have about five hundred thousand fighters for industrial freedom in this country. We are spreading our ideas very successfully in a quiet and secret manner since the police will not let us hold street or hall meetings. You will see by the papers that the labor unions of Canada and Australia are adopting our idea of the ONE BIG UNION. Also you will notice in the papers today that the unions of Montana and Washington are voting on the same thing. This is all due to our continuous propaganda activity. I also noticed that the Triple Alliance of England is going to use our 'method of industrial direct action' in the place of the outworn 'political action' method to get its demands in the future."

I inquired of Conrad as to what he thought was the chief difficulty that confronted the I. W. W. in Santa Clara County at the present time.

He answered my question by handing me the bulletin of the California District Defense of August 4th, 1919, which read:

"A decision has been handed down by the Supreme Court of this state in the case of Thomas McDermott, that declares the Criminal Syndicalism Law to be constitutional. This action of the Supreme Court is no surprise to the members of the I. W. W., as they have long been aware that no law directed at the working class and benefiting the exploiting class would be found otherwise, but we are surprised that the learned judges of the Supreme Court come out so openly in a class distinction. At the least, it was expected they would ponder lengthily upon the meaning of the law until it would appear that in their superior wisdom they had thoroughly decided its status, but instead they apparently took snap judgment and arrived at a decision in a very short time, thus acting like ordinary mortals and very much belittling their exalted positi n and the honorable traditions of the slowness of the courts.

"The upholding of the constitutionality of this law will probably be commended by labor haters throughout this state, and well it should be, for, as a weapon to be used against the workers, it is exceptional inasmuch as it can be used to make a multitude of rights into wrongs, if so decided by any court. This law is at present being used to deny workers the right to organize, to spread the propaganda of their class, to assemble peacefully, and to freedom of speech. It is worded so that it can be used to abolish the right to strike if at any time it is so needed.

"For the above reasons it is essential that we fight every case in which a member of the I. W. W. is arrested under this law, as once a conviction is secured, it is a precedent for those who are fighting the working class to firmly establish the interpreta-

tion of this law as being directed against the I. W. W. Our weakness as an organization makes it impossible to carry on the fight in the industrial field at the present time and win by the display of our economic strength, therefore, it is necessary to fight in the master's courts. Their weapons of warfare are controlled by the pocket book, and it takes money to get results. Money is needed for the defense. A donation is asked from every member of the I. W. W."

Two days after my interview with Conrad, I met by arrangement another member at a cannery in Campbell. This man was a Frenchman by birth. His strong point was his good knowledge of the Syndicalist movement in France, which he said was the same as the I. W. W. movement in America.

"The French organization," remarked F, "La Confederation Generale du Travail, is the most powerful body of labor in France. It is in France what the Triple Alliance of Labor is in England, only La Confederation long ago decided in favor of 'direct action' and against 'political action' as a means to get its demands. For example, in May, 1918, the organization called a general munitions strike. Two hundred thousand were on strike in Paris alone. Then Clemenceau, the Tiger, who eats syndicalists for breakfast, had to beg on his knees Merrheim, the secretary and chief spokesman of the Metal Workers, to settle the strike."

F— went on to say: "You see, we I. W. W. are internationalists. Raymond Pericat, member of the Administrative Council of the Building Federation of La Confederation Generale du Travail, is working night and day in our behalf and that of the Bolsheviki in Russia, with whom we are closely associated. Our members in this country are comrades in the world-wide movement of labor that will eventually come to rule. The preamble of the constitution, to which we workers in Santa Clara County subscribe, is in substance the same to which the revolutionary workers of the world agree."

Now, I met a good many more I. W. W. I met some in the towns of Mountain View, Sunnyvale, and Saratoga; I came across some at Morgan Hill and Cuperino, and I talked with some in Palo Alto and on the Stanford Farm. The conversation presented and the opinions set forth in this paper is representative of them all; that is, it gives a fair statement of what they are all thinking and doing.

There are a few other features about the Santa Clara County I. W. W. of interesting mention. One thing is the monthly report of their receipts and expenditures. Just a sample of the July statement is given here:

RECEIPTS

| | | |
|---|---|---|
| July 1 | Stamps | $ 1.00 |
| July 2 | Donation jail comforts | 5.00 |
| July 5 | List No. 13 | 5.75 |
| July 7 | List No. 65 | 9.80 |
| July 10 | Defense money | 14.65 |
| July 17 | Donation | 50.00 |

EXPENDITURES

| | | |
|---|---|---|
| July 1 | Stamps | $15.00 |
| July 1 | Paper pad | .10 |
| July 1 | Registered letter | .10 |
| July 2 | Tobacco (jail) | .10 |
| July 2 | Telegram Chicago | 1.00 |
| July 2 | Tobacco (jail) | 1.00 |
| July 5 | Pills, bandage, peroxide, vaseline, shoe strings | 1.09 |
| July 7 | Marmalade 2 lbs (jail) | .50 |

Total receipts, $319.72; total expenditures, $72.21. Turned over, $147.51.

A few other things were noticeable. On the whole the men were a jolly and good-natured set. And it is not at all a mistake to say that they were far above the average workingman in intelligence and alertness to vital questions. Practically all of them were readers of "The Dial," "The Nation" and "The New Republic." These they called "fair" magazines. Other magazines and newspapers they styled as "subsidized capitalist mouthpieces." Nearly all the men took pains to impress upon me the fact that the old days of the "mulligan" by the railroad track and the "jungle ups" in barn-houses were over. They said that if I should in my investigation pay a visit to one of their old "boiling up" quarters under some bridge, where a small boy on his way home from school wrote on a sign above "The Home of the Irresponsible Wandering Willies," that I would find those places deserted forever. Their motto was now, "Every man on a job for 'Education—Organization—Emancipation.'"

## PART III

### Critical Reflections

Now in the matter of personal attitudes toward our problem of social unrest, which, I pointed out, exists even in Santa Clara County, we are confronted with three possibilities. There is the ultra-conservative attitude which refuses to do anything but pass oppressive legislation; the liberal attitude, which proposes to bring about change on the basis of the present order, and the revolutionary position. All of us will have to choose either one of these positions sooner or later.

A typical stand-pat attitude, or the recourse to oppressive measures, two sides of the ultra-conservative position, will solve no vital issue. Measures such as the Syndicalist Laws and the Overman Bill, now pending before the Senate, are examples of pseudo-statesmanship. They aim at effects and absolutely fail to comprehend the underlying causes inherent in the system. Our famous bourgeois lynch law—by which we have had on an average of three lynchings a week—killing colored men and women for the past thirty years—3,224 negroes known to have been put to death since 1889, is a good sample of intolerance and club rule carried to its height; yet an utter failure to remedy causes.

We could build a Chinese wall around Santa Clara County, California, or the United States. We could expel all the I. W. W., or put them in jail or even put them to death, but if conditions remained the

same we would have a bigger crop in a short while. Revolutionists are not made by propaganda to any great extent. If the conditions of revolution are not present no sort of propaganda will either hasten or impede it.

Our own revolutionists are a product of a natural evolutionary process. If the invention of gunpowder and printing in the fourteenth and fifteenth centuries presaged the Reformation of the sixteenth, and if the industrial revolution of the eighteenth century was the forerunner of the political revolution throughout the western world, we may well, after the mechanical and economic cataclysm of the nineteenth, cease wondering that the twentieth century is an age of revolution. The centralization of big business going hand in hand with the centralization of the political state, making it the reflex committee of the Capitalist Class, can produce nothing else.

The days of the reformer are over. No more can the politician grasp upon a compromise measure. The age is forcing the liberal either into the camp of the reactionary plutocrat and his vile way of doing things, or compelling him to go where he belongs, the camp of the revolutionist. The gulf between the rich and the poor is getting wider and wider day by day. Hope of a liberal position is only a phantom dream. You are forced to say whether you want to try to stop progress or whether you want to stand in with progress. If you are a little advanced above the dumb brutes you will realize that mankind can advance by taking thought about his environment. If you stop to think seriously at all about the present world-wide condition of the working class, you will be forced to accept but one position, that of the revolutionist.

This thought, therefore, will compel you to adopt the only motto worthy of utterance: "ALL POWER TO THE INDUSTRIAL UNION. THE SOCIAL REVOLUTION. FORWARD! MARCH!

---

## INCIDENTS THAT HAPPENED RECENTLY IN A MODERN BASTILE (SAN QUENTIN, CALIF.)

Joe Martinez (serving four years for breaking jail while doing a six months' sentence on a trumped up charge of poisoning sheep) has his foot badly smashed by a rock rolling on it. The doctor dressed the foot but refused to give him a crutch. He went to the captain of the guard and secured a cane. The next day when he went back to have the foot dressed the doctor took the cane away from him and informed him: "You damned I. W. W., there is nothing the matter with you, only you want to get out of work. Tomorrow you go back to work."

This is only one of the numerous instances which show the manner in which the I. W. W.'s are being discriminated against by the prison doctor.

Recently one of our fellow workers was up before the doctor for examination of his lungs. The doctor told him: "Your lungs are in a bad shape, and if you were not a damned I. W. W. maybe we could get lighter work for you."

J. Malley went before the doctor with a bad cold and requested him to give him an order for some woolen underwear. Instead the doctor gave him some pills and had him punished for throwing the pills away. That is how they are trying to break the men's spirits.

Charles Bentley, convicted under the criminal syndicalism law, filled out a book slip in which he put in the names of ten liberal books, among which were such books as Mill's book on economics, Jack London's "The Revolution" and Edward Bellamy's "Looking Backward." Did he get one of the ten? No. He did not, but instead got a book called "Two Patriots." Did someone say a man could think what he pleases? If so, that man never served a term in San Quentin, for there they carefully guide your thoughts so that when you leave there you will be a "well broken slave."—Card No. 391592.

---

"Great Britain has gained in the war all, and indeed, much more than all she SET OUT TO WIN. Our navy remains at the end of the war intact and unassailed. The principle of freedom of the seas, which is the basis of our national existence, stands unimpaired and unimpugned. The British protectorate of Egypt is provided for in one of the clauses of this treaty. We are demobilizing our forces, but we cannot lay down our arms; we cannot disband them altogether. We must still be able to FIGHT FOR WHAT WE HAVE WON, and be sure that it is not taken from us after we have won it."—Lord Curzon, discussing the Peace Treaty in the House of Lords.

---

"It is absolutely necessary at this time to provide for a strong regular military establishment in this country, not for the purposes of external defense or aggression primarily, but I believe that this country needs a strong military establishment FOR ITS INTERNAL PROTECTION FOR SOME YEARS TO COME, following this war, and we are providing, by this bill, such an establishment, sufficient to preserve law and order and civilized constitutional government." — Congressman Anthony, speaking in favor of the Army Reorganization Bill, passed by the House of Representatives, March 18, by a vote of 244 to 92.

---

Though we be buried in blood and filth up to our necks, though thick clouds of vile and disgusting vapor envelope our heads and blind our eyes, though it seems, at times, as if vulgarity had killed the beautiful dream bore in agony and suffering, though all the torches that we once lighted on the path that was to lead us to a new and better world seem to have been extinguished, **humanity will win.** For that is the great meaning of life in this world. Life has no other meaning.

Perhaps, after all, we are doomed to destruction! Were it not better, then, to be burned up in the fierce fire of the revolution than to rot slowly on the dung-heap, as we have been doing?

—Maxim Gorky.

**SCENE:** The shady side of a barn on a Sunday afternoon. It is a red barn with white trimmings. It extends across the back of the stage, and if the width of the stage permits, the round outlines of a brick silo will be visible at one end, with room for passageway. The barn door is rolled back—and if the opposite door can also be opened we will find ourselves looking through the barn and out over the rolling fields, yellow with wheat ripe for cutting.

BILL, the hired man, and BENNY and HILDA are sitting in the doorway, BILL on an overturned half-bushel measure, BENNY and HILDA at his feet. BILL is long and lean, of the Yankee type. In age he is probably in the late twenties. BENNY and HILDA are as young as children reasonably can be on the stage. BENNY is some two years the elder. There is an atmosphere of Sunday calm about the place. BILL is smoking a pipe. HILDA is humming the tune of a song popular some dozen or so years ago, by the name "San Antonio" . . . but the words she occasionally interpolates are strange.

---

HILDA

**(Humming)**

Tra-la la-la from the word go,
And to the master, they'll tra-la-la-la.
How do the words go there, Bill?

BILL

(*Keeping time with his pipe*)

And if you'll join them, they'll let you know
Just the reason the boss must go!
Say, kiddie, where'd you learn that?

HILDA

From Benny. He whistles it.

(*Bill turns to Benny, Puzzled*)

BENNY

You're always whistling it while you work.

HILDA

Then I found the words in your little red book.

BILL

Well, I'm darned. Where'd you get hold of that?

HILDA

Upstairs in your room when mamma was cleaning.

BENNY

What business you got monkeying with Bill's things?

HILDA

I wasn't . . . It was right there on the table . . and I read the words and mamma hummed some of the tunes for me . . . Wasn't that all right, Bill? Bill I want a little red book like that for my own.

BILL

What'd your mamma have to say about it?

HILDA

Nothing . . . I ast her did she think you'd let me have it and she guessed you thought a lot of it, and I ast her did she think you'd get me one like it, and she said maybe. Bill, will you?

BILL

Well . . . if she doesn't care . . . I wonder about your dad, tho. (*Grinning to himself.*) Did he ever hear that song?

HILDA

'Oh, he doesn't pay much attention to us. He's always too busy.

BENNY

(*Insinuatingly.*)

Bill, if I had a new mouth organ I could play those tunes. My old one's no good anymore.

BILL

Sure, we could have a whole wobbly orchestra.

HILDA

I like the one about the red flag best **(Humming it softly—break off.)** Bill, you promised me a story.

BILL

(*Pulling her hair.*)

Story nothing. This is Sunday.

HILDA

That's why. You said wait till Sunday. (*Settling herself against his knee.*) One about giants.

BENNY

Ah, naw! A real one. You promised me a real one. You said some day you'll tell me about Joe Hill . . . You promised.

BILL

Well . . . all right . . . if I promised.

(*Enter Swanson.*)

*Swanson is a big raw-boned Scandinavian farmer. He is taller than Bill and heavier. He was dressed up for Sunday earlier in the day, but is now in his shirt sleeves and has taken off his collar. His shirt is open at the throat with a gold*

*collar button dangling. He looks cooly and searchingly at Bill.*

SWANSON

You young ones, you run in to your mamma. She wants you.

BENNY

**(Protesting.)**

Ah!

SWANSON

Run!

HILDA

But Bill was just going to tell us a story.

SWANSON

The story can wait.

BILL

(*Quietly.*)

What is it, Mr. Swanson?

SWANSON

Well, now I find you out! So you been one of those fellows, heh? One of thoes damn alleged I. W. W.'s... and never said nothing!

BILL

(*Showing button on his shirt front.*)

Why, yes, Mr. Swanson. I've never made any secret of it. Here's the button. I've worn it out in plain sight.

"I LIKE THE ONE ABOUT THE RED FLAG BEST"

HILDA

Just let him begin it.

BILL

It's all right, kids. I'll tell the story after chores.

HILDA

Sure? And will you make it a giant story?

BENNY

No, a real one.

BILL

Well... maybe both.

(*Under their father's stern eye Benny and Hilda depart.*)

SWANSON

Well... Mr. Bill!

SWANSON

How I know what that thing is? I thought it was a lodge or something.

BILL

Well, so it is... sort of.

SWANSON

Hal of a lodge that is! Setting fire to barns... burning up crops!

BILL

(*Sharply.*)

Hold on, Swanson. You're going too far... making wild statements that have no proof. I've never mentioned the matter to you. Guess we've been too busy since I came, but I've thought that

when things let up a bit, we might sit down and talk it over. I'd like to explain to you—

SWANSON

Explain nothing! Don't I know? Can't I read English? Can't hardly pick up a paper nowadays without reading about some damage done by those damn alleged I. W. W.'s.

BILL

Oh, yes, those damn alleged I. W. W.'s might do most anything.

SWANSON

And here I got one all the time on my place!

BILL

Oh, no. I'm not alleged. I'm real.

SWANSON

I know now what you are all right. And I guess you better get!

BILL

What's that?

SWANSON

Get! Get out! Quit! Vamoose! Get off my place. I got no use here for such a kind of a—

BILL

Oh, now, Mr. Swanson — If you say so, it goes of course, but I wish you'd think it over. Got any complaint to make about me personally?

SWANSON

No-o. You been good worker all right. But now when I know what you are...

BILL

Who told you?

SWANSON

Lindquist... damn him... he think he got laugh on me! I say we should drive all dose rascals out of the country.. and he said I got one on my own place... golly I not stand for that.

BILL

(*Placatingly.*)

I s'pose it did make you sort of mad... but I wouldn't let Lindquist scare me out that way. See here Mr. Swanson, you and I get along fine. Ever since the day I met you in town, you needing a man, I looking for a job... no questions were asked, but we hit it off pretty well from the start...

SWANSON

I know. I know. You been good worker. I like you. Those kids they crazy about you, and the women folks they think you all right... but I can't have you round no more...

BILL

And it's just the beginning of harvest. We were going to cut the south quarter section tomorrow.

SWANSON

Yes, I know it will leave me in bad fix, but I can't help it, I can't run no such risks...

BILL

Oh, hell, Swanson, you know I won't set the quarter section on fire.

SWANSON

Maybe not, maybe not you... but it's what you call a principle...

BILL

That's the idea. Let's get down to principles. You see Mr. Swanson, it's this way...

SWANSON

No—no. I don't care what way it is.

BILL

But take the meeting you fellows are holding in the school house Thursday night... the idea isn't so different. You want to organize...

SWANSON

That's different matter entirely. We got to organize to protect our rights...

BILL

That's the idea... that's what we think. Now you see, it's this way...

SWANSON

I tell you I don't care what way it is! I ain't going to listen to you, and you got to go!

BILL

All right, Mr. Swanson.

SWANSON

Tomorrow morning I hitch up bay team and take you back to town where you came from.

BILL

Just's you say.

(*Enter Benny and Hilda running.*)

SWANSON

(*Muttering.*)

And I suppose those kids going to make hal of fuss.

BENNY AND HILDA together

Automobile come up road... turned into lane... from town... big shiny car... man from town wants to see you... Ma said he'd find you round the barns somewhere... He said call you... she said he could find you... he's still talking to her... we run out to tell you... he said if we saw you to tell you...

SWANSON

All right, I guess he can find me.

BENNY

Go on up to the house and see his car. Gee, it's a swell one.

SWANSON

I guess if he got any business with me he find me.

BENNY

Hilda, you better run on and hunt those eggs like mamma told you.

HILDA

Smarty, she didn't tell me any more than you. (*To Bill.*) She's going to make a custard pie for supper.

BILL

Hurray! Then I guess we better get the eggs for her. Come on.

BENNY

Oh, if Bill's going... (*Follows the other two around the silo, whistling, "There all fighters...".*)

(*DUNCAN enters. DUNCAN is a man from town.*)

DUNCAN

(*Genially.*)

Well, Swanson, how are you? How are you? (*Shakes hands as heartily as possible with no response from Swanson.*)

SWANSON

There ain't no interest due till November.

DUNCAN

No, Swanson, no. I understand that all right enough. Not till your crop is in — crops are looking fine up in this section too by the way. No, no, This is another matter entirely. I was driving by and just thought I'd drop in. You've heard, I suppose, of this meeting planned for Thursday night?

SWANSON

Well?

DUNCAN

Don't have anything to do with it, Swanson. I just offer that as a suggestion.

SWANSON

And, why?

DUNCAN

For your own good, Swanson. This man Bentley's a bad lot. Don't get mixed up with him. He's a smooth talker of course, but he's not to be trusted. Why, good Lord, man, he went bankrupt! (*Confidentially.*) Now we've always done business together Swanson, and I've liked you — you're straight and honest and tend to your own affairs — and I don't want to see you taking the wrong turning if I can steer you straight. Now, you farmers don't want to go mixing up in politics — all this talk of your owning your own elevators and running your own men for office and all that sort of thing, why that's pure nonsense! No man can run two jobs and it's the farmer's business to raise crops — the more crops and the bigger, the better off the country. See! And the better off the country, the better for the farmer, of course. Now as to this meeting on Thursday night — you weren't really thinking of going, Swanson?

SWANSON

Well, I think maybe I go over and see what they got to say...

DUNCAN

No! Take a tip from me. Stay away.

SWANSON

I think I yust go over and take a look around.

DUNCAN

Let's see, Swanson, What's the amount of that note you owe our bank?

SWANSON

I guess you know that, Mr. Duncan.

DUNCAN

Yes, I guess I do, Swanson. ... Due in November. And I'll give you another tip — wheat's going to drop. No more war prices for wheat ... and I may suggest to you that the bank might decide not to let these small loans run on... ther's nothing in it for us, you know. Of course I understand that you've had heavy expenses, with your wife's operation in the spring—

SWANSON

(*Fiercely.*)

That's my business.

DUNCAN

And your new binder not paid for—

SWANSON

By gar, how you know that?

DUNCAN

A banker knows a good many things that go on in his town. The North West Farm Machinery Company doesn't sell goods on time without knowing something of the man... besides I have a small investment in the business. ... And wheat's going to drop, Swanson. Put that in your pipe and smoke it — Wheat's going to drop.

SWANSON

By gar, let her drop! I will hold on to my grain till she goes up again!

DUNCAN

Will you, Swanson? You have storage space, I suppose, for several thousand bushels!

SWANSON

No Mr. Duncan, I ain't. So I will sell it to you at that dropped price, and you will keep it in your elevator till the price goes up, and then sell it to millers in Minneapolis.

DUNCAN

Now that's right, Swanson, don't get hot under the collar. That's what we're here for — to handle the stuff for you. Your business is to raise the crop. We'll look after the rest.

SWANSON

Yes, I guess you look after the rest all right— and I guess I go to that meeting Thursday night to hear something about farmers in North Dakota owning elevators.

DUNCAN

We won't beat around the bush any longer, Swanson. I've given you a hint. Now I put it to you straight. You've got the crop. I've got the elevator. You can't store your own grain. You've got to sell it to me. But I haven't got to buy it of you. See!

SWANSON

By gar, I get lumber and build something if it takes all the crop comes to!

DUNCAN

Need I remind you that you may not get credit at the lumber yard... and until your wheat is sold... I guess you better stay away from that meeting. And just let me tell you, if anybody around here begins to get too fresh, something may happen! I dare say you've heard how a meeting of the kind turned out over in Ferguson?

SWANSON

Yes. I hear about that. I hear they had little exercise with fire hose.

DUNCAN

(*Jovially—good-nature restored.*)

You're right, Swanson. Little exercise with fire hose is good. I guess maybe we understand one another after all, eh?

SWANSON

I guess I understand.

DUNCAN

Good! I knew you were a man of sense, and maybe it won't be necessary to call in that note. Well good day to you, Swanson.

SWANSON

Good day, Mr. Duncan.

(*Bill saunters around the corner, followed by Benny and Hilda.*)

DUNCAN

(*Turning back.*)

Oh, by the way (*catches sight of Bill.*) Um! That's just what I was going to speak to you about. (*With lowered tone.*) Who is he?

SWANSON

My hired man.

DUNCAN

Get rid of him... dangerous character... agitator... one of these I Won't Workers, you know.

SWANSON

He work pretty good for me.

DUNCAN

Never mind. Send him about his business — the sooner the quicker, as they say. Well, so long.

SWANSON

Anything more, Duncan?

DUNCAN

No that's all. Good day. (*Exit briskly.*)

SWANSON

(*Muttering.*)

By hal! He own bank — he own elevator —

HILDA

Who is he, papa?

SWANSON

He is Mister Duncan. He own bank. He own elevator. He own lumber yard. And by gar, I gues he think he own me.

HILDA

O-oh! Then he's a giant. Is he a giant?

SWANSON

What's that you say?

HILDA

A giant — one of Bill's giants. Bill tells us stories about them. They have a hundred arms. They live in Town... in the vaults of the bank... in the big elevators by the tracks... and they reach out with their hundred arms... like those things in the sea... and wrap them around the farms, and around the grain fields and the farmers and the mothers and the little children, and when the time comes and they get good and ready, they *squeeze!* And down in Minneapolis there's the biggest giant of all, and he reaches out and wraps his arms around the banks, and around the elevators...

SWANSON

(*Shaking her playfully by the shoulders.*)

Now, that's a nice story all right — but these here giants, you know, have been dead a long time.

HILDA

That's what I thought, but Bill said—

SWANSON

I used to hear such stories about giants in old country. There was a snake like that, that reach all around the earth... Some day I tell you that story, if you want to listen to such foolishness... now you run in with those eggs to your mamma.

HILDA

Will you surely tell it to me some day? You never told me a story in all your life!

SWANSON

I aint got no time for stories. I got to raise crop for Mr. Duncan! Now you run... only look out for those eggs.

(*Running.*)

I'm going to tell mamma.

BENNY

Is Duncan one of your giants, Bill?

Ask your father that, Benny — after Thursday. (*Bill has seated himself in the barn door way.*)

SWANSON

Benny, you run along and let them yearlings into the pasture. Pretty soon your mamma will be calling for supper.

BENNY

(*Looking back at Bill.*)

Just the same, I bet he is. So that's what you meant. I never knew before. (*Exit, thoughtfully.*)

SWANSON

(*Sits down with Bill. Takes out package tobacco, fills pipe. Offering sack to Bill.*)

Fill her up.

(*The two smoke in silence.*)

SWANSON

I guess we get nice day tomorrow.

BILL

Looks like it... If it's all the same to you, Mr. Swanson, I'll get up and hit the trail early. I can catch the way freight over at the crossing. I won't need any breakfast... don't want to put Mrs. Swanson to the trouble... and don't want to bother you either. You'll want to begin on that south quarter section.

SWANSON

(*After a pause.*)

If it's all the same to you, Bill, I guess you better begin cutting in that south quarter section. (*Another pause.*) I got to look around and see what I got in way of lumber to fix some bins. ... Then maybe I transact some business around the country in afternoon.

BILL

How you off for stack covers... if we had enough canvas...

SWANSON

By gar, that's good idea! I send to Chicago for more canvas. Thank God, Duncan he don't own Sears-Roebuck... not yet.

BILL

How about Thursday?

SWANSON

I guess I go over to meeting, take a look around and see what they got to say.

*(Bill grins appreciatively.)*

SWANSON

*(Knocking the ashes out of his pipe and turning around to face Bill.)*

Now, about those giants! What you fellows think you going to do about 'em, heh?

BILL

*(Swinging about to face Swanson — gesturing with pipe bowl against his palm.)*

Well, Mr. Swanson, you see it's this way...

*(Swanson leans forward listening eagerly, and while Bill expounds the principle of the I. W. W. as applied to agriculture, the curtain slowly falls.*

END.

# As a Doctor Sees it

**Brief Notes—By Dr. B. Liber**

**1. He Is All Right—**

I am a mason. I was always healthy and am not sick now, either. Have just a backache, or rather, a pain in the small of the back. It came after I carried a heavy stone—three months ago. Suddenly I felt an awful pain and it has not left me since. I am working, but it is very hard. Except that, I am all right.

—And this?

This was an operation on account of a fracture of the thigh bone. I fell down from a stepladder—not very high, fifteen feet. Was laid up for four months in the hospital, you know. But it is all healed. Only this leg is somewhat weaker than the other one. Outside of that I am all right.

—And this?

Here I suffered from an injury at work and the hand remained a little stiff. The doctors had to cut out something. But otherwise there is nothing the matter with me. I was never really sick.

—And this?

Oh, here? It was a burn with a hot iron, near the eye. But that happened at another kind of work, when I had no job at my own trade. It was terrible. The face is now a little crooked, but the eye has been saved, as you see, and I am all right.

**2. Boxes and Legs—**

—I examine the patient's legs, which are covered with ulcerations.

This is nothing, doctor. You know, I am a driver, and it often happens that the clerks, when they are in a hurry, throw boxes and packages on my feet, especially if there is no more room on the wagon. Of course, my shin-bones get hurt every day and are always sore. They never heal. But this is nothing and I would not have come to you for such a trifle. I meant to tell you that I have a cold.

**3. Poverty and Sacrifice—**

Just a news item: Her husband was crushed and killed by the elevator in the factory. She became insane. She has three young children and lives with them in her old mother's house. The old woman, herself weak and poor, takes care of them. There is the old father, too, who peddles the whole day, rain or sunshine.

Every minute there is a sacrifice.

I am called to one of the children and I see here that sad poetry that I so frequently meet wherever there is poverty.

**4. Remembrance—**

A case of lung tuberculosis. A young man. When I ask him about his past, he lifts his head, and his cloudy eyes glimmer. After a while he begins to smile and tells me the story of his adventurous life. Then he concludes with these words:

"Yes, it is difficult to stay the whole day in a shop, together with so many other people, especially for a man like me. I was born on the water, in Europe, on a river boat, of which my father was the captain, and I was always out-of-doors, under the broad, blue sky, until a few years ago. Here in the shop I am suffocating. I cannot breathe. No, I cannot breathe"—

And he has a fit of coughing.

**5. Degeneration—**

I am called to a man with a nervous attack. In the course of our conversation he tells me, among other things:

"Years ago I used to read very much. I was a Socialist. I knew the Communist Manifesto by heart. I was a workingman and an idealist, and I was always contented. But the devil inspired me to change my opinions, and now . . . now . . . I have a shop with fifty workers. Unfortunately, I am making good business. I think of nothing but my shop. If I can make something cheaper than my competitor I am glad. I am sinking deeper and deeper into the swamp. For five years I have not read a book. The people I meet are rough and unlearned; they can sign big checks, but they know nothing except business."

He stopped, cried like a baby, and then continued:

"The other day I met a comrade of the good old days. When he pronounced the word Ibsen, I was moved to tears as at the sight of a dead friend who had become alive again. He left a book in my house, by my mistake. I read it, and—this is the result."

"Yes, doctor," said his wife, "he is crying and shaking ever since he read that terrible book. He cannot go to the shop."

"What book was it?"

He: "Oh, it does not matter. It contained ideas, and, if I am to go on with my money-making business, I must not think."

# Future of the American Working Class and the I. W. W.

By HENRY VAN DORN

I

Anybody who is familiar with the present economic and labor situation in Europe and America must acknowledge that we are on the eve of events which will be of tremendous significance for the future of the American workingman. *Continental Europe is economically bankrupt.* It does not produce enough to keep its population from starving. With the possible exception of France, England, and the Scandinavian countries, the exchange value of European money is practically zero. As a consequence American export trade to Europe is but the ghost of its former self. This is one reason for a slump of production in our industries.

Russia is in great need of agricultural implements, rolling stock and many other things. For the last year it has offered to pay in gold for these things to any country which would sell to her. Anybody with an ounce of intelligence knows that the Soviet regime in Russia is there to stay. Nevertheless, on account of the stupidity of our so-called "statesmen" the United States has up to the present time refused to enter into diplomatic or trade relationships with Russia. Great Britain, however, has at last awakened to the folly of the Allied attitude towards Russia and has allowed Russian trading stations to be opened in London and other places. The indications are that Germany and the Scandinavian countries will follow her example. It is therefore a fairly safe prediction to make that thru the shortsightedness of her foreign policy the United States has lost the enormous volume of the Russian import trade, thereby losing what would have been a great stimulus to increased production in her industries.

While the war was on, a large portion of our working class was busy making munitions, or was engaged in other activities caused directly or indirectly by the war. Only just enough production for home consumption was going on to supply the immediate needs of the country. Since the armistice the entire man-power which formerly was engaged in war work of one kind or another has been diverted into fields of production for home consumption and for peace time export to those countries which are still able to pay. Now, it ought to be apparent to anybody who has a sound mind that if during the war this country could engage a very large part of its man power on war work and still provide its population with practically all the necessary things of life, that after the war, with our resources intact and our industries unimpaired and the countries whole man-power engaged in producing for home consumption and for a diminished export trade, it would only be a matter of time before the country would catch up with its partly neglected industries, would have the warehouses stocked with commodities and would be *confronted with overproduction, unemployment and an economic crisis.* How far down this road of economic disaster have we traveled?

After the armistice a number of factors combined to keep up for a while the appearances of war-time prosperity. There was a great deal of construction work to be caught up with, such as the building of dwellings, hotels, factories for the production of peace-time commodities, and highways would have been put off until after the end of the war. An oil boom was on in Texas and in parts of Oklahoma and Louisiana which supplied employment to thousands of men. The war had created a multitude of rich and and nearly rich men who were doing their best to spend a part of their easily-gained wealth. Automobiles were in greater demand than ever before and the factories that make them were kept working overtime while new factories were being built on an unprecedented scale. That portion of the working class which had made comparatively high wages in war industries had acquired the habit of spending their earnings somewhat more lavishly than before, which habit it kept up until their savings became exhausted and the high cost of living put a stop to it.

These combined factors have had the effect of stimulating production for a year and a half after the signing of the armistice, thus lending to the United States the appearance of possessing a healthy economic life. What is the situation confronting the American working class today?

II

The American working class as a whole is worse off today than it ever had been prior to the war. While the sturdy sons of this land of the brave and home of the free were over in Europe fighting to make the world safe for democracy, Congress "slipped one over" on them and made America safe for Autocracy. Under the pretext of war-time necessity it passed legislation which took away from the people their rights of free speech, free press, and free assemblage. To make a good job of it, most of the states have passed the so-called Anti-Syndicalism laws. Kansas and other states have recently passed legislation making strikes and other manifestations of industrial unrest a crime in the eyes of the law. To this must be added the arbitrary power of judges to issue injuctions against strikers, to pass unwarrantedly harsh sentences and to allow political and industrial prisoners to languish in jail for months and years before bringing them to trial. When some of the leaders of the recent coal and railroad strikes were arrested, one

or the other of the above enumerated laws or usurpations of power were brought into operation. Thousands of I. W. W.'s, Communists, Unionists are today in prison, either serving their sentences or awaiting trial or deportation. *Thus has the American working class lost its civil and political liberties and its legal rights.*

The purchasing power of the dollar is now about one third of what it was in 1914. Have wages increased in a like ratio? Not by any means. Outside of a few crafts in the building industry, the wage increases lag far behind the rise in the cost of living. The wages of a large part of the population are so low as to bring it dangerously near to the starvation line. This has been the main reason for the very great number of strikes during the past year, — and especially of the so-called "outlaw" strikes. Which brings us to the *American Federation of Labor.*

Every big strike conducted since the Armistice by the American Federation of Labor has been lost. By losing the coal strike, the longhoremen's strike and the steel strike, the A. F. of L. has conclusively proven its utter inability to successfully wage war against the employing class. By trying to break the so-called "outlaw" strikes of printers and switchmen at least those brotherhood heads involved in these strikes have made an official entry on the side of the employing class. Being based on the antiquated principle of craft unionism, reeking with corruption from top to bottom, and being controlled by a group of well-to-do, self-seeking, old-time political traders, the American Federation of Labor has lost whatever value it ever possessed as a weapon for fighting the battles of the American working class.

This past year has also witnessed the break-up of the *Socialist Party* into three bitterly antagonistic factions. What remains of the original Socialist Party has been irretrievably discredited by its leaders, Morris Hillquit and Seymour Stedman, at the trial of the five expelled New York Socialist assemblymen. These gentlemen showed themselves up admirably in their true colors of smooth bourgeois politicians hostile to every truly revolutionary principle and to every move or genuine benefit to the working class, fawning and currying to the powers that be, in order to retain their finger in the political pie. On the other hand, the *Communist and Communist Labor parties* repudiate parliamentarism and political action in the commonly accepted sense of that term, yet they are political organizations; they profess to believe in direct action, yet they do nothing towards organizing the workers in their respective industries; they aver their fervent faith in industrial democracy and in the dictatorship of the proletariat, yet the members of these parties lift not their little fingers that the workers may get control of industry and may run it efficiently; they loudly proclaim their strict adherence to cold facts and realities, and they boast of the wisdom that they have imbibed from the mistakes of past ages, yet to the American working class they offer "mass action", which is so utterly unsuited to our political and industrial conditions as the weapon with which to bring down the beast of capitalism. In short, they are neither fowl, fish, nor venison. As far as its usefulness to the proletariat is concerned the Socialist party is dead, while the other two parties are tangled up in such a mass of contradictions that the working class has little or nothing to expect from them.

From the newly organized *Labor Party* we have no reason to expect more than we could have received from the Socialist Party of former years. Should the Labor candidates be lucky enough to get into office in some localities, the most that they could obtain for the working class would be a few mild municipal reforms. The same argument that holds good against political Socialism in this country applies with equal force to the Labor Party: if all the wage-earning men and women eligible to vote would cast their ballots for the Labor Party it would not receive a clear majority because our industrial proletariat entitled to vote does not form fifty per cent of the voting population.

*Already signs of unemployment are seen wherever one may turn.* It is a bet that this year the harvest fields will be overflooded with men. Our working class is facing a hard winter and a still harder spring.

While the condition of the working class has been becoming more unbearable day by day, and while their defenses have broken down, *the ranks of the employing class have undergone a process of solidification.* A number of anti-labor organizations, such as the American Legion and others have been formed and are steadily growing stronger. A nation-wide campaign for the open shop, backed by the whole money power of big business, is on foot. To give one instance of it: James F. Costello of the Brooklyn Central Labor Council declared at the Convention of the American Federation of Labor in Montreal that the Manufacturers' Association and the business interests of New York City were raising a fund of $5,000,000 to carry on an open shop war.

To sum up: *the working class has lost its political and legal rights; it has witnessed the breakdown of those organizations on which it formerly relied to better its living conditions; it has suffered a drop in wages as measured in terms of their purchasing power; and it is faced by a protracted period of un-employment; the employing class is stronger and more solidly organized than ever before.*

What is there left for the working class to turn to in this its hour of supreme need?

III

The only organization able to wage war for

the working class against these tremendous odds is a class-conscious, revolutionary, industrial organization with a stiff backbone, which knows what it wants, realizes what it is up against, and is willing to pay the price in order to attain its ends. It must be an organization that cannot be cajoled into submission, cannot be bought, disrupted or corrupted.

*That Organization is the Industrial Workers of the World. Founded on the rock of revolutionary industrial unionism, it has stood the acid test of time and of adversity. With thousands of its members in prison, calumniated and persecuted as no other organization in the history of America, it emerges today stronger and more buoyantly hopeful of final victory for the laboring masses than it ever has been since the day of its inception. The Industrial Workers of the World is the only bulwark from behind which the working class may successfully fight against our dollar plutocracy which is trying to impose a system of industrial slavery upon the American people.*

The I. W. W. is the only labor union in America which organizes the workers by industries and not by crafts. What is more, it organizes the workers in all the industries. When the workers in all the industries are united together in a compact, class-conscious body which believes that an injury to one is an injury to all, then we have the One Big Union. The I. W. W. is based on industrial unionism, and its aim is to build up the One Big Union of all the workers.

When the workers in any industry, such as the building, the railroad or the metal and machinery workers' industry, are all united together in one union and act as one man, their power is almost limitless. By virtue of their absolute control over the industry to which they belong, as well as on account of the disastrous effect on other industries, should they go out on strike, they can obtain from the employing class any demand that they see fit and just to make. In the course of time these industrial unions would become so powerful and efficient that if they so desired, they could dispense with the capitalist class altogether, so that instead of working for the profits of a few individuals, from then on they would be working for the good of all the people.

The capitalist class of America realizes this and that is why it persecutes the I. W. W. and lies about it. It realizes that its game of robbing the people is up once the I. W. W. is given the chance to organize the workers into the One Big Union. So the mouthpieces of the capitalists spread lies about the I. W. W. and call it ugly names. They say that the I. W. W. preaches violence, murder and destruction, while the truth is that the I. W. W., by advocating a course which will save our working class from starvation and our industries from ruin, is the one sane and constructive force in America today, while it is the capitalists themselves who practice violence by the employment of thugs and gunmen, and who murder, — body, mind and soul, — millions of working men and women by imposing upon them insanitary and inhuman conditions of employment at insufficient wages.

Another reason why the capitalists are afraid of the I. W. W. is because it is so easily accessible to the working class and is practically corruption-proof. Its initiation fee and monthly dues are very low; it has a universal transfer system from one industry into another and from one locality to another, without extra charge, and its officers are elected by referendum, are subject to recall at any time, and their salary is equivalent to the average wage of an ordinary worker. Most important of all, only wage-earning men and women may become members of the I. W. W. All these things combine to make of the Industrial Workers of the World a tower of strength.

IV

The message that I hope this article will bring to the members as well as to the non-members of the I. W. W. is this: Your Salvation, my salvation, and the salvation of every working man and woman in this country rests upon the triumph of working class solidarity over criminal capitalism; that *Solidarity is the only thing that counts.* And the welfare, the growth, the coming into power of the organization which embodies that solidarity should form the uppermost concern of your mind. To *it* you should consecrate the choicest products of your hand and brain, at all times and under all circumstances, whatever you may do and wherever you may be. Let the three golden letters, I. W. W., which stand for education, organization, and emancipation become the three faithful seekers after truth and justice, you should follow them, looking neither to the right nor to left, until you see the glorious red dawn o fthe new day of Freedom breaking over the horizon.

---

## *Remember!*

There are still many hundreds of I. W. W. men in jail.

There are three kinds of work in behalf of these men that must never stop:

1. **Raise bail for them.**
2. **Raise money for defense in the courts.**
3. **Raise money for jail comforts and for family relief.**

But most important of all:

**Push the organization work to the limit of your endurance.** Without that, all the other work will fail.

**Buy the stamps!**
**Send contributions!**

# Instinct and Better Organization

By RALPH WINSTEAD

To the Industrial Workers of the World a suggested change in structure does not seem like sacrilege. Battling as this organization does against terrible odds, it is forced by the unremitting ferocity of its struggle for existence to change its organs and use them for the best advantage as every new difficulty presents itself. Without this capacity for adaptation the I. W. W. would have gone under while still in its swaddling clothes. So it is with no surprise that we loggers of the Northwest find presented at this the most crucial hour of our existence both as an organization and perhaps as human beings, a new plan, or modification, of organization, o fthe whole One Big Union.

Throughout the camps and mills of the lumber industry the workers have been discussing this proposed change, so perhaps it will not be out of order to examine the new plan here and compare it with what we have at present. In Solidarity as well as The One Big Union Monthly a chart was printed giving an outline of the change, which is to be based on shop or job units.

If the arguments here presented give only examples of how the change will work in the lumber workers' organization it is through no thought of local or industrial union patriotism but only because the writer is more familiar with the workings of the Seattle District of L. W. I. U. No. 500, and believes that members of other units can apply the thoughts here expressed to their own branch.

The new plan provides for job organizations in an industrial union with more than 5,000 members. When any job can scare up seven members of that union in good standing they are entitled to send a delegate to a central job council, which must have seven jobs in an industry represented before being founded. These central job councils elect delegates to the District Industrial Union Council, which has an executive committee which will function somewhat as the present District Organization Committees function. Then the District Industrial Union Councils will also send delegates to the Industrial Union Headquarters Council, which in turn will have a General Organization Committee, as at present, and will nominate members of the General council.

The District Industrial Union Councils will elect delegates to a District Joint Council composed of delegates from all the Industrial Unions in the district, and this District Joint Council will, in addition to looking after general organization work in the district, have charge of propaganda, defense and auditing the district clearing house books as well as regulating the personnel of the clearing house clerks.

Now this is a radical change or departure from the system now in practice, even when the present system works smoothly without any friction with the police. At present district membership meetings are held, which, as rule, accommodate only a small fraction of the membership that could attend and scarcely a fraction of those who are in the organization. These Industrial Union meetings attend to the routine business, handle complaints, listen to the meows of malcontents, and in general are inefficient and unsatisfactory. In the lumber industry especially, with the great number of members who can never travel clear across the district to attend the meetings, this form of transacting routine business and of supervising the various committees is unsatisfactory. It has been felt so, and a move has been made already to have a delegate council to meet in Seattle every month to transact what business lies in their province and to discuss their various jobs, with their problems, and to get literature.

So it is no new thing to the loggers to hear about job organization. That emphasis has been placed for quite a while but as yet no system has been installed that will enable all the different isolated jobs to keep in touch with one another and make industrial effort replace job effort. This new plan of having councils solves the difficulty.

The one great fear of the membership is that their officials may become autocratic and that control of those officials may pass out of the hands of the interested members. So we find in a district all standing committees and officials being nominated from the floor of the district business meeting or in the job branches and voted on by a referendum of the entire membership. In theory this is the most democratic way of election, but in practice we often find that men are elected to responsible positions and then after a few days refuse to either resign or to function properly. They can be recalled by a referendum, but such a proceeding is costly and usually the organization worries along with the fifth wheel until the next election, when there is another attempt made.

Now under the new system each delegate will be picked from the active members by his fellow workers on the job. After functioning in the central job councils and proving his worth, he may be elected to the district council and from there, still keeping his connection with his job, he will be eligible to the district joint council and the general council. If at any time the workers on this job do not like the way he is representing them he can be recalled at a job meeting and a delegate sent in his place to the central job council with demands for his withdrawal.

Still, if the method of general referendum is preferred for election purposes, such a system could easily be worked out so far as the election of permanent committees was concerned, such as the District Organization Committee and General Organization Committee, along with district clerks and

the like, without interfering with the council principle.

The main factor in favor of the new plan is that it favors cohesiveness, renders each part of the organization susceptible to movements and dangers of the other parts. It establishes means of intercommunication that are absolutely necessary if the I. W. W. is to carry out its mission and to establish order out of misery and chaos.

The very basis of the whole Revolutionary Industrial movement is social feeling, SOLIDARITY, the realization that the workers must act together. Those industries have responded best to the agitation of the I. W. W. wherein the workers live group lives. In the camps and other social aggregations the Wobbly could impress his fellow slaves with his teachings and so they, because they could not segregate themselves, were forced to learn and adopt the new social philosophy. Solidarity has slowly been built up in the camps and jobs, till every one can boast at least of a small group of earnest-eyed workers who know and belong.

At this point, in the lumber industry, at least, we seem to have halted temporarily. Job action there has been—lots of it. Some has paid and some has failed to produce definite results. But the point is that beyond job action there has been little activity since the general eight-hour day strike. Why? The answer is plain. THERE ARE NO CONSTANTLY OPEN CHANNELS OF INTERCOMMUNICATION UNITING ALL THE WORKERS ON ALL THE JOBS IN THE INDUSTRY TOGETHER. Two or three jobs in the same locality suffering from the same conditions call job strikes at different times without knowing that the other neighbor camps are ready to act. Job bulletins are splendid things but by the time the news filters in to the printer and then gets distributed to the camps weeks may elapse. By having the job, central and district council system in operation all that great fund of solidarity which in most cases lies unused and unexpressed with little chance for expression except in the little group on the jobs, would be called on to work for the whole organization intelligently and not blindly as at present.

Working class solidarity is an offshoot or development of an inherent instinct. It cannot be eradicated—because that instinct is as old as life. It is called gregariousness, and through its aid the old primitive herds of men fought and conquered the giant mammoth, the saber-toothed tiger and all their other mortal enemies. It is closely bound up with biological instincts of fear and self-preservation. The herd developed, even before speech was possible, means of intercommunication.

Sometimes, when chattering and searching for their food, gathering berries, munching roots and searching for shell fish, an occasional alarm was given. How they all closed ranks, deciding in an instant the line of action to take, and then, their fear overcome by that feeling of courage which touch and communication with the herd always gives one, they would fall on their enemy, would start an orderly retreat, or would return to their eating satisfied that the alarm was false. Ingrained in each of us is that instinct of gregariousness, and we workers have translated it into terms of solidarity to members of our class.

Last November came from Centralia the terrible news that our fellow workers were being slaughtered by howling mobs. Everywhere that story spread, of the bloody lynchings with more to follow. In the heart of every true worker who had listened to the message of class consciousness flashed that herd concept of instinctive fear. That old impulse to gather together and act against the enemy surged into the consciousness of every one of us.

In every camp and job where there were wobblies working men stumbled out into the night when they heard the word, seeking their fellow workers, gathering in groups, talking, worrying, wishing for something to do. But there were no means of communication. There was no way to take intelligent steps or to use that great conception of solidarity that flared up on all sides. The Scissorbill used it, and a hundred raids testify to the herd instinct that was aroused in the henchmen of the powers that be. But we could gather no force for either protection or offense. In a few days the herd instinct of gathering the forces had spent itself and there came—as always comes when fear finds no antidote in intelligent action—panic.

Scattered were the organs that had been built up. Gone were the fighting members who would have stuck to the last ditch could they have been able to communicate and act intelligently **together.** So, starting with a handful of cynical members, those whom neither fire nor water cause to flinch, the weary, back-bending task of reorganizing the old structure and getting the defense ready for the victims commenced. These fearless warriors have done this job not once, but a dozen times in the last few years. Each clash proves how deeply ingrained the teachings of the I. W. W. are in the minds of the workers and proves further than a structure capable of supplying social action rather than only job action must be raised if we are to go into the bigger fight, the social fight, and come out victor.

Could the members on the different jobs have called their meetings, elected delegates to specially called Central Job Councils, and so got into touch with the whole organization they would have felt their strength, they would have at least known that they **were doing something** and the panic would have been averted even though they could not strike a blow at their enemy that would stagger him.

It is the concept or feeling of action that strengthens the courage of the group and which is capable of calling all the latent solidarity of the masses into action. **Nothing is so demoralizing as lack of communication and the consequent feeling of isolation combined with inaction.** Even in those members who have been unflinchingly on the battle front for years, isolation and inaction produces a querulousness and a nervousness that prevents the full application of fighting ability to the immediate task.

The I. W. W. is a solid unit, unsplit by factional fights or warring egoism, yet so great is the isolation of its members that there is developed in times of need a nervous reaction of anxiety, of pessimism, and we see an alarming spread of rumors of all sorts among members who would refuse to listen to such guff or be disturbed over little things in other times. All these happenings are symptoms of repressed panic and are there because their is no opportunity for concerted action on the part of the group.

This lack of inter-communication causes in many instances a lack of unity between the rank and file and the officials as well as disputes between officials. Gossip finds listeners and breeds distrust while intolerance in personal peculiarities developes because the channels for diverting all this nervous and critical energy are blocked.

With the full development of the job unit system there will be formed the District General Council which will take charge of general organization affairs. Their functioning will tend to nullify any tendencies toward Industrial patriotism and make of all the workers in all the industries, fellow workers, with a chance for development and expression of true solidarity.

Let us perfect our lines of communication. The job unit and council plan show the way.

# Conditions on the Pacific Coast

By A WANDERING WOBBLY

The Canadian "One Big Union" claims to have considerable vogue in Los Angeles, Oakland, and other California points, and in Butte and Billings, in Montana. Just to what extent I am unable to determine, for the movement seems to have neither head nor tail. It is too cowardly, in my estimation, to arrive anywhere. It seems to want the workers to think it is the same as the I. W. W. and the authorities to think that it is not. To the workers it makes the claim to be the logical "successor" to the S. T. and L. A., the Knights of Labor, the W. I. I. U., and the I. W. W., while the testimony of its officials in recent trials in California are frantic denials of the slightest connection with a revolutionary purpose.

George W. Graydon, secretary of the O. B. U. in Los Angeles, testified in the criminal syndicalism case of Syndey Flowers, that "We are trying to organize the wage workers for the purpose of getting better wages and better working conditions and solidifying the workers' political power. The One Big Union stands for political action and is opposed to strikes unless they are forced upon us. We will do anything we can to keep from striking. We believe strikes are a loss to the workers.

In Seattle this "One Big Union" is safely in the hands of a very few doctrinaire Canadian and English "commodity struggle" socialists, who are busily engaged in splitting hairs as to the exact meaning of the word "political" and in deriding the idea that an industrial union could possibly build the framework of a new society within the shell of the old. As these men have no citizenship, it follows that they have no votes, and their grouping is not industrial lines. In fact they seem afraid to hold an open meeting except in the form of a "study class." They are making no headway.

The Seattle situation is peculiar. From one to fourteen years just for packing a red card, and yet everything the wobblies say can be said by those who do not carry cards or whose membership cannot be proved. The building laborers, the longshoremen, many of the machinists, some of the electricians, laundry workers, shipyard laborers, shipwrights, carpenters, and others in the craft unions have absolutely no use for the A. F. of L. and will accept the I. W. W. plan and program, but will not join the I. W. W. itself at this time. This feeling is purely a rank and file development, scarcely a radical in any of the bodies mentioned could be called a "leader", and the few who might be thus termed are holding back the mass so that, when the break does come, as inevitably it must, there will be a large enough body to hold its own against the combined onslaughts of the capitalists and their agents, the international union officials.

The actions of Seattle radicals seem peculiar to anyone who does not know of the conditions mentioned. The choice rests between "boring from within", splitting into an "independent industrial organization," or joining the I. W. W. at a time when the organization is honeycombed with spies and its membership lists are constantly falling into the hands of the employers and the police.

The craft unions are in the last ditch. This is not solely due to craft weaknesses, for there has been a shut-down in the shipyards. Boilermakers, heralded as having the largest local union in the world, has dropped in one year from more than 17,000 members to less than 4,500. Shipyard laborers, riggers and fasteners, which was the second largest union, is now one of the smaller unions with an average attendance of less than 35 members. This union, however, which was industrial to the extent of being recruited entirely within shipyard construction, is a victim of craft unionism, for, as soon as a decline in membership started in the other unions, there was a scramble to partition its members among the different international unions. The machinists admit that their union is on the down grade with no hope in sight unless they quit the A. F. of L. and unite industrially with other workers.

The tailors, strong advocates of industrial unionism even to some of the higher officials, and with a shop steward system second to none, lost their recent strike and returned to an open shop. They are getting the wages and hours they sought, but they lost

shop control and will have to rebuild their shop committee system.

The longshoremen lost their last strike, both truckers and stevedores having to relinquish the list system of calling gangs, but this is no victory for the employers either, as practically no freight is moving to the port of Seattle since the "outlaw" switchmen took a vacation and the waterfront workers of Japan cut off much of the Oriental commerce.

The tyrographical union strike was lost, the building trade strike was lost, the dye works strike was lost, and the bakers are now on strike, but with some chance of success. There is talk among the bakers of an amalgamation of foodstuffs unions, which is not industrial unionism by any means, but has such significance since it proceeeds from the rank and file.

The Central Labor Council lacks life or purpose. The seats are half empty. Scarcely a week that some pseudo-intellectual, broken-down preacher, hare-brained visionary or governmental propagandist is not introduced to make a talk. The council has no economic function at all since its component parts have lost all economic strength.

The leaders of the craft unions, in fact, are opposed to economic progress for it always takes a turn that they are unable to control. So they are devoting their time and attention and the money of the dues-payers to a fake outfit called the Triple Alliance, which is vainly trying to unite on the political field the farmers, the railwaymen outside of the A. F. of L, and the craft unions lined up in the State Federation of Labor.

In addition to that they are furthering all sorts of co-operatives, some of them with the most honest of intentions, however, misled, but many of them with the deliberate purpose of faking the deal. Neither the craft union leaders nor the Rochdale brand of co-operators have any use for the three non-profit co-operatives—the Equity Printing Company, operated to insure some freedom of press; the Co-operative Cafe that puts all surplus into radical propaganda; and the People's Park, which was started because every picnic ground in the Northwest had been closed to the radicals.

The union leaders are also whooping it up for a group of allied stock-selling schemes of the get-rich-quick order:—the Deep Sea Salvage Company, Federated Films, United Theatres, Co-operative Stevedoring, Padillah Bay tide flat lands to be reclaimed with a dyke at some future date, and then to clinch the hold—a Producers' National Bank. The Union Record bunch is in this muck up to its neck.

The State Federation officials have had to get into peanut politics because there is not enough economic activity connected with their jobs to justify a State office. With a few exceptions, the radicals wisely refrained from accepting any offices in the last union elections, so none of the blame for all this muddle can be saddled on the element that favors a different form of organization, a different set of tactics and a social system different from that which seems so dear to the hearts of the advocates and supporters of craft unionism.

The encouraging feature of the situation of the entire Pacific Coast and especially in the Northwest, including the copper region of Montana, is that there are thousands who have sufficient understanding of revolutionary industrial unionism and the historic mission of the workers to withstand the attacks of enemies and false friends on the I. W. W.

# Give Us a Photo Play of Life

**By Raymond Corder**

**Give us a photo play of life—**
**Banish the tinsel from the screen;**
**Do away with the heroine**
**With lips that suck at saccharine**
**Nymph-like shapes and naiad curves,**
**And doctored hair like burnished gold;**
**Such stuff is stale, it's getting old.**
**It's getting on our jaded nerves.**
**Won't some one write scenarios**
**Void of the sickening weeps and woes**
**Of a bourgeois wife with an aching heart,**
**A vampire fluff with a powdered nose,**
**And a silk hat spouse to cap the part—**
**Give us a play of life.**

**Give us a photo play we live—**
**Show us the life of a common slob,**
**With unshaved chin and a slanted nob,**
**Empty bellied, out of a job.**
**Give us a look at the factory Jane**
**(And damn the dashing pink tea tout,**
**Who meets her, loves her, takes her out)—**
**Let her marry an overalled swain.**
**Give us a show of the bloody strife**
**On the picket line, and the traitor's knife,**
**Of gunmen, hunger, cold and dirt,**
**Hell and pain of a worker's life,**
**Idyls of the knights of the greasy shirt—**
**Give us the play we live.**

# A Near Industrial Union

By MATILDA ROBBINS

Those who read the "New Republic" have recently been introduced to a series of articles on an organization known as the Amalgamated Clothing Workers of America, written by William Hard, star journalist of that periodical.

Hard is a very clever writer—clever with that superficial knowledge and play on words so peculiar to his trade. It is amazing with what degree of sureness he discusses things that are seemingly foreign to him and how misleading the whole tone of his articles is while appearing to be well-informed. He tries to show a familiarity with labor union jargon, with proletarian jargon, with revolutionary jargon. But his mind and his pen constantly run on bourgeois ethics, on "business" methods, on "specialists" and on leaders. The great mass of workers that comprise the Amalgamated Clothing Workers of America counts for nothing in his articles; he dwells among executives, officials and "leaders," and it is from them that he gets his estimate of problems and conditions of labor. He may be a good observer, but labor organizations need more than observation; they need study. This he has not done, and the result is that he gets over, under guise of progressivism, a most pernicious set of practices by as unscrupulous a set of "leaders" as ever took root in the American labor movement.

I cannot quarrel with Hard too much. He is just a journalist, writing for a periodical whose readers are mainly liberal harmonizers between capital and labor and would always welcome such labor leaders as have fastened themselves on the Amalgamated Clothing Workers. My protest and the protest of my earnest and class-conscious fellow workers is against this newly powerful group of leaders who have come among us to cloak their conservatism, if not reactionism, with honeyed and "revolutionary" phrases; who speak of the A. F. of L. as reactionary and undemocratic, only to become as that organization and even worse.

A convention of the Amalgamated Clothing Workers of America was recently held in Boston. According to William Hard this is "the most proletarianly advanced trade union in America." The president of this union, Mr. Sidney Hillman, who addressed the delegates to the convention—workers from the clothing shops of New York, Chicago, Baltimore, Rochester and other places—as "fellow workers," costs the union $7,500 a year in salary alone. Small wonder that Hard saw in Hillman a "neat, trim, quiet, collected" (I should say collecting), agreeable, smiling . . . extremely successful manager of the most proletarianly advanced trade union in America."

I think that Samuel Gompers is a much underpaid official, for he, president of the whole American Federation of Labor, gets only a little more than Sidney Hillman, president of the Amalgamated Clothing Workers, only lately a secession union of one of the A. F. of L. internationals.

I don't know how much Sidney Hillman earned as cutter in a clothing factory five years ago, but I strongly suspect that it was considerably less than $7,500 a year, even in rush seasons when he worked overtime. Five years or so of managing a "proletarianly advanced" union, however, has a tendency to raise the standards of the manager. When I think of Lenin and Trotzky and other members of the Central Committee of the Federated Russian Soviet Republic receiving about $90 a month, and how little this sum can now buy in Russia, I wonder if those delegates who cheered Russia's Soviet Republic and Russia's Red Army could have remembered their $7,500 a year president and their other expensive officials.

A strange anomaly are these clothing workers! They fought their way through the most pernicious system of sweat shop exploitation known in this country into some semblance of organization in the A. F. of L. years ago. It took them more years to find out the corrupt leadership in their unions, the chicanery, the trading with the bosses. Then came the split of their international in the A. F. of L. and the Amalgamated Clothing Workers of America was formed.

This latest organization came into existence with the class-conscious element as a leaven. These were the rebels against the tyrannical domination of the A. F. of L. machine; against high-salaried, swallow-tail coated, Civic Federationized officials; against autocratic executive boards; against the old form of craft union morality of "identity of interests between capital and labor." This was to be an industrial, democratically managed union; a true workers' organization. Such was the wish of the rank and file of the seceding faction. But such was not the will of the crafty ones who saw opportunity for themselves in the turn of events.

After five years of life, the Amalgamated came to Boston for its 1920 convention with a swollen treasury, seeking an outlet in enterprise. It brought with it as expensive and domineering a set of officials as can be found in any of the A. F. of L. old internationals. It listened without rising in revolt against President Sidney Hillman's plea for **increased production!** It silently concurred in the opinion of Executive Board Member Hyman Blumberg as to standards of work and the grading of workers according to measure of production in the clothing shops. It listened, although somewhat bored, to the lengthy reading of the secretary's printed report, and it found no criticism with his juggling of "the philosophy of work and wages." It was perfectly behaved, this erstwhile rebellious contingent from the clothing shops, and it let the official machine run away with it.

I say "run away," because the Hillman type of officialdom is too shrewd to run over it. This type found the steam roller of the Gompers official machine too crude and in the long run inefficient. It knows that the tendency among the workers is to recoil from craft union blows and strike back. So it has adopted the suave persuasiveness of certain lawyers in defense of ousted socialist assemblymen. It uses the term "comrade" a lot. It uses a certain kind of "good-fellow" diplomacy. It uses, above all, much verbiage—soft, superior, equivocal verbiage. Verbiage designed to show why it should get $7,500 a year jobs from the workers in the clothing industry; why these workers ought to be for increased production, for standards, for the "shop"; all these things, which really mean the maintenance of harmonious relations between the union and the boss.

It is no mere accident that the discussion of "standards" for increased production and measure of output by each "grade" of workers in the clothing shops, according to pay, was left to the very last hours of the convention. It has always been the game of officially manned conventions to leave important and delicate business to as near the close of the convention as possible, anticipating the waning freshness and patience of the delegates, and then rush it through with machine-like speed.

So the protests of those delegates who saw in this pernicious system of standards of output and increased production the revival of the old sweatshop, speeding-up, piece-work slavery were squelched by these "radical" labor-union diplomats and the convention went on record as endorsing it. These have become Amalgamated standards.

At this writing the report comes from Baltimore that 3,000 workers who pursued "Amalgamated standards" in the factory of Sonneborn & Co. are locked out. The firm claims that the manufacturing cost of clothing is too high, consequently clothing in the market is too highly priced and under-consumption ensues. Or shall we say "overproduction"? The firm proposed putting the workers with their Amalgamated standards on half time. This the union refused. So it was locked out—standards for increased production and all.

According to William Hard's enthusiastic report of the executive board member's emphatic demand that the opponents of standards at the convention "know that the workers in Sonneborn's believe in standards" was about the biggest thing that happened at the convention. This grading and standardization of work and workers so impressed Hard that he could only compare it with one thing—perhaps the one he knows most about—"handicapping in golf." I'm sure the readers of the "New Republic" will understand what that means.

To the workers in the clothing industry, however, these standards that their officialdom foists on them are a real handicap—a handicap to efficient, revolutionary organization. What are these "standards" but the old "identity of interests between capital and labor"? This old wolf in his new sheepskin proposes increased production—increased production so that the workers may all the sooner be thrown out of employment; increased production so that the lines of unemployed may grow even greater.

Ah, yes, but the convention voted that "The Industry," the bosses, that is, should provide an Unemployment Fund of a million or so, which William Hard (whom it gives me pleasure to quote) declares to be "a principle natural to a truly industrial union." I wonder if the officials of the Amalgamated Clothing Workers told Hard that this joker, designed to lead the workers away from the problem of organization along revolutionary lines, was a "principle natural to a truly industrial union." Or else, where did he get his information? It could not come from the workers, for those who did not protest against the crumbs of benevolent industrialism to be thrown to them by the bosses when they have produced too much wealth were just dumbly quiescent.

So at the convention of this "most proletarianly advanced trade-union" increased production and standards of grading were fastened on the workers in the clothing industry in the attempt of the officials to insure some degree of amity between the bosses and the union and to avert strikes. For the leaders are always against strikes. Strikes threaten their berths and disturb their peace and plenty. Anything but strikes. So the workers are led into intricacies and entanglements for which these "leaders" and interpreters and harmonizers and adjustment boards and all the rest of the legalistic machinery devised by "labor experts" must be retained at high cost. And the workers pay.

## Notice to Subscribers

If you fail to receive your magazine regularly, we suggest that you send in an additional 10 cents for each copy, and we will send it by first class mail.

The post office accepts our publications for insurance and registry, but if we mail it as plain "printed matter" the Palmer-Burleson servants hold part of it "for inspection."

As it will be several months before we get rid of this obnoxious gang of politicians, we have to ask our subscribers to be patient. Perhaps it will be better afterwards.

# Strike on the Job

By FREDERICK A. BLOSSOM

At a time when the class-conscious workers of England, France and Italy are systematically decreasing production in order to help put the final crimp into the capitalist system, and when the I. W. W., at its Annual Convention, adopts a resolution advocating the "strike on the job" as an effective weapon against industrial tyranny. the "radical" leaders of the Socialist unions in the textile industry are running true to form as defenders of the capitalist system by introducing *speeding-up methods* in order to ensure the boss's profits against any slowing down on the part of the workers. This is on a par with their system of contracts forbidding strikes and goes further than the A. F. of L. in increasing the employer's profits at the expense of the workers.

The official ring of the Amalgamated Clothing Workers, in spite of feeble protests from the more enlightened and courageous portions of their membership, are establishing "production standards" in connection with week work. Under this system, a worker must turn out a certain amount of work per day. If he falls below this minimum, he will be discharged, with the consent and approval of his union. This is even worse than piece work, as, under that system, if you produce less, you earn less but you hold on to your job.

In similar manner the officials of the International Ladies Garment Workers are adopting *"efficiency systems"* for their branch of the industry. In Cleveland, for example, they are paying $10,000 from union funds to "efficiency experts" to work out methods of increasing production. In other words, officials who get their salaries from the workers are using the workers' money to install a system by which the boss will be able to drive his slaves harder, increase his profits and get the same production with fewer employees!

In the contract entered into on April 9 with four leading ribbon manufacturers of New York and vicinity, the minister-reformers at the head of the Amalgamated Textile Workers followed the seductive example of their evil genius, the Amalgamated Clothing Workers and made careful provision for keeping production up to standard. "Public interest," the preamble to this contract declares, "requires increasing production as a PRIME factor in reducing commodity prices. (Not a word about decreasing profits!) Weavers should not intentionally restrict individual output."

Any ruling of the Impartial (?) Chairman with regard to wages, the contract expressly stipulates, "must provide for DEDUCTIONS of pay for any failure to accomplish fair production on the part of the individual weaver. Any such ruling or regulating of the basis of compensation of weavers shall be ordered by the Impartial Chairman which permits decreased production or fails to guarantee fair production. Any ruling which results in decreased production shall be immediately revoked and rectified. Every wage scale shall be accompanied by a scale of production."

These leaders, even if they are honest, are misleading the workers.

Increased production means more profits for the boss, but more unemployment for the workers. The more they produce, the sooner the market will be filled with goods and the factories will shut down.

Speeding up wrecks the workers' health, throws them out of employment and strengthens the system under which they are exploited.

Slow down, fellow workers! Speeding up wears you out and makes you old before your time. When you are broken down from overwork, the boss will throw you on the scrap heap like a worn-out piece of machinery. Take it easy and save your strength.

Slow down, fellow worker, and make a place for the man or woman who is out of work. The less you produce, the more employees the boss will have to hire. If you speed up, you keep someone else out of a job. Take it easy and give the other fellow a chance!

Slow down, fellow worker, and make your own job last longer! The faster you work, the sooner the boss will lay you off. *Don't work yourself out of a job.* Take it easy!

Do not listen to the fools and fakers who try to persuade you that "the prosperity of the industry is your prosperity." You have no interest in the business beyond your daily wage. Whether your boss makes thousands or millions, you will never get more than just enough to live on — and often not even that. If you increase production, you are merely making more profits for the boss and providing him with more money to fight you when you go out on strike. Why kill yourself making ammunition for your enemy? *Slow Down!*

Profits are the life-blood of capitalism. Without them, it cannot live. When you increase production, you increase profits and thereby build up the capitalist system — you help to prolong its life. If you are a revolutionary worker, therefore, if you want the day to come when the workers will control industry, you will turn a deaf ear to the union officials and other servants of the employing class, when they urge you to "increase production." Instead, you will resist every effort to make you speed up, whether by "production standards," efficiency systems, bonuses, premiums, overtime or any other slave-driving trick.

Slow down fellow worker! Help to strangle the capitalist system by cutting off its profits. *Strike on the job—all the time!*

STAND BY YOUR CLASS! SLOW DOWN!

# The Germans and the I. W. W.

**White Guard Atrocities Against the German Workers**
**(Translated from the German by Wm. Weyh)**

*"The General Workingmen's Union* (Allegemeine Arbeiter Union) is a part of the international revolutionary working class movement which is trying by all means to bring about the overthrow of the capitalist system and to secure for the proletariat political and economic control in order that it may use the soviet power against the counter-revolutionaries.

As an economic revolutionary organization, we are in goal and in fighting spirit most like the I. W. W. of America. (Here follow extracts from "The Revolutionary I. W. W." by Grover Perry, with which we are all familiar, and then the article continues.)

A literal translation of this shows plainly the international and revolutionary character of the I. W. W. and that its goal is the same as ours.

Before all else, the I. W. W. has to vanquish the guild-crazy, nationalistic and race-prejudiced Gompers unions. Not the craft, but the **industry**, is the foundation of the I. W. W. The different branches belonging to one industry unite in that given industry. In accord with American conditions, where the power of the trusts and other organizations of exploiters is more far-reaching than in Germany, the structure of the revolutionary I. W. W. must also be different from ours. We concentrate first on the trade organization, then on the industries and districts and still further, organize these into a big national union (One Big Union).

In contrast to this, the I. W. W. concentrates on the industrial organization, as in America an industry rules whole districts and even wide areas of land. But in tactics and aims the A. A. U. is fully in accord with the I. W. W. in America."

The following articles, dealing with the movement of the German working class, require a brief foreword to English readers.

"The *"Kommunistische Partei Deutschlands"* is the remnant of the Spartacan movement founded by Liebknecht, Luxemburg, etc. But today it is only an organization in decay, dominated by a few politicians like Levi and Duwell. Recently those who were expelled from the K. P. D. formed the Kommunistische Arbeiter Partei. (They have as many splits and names and parties as we here!) The most important revolutionary class organization is the Allgemeine Arbeiter Union (General Workingmen's Union) *besides Die Freie Arbeiterunion — the Syndicalist organization of Germany. Ed.*)

It is an organization which is in full accord with the spirit and principles of the I. W. W. and works along the same lines. That union already embraces **over a million** class-conscious workers, and therefore in the near future will be a power with which the reactionary socialists, the militarists and the capitalists will have to reckon. They will not again be able to crush its members as in the recent bloody White Terror. The slogan of this union is **Organization on the Job**, and in the next battle it will be seen that the workers will be victorious through their organization power. It is expected that in the near future the Kommunistische Arbeiter Partei and the Allegemeine Arbeiter Union will amalgamate.

The Communist Party of Germany (Kommunistische Partei, originally called Spartakus Bund), founded by Karl Liebknecht, Rosa Luxemburg, Franz Mehring and others, became bankrupt morally and politically after the death of those pioneers of the international proletariat. A clique of ambitious and corrupt leaders, eager to control the organization for their own egotistical interests, succeeded in sabotaging every thought and aim of the Proletarian Revolution. They succeeded in steering the Spartakus Bund into reformistic lines, although the great majority of the membership were emphatically opposed to the reform methods. The executives (Zentrale) succeeded in ousting all the districts which were actively opposed to the "Counter-revolutionary institution known as Parliament," to the craft unions and to the "lawfully" organized worker's councils (a la Legien) without giving those districts an opportunity to bring the matter before the party, although they were the largest districts in the organization. The "Zentrale" thereby proved that they deliberately attempted to bring about a split, because the revolutionary activities of the rank and file were out of harmony with their counter-revolutionary tendencies.

The revolutionary opposition, determined to bring the German Revolution to a successful conclusion, is known as the Communist Workingmen's Party (Kommunistische Arbeiter Partei). **That organization is not a "Party" in the exact sense of the word.** It is no party of leaders. Its chief aim is to help the German proletariat with all its power to get rid of the last vestiges of leadership. To free the workers of the traitorous counter-revolutionary leader politicians is the quickest way of uniting the proletariat. The K. A. P. D. is nevertheless conscious of the fact that the union of the workers, the unity of those elements striving for the soviet idea, shall be the aim of the Revolution.

Workers! The K. A. P. D. is the pioneer of the revolutionary proletariat. Help us put our party on an efficient basis, which will insure a successful conclusion of the struggle.

Long live the World Revolution!

Signed:

COMMUNIST WORKINGMEN'S PARTY.
OF GERMANY"

### Massacres in the Ruhr District

(Translation from "Kommunistische Arbeiter-Zeitung," Hamburg, April 17.)

The "police action" which was instituted by Zeitung," Hamburg, April 17.)

Ebert and Muller to restore "order" and "constitutionality" in the Ruhr district gave the White Bandits an opportunity for the perpetration of such atrocities as were not committed during the world war nor have been written of in any revolution in any other country. The reports of the refugees, who with the greatest difficulty escaped the claws of the blood-thirsty soldiery, tell a fearful tale. Among others, there has come into our hands the letter of a Ruhr fighter to his relatives, which illustrates with terrible forcefulness the motto under which the executioners of proletarians marched into the district: "No prisoners will be taken!"

In this letter, which was written in the town of Walsum, there are pictured in unexaggerated terms the events of Easter Sunday.

The Whites attempted by all means to get out of the fortified towns of Munster and Wesel, which were surrounded by the workers. They put on the civilian suits of the captured Red Guards, tied red bands about their sleeves, and so approached the lines of the worker troops. When they believed themselves near enough, they ordered, with an accompaniment of bullets, "Hands up!" Unprepared for such trickery, the workers had to withdraw their lines three miles. The Whites followed in armored autos. With reinforcements the workers again drove them back. Then came a bath of blood. As the above mentioned letter describes:

"The captured Red Guards were compelled to walk as fast as the armored cars retreated. Many a one succumbed on the long stretch, and every one of those who were left behind was murdered."

Then there is related the almost unbelievable barbarity with which the Whites treated the prisoners and workers whom they picked up later.

"Some were found with wrists and ankles burnt through; others had the mouth slit from ear to ear; still others were disembowelled. And often the sex organs were cut off. Men were found whose legs were bound to trees and whose head and upper body were buried in the earth. We also found naked, charred corpses. Even seven Red-Cross Sisters who were captured were not spared; the stumps of their bodies were discovered."

These things explain why the workers, even when their battle was lost, stood together like an iron wall. As the letter continues:

"We have begun the fight and must carry it to the end, for when Noske arrived here we had nothing to laugh about. Without any ado, every worker was stood against the wall."

Following are other facts bearing upon the frightful deeds of the Whites.

The leader of a company of Red Guards, Stephan Brohl, of 168 Hindenburg Street, Muhlheim, Ruhr, declares as follows:

"I went to Streckrade with Company Liebknecht. We lay there at the depot until 1:30 a. m. By that time the company was reduced to three men. Of these three I had sent two to bring reinforcements, as we could no longer hold the position. But they never returned. In the meantime there arrived a Sister of Mercy, Wilhelmina Cullikes of Wehofen. Then a depot official came and announced the approach of an armored train with reinforcements. But when the train halted the "reinforcements" were revealed as Noske "brothers" and cavalry. We were immediately taken prisoners by a young lieutenant. I was severely beaten with the butt of a gun and the Sister was hit across the face. We were then put into a shack in which we were for more than seven hours. During these hours the Sister, and I also, were undressed to nakedness. I was left lying, but the Sister, within my sight, was used sexually by all comers. We did not get our clothes back. My watch and 124 marks, and a medal, and 40 marks belonging to the Sister, as well as every piece of clothing, disappeared.

After the passage of these seven and a half hours we were enabled to escape. The Sister of Mercy found an old torn blouse and a skirt and I a pair of overalls and a jacket. And so we went to the Red Army the Saturday after Easter and put ourselves at its disposition.

Sworn to in the presence of A. Ploeger, Notary Public, Elberfeld, April 9, 1920.

(Signed) STEPHAN BROHL.
168 Hindenburg Street, Muhlheim, Ruhr.

---

The revolutionary workers do not wonder at the fact that the capitalist press, even when specially informed, kept dead silence regarding these "heroic" deeds of the "brave" troops; and it is significant enough that the successor of Gustave Noske, Reichswehr Minister Gessler, at the National Convention, could speak of these beasts in human form as "the safeguards of the people in their evolution toward freedom," without being cried down. By the thousands they fled into the arms of the entente troops, though they were Senegal negroes. Every man knew that no such fate awaited him at their hands as that from which he fled.

The industrial proletariat is beaten. Betrayed by its leaders, from Legien to Levi, the Ruhr proletariat, the bulwark of the proletarian revolution in Germany lies bleeding of a thousand wounds. We must look the fact in the face. **By means of unequalled brutality, the White Terror is triumphant.** Undeniably it is again forced upon the proletariat that there can be no negotiation between revolution and counter-revolution. Hard and thorny is the road which the German working class must go. But let us grit our teeth. The hour is coming when the proletariat will settle its accounts with the enemy. That hour must come!

# The Labor Movement in Argentina

By TOM BARKER

During the last eighteen months the industrial organizations in Argentina have almost trebled their membership. In all directions and all industries the strides made have been phenomenal. The impetus has largely come about as a result of the brutal attack of the Irigoyen administration upon the working class in Buenos Aires in January, 1919, when the streets literally ran with blood.

The **National Socialist Party** is an influential institution with a bad reputation. It stands for national defense and its leaders are middle-class bellwethers. Their daily organ "La Vanguardia," opposes, tooth and nail, the militant campaign of the **Federacion Communista.** During the boycott of the "43" cigarettes by the industrial organizations during 1919, the Socialist daily published the advertisements of the company, thus earning the well-deserved opprobrium of being a scab newspaper. It is the intrigues of this outfit that maintains a very deplorable division in the industrial movement in the Republic. **The International Socialist Party** is the political equivalent of Moscow, and is a divergence from the National Party. Politically it is of minor importance, and it has little marked industrial inclinations. They publish a weekly paper, "La Internacional."

There are two **"Federacion Obrera Regional Argentinas"** (Regional Labor Federations). The one of importance is known as the **"Quinta" and adheres** to the principles established at the Fifth—or Quinto —Congress, in which the organization declared itself for the proletarian revolution based upon the principles enunciated by Michael Bakunin. The dissenters broke away and created what is known today as the **"Decimos,"** or Tenth Congressionales. This outfit is of little importance, and sizes with Sammy Gompers and the A. F. of L. It is, however, as is to be expected, on good terms with the exploiters, who always manage to send some of the "Decimos' " bell-wethers to foreign conventions. The "Decimo" Marotta, who toured Europe and America during 1919, was a person of the rottenest industrial type.

The Quintos, on the other hand, cannot obtain passports from the government, and, in addition, had all their premises closed by the authorities. It is a secret organization, but contains affiliated members numbering over 200,000 organized workers. I am carrying credentials from the Federacion, and represent them in Europe.

Affiliated with the Quintos is the **"Federacion Portuaria,"** numbering 47,000 members. This is the longshore organization in the Republic, and to it belong all the ports excepting two yellow sections in Buenos Aires, known as the "Carboneros" (Coal Workers) and the "Diques y Darsenas" (Docks and Basins). These two organizations have been a constant nuisance to the fighting Federacion. Run by pimps, many of whom are secret service men, they are constantly used to scab on the militants of the branches at California and the South Dock. One of the secretaries of the Diques and Darsenas was found embezzling funds. He disappeared for a few weeks and then he was found to be a police commissary at a small town out in the country.

In October, 1919, in Rosario, there were only 500 members in the Federacion. In this year they had the closed shop with 6,500 members. In Bahia Blanca, Santa Fe, Ensenada and Campana, the Federacion has grown and taken control. In Rosario, in December, the authorities arrested the secretary. They held him a few days, and then one day about 3,000 wharf laborers suddenly appeared before the gaol with knives and revolvers. He was immediately released.

In Villa Constitucion, late last year, there was a strike. Scabs were brought in. The union men attacked them. The police were sent to protect the scabs. The next thing was that the police and the union men united, and what they did to those scabs would shock Mr. Gompers. But, of course, this was in Argentina, where people are not civilized!

The Federacion Portuaria was founded in December last year, and aggregeated, less the two "carnero" (yellow) unions, all the port workers in the Republic. Among the port workers the names of Damonte, Vidal Matte and Armada Lopez will long be remembered for their fearless pioneering of an organization that is to Argentina what the I. W. W. is to the North.

The **"Federacion de Transportes y Rodados"** is another excellent and militant organization. The secretary, F. W. Sanmartin, is a capable industrialist and knows his work. The Federacion contains the chauffeurs, wagon drivers and quite a number of railwaymen. When the latter are brought in, the "Wheeled Transport Federacion" will be powerful, and will strengthen the Quintos Federacion. The "Conductores de Carros" (wagon drivers) is very militant, perfectly organized, which is: quick in action and sparing in words. The bosses hate it, and so do the port authorities and their tools in the yellow union.

Then there are **several textile unions,** including the **Boot and Shoe Workers,** who adhere to the Federacion Communista, and lastly comes the U. T. A., **"Union Trabajadores Agricolas"** (Union of Agricultural Workers), the new and rapidly growing child of the Federacion, which secured 30,000 members in its first three months of existence, and which, as I described in my article in the March "One Big Union Monthly," transformed conditions and wages from the day the enthusiasts of the Federacion Communista launched it. Long may the Federacion Obrera Regional Communista de Argentina continue to live and fight for the proletarian Revolution. I lift my hat to the enthusiasts of the "Quinto" Congress!

of the I. W. W., and at all their conventions they telegraph their greetings to Chicago. They are out to establish the "Pacto de Solidaridad" with all the advanced workers in all countries. Their form of organization works upon the same line as the delegate system of the I. W. W. and the shop steward movement in Great Britain. The executive committees of the organizations in the transport industry meet every night. They take action quickly and drastically. The secret executive meetings are connected with each other, and the well oiled machinery not only stops the ships loading, but also the wagons that carry the cargo to the waterfront, the handlers in the depot yard, to the man who loads the railway cars at the country depot.

One of the most important events in the history of the Argentine labor movement took place last year, when the **M. T. W. (Marine Transport Workers)** was established in Buenos Aires by 250 homeless and hungry marine workers. This proved to be the great connecting link between the Argentine and the outside world, and there is surely no country in the world where the interests of the foreign-going seamen and the shore organizations are more closely allied for action, offensive and defensive.

A flattering thing was said of the M. T. W. branch a little while ago by a member of the local union, "Los Marine Transport Workers se habla poco, se hace mucho." (The Marine Transport Workers say little, they do much.) And that is the spirit of the class-conscious organizations in South America, to act, and to leave talking to the Gomperians of the Decimo Congress. By the way, when the M. T. W. got its foothold in Buenos Aires, Gompers sent a wire to the Argentine authorities to root it out, as it was a branch of the I. W. W.

**The telegram killed the A. F. of L. in South America, and Gompers' Pan-American F. of L. is dead as the dodo there as a result.** Which is as it should be. In closing, I may say that there was not a delegate of the M. T. W. who wasn't in the calabosa less than four times. But gaol deterred them not, and the result is that the ports in Argentina belong to the only sound industrial organization for marine workers, the Marine Transport Workers.

**In the Republic over the Hills (Chile), the I. W. W. increased its membership from 200 in August, 1918, to over 25,000 in January, 1920,** due to the magnificent work of the fearless fighter, Juan O. Chamorro of Valparaiso.

**In Uruguay, the "Federacion Obrera Regional Uruguay" is I. W. W. in sentiment,** and although it is small in numbers, the day is rapidly coming when it will, like its peers in Argentina and Chile, throw down the gauntlet to the ruling class of that republic.

Viva los Portuarios, los Rodados, los Conductores de carros, los Agricolas. Y Viva Los Quintos, y los Trabajadores de Ultramar!

VIVA! VIVA!

# One Big Union in Japan

We have not sent any organizers or agitators to Japan but we have been expecting good news from there anyhow. And here they are, in a letter from one of our friends in that country:

"Dear Friends:—

In our country the socialist and labor movement has become lively since the Russian revolution and a labor movement has developed with the rapid progress of the industries in war time.

The Yu-ai-kwai (Friendly Society which Sen Katayama called a "yellow movement" in his "Labor Movement in Japan") has been reconstructed and is now red. It has established the principle of **One Big Union** in the last August. Baron Shibusawa and other yellow men were excluded from it. In Tokyo Yu-ai-kwai, Shingu-kwai (the printers' union) led by some syndicalists and Nippon-Kotsu-Rodo-Kumaiai (The Tram Workers' Union in Tokyo) are active now.

There have been many labor strikes in the last year; for instance the remarkable strike of all newspaper printers in Tokyo, the sabotage in the Kawasaki shipyards in Kobe, the great strike in Ashio copper mines resulting in riots, and the subtle sabotage of the tram workers in Tokyo in December.

In this year great strikes were made twice in Yawata iron works of the government, the tram car strike in Tokyo, and the workers of the Sonoiki iron works get the right of a Shop Committee first in Japan. These labor movements and numerous articles of magazines stimulate the workers very much.

Owing to the severe suppression of labor movement and the unsparing censorship of books, sacrifices were made by many workers, professors and others. Our workers do not yet understand socialism and unionism very well. So we must propagate them in pamphlets, leaflets and other methods. In Japan there are not many pamphlets.

The panic is coming. The number of the unemployed is increasing. The propaganda of socialism and unionism are indispensable at this time.

I am sending you best wishes to the socialists and members of the One Big Union in America.

Your comrade,

**Koji Nakada."**

## WHAT IS BOLSHEVISM

In our last number we stated that we would in this number give the facts about the taking over of the large industries by the Russian people and the status of the unions. Unfortunately the matter was crowded out. We will return to the question at our first opportunity. Among other articles on the subject we will publish "The Communst Party and Industrial Unionism" by G. Zinoviev.

I. W. W. MEMBERS OF STOCKHOLM, SWEDEN, ON AN OUTING AT VÄRTAN, NEAR STOCKHOLM.

# THE I. W. W. IN SWEDEN

The above photo shows the branch of Marine Transport Workers No. 8, I. W. W. on an outing at Värtan, near Stockholm, Sweden. The members of this branch have later asked the I. W. W. for a recruiting union charter, but the General Executive Board has, after looking into the question thoroughly, decided not to issue industrial union charters in countries where there are already organizations in existence with a program similar to ours, and as the Syndicalist movement of Sweden organizes the workers for about the same purpose as the I. W. W. The I. W. W. prefers to seek federation with that movement to entering into competition with it.

(In our next number we shall have an article on the origin, growth and present status of the Swedish Syndicalist movement, by John Anderson, member of the Executive Committee of that movement).

The Stockholm branch will therefor, probably, have to establish itself as a propaganda league with the object of making the Swedish workers more familiar with the American method of organizing the workers industrially.

The Swedish Syndicalist movement has, due to the low industrial development of the country, devoted itself more to the creation of local samorganizations, or organs of local administration, than industrial unions on a nation wide scale.

The social democratic unions have for years had under consideration a plan of changing from craft unions to industrial unions (industriforbund). If they do, it seems that the proper thing to work for would be a consolidation of the social democratic and the syndicalist unions. The former would supply the organs of production and distribution through their eventual industrial unions, and the syndicalists would supply the organs of local administration. Thus the Swedish working class would be better prepared for a bloodless solution of the social problem than any other country.

Let us hope that it will be so.

---

**AUSTRALIAN WORKERS DEFENCE COMMITTEE**

**28 East Rd, City Rd, London, England**

Have for sale the sensational pamphlet of 52 pages, entitled, "Guilty or Not Guilty," by Henry E. Boote of the Australian Worker.

This pamphlet is a masterly analysis of the evidence against and for the men. The I. W. W. Treason Cases is the most sensational case in the history of the Working Class Movement of Great Britain. Proceeds to the Defence Fund and the Wives and Children. 13 copies, $1.00; 100 copies for $7.50, express paid.

Address Tom Barker, Hon. Secy., A. W. D. Com.,

28 East Rd, City Rd, London, N., England.

# Mexican I. W. W. Permanently Organized

**By Jose Refugio Rodriguez, Secretary-Treasurer**

The Mexican Administration of the I. W. W. which was provisionally organized in September, 1919, with a committee of three in charge, has now been organized on a permanent basis with a General Executive Committee in charge of the six departments of industry, following conferences between representatives of workers' organizations from various parts of the country. The headquarters will be in Mexico City as formerly and the post-office address of the administration will continue to be P. O. Box 985, Mexico City.

The officers are as follows: General Secretary-Treasurer, Jose Refugio Rodriguez; General Executive Committee: 1. Hipolito Flores, in charge of agriculture, land, fisheries and aquatic products; 2. C. F. Tabler, in charge of mining; 3. Vicente Ortega, in charge of transportation and communications; 4. Francisco Cervantez Lopez, in charge of manufacturs and production; 5. Maclo Pacheco, in charge of construction; 6. Linn A. E. Gale, in charge of public service.

Of the officers, Rodriguez is a printer; Flores is a farmer; Tabler is a miner employed in Guanajuato; Ortega is a bridge-builder and has also worked in oil wells; Lopez is a printer and pressman and now has a little job printing office in which, however, he does most of the manual work himself; Pacheco is a carpenter and has worked in various factories; and Gale is the editor of "El Obrero Industrial" (The Industrial Worker) official organ of the Mexican I. W. W. in Spanish and of "Gale's," his own Communist monthly magazine published in English, besides being an extensive contributor to the working class press. All of the men are wage slaves in the fullest sense of the word with the exception, perhaps of Lopez and Gale, who might literally be styled small business men. However, both work as hard as any wage slave and neither makes a profit, each having a constant struggle to make both ends meet. Although the American I. W. W. prohibits membership or offices to those not actually working for wages, the Mexican I. W. W. has believed it wise to stretch the point in these cases as both Lopez and Gale are valuable elements who are strong advocates of Industrial Unionism and have long rendered important service to the movement. Lopez has for some time been National Secretary of the Mexican Socialist Party and was editor of "El Socialista" until it suspended. Gale has been a member of the Executive Committee of the Communist Party since its inception. The two parties have effected a union recently. Both reject political action and are committed to Industrial Unionism so there is no friction between them and the I. W. W. A national I. W. W. convention will be held later in the season.

The Auxiliary Executive Committee of 6 will be named shortly and later committees of 21 workers in every department. Active propaganda by means of job delegates will begin at once among all unions. The workers are very enthusiastic feeling that with the permanent organization of the Mexican Administration, a long step has been taken toward the Industrial Republic in Mexico.

I. W. W. members and unions in the United States and in foreign countries are invited to correspond with the Mexican I. W. W., addressing Jose Refugio Rodriguez, Secretary-Treasurer, P. O. Box 985, Mexico City, D. F., Mexico.

---

# Scandinavian Workers in U. S. A. Endorsing I. W. W.

At the time of the suspension of the Swedish I. W. W. paper "Nya Världen" we announced the prospects of a landslide of Scandinavian workers to the I. W. W. These prospects are now taking shape in quite a satisfactory manner.

**The Scandinavian Socialist Federation** is a body of Scandinavian workers which up to about a year ago paid dues to the socialist party. At the time of the split in that party in the summer of 1919 this Scandinavian Federation cut loose from the political program and refused to join any of the fragments. Some were in favor of joining the socialist party, others preferred the communists, still others the communist labor party, while some wanted to go over to the I. W. W. In spite of this friction the Federation has kept alive by remaining independent. At the present time it is publishing three weekly papers, one in Swedish, one in Danish and one in English ("Truth" in Duluth, Minn.) It has between 60 and 70 locals, we believe, and several thousand members.

Through the Swedish paper "Nya Världen" the I. W. W. came with a proposition to unite all the socialist elements among the Scandinavians in this country on the basis of industrial unionism, dropping politics altogether, and the I. W. W. Scandinavians issued a pamphlet stating their proposition, which was received favorably.

The Eastern conference of the Federation has now, recently voted to have the Federation remain an independent, educational body, but gives an unqualified endorsement of the I. W. W. The conference of the locals of the Central states, held in Minneapolis on July 4-5, adopted a resolution of the same purpose but with the qualification that it expects the I. W. W. to take the initiative to the forming of a real One Big Union or to unite with others who take the initiative.

The General convention of the Federation will be held in September, and we have the best hope that this convention will come to decisions which will place another large body of workers in the ranks of the I. W. W., much as the Finnish, Hungarian, Russian and Roumanian and other federations have done.

# PHILADELPHIA STRIKE IS OVER

The strike on the Philadelphia waterfront has come to a close. The conditions of the settlement are best told in the following report of the committee, which was accepted at a general meeting of the strikers on July 7th. In brief, it is:—

The Employing Stevedores and Shipping Interests on foreign shipping trade agree to pay off all scabs before we return to work.

All strikers to return to work as union men and to receive the same scale as was paid at the time of strike, **this wage to remain in force till September 30th, when new awards are made by the U. S. Shipping Board.**

If the Adjustment Board makes any awards to the workers in other ports, we are to receive same automatically.

(Note: The union does not bind itself to any time agreement nor does it agree to accept an award. The union agreed to return to work if the old scale is paid and all scabs cleared from the docks.)

The grain ceilers are to get $9.00 a day instead of $8.00, which they formerly received. The bosses wanted to know from the grain ceilers if it would be all right for them (the bosses) to hire non-union men in case there were not sufficient union men to handle the work. The grain ceilers informed the bosses that they would refuse to work with scabs and that extra men could always be gotten at the longshoremen's hall.

The checkers reported that they had the assurance that their grievances would be satisfactorily adjusted by the following morning. They also refuse to work with scabs.

After discussion the report was accepted and a motion made that we return to work on Thursday at 1 o'clock in the afternoon. The motion was carried by a great majority by the men in the hall and the overflow crowd in the street.

Everyone was then given a new work button free, so that everybody could get to work with an up-to-date button on his hat.

With the adjourning of the meeting the waterfront took on a new hum, bosses hiring men, rigging going up, all noise and racket.

### THE STRIKE COST TO BOSS AND WORKER

That the strike, which has just come to an end, was one of the most bitterly contested, is proven by the figures given in the Philadelphia Public Ledger of July 3rd. At the time the strike started there were 140 ships in port. Many of these were nearly loaded and some left without completing the loading of cargo, yet a month after the strike began there were 173 ships in port. The tie-up was as complete when the strike was voted off as when the strike started.

The Ledger article follows:

### LONGSHORE STRIKE FIGURES SHOW APPALLING LOSS IN LIFE AND MONEY

Figures on the longshoremen's strike and the cost to the city in casualties and business since the walkout May 26:

#### CASUALTIES

| | |
|---|---|
| Number of persons killed | 5 |
| Number of persons injured | 200 |
| Number of persons arrested | 80 |
| Held for murder | 1 |
| Number of riots | 20 |

#### MATERIAL LOSSES

| | |
|---|---|
| Number of vessels lying in port today awaiting loading or unloading | 175 |
| Daily cost of operation of average vessel while idle | $2,000 |
| Estimated cost to merchants and ship owners, due to demurrage, insurance, loss of business, interest and ship expenses | $50,000,000 |
| Number of working days lost | 34 |
| Number of striking men | 7,800 |
| Estimated daily loss to men in wages | $63,000 |
| Loss last month to the men | $2,142,000 |

#### CAUSES

Demand for closed shop and wage increases.

Hourly rate for "deep-sea" stevedores, of whom there are 3,000, is eighty cents; they want $1.

Hourly rate for "coastwise" stevedores, of whom there are 4,800, is forty cents; they want sixty-five cents, which was the United States Shipping Board rate, reduced to forty cents on relinquishment by the board and increased to forty-five and fifty cents at beginning of strike.

#### OTHER POINTS

Called the worst strike in Philadelphia since the street car strike of 1907.

Among vessels tied up are two loaded with sugar from Cuba.

Of men arrested, the greater number were found to have no permanent address; none had been at boarding house more than two weeks.

---

## ONE DOLLAR PER MONTH AFTER THE FIRST OF AUGUST

The SPECIAL REFERENDUM on the raise of the dues has been taken and the General Ballot Committee finds that the majority of those voting are in favor of the change.

After the first of August the monthly dues will be $1.00 per month, and all who are paid ahead of that date will be required to pay an additional fifty cents ($ .50) on each month so paid ahead.

A special fifty-cent stamp will be pasted over the stamp that was paid ahead. The regular stamp that has been used all along will be issued for the regular payments of dues as orignally fixed, the delegate writing "one dollar" across the face of the stamp, along with the date and his credentials number.

HEADER CREW AT WORK IN THE KANSAS HARVEST FIELDS

# The Modern Agricultural Slave

By E. W. Latchem

## HARVESTING IN KANSAS

The parasites of the State of Kansas are having their yearly spasm over the I. W. W. Ever since 1915 when the first concerted move was made by the I. W. W. to organize the harvest workers, the ruling powers of that state have had a brainstorm of some kind, just about harvest time.

### Conditions in the Harvest Fields

Every year large numbers of men go to the harvest fields in answer to calls in the newspapers asking for men at big wages to help harvest the crops, but who find that they are not only forced to work at less wages than promised, but that nearly everything else in connection with the harvest has been misrepresented.

During harvest the farmer seldom works longer than 10 hours owing to the fact that horses and mules cannot stand the intense heat longer than that. When the harvest is over and threshing starts there is little or no stock used and the hours are lengthened to as long as the slaves will work which sometimes is as much as 14 or 16 hours of pitching headed wheat, which, is the hardest kind of work.

During harvest the sleeping facilities are fairly good as a rule, but when threshing starts the worker is forced to shift for himself, and must find a bed in the barn in a space not used by four legged stock, and if no room is found there, he can hunt up a discarded horse blanket and hunt sleeping quarters in a straw pile or keep company with the coyotes on the prairie.

It was only natural that all self respecting workers should resent being classed as beneath the so-called "lower animals," but they found themselves powerless as individuals; against the well organized financial interests and an overstocked slave market.

### Enters the I. W. W.

In 1915 harvest workers organized in the I. W. W. presented the first wage scale ever set by themselves as follows: A minimum of $3.00 for a 10-hour day together with decent food and sleeping quarters; this to apply all over middle and southern Kansas, and the heavier fields of the northern part of the state to receive a higher wage.

These demands served to cement the harvest workers together with a common aim and they discovered that when they stood solidly together as one, that they had the power to force decent working hours as well as good food and better sleeping quarters.

Seeing the results of the Solidarity of the workers through organization, the harvesters joined the I. W. W. by the hundreds, and this of course was a challenge to those who live by robbing the bread basket of the nation.

No matter how well off a farmer appeared, he was, as a rule completely at the mercy of these exploiters, because of being head over heels in debt

and could be easily handled; but if the harvest workers should be able through their organization to get and hold better working conditions, it opened up the possibility of the farmer getting next to the skin game that was used on him, and the thoughts of the possibility of having to earn a living by honest toil drove these so-called respectable citizens frantic.

**Insurance Capitalists Traffick in I. W. W. Scare**

The papers of the wheat belt were filled with weird and fantastic tales about the I. W. W. burning wheat crops, etc., but very rarely did a bit of truth get into print.

The insurance agents were quick to take advantage of these fantastic stories and use them to get money from the farmer to insure his crop against fire, etc., when in reality they knew that the I. W. W. was not setting out any fires and that the stories printed in the papers were lies published with the object of creating prejudice against workers who were trying to better their working conditions.

In spite of all misrepresentation and abuse the I. W. W. continued to grow by leaps and bounds. This served to make the parasites more frantic. Their lies and abuse had failed of its object. What were they to do?

When the United States entered the war against Germany it suggested another chance which they grasped like a drowning man grasping a straw. They lost no time in making use of the war hysteria in an effort to deal a blow to those who had challenged their right to live by robbing the nations' bread basket. The mental prostitutes of the newspapers were again called into action and this time the I. W. W. was "pro-German" and "out to destroy all the nations' food so as to keep the United States out of the war."

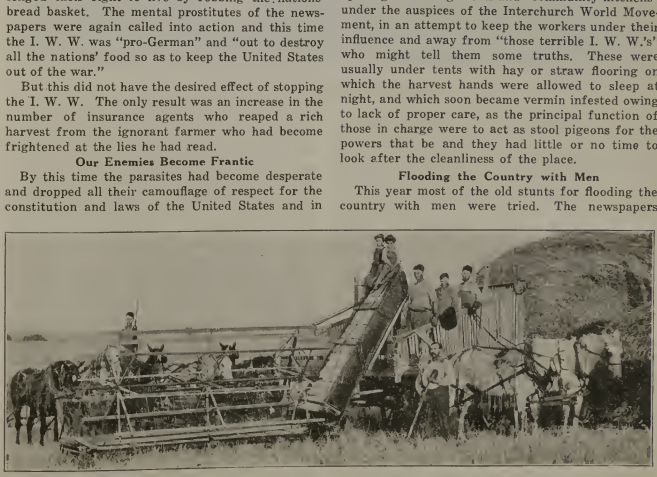
But this did not have the desired effect of stopping the I. W. W. The only result was an increase in the number of insurance agents who reaped a rich harvest from the ignorant farmer who had become frightened at the lies he had read.

**Our Enemies Become Frantic**

By this time the parasites had become desperate and dropped all their camouflage of respect for the constitution and laws of the United States and in the later part of Nov., 1917, about 25 members and delegates were arrested without warrants or due process of law and thrown into jail and held for two years without trial in a desperate attempt to stop the work of organization, but to no avail as the work of organization went along anyhow.

The failure of their efforts to stop the I. W. W. found these parasites and their henchmen on the verge of insanity at the opening of the harvest of 1919.

They again called on the prostitutes of the press, each of whom, this time, tried to outdo the other in committing terrible crimes on paper and blaming the I. W. W., in an attempt to get the ignorant workers and farmers worked up into the same insane state of mind as themselves, and act as their catspaw. Members and delegates were arrested all over the wheat belt, but all were released without trial as they had committed no crime.



While the people's minds were still stultified from reading the ravings of insane newspaper prostitutes, 28 members and delegates who had been in jail for 2 years without trial were rushed into court convicted and sentenced to the Federal Penitentiary for from 3 to 9 years. Their only crime was activity in the organization that had challenged the worst set of brigands that ever lived off the labor of another.

**Enters the Interchurch Movement**

Another feature of the harvest of 1919 was the opening of reading rooms and "community kitchens" under the auspices of the Interchurch World Movement, in an attempt to keep the workers under their influence and away from "those terrible I. W. W.'s" who might tell them some truths. These were usually under tents with hay or straw flooring on which the harvest hands were allowed to sleep at night, and which soon became vermin infested owing to lack of proper care, as the principal function of those in charge were to act as stool pigeons for the powers that be and they had little or no time to look after the cleanliness of the place.

**Flooding the Country with Men**

This year most of the old stunts for flooding the country with men were tried. The newspapers

HEADER CREW BUSY FILLING THE WORLD'S BREAD BASKET

stated that the farmers had set the wages at 70 cents per hour, but on arrival you were told that the farmers could not afford to pay that amount. Also that the farmers did not have anything to do with setting this wage and that it had been set by the bankers and business interests without consulting the farmers and that they were not under any obligation to abide by it.

If any suggestion was made to the effect that the harvest hands should have something to say in regard wages, you were told that you were welcome to all that you could get as an individual. **But there was to be no pooling of interests among harvest hands, and that anybody attempting it would land in jail pretty d—— quick.**

You are deliberately told that the business interests have set the wages and if you attempt any effective resistance, you will feel the "mailed fist" in the hands of our modern descendants of the "cave man" who has been dressed as officers of the law and who are usually ready and anxious to show that they still have the same stupid mentality as their ancestors.

A talk with any county or state official in the harvest belt is sufficient to convince all workers of the necessity of organization among the harvesters, and if his mentality be above that of the "cave man" he will also see the need of a society that is not based on robbery and ruled by those who have inherited the ferocious instincts and stupid mind of the cave man who scientists claim passed away centuries ago.

It is time to abolish the savage remnants of the past which remain in our so-called civilization, and when we do, we can say that we are above the savages, but until then we have nothing to boast of.

HEADER CREW READY TO GO HOME

# Who Does Not Work Neither Shall He Eat

The Hotel, Restaurant and Domestic Workers' Industrial Union is a more important industrial union than most of the membership give it credit for. In fact, it is a very important industrial union, as I will try to show in this brief article, in the hope that it will bring renewed effort on the part of the membership to help us build it up to a point of vantage.

We of the hotels, restaurants, etc., are the ones who will be called upon to take charge of the feeding and housing problem when capitalism has been abolished.

We are the ones you will have to look to for the regulation of your food supply, especially so during the period of reconstruction, and we are the ones who will have to organize the distributive forces of this particular industry and completely change the existing order of service in this line of human activity.

Organization is absolutely necessary and so is education, for without the latter we are helpless and can be driven anywhere, but if we understand, we can do anything, for we all know by this time that might makes right, and it is up to us to organize and educate that might.

From all indications we are going to be successful, perhaps more successful than most of us think, but that should only spur us on to do something greater, for we realize that the sooner we get the organized power, the sooner will capitalism with all of its rotten, festered hypocrisy, fall.

We are living in a time when the workers are looking to the I. W. W. as never before for relief, and it is up to us to make every minute count. Agitate. Educate. Organize. Morning, noon and night, and even while we sleep, let us dream I. W. W., for it alone is the remedy for all humanity. Others come and go, some stay longer than others, humbugging and fooling the workers, but now we have about arrived at a stage of the game where the workers refuse to be longer humbugged and are demanding the real thing, and the only real thing for them is the I. W. W.

Now as to the hotels and restaurants, etc., again. Today a man can start a small place or perhaps a large one, and exploit his slaves to the limit of his

ability. The dishwasher, the waiter, the cook and so on, all down the line, they work long hours and receive a bare existence wage, simply because of their disorganization. Some are organized in craft unions, some are split over religious issues, some over politics, and all are split over something that does not concern the workers in any manner whatever.

But no matter what they are split over, the fact of the matter is that they have only ONE recourse in the long run, and that is Industrial Unionism. They must unite as ONE. They must organize and educate their membership so that they will be able to not only shorten their hours and raise their wages, but for the final and most necessary reason, of taking over and operating the hotels, restaurants, etc., of the workers, by the workers and for the workers. For under the new order that soon will be established we will have to know how to manage our own affairs, not only for ourselves, but also for all humanity, because we will have to feed and house all the people.

How are we going to do this? Simple as can be. We are the ones who do the work, all of it, but we let the boss do the dictating. Under the new order we will not alone do the work but we WILL DO THE DICTATING. We will find out the number of workers engaged in this industry, we will wipe out all unnecessary small places, and have the ONE LARGE PLACE, or whatever is necessary, and then the subdivisions near the places where the workers work. There will be no profits; there will be service. For our wages we will receive according to the time we have put in in necessary work for society. The time cost of production. By eliminating all the small, unnecessary places and establishing the large ones where we find it necessary, we release a great majority of workers engaged in this industry and we place them at work in the places necessary, thereby reducing the hours of labor to the very minimum, and yet the workers will get more, by at the very least two-thirds, than what they receive today under capitalism. It can be best illustrated thusly:

We recognize first that all workers engaged in useful occupation are necessary. One is no more necessary than the other. Now, then, that being the case, we say that they should be paid according to the time they put in in work, and not according to what the boss can get them for so he can make a profit. Then, if you work three hours a day under the new order you will receive more of the social products of labor than you would if you worked twelve hours a day for a master as you do today.

We will take over all hotels, restaurants, clubs, boarding houses, etc. That will be the first step. Then, by committees as a whole, we will get together, and whatever we decide will be the thing done, regulated as we go along to suit the best interests of all society. **We will establish as one of the first edicts of the Hotel and Restaurant Workers that if a man do no work neither shall he eat.** We will e to it that nobody gets food or lodging unless he proves that he has earned it by useful labor, or can show cause for exception.

So, Fellow Workers, in closing, let me say this: That we are numbered today in this country in the millions; we are a factor to be reckoned with; we are determined that we are going to rule; we are out to do all in our power to make the other slave wake up to his true position in society; we are out to win, and we ask all workers to think over what his course will be. Will it be with the workers in our common fight for emancipation, or will you stand with the masters and fight for them, so that they can prolong the agony of wage slavery, where all workers are compelled to be slaves to a parasite who does no useful work and who is no more necessary to society than the flea on the back of a dog.

Fellow Workers, I appeal to you in the name of the workers who want to live as human beings should live. I appeal to you in the name of suffering humanity, I appeal to you, to all that is good in you, to your sense of duty to your class, and to your sense of JUSTICE. ORGANIZE! ORGANIZE! ORGANIZE!

C. DEVLIN, Sec'y-Treas.
Hotel, Restaurant and Domestic Workers I. U. 1100.

# Some Timely Remarks

The arch traitors against all humankind have been the kings, the czars and the profiteers, with their long train of soothsayers and politicians.

* * *

All wealth is produced by human effort, and those who take no part in this production should have no part in the affairs of state.

* * *

An itemized account of the expense of the visit of the Belgian "royal" family to America indicates that Americans vastly overcontributed to the Belgian relief fund.

* * *

The people of 1920 are not repeating, after some bemedaled commander, "My country, right or wrong." They are saying "War must cease; and **in order that war may cease, profits must cease."**

* * *

So many orators and would-be orators are beating their breasts and shouting "Americanism" and "Democracy" that they are in danger of cheapening those terms. Americanism and democracy are both susceptible to the progress of evolution.

* * *

The people of the United States have paid millions of dollars in taxation to keep state and national legislators engaged in drafting laws, until it now takes hundreds of heavy volumes to contain the copies of these laws. From this great mass it would probably be difficult to select a score that are of undoubted benefit to the rank and file, the people who make up 90 per cent of the population.

J. C. C.

# THE SPENDTHRIFT WORKERS

## By Mary E. Marcy

AMID all the ignorance, cupidity and shaos surrounding the capitalist system today, the characteristic that stands out most strongly is the growing hatred of capitalists for the working class. You hear it on all sides.

When an employer of labor, for example, sees a workingman who has slaved away in some machine shop or mill or factory for twenty years, riding around in a Ford automobile of his own, he just naturally foams at the mouth and shrieks that the only way to save society from utter barbarism is to lower wages right away.

When a magazine writer, who has done nothing in a long life of uselessness but dress up the ideas of the owners of industry in forms to fool the workers, sees a workingman buying a ticket for a vacation and riding in a PULLMAN, he goes home and breaks out in a long article showing why the extravagances of the laboring classes is raising prices and driving the old ship of state straight for the rocks.

He exclaims with horror that the workmen today are demanding good and "expensive" clothing instead of shoddy, and to prove his statement he tells us how the second-hand clothing dealer has gone out of business and how a bang-up haberdasher is doing a land-office business at the old stand.

Working girls are known, during these unprecedented times, to go about wearing silk stockings, occasionally, and the clergy are shocked and grieved to learn that plumbers and steam fitters and electricians are to be seen now and then wearing SILK shirts.

And during all these outrages the employers of labor have been forced to sit back helpless and grind their teeth and endure these sights and plot to bring back the good old days when the workers who produced everything had to be satisfied if they had any sort of clothes to their backs and to eat the tougher portions of beef, when they had any.

The workers have had the employers in a corner owing to the great demand for American goods the past year and the shortage of labor, but the old politicians and the capitalist class are preparing to give us a great jolt in the near future.

Now that the bank deposits amount to about twenty-two times the currency in this country, the banks are up against the proposition of obeying the banking laws and holding the legal reserve in bank to (partially) protect their depositors, or of starting the printing presses going again and loading us all up with more paper notes and thereby lifting prices another thirty or forty per cent.

And so the banks are going to curtail credit. They are going to refuse credit to "legitimate business enterprises." We know it because they have all said so. And, knowing the banking fraternity as we do, we may rest assured that each and every banker is going to preserve a noble exterior and tell the world he yields to social needs and social welfare, while he will secretly extend credit to favored clients—for special considerations. And so the banking situation is going to be acute before long.

There simply will not be enough credit to go around, so that some industries are going to find their loans called and the capitalists in these fields will probably have to dispose of their stocks at a reduction to meet the bank calls; some will be put out of business.

And while the press and the politicians, and, above all, the capitalists, are crying for "increased production" out of one side of their mouths, they will be forced to refuse credit where it is necessary and will thus cause DECREASED production in certain industries.

Now some capitalists are up against this curtailment of credit. The banks have called their loans; they know they are up against a stiff condition; the banks require additional security for any loans. But the employers of labor, the exploiters of labor, are so obsessed with their growing FEAR and hatred of the workers that in spite of their own economic dan-

ger they often welcome a situation that will throw labor out of employment. They imagine unemployment will take out the new backbone the workers have developed during the past two years and make them servile wage slaves once more.

The capitalists regard it as perfectly right, justifiable and natural for the financiers, bankers or other groups of capitalists to prey upon any social group, to hold them up when they can do so, to squander, and loot and lie and steal. They admire and envy the capitalist who toils not and who is known as a conspicuous waster, but their bile rises when they read about a teamster eating porterhouse steak or a mere producer owning his Ford, or wearing a silk shirt.

A silk shirt on a workingman unites the entire capitalist and parasitical classes against the productive workers in society as nothing else on earth can. It draws attention so patently to the difference between the new and the old conditions, and it strikes the fear of the giant home into the hearts of those who prey upon society.

The workers in America today are in no mood for curbings, and the capitalists are in danger of losing all the power they have misused so long. Consequently, they are organizing to put up the fight of their very lives against the working class.

We shall see the waging of a giant battle during the coming months, in which it is not unlikely that the old craft unions may be torn and rent asunder never to be united again. For the pure and simple craft union will prove utterly unable to stand up before the onslaughts of united capitalism, and great numbers of men in the old unions will refuse to suffer disaster for the sake of an outgrown and dying institution.

These months ought to be the great harvest days for the I. W. W. It would be an extremely wise man who would be able to foresee what the next year will bring forth. But of one thing, I think, we may feel rather certain. It will bring us the greatest opportunity for the organization work of real class unionism that we have ever seen.

## SOME FAMOUS DRIVES

**St. Patrick drove the snakes out of Ireland, but overlooked the capitalist class.**

**It remains for the I. W. W. to drive out the capitalist class, not only from Ireland but from other countries as well.**

**Part of that drive falls on the lot of the One Big Union Monthly.**

**For that reason we have started a drive to increase our circulation from 15,000 to 25,000 by Christmas, as a starter.**

**Who wants to give us a hand?**

**Better order a bundle today.**

If an I. W. W. man is supplied with the right kind of literature nothing can stand up against him. They will all have to surrender, from a scissorbilly to a grizzly bear.

Here is a list that will carry an I. W. W. man through against all resistance.

**THE I. W. W.—A STATEMENT OF ITS PRINCIPLES, OBJECTS AND METHODS.**

This is a big 4 page leaflet just out. It was printed in the May issue of The One Big Union Monthly and is the first leaflet issued by The Educational Committee provided for by the last convention. It is expensive but we could not make it any cheaper. $1.50 per hundred and $12 per thousand. But that should make no difference. Every branch should lay in a big supply. This leaflet talks for you to strangers. It is a wonder worker. Every I. W. W. man should carry some in his pocket all the time. If you can do nothing else in your locality, you can buy some of these leaflets and distribute them. You will soon notice a change. Send for some.

Next on the list is:

**THE I. W. W. IN THEORY AND PRACTICE,** by Justus Ebert, the first book to be issued by the said sommittee. See advertisements in other places.

Next we recommend:

**THE CENTRALIA CONSPIRACY** by Ralph Chaplin. See advertisement elsewhere.

And next:

**THE I. W. W. WEEKLY PAPERS** and

**THE ONE BIG UNION MONTHLY.**

If you are supplied with this literature you can go anywhere for then you are truly,

LOADED FOR BEAR.

# The CENTRALIA CONSPIRACY

BY RALPH CHAPLIN
PRICE 50 CENTS

## WHAT HAPPENED IN CENTRALIA?

The newspapers said that unoffending paraders were killed without provocation or excuse by ambushed I. W. W.'s.

**DO YOU BELIEVE IT?**

Papers telling the truth about the tragedy were shut down or denied the use of the mails. Only the Lumber Trust version was permitted to reach the public.

**DO YOU WANT TO HEAR THE OTHER SIDE?**

Every effort was made to spread broadcast the lie and suppress the truth.

**ARE YOU WILLING TO HEAR THE TRUTH—EVEN IF IT HURTS?**

**The Centralia Conspiracy**, by Ralph Chaplin. 80 pages; 44 half-tones of actual scenes. Price 50 cents. Get a copy at any progressive bookstore, or order by mail from the following places: The Liberator, 138 W. 13th St., New York, N. Y.; Geo. Williams, Box 1873, Seattle, Wash.; Thos. Whitehead, 1001 West Madison St., Chicago, Ill.

# The I·W·W· IN THEORY & PRACTICE

## JUSTUS EBERT

If you would know the I. W. W. in substance, in spirit, in history, read this important book, just off the press and now ready for delivery. It is a running story of the I. W. W., brief and newsy, but comprehensive and thorough. It begins with its back ground, the environment of its origins—its material origins—industrial, economic, the great industrial combinations, the financial powers; follows with a resume of the developments in this country reflective of the native class struggle, the growth of the antecedent labor organizations up to the Knights of Labor and the A. F. of L. as it is today; then, the actual history of the I. W. W. itself, its many strikes and struggles; its policy as to violence and sabotage; the principles and the structure of the organization; finally current questions, up-to-the-moment, and the attitude and relation of the I. W. W. in connection therewith.

Yes, if you would know the substance and the spirit of the I. W. W., get this meaty little booklet—128 pages of reading matter. Now ready for delivery. 50 cents per copy. Postage prepaid; in lots of 10 or more, 30 cents, prepaid. Address: Thos. Whitehead, 1001 West Madison Street, Chicago, Ill.

### FIVE-CENT PAMPHLETS

Industrial Communism—The I. W. W.—Varney.
A clear and concise explanation of Bolshevism and I. W. W.'ism; 24 page, large type and attractive cartoon on front page. Price, 5 cents a copy; in lots of 50, 4 cents; 100, 3 cents, prepaid; 500 copies or more at 2 cents, express collect.

### LEAFLETS IN STOCK OR IN PREPARATION

Open Letter to American Workmen.....Hardy
Eight page; a convincing argument for Industrial Unionism. Price, 30 cents a hundred, or $1.75 a thousand.

Justice to the Negro .....Jones
A clear picture of the industrial and social status of the Negro; four page, with cartoon on front page; price, 25 cents a hundred; $1.50 a thousand.

Political Parties .....St. John
Four page. A clear exposition of the fallacy of political action as a mass of working class emancipation. Price, 25 cents a hundred; $1.50 a thousand.

An Address to Colored Workingmen and Women.
A clear and forceful statement of working conditions of the Colored workers, as well as a plain and convincing statement of the attitude of the I. W. W. toward all workers. Price, 25 cents a hundred, or $1.50 per thousand.

The I. W. W.—A statement of its principles, objects and methods. Price $1.50 a hundred. $12.00 a thousand.

Note—All prices of pamphlets in 100 lots and leaflets in 1,000 lots are subject to express charges collect.

### SONGS WITH MUSIC

Price: 15 cents a copy; six for 75 cents; ten for $1.00, prepaid; or $7.50 a hundred, express collect.

Workers of the World, Awaken!.....Joe Hill
The Rebel Girl .....Joe Hill
Don't Take My Papa Away from Me.....Joe Hill
The Advancing Proletaire.....Douglas and Von Liebich
Song of Separation.....Chaplin and Liebich

# Preamble of the Industrial Workers of the World

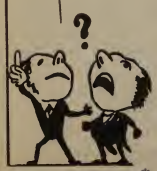
The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interests of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."



It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.

By organizing industrially we are forming the structure of the new society within the shell of the old.

THE MONSTER WHICH CAUSES MOST OF OUR SUFFERINGS

Vol. II, No. 9 SEPTEMBER, 1920 Whole Number 19

# THE ONE BIG UNION MONTHLY

Published Monthly by the Genenral Executive Board of the Industrial Workers of the World
1001 West Madison Street, Chicago, Illinois.
JOHN SANDGREN, Editor

Subscription price, $2.50 per year; 25 cents per copy; bundle orders, 15 cents per copy, non-returnable; express charges "collect".

Address subscriptions, business communications and remittances to **The One Big Union Monthly**, 1001 West Madison Street, Chicago, Ill. Other communications should be addressed to The Editor.

# ANNOUNCEMENT

This number of The One Big Union Monthly retails at

**25 CENTS PER COPY**

We will take our readers into our confidence and tell you why.

The cost of production per copy has been on the increase from the very start. The printshop bill for March-July 1919 varied between 3½ and 4 cents per copy. In May 1920 the printshop bill was 7.47 cents per copy. It has been going up ever since, getting closer to 10 cents per copy. Please remember that this bill is the printshop bill alone. To this must be added the cost of the illustrations, which is quite considerable, a large part of the postage, duplication of copies lost in the mail (a large item), uncollectable accounts, sample copies, office expenses and wages of editor and business manager, etc.

We have recently been running at some loss, but have delayed the raising of the price in the hope that the circulation would possibly rise to a point where the magazine would still be on a paying basis. The circulation has been going up all the time, being at present round 15,000, and thus warranting such hopes. And it would have been a great advantage to be able to keep it at a low price, but all such aspirations were crushed by the manager of the printshop who showed us that he was paying about 23 cents a pound for the paper, which is quite a jump from previous 14 cents. A raise of the price to 15 cents per copy wholesale will barely put us on the safe side for the time being.

The last I. W. W. convention recommended an enlargement of the magazine by about one-third and the adding of a colored cover as well as the raising of the price to 25 cents. The reason this recommendation has not yet been carried out is solely the fact that we have so far been unable to secure the proper printpaper for the purpose.

As soon as we succeed in getting that paper, and we hope it will be soon, we shall come out in larger size and with a substantial cover in colors.

In the meantime the new prices in effect with the September issue will be:

25 cents per copy retail.

15 cents per copy wholesale, express charges collect.

$2.50 per year; $1.25 for 6 months.

Old subscriptions will continue to run at the old price. The new price takes effect at renewal. Those subscribers who are not getting their magazine regularly through the mail could secure prompter delivery by having it sent by first class mail. This will cost them 10 cents extra per copy, or $1.20 per year.

Our bundle order agents everywhere are urgently requested to try to help us over this change in price without a loss in circulation. The magazine is cheap anyhow, considering that it is all text and illustrations and no advertisements.

All together for an increase of our circulation to at least 25,000 by Christmas. If we all help, it can be done.

THE EDITOR.

# Philadelphia Marine Transport Workers Charter Revoked

The following statement issued by the General Executive Board and the General Secretary-Treasurer speaks for itself.

## STATEMENT ON PHILADELPHIA MARINE TRANSPORT WORKERS

On August 11, 1920 the General Executive Board of the Industrial Workers of the World learned, for the first time of the treasonable action of the Philadelphia branch M. T. W. No. 8. This situation is the result of circumstances over which the General Executive Board had no control.

This branch was immediately expelled from membership and their charter revoked.

We consider that these misguided longshoremen have been guilty of a crime against the working class. They have betrayed the international labor movement by loading shrapnel shells consigned to the infamous Allied catspaw, Wrangel, for the purpose of drowning the Russian revolution in a sea of blood.

Such action is diametrically opposed to every principle of working class honor that the I. W. W. has stood for, fought for and bled for from its inception.

The I. W. W. views the accomplishments of the Soviet government of Russia with breathless interest and intense admiration.

Workers who load munitions of war at the behest of any capitalist government to help defeat any working class revolution are guilty of high treason to their class.

The I. W. W. has stood for unqualified industrial solidarity to defeat such ignoble ends and it stands for it now. The organization would rather face death and dismemberment than stand the disgrace of having its members render any assistance in keeping its workers enslaved to the Moloch of capitalism.

The I. W. W. has always expelled members who were not true to the basic principles of the world revolution. We would expel members for aiding in the overthrow of a working class government in Poland as readily as for aiding in the overthrow of the working class government of Russia. We look forward joyfully to the day when the proletariat of Poland will cast into oblivion the imperialistic fakirs who now dominate the nation.

The I. W. W. has proved by deeds that it is willing and eager at all costs to fight and sacrifice for the cause of international solidarity. It still keeps the faith.

The organization was designed to make it impossible for one group of workers to be used against another group in the great struggle of the classes. We do not want and will not tolerate in our membership men who can stoop so low as to aid and abet any capitalist government or any other national or international section of the common enemy in keeping the working class in slavery.

We look with horror and disgust upon the action of the Philadelphia longshoremen in loading high explosives on ships for the purpose of butchering our brave fellow workers in Russia who have established the first working class government in the world.

The I. W. W. has stood the brunt of the fury of master class hatred in America. More of our members have been imprisoned, murdered and brutalized than all other revolutionary organizations combined. The reason is that we stand and have always stood for the use of militant direct action to overthrow the dictatorship of the capitalist class.

The I. W. W. wishes to keep its fair name untarnished in the eyes of the world's proletariat.

We call upon the membership of our organization to use their utmost power to assist the Soviet government of Russia in fighting the world's battle against capitalism.

We pledge ourselves and our organization to help overthrow capitalism and everything that stands for capitalism.

We appeal to the working class in general and the United Communist Party in particular to take a stand in industry and help build up a revolutionary organization that will make forever impossible repetition of the dastardly action of the Philadelphia longshoremen.

The I. W. W. holds out the clean hand of brotherhood to the revolutionary workers of the world.

Signed by **General Executive Board of the I. W. W.**
**Thomas Whitehead,**
Gen. Sec'y-Treas.
**August Walquist**
**Patrick McClellan**
**P. F. Mashlykin**
**George Speed,**
Chairman, G. E. B.

That this action of the General Executive Board meets with the approval of those I. W. W. members who are nearest to and best in touch with the situation is proven by the following resolution from New York, which has arrived after the revoking of the charter.

Word reached members of the I. W. W. of New York on Aug. 8th, 1920, that Longshoremen, members of the I. W. W. at Philadelphia, Pa., were loading amunition that would be sent to General Wrangle. The Sec'y Treas. of the Marine Transport Workers' Industrial Union District No. 8 and two members of the newly elected General Executive Board went to Phila. Pa. to investigate. The Longshoremen refused to quit loading the ship. Whereon a general membership meeting of the New York membership was called to take action. The following resolutions were adopted.

1. At a special general membership meeting on August 10th, 1920, of the New York I. W. W. con-

sisting of all the Industrial Unions the following resolution was unanimously adopted.

2. Whereas it has been brought to our attention that I. W. W. members of Philadelphia District No. 8 Marine Transport Workers have knowingly and wilfully loaded ammunitions of War bound for Poland, to be used against the Workers of Russia in their fight for freedom from the world Imperialist, and

Whereas they have violated the spirit of working class solidarity and their right to continue as an integral part of the Industrial Workers of the World,

Be it therefore resolved that we, the I. W. W. members of New York refuse to have any relations with the Philadelphia District No. 8 M. T. W. and demand from the General Executive Board that they revoke the Charter of the above mentioned Branch instantly, and that the expulsion of the entire Branch be made Public in all of our official Organs.

# The Lesson of Philadelphia

That a union of the I. W. W. should be so derelict in international solidarity as to actually load munitions with which to kill the Russian workers now fighting our battle against the combined capitalist powers over in Europe seems almost incredible and requires an explanation.

The I. W. W. Marine Transport Workers had job control in Philadelphia, and that means that in order to get a job on the water front of that city you had to have an I. W. W. card. By holding the club of job control over these workers we made "adherents" and "converts" by the thousands, much as the Swedes made "converts to christianity" of the Finlanders in the 11th and 12th centuries. They went over there with big armies and conquered the Finns in battle and then drove them down into the rivers by the thousands to baptize them in a bunch.

Before his clothes were dry the outraged Finnlander again prostrated himself before his "idols" and prayed for the death of the invader.

The Philadelphia Marine Transport Workers, at least part of them, have been taken into the I. W. W. by the wholesale without previous education in our principles. They lined up because they liked the economic advantages gained through the I. W. W. method of fighting and not because they had absorbed our philosophy.

Such a state of affairs quickly revenges itself, as we have seen in this case. The I. W. W. had bit off more than it could chew and we had to spit it out.

The lesson to be drawn from this incident is that EDUCATION IS THE PRIME FACTOR in our work. If we build up a membership without education it will grow into a tail which will wag the I. W. W. dog. When we are again confronted with a situation of mass affiliation, the first thing to do is to put our literature into the hands of every new member by any means in our power. THEY MUST NOT BE ALLOWED TO BE IGNORANT.

No doubt the numerous I. W. W. element on Philadelphia's wharfs will again get in control of the situation, but when they do, it is to be hoped they will be wise from this experience and make every member take our papers and magazines and read our books, each one in the language he best understands. We have plenty of literature of the right kind.

# Criminal Syndicalism

Criminal Syndicalism continues to be the club with which the master class tries to keep the slaves subjugated in California.

There are now twelve of our fellow workers in San Quentin Penitentiary under this vicious law. MONEY IS BADLY NEEDED FOR THE APPEALS OF THESE CASES AS WELL AS FOR THE OTHERS THAT ARE STILL PENDING IN THE SUPERIOR COURTS.

Send all remittances to:

W. I. FRUIT,
Sec. Cal. District Defense Committee,
219 Russ Bldg., San Francisco, Cal.

# What is Bolshevism?

As announced, this is a bolshevik number.

We have made it our object to answer, as fully as our limited space permits, the question "What is bolshevism".

To that end we printed in our July issue several articles which had appeared in "Soviet Russia," covering agriculture and the co-operative movement in the Soviet Republic. As promised, we are in this number printing some chapters from a book recommended to us by the same "Soviet Russia", covering nationalization of industry, the position of the unions and the status of the workers.

In addition we are publishing the reports of two of the largest Industrial Unions in Soviet Russia, the Food Stuff Workers Union and the Civil Servant' Shop assistants' and Clerks' Unions. By means of these two reports, which are fresh here from Russia, we have furnished a first hand insight into the life of the union movement of Russia which will help our readers to grasp Russian present day conditions.

Finally we are in this issue publishing two documents signed by G. Zinoviev, the president of the Third international. The one is an appeal to the I. W. W. calling upon us to accept the program of the Third International and to seek unity with the members of that international in this country. The second one is called "The Communist Party and the Industrial Unions" and contains the communist view of the relations between the political party and the unions.

All these documents speak for themselves and we admonish our readers to study them carefully in order to be able to form an opinion independently.

We only wish to point out from "The Communist Party and the Industrial Unions" that Zinoviev recognizes the necessity of an industrial international as separate from the political international. The invitation to join such an industrial international, issued recently by the Russian Industrial Unions and reprinted in the February and April issue of this magazine is in line with this suggestion. The I. W. W. has not yet been able to directly connect with the Russian Unions, but we are sure that not a voice will be raised against affiliating with such an industrial international. On the other hand we think that the number of I. W. W. men that would affiliate directly with the political, The Third International, are easily counted. We always have been and are now a purely industrial organization and expect to solve the whole social problem on an industrial union basis. We want to build industrial unions as organs of production and distribution and central councils emanating from the industrial unions as organs of local and regional administration, subordinating both these kinds of organs to the I. W. W. general administration. That is how we propose to solve the social problem. We cannot introduce a political party, communist or otherwise, into this scheme, without surrendering our fundamental principles and abolishing our own independence. For us to adopt the plan of the Third International would mean that we step down from our assumed position of world leadership and acknowledge as our masters and leaders the membership of a political party recruited from all layers of society. The I. W. W. membership, having once tasted spiritual independence and feeling that they now are the masters of their own destiny, will never seriously consider any such proposition.

They are out to establish the rule of the workers, they have been at it now for fifteen years and grown into a world movement on the strength of it. They are not likely to adopt a program which saddles a political party on their back as their taskmasters.

As for endorsing armed insurrection as a means of attaining our ends, no body of men in possession of their senses would advocate such a policy. To do so would undoubtedly immediately result in our being wiped off the earth here in America and driven "under ground", compelling us to cease being a bona fide industrial movement and becoming a hunted set of underground political conspirators. But even if

we were secure for such a fate, an endorsement of such a program would be outside our sphere. We are in the business of creating new organs of productions, distribution and administration. Our fear is not that capitalism will not be overthrown. Our fear is that we shall not be able to get the new organs ready in time for the collapse.

In our opinion capitalist government will collapse of itself when capitalism collapses. Capitalism will collapse politically soon after it has collapsed economically, as a sort of reflex. Capitalist government exists on revenue, principally taxes. When capitalism collapses industrially, as it is doing throughout the world, the capitalist governments will collapse from insufficient revenue if for no other reason. Italy today is a case in point. Being too weak numerically to speed on this collapse by artificial means, even were it desirable, we have no choice but to go ahead and teach industrial organization and create what new organs we can. By doing this we are both undermining and overthrowing capitalism to the limit of our ability and at the same time providing for the future.

Armed insurrections may come without our assistance. By the way the capitalist class is now treating the people they are driving the masses to despair. The masses will stand cold steel just so deep. When they can go no longer they will revolt, first sporadically and on a small scale, as the coal miners and the outlaw railroad strikers, then in greater masses. Out of this clash of interests a head-on collision is apt to result in due time, when the discontent of the masses has gathered a sufficient momentum. In rejecting the program of armed insurrection we, consequently, do not by any means imagine that we will be able to avert the calamity of such a collision. But we do not wish to bring about that calamity and try to cause a premature collision by artificial stimulation. If it has to come, let it come about naturally as a result of insufferable conditions. We the I. W. W. will be on the spot when that time comes, trying to bring order out of chaos.

So much for the general principles involved in the above manifestoes.

But the Third International is one thing and the Russian Revolution is another.

The Third International is composed of various political and some industrial organizations of many different countries. The Russian Revolution is a living fact in which we rejoice as a great movement of the people for freedom. To the Russian people in revolution we extend the hand of fellowship and pledge them all the assistance in our power. But to the Third International we must say, that our place is with the Industrial International that has been proposed and that we will have to work out the solution of the social program along the lines proposed by ourselves and outlined above.

With this understanding we grasp the outstretched hand of the Third International, through its president, and pledge our solidaric co-operation in the struggle for Industrial Communism.

---

We wish to call the readers' special attention to the series of articles by HOWARD SCOTT commencing in this issue. As you will no doubt immediately notice this writer projects his mind still further than we are used to doing and penetrates deeper into the question of production and distribution than we usually do. By paying close attention to these articles we shall be able to learn many important new points and avoid many errors in our attempt to build a new society. By adding these points to our store of knowledge we shall be able to go about the task of economic reconstruction with considerably increased efficiency. Do not neglect to call people's attention to these articles. They will help to get new readers.

---

The new General Executive Board is now in session, and we shall probably have some interesting reports from their meetings in the next issue of The One Big Union Monthly.

# The World Situation

The central fact of present day history is of course the steady and rapid collapse of world capitalism, which seems to be irresistibly drawn to its destruction. The cornerstones of capitalism have turned into mill stones round its neck and the invisible leaden weights of its inherent mathematical absurdities are bearing it down. This spectacle is so imposing and gigantic that one can hardly have eyes for some of the details.

Nevertheless we cannot but be impressed by the drama now being enacted round Warsaw, the capital of Poland.

If it were only a common war of conquest, an ordinary conflict between two peoples, of which history has recorded so many, the average American would pay little attention to the happenings on Russo-Polish battlefields. But the fact of the matter is that Russo-Polish is a misnomer. It is not a battle for supremacy between two peoples.

There is no use concealing the fact that it is a Communist-Capitalist battlefield. It is the beginning of the last battle. It is a battle between the red flag of socialism or communism, whichever you want to call it, and the black flag of piratical capitalism. The peoples of the earth have lined up behind the combatants. Back of the Bolsheviks stand the socialist and communist workers of the whole world, their heart beating with sacred expectation. Back of the Polish troops stand the capitalists and their hangers-on of every country. The two nations, the capitalist class and the working class have come to a final collision. On the outcome of this battle depends the fate of the working class for a long time time to come, whether it shall be mastery of the world or subjection to capitalist reaction and white terror.

The English Workers have been quick to grasp it. They have taken a stand which is forcing the English Government to voluble even if insincere declarations of neutrality. The French Workers are straining every nerve to make impossible the sending of troops and ammunition against the Bolsheviks, although with less success. An international convention of marine transport workers in session a few days ago in Belgium adopted a resolution to make war impossible by a refusal to carry war implements and soldiers. The I. W. W. of America has shown its hand by expelling the unsolidaric longshoremen of Philadelphia who were loading ammunition for Wrangle, with which to fall the Russian workers in the back. Only the American Federation of Labor seems to have thrown its lot with the backers of the Polish armies.

A recent newspaper dispatch announces that A. F. of L. officials are seriously considering withdrawal from the Trade Union International they belong to, as the European labor organizations are becoming too radical to suit these officials. At its last convention, in Montreal, they voted down the proposition to endorse the present regime in Russia. After that a withdrawal is naturally in order, as the European workers are nearly all backing the Russian workers.

On the outcome of the present battle in Poland depends the course of Europe and the world for the near future. If the bolshevik armies are victorious, Europe and the world goes red; if the bolsheviks are defeated the white terror will hold its sway in many countries and reaction will triumph.

We here in America are so distant from the field of action that we can do little to bring victory to the bolshevik arms and defeat to the legions of capitalism. But we can shout our encouragement and help indirectly by digging in and doubling or trebling our efforts for industrial unionism. For that is our way to weaken and fight capitalism.

By paralizing the arm of American capitalism raised for a dastardly blow against labor the world over, we are doing the best we can to bring victory to the bolshevik arms.

Ergo:

Make another dash through the enemies' lines with that bundle of I. W. W. literature.

Buttonhole two or three more fellows a day in the shop and tell them about our mission. Go after the workers with books and papers in one hand and a membership card in the other. Get on the soapbox if and where you can and talk to groups of workers. Speak, write and agitate without rest. Every worker won over to our ideas means increased chances for the red cause on the battlefront in Poland and everywhere else.

# FOUR HEROES

By Robin Dunbar

Radicals have their heroes just like scissor-bills have theirs.
You hear of several mushroom millionaires
Every day; their names adorn the front page
Of your favorite newspaper quite often.
Let them wear their pants a little longer
Or their skirts a little shorter,
The news is put on the ass. press wires at once.

Well I'm not going to bother about such silly folk;
I'm going to sing of real men, four of them.
None of them was a hero to his valet
For the simple reason he never had one.

Well the hero of my youth was AUGUST SPIES,
I'd like to have met him; he died for a cause,
The cause of freedom and died game.
He helpt me to form good tastes,
For real men and women, instead of wax figures.

JOE HILL came next; I liked the way he died
With a song on his lips
And a message of cheer to his comrades.
He died like a man; shot by coward bullets.

FRANK LITTLE soon followed him; a true martyr.
Little was a consistent pacifist;
Rather than acclaim slaughter god,
He went a willing victim to the trestle.
Never was a bridge more honored
Than when it sustained his bruised body
Suspended on a ruffian rope.

Last comes WESLEY EVEREST, who died fighting;
He is the most dramatic figure of them all.
I like the way he returned shot for shot,
Until his gun clogged from heat.
He had been taught to murder for pelf,
And he wiped out that stain by killing for self,
And in defense of the sacred right of asylum.
No wonder his heroic stand roused the fury of the hell hounds
To heights of insane froth.
His example is a great inspiration;
His death a noble martyrdom;
His blood shed in freedom's cause
Is already breeding defenders.
A sacrifice like his proves more than words,
That slavery is doomed
To sudden and ignoble death.

# Blood and Wine

**A certain little renegade of the Revolution chants a hymn of praise to his erstwhile Enemy.**

By Ralph Chaplin

Behold! the helots of the land
Are cowed beneath thy iron fist;
They are too blind to understand—
Too dumb and spineless to resist.

Victorious one! against thy gains
These chattels cannot, dare not rise;
Stifle the thought within their brains
And rule with bayonets and lies.

So may thy sons, with greed uncurbed,
Their children's children rule again;
Aye, rule with iron undisturbed,
The all-prolific sons of men.

What matters that ten million died
To give thy lust a dwelling place?
Does not thy Terror set aside
The ancient freedom of the race?

What matters that the peasant's plow
Bites at a soil baptised with red?
Are not thy bloody dollars now
More myriad than the myriad dead?

That in charred cities, wan with pain,
War-desolated mothers live,
While lips of babies tug in vain
At breasts that have no milk to give?

Or that beneath thy towered walls,
Cursed with the eloquence of hell,
Black want to red Rebellion calls * * *?
Heed not! I tell thee, ALL IS WELL!

Heed not! have vine-clad maidens sing
And serve thee scented wine and gore;
Laugh! glut thyself to vomiting
And hiccough, screaming still for more.

What of the Men against the gate,
Black-massed and sullen, gaunt and lean?
Like thee they crave one thing to hate * * *
Be glad * * * and whet thy guillotine!

# Let's Line Up "Bill"

By "Wingy" Thomas

It's a long way to good conditions
While Scissor Bill hangs around,
For he's solid out at Roach's—
Strong on Hump's and Shippey's ground;
The only place he's absent
Is at Mills' SIX-BITS camp—
There they've all joined the wobblies,
So "Bill" had to decamp!

To hell with these old blankets!
Where cooties swarm at will;
We can end these fierce conditions
With the help of scissor bill.
When "Bill" joins ONE BIG UNION,
On clean beds we will flop—
Not in a portable dog-house
With rain pouring in at the top.

The crumbs are running races,
The garbage makes us sigh;
If "Bill" would line up with us,
Away these things 'u'd fly!
In place of "belly" and cabbage,
And all that kind of junk,
We'd have a cook and cookee
Whose chuck would ne'er punk.

Now to better our conditions
We must take OLD SCISSOR BILL,
And teach him organization—
His wood block we must drill!
Of demo-cracy he's had plenty
And he's longing for a change;
With "Bill" wised up and raving,
We'll drive the GYPPOS from the range!

# Does this Fit You?

By John E. Nordquist

Oh, for a legion of workers
Who dare to think and do,
Who cannot be cowed by the masters,
And never for mercy sue.
Men of nerve and action
Men who forge straight ahead;
Oh, for a legion of workers
Who refuse to be towed and led!

Oh, for a band of toilers
With the spirits of Everest and Hill,
And courage like Little's and Larkin's—
And others in dungeons chill.
They recked not consequences
Nor censure and scorn of man:
Oh, for a band of workers
Imaged after this fearfree clan!

# The Storm

By Chas. Devlin

The storm approaches, still the air
Quiet here, but there the blare
Boom and crash and lightening flash
Stirred as with a mighty lash
Hearts of men, and eyes as well
Gaze at this infernal hell,
Canons boom and shrapnel shrieks
Lo! The system surely creaks.

The world's aflame, revolt is here
Revolt of millions coming near
With words and deeds and valor they
Are mapping out the ONE real way
On the land and in the air
Revolution everywhere
The Proletariat is up
Drinking now from victory's cup.

And when the storm is spent and done
And workers everywhere have won
A system new from out the old
Will rise and spread its every fold
Embracing all Humanity
Giving lasting liberty.
The goal is worth our very best
Let every worker stand the test.

# HELP WANTED

A few thousand high-souled and courageous men and woman to sell

**THE ONE BIG UNION MONTHLY**

in every city, town, village and hamlet in America.

**THIS MEANS YOU**

**George says he is being imposed upon and he won't do it.**

**ORDER A BUNDLE TODAY**

of 15 and up.

You pay us 15 cents per copy. You pay the express. You sell them at 25 cents per copy.

Having followed this advice you will have a good conscience and will sleep like an innocent child.

THE NIGHTMARE OF THE CAPITALIST

# The Scourge of Politics in a Land of Manna

BY HOWARD SCOTT
(Industrial Engineer.)

Through the missed of the fourteen points, the clamor of the League of Nations, and the speed of the "may I knote", shrieks the siren of the newspapers proclaiming the efficacy of some one political programme as a panacea for the immediate ills. We have with us today as many breeds of political parties as we have religious sects, all advocating greater or lesser reforms, varying in their demands according to the strata of society they represent, all antithetical to each other, but all possessing one common factor, their belief in the efficacy of political action.

Color, music, religion, morals and politics are subjective realities. For the color-blind, as, for instance, those who fail to perceive the greens, light of this color does not exist, although it may for others. Those of normal vision may have the sensation which they call green light, which means, not that the green light is real, but only that the impression is real to them. By the defective in hearing certain sounds may not be heard at all, although another man may hear them clearly. Sound does not exist for one who is totally deaf.

Religions, morals, and politics, being beliefs, create impressions which are real to some people, to others are totally different, varying in accordance with race, geographical location and economic conditions, and to others do not exist at all.

Political power is centered in the emotional expression of the mass, and its adherence to the political party in power depends on the amount of belief in each individual member. Written on the flyleaf of the book of rules of every able politician and statesman is that sentence of Macchiavelli's, "The appearance of belief in any popular faith is as necessary as the belief in it is harmful;" followed by the addenda of Bismark, "Religion, patriotism, and politics are the primary weapons for controlling the mob." The political leaders of the past and present have, through the inculcation of beliefs or subjective realities into the minds of the mass, achieved for themselves a goal which lies on a separate and distinct plane, and does not concern itself with the objective realities of the mass. It is the fervour of faith, the fanaticism of belief, the reaction of all primal instincts and personal impressions that sweeps a candidate or party into political power. If there existed that queer paradox, a political party, based, not upon theory but upon actual facts, the situation would not be such a hopeless one.

The structure of our present legislative bodies is composed of representatives elected on the basis of geographical divisions, the qualification of an electee consisting in the possession of a definite amount of capital vested in real estate, bond, or other holdings. He is not required to be involved in the production of any of the essentials of life for his district, nor even to possess a knowledge of the methods of production. We therefore have that queer anomaly of a man being elected from a division the important function of which, for the country as a whole, is the production of coal who is a lawyer, and whose knowledge is limited to law and litigation; or we have a doctor of medicine representing a steel district, or a banker a farming district. Thus are made possible the debates which frequently occur in Congress on the subject of operating railroads in which lawyer, doctor, banker and professional politician participate with equal ignorance argueing away the nation's legislative time and money. And though such an unrepresentative group may legislate, it becomes still more innocuous through the fact that it does not carry its legislation into execution.

There are before the public at the present moment a number of political expedients through which they are attempting to solve one of our primary industrial problems, namely railroads. But the railroads are only one unit of the industry of transportation and cannot be dealt with separately and obtain efficient service in our common carriers. Of all the plans presented not one has taken into consideration the technique of this industry, or has apparently realized that under scientific administration of our carrier system, railroads must be secondary to that more efficient method of hauling bulk cargoes, namely waterways—depending, of course on the geographical conformation of the country. Nor do they realize that the motor trucks on our highways are relieving the railroads of an ever increasing portion of their bulk freight. Still again! Nor do they realize that our transmission lines and our pipe lines provide a better method of transporting power and fuel than do our railroad coal cars and tank cars.

The inadequacy of any plan that proposes to allow the workers to share in the profits of an industry is that it places the basis of efficiency not on scientific grounds, but on methods of management that will obtain greater profits for all parties involved. If such a plan were imposed on the transportation system of this country it would induce a condition so static that all other forms of transportation would be discriminated against in order that the railroad workers and railroad capitalists be enabled to maintain their established earnings. The railroad interests in the past, by devious financial and financially induced legal means, have killed every form of water transportation in the United States excepting those required by the railroad interests for their own ends. Our railroad interests have chased the river steamer and the canal boat out of existence, leaving them and their docks to disintegrate under the ravages of time. In the majority of cases the rivers and waterways of our country are today paralleled, not only on one, but

on both sides by railroads. Under scientifically operated transportation the waterways, with feeder highways or short line feeder railroads, would relieve the present trunk line railroads of the United States of over one half of their freight load. So it is that any political solution to the railroad workers problem endangers the transportation problem of the entire nation. Efficient transportation is not only a matter of carrying goods, but also of eliminating the unnecessary carrying.

In view of the complexity of the industrial situation in this country, and the fact that the industries are so closely inter-related, any fundamental change in the methods of operation of any one industrial unit would involve a corresponding change in every unit that is correlated to it; and any method of scientific operation which might be introduced in any seperate unit would be immediately sabotaged by the financial control which is equally interlocked and co-related, and thereby strangle at birth. The absurdity of any plan for the operation of railroads (whether it be the Plumb plan, or it's adversary, the Cummins bill) is immediately apparent when one is brought into cognizance of the fact that the present group of railroad interests own and control the sources of supply of power and fuel in coal, oil, and water, and that they own and control the manufacturing of railroad equipment, and in the further knowledge that the earnings of the railroad groups are accentuated by the carrying of products which they own and control in preference to transporting them by a more efficient method, but one in which they have no vested interest. The introduction of a scientific system of operation would carry with it the scientific use of materials inter-related with the railroads, and the scientific use of one of these materials alone, namely bituminous coal, which is one-third of all the freight moved on common carriers would render it impossible for the railroads of this country to earn dividends on their present capitalization.

We are living today in an industrial age which concerns itself with the production and use of energy and matter in the forms of electricity, steam, steel, lumber and cotton, etc. The amount of energy or work required to produce a given amount of a certain material under a given condition can be accurately calculated. The machine necessary for the production of so many units of power can be accurately designed. The resultant of a chemical reaction can be determined before the reaction takes place. The candle power of a given amount of electricity is a known factor. The food content of a bushel of wheat of standard grade is an established fact. The production factor of the worker can be determined under all conditions.

Political legislation cannot decide the question of the number of hours a worker shall work in a given industry under a given condition, or what materials, quantity and quality, shall be used, or the methods of production, unless politics can co-relate all industry.

Why be carried away by the momentum of our multiple verbiage in the discussion of the high cost of living? Why not consider the fact that only one in ten of our population is engaged in actual production?

Why allow a million petty stores to muddle up the problem of retail distribution with their inefficiencies? Why not eliminate 75 per cent of the inefficiency and the individuals engaged in this trading, by consolidation into scientific distribution depots on a large scale,putting the 75 per cent of the men no longer needed into essential production?

Why insist upon the different agricultural industries being personally operated by any method that the individual farmer cares to adopt? Why not industrialize agriculture by operating large areas as industrial units, vesting the personal rights of the farmer, not in possession, but in an equity of productive effort?

Why mine bituminous coal for the production of power? Why waste fifteen-sixteenths of it's multiple content by burning it under boilers? Why not develop the remaining 97 per cent of our water-power resources in this country?

Why operate manufacturing establishments 2,000 miles from their source of supply? Why not have manufacturing establishments located in the center of their source of supply, or as nearly so as possible?

Why have the ill-health of a citizen an incentive to profiteer on the part of our medical profession? Why not have public health and hygiene nationally operated on the basis of service?

Why have the security of the individual from starvation the income provider for the insurance companies? Why not have it that the individual's social service contract with the state provides him with a livelihood until death?

Why involve ourselves in the discussion of the laws and the inefficiencies of our law courts? Why not eliminate the major number of inefficiencies by cancelling all causes of litigation?

Why indulge our national vanity in wasting effort, time, and materials in the production of gold as a ballast for international treasuries, necessary with a gold basis currency? Why not have a currency that one cannot store up to rust, and that thieves cannot steal, of purchasing value only to the individual to whom it is issued in exchange for his productive effort?

Why tolerate the throttling of our industrial life by politicians and political action? Why not eliminate all politics and political action by instituting an industrial organization composed of men who, by their training and experience, have the knowledge of operation and direction?

Why the demand for higher wages? Why the higher prices? Why not a system of industrial operation wherein one would obtain, not a wage that is in the ratio of 8 per cent to his productive effort, as exists today, but 69.3 per cent, the remaining 30.7 per cent being no tribute to capital, but the normal contribution of each citizen to the

requirements of replacement and depreciation, and the maintenance and operation of the administration and it's indirect industries, such as education, sanitation etc.

These questions are not of a destructive character; individually they may seem so, but as components of a sequence they partially reveal the possibilities that would develop in a plan, nation-wide, that was not political, but industrial, wherein production would be for use, not for price.

It is possible under a system of scientific administration to increase the present standard of living over 800 per cent. The day is pregnant with the need of just such a readjustment. There can be no cessation to industrial unrest so long as the conditions heretofore mentioned persist. They are blocking the wheels of the industrial mechanism. Given a plan or design of industrial administration the movement of the mass can be directed into constructive channels, but without such the country shall be plunged into a maelstrom beside which the Russian revolution is but a tempest in a tea-pot; no, not a maelstrom, but an eruption of mud.

## *International Relations*
### *Will be Submitted to a Referendum Vote*

The following extracts from the minutes of the G. E. B. now in session were made at the moment of closing the last form. They refer to International relations.

1. Moved by McClellan, Seconded by Mashlykin, **That we endorse the Third International. Motion lost.**

   For: McClellan, Mashlykin. Against: Brown, Nordquist, Lessig, Sullivan and Fisher.

2. Moved by Brown, Seconded by Sullivan, **That we do not endorse the Third International officially, and that we notify the Third International that our position makes it impossible to endorse same as it is outlined in the Zinovieff appeal to the I. W. W., and that we are in favor of an Economic Industrial International. Motion carried.** For: Brown, Lessig, Sullivan, Nordquist. Against: Fisher, McClellan, Mashlykin.

3. Moved by Lessig, Seconded by Nordquist, **That we endorse the Third International with reservation, as follows: That we do not take any part whatsoever in parliamentary action and that we reserve the right to develop our own tactics according to conditions prevailing. Motion carried.** For: Nordquist, Lessig, Sullivan, Fisher. Against: Brown, McClellan. Mashlykin not voting.

4. Moved by McClellan, Seconded by Mashlykin **that the three above propositions be submitted to the membership for a referendum vote. Motion carried.**

The appeal in question will be found in this issue of the magazine Everybody should read it before casting his vote in this referendum.

## "The Amnesty Key"

**By John Nordquist**

**Tune—"I'm Forever Blowing Bubbles"**

**I'm having dreams,**
**I'm seeing gleams,**
**Of men in prison cells—**
**Sentenced long years**
**To haunting fears,**
**And death in these earthly hells.**
**If you would hasten the dawning**
**Of blissful "AMNESTY MORNING,"**

**Chorus—**
**Come, then, workers, strike together**
**In one mighty union grand;**
**Hear Ye the call, Freedom for all—**
**Strike till the masters' bastiles fall;**
**Empty every cell house,**
**Make all sorrow flee.**
**We can open up the prisons**
**With the "ONE BIG UNION" key.**

**Organized right**
**We'll win the fight,**
**For all we'll freedom gain—**
**After the strife**
**They'll find new life**
**With wife and babies again.**
**If you would shorten their anguish**
**Break down the bars where they languish.**
**(Chorus)**

### GOOD NEWS FROM AUSTRALIA

We are in receipt of a letter from Tom Barker, now in London, where he has vigorously championed the cause of the 12 I. W. W. members under long sentences in Australia. The letter came too late for this issue. We are able to quote, however, that a Royal Commission has rendered a report which acknowledges that these men were framed up. As a result ten of them have been released alrady, and the other two are expected to be free very soon.

It now remains for a commission in this country to unmask the frame up against the American I. W. W. members in jail so that they also may go free.

# Sidelights on American Industrial Evolution

*(What here follows is another chapter of the new Industrial Union Handbook for Agricultural Workers, soon to be issued by the I. W. W.)*

### The Condor and the Eagle

Europe, after the capitalist class had intrenched itself within the smouldering ruins of Feudalism, was a hot-bed of intrigue and oppression. Karl Marx summed up the situation with an expressive phrase: Capitalism came into the world dripping blood and filth at every pore." The agricultural population was largely driven into the mills, mines and factories there to toil prodigously that the ruling classes of the various capitalist nations might compete with one another for control of the world market.

After the settlement of the eastern shores of the new world the young continents of America began to germinate with the seed of social progress. In a comparatively short time they fell in line with the general development of Europe. In the United States, even in earliest times, forces were at work that would eventually produce the evil weed of industrial autocracy. Capitalism must follow its natural bent here, just as in the rest of the world. But the country was so young and so full of manifold opportunities that years must elapse before the new despotism might enslave the people. Even today there are workers, known as "scissor-bills" who look at the present world through the eyes of their great-grandfathers. They have not brought their minds up to date and therefore have the psychology of two generations ago.

But the early American pioneer, ever venturing westward into the wilderness lived over again the whole history of the human race. First came the daring explorer steering his adventurous canoe up the courses of uncharted rivers; the hunters, trapper and fisherman, blazing a trail across the untamed continent for multitudes yet unborn; then the first settlers with their families, agricultural implements and stock; also the farmer and herder with their rough free life on the virgin prairies or the range in the middle of the last century, and finally the merchant, manufacturer and banker, erecting railroads along the old trails, factories at the junctions, court houses on the town commons and jails on the sites of the block-houses.

The capitalist class eventually dominated the land of our forefathers and put its heel-print upon the life of the nation. The traditions of the Revolution were forgotten and the government, as in the rest of the world, became an instrument of working class repression. The principle of democracy was not extended into industry when the country became industrialized. The condor of industrial despotism luxuriated the nest of the proud American eagle.

### The Iron Law of History

But capitalism was not always reactionary as it is today. In the beginning it was of real service to the human race. Progress had entrusted to capitalists the task of constructing a system of production that was adequate for the growing needs of the population. Industrial evolution had to follow its inevitable course. Wasteful competition had to be eliminated. Inefficient methods had to give way to organized and centralized production. Industry had to expand and keep pace with the progress of the world. In helping to make these things possible the early captains of industry were a help to society. They prepared the processes of production for the next inevitable step in human progress. They built up an industrial arrangement that could survive them when their services would no longer be needed. Like the early explorers they blazed the trail for the New Society that was to arise when the mission of capitalism had been fulfilled.

They prepared the industries for the ownership of the people.

The doom of private ownership in the means of life was sealed from the beginning. The process of industrial evolution was slowly but surely leading the masters of bread to a point where they would become purely parasitical—mere barnacles on the social organism. We must give the old school of capitalists credit for contributing immensely to the welfare of the human race. The forefathers of the present third generation idle rich helped to organize the wonderful mechanism of today. But this is no reason why their profligate offspring should be supported in luxury to the end of time.

The same laws that produced capitalism are bringing about its collapse. The world is constantly changing. No system based on social parasitism has or can remain permanent. The egg of capitalism contains Industrial Communism just as surely as the egg of Feudalism contained that of Capitalism. The development in the egg is **evolutionary**; the process of breaking the egg is **revolutionary.** In a way the capitalists also were "building the structure of the new society within the shell of the old."

The feudal lord and the modern capitalist stand together before the bar of history. The downfall of the latter is just as inevitable as that of the former. Whatever becomes a hindrance to human progress must go. Slavery, feudalism, capitalism; each in turn have yielded and must yield to the iron law of history.

America was primarily an agricultural country for many years. Before the land and machinery of production were monopolized the United States was in reality the land of opportunity. Capitalism could not enslave nor break the spirit of the American people as long as the frontier beckoned in the golden West. There was a time, in the early days when a Yankee simply would not work for wages. Land was cheap out toward the sunset or, if farming did not allure, there were thousands of business opportunities that had not yet been gobbled up by monopolists. About the only things that would keep a man from succeeding were his own indifference

or laziness. It was comparatively easy for the farm hand to become a farmer, the mechanic a manufacturer, the clerk a merchant. Classes and castes existed only in embryo. Strikes were few in number and local in character. The class struggle, like the industries in which it was developing, was still in its infancy. Wall street, in these days, had not yet taught the people to eat from its hand.

### The Industrial Revolution

Gradually the old free America was changed. The western prairies were fenced in and the range became a series of ranches. A shining network of rails was thrown across the land and the historic trails were no longer trampled with hoofs of countless herds. The door of Opportunity was slammed in the face of the working class. Monopoly spread like a black plague upon the land. The industrial pirates of the East, not content with the millions of acres of land which had been conveniently given them by their government, defrauded both the government and people out of millions of acres more. The story of land grabbing and the hogging of the nation's industries is a long record of robbery and fraud. The titles to all the property of the United States began to find their way more and more into the strong coffers of the social parasites. Hand production was changed to machine production. Smoking factories sprang up in all directions. Eventually the whole nation was safely in the clutch of private greed. Capitalism, by means of a series of prodigous robberies, had reached its afflorescence. When the working class get ready to take back the world that was stolen from them they will use far cleaner tactics than did the present "owners" in getting possession.

The centralization of industry gave birth to marvelous machines which rapidly displaced the skill of the workers. Instead of lifting the burden of labor these wonderful inventions served only to enrich the favored few. The entire working class was reduced to the dead level of uninteresting drudgery. Classes became ever more clearly defined and the class struggle ever more intense. Overproduction, strikes, wars and unemployment became more frequent and wider in scope. Wealth became more and more concentrated into the hands of an ever decreasing number of parasites. In the cities the machine proletariat had become divorced from the means of production; in the country the agricultural proletariat was shut off forever from ownership of the land. The possessing class became more powerful and the working class more dependent. On the one side, now that the system is "rotten ripe for change", stand the industrial autocrats, law-buttressed and arrogant; on the other the rebellious tenants and workers, vaguely trying to comprehend the great changes that have taken place all about them. The breath of Revolution is already stirring this miasmic jungle of despotism and decay. America, like the France of 1779 is about to feel the birth-pangs of the new society. Will the hideous system of Capitalism leave the stage as it entered, "dripping blood and filth at every pore?" The future alone will tell.

### Modern Serfdom—the Tenant Farmer

Land tenantry is serfdom without the picturesque background of feudalism. It exists in America to a surprising extent. The Industrial Relations Commission, at the suggestion of William D. Haywood, investigated this disgraceful symptom of social sickness. Their disclosures have since been almost suppressed, but any worker who has lived in the south knows of the real situation from first hand observation.

The tenant farmers, particularly those in the states of Oklahoma, Texas, and Louisiana, occupy a position peculiar to themselves in the economic and social structure of the nation.

These people are not actual wage earners, but at the same time the most viciously exploited of any division of workers in the United States by the capitalist land owners.

In the Lone Star state there are no federal lands. A few persons have, however, schemed and contrived to gain possession of vast tracts of land that were formerly used for grazing purposes only.

A certain contractor for erecting the capitol building at Austin, Texas, came into possession of something like a million and a half acres of state land. The Dunlops are credited with owning some three million acres of land, while those who visited Widow King discovered that it is fifty miles from her front gate to the front door of her residence.

Armour and Company own huge tracts of land in California. The Taft Company owns a farm of 150 square miles. The holdings of the Miller and Lux Company run contiguously through six states and embrace millions of acres. Farming is not only becoming industrialized but the agricultural proletariat is now an established fact.

In this territory the typical farm renter of the south is the grandson of the aristocratic slave owning patricians, tall, clear eyed, broad shouldered and deep chested. They marry young and are early burdened with a rapidly increasing family of children.

Equipped with a span of mules, a dead-axe wagon, some household furniture, a coop of chickens, and his family aboard he is looking for a farm to rent. Traveling about he secures a piece of land forty or eighty acres from the Burlesons or Gregories of the south; usually rented by the season. For his tenure he gives a fourth of the corn and a third of the cotton he raises. His temporary habitation is a miserable shack built of boards and batten which are little barrier for the cold Texas winds or the blazing hot summer sun.

"The Old Oaken Bucket" never originated on a tenant farm. There is no such thing as a well or a spring. Water for household use comes from an open cistern.

### The Refinement of Exploitation

The farm owner exacts that all the land be tilled, and it usually is farmed up to the back door, leav-

ing no pasturage for a cow. The tenant farmer and his children seldom taste the delicacies of milk, butter, and eggs which are supposed to go with farm life.

Crowd the houses of the farm renters together and you will have tenement quarters such as does not exist in any part of the world. Whitechapel, London or the east side of New York would be paradise in comparison with the jumbled shacks of the people who raise corn and cotton to feed and clothe others.

The tenant farmer in his overalls and broad brimmed hat stands alone and helpless. Robbed as are the black men of the south, he accepts his condition with little protest.

The crop he raises, good or bad as it may be, after giving the share exacted by the land owner, does not then belong to the man of toil. He has been compelled to borrow a little money from the bank for which he must pay an excessive interest. He has purchased some supplies from the store on all of which he has paid an exorbitant profit.

When he comes to sell his crop, the cotton is baled and hauled to market. A Commissioner or Sales Agent inspects the cotton and says with an air of authority, "This is short." He will then quote a price three or four cents less than the market value. Thus it can be seen, though cotton may be King, the man who produces is robbed in four ways: Rent, interest, profit, and commission, all of which he meets at the point of production.

Not only is the farmer himself robbed but his entire family. His children during cotton picking time are in the field—little babes four and five years old, dragging along tiny sacks, picking off their mite of cotton from the plants, while the mother leaving her nursing babe at one end of the row drags herself through the fields of green and white gathering, as it were, the material to make the shrouds of her class.

---

# The Dear ? Old Blanket Roll

By Chas. O. Olsen

Blanket-roll! I ought to love you,
Dear and dirty, warm and worn;
For the sleep-compelling virtue
Of your folds so old and torn;
But the best of friends must sever
Ties that bind—and go you MUST;
So I'll bid good-bye forever,
As you vanish, dust to dust.

When I bought you of the Hebrew,
You were somewhat neat and clean,
Though outside his door, you had to
Lie for weeks without a screen.
This was but an intimation
Of the life you were to lead;
Many a day you've had occasion
To regret those days indeed.

New and tender—unprotected,
You were dragged across the floor,
By a baggage man ejected,
Through the "depot's" open door.
Flung by scornful, careless fingers,
In a filthy baggage car,
Where you won a scent that lingers
With you, and I smell afar.

Outside many a little station
You have left a mottled stain,
As your rainbow decoration
Gently faded in the rain.
Many a mile I've watched you bobbing,
Lashed beside an auto stage;
Often times I've seen you dropping
In the mud, with silent rage.

Oh, you're full of fleas and splinters
From many a soiled and caulk-worn floor
When in weary, workless winters
You were "left" behind the door.
Many a dog in friendly greeting
Sniffed your bulging drapery;
Many a cat has found a fleeting
Couch of hospitality.

Snug within your folds are hiding
Germs and microbes of decay;
Patiently their time abiding
To infect me and to slay;
But I laugh at all this danger,
I'm a close friend—hence immune,
But it's hell on any stranger
Who might have the misfortune.

Hidebound custom did unite us
Whom education must divorce;
Shall indifference, blind and callous,
Like an ancient dragging curse
Chain us to a foul condition,
Relic of old, ignorant ways?
Surely not—a cleaner vision
Points a path to saner days.

# Evolution and the I. W. W.

BY JACK GAVEEL

This is a short sketch of a vast evolutionary and historical process. However an exposition of details is not necessary here as the aim of this article is education which will enable the workers to break the mental chains which hold them in subjection to the present system of society (a society from which they have nothing to gain and by the disappearance of which they stand nothing to lose), and for this purpose an outline of the most essential facts contained in the evolution of man and Society is all that is required.

The value of a knowledge of the facts of human and social evolution in its relation to the emancipation of the workers may not at first be appreciated, and even by many ignored, but, after a more thorough consideration of the question by all those willing and capable to use their brains, the fact will then clearly stand out that, before the workers can give the best that is in them in their struggle to abolish wage slavery and capitalism and establish Industrial Democracy, an understanding of Evolution in its broadest aspects is essential.

Evolution is that succession of transformations through which matter and force pass in their eternal restlessness. To understand Evolution therefore is to understand its manifold transformations which include Man, his mind and his Society.

Take the mind of man for instance. According to the poisonous teachings of those who prostitute the uses of their intellect at the command of the ruling class the mind is a mystery, not belonging to the things of the material world. It is uncaused and constitutes part of the divine substance and as such its dictates are the arbitrary will of—God, a will not to be brought under natural law, not to be understood and therefore to be obeyed implicitly.

According to the evolutionary point of view, however, Man's mind is the result of a long natural development beginning with the lowest forms of life, leading on through ever higher forms of existence and finally culminating in Reason, Judgment, Imagination, Sympathy, etc. Also according to the same point of view the succession of ideas in the History of Human Society has been caused by changes in the economic conditions. That is; at all times Man's social consciousness has been adapted to the mode of wealth production. To take a concrete illustration; if the prevailing notion in regard to the nature of the human mind is that the latter is a mystery not to be understood we know in the light of Evolution that this view, this state of mind is an effect determined by the interests of the present ruling class which derives its existence from the exploitation of the wage workers and which therefore has to have a set of rules for the conduct of its slaves, rules which must be made to look mysterious and as if emanating from the Divinity to insure their successful operation. And how can this be done better than by ascribing to the mind and its ideas a supernatural origin?

From the above illustration it will be readily seen that the worker who has studied and understands evolution has a great advantage over his fellow-worker of the field, mine or shop who is not so instructed. For the latter will swallow all his master's teachings and morality bait and hook without ever inquiring into the wherefore of things thereby forging the chains of slavery around his own legs whereas the former will treat with disdain an education tainted with the lust for greed of the capitalist class; and set up in opposition an education and morality suited to the interests of himself and his class, the workingclass.

If we go back in our imagination to that period of the dim past when man first made his appearance on the earth we must perform a mental elimination of all his wondrous accomplishments. The steam ship dissolves in the dugout, the electric train becomes a rude device consisting of a wooden body supported and rolling along on wooden discs sliced off some tree trunk. Modern telegraphy finds its prototype in the signal fire lit on the forest hill. The machine gun goes back to the blowpipe. Instead of nations we meet with tribes and federations of tribes held loosely together. One by one disappear his modern means of production. The plow is replaced by a stick used for rooting up the ground. There are no clothes except animal skins worn across the shoulders with sometimes the head of the bear or the horns of the aurochs attached. And if we go back far enough we arrive at a time when the melting of iron had not been invented yet and when instead of iron tools and weapons men used stone clubs, axes, knives and spear heads chipped out of flint. However, even these finally disappear together with agriculture, the domestication of animals and the use of fire. Here all co-operation ceases and man becomes the animal primitive In our imagination we can reconstruct him in this primitive state. We can see him even without a bow and arrow depending for his survival in the struggle for existence on his brute strength on the length and sharpness of his big tusks, the degree of power residing in his bulging jaw muscles and the capacity of his mobile ears to detect the slightest sound of danger.

Prowling through the gloom and stillness of the forests of the ancient world, surrounded by dangers on all sides, having nobody to depend upon in his fierce battles but himself this gibbering savage was nothing but a bundle of ferocious instincts continually slaying and being slayed. Awe, wonder, cruelty and stupidity took the place in his narrow and flat skull of imagination, sympathy and intelligence.

Came a time when his conditions of existence started to change, when he was forced to leave be-

hind his arboreal life and was driven out on the wide open plains teeming with new and much more formidable dangers. For here, bereft of the protection offered by the lofty foliage of the forest trees, all his individual strength, his brute ferocity and his prowess availed him naught. Henceforth if he wanted to survive he must say good bye to his former hermit's life. Thus originated the social instinct born in the struggle for existence drawing men together. Thus were the germs of sympathy planted in men's minds. But out of this co-operation evolved also a higher intelligence, for language (implied by association) draws out the ideas and develops the mind. A further mental development resulted from the use of artificial means of offense and defense (tools and weapons).

As co-operation, intelligence and sympathy increased; as life became more secure and the struggle for existence lost a good deal of its harshness and ferocity, man's whole structure changed. His skull grew broader and higher, his big canine teeth became shorter, his ears lost their power of motion, his posture became erect, in short man became man.

Anyone who doubts the truth of the above facts will do well to study the growth of the child. He will here see repeated the same identical stages of growth through which the race has passed. The child at one point in its evolution has the mental equipment of the savage. The primitive hunting, killing and fighting instincts are well developed much more so than in full grown people in whom these instincts through long disuse have assumed the nature of vestigial instincts. It is also a well known fact that children are more cruel and more devoid of sympathy than adults. At the same time awe, wonder, and curiosity play a prominent part in the child's psychology. The explanation of this repetition of ancestral traits lies in the Law of Biogenesis according to which the individual in his development passes through the same stages that the race has gone through.

Man's whole history has been one long and bloody struggle for an ever more perfect existence, a battle for food, clothing and shelter. In this struggle he has schemed and planned, failed and been successful, organized and changed his organizations. Empires have come and gone, races been exterminated, governments and laws been reduced to dust and classes succeeded each other. And the progress made in this yearning and groping for a nobler, better and happier life has been due chiefly to two factors: Man's use of tools and his use of science. Without these he would still be at the mercy of the forces of nature, the limits of his expansion would still be determined by the possibilities offered by raw, undeveloped nature whereas the law of the survival of the fittest would still have its way with him causing him to continuously change his whole structure at the expense of wholesale extermination.

And yet in spite of all his great accomplishments the battle for food and shelter still rages.

The degree of perfection of men's tools has determined the degree of perfection of their lives.

When we study the successive stages of man's development since his emersion out of the jungle we see that the development of production has been the fundamental cause of all progress. Throughout savagery, barbarism and civilization the source of man's ideas, customs, inventions and institutions can be traced to the condition of his economic development, the nature of his tools.

The savage, although with his bow and arrow he controlled a greater food supply than his immediate predecessor, still, having no agriculture, when game became scarce in his territory, was forced to resort to migrations and invasion of the hunting grounds of other tribes. A battle would follow and if the invading famished horde was victorious the victory would be celebrated by a heartly meal of the enemy's flesh.

These mutual migrations, invasions and wars, together with the practice of cannibalism, ceased after men as barbarians had still further augmented the control of their food supply by the cultivation of the soil and the domestication of animals. The cultivation of the soil tied men to one place, also on account of a comparative abundance of food migrations, invasions, wars and cannibalism ceased to exist.

Talking about inventions we can see the truth of the statement that inventions are the result of the development of man's productive powers when we consider that the fire of the savage was the forerunner of the art of pottery. Another fact belonging to the same category is the origin of agriculture most probably in the domestication of animals. (When food for the herd became scarce there would be a tendency to grow plants and grasses instead of leaving their generation to nature.)

And how about the institutions of private property and the state? Have not these their beginning in the increased productivity supplied by the invention of agriculture.

And when we come to deal with religion (which is nothing but a substitute for ignorance and a sense of helplessness and dependence in the face of the unconquered forces of nature) evolution teaches us that as man wrests from nature one by one her secrets he loses his fears and according as he bends her stubborn will to his own thru his inventions and discoveries he develops a sense of his own importance and power, culminating in the conviction that, the same as he is, the creator of all things, so he was also the creator of the mental delusion called God.

The present historical period is called civilization, its later development capitalism and machine production. Before the capitalist class became the ruling class there was a social revolution. New and gigantic forces of production had made their appearance. The old administrative or political powers were no longer capable to administer to these new interests represented by the capitalist class. A new government and new laws adapted to the development of the new productive forces were re-

quired. Natural resources had to be developed, markets must be opened up, railways built, commerce expanded and wage labor was required, also bigger and more efficient armies and navies. Compromise between the old and new ruling classes was out of the question because their interests were diametrically opposed. One believed in stagnation and death, the other in activity and life. So the revolution came.

In less time than it takes for the lightning to flash across the dark sky, old cherished beliefs, customs and institutions were flung in the dust and trampled. Men went mad. Nothing was stable any longer. Stunning changes followed each other in quick succession. Everything was examined, all things revalued. The jails were full. Hundreds of thousands lost their lives, title, heredity and position all of a sudden mingled with the filth in the gutter. Princes, kings and nobles mixed their blood under the knife of the guillotine. At last, amidst the crash and roar of the collapsing timbers of the old feudal society, capitalism reared its bloody but victorious head. All had been accomplished in the name of Liberty Equality, Fraternity and FREE TRADE, although what really took place was this: Revolution in the forces of production had lead to a revolution thru the whole social superstructure.

Have since that time the social forces ceased to act, or is Man still developing, and are his productive forces still expanding? Is it possible that the existence of such an organization as the Industrial Workers of the World is an indication of that development and a prediction of its outcome? That is; is it possible that the I. W. W. is the inevitable outcome of the historical process.

Was the human race emancipated when the capitalist class broke the shackles of the old tyranny? Were justice, equality and fraternity extended to all? Had progress been put in shackles because perfection had at last been attained?

After the capitalist revolution the disillusionment came. Reality which came as a cold shower extinguishing the fires of the most ardent expectations and hopes soon stripped the golden mask off the things of the new order and laid bare all the ugly sores. It was now seen that Equality and Justice was a fool's dream. Society had resolved itself into capitalists and wage workers. The worker had nothing but his labor power. This he sold to the capitalist for wages in order to live. The capitalist on the other hand owned the gigantic means of production (so recently come into existence thru men's united efforts) and this enabled him to exploit the workers of the lion's share of what they produced. Unemployment became rampant, wages went down, women and children took the place of men, panics became more frequent. So did wars and poverty and crimes and prostitution.

Revolution is again casting its shadow over the world. The capitalist administration, its legal and political forms cannot take care of the expanding forces of production. At one time the logical promoters of these forces, the latter have now become unmanageable in its hands. Still they resist all improvement. A class once revolutionary and progressive has become conservative and stagnant.

The struggle today is not carried on any longer in the interest of markets, commerce and the development of natural resources but against private ownership in the means of production which are socially operated. With the productivity of today's gigantic machinery of production abundance may be the lot of all men, nobody needs work long hours, unemployment is unnecessary and there is no need for poverty and inefficiency in production. Still under a system of private ownership in the means of life and production for profits there must be unemployment, some workers must be made to carry the burden of all the others, wages cannot be anything else but low and starvation, poverty, death and disease are let loose broadcast over the land.

So the cry goes up for socialization of the means of production. A new invisible government is already in process of formation. It is the One Big Union of all the workers or the Industrial Democracy and its legality lies in the fact that it alone can organize social production in conformity with the requirements of the expanding forces of production. It is the inevitable outcome of Man's vast struggle for Liberty all thru the ages.

The I. W. W. aims to put the workers in possession of the means of production thereby doing away with production for profits. When the workers own the shops, mills and mines in which they work unemployment will be done away with. All men will put their shoulder to the wheel, thereby lightening the burden of each. The maximum limit of the working day under such conditions will probably be two hours. All will receive according to their needs. Poverty and disease will disappear, also crime, prostitution and war. The aged, sick and crippled will be cared for. Ample opportunity will be given for education and travel. Political government as we know it today based on private property will be replaced by an Industrial government having its basis in the workshops. This government will consist of representatives from the different jobs who will be the "legislators" passing "laws" with a view to the promotion of the most suitable conditions on all jobs.

---

## REMEMBER!

There are still many hundreds of I. W. W. men in jail.

There are three kinds of work in behalf of these men that must never stop:

1. **Raise bail for them.**
2. **Raise money for defense in the courts.**
3. **Raise money for jail comforts and for family relief.**

But most important of all:

**Push the organization work to the limit of your endurance.** Without that, all the other work will fail.

# Social Structures

BY RALPH WINSTEAD

All the ideas that are a part of the system of political democracy seem endowed with a stubborn strength and persistency. Their virility was best expressed, however, in that long struggle which finally gave birth to "representative government." All to late was the victory, for the same age that saw the beginnings of parliamentarism also saw the development of the factory system and the displacement of the handicraft methods.

Political Democracy — theoretically desirable under the handicraft economy, is productive only of strife, chaos and waste under capitalism. In fact it is only thru the constant efforts of patchwork reformers that the structure maintains its dizzy balance.

An analysis of the failure of parliamentary (political democratic) methods of social organization, to advance even the simplest life processes shows several outstanding reasons why that failure exists.

The success or failure of normal national political democracy depends entirely upon the clearness with which the constituent population views the questions of the day and the degree of control which they can exercise over their elected representatives in the three branches of government—legislative, executive and judicial.

Clear vision in the matter of vital social questions is one of the assumptions on which political democracy is based. That any group could control the formation of general opinion was unthinkable during the stage of development that was represented in America by the democratic town meetings.

Yet, with the growth of large industrial units in the basic industries has grown the trustification of the machinery of news dissemination. The economic interests that control the major industrial life of the community control also the means of molding opinion. The town meeting is a relic of the past and has so far fallen out of fashion as to be nonexistent even in those small villages where it is a practicable form of expressing the wishes of the people. Today the majority of the people cannot help but think on POLITICAL questions as the press, school and pulpit influence them or, in other words, as the barons of industry desire.

Just in the last few years some of the most important of the social sciences have developed. These sciences—individual and social psychology—have been reclaimed from the realm of guess work and superstition and have been examined in the light of modern knowledge.

The prevalent idea that man is mainly a reasoning and logical animal has been exploded. The facts have been established that mankind thinks and acts largely because of instinctive forces. It is true that reason is slowly gaining ground in the settling of human questions but it is as yet only a minority factor in that settlement. The examination of the idiotic course which human activities have been prone to follow gives small hope of refuting this Psychological theory. *

Chief among the instincts that have great effect in the molding of opinion are those gregarious or herd instincts that cause men to wish to conform to the ideas and actions of the group. Gregariousness, imitativeness and emulation show themselves in countless forms and variations thruout the whole social life of humanity. Closely bound up with action of these instinctive forces are the means of communication which under the present system are to be found in the press, the schools and the churches. Without communication there can be no conformity of thought or action. There can be no general molding of opinion.

*On this question the reader may be referred to a whole mass of psychological works chief among

which may be mentioned Veblen's—"Instinct of Workmanship," "Theory of the Leisure Class," and "TheNature of Peace," Ellwood's "Introduction to Social Psychology"; Wm. McDougall's "Introduction to Social Psychology" and Trotter's "Instinct of the Herd in Peace and War."

Each small group would tend to develop different customs, thoughts and actions in answer to the promptings of their instincts and the pressure of their environment.

The development of the gigantic rotary presses furnishes a means of communication that will standardize social thought. The ownership and control of those presses gives the capitalistic class a power never held by any ancient tyrant. Social thot can be turned into any channel that the press dictates. The millions can be stimulated into blood-thirsty activity or can be made good and willing slaves. The ownership and control of the means of intercommunication is the key to the whole modern social structure.

The capitalist class, with but pitifully few exceptions, owns and controls the press. By means of the agitational value of the press they can create sentiment among the masses so that the press controls the ballot. The people seldom use any but instinctive processes in political questions hence the ability of political parties to elect the proverbial yellow dog. So much for the clearness of vision which was assumed as unquestionable by the old heroic fighters for "democracy."

The ability to control the activities of elected representatives is even less in evidence than the ability to elect true representatives. Modern psychology also throws the light of knowledge on that ancient phenomenon which Lincoln called "Fooling the People."

Every person, no matter how gigantic an intellect he or she may have, still depends on those instinctive processes which demand group sanction for their acts and thots. To go single handed into the enemies' camp and to live there without compromise is unnatural and inhuman.

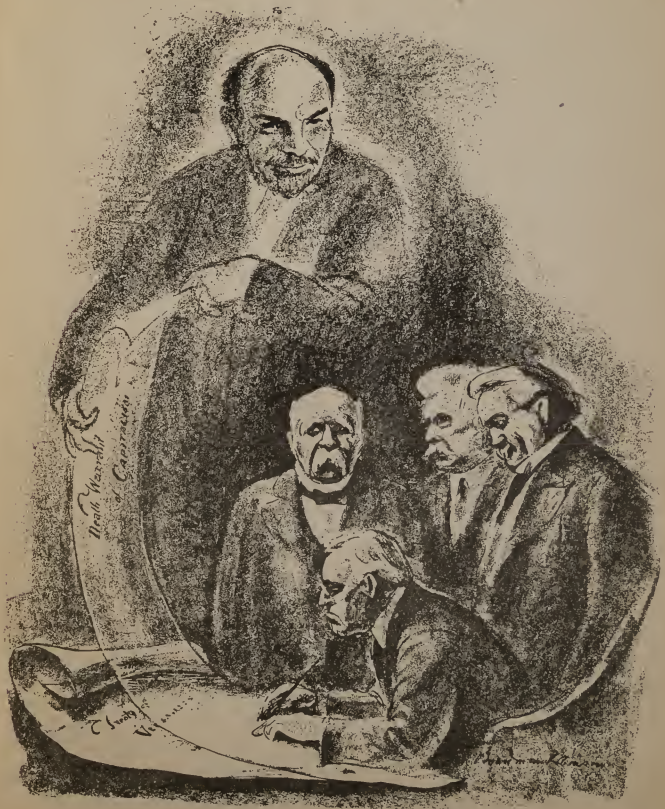
It is impossible of accomplishment unless the person trying it has all the surroundings of the group he came from, and can gain inspiration and renewed strength from constant contact and communication with that group.

Modern political life furnishes none of the essentials for carrying on working class battles in parliamentary circles. The horny handed conscientious son of toil is (perhaps) elected to office. That office carries a salary far above what his class receives at day labor. His surroundings are of a much more luxurious character. All of his new associates are of those people whom he has been sent to fight. He has no group to which he can retire and gain that sanction which is so necessary if the fight against his environment is to proceed. The net is spread and the political victim is snared so gently that he never feels his coils. He conforms to his group surroundings and soon adopts their attitude of looking at things.

Such forces would prevent efficient political action or change even tho the news channels were free. However it would not prohibit political changes. With the news channels in the hands of the capitalist class the working man's ballot has no chance of having any effect.

Under the old system of handicraft production the elected representative of his community lived either in his community and associated daily with his constituency or in another group of the same character. Under such conditions representative government would have had some chance to represent. With present day mass production and centralized population there is no chance for political democracy to produce anything more than it currently does produce—graft, greed and corrupted manhood.

All of which is liable to bring pessimism to the social student. The extraction of a written resignation from a candidate by the members of a political party so that they may demand his living up to their principles by that candidate does not work. There is nothing to prevent the candidate denying the authenticity of the resignation, even tho the mass should learn enough of the truth to demand his removal.



The initiative, referendum and recall are no safeguards. The press perverts and twists these makeshifts of popular control to suit themselves. Control of industrial processes—economic power thru industrial organization is the only road that the working class can travel without seeing the pick of their membership lost to them in the battle with the capitalist class.

Social progress and the building of a sane social order can come only thru the initiative and action of the working class themselves and not thru the exaltation of a few egoistic leaders. Social progress depends on the creation of a new social or gregarious viewpoint and the spread of that viewpoint, by means of new organs of communication and industrial power, to the whole working class.

The machinery of that new structure is already in action. It is embodied in the organization of the Industrial Workers of the World. Instead of being structurally based on non-existent township and precinct geographical organization, this organ of the new society is founded on the modern economic development—the industries.

The dominant factors of social life are the economic ones. Revolutionary Industrial Unionism seeks to build up organs for the developing of economic power by the working class; using the power so developed in their every day struggle for better wages and working conditions and perfecting their organs so that when the evident inefficiency of the present political economic system of disorganization brings the world to chaos the workers may rescue civilization.

Then may be built up a new world not based on outworn ideas of political democracy but based on the structure of the modern economic organizations. Industrial Democracy—the rule of the Industrial Workers of the World is the future society. Active membership in the Industrial Workers of the World is the one working class activity that will not prove waste effort. (The structure of this organization will be viewed later in comparison with other economic organizations.)

SIGNING THE DEATH WARRANT OF CAPITALISM (From the "Liberator")

# The Communist International to the I. W. W.

## *An Appeal of the Executive Committee of the Third International at Moscow*

COMRADES AND FELLOW WORKERS:

The Executive Committee of the Communist International in session at Moscow, the heart of the Russian Revolution, greets the revolutionary American proletariat in the ranks of the Industrial Workers of the World.

Capitalism, ruined by the World War, unable any longer to contain within itself the tremendous forces it has created is breaking down.

The hour of the working class has struck. The Social Revolution has begun, and here, on the Russian plain, the first vanguard battle is being fought.

History does not ask whether we like it or not, whether the workers are ready or not. Here is the opportunity. Take it-and the world will belong to the workers; leave it—there may not be another for generations.

**Now is no time to talk of "building the new society within the shell of the old." The old society is cracking its shell. The workers must establish the Dictatorship of the Proletariat, which alone can build the new society.**

An article in the ONE BIG UNION MONTHLY, your official organ, asks, "Why should we follow the Bolsheviks?" According to the writer, all that the Bolshevik Revolution in Russia has done is "to give the Russian people the vote."

This is, of course, untrue. The Bolshevik Revolution has taken the factories, mills, mines, land and financial institutions out of the hands of the capitalists, and **transferred them to the WHOLE WORKING CLASS.**

We understand, and share with you, your disgust for the principles and tactics of the "yellow" Socialist politicians, who, all over the world, have discredited the very name of Socialism. Our aim is the same as yours—a commonwealth without State, without Government, without classes, in which the workers shall administer the means of production and distribution for the common benefit of all.

We address this letter to you, fellow-workers of the I. W. W., in recognition of your long and heroic services in the class war, of which you may have borne the brunt in your own country, so that you may clearly understand our Communist principles and program.

We appeal to you, as revolutionists, to rally to the Communist International, born in the dawn of the World Social Revolution.

We call you to take the place to which your courage and revolutionary experience entitles you, in the front ranks of the proletarian Red Army fighting under the banner of Communism.

### Communism and the I. W. W.

The American Capitalist class is revealing itself in its true colors.

The constantly rising cost of living, the growing unemployment, the savage repression of all efforts of the workers to better their condition, the deportation and imprisonment of "Bolsheviks," the series of anti-strike laws, "criminal syndicalist" laws, "red flag" laws, and laws against propaganda advocating the "forcible overthrow of government and the unlawful destruction of property"—all these measures can have but one meaning for every intelligent worker.

BUT NOW THE CAPITALISTS OF THE WORLD—THE AMERICAN CAPITALISTS AS WELL AS THOSE OF FRANCE, ITALY, ENGLAND, GERMANY, ETC., ARE PLANNING TO REDUCE THE WORKERS ONCE FOR ALL TO ABSOLUTE AND HOPELESS SERFDOM.

**Either this, or the Dictatorship of the Working Class**—there is no other alternative. And the workers must choose **now.**

Capitalism is making desperate efforts to reconstruct its shattered world. The workers must seize by force the power of the State, and reconstruct society in their own interests.

### The Coming Slave State

Before the American Civil War, the Negro slaves of the South were bound to the land. The industrial capitalists of the North, who needed a floating population to operate their factories, declared slavery to be an outrage, and abolished it by force. Now the industrial capitalists are attempting to bind the workers to the factories.

In every country, during the world war, it was practically forbidden for the workers to strike, or even to stop work. You will remember the "Work or Fight" laws in your own country.

And now that the war is over, what has happened? The cost of living has gone up and up, while the capitalists have actually tried to reduce wages. And when the workers, faced by starvation, are forced to strike, the whole power of the State is mobilized to drive them back to the machines. When the railway shopmen walked out, the United States Marshal of California threatened to bring in Federal troops to force them to work. When the Railroad Brotherhoods demanded higher wages or the nationalization of the railways, the President of the United States menaced them with the full armed power of the Government. When the United Mine Workers laid down their tools, thousands of soldiers occupied the mines, and the Federal Court issued the most sweeping injunction in history, forbidding the Union leaders from sending out the strike order or in any way assisting in conducting the strike, and forcibly preventing the payment of strike-benefits. And finally, the Attorney General of the United States declared officially that the Government would not permit strikes in "industries necessary to the community."

Judge Gary, head of the Steel Trust, can refuse the demand of the President of the United States to meet a committee of his workers. But when the steelworkers dare to go on strike for a living wage and the elementary right to join a Union, they are called Bolsheviks and shot down in the streets by the Pennsylvania Cossacks.

And you, fellow-workers of the I. W. W., with your bitter memories of Everett, of Tulsa, of Wheatland, of Centralia, in which your comrades were butchered; with—your thousands in prison—you who nevertheless must do the "dirty work" in the harvest-fields, on the docks, in the forests—you must see plainly the process by which the capitalists, by means—of their weapon, the State, are trying to inaugurate the Slave Society.

Everywhere the capitalist cry: "More production! More production!" In other words, the workers must do more work for less wages, so that their blood and sweat may be turned into gold, to pay the war-debts of the ruined capitalist world.

In order to accomplish this the workers must no longer have the right to leave their jobs; they must be forbidden to organize so that they may be able to wring concessions from the bosses, or profit by capitalist competition. At all costs the Labor Movement must be halted, and broken.

To save the old system of exploitation, the capitalists must unite, and chain the workers to the machines of industry.

### Or the Social Revolution

Will the capitalists be able to do this?

They will, unless the workers declare war on the

whole capitalist system, overthrow the capitalist governments, and set up a Government of the working class, which shall destroy the institution of capitalist private property and make all wealth the property of all the workers in common.

This is what the Russian workers have done, and this is the ONLY WAY for the workers of other countries to free themselves from industrial slavery, and to make over the world so that the worker shall get ALL HE PRODUCES, and nobody shall be able to make money out of the labor of other men.

But unless the workers of other countries rise against their own capitalists, the Russian Revolution cannot last. The capitalists of the entire world, realizing the example of the danger of Soviet Russia, have united to crush it. The Allies have quickly forgotten their hatred for Germany, and have invited the German capitalists to join them in the common cause.

And the workers of other countries are beginning to understand, in Italy, Germany, France and England the tide of Revolution is rising. In America, too, even the conservative members of the A. F. of L. are realizing that strikes for higher wages and better conditions don't mean anything, because the cost of living is always higher and higher. They have proposed all sorts of remedies, reforms, such as the Plumb Plan, nationalization of mines, etc. They have founded a so-called "Labor Party," which works for municipal and Government ownership of industry, more democratic electoral machinery, etc.

But these reforms would not solve the problem, even if they could be achieved. SO LONG AS THE CAPITALIST SYSTEM EXISTS, THE SAME MEN WILL BE MAKING MONEY OUT OF THE LABOR OF OTHERS. ALL REFORMS OF THE PRESENT SYSTEM OF SOCIETY SIMPLY FOOL THE WORKER INTO BELIEVING THAT HE ISN'T BEING ROBBED AS MUCH AS HE WAS BEFORE.

The Social Revolution has begun, and the first battle is on in Russia. It will not wait for the Workers to experiment with reforms. The capitalists have already destroyed the Hungarian Soviet Republic. If they can dominate and break the Labor movement in the other countries, then will follow an industrial Slave State.

BEFORE IT IS TOO LATE, the class-conscious workers of the world must prepare to meet the shock of the capitalist assault, to attack and destroy capitalism, and root it out of the world.

**The Capitalist State**

The war and its aftermath have revealed with startling clearness the real function of the capitalist State—with its legislatures, courts of justice, police armies and bureaucrats.

The State is USED to defend and strengthen the power of the capitalists, and to oppress the workers. This is particularly true in the United States, whose constitution was framed by the great merchants, speculators and land-owners, with the deliberate purpose of protecting their class interests against the majority of the people.

AT THE PRESENT TIME THE GOVERNMENT OF THE UNITED STATES IS OPENLY ACTING AS THE WEAPON OF THE CAPITALISTS AGAINST THE WORKERS.

The I. W. W. should realize this more clearly than any other body of workers, for it has been savagely persecuted by the Government—its leaders imprisoned, its papers suppressed, its members deported, jailed on false charges, refused bail, tortured, its headquarters closed, and its propaganda illegal in many States.

Any worker can see this fact with his own eyes. All the people vote for Governors, Mayors, Judges and Sheriffs; but in time of strike the Governor calls in the militia to protect the scabs, the Mayor orders the police to beat up and arrest the pickets, the Judge imprisons the workers for "rioting," "disturbing the peace," and the Sheriff hires thugs as deputies, to break the strike.

Capitalist society all together presents a solid front against the worker. The priest tells the worker to be contented; the press curses him for a "Bolshevik"; the policeman arrests him; the court sentences him to jail; the Sheriff seizes his furniture for debt; and the Poor-House takes his wife and children.

In order to destroy Capitalism, the workers must first wrest the State power out of the hands of the capitalist class. They must not only SEIZE this power, but ABOLISH THE OLD CAPITALIST APPARATUS ENTIRELY.

For the experience of Revolutions has shown that the workers cannot take hold of the State machine and use it for their own purposes—such as the Yellow Socialist politicians propose to do. The capitalist State is built to serve capitalism, and that is all it can do, no matter who is running it.

And in place of the capitalist State the workers must build their own WORKERS' STATE, the Dictatorship of the Proletariat.

**The Dictatorship of the Proletariat**

Many members of the I. W. W. do not agree with this. They are against "the State in general." They propose to overthrow the capitalist State, and to establish in its place immediately the Industrial Commonwealth.

The Communists are also opposed to the "State." They also wish to abolish it—to substitute for the government of men, the administration of things.

But unfortunately this cannot be done immediately. The destruction of the capitalist State does not mean that capitalism automatically and immediately disappears. The capitalists still have arms, which must be taken away from them; they are still supported by hordes of loyal bureaucrats, managers, superintendents, foremen, and trained men of all sorts, who will sabotage industry—and these must be persuaded or compelled to serve the working class; they still have army officers who can betray the Revolution, preachers who can raise superstitious fears against it, teachers and orators who can misrepresent it to the ignorant, thugs who can be hired to discredit it by evil behavior, newspaper editors who can deceive the people with floods of lies, and "yellow" Socialists and Labor fakers who prefer capitalist "democracy" to the Revolution. All these people must be sternly suppressed

To break down the capitalist State, to crush capitalist resistance and disarm the capitalist class, to confiscate capitalist property and turn it over to the WHOLE WORKING CLASS IN COMMON,—for all these tasks a government is necessary—a State, the Dictatorship of the Proletariat, in which the workers, through their Soviets, can uproot the capitalist system with an iron hand.

This is exactly what exists in Soviet Russia today.

BUT THIS DICTATORSHIP OF THE PROLETARIAT IS ONLY TEMPORARY.

We, Communists, also want to abolish the State. The State can only exist as long as there is class struggle. The function of the Proletarian Dictatorship is to abolish the capitalist class as a class; in fact, do away with all class divisions of every kind. And when this condition is reached then the PROLETARIAN DICTATORSHIP, THE STATE, AUTOMATICALLY DISAPPEARS—to make way for an industrial administrative body which will be something like the General Executive Board of the I. W. W.

In a recent leaflet, Mary Marcy argues that, although the I. W. W. does not theoretically recognize the necessity for the Dictatorship of the Proletariat, it will be forced to do so IN FACT at the time of

the Revolution, in order to suppress the capitalist counter-revolution.

This is true, but unless the I. W. W. acknowledges beforehand the necessity of **the Workers' State,** and prepares for it, there will be confusion and weakness at a time when firmness and swift action are imperative.

### The Workers' State

What will be the form of the Workers' State?

We have before us the example of the Russian Soviet Republic, whose structure, in view of the conflicting reports printed in other countries, it may be useful to describe briefly here.

The unit of government is the local Soviet, or Council, of Workers', Red Army, and Peasants' Deputies.

The city Workers' Soviet is made up as follows: each factory elects one delegate for a certain number of workers, and each local Union also elects delegates. These delegates are elected according to political parties—or, if the workers wish it, as individual candidates.

The Red Army delegates are chosen by military units.

For the peasants, each village has its local Soviet, which sends delegates to the Township Soviet, which in turn elects to the County Soviet, and this to the Provincial Soviet.

Nobody who employs labor for profit can vote.

Every six months the City and Provincial Soviets elect delegates to the All-Russian Congress of Soviets, which is the supreme governing body of the country. This Congress decides upon the policies which are to govern the country for six months, and then elects a Central Executive Committee of two hundred, which is to carry out these policies. The Congress also elects the Cabinet—The Council of People's Commissars, who are heads of Government Departments—or People's Commissariats.

The People's Commissars can be recalled at any time by the Central Executive Committee. The members of all Soviets can be recalled very easily, and at any time, by their constituents.

These Soviets are not only LEGISLATIVE bodies, but also EXECUTIVE organs. Unlike your Congress, they do not make the laws and leave them to the President to carry out, but the members carry out the laws themselves; and there is no Supreme Court to say whether or not these laws are "constitutional."

Between the All-Russian Congresses of Soviets the Central Executive Committee is the SUPREME POWER in Russia. It meets at least every two months, and in the meanwhile, the Council of People's Commissars directs the country, while the members of the Central Executive Committee go to work in the various government departments.

### The Organization of Production and Distribution

In Russia the workers are organized in Industrial Unions, all the workers in each industry belonging to one Union. For example, in a factory making metal products, even the carpenters and painters are members of the Metal Workers' Union. Each factory is a local Union, and the Shop Committee elected by the workers is its Executive Committee.

The All-Russian Central Executive Committee of the federated Unions is elected by the annual Trade Union Convention. A Scale Committee elected by the Convention fixes the wages of all categories of workers.

With very few exceptions, all important factories in Russia have been nationalized, and are now the property of all the workers in common. The business of the Unions is therefore no longer to fight the capitalists, but to RUN INDUSTRY.

Hand in hand with the Unions works the Department of Labor of the Soviet Government, whose chief is the People's Commissar of Labor, elected by the Soviet Congress with the approval of the Unions.

In charge of the economic life of the country is the elected Supreme Council of People's Economy, divided into departments, such as, Metal Department, Chemical Department, etc., each one headed by experts and workers, appointed, with the approval of the Union by the Supreme Council of People's Economy.

In each factory production is carried on by a committee consisting of three members: a representative of the Shop Committee of the Unions, a representative of the Central Executive of the Unions, and a representative of the Supreme Council of People's Economy.

### Democratic Centralization

The Unions are thus a **branch of the government**—and this government is the MOST HIGHLY CENTRALIZED GOVERNMENT THAT EXISTS.

It is also the most democratic government in history. For all the organs of government are in constant touch with the working masses, and constantly sensitive to their will. Moreover, the local Soviets all over Russia have complete autonomy to manage their own local affairs, provided they carry out the national policies laid down by the Soviet Congress. Also, the Soviet Government represents ONLY THE WORKERS, and cannot help but act in the workers' interests.

Many members of the I. W. W. are opposed to centralization, because they do not think it can be democratic. But where there are great masses of people, it is impossible to register the will of individuals; only the will of majorities can be registered, and in Soviet Russia the government is administered only for the common good of the working class.

The private property of the capitalist class, in order to become the SOCIAL property of the workers, cannot be turned over to individuals or groups of individuals. It must become the property of **all in common,** and a centralized authority is necessary to accomplish this change.

The industries, too, which supply the needs of all the people, are not the concern only of the workers in each industry, but of ALL IN COMMON, and must be administered for the benefit of all. Moreover, modern industry is so complicated and interdependent, that in order to operate most economically and with the greatest production, it must be subject to one general scheme, and one central management.

The Revolution must be defended against the formidable assaults of the combined forces of capitalism. Vast armies must be raised, drilled, equipped and directed. This means centralization. Soviet Russia has for two years almost alone fought off the massed attacks of the capitalist world. How could the Red Army, more than two million strong, have been formed without central directing authority?

The capitalist class has a strongly centralized organization, which permits its full strength to be hurried against the scattered and divided sections of the working class. The class war is war. To overthrow capitalism, the workers must be a military force, with its General Staff—but this General Staff elected and controlled by the workers.

In time of strike every worker knows that there must be a Strike Committee—a centralized organ to conduct the strike, whose orders must be obeyed—although this Committee is elected and controlled by the rank and file. SOVIET RUSSIA IS ON STRIKE AGAINST THE WHOLE CAPITALIST WORLD. THE SOCIAL REVOLUTION IS A GENERAL STRIKE AGAINST THE WHOLE

CAPITALIST SYSTEM. THE DICTATORSHIP OF THE PROLETARIAT IS THE STRIKE COMMITTEE OF THE SOCIAL REVOLUTION.

Probably the coming proletarian revolutions in America and other countries will develop new forms of organization. The Bolsheviki do not pretend that they have said the final word in the Social Revolution. But the experience of two years of Workers government in Russia is naturally of the greatest importance, and should be closely studied by the workers of other countries.

### Politics

The word "politics" is to many members of the I. W. W. like a red flag to a bull—or a capitalist. Politics, to them, means simply politicians—usually "yellow" Socialist candidates trying to catch votes to elect them to some comfortable office, where they can comfortably forget all about the workers.

These "anti-political" fellow-workers oppose the Communist because they call themselves a "political party," and sometimes take part in political campaigns.

This is using the world "politics" in too narrow a sense. One of the principles upon which the I. W. W. was founded is expressed in the saying of Karl Marx, "EVERY CLASS STRUGGLE IS A POLITICAL STRUGGLE." That is to say, every struggle of the workers against the capitalists, is a struggle of the workers for the POLITICAL power—the State power.

This is using the word "politics" in too narrow a use the word "politics."

The "yellow" Socialists believe that they can gradually gain this political power by using the political machinery of the capitalist State to win reforms, and when they have elected a majority of the members of Congress and the Legislatures, and the President, Governors, Mayors and Sheriffs, they can proceed to use the State power to legislate capitalism peacefully out, and the Industrial Commonwealth in.

This leads the "yellow" Socialists to preach all sorts of reforms of the capitalist system, draws to their ranks small capitalists and political adventurers of all kinds, and finally causes them to make deals and compromises with the capitalist class.

The I. W. W. do not believe in this, and NEITHER DO THE COMMUNISTS.

We, Communists, do not think that it is possible to capture the State power by using political machinery of the capitalist State. The State being the particular weapon of the capitalist class, its machinery is naturally constructed so as to defend and strengthen the power of capitalism. Capitalist control of all agencies molding public opinion—press, schools, churches, and Labor fakers, capitalist control of the workers' political conduct through control of their means of living, make it extremely improbable that the workers under the present capitalist "democracy" could ever legally elect a government devoted to their interests.

And at this time when the capitalist class the world over is launching a desperate campaign of repression against all conscious working class organizations, it is unthinkable.

But even if it were possible for the workers to win the State power by means of the political machinery, the capitalist State could never be used to introduce the Industrial Commonwealth. The real source of capitalist power lies in CAPITALIST OWNERSHIP AND CONTROL OF THE MEANS OF PRODUCTION. The capitalist State exists for the purpose of protecting and extending this ownership and control—it cannot therefore be used to destroy it.

So far the Communists and the I. W. W. are in accord. The capitalist State must be attacked by DIRECT ACTION. This, in the correct meaning of the word, is also POLITICAL action, for it has a POLITICAL aim—the seizure of State power.

The I. W. W. proposes to attain this end by the General Strike. The Communists go farther. History indicates clearly that the General Strike is not enough. The capitalists have arms—and the experience with White Guards in Russia, Finland and Germany proves that they have sufficient organization and training to use these arms against the workers. Moreover, the capitalists possess stores of food, which enable them to hold out longer than the workers, always on the verge of actual want.

The Communists also advocate the General Strike, but they add that it must turn into **ARMED INSURRECTION.** Both the General Strike and the insurrection are forms of POLITICAL ACTION.

### Revolutionary Parliamentarism

If this is so, if the Communists do not believe in capturing the State power by means of the ballot-box, why do the Communist Parties participate in elections, and nominate candidates for office?

The question of whether or not Communists should participate in elections is of secondary importance. Some Communist organizations do others do not. But those who DO act on the political field, do so only for PROPAGANDA. Political campaigns give an opportunity for revolutionists to speak to the working class, pointing out the class character of the State and THEIR class interests as workers. They enable them to show the futility of reforms, to demonstrate the real interests which dominate the capitalist—and "yellow" Socialist—political parties, and to point out why the entire capitalist system must be overthrown.

Communists elected to Congress or the Legislatures have as their function to make propaganda; to ceaselessly expose the real nature of the capitalist State, to obstruct the operations of capitalist government and show their class character, to explain the futility of all capitalist reform measures, etc. In the halls of the legislative assembly, against the sounding-board of the Nation, the Communist can show up capitalist brutality and call the workers to revolt.

Karl Liebknecht showed what a Communist in the Parliament can do. His words, spoken in the German Reichstag, were heard around the world.

Others in Russia, in Sweden (Hoglund) and in other countries, have done the same thing.

The most common objection to electing candidates to capitalist legislatures, is that, no matter how good revolutionists they are, they will invariably be corrupted by their environment, and will betray the workers.

This belief is born of long experience, chiefly with Socialist politicians and Labor Fakers. But we, Communists, say that a REALLY REVOLUTIONARY PARTY WILL ELECT REAL REVOLUTIONISTS, AND WILL KNOW HOW TO KEEP THEM UNDER ITS CONTROL.

Many members of the I. W. W. are bitterly opposed to making ANY use of legislatures and other Government institutions for purposes of propaganda. But the I. W. W. as an organization has often used them. In the Lawrence Strike of 1912 the I. W. W. made good use EVEN OF VICTOR BERGER, THE SOCIALIST CONGRESSMAN, who advertised the strikes and the I. W. W. on the floor of the House of Representatives. William D. Haywood, Vincent St. John, and many other I. W. W. leaders voluntarily testified before the Industrial Relations Commission of the United States Government, using this method to make propaganda for their organization. But the most striking example of using the political machinery of the State for purposes of propaganda occurred in 1918, when the

Federal Court in Chicago was turned into a three-months-long I. W. W. agitation meeting—extremely valuable for us—by one hundred I. W. W. leaders on trial there.

These are all cases of using the political machinery of the capitalist State to make revolutionary propaganda among the masses. This method of propaganda should be used as circumstances dictate—as should parliamentarian action. NO weapon should be totally condemned.

The special and particular business of the I. W. W. is to train the workers for the seizure and management of industry. The special function of the Communist political party is to train the workers for the capture of political power, and the administration of the Proletarian Dictatorship. All workers should at the same time be members of the revolutionary industrial union of their industry, and of the political party which advocates Communism.

**The Social Revolution and the Future Society**

The aim of the I. W. W. is "to build the new society within the shell of the old." This means, to organize the workers so thoroughly that at a given time the capitalist system will be burst asunder, and the Industrial Commonwealth, fully developed, shall take its place.

Such an act requires the organization, and discipline, of the great majority of the workers. Before the war there was reason to believe that this might be feasible—although in the fourteen years of its history the I. W. W. had been able to organize comparatively only a small fraction of the American workers.

But at the present time such a plan is utopian. Capitalism is breaking down, the Social Revolution is upon us and HISTORY WILL NOT WAIT UNTIL THE MAJORITY OF THE WORKERS ARE ORGANIZED 100% ACCORDING TO THE PLAN OF THE I. W. W. OR ANY OTHER ORGANIZATION. There is no longer before us the prospect of normal industrial development which would alone allow the carrying out of such a plan. The War has hurled the peoples of the world into the great Cataclysm, and they must plan for IMMEDIATE ACTION—not for the working out of schemes which would take years to accomplish.

The new society is not to be built, as we thought, within the shell of the capitalist system. We cannot wait for that. THE SOCIAL REVOLUTION IS HERE. And when the workers have overthrown capitalism and have crushed all attempts to re-establish it, then, at their leisure, through their Soviet State, they can build the new society in freedom.

In the face of the Social Revolution, what is the immediate important work of the Industrial Workers of the World?

They, as the most important organization based on revolutionary Unionism in America, should take the initiative in trying to establish a basis for the uniting in one organization of all Unions which have a class-conscious revolutionary character, of all workers who accept the class struggle—such as the W. I. I. U., the One Big Union, and certain insurgent Unions in the A. F. of L. This is no time to quibble about a name or minor questions of organization. The essential task is to draw together all workers capable of revolutionary mass action in time of crisis.

They, as revolutionists, should not repel the attempts of the American Communists to come to an agreement with them for common revolutionary action. The political party and the economic organization must go forward shoulder to shoulder toward the common goal—the abolition of capitalism by means of the Dictatorship of the Proletariat and the formation of Soviets, and the disappearance of classes and the State.

The Communist International holds out to the I. W. W. the hand of brotherhood.

January, 1920.

RECEPTION TO THE ENGLISH LABOR DELEGATION IN MOSCOW, 1920

# The Communist Party and Industrial Unionism

BY G. ZINOVIEV.
(President of the Third International)

## THE PURPOSE AND STRUCTURE OF INDUSTRIAL ORGANIZATION.

To arrive at a clear understanding of the proper relationship of the Communist Party and the workers' industrial organizations, one must first examine the purpose and structure of industrial organization.

According to Webb, the aim "is to maintain and increase the standard of wages." Brentano and Sombart say that the object is "to subsidize the members in time of strike, and to safeguard their interests by increasing their wages."

The Bolshevik* Party has never given its adhesion to these phrases. It has never aproved the formula generally accepted by the Second International. This was defined by a well-known Austrian militant industrialist, Adolf Braun, as the organization of the workers "in permanent craft or Trade Unions of wage earners, with the object of securing ameliorations of working conditions within the limits of the capitalists system, and to fight within those limits to prevent conditions growing worse."

In its controversy with the Menshiviki in 1913, the Bolshevik* Party laid down that the workers should be organized in a Union covering the entire industry, not merely a sectional craft trade within the industry.

The Communist Party declared that the Industrial Unions should conduct the economic fight of the workers, and should constantly collaborate with the workers' political party in the working class struggle for emancipation, the abolition of wage slavery, and the victory of Socialism.

For this reason the Bolshevik Party has never considered the Industrial Union as an organization aspiring only to secure some reforms and ameliorations of working conditions within the limits of capitalist society. On the contrary, the Bolshevik Party, in complete accord with the doctrine of Marx, has always seen that the Industrial Union is one of the most important organizations of the working class; one that has been created for the fight for Socialism in intimate collaboration with the political party, and one that, in consequence, is favorable to the dictatorship of the proletariat.

Since 1913 important changes have come about in Russia. The power has passed into the hands of the working class. The bourgeoisie as been expropriated; the workers are no longer obliged to sell their labor power to the divers exploiting employers.

If we consider that fact, it immediately becomes clear to us that the functions of the Industrial Unions in Russia are subject to important modifications.

## A STATEMENT BY THE ALL-RUSSIAN CONGRESS OF TRADE UNIONS.

The resolution adopted at the First All-Russian Congress of Trade Unions in 1918 is as follows:—

"The October Revolution, which transferred the power from the bourgeoisie to the workers and poor peasants, has created entirely new conditions for all the workers' organizations, and especially for the Industrial Unions.

"Under the changed conditions, the industrial organization can no longer be regarded as the advance guard of the fight put up by the worker in selling himself to the employer. The employer who used to buy labor power of old, exists no more. It is no longer necessary for the Unions to collect strike funds or to organize strikes.

*Now the Communist Party of Russia.

## THE PRESENT FUNCTIONS OF RUSSIAN TRADE UNIONS.

What are the real functions of the industrial organizations in Russia today?

The same resolution of the First All-Russian Congress of Industrial Unions says on this point:—

"The Unions must now transfer their center of gravity to economic reconstruction."

To explain what an industrial organization really is under the conditions now obtaining in Russia, one is first obliged to make clear that:—

"An Industrial Union in Russia today is a permanent union of all the workers in a given industry; it represents one of the principal bases of the organization of the Dictatorship of the Proletariat.

"The Industrial Union today (under the guidance of the Communist Party) transfers its center of gravity to the domain of economic organization, by making its aim an energetic participation in all the efforts of the workers for a Communist reconstruction of society and for the abolition of social classes. This participation takes the following forms:—

"(1) General co-operation in the organization of production on a Communist basis.

"(2) The re-establishment of the productive power of the country, which was destroyed by the war and the internal crisis.

"(3) The calculation and redistribution of labor for the entire country.

"(4) The organization of the exchange between town and country.

"(5) The introduction of the obligation to work.

"(6) Helping the State Departments to provide food.

"(7) Helping to solve the fuel crisis and other difficulties.

"(8) Giving general aid to the formation of the Red army.

"(9) Defending the economic interests of the workers, and at the same time fighting against the individualist tendencies, and the short-sighted views of that section of the workers which, because of its ignorance, still retains the habit of regarding the Proletarian state of today as though it were the old employer.

"Because the industrial organizations of today are the Communist schools of the proletarian and semi-proletarian masses, they have become, little by little, an integral part of the general mechanism of the state. They are one of the organs of the state of working people who submit to the rule of the Soviets because the Soviets are the vehicle indicated by history for the Dictatorship of the Proletariat."

## THE COMMUNIST PARTY AND THE SOVIETS.

The Industrial Unions work in conjunction with the Communist Party and the Soviets. The activities of these three institutions are closely linked. To make clear the relations of these bodies, it must be remembered that the Soviets actually include larger masses than the Industrial Unions themselves; also that the Soviets have taken over part of the functions of the Industrial Unions.

The Eighth Congress of the Russian Communist Party has given the following definition of the party and of the Soviets:—

"The Soviets are the state organizations of the workers and poor peasants which effectuate the Dictatorship of the Proletariat during the period when the state in all its forms is gradually being extinguished. The Soviets unite within their ranks ten million workers, and, little by little, must strive to

(Continued on Page 34).

Ballot Committee.

include the entire class of workers and poor peasants.

"The Communist Party, on the other hand, is an organization which takes in only the advance guard of the workers and poor peasants; only that part of these two classes which fights consciously for the practical application of the Communist program. The aim of the Communist Party is to obtain a preponderating influence and complete control of all the workers' organizations, the Industrial Unions, the Co-operatives, the rural Communes, and so on. The Communist Party strives especially to introduce its program into the actual organizations of state—the Soviets—and to obtain complete control there. No doubt can exist that in the future the various existing organizations of the workers will be finally united in one form. It is useless to speculate today as to which form will prove the most durable. Our present duty is to determine precisely between the Communist Party, the Industrial Unions, and the Soviets.

## THE THEORY OF THE EQUALITY OF RIGHTS.

Even amongst the more hopeful section of the old International, the opinion was very prevalent that the Communist Party on the one hand, and the Industrial Unions on the other hand, were organizations of equal value—having the same rights —organizations which collaborate on important questions of all kinds, like two contracting parties. The Socialist Party should control the political side, while the Industrial Unions controlled the economic side. Thus, for example, the German Social-Democrats passed a resolution, supported even by August Bebel, stating that if it should ever be necessary to employ the weapon of the general strike, this question could only be decided by a conference between the executive of the party and the general committee of the Trade Unions.

From the Communist viewpoint this opinion cannot be recognized. The equality of rights theory has always been disputed by the revolutionary Marxians.

From the revolutionary Marxian viewpoint, the Communist Party is the ultimate reunion of all phases of the struggle of the working class for freedom from the capitalist yoke. The Communist Party makes use of a whole arsenal of arms to win this fight. The political struggle is indissolubly bound up with the economic struggle. The Communist Party shows the way for the economic as well as the political struggle. The Communist Party is the advance guard of the proletariat. By the torch of Communism it lights up all the turnings of the road leading to the emancipation of the workers. On this account, the work which the Communists are doing in the Industrial Unions is but a fraction of the work which the Communist Party, as such, are doing.

During a period of dictatorship like that we in Russia are now passing through, one can still less think of any compromise with the equality of rights theory. The least deviation in this direction must be strenuously fought, in theory as well as in practice.

## THE "NON-PARTY" TRADE UNIONS.

The present Industrial Unions are not necessarily under the Communist Party. All workers, both men and women, are received into them irrespective of their party or creed. A worker who does not belong to the Party has the full right to join our Industrial Unions. But on that account, Communists who work in the Industrial Unions should not fail to pay attention to the conservative character of the members who do not belong to the Party. The Communists, and the Communist group, in the Industrial Unions must preach Communism openly. The leaders of the Industrial Unions must constantly draw the attention of the workers to this fact that the enemies of Communism, not belonging to the Party, are trying to deceive them. They should explain to the workers why the Industrial Unionists, while they are not formally members of our Party, always help the Communist Party, recognizing the Dictatorship of the Proletariat, and defending the Power of the Soviets and the World Revolution.

## THE MODREN TRADE UNION MOVEMENT.

The modern Industrial Unions are doing an enormous work, and they greatly facilitate the struggle for Socialism made by the Communist Party and the Soviets. But, at the same time, there is, during our transition, a dark side to the activity of the Industrial Unions. For example, some branches of the Dock Laborers' Union on the Volga support the wage demands of their short-sighted individual members (without even having helped the Soviets in their fight against the incredible thefts which have been committed by the dockyard workers); they prove they are very much behind the times, and that they are incapable of rising above the narrow interests of their group. When certain associations of clerks and other similar commercial associations introduce people into the Soviet institutions, who are not fit to do the work which is entrusted to them, and when these associations take up the demands of their members, forgetting that they no longer have to deal with employers, but with the Proletarian State, they also prove their Trade Unions' narrowness. The fight against the negative parties of the working class movement is one of the chief duties of the Communists in the Industrial Unions.

## CONCESSIONS TO INDUSTRIALISM.

At a time when the best elements in French Syndicalism are abandoning their former errors, and moving towards Communism in laying down the principle: "All power to the Workers' Councils," there are working class groups and circles in Russia which are trying to revive the worst features of syndicalism. **The famous Left Wing Social Revolutionary Party recently adopted a resolution demanding the transfer of the whole administration of industry and transport to the Central Committee of the Industrial Unions. It further proposed that common action should be taken by that committee and the industrial organizations of the whole world for the entire management of the Social Revolution and the world control of industry and transport by a combine of Industrial Unions.** (This is practically the position taken by the I. W. W.—Ed.) The Communists who work in the Industrial Unions should strongly oppose syndicalist tendencies of this kind.

## SO-CALLED "INDUSTRIALISM."

It is equally necessary to turn against the tendencies known by the name of "industrialism," which are defended by some members of the Russian working class movement who are members of the executive committee of the All-Russian Metallurgical Union.

The industrialists want to erect our entire edifice on the skilled workers, and to put aside the whole mass of unskilled workers. Doubtless the war and the revolution have led to many fundamental changes in the social structure of the proletariat itself. There is no possible doubt about it. The factory worker of today is certainly the most developed of the proletariat. But in no case can it be the task of the Communists, men of the working class, only to elect skilled workers, who form a minority of the working class. The Communist ideas have nothing in common with the propagation of the working class aristocracy. On the contrary, the task of the Communists, of the people in the work-

ing class movement, consists in helping the most advanced sections of the industrial workers to organize little by little, the whole mass of the proletariat, including the unskilled workers, and to include them in the constructive work of the state. The policy of industrialism, which at first sight appears to be radical, is, in practice, only the opportunist policy of the leaders of the working class aristocracy. When all is said and done, this policy will be the same as that of the social traitors.

### STATE TRADE UNIONS.

The All-Russian Trade Unions' Congress in cess which is taking place in the Trade Unions will January, 1918, declared its conviction that the prolead to t heir transformation into departments of the Socialist state, and, at the same time, Trade Union membership will be a state obligation for all the workers who belong to the same branch of industry." (Par. 9 of the resolution.)

This conviction of the All-Russian Congress is based on facts. The Industrial Unions are gradually assuming the attributes of state departments. They really work as a veritable department of the state when they mobilize all their members, when they concentrate workers in a given town, when they transfer the workers from one part of Russia to another, when they give their vote on a question of wages, when they exercise, by means of their representatives, a decisive influence on the activity of the Supreme National Ecomonic Council.

And just because this transformation of Industrial Unions into state departments takes place gradually, and quite normally, there is no present necessity of forcing this process, there is no need to proclaim from one minute to another the transformation of Industrial Unions into state departments. The Communists who work in the Industrial Unions have every reason for adhering to the resolution of the First and Second All-Russian Trade Unions' Congress in this matter.

### GROUPS, TRADE UNIONS AND LOCAL BRANCHES OF THE PARTY.

In every Industrial Union there should be a Communist section, strongly organized and disciplined in order that each section may propagate the same economic policy as that of the Central Communist group, which is in the All-Russian Trade Unions' Council. No concession to what is called "Localism" should be made. Wages, hours of labor, food questions and so on should all be considered from the all-Russian point of view. Each Communist group within an Industrial Union is merely a kernel of the local branch of the Communist Party. The local committee of the Party completely dominates the Industrial Union branch of the town, while the Central Committee of the party controls, by its dominating influence, the All-Russian Committee of the Industrial Unions.

The Communist Party is the force to be counted on in mobilizing the workers for industry and for the Red army. The Committee of the party comes to an understanding with the Communist groups in the Industrial Unions. The Communist Party directs all the constructive side of the Trade Union activity, but it takes care that this direction shall never be of a domineering character.

### ORGANIZATION OF THE RURAL WORKER.

One of the most important tasks of the working class movement at present in Russia is the organization of the rural workers. It is necessary to help the already existing organizations of the workers by all possible means. The Communists working in the working class movement should consider it an honor to organize the rural workers. This task requires a good deal of energy and power.

### THE TRADE UNIONS AND THE INTERNATIONAL.

In consequence of certain peculiarities in the evolution of the working class movement in Western Europe, a false conception exists about the Trade Unions among the German Communists and the Communists of other countries. Our party believes that we cannot do without the Trade Unions. During the proletarian revolution, the Trade Unions will split up in the same way as the old Social-Democratic parties have done. The experiences of the German working class movement showed us that already the Berlin Trade Unions are freeing themselves from the pernicious influence of the social-democracy of Scheidemann.

**The Russian Trade Union movement should take the initiative in creating a Red Trade Union International, in the same way as the political party has** done in the political field. At the Congress of the Red International, not only should the organizations of the party be represented, but also the organizations of the Workers' Councils, the Co-operative societies, and the Communist Trade Unions which approve of the Dictatorship of the Proletariat and the Soviets. Meantime it is necessary to create an International Union to take their stand in the Communist International.

HIS SLUMBER DISTURBED

# All Russian Union of Workers in the Food Manufacturing Industry

PUBLISHED BY THE ALL-RUSSIAN CENTRAL COUNCIL OF TRADE UNIONS. MOSCOW, 1920.

*(Editor's note: — The following official account of the activities of the union of the foodstuff workers in Russia has just reached here. It covers the time immediately before and during the revolution and describes how this union under the soviet regime is gradually growing into the food manufacturing organ of the Russian people. The story should be an inspiration and a lesson to the same workers in this country to hurriedly change from craft unionism to the industrial form, in order that these workers may be able to feed the people when the big crash comes and for ever thereafter. The fate of all of us rests largely in the hands of the food stuff workers.)*

Strikes broke out among the bakers and confectioners even prior to 1900. These strikes were very often accompanied by terrorism directed against scabs and employers. After 1900 the bakers and confectioners began to organize themselves in illegal unions.

In 1904 the first bakers' strike broke out in Petrograd. The strike was badly organized, was accompanied by sabotage which expressed itself in the destruction of ovens, the spoiling of dough and flour, the breaking of the windows of the bakeries and shops and even the killing of their owners.

The revolution of 1905 gave a strong impetus to the development of the labour movement among the workers of the food manufacturing industry. A great strike movement commenced and, simultaneously with this, unions of workers in this branch of industry sprang up all over Russia. All these unions were of a craft character: bakers, confectioners, sausage-makers, tea-weighers, millers and so on, all formed their own separate unions. The strongest of these was the bakers' union.

The strike movement led by the unions now assumed an organized character. It should be observed that the Petrograd strike in June 1906 was the best organized strike in the history of the trade union movement in Russia. All the bakers and confectioners of the whole Government of Petrograd (Petrograd Tsarskoe Selo, Pavlovsk, Schlusselburg, Luga, Kronstadt, Gatchina, etc.), to the number of 30,000 workers, went on strike. The strike was brilliantly won after a two weeks' struggle. The general bakers' strike in the Petrograd province which broke out in 1907 ended however, in the complete defeat of the union by the Government and in the arrest of two hundred of the most active workers.

In other towns in Russia the labour movement among food workers developed chiefly among bakers and confectioners. Unions of workers in other branches of industry existed only in a very few places: thus a union of millers existed in Ekaterinslav and Nijni-Novgorod and unions of tea weighers existed in Moscow, Odessa and Tchelabinsk. Attempts were made to organize unions (unregistered) of fishermen in Astrakhan and of workers in the butter industry in Kazan and other places.

In 1906 the first attempts were made at creating national unions in separate branches of the food industry. In that year an All-Russian Conference of Tea Weighers was convened at which representatives from Moscow, Odessa, Tchelabinsk and Ekaterinburg were present. This Conference passed a number of resolutions amongst which special attention must be drawn to the resolution on the 8-hour day, on the establishment of a central strike committee, on the abolition of searchings and fines, on the standard of tea weighing, etc.

In 1907 the Petrograd Bakers' Union received an invitation to the International Congress of Bakers in Stuttgart but the delegate who was elected did not succeed in crossing the frontier.

During 1906 and 1907 the Bakers' Union in Petrograd issued a journal "The Voice of the Baker and Confectioner" and the Union of Confectioners and Chocolate Makers issued the "Confectioner." In Moscow a journal entitled "The Baker" was published.

Nothing can be said of the growth and development of the movement between 1908 and 1912 because this was the period in which the trade union movement among the food manufacturing workers was completely dissolved. Alongside with the wholesale closing down of unions in the food industry as well as in other industries proceeded the annulment of all the economic gains so that by 1912 only the memory remained of the gains previously secured after long and difficult struggle. Towards 1912 illegal bakers' unions existed only in nineteen towns and only in Moscow was there a union of the confectioners besides that of the bakers.

In 1912 a revival began in the bakers' and confectioners' unions particularly in Petrograd where during that year they published a trade union journal (15 numbers).

During 1913 and 1914 the idea arose of convening a national Congress of Bakers and Confectioners but it was fated not to be realized, as the outbreak of the imperialist war in 1914 led to the wholesale closing down of unions and the arrest of hundreds of the best workers.

During the war the trade unions of bakers and other food producing industries were everywhere broken up. Only in the revolutionary centers like Petrograd and Moscow, did bakers' confectioners' and tea-weighers' unions exist. In Petrograd the union existed illegally. These unions maintained a definite anti-militarist position and their leaders belonged to the left wing of the labour movement.

The February Revolution opened wide the door to the trade union movement and aroused the workers of the food manufacturing industry to exert their organizing power. In every town separate bakers' and confectioners', sausagemakers, millers, confectioners and other unions were formed.

From the first days of the February revolution arose the idea in the Bakers' Trade Union movement of uniting all workers employed in the food manufacturing industry into one union. The call from craft unions to one big union became very prominent. In many towns such as Samara, Irkutsk, Krasnojarsk, Petrograd, Rostov-on-Don, this amalgamation took place from the first day of the Revolution.

On the Volga and the Upper-Volga a Union of Millers arose which rallied round itself all the millers from Jaroslav, Kostroma, Ribynsk and Kineshma.

In the South of Russia the food producers' and workers' unions during this period presented a kaleidoscopic picture of craft unions.

From the very first months of the revolution the food workers' unions were confronted with the con-

crete question as to what their immediate aim should be, government by bourgeois coalition or labour dictatorship. They did not hesitate for a moment and everywhere in overwhelming majorities they expressed their active support to labour dictatorship. Compromising tendencies among the food workers were extremely weak.

In June 1917 three unions in Petrograd—Bakers-Millers, Sausage-Makers and Confectioners—amalgamated into one union. Immediately after this amalgamation, the question arose as to the necessity of an All-Russian Union of Food Workers headed by a single All-Russian center. For this purpose a special provisional bureau was selected from among the Petrograd unions upon whom the task was imposed of convening an All-Russian conference of food workers' unions which sent out a number of members of the bureau for the purpose of organizing the conference.

In Ekaterinoslav on November 2nd, 1917, a conference of outlying Unions of Food Workers was called at which representatives of 25 South Russian towns representing 20,268 organized workers were present.

The Conference unanimously decided to unite into **a single All Russian Union of Food Workers.** It also by an overwhelming majority passed a resolution severely condemning the Provisional Government and expressed itself for the dictatorship of the proletariat and the necessity of fighting for and supporting the new Labour Government which arose as the result of the October Revolution. Later, a conference was called in South-East Russia, in Rostoff-on-the-Don on November 1st. This Conference also resolved to unite into a national union and passed resolutions supporting the Soviet Government.

The First All-Russian Conference of Food Manufacturing Unions took place in November, 1917. This Conference expressed itself in favour of uniting all workers in the food manufacturing industry into one national union. At this Conference there were present representatives of 43 unions from 39 towns, chiefly from South Russia, representing a membership of 95,951. The unions present represented the following sections of the eight united food workers' unions, with a membership of 39,207; 27 bakers' and confectioners' unions, with a membership of 32,544; 4 millers' unions with a membership of 25,000; 2 brewers' and oil refiners' unions, membership 1,350; 1 cooks' union, 15,000 members; 1 bakers' shop assistants' union with 3,500 members; 1 union of meat preservers and sausage-makers with 450 members. Many unions, owing to political events were unable to send their representatives. Generally, the unions joining the amalgamation had a membership of nearly 120,000.

The Conference greeted the Soviet Government and passed a resolution for the municipalization of all food producing businesses. An All-Russian center—the Provisional All-Russian Council of Food Workers—was elected.

The occupation of the Ukraina by Germany dealt a severe blow to the organization of the unions. As we have seen, most of the representatives at this Conference came from South Russia. With the occupation of Ukraina by Germany, connections with these unions were broken and the majority of the members of the unions remained in the Ukraine. Thus, the All-Russian Union of Food Workers was mutilated at the very beginning of its existence.

In Central Russia there were hardly any food workers' Unions and generally hardly any food manufacturing industry. Those places in which they did exist were occupied by the counter-revolutionaries. The active members of the union were dispersed among different government departments for reorganizing the economic life of the country and were also sent to the front.

The Provisional Council took an active part in the organization of the food making industry. On its initiative an independent Department for the Manufacture of Food Products was opened up in connection with the Chemical Department of the Supreme Council of National Economy. A member of the Provisional Council was at the head of this Department and the Collegiate board was also composed of members of that Department.

At the same time measures were taken to organize unions in the provinces and to amalgamate separate millers', bakers', confectioners', and other unions into one union.

In September 1918 the Provisional Council called the first All-Russian Congress of Millers which decided that all millers should join the All-Russian Federation of Food Workers. The Conference welcomed the nationalization of the milling industry and resolved to create a chief administration of the flour and grain industry to manage it. The Conference also elected its representatives to the Provisional Council. The entire proceedings of the Conference were marked by its unanimous support of the Soviet Government.

During the period of its work the Food Manufacturing Department of the Supreme Council of National Economy, with the participation of the Provisional Council, established an administration of the nationalized undertakings of various branches of the food industry (milling, confectionery and chocolate, fish and meat preserving industry, tea,

The Provisional Council after the addition to it coffee and chicory industry, dairy produce and fish). of new representatives energetically set to work to prepare for the National Congress which took place on January 15th 1919. At the Conference were present representatives from 50 unions representing 100,000 workers.

In the resolution passed by the Congress it is stated that the destiny of the workers organized in the Food Producers' Union is closely connected with that of the Soviet Government and that the members of the union will take all measures to repel the enemies of Soviet Russia. The Congress regarded the organizing of the Food manufacturing industry as the most important task of the Union. A resolution in this connection declares that the form of organization of the organs directing the industry will indicate the solutions of questions of organization in various branches of the food industry.

The Conference finally formed the Union of Food producers and included in its ranks workers and employees of the following branches: 1) millers, 2) macaroni makers, 3) biscuit-bakers, 4) butter and dairy produce workers, 5) confectioners, jam makers and chocolate makers, 6) starch and treacle workers (potato-starch sago, dextrine, treacle and glucose), 7) preserving, meat, fish, fruit, vegetables etc., 8) vegetable and fruit drying, 9) brewing and distilling, 10) egg and milk preserving, 11) sausage making, 12) slaughterers, 13) bacon curers, 14) salting, 15) meat extracts, 16) blood drying, 17) cold storage, 18) fish, 19) coffee, tea and chicory, 20) picklers, 21) beer brewing, 22) kvass and mineral waters 23) oil pressers. The necessity was recognized also for including workers in the sugar refining industry.

The first organizing work of the Central Committee after the Conference was to **complete the amalgamation of all the above indicated industries.** This work was carried out fairly rapidly and at **the present moment there is not a single craft union in the food industry in the whole of Soviet Russia** except in some places in the Ukraine. The second task of the Central Committee was to carry out the resolution of the Congress on the organization of

unions by provinces and to convert the provincial unions into branches of the National Union of Food Workers and the district unions into sub-branches of the provincial branches.

The fall of the Skoropadsky government and the liberation of the Ukraine by the Soviet troops raised the tremendous problem of organizing the Ukrainian food workers. A delegation of the Central Committee was sent to the Ukraine which, together with the Kiev Food Workers' Union, convened an all-Ukrainian Congress of Food Workers which confirmed the resolutions of the first All-Russian Congress. On the instructions of the Central Committee a bureau of the Central Committee was set up in the Ukraine. This Bureau convened a conference of millers which resolved to unite Ukrainian millers in the All-Russian Union of Food Workers. As a concequence of the occupation of the Ukraina by Denikin, however, connection with Ukraine again became interrupted. The Central Committee left two of its members in the Ukraine to carry on illegal work. The liberation of the Ural and Siberia by the Soviet troops opened up for the Central Committee a wide territory in which the food industry is well developed and where there are large numbers of food workers, chiefly millers. The Central Committee delegated several workers by whose assistance the unions which were destroyed by Koltchak are once again arising.

The Central administration of the food manufacturing industry during 1919 succeeded in developing its work to the extent possible under the prevailing conditions of civil war. In its activity the Central Committee was continually brought up against pure questions of organization such as the form of this or that organ of the industry, as well as separate questions of organizing production. For the purpose of solving the questions of production All-Russian Conferences of Millers (2-nd Congress), Starch and Treacle Workers, Sausage Makers, Preservers and Fishermen were called. The Conferences received the reports of the Central Administration, considered the plans of the future work of these administrations and passed resolutions indicating the path which the Central Administrations must follow in their future work. During this period a new department was formed with the co-operation of the Central Committee, viz. the Chief Department for administrating the cold storage business of the Republic.

Tremendous work has been accomplished in regulating wages in the various branches of the food industry. An exact definition of each category of labour and a definite standard of output were worked out and applied. The premium bonus system for millers and the fish industry was introduced.

Much work is being carried out in the sphere of labour protection, in examining the labour conditions in the food manufacturing industry, supplying workers with industrial clothing and granting extra holidays for harmful trades.

The union took an energetic part in mobilizing its members for protecting the Soviet Republic against its surrounding enemies. In many of the food workers' unions, particularly in the Volga towns, nearly all the members stood under arms for the defense of their governments.

**The 2-nd. National Congress of the Food Workers' Union took place on March 17th.—25th. 1920.** For the first time representatives from the whole of the Soviet Republic were present. 174 delegates representing 75 unions and 151,895 organized workers were present. Owing to bad railway communications it was not possible for all the unions to be represented.

The 2-nd. Congress again expressed its unreserved support of the Soviet Government. **The main point on the agenda was the organization of the food manufacturing industry.** A report was submitted from the food manufacturing department of the Supreme Council of National Economy and of all the chief administrative departments of the various branches of the industry. On each report resolutions were carried indicating the path which the Congress thought it necessary for the organization of the industry to follow. The struggle against the economic disorganization must be conducted with the greatest energy by the Unions.

The Congress sent out an appeal to the millers, bakers and other food manufacturing workers of Europe and America.

On March 1st 1920 the National Union had 268 departments, branches and sections, with a membership of 222,389.

In the local unions (provincial and regional departments, district and sub-district branches) there are sections of workers engaged in separate branches of industry. These sections are auxiliary organs of management of the union and all their decisions must be confirmed by the general administration. The sections are engaged chiefly in participating in the organization of their branch of industry and in working out wage rates and standards of output. There are no national sections although their existence was permitted by a resolution at the Congress.

The Central Committee and its local branches participate in the organization of production by delegating its representatives to the administrative collegiate boards of the economic organs which are set up by the consent of the Central Committee.

At the present moment the Central Committee has its representatives in the Chief Flour Department of the Supreme Council of National Economy (3 members out of 4) in the Chief Confectionery Department (all 3) in the Chief Preserving Department (two out of three) in the Chief Fish Department (none although this collegiate board was set up by the consent of the union) the Central Cold-Storage Department (1 out of 3) and the Department for the Manufacture of Food Products (3 out of 4). All the collegiate boards are set up with the consent of the Central Committee.

The predominance of the union representatives on local administrations is even greater than in the center.

The factory administrations are also set up by the consent of the unions (branches and departments). Individual managers are also put forward by the union. The representatives of the union are connected with the union by the presentation of reports on their activity and the joint examination of all questions of organization of production.

The Central Committee published a journal called "The Voice of the Food Workers." The finances of the Central Committee can be described in the following manner: For January, February and March 1920 the amount of contributions received from the departments and branches of the union was 601,121 roubles. Special levies on members—511,532 roubles. The expenses for this period were 588,298 roubles. Grants for the organization of unions in the liberated districts and to various persons and institutions, 575,525 roubles.

On April 1st there were 34,716 roubles in the funds of the union and 74,739 roubles on current account at the National Bank.

The union lives the life of the masses and together with them concentrates its efforts on the organization of labour and industry in the interests of the Soviet Republic, in its defence against foreign and internal enemies and the creation of a new communist society.

**The Central Committee of the Food Workers' and Employees' Union.**

# The All-Russian Trade Union of Civil Servants, Shop Assistants and Clerks

PUBLISHED BY THE ALL-RUSSIAN CENTRAL COUNCIL OF TRADE UNIONS. MOSCOW 1920

*Editor's note: — The following review of the activities of a union counting about* 650,000 *members should cause the same class of workers in this country to stagger. It should be plain by this time that no group of workers can escape the pain and the travail of organizing. The collapse of capitalism is imminent and still this class of workers here in America have hardly made a move to prepare themselves for the responsibilities which will inevitably be theirs in a very short time. Our clerks are inviting a catastrophy by their failure to prepare for the great roll they are soon destined to play.)*

At the present moment our Trade Union includes all clerks, independent of their profession, working in the distributive and supplying organs (food distribution organs, co-operatives &c.) and in all Soviet institutions (commissariats, soviets, councils of national economy, "Centers" &c.), with the exception of the Commissariat of the Means of Communication and of Posts and of Telegraphs, the employees of which form part of the corresponding industrial unions.

Before the October revolution of 1917 there existed in all the Russian towns unions of shop assistants and clerks organized after the overthrow of czarism. The fusion of these single unions into one big union on an All-Russian scale was very weak, though there existed a Council of the trade unions of shop assistants which had been elected on the fifth All-Russian Congress and which tried to unite all similar unions, of the unions of factory clerks (which at the period were organized apart from the workmen), of the workers of the restaurant trade and of the commercial fleet (at that time there was no general union of the workers of the water transport). The former societies of mutual help created among the shop assistants and clerks, which had not reorganized themselves in time and the functions of which, before the revolution of 1905 and after the same up to the liquidation after the revolution of 1917, were limited with the distribution of small subsidies in case of illness or death, with the organization of medical help, of clubs and libraries, also formed part of the above mentioned council. Some of these societies of mutual help numbered among their members also merchants, the latter often being the initiators of the organization of the said societies before 1905. Neither before the revolution nor after the same did these societies fight for the increase of salary or the improvement of general conditions of labour; before 1905 they carried on the campaign for obtaining weekly day's rest for clerks, but their efforts generally remained without result. Beyond this the societies of mutual help did not display any other activity. It is, therefore, quite natural, that when in 1905 there arose the possibility of organizing themselves, shop assistants, clerks and warehouse men, similar to factory workers, at once organized themselves in all the Russian towns into Trade Unions and started the struggle against the employers for the ten hours working day and for the full weekly day's rest and holiday's rest, this struggle being conducted by means of strikes, local demonstrations which sometimes ended with breaking of window panes in the shops of some of the most obstinate tradesmen. This struggle lasted until the decreeing of the provisional law about the normal rest of the employees which in principle fixed the ten hours day and the weekly day's rest; in Petersburg this struggle was being carried on also after the police authorities had closed the union of shop assistants, in the place of which an illegal organization had been created under the name of "Council of Delegates" which united chiefly the employees of the big enterprises represented through delegates of the single undertakings; this council of delegates used to assemble at Terioki, beyond the Finnish frontier, and existed until spring 1907, when again the trade union of shop assistants and clerks was created. From that moment also in other Russian towns trade unions of shop assistants, clerks and warehousemen were being formed, the activity of which was, however, strongly limited by police measures, frequent arrests of the members of the Board, their expulsion, the closing of the unions themselves. In some towns the respective departments refused to register these trade unions and in order to elude the orders of the administration the clerks had to limit their activity with the seizing of the old societies of mutual help and the organizing of new unions, directing their activity according to the general course of the professional movement (for example in the Ural and Siberia). With the beginning of the war in 1914 in all the towns—with very few exceptions—the above trade unions were closed by he authorities and until the revolution of 1917 one could not even think of a trade union movement.

The year 1917 is marked in the history of the professional movement by universal strikes aiming at the increase of wages, the eight hours working day and other improvements of conditions of labour, and after every single strike collective treaties were being signed with single merchants, as well as with groups or trusts of the same. After the October revolution conflict between employees and employers were being settled peacefully, because the unions rested already upon the power and authority of the proletariat, and the employers were no longer in a position to apply to the police, as they did before.

The strikes of civil servants during the October revolution directed against the latter very soon called forth the reaction on the part of the lower employees which were not interested in the maintenance of the power of the bourgeoisie, and these latter, reinforced with groups of civil servants devoted to or sympathizing with the proletarian revolution, organized the All-Russian Union of Civil Servants (later called the union of Soviet employees) as a counterpoise to the illegal committee which was leading the strike of the sabotaging officials. **Our Trade Union in the shape in which it appears at present was formed from the fusion of this union of Civil servants with the union of clerks and co-operative workers which existed since May 1919. The complete fusion of our trade union on an All-Russian scale was proclaimed in May 1919 at the second All-Russian Special Congress of all trade unions making part of our federation.** The First All-Russian Congress took place in July 1918 but without the result of a lasting fusion because of the dissidence between the communists and the independent group of the trade-union movement, and only at the November conference of this year an agreement between these groups was reached, rati-

fied at the Second Special Congress, when the Communists had the majority of votes.

Besides the above mentioned two congresses, from the year 1898 to 1917 including, five congresses had been organized: the first two congresses were held before 1905 and represented only the societies of mutual aid. The third Congress took place in 1906; 90% of the delegates to this congress represented the societies of mutual aid, the remaining 10% the trade unions (for several reasons the majority of the trade unions including the Petersburg union of shop assistants and clerks, did not participate in this congress). The fourth Congress took place in 1913 under the pressure of the awakening movement of the shop assistants in connection with the general awakening of labour movement and the deterioration of the law about normal rest; at this congress, which attracted the attention of large circles of society, a fierce struggle was carried on between the representatives of the old societies of mutual help and the representatives of the trade unions marching under the flag of social democracy; by order of the minister of the interior the congress was closed before having ended its work. In 1917, in the Kerensky epoch, the fifth congress took place, which was represented by 146 delegates from 105 trade unions and 64 delegates from 36 societies of mutual help. It was then decided to reorganize the societies of mutual help into trade unions and where the latter already existed to fuse these societies with the same. The first congress of the trade unions of shop assistants and clerks was then fixed for the year 1918, at which date no societies of mutual help were to exist any more. In the quality of a temporary federation and for preparing the first congress the Council of trade unions of shop assistants and clerks was then elected.

After the October revolution the activity of our trade union took quite a different shape. The strike movement was completely eliminated, because the employers easily agreed with the demands put before them in the name of the union, and besides, since industry had been nationalized and the whole apparatus of supplying and distributing products and goods had passed into the hands of the proletarian state, the economic struggle in general had lost all meaning, there being no necessity for same.

The change in the functions of the union consisted in the fact that after the seizure of the power by the workers, the trade unions of clerks, especially in the big commercial centers, and also in the Ural, directed their utmost attention towards the correct organization of the question of supply and distribution. Before the nationalization of the trade was proclaimed in the private warehouses and stores the employees control commissions were formed which undertook the task of controlling the commercial and financial activity of the concern. These control commissions played an important part in the preparation for the nationalization of trade in those towns where they existed. At the same time the unions of clerks took an active part in the councils of national economy, the latter having special commercial sections composed of representatives of these unions of clerks. These commercial sections or departments in the big centers prepared and carried through the nationalization in close collaboration with the above unions. For example, in Petersburg, the union effected the registration of all the employees of the nationalized trade, drew up the lists of the staff for each distributor and appointed managers for the distributive organs and the warehouses. Stock-taking was also being effected under the control of these commissions. It must be mentioned, that the nationalization of trade passed comparatively well only in those towns, where it was being effected with the immediate participation of the unions of clerks and shop assistants, like for example, Petrograd, Ivanovo-Vosnessensk, Vladimir, Voronesh, and other towns, and in some towns of the Ural.

It must also be expressly noted, that if, in some towns, the unions of employees did not take any part in the nationalization of the trade, this was the fault of their leaders who declared themselves in principle against nationalization. The Council of the trade unions of shop assistants and clerks, elected at the first Congress in which the communists refused to take part, concluded a policy of boycott against nationalization and changed its standpoint in this question when it was already too late—after the nationalization of trade had been effected. The subsequent participation of the union in the distributive and supplying organs was mostly limited to the selection of experienced managers and specialists, which were being directed to the work in food and other similar organizations.

Apart from this the union undertook the task of introducing labour discipline among the employees of the institutions and concerns forming part of it; the Central Committee of the Union worked out a "Regulation" on labour discipline confirmed by the Central Council of Trade Unions and Peoples Commissariat of Labor. This regulation is being applied at present in all the institutions of Soviet Russia under the direction of the gubernia departments and district (uyesd) sections of our federation.

**The Structure of the Federation**

The fundamental nucleus of the union is the committee of clerks, elected at the general assembly of the employees of a given institution or concern. In large combined institutions, divided into big departments, each of which has a strictly determined circle of functions, and situated sometimes in various parts of the city, the committees are being elected separately in every department or enterprise depending from the said institution. To the functions of these committees belongs the representation of the interests of the clerks at the administration, the recruiting of new members for the union, the collection of members' contributions, the maintaining of a permanent contract with the local administration of the union, the application of the decisions and resolutions of the union among the clerks of the given institution, the execution of all the tasks of the union in the way of tariffs, protection of labour, culture and educational work and the raising of labour productivity through application of labour discipline in the single institutions.

All committees of a said town or district are united in the local branch of the union (district branch, branch of the city in government towns). The chief administrator of the local branch is the conference of committees, forming part of the branch; the running work of the section is being executed by its administration, elected at the Conference of Committees.

All district branches of a given government or region form the government branches of the union administrated by the government conference and the government administration; the government conference is composed of representatives elected at the district conferences of committees at a fixed proportion, and in the government town at the city conference of committees; the government administration and the revision committee are being elected by the government department.

The number of branches of the union is 416, they are united into 41 government departments. In this way each government department on the average includes ten branches. At the present moment the federation unites 646,040 members on the Russian territory excepting Siberia, the Ukraina and Turkestan, where the process of organization of the union is not yet terminated—while at the moment of the Second Special Congress in May

1919 the union counted only 350,000 members, i. e. in the course of one year the number of members increased by about 300,000 or 100%. Each district branch on the average includes 800 members and all 375 branches about 300,000 members. Each city branch of a government town counts on the average 8,440 members, and 41 government towns together count 346,000 members

To these we must add 25,000 members in the Turkestan, where the branches of the unions are being united by the regional committee which only in the end of March of this year got into touch with the central committee of the union—it could not do it before, this region being cut off from Soviet Russia.

As regards the borders—Siberia, Ukraina (the Ural is included in the above figures), no exact information could be obtained up to now neither regarding the restoration of the union organizations destroyed or more or less damaged during the domination of Denikin and Koltchak, nor regarding the number of members of the organizations which have already been called into life again, with the exception of the Kharkhoff, Kieff and Ekaterinoslaff sections counting together about 35,000 memebrs.

The chief organ of the union is the All-Russian Congress convoked once a year. The same elects the central committee and its Board for the management of the activity of the union, which is executing the daily running work and representing the union.

The plenum of the central committee is convoked every two months. The delegates to the All-Russian Conference are elected at the government conferences according to a determined proportion. At the 2nd Special Congress in 1919 the central committee elected was composed as follows: 21 members out of which 12 communists, 6 partisans of the independence of the trade union movement 3 internationalists; the Board of the central committee was composed of 11 members—6 communists, 3 partisans of the independence of the trade union movement and 2 internationalists; after the fusion of the internationalist with the communist party the internationalist members of the central committee and of the Board fused with the communists, thus increasing the number of votes of the latter.

### The Classification of Wages

The wage-classification of our union on an All-Russian scale began to be applied only since February 1919. The entire tariff work of the union is concentrated in the Tariff Department of the Central Committee. At present all the branches of the union have central tariff taxation commissions which have the task of applying the tariffs in the precincts of their branch.

Every institution or enterprise together with the committee of employees, organize a tariff commission composed of representatives in equal number of the clerks and the administration.

These commissions divide the clerks into groups and categories of the tariff net work, qualifying the work of every single person, and fix according to the tariff system the rate of pay, after which the lists are passed on to the Central Tariff Commission of the branch of the union. After having been confirmed by the latter Commission the tariffs become obligatory for the given institution. In case conflicts arise which cannot be settled in the Tariff Department of the Central Committee, the Higher Tariff Commission must be applied to, the decisions of which are considered definite in all questions practical and of principle.

Recently the Central Committee drew up a project of normal terms of labour and the introduction of the premium system of wages. These questions are quite new and extremely difficult for our union, but the first steps in this direction have been taken already—the general scheme of the premium system of pay is worked out. This premium question is closely tied to the question of raising of productivity of labour and of labour discipline, therefore when speaking of this question, several points—besides the one fundamental point, that of strict regulation of the terms of labour—have to be considered, like: reduced staff, individual initiative, definite tasks (the execution of a determined work, at a determined period), the stage of service in an institution (this being introduced for the purpose of struggle against the frequent changes of service from one institution into another).

In the province the premium system of wages will be applied only after the schemes worked out by the Central Commission of the Union have been confirmed.

The distribution of special industrial clothing among the clerks also belongs to the circle of activity of the tariff commission. According to the lists presented for the first receipt 138,000 garments have been received (footwear, various upper clothing, warm clothing, overalls, gloves, half sleeves, etc.), which is about 70% of all the things required. The lists to be presented for the second receipt are not yet drawn up.

### Protection of Labour

The work of protection of labour of clerks and shop assistants employed in the provinces is not yet properly established chiefly because of the lack of experienced workers, which up to now were kept back on the fronts of the civil war. Besides, this work can only be fully developed with the improvement of the economic situation of the country, because under the present conditions many measures concerning protection of labour cannot as yet be applied. Therefore, the activity of our union in this direction is limited, chiefly, to the settlement of conflicts and also to the elaboration of various materials and regulations connected with the question of labour protection. These latter are then put before the Central Council of Trade Unions and the Peoples Commissariat of Labour for confirmation, and among them are to be noted: 1) Reports addressed to the Council of Peoples Commissaries and the Peoples Commissaries of Labour about reduction of tariff in the institutions and stores and the utilization of available labour forces; 2) regulation about the "inspection" for persons serving in small enterprises; 3) "regulation about labour discipline" for employees; 4) materials in the question of the 6-hours working day for office and mental workers employed in institutions with 8 hours working day; 5) regulations about overtime work for persons above 20th tariff category; 6) instructions for application of the "Regulation on disciplinarian courts of honour."

It is further to be noted that the Union has got the permission of instituting in seven of the biggest centers (Moscow, Tula, Petrograd, Nishnij Novgorod, Saratoff and Vitebsk).

In the big centers the union also succeeded in withdrawing underaged children from work and placing them under the care of the Social Maintainance Board. The detailed examination of conditions of life of civil servants, which had been undertaken, could not be carried to the end because of the lack of experienced workers.

### Cultural and Educational Work

Notwithstanding the great possibilities offered, the activity of the union in this direction has not developed very much. Partly this fact can be explained with the foundation of a large number of governmental and general proletarian educational institutions, and such an activity on the part of the

unions would therefore, in most of the towns, introduce a kind of parallelism in the work of the above organizations.

In a considerable measure the educational work of the union is so little developed because of the general reasons, i. e. of the impossibility of applying a sufficient number of experienced workers towards the same, these latter being needed for military purposes and for the reconstruction of the socialist state. There is as yet no complete data of all the educational institutions, training of the union clubs, libraries, scientific and professional courses. In connection with the scarcity of skilled workers in the institutions, many departments of our federation (especially in the Ural where the skilled workers had been evacuated by Koltchak, partly by force and partly on their own free will) started the organization of courses for special professional training. The results of these courses have until now proved very satisfactory, thus fiilling the ranks of the skilled workers.

At present steps are being taken for the centralization of the activity of the union in the spheres of professional training and also in other spheres of educational work, following the example of other branches of the union's activity—the financial and tariff organization—the centralization of which has been attained already in the most essential points.

Moscow,
April, 1920.

# Bolshevism at Work

BY WILLIAM T. GOODE

*(The following three chapters: "The Bolshevik organization of industry", "Bolshevism and Labor" and "Trade Unions in the Soviet Republic" are borrowed from "Bolshevism at work", a book recently written by William T. Goode, Special Correspondent of The Manchester Guardian. It is published by Harcourt, Brace and Howe, New York, N. Y., costs $1.00, and can be had in all Radical Book Stores. It is a fine book and should be read by everybody.*

*The author blunders aggravatingly in a couple of lines about the I. W. W., filling the world with an atrocious misconception about our form of organization, but that does not detract from the value of his description of Russian conditions to-date.*

*We are chosing these chapters mainly for the reason that they were recommended to us by "Soviet Russia", the official organ of The Russian Soviet Bureau in the United States.)*

## CHAPTER IV.

## THE BOLSHEVIK ORGANIZATION OF INDUSTRY

### Interview with Miliutin, Associate Commissary of National Economics

He is now Professor of Political Economics in the Moscow University, and is at the head of a very important Commissariat, that dealing with industries. I thought him best fitted to clear my ideas on the subject of nationalization of industries — a matter on which a good deal of cheap wit has been spent and many violent statements wasted. He listened courteously and patiently, and answered my questions without any hesitation or reserve, giving me all the assistance possible, in spite of being excessively busy, as are indeed all the Commissaries of the people .

*His department manages some* 3,000 *nationalized plants, answering for* 90 *per cent. of the full production of the country.* These embrace *mines* in the Moscow coal basin, producing 35 million poods a year; *textiles*, mostly in Vladimir, Tver, Nijny Novgorod, and Ivano-Vosnesensk; *metals*, in Nijny Novgorod Government, in the north portion of Volga territory, Petrograd, and now Ouralsk. His statement covers about thirty Russian Governments, but does not include Ukraina; *nor are small or home industries nationalized.*

### How is Russian Industry Organized?

Regarding the *conditions under which the factories are worked*, he described the system as follows: *The head of every factory is a college of management of from three to five persons, a mixture of workers and specialists. But the people elected on this body must be ratified by the special section of the Supreme Council of National Economics at Moscow under which the particular factory falls.*

*The* 3,000 *factories are divided into State trusts*, as, for instance, machine making, sugar making. In all there are *some ninety trusts*, of which forty are concerned with textile manufactures. *Each of these trusts come under the management of the particular section of the Supreme Council of Economics which is occupied with the industries they represent. Of these sections there are sixty, out of which fifty are concerned with production, ten with distribution, or are of a general character* (statistical, legal, inspcetion, etc.). Control would seem to be pretty complete, since the first elective management is controlled by a trust, which in turn is controlled by a section, the whole controlled by the Supreme Council.

I was curious about the *trusts*, and he replied that *each has its own administration appointed by the section of the Supreme Council* under whose jurisdiction the trust falls. Further, that the function of a trust is much the same as that of a board of directors of a capitalist Co. It distributes to the factories which form it raw materials, engineers; it regulates their output and controls their financial operations. I asked him plumply what his opinion was of this *elective system*, of

its success in actual working. The elective system, he said, might be absurd in any country not centralized like Soviet Russia, but here the Supreme Council has to confirm the appointment in fact, control the election, and thus any absurd results can be eliminated, while the association of engineers and specialists on these bodies with workmen is provided for through their governance by the chief board of State trusts.

### The Unions

*The Professional Alliances (Trades' Unions) or unions of industries* have a special interest in eliminating any friction in the nomination of candidates, and as far as possible all is done in conjunction with the local professional alliances. Business ideas and practices, he said, govern all the relations of trusts with factories. The system goes further. It eliminates all conflicts between workers and the factory managements. (This corresponds to Melnichansky's statement that *strikes are unrecognized; they are illogical and should not happen.*)

And through this system the workers in a factory become interested in their work, they are personally conscious of the part they play in the efficiency of the factory. And it is conditions of efficiency that are the sole guiding motive for all, but especially for the Supreme Council.

### Results Obtained

As to its *success* in working, he declared that under the conditions created by the Civil War, by the cutting off for a whole year of supplies of raw materials and fuel, whatever stability there is in the industries of Russia is due solely to this system; that in spite of food and other difficulties there is great labor discipline, and that the full systematization of industry gives the Supreme Council the power to make plans for production, to distribute orders where they can be best carried out, according to resources — in a word, that it gives full knowledge of what can be done, and where, for the best. Under this system full centralization is reached and it has become possible to administer industry according to special needs and to organize a complete system of national economcis. Its *solidity* is best demonstrated by the ability to set up new plants, and they have put up two new central electric stations, various new plants, several new railways have been built in Podolia, and in the Moscow Government a new locomotive works, turning out two engines in the week of this interview. Of course, the system, like all new systems, has to fight against the difficulties of present conditions obtaining in Russia and it has its defects. Yet in an existence of less than two years it has brought forward from the ranks of the workers a series of excellent administrators, of managers, men who have been placed on the Supreme Council — in fact, it is a system *selective of the best brains of the workers, from the masses up.*

That, it seems to me, is high praise; but I put a last question on the effect of this system on *output.* As Miliutin said, the workers' output depends on food and conditions generally it is a physical and physiological proposition. Owing to difficult conditions which we do not conceal, we have succeeded only in some factories to raise the output, especially in those working on war orders. And during the last year industrial Russia has been living on the food of those parts of inner Russia, which normally were unable to supply surplus food. This surplus food came in ordinary times from Ukraina and from Ural, but these had then been cut off. The conditions are not sufficiently stable for a norm to be established, and yet in spite of all there are a number of factories in which there is an absolute increase in the production, which as a conclusion confirmed the statement of Krassin, the Commissary of Ways and Communications.

### The Working of a Factory in Soviet Russia
### Mills not in the hands of Unions

Pursuing my inquiries into the working of industries under a system of nationalization, I took a journey of from four to five hours by train, south to Serpukhoff, where are the Konshin textile factories, to look them over. The town, which is quite prettily situated, is some three miles from the railway station, and is a town of factories. The Konshin enterprise has four mills, spinning, weaving, dyeing, and printing mills. In normal times 15000 hands are employed, and even under the present stringent conditions come 6,000 are working; so that it formed a good object-lesson in the management of a huge factory under nationalization. But it is not only a factory, it is almost a town, for in these far-away Russian manufactories everything has to be provided, not only for manufacture, but also for the life of the workers, housing, schools, hospitals, medical attendance, baths, meeting and recreation rooms, farm, corn-mills and bakery — everything. The town can do nothing: it is the factory that does and gives all. It generates its own electricity in a superbly built and installed generating station, has built its own railway to a forest to supply itself with wood for fuel, since naphtha and coal are cut off, and presents a number of problems and opportunities which are entirely lacking to a similar understanding in Lancashire. Its fabrics were well known before the war, outside of Russia. The character of its present output has changed for obvious reasons.

Among its mill managers are three men, from Lancashire, and on the general direction chosen by the workmen are two former directors, a director and the technical manager—their election being an evidence of the confidence they had

generated in their workmen. Altogether it was not only a place worth visiting, but from its size and the character of the personnel it was likely to prove instructive on the Soviet system of running industries.

The technical manager was quite frank. According to him the system, in the early days of its action, was disastrous. The workmen, who are peasants drawn from the surrounding villages, and who leave for tilling or harvesting their land when these become necessary, were unable to understand anything except that the Revolution gave them the right to do as they pleased. The output went down to 40 per cent, and chaos in government ensued. But with experience, and by changing the powers of the various committees, an improved condition of things had come about, work went on smoothly, though even yet there were causes of trouble existing, and this year had seen the factory and the system satisfactorily adjusted.

*Each mill has its own workmen's committee,* who are elected, and there *is a management committee* of five members for the four mills, *on which are elected workmen, members of the Professional Alliance (Union) and technical staff.* Then as this district is a textile working district, *the eleven cotton mills in it are organized into a State Trust,* which controls 22000 workers. *The Trust has a directing committee of nine members, of whom three are elected by workmen, three by the Professional Alliances, and three by the local branch of the Supreme Council of National Economics, which governs all industries.*

This committee governs the eleven mills in all senses. It controls their financial arrangements, and all estimates of whatever nature must be put in six months in advance; they are then submitted to the appropriate section of the Supreme Council for ratification, finally going before the Supreme Council of National Economics itself.

Each item of these estimates can be examined by the Trust Committee and they are able to compare items from one mill with corresponding items from others. The scheme allows for complete control of the distribution of raw material, of orders, and the governing idea is that of correspondence between the mills and mutual help.

The committee I met governed eleven cotton mills. For those using flax other committees were formed, and so on. I asked about the taking on of men or their dismissal, and learned that it is really done in the first instance by the workmen's committee in the mills, discussed with the management committee, and is only controlled in a general way by the Committee of the Trust.

*The Trust Committee works hand in hand with the Professional Alliances (Unions)* in their local branch. Delegates attend the meetings, and one member of the Alliances has a vote in the proceedings. In this way all reason for friction between them is removed. It might be thought that this is guild socialism. I was told it *is not. The mills are not in the hands of the unions, who are only partly controlling the industry.*

But by the composition and working of the committees all friction is obviated. That this must be so is obvious when one considers that every workman in the mills, whatever his trade — spinner, smith, etc. — is a member of the same Alliance (textiles), and is fully represented on all committees. This formation of unions by industry and not by trade has another good quality. It prevents *sectional* strikes; further, a strike in one mill need not affect other mills.

*The workmen's committees have their hands full with the labor discipline, observation of rules and laws, matters affecting the health, housing, culture of the workers;* and the men I met, the chairman and the committee members, seemed highly intelligent and were evidently proud of their position. They control yet another matter. Workmen are allowed by law to proceed to their villages in search of supplies, and to bring back amounts up to 2 poods in weight (80 lb.). The lists of those people are drawn up and certified by the workmen's committees, though it can be imagined what an element of uncertainty it places in the hands of the management, especially when in addition orders for mobilization of a certain percentage of workers may arrive at any moment.

*Workmen are paid according to very elaborate tariffs, which have been prepared for all occupations whatsoever.* It is here that the cause of present trouble exists. A rigidity of tariff allows no margin within which the management can act; but attention has been drawn to this, and a revision in the sense required is being undertaken.

My frank discussion with the management, the Englishmen, and the committees left the impression that this huge concern *war being managed successfully on the Soviet Committee system,* and that in a time of peculiar and great difficulty. The system allows co-operation in industry between mills, prevents friction between Professional Alliances (Unions) and management, and stimulates the workers. That socialistic management should stimulate *emulation* was indeed a surprise. But I was told it is true, and that an exhibition of comparative output at Moscow provides a sufficient incentive to competitive work.

### A Further Note of Industries

From my long conversation with the three workmen who are now members of the Textile Trust Committee I gathered much that throws light on the condition and prospects of industry.

Thus this committee controls nearly 500 factories engaged in textile manufacture, linen, cotton, cloth, silk, rope, and thread: factories that are working today. I have previously described how it is responsible for the approval of the estimates of the factories controlled by it. It was surprising

to learn that decisions had been taken of an anti-Bolshevik nature, e. g. in cases where the committee was unable to supply the thing needed — dyestuffs — *factories were allowed to buy from speculators;* and in combustibles, authority was given to each factory independently to supply itself — a thing I had seen in operation at Serpukhoff and at the Moscow waterworks. *Such things are confirmation* from another quarter of *my statement elsewhere that the communistic practice of the Bolsheviks is imperfect.*

The buying of flax, first done by individual exploiters for export, then by the Co-operative Societies for the same purpose, is now done by the Soviets, under the Trust Committee. Much had been given out to the *cotton* factories to work. It is cut into short lengths to make it convenient for use in the cotton machinery; in some cases machinery has been altered with the same end in view. But the bulk of four years' stock remains in hand, unexported, ready for trade.

Like other trusts, this Textile Trust has in mind the proper housing of the workers, and is planning to secure it. For the development of the factories it is to build light railway lines to connect them with the main lines, and help also the workers. Some of these have already been built, and returns in one year repay the cost of building.

Talking of the condition and the future of the Russian industries, it surprised me to learn that even in the midst of the civil war and all its attendant difficulties and horrors, the Trust Committees and the Supreme Council have a real forward policy. And enterprise after enterprise was pictured out to me, from which I extract only one. The great turf bogs are to be exploited. Existing conditions have warned them that Moscow must be independent for light and heat of the Donetz basin and the Baku Wells. At Bogorotsk, 70 kilometers from Moscow, a generating station burning turf is at work. Another, similar, at Schaturskaya, 90 kilometers off, began to function in January. At Kashira works for using the soft coal of the Moscow province will generate 15,000 h. p. — also for Moscow.

But there is sufficient in the interview with Miliutin, the visit to Serpukhoff, and the reports of these workmen, to disprove the statement that the Bolsheviki have destroyed the industry of Russia.

## CHAPTER VI.

## BOLSHEVISM AND LABOR

### The Commissariat of Labor

This Commissariat is one of the most important, and as in the Soviet Republic the working classes hold the supreme power, it was urgent to discover what action they had taken concerning themselves, not as governors, but as workmen.

The Commissariat does not lack work. It is concerned with the enrollment and distribution of labor throughout Russia; with the fixing of hours of work; with making the tariffs according to which workers are paid; with the protection of labor (factory inspection); with the support of the worker during temporary inability to work (insurance against sickness, disablement, complete or partial, accident or temporary unemployment); with pensions. It thus combines the functions of Labor Exchanges, factory Inspectors, and National Insurance with us, with many other functions, which require the action, with us, of Parliament, or of the trades' unions themselves. *The basis of this Labor Commissariat is the Professional Alliances* (*Unions by industries*), *from which the Commissariat is built up. A college of nine is formed of which five members are the representatives elected by the National Council of Professional Alliances, four being appointed by the Commissaries of the People,* though even here the Professional Alliances have the right to challenge these appointments if they see fit. *Laws to be passed concerning labor are first passed through the National Council of Professional Alliances, then sent to the Commissariat of Labor to be ratified or condemned;* if ratified, to be promulgated as law.

This constitution of the Commissariat insures that the men who are making plans for labor are competent for the task, men who are experts in their own branch, while the elective system insures the active personal participation of all the workers.

*Hours of Labor* — At the present fixed, are *eight hours daily for workers, and six hours daily for employees in offices. In trades that are dangerous* to health — mines, gas, factories — the day is *six hours* long; in the tobacco industry seven hours. Overtime is not provided for, but owing to the stringency of present conditions a concession of two hours per day has been allowed, the pay being one and a half times the ordinary pay. *In Night Work* the period is seven hours on a shift, but neither women nor the young workers are allowed to work on night shifts.

The age at which work may begin is sixteen, and it is hoped later on to raise it. From sixteen to eighteen years of age a six hours' day is fixed, and no working of overtime is allowed. If the sixteen to eighteen years' old workers do the same kind of work as the older, they get the same pay; working six hours they get paid for eight hours. The remaining two hours of an eight hours' day must be spent in schools that are specially arranged for the workers' improvement under Lunacharsky's scheme. As a temporary measure, due to the conditions obtaining in this wartime, it has been permitted for youths from sixteen years of age to work for four hours per day, but only in those trades which are not preju-

dicial to health. The shop committees control the schools.

The provisions for continued school instruction are an improvement on American vocational schools, where the full eight hours' day must first be passed in the factory.

*Rest.* — Every worker is entitled to forty-two hours' rest a week, that is really one week-end; and after a year's work he can further claim a month's holiday with full pay. This at present is reduced to two weeks owing to war conditions, but even here workers in dangerous trades receive the full month's holiday.

*Tariffs of Pay.* — These have been worked out entirely for the various industries by each National Committee of the particular Professional Alliance (Industrial Union). The tariff has to pass through the National Council of Professional Alliances, and be presented to the Commissariat of Labor, which has to determine how far it is in accord with the general policy of the Soviet Government. The National Council of the Professional Alliance, when each tariff passes its control has to determine whether it harmonizes with regulations worked out by other Professional Alliances. Tariffs are changed from time to time as soon as the Tariff Committee of the National Council finds that the cost of living is in excess of pay.

*Social Insurance* is an important section of the work of the Commissariat. The system is non-contributory, the fund being maintained by a 25 per cent. grant of the full amount of the wages sheet made by the State, or by the private employer where the industry is not nationalized; more being paid if the trade is hurtful to health.

This social insurance covers the whole life of the worker — sickness, invalidity, unemployment, accident, old age pensions, and maternity. In cases of complete loss of ability to work, accident or maternity, full wages are paid. In the case of maternity the period lasts for eight weeks before and eight weeks after the birth of the child.

In cases of partial disability the amount paid varies according to the percentage of disability.

*Pensions* for total disability, or invalidity, or old age, vary in amount according to the average wages of the trade in the locality concerned; but where special treatment or care is required, an addition is made according to the medical requirements on the recommendation of a special committee which examines the cases.

*A factory worker on reaching the age of fifty automatically receives a pension,* but other workers in less exhausting occupations must, at sixty, present themselves before a special committee, which decides to what extent they are pensionable. Should they be thought to retain 50 per cent. of their energy, they still work; but if less, then they are fully pensioned. This, I was told, is a temporary measure due to the stringency of the time, and the shortage of hands; it is not intended to be permanent. Every consideration is paid by the Commissariat to the conditions of labor, and efforts are made to reduce the damage to health, by introducing new processes, when these are within the means of the Commissariat. All matters of sanitary value in the *housing* of the worker come also within the scope of its powers, and it has the task of passing all plans for new buildings for workers. Their effort in requisitioning houses of the rich and apportioning the rooms as a temporary measure to meet the very great requirements of the workers is one of the things that has been strongly criticized. I myself lived in a room in such a house, which shelters now, instead of two people, a dozen workers of the Soviet. There are not enough big buildings to house all the workers. Most of them are far away from the factories, but still all of them are inhabited by workers.

*Factory Inspection* is now conducted by the workers themselves, the Professional Alliances are choosing and training men from among themselves who control thus the industries for the department of the Protection of Labor, a special part of the Commissariat. They are charged with seeing that regulations concerning hours and social insurance are observed, with taking children away from work — in short, with the full duties of a factory inspector.

*The Enrollment and Distribution* of labor is solely in the hands of this Commissariat, which alone has the right of supplying labor. *Formerly* the Labor Exchanges were made up of representatives of professional unions and of municipalities. These have been re-formed into departments of registration and distribution, acting through committees formed of representatives sent by the various Professional Alliances. Then there was much unemployment, Labor Exchanges were needed. Since there is shortness of hands they were re-organized as "Enrollment and Distribution Committees," which are also formed by committees of the alliances. *The "Enrollment and Distribution Committee' has to enroll every citizen and see to it that he shall work.* When an exigency arises there shall not be any idlers. *They register all labor; they supply all labor as applications are received from the factories requiring it,* though, as a temporary measure, in the case of the more responsible workers, such as engineers, permission is given to factories to *invite* workers; but once such an appointment is made, it is registered under the particular trade to which it belongs.

*The Commissariat has thus complete control of the labor market, and is able to eliminate competition, that is the competition which is represented by men fighting for a job, or trying to undersell one another.*

## CHAPTER VII.

## TRADE UNION MOVEMENT IN THE SOVIET REPUBLIC

*Trades' Unions are here called Professional Alliances, they embrace not single and local trades, but whole industries.* At the offices of the Moscowsky Council of Professional Alliances I saw the Secretary, Melnichansky, who discoursed freely on this side of Soviet life, and answered all my questions with the greatest ease. As Secretary of this huge organization, I imagine he is in the right place. He is soaked in his subject, and had no need to consult any note or book during the three hours the interview lasted.

**Labor Temple — former Palace of the Nobility**

The building where I found him in the center of Moscow is so striking both in itself and in the contrast between its present and its past, that it deserves a word to itself. This Labor Temple (the building of the Moscow Alliances or Unions), as it now is, is the former palace for the meetings of the nobility, an immense building containing suites of offices and a vast marble staircase leading up to a gallery surrounding two sides of a magnificent hall, where fetes used to be given to the Tsar when he visited Moscow. It is, perhaps, the largest hall in Russia; a noble oblong of great height finely proportioned. The sides are lined with white marble pillars supporting the cornice, behind them are two promenades, above them is a gallery which runs round three sides. The old lusters remain, and the lighting is continued by a concealed fringe of small lights behind the edge of the cornice.

My imagination quickly peopled it with a glittering throng of courtiers and nobles, splendid in dresses, jewels and orders, and contrasted it violently with its present use, filed with chairs for the meeting of conventions, a big platform at the further end. It can be made to hold from 3,000 to 4,000 persons, and I thought that the workers of the Soviet Republic can congratulate themselves on having as a home perhaps the largest, and certainly the most splendid and significant hall in the world. It was given to them by the Government after the October Revolution. Its condition was dirty and unkempt, for it had been used during the Great War as work-rooms for the making of uniforms. But the workers cleaned it, and in some places altered its decoration themselves, and in the suite of rooms forming a long gallery the scutcheous of the nobility in the wall panels are replaced by shields bearing the emblems of the Republic, the Professional Alliances, and various trades, modeled in plaster. And in the center room of the gallery, where formely were pictures and emblems of the Russian generals of the Napoleonic period, on walls and ceiling are now simple red panels, against two of which are busts of Marx and Lenin, resembling, but not particularly fine works of art. In the part of the building given up to offices in a fine circular council chamber, the meeting-place of the nobility, where the very chairs bear witness to the former character of the place, for on their backs are the heraldic emblems of former occupants.

The contrast between past and present is almost stupefying, yet is so full of meaning, so indicative of things that are happening here (where Commissaries of the People are lodged in the Kremlin itself) and in Russia generally, that it is worthy of careful note.

**The Trades Unions System under the Soviet**

Melnichansky's lucid explanation of the Trades' Union system under the Soviet I shall try to reproduce as clearly as I can.

There is a difference between the Russian form of organization and the English, where men are members of local and special unions according to trades; or the I. W. W., which runs a general mixed organization. (Of course, here the author does not know what he is talking about. He evidently knows only of our General Recruiting Union. He has not heard of our 22 Industrial Unions. - Editor). Russian workers are organized by industries, as metal, wood, textile industries, embracing all trades. Thus the Metal Workers' Union takes in some 290 trades. But all are united in one central organization — the All-Russian Council of Professional Alliances. There are thirty Professional Alliances, which unite all trades by the industries in which they are employed. In most of the cities (1) they are organized by localities; (2) they are then united by Provincial Councils; (3) these are connected by National Councils. There are thirty National Councils, which are united by the All-Russian Council of Professional Alliances. This, omitting the part of the Ukraine, which is at present in the hands of Denikin, rules some 3½ million members. This organization has been largely developed by the Soviet regime, for at the February Revolution there were only three trades' unions in Moscow; but at the time of the October Revolution all trades here had been organized, and the present all-embracing system evolved.

Every man is a member of some Alliance (Union), which elects its own member of the Soviet. At the same time it elects the Executive Committee of the Alliance, which in turn, elects its members to the Soviet, at least two, at most five, according to the numerical status of the members of the Alliance.

There is thus a direct participation in the government, both of the alliance and of the country for the members are elected by and from the workers. The Soviet though superior to the organization of the alliances, who require its approval before their conclusions can become law, can thus devote itself to the political development of the

country, while the Executive Committees can care for conditions of the industries they represent, and through the Central Organizations of the Alliances, for the economical developments of the country.

### Strikes

A question regarding *rates of pay* brought information concerning *strikes*. These are not recognized. Indeed one must confess they would be illogical—you do not strike against yourself. Formerly, he said, strike-breakers were considered as traitors to the cause of the workers; now it is strikers or people wishing to strike who are the traitors. In other countries strikes were and are the only weapon in the workers' hands for securing a change of conditions. Here, on the contrary, the various Alliances have Tariff Committees, who follow the movement of prices, and, where necessary, work out plans for changing the rate of wages. These plans are passed through the Central Council, thence through the Soviet, and so become law.

### Insurance Features

*Unemployment and Sickness* have been tackled by the Alliances with success, though Melnichansky frankly admitted their early difficulties, both in creating a fund and in finding out ways of distribution. His frankness was but a repetition of what I have constantly found — the readiness to admit mistakes and blunders, and to confess the difficulty of finding successful ways and methods of action under conditions of great stress. The school of experience of the leaders of the Bolsheviks has been a hard one, but they have profited by it.

They got over their difficulty of raising a fund for insuring the worker against sickness and unemployment by requiring the proprietors of factories, all of whom had done sufficiently well out of the war period, to pay to a Central Committee elected by the Alliances a sum equal to 4 per cent. of the total wages paid by them, which provided a fund against unemployment; and a further sum equal to 10 per cent. of the wages sheet, which formed the fund against sickness. In this way a fund was formed sufficiently large to begin operations, which were the more necessary because of the disorganization of industry and the unemployment caused by the stoppage of the intense production caused by the war.

A payment by the proprietors of wages for three months to their employees who were not needed was decreed, but on the plan that it should really be paid only for half that period, the payment for the other half being made to the Central Committee to strengthen its funds. It was argued that the Russian factory worker being in most cases connected with a village, would in six weeks, if he had not secured work, have returned to his village. Unemployment generally is a thing unknown in the Soviet Republic; in cases of workmen being out of work, they are fitted with employment by the appropriate State Department. But in case of any fortuitous stoppage of a factory, through, say, want of fuel, as has occasionally occurred, this being a completely, abnormal state of things, the workmen's pay is continued by the State. For sickness special committees elected by the workers' Alliances cater. They provide the clinics, the medical advisers, and the medicaments. But wider affairs of a national kind tuberculosis and the like, are cared for by the State Department of Hygiene, on whom devolves the duty of providing the necessary sanatoria, advice, and treatment.

### Free Speech. Free Press. Free Assemblage

Melnichansky remarked that it had recently been said in the West that there was neither freedom of speech nor Press nor meeting for the workers and Professional Alliances under the Soviet. In the great hall I had just seen he said they had quite recently called a convention of Factory Committees, which, after discussion, had elected a Central Committee to organize the best way of distributing all supplies of food and clothing in Moscow. A clear proof of freedom of speech and initiative, anyway, for it was quite an untrammeled convention. As for the freedom of the Press amongst the workers, the dearth of paper causes curtailment, but he gave me a copy of an excellent monthly issued by the Central Committee, and of a weekly paper, distributed everywhere and devoted to the professional interests of the workers. Besides these, every Professional Alliance has its own monthly. In these the fullest discussion is permitted. As for freedom of meeting one might say it is an integral of the system, but not during working hours. They are devoted to work, not talk, and if meetings must be held it must be outside the time allotted to work, in the workers' own time.

Meetings of the Sovietists are held every week for the discussion of political and economic topics, in which the leaders take part — for never did any people so well understand the power of propaganda, the spoken word, as these. And I myself have seen on the walls of Moscow notices of a Menshevik meeting, a proof that toleration is exercized, so long as it does not lead to counter-revolutionary activities.

In towns and villages where we have no bundle order agent our readers or subscribers are requested to do their best to introduce our magazine. Take home a bundle each month. We charge you 15 cents a copy and you pay the express charges, thereafter selling the magazine for 25 cents a copy.

# The Bridge

By Kirah Markham

I have no love for outworn creeds,
Your panaceas make me sick;
Content with no more than your needs
No cause can bite you to the quick.

No inquisition is too cruel
For men too sluggish to resist,
And tyrants place the dunce's stool
For all whom Fortune's wheel has missed.

But when your overlords have reaped
Two hundred fold what you have sown,
And from your docile strength upheaped
The gold to buy you for their own.

Perhaps you'll waken from your dream
To know that magnanimity
Is not the reason why their scheme
Included you in industry.

Perhaps you'll find the land you till,
The coal you dig, the steel you cast
Are your divine inheritance
From the immemorable past.

And 'wakening you will cast aside
Old theories and beliefs of man
And build a system Argus-eyed,
A universal working plan.

Then shall revolt be built on fact,
And capitalist and financier
Shall forfeit up their world contract
To working man and engineer.

And each shall labor with his kind,
And claim for work, on desk or soil,
The aristocracy of mind
As greatest guerdon for his toil.

# Jackasses and Progress

By D. S. DIETZ

The other day we saw a mule;
Much like a real old-time jackass.
He spied a great big auto car
Approaching near his field of grass;
At once he planted his fore feet,
And then let drive his hinder two
Right thru the lamps and windshield glass;
Then ran away with legs all blood,
A-braying thus: as we surmise,
Hee, haw! Hee, haw, I'll kick and kick
Each time I see a Bolshevik.

Again, we saw a fat, old man;
He was so proud of his big vest
That it was dollar marked throughout;
To show he had done his best
To beat his neighbors to the game
Of profits. One evening late,
A group of workers, in from camp,
Were strolling past his garden gate
Discussing hours ten and less.
The old man heard the sound of eight,
Which was enough to base a guess;
Then wildly rushed right down the walk,
With heated face and cane aloft,
A-braying madly, as he ran,
"I'll have you all arrested quick;
You whole damn bunch of Bolshevik."
He got by with it! ! ! !

# Which en T'other

**Once I read a book called The New Freedom—**
**Then I read about an old man in jail—**
**Then I read about the pardoning of a profiteer;**
**And then, I inquired:**
**Are there two Woodrow Wilsons?**
**Then I was locked up five months,**
**Without any trial.**
**Then I was discharged,**
**Without any answer.** —TIM.

that we are in midst of a drive to increase our circulation from 15,000 to 25,000 by Christmas.

## YOU

have to do some tall hustling if you do not want us to fall down on this proposition.

Order today.

# An Open Letter to the President

Montesano Jail, June 17, 1920

Dear Sir: I see by the papers that food is being withheld from Soviet Russia, because 20 Americans are in jail in Russia, so I am writing to ask, if you ever stop to think of the hundreds of Americans in the jails in the U. S.? Men guilty of no crime at all. And how about the hundreds of Russians, arrested without warrants, contrary to our U. S. Constitution, and held for weeks, and months, without trial. Has America the divine right, to imprison men from all nations, her own native born included? And has no other nation that right? When we were forced into the war we were told, it was to crush militarism and to secure self determination for all nations. How about Russia, and Ireland? We were very indignant when Germany outraged Belgium, why are we silent now? While John Bull—ravishes Ireland, and is sending munitions to Poland, we are making a mockery of our statement of purpose made on entering the war. I was not in the army, but I worked 13½ hours per day in the harvest fields of Idaho, for $4.00 a day helping to harvest the wheat that I did not help eat, and I helped to plow the fields in the spring, and to put the crop in for $1.25 a day—I am an American, born in the state of N. C., of American parents, whose ancestors date back to the old Colonial days of Virginia; my mother's, father was a Fifer in the Union army in the Civil war. I am just a coal miner, without education, for I started to work in the mines at Lynn, W. Va., when I was eight years old. But I can see the injustice of the Capitalist system, and I have voluntarily joined the Industrial Workers of the World, a working class organization formed to regain the rights of the toilers, by educating them to a full realization of their true status in society. Unlike the trade unions, we are organizing not only for the everyday struggle with Capitalism, for a few more of the good things we produce, but to do away with Capitalism, and to carry on production after Capitalism has been overthrown.

It is our purpose to establish a new society, wherein every man and woman will be a useful member of society, and no man can exploit another, and wherein all things will be produced for use and not for profit.

Our most celebrated American, Abraham Lincoln, dreamed of the I. W. W. in his day—even as he foresaw the time when the government of the U. S. would be the foster child of the special interests. Lincoln said, the greatest bond of sympathy on earth, outside the family ties, should be one uniting the workers of all nations into one union. The I. W. W. is Lincoln's dream coming true.

I am a married man and have been trying to make a home for my wife and baby—when the war started I had a homestead on a mountainside in Idaho, but with war prices I soon was starved out. The government was calling on all miners for more coal—so I came over here to dig coal. Sept., 1918, after the armistice was signed, the miners only worked 2 or 3 days a week, so it kept me busy to make ends meet. And last fall when the raid was made on the I. W. W. hall in Centralia I was arrested and charged with the murder of one of the raiders who was killed in the first attack on the hall. I had nothing to do with it, but I was taken by a mob without a warrant, and locked up. The newspapers worked overtime spreading lies against us, and when finally, we were brought into court it was such a farce that Germany would blush with shame if it had been perpetrated there. I was unarmed the day of the raid, and witnessed it from a hotel lobby adjoining the hall. Not a shot was fired until the door was smashed in by the mob. So if the men who fought when they were attacked are murderers, then our forefathers who fired on the British at Concord, were murderers. The Prosecuting Attorney of Lewis County, was present at the time of the raid and made no effort to stop it, or the destruction of property. I saw him there, and he don't deny it. He turned his office over to the lumber trust attorneys to persecute us, and he sent for the U. S. army to intimidate the jury, in favor of the lumber trust.

If you will read the records of our trial you will be ashamed to look a Russian, German, or any other foreigner, in the face until you have done something to get justice for us. There are 11 other men in this jail, for no other crime than being members of the I. W. W. and that is no crime at all. If the I. W. W. were a criminal organization I would not be a member—for I have always tried to abide by the Golden Rule—and I believe my morals have been above the average. I have never been guilty of any crime, nor have I violated the law in any way. So I think you should start your protest at home, against the imprisonment of innocent men. Then after they are free here, you will find it easier to make Russia believe you are sincere in your sympathies for the Americans in jail there. You stated in the "New Freedom" "We must get together some way as our fathers did, for consultation and debate, in which all freely participate.

How many men are in jail today for trying to discuss matters of public interest. How about Gene Debs? And hundreds of others, in prison for speaking the truth? And now in closing I will say I believe you spoke the truth when you said, the masters of the U. S. government are the combined Capitalists and manufacturers of the U. S. But I trust you will use what little influence you may have to the end that the prison doors shall swing open in our own country and the constitution be restored to the people. Yours for Industrial freedom.

EUGENE BARNETT.

THE LAST CONVENTION OF THE SWEDISH SYNDICALISTS

# The Syndicalist Movement in Sweden

By JOHN ANDERSSON

Ten years have now passed since the Swedish Syndicalists started their work with a independent Syndicalist organization for a conscious revolutionary struggle on the economic battlefield, the only field where the workers can carry on their struggle for emancipation to any advantage and with the prospect of victory.

The ideas of revolutionary Syndicalism were for the first time consciously propagated here in Sweden about fifteen years ago. True, discontent had already before been expressed over the lack of possibilities for an effective struggle by means of the Swedish craft union movement, and strong voices were heard for a rebuilding of these organizations in a revolutionary direction, but the Syndicalist ideas were not clearly formulated, aye, they were simply unknown to the workers of Sweden.

The Young Socialist movement of Sweden may be said to be the movement which during these years made the ideas of Syndicalism and its tactical methods known. Not as to say that the Young Socialist movement was the direct cause of the appearance of the Syndicalist movement as an organization — economic development and the necessity of revolutionary economic struggle would sooner or later have made Syndicalism necessary anyhow, and the practical experience of the Workers would then, perhaps, have formulated these ideas, but the Young Socialist movement with its energetic work of agitation and enlightenment on this subject accelerated this development. The Swedish Syndicalist Labor Mavement owes great thanks for this counscious Syndicalist agitation carried on by the Young Socialist movement, for this agitation had the effect that the Syndicalist organization in Sweden, when it became an independent fighting organization, immediately took a position which was in complete consonance with the ideas of International Syndicalism.

The reason for the forming of this organization was simply that the old organization had plainly shown its incapacity to seriously represent the workers' demands and interests. There was nothing else to do than to take this step, namely the step of trying to gather the workers in a new revolutionary organization for a necessary struggle against Capitalism.

Already before we had, during a series of years, energetically worked for the remodeling of the Craft organization in a Revolu'ionary Syndicalist direction. It was the Young Socialist movement which during this period was the driving power in this opposition. We got great numbers of workers on our side, demanding a remodeling of the old movement. A great number of propositions and motions with this purpose in view were made at the Congresses of the National Craft Unions and of the Landsorganization but these propositions were defeated without much debate. Not even after the smarting defeat of the general strike of 1909 would the Landsorganization make

the smallest change in spite of the fact that at the National Congress in 1909 there were about forty different motions which all proposed changes in more or less radical direction.

1907, 1908 and 1909 are three years of mighty struggle in the history of the Swedish Labor Movement. One great battle followed upon another on the economic field and culminated in the great general strike of 1909. Most of these battles turned out to be stinging defeats for the Swedish Labor movement. The organizations were partly razed and great numbers of workers were thrown into unemployment and a considerable number of them were compelled to emigrate to foreign countries, especially to America, in order to try to make the living that was denied them in Sweden, thru the conscienceless persecution of the employing class. It was the revolutionary workers who had to stand the worst persecution, and when the workers demanded that the organizations should step in to protect this energetic revolutionary element in the labor movement, the reformist leaders showed the most callous indifference. They were apparently happy to see these fellow workers chased out of the country. By such means these revolutionaries, who were so troublesome for the reformist leaders, were gotten rid of.

The cause of all these defeats was exclusively this: that the battles were not conducted according to the methods demanded by the circumstances. The old craft union movement was permeated with that accursed consideration for the Capitalist class and their system of society, which is such a characteristic trait of the reformist labor movement thruout the world. If during these years the Swedish workers had resorted to revolutionary fighting methods, the results would surely have been different. The workers would then have emerged as victors from those battles.

After the inglorious end of the general strike everything was on the verge of falling apart. The organizations were thrown to pieces and unfit for battle and, what was worse, great numbers of Swedish workers had lost faith in all organization and its ability to gain the demands of the working class. The very idea of organization and solidarity had received a hard knock.

What was to be done in order to pull the workers out of this stupor? How could we get new life and a revolutionary will into this listless class? That was the most burning question of the day among the wide-awake workers. It was at this time that the syndicalistically inclined workers of Sweden took hold with all their power in order to create the Syndicalist Revolutionary fighting organization. They had completely lost faith in the ability of the old organization to develop in a revolutionary direction and for this reason energetic agitation was started for a new organization. A great number of meetings were held on the question where the workers gathered resolved in favor of forming such an organization.

After a preliminary conference in SKANE, where a committee was elected to do the preliminary work for a new organization, about twenty craft union representatives, together with others, met in convention in Stockholm at midsummer, 1910, to lay the foundation for the Syndicalist Organization in Sweden. After three days of earnest discussion the organization was ready to start on its career in life and to commence the necessary battle for the interests of the working class.

The name decided upon was "Central Organization of Workers of Sweden" (Sveriges Arbetares Centralorganisation). It was built on local "Samorganizations" in every place (Sam - together). Technically these had for their purpose to unite all the workers of the locality, regardless of craft or occupation, in a unified class organization. As our organization has developed we have also worked out the necessary industrial organs inside the organization in order to divide the local Samorganizations in industrial subsections in the bigger communities with their many different kinds of industrial workers. In most of the big industries thruout the country, we have in our conferences selected industrial education and action committees whose purpose has been to serve as organs for activity along industrial lines when such proved to be necessary. As a whole the members are welded together in a unified class organization.

Already from the start our organization experienced a heavy resistance. Not enough that Capitalism began a ruthless battle against us, as was to be expected, but the old organization, particularly its leading men, has also done everything to put our movement down. In this struggle against us the reformists have used every means. Lies, slander, and treason have been the most common methods. Many of our battles have been broken up because the old organization acted as traitors. They worked hand in hand with the employers against us but we are proud to point out that in spite of these traitors we ourselves have NEVER acted in a similar manner against the members of the old organization when they were out on fight.

The membership figure has risen slowly, but surely, from year to year. The following figures will illuminate the development during these years both in local Samorganizations and number of members:

| | | | |
|---|---|---|---|
| Dec. 31 1910 | 21 | L. S. | 696 members |
| Dec. 31 1911 | 38 | L. S. | 1175 members |
| Dec. 31 1912 | 64 | L. S. | 2037 members |
| Dec. 31 1913 | 94 | L. S. | 3709 members |
| Dec. 31 1914 | 99 | L. S. | 4519 members |
| Dec. 31 1915 | 98 | L. S. | 4880 members |
| Dec. 31 1916 | 144 | L. S. | 9295 members |

Dec. 31 1917...196 L. S...15216 members
Dec. 31 1918...296 L. S...20331 members
Dec. 31 1919...353 L. S...24000 members

1920 shows the same upward tendency only in a little speedier tempo. There is as yet no statistics elaborated for the past half but we can nevertheless state that S. A. C. (Central Organization of Workers of Sweden) at the moment of writing has 420 local Samorganizations with a little over 30,000 members. This figure is not very large, but Sweden is a small country of only some 6,000,000 inhabitants, and we are sure it will not be many years before the Syndicalist Organization has broken thru completely. The strength of Syndicalism in Sweden must however not be computed according to this membership figure for it is much greater. All around us among the masses of the workers, outside our organization, Syndicalism and its methods have become recognized and our ideas conquer. It now only remains for those workers to transplant their ideas into practice in the way of organization.

The Swedish Syndicalist Organization has already from the start stood as an uncompromising fighter against Capitalism. The number of battles during the years past proves this clearly.

From June 25, 1910 to December 31, 1919, the local Samorganizations have, according to the reports, conducted not less than 1,046 battles. A great number of other battles have also been conducted but have not been reported. The figure given includes mainly the open battles. In some cases the demands of the members have been wholly or in part complied with without the necessity of going to an open fight.

Of the 1,046 battles mentioned, 705 ended with victory for the workers, 84 with defeat and 257 with compromise. Besides, there has on the different places of work been conducted an extensive job battle, — that means fights on the job with different means, by which methods the members have gained considerable advantages. So, for instance, the Construction Workers in the S. A. C. have on a large scale used what they call the "Register" by means of which they have from January 1, 1917 to June 30, 1919, won a wage increase of not less than 145%. This is a quite noteworthy improvement won thru this persistent and conscious battle on the job for industrial control and fixing of wages. During these years the S. A. C. has been a battling organization and will be so much more in the future.

All the branches of the organization are developing towards greater stability. The financial status is relatively good. A newly started printshop is working under high pressure to produce all the literature which is spread in millions of copies over the country. The publishing bureau issues books and pamphlets in rapid succession, treating of the different phases of the actual class struggle.

Our paper "Syndikalisten" which is issued twice a week now has an edition of 15,000 on Wednesdays and 17,000 on Saturdays. Steps are now being taken to issue "Syndikalisten" as a daily paper. For this purpose the Organization has bought a house in Stockholm for 250,000 kronor in order to fit it up as a printshop and newspaper office and organization offices.

Special papers are issued quite frequently in large editions and in some parts of the country local Syndicalist papers are planned in order to better be able to agitate for Syndicalism.

All in all the Swedish Syndicalist movement is in a state of rapid development, not only is the membership constantly increasing but the stabilization progresses, making the members conscious Syndicalists able to know what they want and to know the task they have to perform in the imminent struggle for the re-organization of society.

---

HANGING ON 'BY THE SKIN OF THEIR TEETH'

EDITOR CHRISTENSEN OF "SOLIDARITET" SPEAKING TO A CHEERING CROWD OF 10,000 IN COPENHAGEN UPON HIS RELEASE FROM PRISON

# SYNDICALISM IN DENMARK

By JOHN ANDERSSON

Even in the little agricultural country, Denmark, a revolutionary Syndicalist movement has begun to make itself felt; not among the agricultural workers, though, but among the industrial workers, particularly in Copenhagen and surroundings, where nearly all industry is concentrated. Already fifteen to twenty years ago the revolutionary ideas began to be known in Denmark. There were a few small but energetic groups carrying on a powerful agitation. Some papers were also started, one after the other, but they did not come out with very many numbers before they had to stop, due to small circulation. Besides, this propaganda movement was of a rather loose kind with members who enthusiastically devoted themselves to the discussion of theories and philosophy but didn't give a snap for action expressed in carefully planned organization work and self-assertion on the economic battle field. These propaganda groups consequently worked principally outside the economic movement.

But even here there was finally a more practical revolutionary movement formed, which saw the light of day with the starting of "Fagoppositionens Sammenslutning" (The Unified Craft Opposition). As one can judge from the name, its purpose was to carry on opposition for the Syndicalist ideas inside the old organization "De Samvirkende Fagforbund" (the united trades unions). The craft opposition formed a great number of clubs inside the various crafts or industries. These clubs later were unified and had for their purpose to work for Syndicalism, each one inside their own organization.

This movement soon started an agitation paper called "Solidaritet". It was first issued as a weekly paper but has now for nearly two years been issued as a daily paper which comes out even on Sundays. To keep this paper going the members have made great personal economic sacrifices and as a result this paper is about to be recognized as the fighting organ of the Danish working class.

This movement has in the course of the years experienced tremendous resistance. The old reformist movement has done everything to break it down but they have constantly failed. The authorities have worked hand in hand with them. Many of the driving forces of the movement have been thrown into prison, sentenced to long and hard punishments for their energetic fight against the exploiting Capitalist class. This conscious Syndicalist agitation has recently commenced to show results. Quite a number of workers have left the old organization and formed a new one by the name of "Dansk Federalistisk Sammenslutning" (Danish Federalist Union), a new independent fighter in the economic class struggle.

The purpose of this organization is "to gather all the economic organizations outside the "De Samvirkende Fagforbund" for co-operation. And on the basis of absolute sovereignty for each organization to create a Central Secretariat for educational and advisory purposes in the economic class struggle of the working class." The organization stands outside all political parties.

Besides, the purpose of the Central Secretariat is "to gather and elaborate all material that can be of service to the working class in its struggle for the conquest of power over the land and the means of production and distribution." The power of decision rests entirely with the members and with no leaders.

The membership of this organization is now between thirteen and fourteen thousand. The main group is Marine Transport Workers, who are affiliated to the number of 7500. There are no other sailor organizations in Denmark besides the Syndicalist organization to which nearly all seafearing men belong. It is desirable and practical that the Marine Transport Workers Industrial Union No. 8, I. W. W., as soon as possible, enter into co-operation with this organization in Denmark. It is sure to leave good results. In Sweden and Norway, also, we are willing to establish such co-operation, having for its object the strengthening of International Solidarity thru action.

Truly, the revolutionary economic organization ideas are breaking thru in every country.

---

WILL HE STAY DOWN THIS TIME?

# Norwegian Landsorganization Discards Craft Unionism

From "Syndikalisten" (Swedish Syndicalist paper) of July 24 we gather the following:

"The Norwegian Landsorganization of Labor Unions was in session all week last week and took position on a number of great questions.

"Among other decisions we note one providing for a transformation of the form of organization. Instead of craft unions and craft internationals, hereafter all local unions in each locality are united into a local samorganization, which is to be the basic unit of the landsorganization. The individual local unions which have hitherto belonged to craft associations, will now form industrial branches which unite into industrial unions."

Thus craft organization loses another stronghold, and that, too, in a country where craft production has not yet played its roll to a finish. For while Norway is making rapid strides towards a complete industrialization like America's, handicraft is still a factor much more than it is in America.

As to the new form of organization adopted it appears to be almost a counterpart of the Swedish Syndicalist organization described in this number by John Anderson, only with this difference that the Industrial Union appears to be better developed in Norway than in Sweden. The natural explanation is that Norway starts with the whole body of workers at its disposition, while the syndicalists in Sweden are building from the bottom up, adding new organs as they need them.

The striking fact in both cases is that the local samorganization (corresponding to the City Central Council of the I. W. W.) is the basic unit of the landsorganization. This arrangement makes of the landsorganization in the first hand an organ for national and local administration, a thing so necessary in these revolutionary times. By this arrangement the Norwegian workers will be able to step in and take national and local control at a moment's notice without being compelled to use the old political organs of administration.

This arrangement makes it possible for the workers to assume control without the aid of a political party, and makes it possible to use the industrial organization of the workers as the basis of society.

As for forming productive organs on a nation-wide scale, this appears to have been a question of secondary nature, just as with the syndicalists of Sweden and other countries.

This is the natural result of the state of economic development of the country. While we here in America have trusts covering the whole nation with their industrial operation requiring the industrial union on our part in order to match them, in Norway and Sweden the majority of industrial enterprises are limited to one locality enabling the local union pretty well to cope with them.

However we see that both the Swedish Syndicalists and the Norwegian Landsorganization have provided for productive and distributive organs on a national scale, corresponding to our industrial unions.

The I. W. W. has yet to build its central councils for local administration. They will come as we organize more and more branches of industrial unions to draw these councils from. We are apt to need them any day on a large scale.

---

# The White Terror

Forgetting for the moment the reign of terror in America of which we ourselves are the victims, we cannot help but stand aghast at the White Terror in Finland and Hungary.

If we compare ourselves with the Finnish workers we must feel like the coddled pets of the masters. As we all know the Finnish White Terror authorities threw about 40,000 in jail and have executed or starved to death or otherwise murdered tens of thousands. And we should not for a moment believe that this regime of terror has stopped. Oh, no. For every day that passes the Finnish papers bring us news of new sentences for "crimes" committed during the red revolt of a couple of years ago. Time and again life sentences are imposed, sometimes reduced to 10-20 years. The charge is sedition and treason.

The socialist party holds 80 seats out of 200 in the lantdag, but they have not power enough to protect themselves and their own. A constant stream of the party members is entering through the jail doors to serve long sentences, the latest one being Valpas-Hanninen, an ex-editor of the "Tyomies" who has been condemned to life imprisonment for participation in the revolt.

The Finnish socialists are largely politicians. They have no industrial organization built up by which they could check the White Terror.

In the same manner correspondence from Hungary indicates that the White Terrorists are working night and day. As a sample of their work let us mention a family group of four which was terribly mangled with bayonets before being buried alive. Arrests and convictions are innumerable and the justice dealt out is a parody.

Nearly all the "Peoples Commissars" of the shortlived Communist regime are arrested and face terrible sentences.

The people of Hungary seem to be paralized by this terror. Perhaps the nearness of a Russian victory in Poland will tend to give them hope again.

We expect to have more details about Hungary in our next number.

# Consequences of the Railroad Strike in France

By George Andreytchine

20,000 militants "cheminots" discharged and blacklisted! Hundreds sentenced to prison for months and years! About 20 of the leaders in the infamous prison "La Sante", the Bastille of the Third Republic, charged with "plotting against the internal security of the state", victims of the sterile vengeance of the bankrupt French bourgeoisie. The Railroad Workers' Federation again under the " piritual guidance" of Bidegaray, the willing tool of the companies and government. The railroad unions deprived of their best active members, a general demoralization all along the line.

This is, to the reporter who is not accustomed to dig deep into history and psychology of such profound elemental forces, the balance-sheet of the memorable struggle in May.

But to the socialist historian the great railroad strike in France is one of the preparatory maneuvers of the militant army of labor, which is making these assaults against the fortress of capitalism with the sole intention of the tempering ardour and willpower of the soldier-producer. No one in France had the illusion that this was the signal for insurrection against the existing order, no one from the ranks of avowed revolutionists, anyway. The necessary elements of popular discontent were lacking to make such an insurrection the work of the masses; the revolutionary propaganda and technical preparations for a general strike were almost nil; the main labor organizations were still under the control of renegates, who are now openly working against a social revolution; the railroad workers' organization had just gone over to the revolutionary side; the men who were elected to direct that powerful organization counting over 350,000 members, were young and inexperienced, yet—the mass of "cheminots" hardly knew the men who had signed the strike order.

The main reason for the failure of the strike lies in the fact that there were no deep seated economic grievances and that the battle cry "Nationalization" was as foreign to them as "Arise" would be to the tired and exhausted traveler who had fallen asleep by the wayside.

The young and critical anarchist element of the railroad workers claim that an open declaration of war on the capitalist regime would have carried a greater number of workers than such a lukewarm and meaningless platform. There may be a great deal of truth in this assertion.

The young and enthusiastic militans who were elected after the defeat of the reactionary Bidegaray recognize their mistakes in overestimating the readiness of the masses; the February strike had given them abundant hopes and even justification to expect that this time the response would be overwhelming.

Another tactical mistake Monmousseau, Midol and Leveque made was to allow the old reprobate Jouhaux and his clique of recent and ancient renegates, the ex-Zimmerwaldians Merrheim, Dumoulin, Calveyrah, Laurent and tutti quanti, to run the strike, after having witnessed all their nefarious dealings with the corrupt French governments during the war and ever since. They knew in advance that this move was suicidal, and still they made it, for the sake of safeguarding the railroad workers' union intact, I presume.

Suppose the Bolsheviki would call on general Foch to lead their armies! The step Monmousseau made was analogous to this situation. In the last year and half the whole "General Staff" of the once glorious Confederation Generale du Travail have been occupied solely with the attack—coup-de-grace —to be dealt to these "geneurs" (trouble makers) Monatte, Nonmousseau, Sirolle, Midol and their followers. And the golden opportunity came in the most propitious moment. The Holy Alliance (Sainte Alliance) of the railroad Magnates, the Government of the Bankers and Speculators, the yellow press and the leaders of the C. G. T., did not hesitate to take advantage of the situation. With a masterful stroke, the "General Staff" of Judases, once men of courage and moral probity and now sworn enemies of their fellow-soldiers in the class war who have remained true to their proletarian past traditions, shattered the last remnants of the revolutionary leadership in the Railroad Workers Federation. With open fraud and corruption, they again put their ally Bidegaray in the saddle, in spite of the fact that he was repudiated by the "cheminots" at their congress in April! repudiated and discarded. But, as Monatte writes from "la Sante", these are Bidegaray's **"Cents Jours"*)** and soon we may again witness the revival of the pre-war syndicalist spirit in this union and Monmousseau will take his place at the helm of this formidable battalion of rebels, much wiser and more of a general than he has shown himself during the May strike.

There is no reason for despair: all children must learn to walk by falling. The waves of discontent are growing in geometrical proportion to the follies and failures of the French bourgeoisie. It has demonstrated its incompetency to solve the tremendous problems of production; it has accelerated its downfall by its insane policy towards Soviet Russia and its stupid procedure at home.

The organized workers in France long ago could have put an end to its agony and last gasps, were it not for the fact that the men they have entrusted with the steering of the Confederal ship have always come to the rescue of the doomed bourgeoisie. Moreover, one must not forget that of the 2,000,000 members of the C. G. T. only a small minority is composed of the old war-horses who in the days of yore made its spectacular career and its epic battles inspire all of us with admiration. Most of the new

members are just simple trade unionists, who have entered it for economic security and protection, and not far the purpose of making revolution. The leaders are doing nothing to point out to them the inevitability of the coming revolution and assign to them their constructive work.

But every year the waves of strikes grow bigger; they reach deeper layers of the masses, embrace more and divers organizations. The crucial moment is fast approaching. And then neither Jouhaux nor Foch can stem the conquering avalanche of the proletariat.

*)"Hundred Days", when Napoleon returned from Elba and reigned only a hundred days to find his inglorious end at St. Helena.

EXECUTIVE BOARD OF MEXICAN I. W. W.

**Photo taken in garden of ranch near Mexico City, showing all but two members of Executive Board and three other fellow workers. (Tabler and Lopez of Executive Board were absent.) Names and corresponding numbers: 1. Maclovio Pacheco; 2. Hipolito Flores; 3. Jose Refugio Rodriguez; 4. Jose Zuidarsic; 5. Linn A. E. Gale; 6. Jose Estrada; 7. Vincente Ortega; 8. F. Snyder.**

# GENERAL DEFENSE

**By Wm. D. Haywood**

Henry Bradley, a former member of the General Executive Board, was convicted of criminal syndicalism at Eldorado, Kansas August 14th. The case will be appealed. Bonds have been fixed at One thousand dollars.

Chas. Plahn and Sam Masonovitch were arrested in Chicago, the latter being released. Plahn was held under the indictment growing out of the New Year's raids which were manipulated by Maclay Hoyne and the Department of Justice. Plahn's bond was fixed at $5,000.00 and has been furnished.

The bonds of James Price and Ceasar Tabib of the Sacramento group have been completed. These men are both in bad physical condition, and we trust to learn of their early release.

Ed. Anderson, Felix Cedeno, Frank Filey, Jos. Harper, Harry LaTour, and Frank Moran of the Sacramento group, doing a three years term in the Leavenworth Penitentiary, will be released on expiration September 2nd. $75.00 each has been sent to them for traveling expenses.

William Moran and Burt Basnett were arrested in recent raids at Seattle, Washington. Moran was released, the charge against him being reduced to a disorderly person, though a finer young man it is hard to meet. Basnett was held for bond of $1,000.00.

John Grady, Nick Wallace, R. I. Parent, and Chas. Craig were found guilty of putting a crimp in Judge Webster's injunction. Parent was presented with four months and the other six months in durance vile. These men had committed no offense other than conferring with one another and other members out in the woods. Ten others were arrested for doing something with the same injunction on August 5th. They are being held under a

blanket bond of $1,000.00, $500.00 of which has been raised.

George Allridge who was held for murder at Medford, Okla., has been released. It seems that a railroad policeman had been killed somewhere in that vicinity and the wise detectives thought of nothing else than arresting an I. W. W. for the crime. Three other members are being held at Medford. No case has been made against them. The Prosecuting Attorney offered the magnanimous proposition of turning them loose in thirty days if they paid board at the rate of 75 cents a day for the entire period of their incarceration. The General Defense Committee recommended that it be not done, believing that it would establish a bad precedent.

The following named nineteen members of the I. W. W. Paul, Diachuk, Sergey Drigoff, Stephen Hinievich, Frank Dziarkofsky, Peter Dubovik, Philip Holishko, Paul Grib, Ivan Hornofsky, Christopher Kataguroff, Efim Kertz, Naom Kerget, Vasili Korotkoff, Philimon Matorin, Ivan Mayboroda, Paul Manko, Ivan Sabchuk, Prokopiy Savitch, Stanislaus Zamoysky, Vasili Hornofsky are being held at Ellis Island, New York and will be deported to Russia. They say they are conforming strictly to the preamble of the I. W. W. and will make no appeal to capitalistic courts or judges believing no relief or favorable decision would come from such sources.

The Writ of Habeas Corpus was sued out on behalf of Taft et al. The six members who were convicted of vagrancy and sentenced to the Municipal farm with a fine at Kansas City, Missouri. The Habeas Corpus will be argued August the 16th. It will be remembered that this case was originally tried before a judge who when Mr. Vanderveer objected to the jurist making remarks outside of the record told Vanderveer that if he did not like what was being said from the bench that he would be excused from the courtroom—some justice!

Twenty-five thousand dollars in Liberty Bonds have been raised for the joint bond; twenty-five thousand more is needed to secure the release of the remaining members of the Chicago group confined in the penitentiary at Leavenworth. The Amnesty Club at Chicago reports an additional sum of three thousand dollars raised for this purpose which will make a total of $28,000.00.

# Amnesty Picnic

**Given by the Scandinavian Bail and Bond Committee of the General Defense *of the* I. W. W.**

# Skinners Job-Strike a Winner

By JOHN E. NORDQUIST

The skinners are winning the eight hour day. The strike on the job tactics are turning the trick in camp after camp. Not only are the hours of labor being shortened, but the wages have been materially raised in many of the camps of the Northwest and middle-west; and better still, Mr. Block and his brother, Scissor Bill are being forced to line up in the only working class union or get off the job. In camp after camp he is told to begin functioning for himself and his class or else get off the job and stay off.

The past method of pleading with the unreasoning camp workers has been discontinued as it has proven a failure. A program of steely persuasion has been inaugurated instead, and it is proving a grand success.

Up to date, most of the camps of Washington and Oregon have gained the eight hour day. All of Kane's camps near Aberdeen, S. Dak., started in on the eight hour day on Aug. 1, and many other camps in the middle west are about to make the great change.

Naturally the gaining of the eight hours is a slow process. Before effective action can be taken a majority of the workers in a camp must be lined up and this is being done as speedily as possible. Every camp delegate in the country is sending a steady stream of applications for membership into headquarters and it will be but a short time till all construction camps will be under control of those who work in them. Not till then can the conditions be improved to the extent that they should be improved.

You old members who have been asleep at the switch while the active fellow workers have been bearing the brunt of the battle, had better pitch in and do your bit now. Can't you see that with a little more action we'll make the camps solid wob?

Don't hang back any longer!

Write in for credentials at once, then begin FORCING the scissors into the ONLY UNION, or force them out of the camps.

Away with all the soft stuff!

Let's try a plan that will win!

Make the three letters read, "I WILL WIN" for the Industrial Workers of the World!

Here is a fac-simile of the leaflet that has helped solidify the skinners and brought about concerted action in the team camps.

### STRIKE ON THE JOB

Fellow Construction Workers of the Road Camps and Railroad Grades of the Entire Country—North, East, South and West—the time has come for us to assert our rights or the greedy contractors will grind us still harder. They are already contemplating a cut in our scanty wages! Yes, and they are thinking of still further cheapening the damnable chuck that they are at present slopping us with!

They have even decided to lengthen the long, arduous hours that we now slave for them! The nine, ten and eleven hours that we are now working doesn't seem to satisfy them. One honest-to-goodness camp of wooden-blocks is actually working twelve hours!

Now, as we have already agreed that the eight-hour day is most important, we will

### TAKE THE EIGHT HOUR DAY

### TAKE IT! UNDERSTAND!

We are not going to ask the "cons" to cut the hours and have them refuse us, as they have done in the past. This time we are really going to take the eight-hour day, as the lumber jacks of the west did recently; that is, we are going to win our wishes by striking on the job.

### HERE'S OUR PROGRAM

We'll go to work at the usual time and put in eight hours of work. Then, at a signal from one of our fellow workers, we'll simply unhitch and stable the stock.

There's no need of informing the boss previously that we are going to take this action. Just work the eight hours and quit, then tell him our reasons. If he doesn't like it—well, it's just up to him to make the next move. Very likely when he learns that we are pulling the same tactics in every construction camp in the country, he'll think twice before he gets hard-boiled and wants to "can" us.

Remember, fellow workers—the "cons" can't depend on the "standing army" of unorganized men that they formerly shoved into the groove when we went on strike, for the simple reason that most of these unorganized men are now red-card members. And that is the chief reason that we are bound to win the eight-hour day.

The masters have already delayed the big jobs as long as they dare in order to force us to accept long hours and low wages. Now, when they see that we are determined to force the issue, they will agree to our eight-hour program in order to get as much work done as possible before snow flies.

### REMEMBER

Our program is for the eight-hour day at the same wage that we are now getting for the nine, ten and eleven hour shifts.

When we have firmly established the eight-hour day we'll give our attention to a reasonable wage scale for all camp construction workers.

"One thing at a time" should be our motto, if we expect to better our conditions quickly.

Prepare for the great "job strike" by lining up as many of the cardless as possible. Make your camp ONE HUNDRED PER CENT WOB.

If you who read this haven't lined up in the I. W. W. yet, get in touch with a delegate at once. Your card awaits you. Don't wait till we get the eight hours for you. Show that you are a man! Be with us and

WORK PEOPLES COLLEGE, RIVERSIDE, STA, DULUTH, MINN.

# The Work People's College

## AN I. W. W. INSTITUTION

The Finnish workers in America have observed that the advancement of learning is one of the most important factors for the progress of the class struggle of the workers. It is for this reason that the workers have established in their midst an institution which for over a decade has carried on education of the Finnish workers of America. This institution. **The Work People's College**, during its existence has implanted into the workers the true spirit of the class struggle and its processes, teachings which have been very effective in the struggle of the workers against the capitalist class.

But being an institution of the Finnish people only, it has not attained that effectiveness which, as a working class institution in America, it should have. So The Work Peoples' Coll ge seeks to broaden out in order that the workers the nation over shall have the opportunity to take advantage of this institution of learning. With this in view several of the subjects *will be taught in English* during the coming year. The success of this work is guaranteed by the fact that the workers industrial organization of America—the I. W. W.—in its twelfth annual convention held in Chicago, Ill., May, 1920, has given its support and endorses the college as an I. W. W. institution.

### SCHOOL YEAR

The school year at the Work People's College commences on November 15 and continues for five months until April 15. Everyone entering the college may begin his course of study from where he left off either at the college or other school or at the place he had reached by self study.

### COURSES OF INSTRUCTION

1. Scientific department.
2. Technical elementary sciences and practice.
3. English department.
4. Organization bookkeeping department.

### SCIENTIFIC DEPARTMENT

Lectures in this department will be given on the following subjects: The construction and procedure of industrial unionism, commencing with the preamble of the I. W. W. and concluding in industrial society. Economics and sociology.

Literature which treats on these subjects will be used as text books. The teachers will guide the students in the obtaining of such course books as are collateral to the lectures. The college library has a good assortment of books dealing with these subjects, giving an abundance of material in this work.

### PRACTICE DEPARTMENT

Among other work in this department, two hours per week will be devoted to correct pronunciation, reciting poetry, reading and platform department.

Two hours per week will be given to public speaking and presentation, debate, parliamentary drill, and organizing work.

In addition to these hours the student body will arrange for two meetings per week in which subjects of the hour and other discussion will be carried on so as to give the students practice in speaking on his feet and conducting meetings according to parliamentary rules.

### DEPARTMENT OF ENGLISH

The teaching of the English language is divided into four classes. The first class learn the fundamentals of grammar, pronunciation and the diacritical mark.

The second class goes through the grammar thoroughly and in detail. Considerable attention is given to composition in connection with the points raised in the grammar. Attention is also given to sounds and the pronunciation.

The third class concentrates on composition with reviews now and then in grammar. Considerable time is given to reading.

The fourth class gives most of the time to the study of rhetoric; several long themes are written; some time is given to working out speeches and debates.

### ORGANIZATION BOOKKEEPING

1. The duties of a delegate: 5 hours.
2. The duties of a secretary: 3 hours.
3. Fundamentals of double entry bookkeeping according to the Rowe system: 2 hours. The students can take up the work where he had formerly left off, or depending on his former preparation.
4. Penmanship; 5 hours.
5. Letter writing; 2 hours.
6. Arithmetic 1, whole numbers, fractions, decimals; 5 hours.
7. Arithmetic 2. A review of Arithmetic 1. measures, percentage and proportion; 5 hours.
8. Typewriting.

### CHARGES

Room and board may be obtained at the college dormitory and boarding hall. The charges are as follows: Tuition, $10.00; board, $30.00, and room, $6.00 per month, the total expenses being 46.00 per month. Under all circumstances the payments are to be made in advance for at least one month.

If for any reason the student is compelled to leave before the month is up, the balance of his boarding and rooming account will be refunded, but no tuition will be refunded.

### HOW TO GET TO THE COLLEGE

To get to the college buy a ticket at the Union Depot in Duluth to Spirit Lake. In case of baggage which is checked, the check must be given to the conductor on the train before the baggage is put off at the Spirit Lake station. The station is right near the college. If the street car is taken, take car No. 9 or 14 to 91st avenue W. From here it is just a short distance to the college.

### STUDENT LIFE

The students are organized and have regular business sessions as well as discussion and debate. Parties, games and dances are given Saturday evenings. Frequently programs are given which are attended by fellow workers and friends from Duluth and the neighborhood, who come here to take part in the program and to visit the college.

There is plenty of opportunity for the student to take regular exercise indoor and outdoor to keep himself in good physical condition.

### INTRUCTIONS FOR THOSE INTENDING TO ATTEND THE COLLEGE

Hereafter is attached a student's entrance application. Fill it out and send it to the college. When you have made application for entrance, report at the time you specify. If you are unable to attend after you have reported, be sure to notify the college of the inability.

Try to arrive at the college. Do not unnecessarily delay in making your entrance application, for in the college dormitory there is now room for only about 60 students, therefore a delay may shut you out.

Take all your text books with you for they may be useful course books here.

Select your course of study as completely as possible before your arrival here, selecting what you think the most important subjects. Follow your selections and plan to the end; then you will get the most from your study.

Knowledge is the keenest weapon in the unavoidable class struggle. The sooner the working class becomes conscious of its significance in society the nearer is the day of industrial freedom.

It is required of all students persuing courses at the college that they take at least one subject in the scientific course.

### APPLICATION FOR ENTRANCE TO THE COLLEGE

Use this form and send it to the college. Mark with an (X) cross the subject you intend to study.

.....Scientific Course.

.....Practice Subjects.

.....English Language.

.....Organization Bookkeeping.

I shall arrive at the college.....

.....(Month).....(day).

**WILLIAM CLARK**
**Stool Pigeon**

From Philadelphia we have received the accompanying photo of Wm. Clark together with the following letter, with request to print:

Fellow Workers:

Enclosed find a picture of William Clark, who ran away with about eight hundred dollars ($800.00) belonging to the "Organization and Class War Prisoners Fund." He was formerly a member of 400, and was well known around Dakotas. It is furthermore rumored, that for evading the draft the "Department of Justice" did not prosecute him, but kept him in the organization to act as a stool pigeon.

He is about five freet seven (5 ft. 7 inch.), blue eyes, black hair and has a woman's head totooed on his right hand above the wrist. He is about thirty-four (34 years of age.) He was on the last ballot of No. 573 for the "Organization Committeeman."

Hoping that you will keep your eyes on this bird.

Yours for the O. B. U.

JOHN J. WALSH,
Fin. Sec. Joint Locals.

## THE I. W. W.

### A STATEMENT OF ITS PRINCIPLES, TACTICS AND METHODS.

This is a new, large 4 page leaflet. It is just the thing to give to strangers. It saves you a lot of talking. First edition sold out in a week. Second edition now ready. Every I. W. W. men should always carry some with him. $1.50 a hundred. $12.00 per thousand. Send all orders and remittances to: **George Hardy, Gen. Sec'y-Treas., 1001 West Madison St., Chicago, Ill.**

# The I·W·W· IN THEORY & PRACTICE

## JUSTUS EBERT

If you would know the I. W. W. in ·stance, in spirit, in history, read this ·rtant book, just off the press and now · for delivery. It is a running story I. W. W., brief and newsy, but com-·ive and thorough. It begins with its back ground, the environment of its origins—its material origins—industrial, economic, the great industrial combinations, the financial powers; follows with a resume of the developments in this country reflective of the native class struggle, the growth of the antecedent labor organizations up to the Knights of Labor and the A. F. of L. as it is today; then, the actual history of the I. W. W. itself, its many strikes and struggles; its policy as to violence and sabotage; the principles and the structure of the organization; finally current questions, up-to-the-moment, and the attitude and relation of the I. W. W. in connection therewith.

Yes, if you would know the substance and the spirit of the I. W. W., get this meaty little booklet—128 pages of reading matter. Now ready for delivery. 50 cents per copy. Postage prepaid; in lots of 10 o rmore, 30 cents, prepaid. Address: George Hardy, 1001 West Madison Street, Chicago, Ill.

**SEND FOR IT NOW**

# The CENTRALIA CONSPIRACY

## WHAT HAPPENED IN CENTRALIA?

The newspapers said that unoffending paraders were killed without provocation or excuse by ambushed I. W. W.'s.

**DO YOU BELIEVE IT?**

Papers telling the truth about the tragedy were shut down or denied the use of the mails. Only the Lumber Trust version was permitted to reach the public.

**DO YOU WANT TO HEAR THE OTHER SIDE?**

Every effort was made to spread broadcast the lie and suppress the truth.

**ARE YOU WILLING TO HEAR THE TRUTH—EVEN IF IT HURTS?**

**The Centralia Conspiracy**, by Ralph Chaplin. 80 pages; 44 half-tones of actual scenes. Price 50 cents. Get a copy at any progressive bookstore, or order by mail from the following places: The Liberator, 138 W. 13th St., New York, N. Y.; Geo. Williams, Box 1873, Seattle, Wash.; George Hardy, 1001 West Madison St., Chicago, Ill.

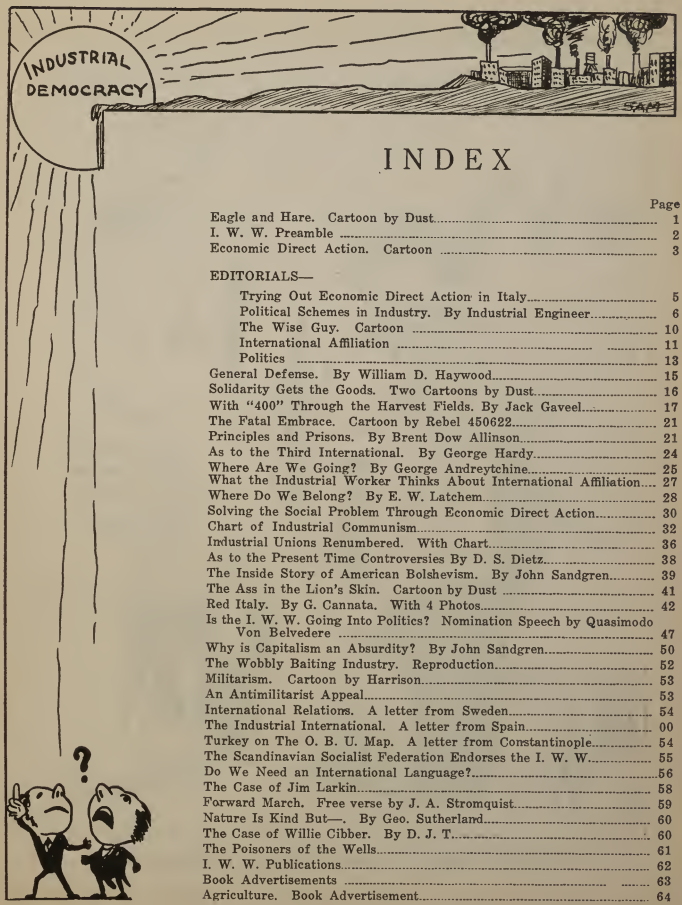
EAGLE AND HARE

TWENTY FIVE CENTS

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace as long as hunger and want are found among millions of the working people and the few who make up the employing class have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.



We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping to defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interests of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown.

By organizing industrially we are forming the structure of the new society within the shell of the old.

## Trying Out Economic Direct Action in Italy

Elsewhere in this issue there is an article under the title "Red Italy," written by Fellow Worker G. Cannata. Everybody should read it with care. When you have read it you will know *why* the workers of Italy are taking over the industries.

The writer piles up the facts in the case in such a manner that we really understand that capitalism in Italy has about come to an end both industrially and politically.

The events in Italy are not a little disconcerting to the doctrinaire communists who in their imagined superior wisdom have ordained that the workers must *first* put their respective communist parties in power, in order that they might "smash the state," before any taking over of the industries takes place. They are reluctant to approve of any revolution which does not first of all shake the plum tree of political jobs into their lap.

The Italian workers, though having expressed their sympathy with Soviet Russia and the program of the Third International, as outlined largely by the Russians, have chosen their own way of solving the social problem. That their efforts, so far, almost entirely agree with the I. W. W. program is, no doubt, more than blind chance. They, like we, are following the line of least resistance in determining their course, much as water and electricity and other forces of nature do. The Italian workers are choosing for their field of revolutionary activity the sphere where the workers are strongest, that is in the shop, disregarding doctrine which would stear them up against the machine guns that guard the government buildings and public places, at least for the present.

This is what the last I. W. W. convention termed *Economic Direct Action.*

There are two messages of world importance which the Italian Industrial Revolution has aready at this stage flashed to the workers of the world. They are

(1) That the job organization, the industrial union, is the organ by means of which the people shall take possession of the industries.

(2) That the revolution should be made bloodless, if possible.

These two messages are inspiring and are these very days being indelibly engraved in the minds of hundreds of millions of people who read the news. It can not fail to have a tremendous influence on the world's workers. It will no doubt speed up the work of industrial organization throughout the world as nothing else can do, and the beautiful gospel of bloodless revolution is bound to enthuse even those big masses who have held back from carrying out the program of the political revolutionists.

We greet this first stage of the Italian revolution as the beginning of a new era in revolutionary working class activities, as a new type of revolution. This Italian type, centering in industrial occupation, will probably be the one adopted in all countries of any considerable industrial development. The other type the Russian, whose central fact is the political revolution, is more apt to be resorted to in countries of about the same stage of industrial development as

Russia. The industrial character of the revolution is apt to be the more pronounced, the more complex the industrial structure of a country is.

However, there is no reason why we or any other country should slavishly follow Italy's example, any more than there is reason for us to copy Russia in detail. The solution will differ in different countries.

We wish to call special attention to one sentence in Cannata's article, which seems un particularly timely. To wit: *"In fact it may be said that the sole bone of contention between the Syndicalists and Communist Anarchists on one hand and Maximalist Socialists on the other is the insistence on the part of the former that the Socialist Party, with its heterogeneous leadership, held in unnatural unity through the vision of coming power, shall not extend its hegemony over the workers into the revolutionary period by the organization of politically dominated soviets, as has happened in Russia under a different set of conditions."*

This indicates that the Italian proletariat, in shaking off the rider that has hitherto driven the spurs in its sides, is going to take care that it does not saddle upon its back a new set of rulers who would like to get into power over the workers under the cloak of "proletarian dictatorship."

The article indicates that the workers are taking steps to take over the present political functions of society through their economic organization and establish proletarian self-government rather than a dictatorship. Whether these "political" organs will be the "camere del lavoro" or some new organ growing out of the present situation, that remains to be seen.

We are not oversanguine in our hope that the Italian workers will be able to carry out the industrial occupation to a successful finish without the shedding of blood in the process. We dare hardly believe that the Italian capitalist class and the Italian government will be able to control themselves and allow the change to take place without attacking the workers.

But if they do make such an attack, the workers will be able to wash their hands of resulting events, as they have in good faith offered the world to make the change without shedding blood.

*All hail to our Italian Fellow Workers in revolution!*

*Long live "The Fourth Italy," the Italy of Industrial Communism!*

# Political Schemes in Industry

**By An Industrial Engineer**

During the last five years the world has been flooded with two classes of propaganda, one advanced by the capitalistic powers in an effort to maintain the present, or rather to reclaim a previous status quo, and on the other side one even more intense advanced by radical parties and labor unions in an effort to do away with the present system altogether. The first specie of propaganda necessitates no comment, as the world is in a state of flux, and that which concerns itself with maintaining what already is, is dealing with a dead carcass. So that which is of primary importance is that propaganda which is for the purpose of burying the carcass of present systems, and substituting a living mechanism.

**Who are "the Workers"**

There are many programmes of a supposedly radical nature running from the Plum plan to communization. These are infinite in their variations, but their variations are mostly as to how the change shall come about. Their appeal is made to a rather indefinite character, namely "the worker." Their appeal is made on the grounds of robbery, corruption, and the unethical practices of the present system. Their appeal is made for a change in control to place the worker as the dominant factor and right these ethical wrongs. The kernel of the more radical schemes is the expropriation of the present owners of industry and property. Therefore all this propaganda busies itself with methods of intriguing the worker as an individual into methods of expropriation and idealistic conceptions of a workers' state.

"Workers of the world unite!" has come to have as great a political slogan value as "Liberty, Equality, Fraternity!" had dur-

ing the French revolution. It is a fine phrase, but the question is "Unite for what?" The unity so far achieved bears no relationship to work. Not that the slogan should not be used; it has its value in an advertising nation. Wilson's "He kept us out of war" gained for him sufficient adherents to re-elect him, and to enable him to put us into war. Slogans of the past have either been exhortations or expressions of liberality with spiritual ideas, while slogans of more recent date have gained power for their originators by their proclamation of great material generosity. "All power to the Soviets!" and "Land to the peasants!" undoubtedly are the greatest gifts that have ever been made, but like all gifts they carry with them no obligation either in use or abuse. "Labor creates all wealth." That human effort produces all is only too obvious. "To the worker belongs the product of his toil." Once again the expression of an ethical right!

Who is "the worker" to whom all this propaganda is addressed? In industry today, whether in a steel plant or a hospital (for we are going to call all essential work industries, direct or indirect) the divisions of functional service are four in number. These are (1) manual: consisting of unskilled and skilled labor, mechanic and expert mechanic; (2) clerical: consisting of clerks, accountants, auditors, who in the future should be industrial statisticians; (3) supervisory: consisting of foremen, superintendents, and managers, who in the future should be functional supervisors, and not job bosses; and (4) technical: consisting of draughtsmen, inspectors and technicians. This is paralleled in a hospital by elevator operators, ambulance drivers, record clerks, nurses and internes, superintendents, laboratory workers, bacteriologists and consulting experts. In an industrial state the concept of "the worker" must include all of these divisions. Treating the worker apart from his industrial function is appealing to a **political** entity. We all cease to be workers when we are off the job. Today "all those who work for wages" is the definition of "worker"; whereas **industrially it should be "all those essential to production."** The advertising man and salesman work for wages, but they perform no function in the producing or distributing of any material. Any scheme proposed as a solution for the present unrest which does not contain within its plan for the operation of industry specifications for increasing the producing power and eliminating all extraneous occupations is a political scheme and doomed to but a brief existence. Any scheme which contemplates the maintenance of present foreign trade is nothing short of political imperialism under another name.

To the economist and theorist the abolition of capitalism is the crucial point. Dealing only with financial wealth and its distribution these people seek their remedy only by making distribution equitable. But the very mechanism of material production and distribution has been built by the capitalistic regime, and its waste of materials and energy surpasses the sum total of its production so that no matter who comes into possession of the present industrial system the result will differ little from the operation of today.

Shylock says "You take my life when you do take the means whereby I live." Take from the capitalist his means, or in other words his system, and the capitalist will undoubtedly be relieved of his life as such. But those who take over his means, or system, fall heir to the same methods and inefficiencies, and inevitably to much the same life as they had lived before.

**NO CHANGE OR REVOLUTION HOWEVER GREAT FROM THE POLITICAL POINT OF VIEW CAN FUNDAMENTALLY CHANGE THE STANDARD OF LIVING UNLESS IT CARRIES WITH IT A CHANGE IN THE BASIC TECHNIQUE.**

### Shortcomings of the Guild System

The guild system of the workers of Great Britain proposes that industry shall be operated by a number of industrial guilds, each guild to be composed of the trade unions engaged in one industry and to be responsible for its product, the health of its workers, and the maintenance of its material equipment. During operation the workers in a guild are paid a national basic, or minimum wage. Their goods are sold in the open market to individuals or other guilds. Cost and maintenance are subtracted from the proceeds, and the surplus is distributed pro rata among the workers in the guild. Although the guildsmen call the guilds industrial, a perspective of one of them shows that they are rather a heterogeneous collection of several industries and associated trades. For instance they have garment, fur, shoe and artificial flower factories in one guild called the clothing guild. Another guild is comprised of what is known in Great Britain as the engineering trades, including ship building, locomotive building, machine building of all kinds and all repair machinists. The conception of a guildsman is of a guild parliament sitting in England, wherein representatives of all **free governing** dom-

inions of the British Empire are represented, maintaining the present position of Great Britain as the world's industrial middleman. Canada and Australia are treated as subjective industrial entities, to be directed by the industrial policies of the guilds of Great Britain. Of course India and other colonies, not being self governing, would have no representation. The producers would be represented by the industrial guild to which they belong, the consumers by a political state parliament which is the supreme national executive body. It will be seen that while the guilds will appropriate the means of production and distribution from their present owners, they are still imperialistic in that they would attempt to maintain the political organization of the British Empire, thereby retarding the industrial development of other countries, and causing the exploitation of other workers. Within the guild itself, while admitting that employment could be made more regular, and housing and sanitary conditions could be much improved, the basis of production remains a capitalistic one in that they are producing for sale in the open market, subject to price fluctuations. Though the surplus profit returns to the workers the productivity varies so enormously in different industries that in spite of a basic wage, incomes would vary tremendously, creating a new capitalist class. They would use the same monetary system, and the same banking system, the same internal fiscal policy of the state in that taxes would be levied on the guilds by parliament, and the guilds would act as tax collectors to their individual members. They can employ their technicians and managers, etc. on any agreement which the individual guild cares to make. Any process or invention is submitted to the guild and purchased by them if found desirable. Thus the guild is not a complete complement of industrial workers and is not obligated to accept any improvement.

The British textile guild would go on importing raw cotton and manufacturing it into goods and in turn exporting it abroad. The same treatment would be accorded silk and wool. Today Great Britain has 46 per cent of the world's cotton producing spindles, whereas her consuming capacity is less than 18 per cent. She is entirely dependent for the large percentage of her cotton upon United States. Great Britain is some three thousand five hundred miles from our cotton growing region, and the industrial question naturally arises "Are the other industrial countries going to continue to pay tribute to either the British worker or the British capitalist to manufacture their cotton goods for them?"

The production factors in the fabrication of raw cotton into finished goods are relatively similar in United States and Great Britain. As both the transportation of cotton and its manufacture are dependent upon power, and as Great Britain is dependent upon coal as her source of power, it is evident that, as power from coal costs three and one-half times more in Great Britain than it does here, industrially it costs more to produce cotton cloth in Great Britain than it does here. This is not financial cost, but what the engineer calls production cost. Let us see what the respective coal production costs amount to in the two countries.

### Coal as a Factor in Production

In Great Britain there are 1,200,000 coal miners producing only 226 tons per man per year. In United States we have approximately 760,000 coal miners producing 794 tons per man per year. It is self-evident that, barring a period of transition to a new order, Great Britain cannot afford to support 1,200,000 men for mining coal for the purpose of maintaining foreign trade. Neither could any other country pay their upkeep. The coal mines of both Great Britain and this country are demanding attention. In both countries similar schemes have come to light. Neither nationalization, coal guild, nor communization deal with ton hour production per man, nor do they take into consideration the present methods of using coal, which utilizes only one-sixteenth of its value. To technically utilize coal necessitates not only a change in the methods of coal mining, but also affects all transportation and present power plants. It would mean the creation of new industries, and the elimination, wholly or in part, of old ones. This is illustrated very aptly in the United States where 34 per cent of the freight load of our railroads is coal. The elimination of all coal transportation is not only scientifically possible, but technically inevitable. Here arises the prospect of a well to do railroad guild and a prosperous coal guild being confronted with the fact that the rest of industry will not tolerate a lowering of its standard of living by maintaining a railroad guild one hundred per cent overmanned, and a coal guild five hundred per cent overmanned.

### Functional Ownership as Bad as Private Property

Today the peasants of France are preventing France from entering a new period of industrial progression. The peasants of

Russia provide for themselves, but do little more than that. These are examples of groups of workers who persist in a method of production which, although they prefer it, is nevertheless the result of that deadliest of industrial diseases, stagnation. The medieval guilds and the pueblo communes all achieved craftsmanship, equitable distribution of food, clothing and shelter, and equitable working participation, and died because they persisted in holding the proprietary rights of function inviolate. From time immemorable when any group has achieved craftsmanship and tolerable living conditions the group has always attempted by enforcing numerous regulations to prohibit any change or improvement in the functional sequence to which they have become accustomed in their trade. They have sought by all means in their power to make functional ownership as great a vested interest as entailed property. They have striven to pass their craft on from father to son, even practicing this today in India and China, where the same method is being taught to apprentices as was taught four hundred years ago. Private property is dangerous because it prohibits complete utilization of material resources. Functional ownership is even more dangerous in as much as it prohibits any improvement either in the use of material resources or human effort.

Political history records that men are voted into positions, but it does not record men ever voting themselves out of positions. Any group of men which forms itself into a body to control the processes of an industry does not vote in a new process whereby they would automatically be voting the major part of the group out of that industry. The coal miners of Great Britain, although they are insisting upon nationalization, and although it is admitted that under the present regime they cannot achieve any fundamental change in the methods of **coal mining** and **coal use,** still are demanding something which, under the present system or a future one, would amount to nothing more than a slightly higher standard of living for themselves as individuals. It is inconceivable that miners organized into a militant body would democratically vote into existence another system of coal mining and coal use whereby nine-tenths of their present organization would have to be given employment in other industries.

### The Limitations of Labor's Vision

Today the world over all programmes for a new order content themselves with the advocating of a mere shift of control. All of them preserve the present industrial entities. All of them propose to maintain the present lines of trade. The majority of labor organizations are not capable of operating industry. There are a few that are capable of operating it as well as the capitalist, but that is not sufficient. **There are none that can operate and co-ordinate the present producing mechanism with the needed accompaniment of a change of technique.** A reply is often made to the statement of this condition, to wit, 'The workers will acquire the knowledge and the organization after they come into power.' In Russia, where 92 per cent of the population are peasants, and where there is only a young industrial development, a dislocation of industry, while serious in itself, does not bring starvation to any large percentage of the people. In United States to attempt to acquire an operating knowledge of an industry and an organization after the change would be preparing for a birth while the autopsy was already being carried on. The interdependence of industry with industry is such that the absence of a producing organization capable of directing and operating industry would bring about nothing short of chaos and dissolution. We have no such organization, not even the proper nucleus of one, and yet the propaganda for change goes on. The organizations of the present enlist either those who profess a belief or the worker as an individual. There exists no industrial organization wherein members function in a similar capacity to that in which they work. This is best illustrated by the man who, when asked at a meeting what group he represented, said that he was a socialist, and from whom was finally dragged the information that he was a stevedore, and represented the stevedores as such. A Steinmetz may join any one of a number of labor organizations as an individual, but there is no organization of workers which he could join in his industrial capacity of research technilogist of the equipment division of the power industry.

The glass blowers some years ago possessed a very strong union and were very highly paid. They attempted to maintain their union and the old form of glass blowing in the face of a new industrial process. The process won, and the process will always win eventually. Today it throws men out of jobs, but in the future every improved process will raise the standard of living and increase mens' leisure. Today there is not a single industry which cannot be revolutionized by processes already

proven. Technical science has traveled so far ahead of the industrial order that if only that which is already known were applied its effects would be farther reaching and more fundamental than any political change could dream of accomplishing.

THE WISE GUY

Wobbly: "Better come aboard—it's going to blow."

Wm. Shears: "Nuttin' doin'! You guys are too damn radical!"

# International Affiliations

The referendum arranged by the General Executive Board on the question of International Affiliations has aroused great interest. It is the question of politics diving up again in the organization, though in a different form from 1908. We have in this issue six articles dealing directly with this question, namely "As to the Third International" by George Hardy; "Where Are We Going?" by George Andreytchine; "We Oppose Political Affiliation," editorial in "The Industrial Worker"; "Where Do We Belong?" by E. W. Latchem; "Some Present Time Controversies" by D. S. Dietz; and "Solving the Social Problem Through Economic Direct Action" by John Sandgren.

A similar discussion is being carried on in our weekly press. As there are 90 days in all allowed for the referendum the chances are that the question will be quite thoroughly discussed. And it is well that this discussion takes place. Of late we have allowed things to drift pretty much, as far as living up to the I. W. W. program is concerned. A new element, strange to the I. W. W. has been washed into our camp by the tidal wave of the world revolution. This element, only recently belonging to a political party, carries with it its own dogms and doctrines which are coming in conflict with the I. W. W. preamble and the position taken by the organization on the principal questions. A conflict and clash was unavoidable seeing that the new element seems unable to assimilate the I. W. W. program.

Let us have a thorough discussion of the question and then vote on it and settle it for good. As it is now the progress of the organization is pretty well blocked by the controversy, being that the new element seeks by all might to turn our activities into new channels as outlined by the Third International, while the old element desires to stear the same course as before, aiming at an Industrial International such as proposed by the Russian Unions, The Scandinavian and Dutch Syndicalists and the Syndicalists of the Latin countries, as indicated by another article in this issue.

It is either one way or the other. We cannot straddle the fence and have one foot in each camp. That makes growth and progress impossible.

The vote will clarify the situation, dispel all uncertainty and unite all the sincere forces for common action. For this reason every member should immediately pay up his dues and vote on the question at issue. Ask your delegate or secretary for a ballot.

The text of the three propositions will be found on another page.

The first question calls for endorsement of the Third International.

The second question calls for rejection of the program of the Third International and would place us in an eventual Industrial International.

The third question calls for endorsement of the Third International with reservations.

Which shall it be? Study the questions thoroughly and then help decide the fate of the I. W. W. The sooner the membership is united again, the better.

---

## INTERNATIONAL AFFILIATIONS EVERY MEMBER SHOULD VOTE

As announced in our previous issue, the General Executive Board has submitted the question of international affiliation to a special referendum.

The following three motions are submitted:

**Ask your secretary or delegate for a ballot.**

1. Moved by CcClellan, Seconded by Mashlykin, **That we endorse the Third International. Motion lost.**
   For: McClellan, Mashlykin. Against: Brown, Nordquist, Lessig, Sullivan and Fisher.
2. Moved by Brown, Seconded by Sullivan, **That we do not endorse the Third Interna-**

**tional officially, and that we notify the Third International that our position makes it impossible to endorse same as it outlined in the Zinovieff appeal to the I. W. W., and that we are in favor of an Economic Industrial International. Motion carried.** For: Brown, Lessig, Sullivan, Nordquist. Against: Fisher, McClellan, Mashlykin.

3. Moved by Lessig, Seconded by Nordquist, **That we endorse the Third International with reservation, as follows: That we do not take any part whatsoever in parliamentary action and that we reserve the right to develop our own tactics according to conditions prevailing. Motion carried.** For: Nordquist, Lessig, Sullivan, Fisher. Against: Brown, McClellan. Mashlykin not voting.
4. Moved by McClellan, Seconded by Mashlykin **that the three above propositions be submitted to the membership for a referendum vote. Motion carried.**

The appeal in question will be found in the September issue of this magazine. Everybody should read it before casting his vote in this referendum. Copies of this issue can still be had at 25 cents.

In this connection the General Secretary-Treasurer wishes to make the following announcement:

VOTE FOR ONE ONLY.

In order to have no mistake in counting the ballots and to have a clear understanding of the desire of our members it will be necessary to have every one vote on the endorsement of the Third International, but vote **only one yes and two no.** Discuss and consider well before voting.

# POLITICS

We have been gathering data of the slushfunds of the Cox and Harding campaigns, finding that the maximum estimate of the Harding fund is 30 million dollars and that Cox is supposed to draw subsidies from England, being that he stands for the League of Nations. We believe everything that the Cox people say about the Harding people and vice versa. To do anything else would be to call them liars, just as they are calling one another. The party that gets elected would probably resent such an imputation as soon as they got the power.

We have also gathered a nice lot of clippings about the Lowden faction and the Thompson faction in Illinois, intending to use them together with the Cox-Harding material and hammer it all together as a true picture of 100 per cent Americanism. For surely these people all claim to be 100 percenters. Being accused of being a lot of foreigners we thought it might be well to assist in the Americanization program so strenuously urged by these people by giving publicity to what they say of one another. The example set by these high-tone people in high position surely ought to be worth following by us "foreign scrubs in overalls."

But then we came to think of the fact that the I. W. W. program demands that we abstain from endorsing any political party, let alone all of them, so we gave it up. At the same time we came to remember that I. W. W. tradition speaks of "political parties" **but says nothing of independent candidates,** so we allowed "Dust" to deal with the political parties in a cartoon on our front page while we ourselves hastened to endorse the independent presidential candidacy of Quasimodo von Belvedere, whose nomination speech will be found in this issue.

## THE I. W. W.

**A STATEMENT OF ITS PRINCIPLES, TACTICS AND METHODS.**

This is a new, large 4 page leaflet. It is just the thing to give to strangers. It saves you a lot of talking. The two first editions lasted only 2 weeks. The third edition containing the new numbers of the unions, is now ready. Every I. W. W. man should always carry some with him. $1.50 a hundred. $12.00 per thousand. Send all orders and remittances to: **George Hardy, Gen. Sec'y-Treas., 1001 W. Madison Street, Chicago, Ill.**

# Woman Suffrage

Editor One Big Union Monthly;
Dear Fellow Workers:

The passage of the 19th Amendment to the constitution giving suffrage to women has closed an epoch in our political history. Perhaps I should not be writing of this particular reform for readers as far advanced as those of the O. B. U. Monthly were it not for the fact that in a recent conversation with a member of your organization he referred slightingly to woman suffrage as a minor reform. I will admit that it is of less consequence than it would have been a decade ago; that it comes at an hour when all people who have thought along politico-economic lines at all are coming to realize the vastly greater power of economic organization. However, it is not an achievement that should be dismissed lightly. It had its pioneers—women and men not afraid to launch out into a new and untried and immensely unpopular movement. It has had its workers, unpopular up to the present hour, some of whom will carry over into new fields of endeavor the stigma and hostility gained in their labors for this unpopular measure. That this was not a popular reform is evidenced by the strategy that it took to put it over—perhaps it has taken energy that might better have been spent in other fields, however, it was necessary for the adult citizenship of this land to have full and equal suffrage before they could be convinced that it was but a small part of the whole.

Earnest souls have died with the full conviction that if only the female half of the world had the ballot our difficulties would be quickly solved—a few women have themselves been the victims of this delusion. In the next few months we will be deluged with references to the long, and successful struggle that has just been achieved—even now some belated champions of the suffrage system are preparing their peorations. Let them beware! Methinks that in the rank of intelligent, earnest, women who have sacrificed for this measure are not a few who can see, out of the tail of their eye, the vastly more effective method of the Belgian men in their struggle for the ballot. The contrast between the slow, tedious, expensive, heart-breaking methods of the past three quarters of a century with its toll of human energy and talent and its staggering and never to be computed financial expense and the three short days of the folded arms of the Belgian workmen is too glaring long to remain unnoticed.

The example of the economic solidarity that brought about the passage of the Adamson Bill, will make that three-quarters of a century of toil and sacrifice look long and cumbersome.

Political governments will carry out the will of any group that has an organized vote solidly behind an organized want!

So do not be so scornful of this "Petty reform", boys. You who have been in jail for an idea know that that is the very worst thing that could be endured—the isolation, the lack of warm, human contacts, the long, long hours and days of being cut off from your fellow-men. Well, boys, a lot of women have faced just that thing for the sake of suffrage. When? Where, you ask? They faced it in their own home towns, among people hostile to the idea—many of them faced it in their own families—and fellow-workers, it is hard to be shut away from human contacts, but at least you have the warm, sweet knowledge that outside there are hearts and minds that would be open to you were it not for the bars interposed. Any reform big enough to cause human beings to suffer isolation, ostracism and loneliness rather than renounce it is too big to be dubbed "Petty". Many more people than you dream of have endured just these things for suffrage, in a community, but not of it, because the prejudices of their fellow-men erected bars that were just as real as bars of iron and sometimes infinitely more cruel in that one had the semblance of liberty, but no word of greeting reached them and no hearty hand clasp met them from day to day and through the dreary stretch of years.

Now that a technicality has been swept aside and we can begin our game of tinkering with the ballot, I predict that it will not take the women as long to learn its true value as it did the men. Wait and see!

Fraternally yours,

FLORENCE BOSSENBERGER.

---

### EDITOR'S NOTE ON WOMAN SUFFRAGE

To the above letter we wish to make the following comments:

The I. W. W. does not sneer at woman suffrage. Nor at male suffrage. The I. W. W. realizes that on its way from savagery to civilization mankind is passing by certain milestones which it simply has to pass by unless it wants to stay behind. Just as a bird cannot rise to the 2,000 feet level until it has passed the 1,000 feet level.

Mankind advances from the past into the future in a wedge-shaped formation, very much like the "svinfylkings" of the Vikings, scattering the forces of darkness to the right and to the left in their impetuous struggle towards light and freedom.

At the head of the attacking wedge of humanity the Vikings put a stalwart, broad-shouldered, battle-trained warrior with a two-edged sword too heavy for an ordinary man. As this was a post of honor almost sure to lead to Valhall and the table of the gods before the sun went down, there was great competition for the place. But only one could hold it at a time. The others had to arrange themselves in ranks of increasing lengths, the longer the further back they were of the point of the human wedge. In the second rank were two men, in the third were four men, in the fourth were six men and so on. The last rank probably had a hundred men or more and the bulk of the warriors were in the heel of the wedge where it was comparatively safe. But the men at the head did not sneer at

their comrades behind them. Without them as a backing their own bloody enterprise would have been futile.

So it is with the I. W. W. and the rest of mankind. Economic conditions in combination with a liberty-loving spirit put the I. W. W. at the point of the flying wedge which humanity is using in its battle with darkness and oppression. The "head men" are constantly being picked off, but new ones, drawing from the deep layers of the people, are rushing forward to take their places. We have all come from the deep ranks of the people before we were thrown at the point of the wedge as I. W. W. men. We do not jeer our sisters and brothers, our fathers and mothers who are way behind in the deep mass of humanity which forms the heel of the "svinfylking" of progress. All that is near and dear to us is back in that mass, and it is largely for their sake that we are sacrificing life, liberty and happiness and not for our own. Most of the I. W. W. are in a way to be compared with the Philippino "juramentados" who in the dark of the night would rush into the camp of their enemies, killing as many as possible, having previously taken an oath (juramento) to sacrifice their lives for their kinsmen. The average I. W. W. man has thus consecrated his life to the cause of humanity, irrespective of consequences to himself, not in order to kill but in order to organize.

We have taken pains to make this plain because we felt our soul faintly scratched by the thorn of a veiled reproach that we, in conceit and heartlessness, fail to appreciate the efforts and the sacrifices made by women to attain social and political equality with men, being that we ourselves place little or no value on the ballot.

We most surely rejoice with all our heart with womankind in the "conquest" made, even though we consider the ballot only as the final formal act in the struggle for equality, much as "Amen" is the proper finale of a prayer.

We do not know the I. W. W. man referred to in the above letter, but should these lines come under his eyes, we believe he would endorse every word of them.

If there is a tendency to scoff at woman suffrage on our part, we swear by everything holy that there is not a tinge of hostility towards the aspirations of womankind.

What we scoff at is **the equality** that they have striven for and won, for what they have gained is the equality of hell. How could any one desire to be our equal, the equal of a wage slave in an accursed system of society? If we scoff, it is with bitterness at the thought that the ballot will turn to ashes in woman's hand and that the equality attained consists in being chained to us in wage slavery.

We fail to see how your ballot is going to help you any. It certainly has not helped us any. Nearly all of us tens of millions of male workers are the sons in first or second rank of free men, free tillers of the soil in this or other countries. And look at us now! In spite of the status in which we were born and in spite of the ballot we have sunk into the hell of wage slavery, dragged down into it by an unrighteous system of society and by our failure to guard our liberty through solidarity.

We blush with shame at your claim to equality with us, we who have surrendered the status of free men which our fathers gave to us, we who rarely can have a wife and rear children. We are afraid that the granting of the ballot to you marks only your degradation to our companions in misery. It was worthless, or it would not have been given to you.

Most of us I. W. W. men are throwing our right to vote away as useless in our attempt to regain the freedom lost. We are now gathering in industrial unions in order to be able to re-assert our manhood and wipe the slave mark off our forehead and again be freemen and be worthy to be called the sons of free fathers and mothers.

If woman really wants to be the equals of free men she will soon discover that she will have to give up her faith in the political ballot and use the industrial union ballot instead. This ballot has never been denied her. In the union women are entitled to a vote just like the men, and as soon as she is able to work in the shop, she is able to vote in the union.

If there is one message we would like to bring the women in this connection it is this, that the victory just won is worthless to her. It is like a theatre ticket to a play that ran last week or like a street car transfer from yesterday. It will take her nowhere.

We want to wreck your faith in this new talisman or amulet and have you join us in our struggle for a new society via the route of Economic Direct Action. We want you to form unions, each in your occupation, in order that you may unite your forces and help us overthrow the economic system that enslaves us both. We want you to organize so that you can take over your respective industries and occupations collectively under the guardianship of all society and for the benefit of all.

We want the factory girls to get together and take over the factories, the store girl to organize to take over distribution, the office girl to take over the clerical work, the houseworkers to form unions to take over the housework. The old order is on the verge of dissolution, and unless woman wakes up and helps us to put things in order a little in advance of the collapse we are afraid that all human relations will be dissolved and all society go to smash.

Woman is powerless to attain her freedom with the political ballot in her hand. If she organizes industrially with the men, her freedom is born in the same moment that the organization is accomplished, and will spring into full life as soon as the organization becomes general enough to become a power.

## "Industrial Engineer"

**The above signature appears at the top of the article "Political Schemes in Industry" in this number. Those who have not read the same author's article "The Scourge of Politics in a Land of Manna" in our September issue should get it.**

**"INDUSTRIAL ENGINEER" will continue to write for the O. B. U. Monthly. Do not miss any of these articles. They are epoch making.**

# GENERAL DEFENSE

By WM. D. HAYWOOD

Three members are held in the County Jail at Aberdeen, South Dakota. Their names are James Howard, Joseph Gortland, and Harry Hornerich. The charge against these men is criminal syndicalism. One of the men has had a preliminary examination and is being held for a jury trial.

This is the first case under this nefarious law to be tried in the State of South Dakota. Great care will be required in the preparation of these cases. They must be won, as the penalty of conviction means to the men involved a term of 25 years in the State Penitentiary. Harold O. Mulks of Chicago has been employed to take care of the preliminary proceedings.

A brief has been filed in the Supreme Court of Iowa in behalf of Henry Tonn to have the cost and expenses in Tonn's case paid by Linn County. This was originally granted upon proper showing being made by Henry Tonn in his appeal by order of the court before which he was tried.

A brief has been filed in the Supreme Court of the State of Missouri on the Writ of Habeas Corpus sued out for Henry Taft et al. A decision should be rendered in this case in the very near future.

A continuance has been taken in the case of Jack Terrell at Enid, Oklahoma.

The three members who were held in jail at Medford, Oklahoma, charged with criminal syndicalism, finally have been released.

Fellow Worker John Alexander, temporary editor of our German paper, was placed under arrest at two different times. The first time, after being held in the Cook County Jail for a number of days, he was released on a deportation bond. The second time he was taken as a draft evader and imprisoned in a military barracks at Camp Grant, Rockford, Ill. where he was treated in the most outrageous manner. He was beaten and clubbed and two pails of chemicals were thrown over his head, so that he temporarily lost his eyesight completely, and is permanently injured. He was later released and the charges against him cancelled. As a result of this frightful treatment Fellow Worker Alexander will have impaired eyesight for the balance of his life. Such actions are probably part of the Americanization program now so strenuously urged.

The following letter has been received from Fellow Worker T. S. Wetter of Baltimore, Maryland:

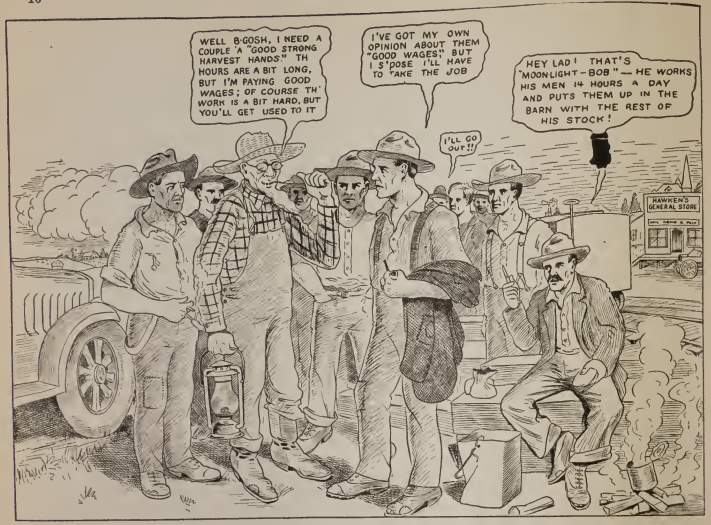
"This is to report to you the progress of the case of William Hoffman, who was arrested at Norfolk.

Acting under your telegraphic instruction, the branch voted to retain J. J. McNamara as attorney for him, and to pay him out of the funds from the 4th of July picnic which were to be remitted to the General Defense Committe. They also decided to send relief to Hoffman, and $10.00 has already been sent to him.

McNamara attended Hoffman's hearing at the Postoffice Building in Norfolk on September 13, and reported to us on his return that the case against Hoffman was one of the rankest frame-ups he had ever seen. He said that Hoffman was charged with burning up the ship upon which he had sailed from Baltimore.

Hoffman was paid off at Wilmington, N. C., and the morning after the ship departed from there it caught fire. The captain who was at the hearing in Norfolk, reported that neither Hoffman nor any other member of the crew had been at the forepeak, where the fire occurred, during the entire trip. The agent of the Department of Justice, however, produced a Negro from Wilmington, N. C., who testified that Hoffman told him that he intended to burn up the ship. The Negro also said that he had met Hoffman in New Haven, Conn., in 1916.

Hoffman was a delegate of the A. W. O. in their drive at that time and was no nearer New Haven than a thousand miles, but nevertheless on the strength of the uncorroborated testimony of this Negro, who is probably trying to escape a jail sentence for boot-legging or some similar offense, Hoffman was bound over to the grand jury under $2,500.00. McNamara says that he does not believe in case of an indictment that a conviction can be secured in this case.



The Commissioner told McNamara that Hoffman was held more on account of his presumptive state of mind (meaning his membership in the I. W. W.) than any actual evidence against him."

---

Since the government attorneys agreed to accept $50,000.00 joint bond for the Chicago group four members have been released from Leavenworth Penitentiary, two on parole and two on bond.

We have accumulated $43,000.00 in Liberty Bonds. This sum will be deposited with the Appellate Court on September 23 with the request that it be accepted as the bond required, as when the sum of $50,000.00 was proposed, it was understood that only $35,000.00 of this was to be Liberty Bonds and $15,000.00 property bonds. Having the amount of $43,000.00, as mentioned above, we are in hopes that it will be accepted.

Please remember that there are still hundreds of fellow workers who must be bailed out or who must be given a legal defense. Do not allow your efforts in their behalf to stop for a moment.

WELL B-GOSH, I NEED A COUPLE A "GOOD STRONG HARVEST HANDS" TH HOURS ARE A BIT LONG, BUT I'M PAYING GOOD WAGES; OF COURSE TH WORK IS A BIT HARD, BUT YOU'LL GET USED TO IT
I'VE GOT MY OWN OPINION ABOUT THEM "GOOD WAGES," BUT I S'POSE I'LL HAVE TO TAKE THE JOB
I'LL GO OUT!!!
HEY LAD! THAT'S "MOONLIGHT-BOB" — HE WORKS HIS MEN 14 HOURS A DAY AND PUTS THEM UP IN THE BARN WITH THE REST OF HIS STOCK!
HAWKEN'S GENERAL STORE

WELL BY GOSH OLD HEMLOCK! I RECKON IF YOU FELLER'S ARE ALL STUCK TO-GETHER THIS WAY, I'LL HAVE T' HIRE YE AT YER OWN TERMS B-GUNDER!!
IN THE ANCIENT DAYS THE HUMAN RACE WAS COMPELLED TO ORGANIZE TO PROTECT ITSELF FROM THE WILD BEASTS — YOU SEE WE HAVE SIMPLY TAKEN A HINT FROM OUR REMOTE ANCESTORS.

# With "400" Through The Harvest Fields

BY JACK GAVEEL

The battle with the capitalist class is primarily a struggle with the ignorance of the workers. The workers themselves by their apathy and indifference give their exploiters the power to rob and crush them. If it was not for this ignorance among the workers the capitalist class would have to surrender this very minute.

To possess an I. W. W. card is not sufficient. We can look back over the pages of History and in studying the great accomplishments of the Human Race we find that every step made in the direction of a greater Freedom from the Tyranny of Nature and man was only possible because it was the fruit of struggle, the struggle between the new and the old.

The good things of life do not drop out of the clouds as the result of a wish or a prayer but come to us only as the inevitable gain of determined and intelligent effort.

Do not let us forget that the I. W. W. is not an organization based on mutual admiration or admiration of its principles. Nor is it an organization, membership in which will ensure to the member, as if by some sort of magic, better conditions of life. These things have to be fought for and taken by power. The I. W. W. is an organization which finds its explanation in the Class Struggle. With capitalist blood suckers and pirates in palaces and exploited, crushed and bleeding working class victims in the slums there can be no peace. A struggle, at first blind and unconscious of the bigger issues involved, gradually develops into the conscious and determined class struggle of the Revolutionary Proletariat to rid the working class and the world at large of the pest and curse of Capitalism. The only way that this can and will be done is by the workers taking possession of the means of production and distribution. When the workshops of the world shall have been taken away from the greedy clutch of the ravenous and blood-thirsty vultures who have stolen them, production for profit will cease and production for use will take its place.

It is therefore a fight to the bloody finish and under the present social arrangement the revolutionary members of the working class have no time for anything else. Furthermore, this fight of the workers to eliminate the capitalists as a class and also for the more immediate issues, such as shorter hours and higher wages, I say this struggle must be waged by the workers themselves as they alone stand to gain, and gain immensely, by a successful issue.

Fellow workers: Do not be simply "Card Men". So are the members of the A. F. of L. And where do you find them? Down in the mud grovelling and snivelling at their masters' feet, glad of every chance to lick their boots. And do you know what made your organization, the I. W. W., what it is today? What is there in the O. B. U. that it should strike terror in the hearts of the American Capitalists? What disquieting fascination does it hold over the exploiters of the working class that they should curse it and cowardly misrepresent it? Has it not been the alertness and awakeness of its fighting members, their determination to fight like tigers instead of laying down like lambs, yes to fight under all circumstances.

Your mind is on a "stake". In spite of all your revolutionary utterings in the Union Hall, the minute you set foot on your master's sacred job your vision of the One Big Fighting Union of all the workers goes up in smoke. Do you not know that the source of all Revolutions is to be found in Human Industry and not in a hall?

And you talk after this to the unorganized and to the new members in the organization and tell them that the possession of a card alone will not change conditions or give Liberty from Slavery but that these can only come as the clearly bought laurels of a battle in which each member in the organization exerts himself to the utmost, giving to the great Cause of Industrial Democracy the best that is in him.

Have you forgotten the picture of the Worker behind the bars. What has become of your promises to him? What of your significant statement; "We are out here for you." Is this worker, looking at you thru iron bars out of fever eyes, sunken back in an emaciated face, so soon to be forgotten and left to his terrible doom and all for the sake of a STAKE.

And what is a stake that it should make you a despicable contemptible wage slave yet once more, that it should cause you to forsake and trample in the dust your sacred principles as if they had been so much cheap thrash and rubbish cut out of some capitalist newspaper. Has not each winter always found you again homeless, penniless and shivering with the thin blood that comes from starvation?

Do you know that if you are ever to become free, if ever the cold, bony claws of dark and gaunt death are to be torn from your children's throats, SOMEBODY has got to make a beginning. And on whom does this duty rest more than on YOU the members of the I. W. W.?

Life is a gamble. Nothing, especially great issues, is ever accomplished without taking a chance. The man who, knowing this, still stands off to one side is a cur.

Do not be a Card Man. Be a fighter.

The plain is exhaling fire. Not a breeze stirs. Tired and sore muscles are forced into submission. Men and horses are stupified by the terrible heat. They stumble and move on in a trance. Strong lungs gasp, bold hearts falter. Not even a drink of cool water to wash the fire out of burning tissues.

Who are these men? What do they think? Are they thinking of lands and homes in far climes long

since forgotten? Are they thinking of next winter when the frozen breath of the North will tear their rags to shreds and chill their hearts? Do they know that the creators of all wealth are slaves, that the growers of bread starve? Are their thoughts with the Organization they belong to? Do they dwell on a plan of campaign in the fight for the workers' control of the wheat fields?

Or haven't they got any thoughts. Can it be that the crushing weight of slavery and degradation has made brutes out of them? Have they ceased to think? Are they nothing but automatons moving at the crack of the whip?

Gone are the sacred oaths, the solemn promises, the lofty aspirations and the inspiring ideals. They have only one thought. It consumes their brain and in its feverish heat all former resolutions, nay, even the vision of the One Big Union of all the workers are dissolved in a vague and formless mist. Yes they are out to make a STAKE.

This realization comes like the thrust of a knife held in the hand of a traitor. It is maddening, stunning, exasperating. How battle the already unbearable heat any longer? Where find new strength to conquer the gnawing pain of dry joints, aching bones and cramping muscles? Come, welcome stupor induced by the heat, come and sink your poison fangs into me. Saturate my tortured mind with your opium, which I know brings about deep sleep. Enfold me and make me forget.

So it is not a battle with the capitalists but with ignorant, indifferent and slavish workers. No hold on it is a battle with both. This idea is the only one which emerges out of the seething mass of crazy mentality which pounds and throbs in the brain. What must be done? There is no answer, no solution. An inspiring and hopeful class war against capitalist exploiters and despoilers has become a dull, hopeless and exasperating revolt against the ignorance and the slavishness of the workers. The bottom has been knocked out of the firmest convictions. The most ardent expectations have been shattered. It is a nightmare. The battle is over. All past efforts to no avail. Slavery has conquered. Black night and despair sit on the throne.

And yet, born from black despair and misery, the incarnation of the slavery and degradation of millions of workers, there arises on the highest hilltops towards the East and Russia a vision. It is REVOLUTION, swathed in the fires of the rising Sun. With the Sun it rises out of black night and despair and as it mounts ever higher and higher its flood of flashing light sets the world on fire. Listen, already millions of feet can be heard tramping. The fires in the workshops of the world have become cold. The earth is shaking with the roar of workers' voices, giving utterance to long pent up emotions. And ever the conflagration spreads, fed on the rottenness and corruption of a cankerous and decaying civilization. Oceans and mountain chains no longer form any barriers. The whole world is in birth. The workers are taking possession of the earth. Armies and navies are marshalled on both sides and the planet shakes with the thunder of their feet. Work has ceased. Food supplies are being confiscated. The revolution is on. Passions are unleashed and given free play. Blood is shed. Heroes become immortal. Death stalks abroad. But what about that? Revolution has entered and claimed the world. It leads the march to Freedom. Its blazing torch is an inspiration to the oppressed of the earth. In the red conflagration lies the settlement of all old debts, because in one fell swoop it levels off all inequalities, injustices and wrongs.

Anybody who has been out in the fields with the boys of "400" this summer knows that the sentiment for the O. B. U. is sweeping the country. Never did workers join the I. W. W. so readily. Just mentioning the O. B. U. seemed to act contagiously on the mind of workers who so far had kept aloof. A. W. I. U. 400 delegates were to be found in all the small towns pretty near thru the Dakotas. And what struck one in particular was the big number of these delegates. One to every three members I should say. (That there are stirring times ahead and days of power to the I. W. W. so soon as each one of its members appoints himself a delegate, of this there can be no doubt.) A skirmish line had been thrown out, running thru all the leading gateways into the harvest country, a veritable ring of steel. Delegations of I. W. W. delegates met all incoming trains at the depot to interview new arrivals. Generally the speaker who first addressed the scissorbill succeeded in transferring a red card to his pocket. If however, the first attempt was unsuccessful reserve forces would rush to the attack and the game would go on in this fashion till even Mr. Block's solid ivory ball could not stand the onslaught any longer and split under the terrific blows delivered by the sledge-hammer of education. True a few scissors managed to break thru the iron ring and found their way to the hotels. However, here they never stopped very long, because after a few very vital questions put to the hotel proprietor and some stray hay seeds the answer would invariably come: "Yep, this burg is solid I. W. W." After that these hopeless characters could be seen making a bee line back to the depot, to catch the first train out. They no doubt would have liked to make the nearest water tank to catch a freight which would have saved them fare. But even this bliss was denied them as they knew that, before boarding a side door Pullman, the I. W. W. conductor would challenge them for a red ticket. Even the enjoyment of a nice shady and well provisioned jungle was denied these hapless creatures.

I remember a brakie coming up to the three of us, all wobblies, at Glenwood, Minn., when we were waiting to make a rambler down the line to Fairmount, N. D. This shag was one of the crew on the train we were going to make. His first question when he got within speaking distance of us was: "If we were going to make her"? Upon an affirmative answer he challenged us for a red card. After we produced the goods, came the reply: "Pile on".

The same shag later on came up to our car further down the line and notified us that there was a "Scissor" on the train, inquiring at the same time if there was an organizer "in the Bunch". Taking his good advise to heart we went down, located Mr. Block in his place of concealment and enrolled another member in the ranks of the I. W. W.

Incidents such as the above, showing the growing sympathy of the railway workers with the principles of the O. B. U., were a daily occurrence this summer. What will happen when 520 (600) and 110 (400) are lined up 100% solid in the One Big Union is not hard to foresee. I can see before my mind's eye the fields deserted, the fires cold, the separators asleep, the horses standing idly in their stables and the wheat rotting in the fields. And beyond in the background the rails covered with rust, the ties rotting, the stillness of the fields unmarred by the hoarse bellow of the whistle. Boxcars are deserted on sidings. No smoke trail is to be seen anywhere across the horizon, and the scabs that would vain come to take the places of the striking Agricultural workers have to stay back in their slums and rat holes because thru the Solidarity of the railroad workers neither passenger nor freight trains are operating.

Very instructive to listen to were some of the conversations carried on between the boys of 400 and the farmers. A freight train would stop in the yards of a small town. A farmer, instinctively sensing you might say the presence of a bunch of pesky go-abouts in some box car, would come along sniffing the air with apprehension of at last securing the so long desired and prayed for valuable labor power. Finally he would locate the peskies. After the usual exchange of the customary greetings would come the question: "You boys looking for work." Next would come an inquiry on the part of the boys regarding conditions such as hours, wages, docking, etc. There was also the question of "If all going to and from the job should be done on the boss's time or on the workers' time" I may mention here that this question was broached in the jungles at Leeds, N. D., during a business meeting of the 400 members present there and it was unanimously voted upon to work ten hours from collar to collar, this meaning that in a workday of ten hours all going to and from the job shall be done on the Farmer's time.

But to come back to the subject. After an inquiry about conditions if it was found that the farmer did not want to obey the law of 400 in regard to hours and wages no amount of talk or persuasion by John could induce the 400 boys to stay in that part of the country. The train would pull out and leave the desperate farmer standing on the siding by the elevator. And not only one trainload of harvest stiffs would behave in this maddening manner. Load after load would pull out if the conditions offered were not up to the grade required. And every load that pulled by, without evincing the least inclination to go to work, would leave the desperate farmer still more desperate.

If anything will break the proverbial obstinacy of the rustic and set him thinking it is methods such as the above. This is an education which will soften the hardest skull. True, long before we had the A. W. I. U. 400 there were efforts on the part of harvest workers to better their conditions by refusing to sell their labor power below a certain wage. However, these early efforts were only sporadic and the work of individuals rather than the activity of an organization. Today it is different. The farmers are faced with an Organization of harvest workers that means business. This is the Agricultural Workers' Industrial Union No. 400 (now No. 110) of the I. W. W., which rallies to its banner all workers working in the wheat fields of North America. Engineers, separator men, firemen, water wagon haulers, grain haulers, grainary men, spike pitchers, bundle pitchers, bundle teamsters, all come under its head. If one member of that organization, which this summer includes the bulk of the men working in the harvest fields, makes a demand for eighty cents an hour and ten hours a day the whole Organization makes it. What the outcome is going to be is not difficult to foresee. We might just as well lay our prejudices aside right now and acknowledge facts. This is what the ex-capitalists of Russia had to do and this will also have to be done by the Capitalists of the U. S. Yes before long the workers who are enriching the farmer by their creative toil and enabling him to send his offspring to college will be a factor to reckon with. These men are no longer to be considered as dogs fit only to sleep with the pigs. They are going to demand the right to live like men, and also a bigger share of the wealth they produce and finally all of it, i. e. the harvest fields of America with their productive Machinery.

You laugh. So did at one time the Czar of all the Russians. So did all the other tyrants who crushed the people in the dust till that same people rose up and wiped clean the slate with the blood of said tyrants. Russia today. America tomorrow.

At one small town where we stopped to switch cars an old farmer came up to interview the "millionaires of the road." When asked by the wobblies why, if he wanted men, he did not pay the wages asked for, he started to complain of the H. C. of L. Thereupon a keen wobbly told him that if on account of the H. C. of L. he could not pay the wages demanded it seemed funny that he had not the least objection to writing out a cheque for a few hundred dollars to a lightning rod or weather cock agent. Shocking especially was much discussed, it being pointed out that the farmer sits on the binder doing nothing while the hired men do the shocking. As this plainly shows that shocking is extremely unpleasant and hard work and as furthermore the workers have enabled the farmer to sit on his binder and take it easy, if the farmer wants any shocking done he had better come thru with the same wages that he pays for threshing.

And so it went on. There was talk about the commercial clubs and the bankers, the Non-Partisan

League and the I. W. W. Especially was it shown that if the farmers had a right and found it a good thing to organize, so had the workers. Weren't the bankers organized to set the wage scale in the harvest fields? If not, how was it then that all farmers seemed to have entered into a conspiracy this summer to pay only sixty or seventy cents an hour, and this in spite of the fact that their grain was rotting in the fields for lack of help? There was surely no sense in this from the farmers' point of view. So it could not be the farmers who were behind this. The only explanation left was the bankers. Yes that was it. The farmers owed the bankers much money. If the farmers paid their hired help too much it would mean so much in the pockets of the workers and so much out of the coffers of the bankers. So the farmers must not pay their hands too much. To this the bankers saw by threatening to foreclose on those who owed them and by refusing the use of their money to others.

And how could such a One Big Union of capitalist Exploiters and leeches be met otherwise than by the One Big Union of the workers. Certainly this One Big Union of the Workers could swing the bankers into line by causing the wheat to rot in the fields. And sooner than see this happen the bankers would come over to the terms of the I. W. W.

Yes much education has been handed out, great enthusiasm shown, many new members lined up and the Organization perfected. And still "400" is not perfect by any means yet. We who claim to be an organization for the purpose of eventually controlling the Agricultural Industry of North America, must start our constructive work at home, i. e. right on the job. We cannot expect the workingclass to ever develop the power and the intelligence to run the Industries of the world without first paying attention to such elementary principles as shorter hours and higher wages. The workers' political power, that is, their power to make their voice heard in the affairs of society and the world, can only then be developed when they belong to an organization which knows how to shorten hours and increase wages. As hours are shortened, wages increased and better food, better clothes and better dwellings are to be had, while also a greater opportunity for education is afforded. As a result the workers will begin to make themselves felt as an economic power. At the same time they will develop a sense of power, which will slowly permeate society.

So, first of all, it is a question of organizing to shorten hours and raise wages. But even this requires different tactics from the ones which the A. W. I. U. has been following so far. Space is becoming limited and I will therefore only point out as briefly as I can some of the most salient points.

At present too much of the energy spent by "400" in the harvest fields depends on blind chance for success. There is first of all the question of the labor market. The harvest starts and workers flock blindly without any plan all over the country. The result is that in some parts there are no workers to do the work at all while in other parts the country is flooded. When the Government can get out maps showing the location of good crops and bad crops of a big acreage and a small one, cannot we do the same thing. We have got to have some plan so that we will know where to send not only our own men but also the unorganized. Otherwise where they have a bumper crop and a big acreage there will be no men at all while a country that has been burned or hailed out is liable to be flooded. Anybody can see that with a panic on as the result of a swamped labor market there is not the least chance to make job conditions or line up men in the I. W. W. Therefore the I. W. W. ought to have information bureaus posted on the condition of the crops all over the country, which will guide the actions of the workers going out in the wheat fields.

There is the question of the delegates, too. Some localities have a surplus, others have none at all. What is the matter with, if in any locality delegates are needed, sending word to the above mentioned Information Bureaus. These can then see to it that the demand is supplied. Each locality after the required amount of delegates has been furnished can then report back to the bureau so that at all times we know just where we stand on this question.

Another thing we should have, is some educational system. Let "400" start classes to instruct its delegates in the I. W. W. theory so that they in turn will know how to explain the principles of the I. W. W. to the men to be lined up and especially to the new members. Lack of grasp of the I. W. W. philosophy is often the cause of new members dropping out.

Another way of education is to send the soapboxer thru the fields while the harvest is on. Although speaking alone will not build up the O. B. U., yet, in conjunction with a determined and great drive, it is an ally not to be ignored.

Finally, there is the question of the job committee. We can and must have it in the fields, the same as revolutionary workers are going to have it in the shops. When a number of I. W. W.'s go to work on a job threshing, that job should be organized right away. Let a committee of two or three be elected. Its first duty should be to examine the cards of all men on the job. Another of its duties will consist in seeing to it that all unorganized workers are lined up. The first day on the job the engine might shut down for a couple of hours. Of course the workers will pull in at six o'clock anyway. Ten hours to them means ten hours from barn to barn, no matter how many hours they actually work. Anyway, the committee should interview the farmer the same night after coming home, to find out if any docking has been done.

Some of these questions should be discussed at the next convention. Let us quit fighting over technicalities in our laws and by-laws. Let us initiate a move to perfect the Organization so that it will get the goods. And above all, we do not be card men, but be fighters.

THE FATAL EMBRACE

# Principles and Prisons

**Prepared Address by Brent Dow Allinson**

It is a serious matter to speak before a meeting of Industrial Workers of the World on any subject at any time, but to be scheduled to speak on "Principles and Prisons" without any warning being given or any agreement made when one has only just graduated from the penitentiary—literally thrown out upon an arid and heartless world—with the prison simplicity still obviously clinging to him, is reason enough for anxiety if not for actual panic of soul. What, under Heaven, is to be said on the subject of principles and prisons when the very terms themselves are mutually exclusive and antithetical? Surely nobody with any principles would ever get to prison and nobody in prison can possibly have any principle!

I had no sooner said this to myself, however, than I realized that I was wrong—pitifully wrong. Like President Wilson I was ignoring facts, in the fever of my (suppressed) desire to escape the clutches of "Big Bill"! The world has been turned upside down and inside out—or rather outside in—the last couple of years and the interesting result has followed that a considerable proportion of the men of principle are on the inside, especially in America. There are some people who think that this is the most successful and convenient way to Americanize our heterogeneous population. I have been on the inside for a considerable period of time, however, and I do not agree with them. In fact I think they should go there first—especially Judges and Liberals—before they talk about Americanizing anybody.

Prisons, like almost everything else in human society, have at the bottom an economic reason for their existence. On the surface, however, they are explained and justified by a theory, usually "moral." There are two "moral" theories, to be exact, by which prisons are maintained and defended. The first is the theory of Free-Will and the second is its natural corrollary, the theory of punishment. The theory of free-will holds, to put it briefly, that every individual is "the architect of his own destiny", a free moral agent, a being free to act as he will for good or evil and therefore deserving to be held to a strict accountability for his acts and for their moral consequences. It is a theory that flourished easily in a period of economic individualism and of extraordinary economic opportunities. It is a remnant, in my judgment an unscientific and erroneous remnant, of Puritanism—a theory that has done vastly more harm than good in the world. It has been the bulwark of legal barbarities and religious tyrannies and frauds for centuries; in its name atrocious cruelties have been inflicted upon the invalid and the weak, the young and the delinquent, the indigent and the insane. It is universally recognized that very young children are not responsible for their behaviour. At just what period, then, in the life of a man does he become a sovereign moral agent individually responsible for his acts? At eighteen or twenty-one? Who can say? It is a matter, not of years, but purely of education.

A man is the sum of his experiences touched, sometimes, with a spark of aspiration—of experiences which themselves are the products of the complicated interaction of environmental influences and hereditary traits. His education may have been carefully supervised and consciously directed by parents and teachers, in which case he is likely to become a law-abiding and useful citizen—but far more frequently his education is a matter of accident rather than design, or it is neglected altogether. How, in such an event, can an individual be blamed for "going wrong"? Yet he is in fact not only blamed for it by citizens and judges but he is sent to prison with others of his kind to "pay a debt to society." The debt, in fact, is more probably upon the other side.

An astonishingly small percentage of human conduct is deliberative or rational or in any true sense dictated by ideas—so small, indeed, that a man who attempts to act upon principle or rational theory, in war time particularly, is almost sure to be regarded as a fit subject for an asylum or a penitentiary. And of that small percentage of conduct in which reason appears to operate to select a given course among a number of possible alternatives, the choice which is made is determined in advance by the temperament and education, i. e. the instincts and accumulated personal experiences of the individual agent. In a word, when men choose deliberately they do so under what might be called a compulsion of inevitable choice, and when they do not choose rationally or deliberately they are the creatures of undisciplined instincts and untrained emotions, or of their instinctive and emotional prejudices, to be studied and commiserated with and taught rather than condemned. This, I believe, was the true meaning of Jesus Christ when he said: "Judge not, that ye be not judged!" He was condemning the moralistic attitude and the Theory of Free-Will. Certainly the obsession that men are willful saintsor sinners—free moral agents acting in some kind of a social vacuum for good or evil, as they will,—is an uncritical, unscientific, Puritanical barbarism verging on a monstrosity!

The second theory by which prisons and penitentiaries and our whole machinery of injustice is maintained is the theory of punishment. But it we deliver into the hands of professional tortures men and women who are convicted, often by handpicked juries, not necessarily of crime in the moral sense, but of some violation of law, regardless of whether the act for which they have been convicted be evil or not, and equally regardless of whether the individual be responsible or not and of whether the punishment will do him any good or not. It is simply a case of revenge—that is the only way it can be explained—revenge taken by the agents of society upon the offending individual. Now punishment may, on rare occasions, be useful in the correction of a naughty child, provided always that the child understands why it is being punished. But does anyone who knows aught of life really believe for a moment today that the infliction of pain by one adult human being upon another awakens in the latter anything but hatred and rebellion, achieves anything but malignance and contumacy and spiritual debasement all around? If there be anyone who does, I invite him to go to prison and see for himself. He will find, as I have found, that the theory of punishment is a rank and stupid fallacy that fails miserably to do what it is intended to do. Jails and prisons and penitentiaries do not reform. They do not make useful citizens out of bad ones; they breed crime. They corrupt and embitter and degrade, both officers and inmates; they intensify the selfishness and ignorance which they are designed, or believed to be designed, to reform. They are, I am convinced, worse than useless as they exist today. In the words of Lester F. Ward, one of the greatest thinkers America ever produced —"Just as men imagine that they would commit crime but for certain Governmental restraints, so they think they would do wrong but for religious restraints when in fact they would do just the same as now, if neither existed."

The men who direct and supervise the establishments in which we confine our offenders are with few exceptions, totally unfit for the responsibility. They are generally without scientific training of any kind and are without interest in the men over which they have virtually power of life and death, save an economic interest in their exploitation or something worse—a sadistic interest in their torture. They are often much inferior intellectually and morally to their slaves. Generally speaking,

prisoners in our penitentiaries have nothing but contempt for their masters and wardens; how could it be otherwise? The penitentiary at Leavenworth is a palace of corruption and human degeneracy which costs the tax-payers of the United States something more than a million dollars every year to maintain. It is an institution so designed and so administered that, I firmly believe, a course in it would make a sneak-thief of St. Peter and a confidence-man or worse of the Angel Gabriel!

There is no attempt at study or scientific classification of the prisoners there, no psychiatric or correctional medical work of any kind. A prisoner who seeks to maintain his dignity by refusing to become a "stool-pigeon" (this is called "refusal to co-operate with the authorities") may virtually abandon hope of winning a parole because the granting of parole is in the hands of the local officials—the Warden, the Doctor, and often the Chief Clerk, composing the Parole Board, together with one official from the Department of Justice in Washington. Recently a rule has been introduced to the effect that a prisoner may not even appear before the parole board if he has been reported for any infraction of rule within six months prior to the meeting of the board. Inasmuch as a guard can report—and can be instructed to report—a prisoner at any time, for the most trivial offense such, for instance, as standing out of place in line, any prisoner can be disbarred from parole indefinitely, if the local officials desire it. This neat arrangement, together with the small number of men who have been paroled in the last few years and the known corruption in the enforcement of the Parole Law, is the reason why a bill has been introduced in Congress providing for the automatic parole of first offenders at the expiration of one-third of their sentences.

The treatment of the political prisoners whom the war has sent to the penitentiary is the same as that of the ordinary "criminal" save that, on the whole, he gets distinctly the worst of it. Vilified by the controlled newspapers and being in a tiny minority, without the gang protection and means of communication with the outside world that habitues of the underworld possess, he is exposed to the unscrupulous intrigues of stool-pigeons and provocateurs and victimized by his own naivete and ignorance of the ways of the underworld and of prisons which, in their psychology and atmosphere, at least, are a part of it. The political prisoner is regarded as either a freak fit for an asylum or some sort of a camouflaged crook—"criminals at heart and nuts" the Deputy Warden at Leavenworth calls them—who doesn't "fit in." Most of them, to their credit be it said, do not try to "fit in", in the sense of playing the degraded prison game. It is a deep scandal and disgrace that prisoners of this type should be sent to the penitentiaries by a nation which regards itself as enlightened and liberal. I feel convinced that if political prisoners as a class are to be recognized in America and dealt with in a dignified and creditable way it will be solely through the demands of organized labor.

I have spoken of the theories by which prisons are maintained and of some of the abuses which accompany their maintenance. But the reason why our prisons and penitentiaries are the miserable failures that they are is not merely because they aim to punish rather than to reform, nor because they are directed and controlled by politicians for politicians instead of by scientists for society. These evils might be corrected if an aroused public opinion demanded it. The ultimate reason for their failure lies in the corruption and dishonesty which pervades our entire machinery of government and which is expressed strikingly in the remark, often heard at Leavenworth, that a man who steals a mail-pouch is sent to the penitentiary while a man who steals and loots a railroad or a whole system of railroads, is sent to the Senate!

I am informed not only that nearly 500,000 men and women leave our jails and penitentiaries every year but that over 80 per cent of the offenses for which these men and women were incarcerated are offenses against private property. For this the gross and shocking inequalities in the distribution of wealth are, undeniably, largely responsible.

It is easy enough to say with the more extreme Communists, for instance, that if one would abolish crime and criminals and prisons one has only to abolish private property—but to say so is no more relevant to the solution of our practical and pressing problem than to say, for instance, that "Money is the root of all evil" and rest content with saying so. Both statements are true enough in their way. Private property is, however, one of the oldest of human institutions and while private ownership of essentially public services and resources will, I believe, be rapidly extinguished, private property in some form, probably in many forms, will remain. And therefore it is reasonable to suppose that offenses against private property, as well as other offenses, will continue. Thus it is that, whether one is a capitalist or a "prowling terrier", an individualist or a communist, one must face as a citizen the challenge which prisons make and endeavor to find a solution for the accusing fact and prevalence of crime—a fact which is a constant menace to the success of organized society and government, and to the success of popular government in particular.

What the solution may be I shall, perhaps, attempt to outline at another time. But in approaching this perennial and often baffling problem nothing seems to me so important as to hold steadily to the conviction, tested and sustained by observation and actual experience, that men and women are seldom, if ever, to blame for being what they are, that they act nine times out of ten and perhaps ten times out of ten, in the only way they know how to act, and that punishing them will never alter their characters or their conduct for the better. Muscle cannot do the work of mind and not until the mind of the offender is reached and quickened with transformed desire will the man be changed

# As To The Third International

By George Hardy

Much discussion is now going on throughout the organization on the "Third International." This is only natural since the world's working class movement is gradually swinging to the left, and revolutions are occuring that give an impetus to thought which must inevitably result in some action.

There is no mistaking where the I. W. W. stands in the world's movement, but there is a doubt in the minds of some as to what is the best policy to pursue in the field of revolutionary activity. So intense is this feeling that one is bound to feel that a swing to the side of either extremity would be disastrous, that is: to refuse to endorse the 3rd International, or to agree wholesale to Zinovieff's "appeal to the I. W. W." It is one thing to sit behind a red army and tell others what to do, and to face a condition without power and do the things advocated by those powerful.

The I. W. W. is with our Russian comrades in the fight for their Communist Republic and the spirit of the I. W. W. spells the proletarian dictatorship. Our whole history is one of intense struggle and our death records of the last year shows our members are on the firing line. So we are forced, while assaying our critics, to come to conclusions which takes us outside of our everyday struggle as a revolutionary unit in America.

What is it we are asked to do by those who seem to disagree with us? "Indorse parliamentary action for revolutionary purposes," say those seeking to turn us into a channel we left in 1908. To this we answer: "Are you trying to make the I. W. W. fit you for reasons obvious in all movements? If not, why are you outside the I. W. W., criticizing us when the I. W. W. has in its program all the elements of an Industrial Communistic Republic?

The I. W. W. will remain scientific and reserve the right to use its own tactics according to conditions prevailing at a given time. Our membership can vote for revolutionary candidates for bourgeois parliaments if they want, and do vote at times, when they feel it necessary, but we do not want to become infested with political office seekers, and therefore we reject the appeal of Zinovieff and our American critics to participate in elections as an organization. Further, we are satisfied, if our Russian Fellow Workers were asking us today to do something they might write a different document. Zinovieff's appeal was written in January, 1920.

It is the armed force part of Zenovieff's appeal that makes it impossible for us to endorse it. We refuse to stick our head above the trenches while a barrage is on. Lenine can be counted as one of the greatest tacticians and was naturally called a "compromiser with capital" when he showed a tendency to pay interest on old debts. It was no compromise, it was a tactical manoeuvre in the field of **Political Science** and the old politicians of the ruling class knew it, and that is why it was not adopted. It was an attempt to stop the hostilities until the Russian Proletarians could dig themselves in. We also reserve the right to develop our own tactics in the field of action.

A great deal of misunderstanding arises out of the various conceptions as to what constitutes the State. The State is nothing but the necessary machinery to keep in subjection the working class, and the corrollary is: to maintain the supremacy of the ruling class—the present economic masters. We cannot, as the world's events have shown, hope to penetrate bourgeois parliaments and win by any such methods—**Power, Economic Power** is the only weapon to conquer the State. We mean by power—to create a **Greater Social Force** which will overcome the power of the State and inaugurate a Proletarian State operating and controlling the forces of production and distribution thru the Industrial Units in field, factories, mines, etc.

We propose to solve this problem on the economic plane. Thru our units—called central councils—regional or community councils drawing their representation from the organs of production and distributions. By this method we always keep inside the working class organizations within the industries—we mean industry in its broadest sense—thus we gather the political expression of the workers and co-ordinate it for defensive and offensive purposes. The money spent in this way is better than putting it up for election fees to Capitalist governments and loosing. We don't think the masters will allow the advocacy of things obnoxious to them, even though it is election time—no camouflage goes with the ruling class.

There is only one course open for the I. W. W., that is to give our endorsement to the 3rd International with the above reservations. The last G. E. B. voted in favor of becoming a constituent part of the 3rd International. They reported their reason in their report to the last annual convention.

Now the new G. E. B. asks the members to decide. Let the members be awake to outside influences. Discuss this impartially. We can endorse the 3rd International, but we must do it with our future in mind and regard for our status in the world's revolutionary movement. Do not be influenced by spellbinders and hair-splitting debates. Let your decision be rendered on the basis of actual facts. The I. W. W. cannot afford to be outside the realm of the real revolutionary working class movement which has for its aim **Freedom for the Working class** and **No-compromise.**

# Where Are We Going?

By Geo. Andreytchine

Moscow or Amsterdam? This is the question. The Russian fellow workers who sent the appeal for an International of Revolutionary Unions, ask: Between the two existing Internationals, which does the I. W. W. prefer to join? Gompers, Jouhaux. Legien, D'Aragona, Appleton—being not as much concerned about the transformation of capitalist society into a Commonwealth of Labor as in conserving the existing system of exploitation, have made their choice. They do not make any bones about their intentions—they are after the scalp of the Russian Working Class which stands today on the vanguard of the International Class War.

It is our turn (it has been as a matter of fact for the last three years) to find our place in the world labor movement. It is absurd and utopian to imagine that we can make our own "International", or to isolate ourselves like the timid philosopher in our "ivory tower" and contemplate the panorama of the heroic epic battle waged between two social gladiators—the Producers and Robbers, for the heritage of the world power and therefore natural resources and produced wealth. No, not we! The I. W. W. was born and has grown in the baptism of the bloodiest episodes of the class struggle in the United States; it has borne the brunt of the class struggle and with its countless sacrifices and tenacity has created a place of no mean significance in the history of the labor movement the world over, as the pioneers of a new form of organization, with new set of tactics and a broader and more revolutionary vision than all its predecessors in this country.

A scientific and modern organization like the I. W. W. cannot fail to appreciate the paramount issue and absolute necessity of an organized International effort of all revolutionary organizations to work as one in their attempt to do away with capitalism, and all its gruesome consequences: wage slavery, human exploitation, degradation, ignorance, war and all the rest of its attendant horrors.

The I. W. W. first recognized the international character of the class war; the peculiar conditions in this immense country have shown plainly that in its make up the I. W. W. cannot be but a united whole of the different racial and national groups that are used as "man power" in the industrial mechanism of this classic land of modern Capitalism. Without its inspiring internationalism, this organization would have made no impression on the mind of the downtrodden foreign worker. He is proud of the frank and absolute lack of any taint of nationalism in the make up of our organization. Truly, there is no better example of a model revolutionist, devoid of any national, or racial taint, than the American I. W. W. Being a true proletarian, without a "home", without any worldly goods (save his two hands and more or less permanent jail sojourn), having seen all the revolting cynicism and deception of capitalist morality, the I. W. W. is the incarnation of the Citizen-Producer of the future world Communist Commonwealth.

But in late years we have witnessed a sort of "chauvinism", if you please, towards our own organization, forgetting that nothing in this world is **perfect**, and that an organization must be **flexible** and **easy adaptable** to changing conditions in order to keep pace with the onrushing events. In other words, our simple mind has stopped growing, thinking that no one can teach us a lesson and almost contemptuously have looked upon other movements and other organizations when they try to demonstrate to us that we are wrong. We have gone so far in this direction, as to deny even the greatest lessons of proletarian efforts—sneered and laughed at tragic struggles like the steel strike, not to mention the revolutionary experiments in Hungary and Bavaria, even Russia.

Enough of this, fellow workers! We cannot be the critics of the labor movement in other countries. We must change our attitude of isolation and do something POSITIVE, constructive, rather than constantly criticize.

We must abandon the negative state of mind: it is sterile, barren and leads to inaction. Action is the result of POSITIVE and CREATIVE efforts. action must tend to demonstrate the efficiency of our tactics and practicability of our plans of revolutionary reconstruction of society.

In other words, we cannot do anything worthwhile, unless we realize that **conscious Action** and **example are the most effective instrument of propaganda** of such ideals as we have been preaching for so many years.

To act efficiently, we need the masses. A movement like ours must be a MASS movement, and not a sect of "simon pure" theoreticians, who know Marx or Bakounin by heart but cannot find their way in the perplexing problems of a revolutionary fact.

If we get the masses behind our One Big Union gun, we cannot fire the final shot (le geste finale) all alone, without the aid and solidarity, **in deeds** rather than words, of the workers of other lands. Russia and Hungary have admirably demonstrated this fact. It is Utopian and absurd to expect that the Italian workers can establish a Soviet Republic without the aid (material and moral) of the British, American, Balkan and German working class. They may have a perfect working mechanism and revolutionary trained proletariat, disciplined and conscious of its tremendous power and responsibility (which I doubt), but they cannot feed themselves and their families with bread, for bread is made of foreign wheat; they cannot feed the metal furnaces with iron, copper and zinc, for Jupiter, though he

was an Italian god, has by a magic, omitted Italy from the generous gifts he distributed round once upon a time, and most of all, Italy lacks the "nerve" of modern production—C O A L. The picture looks grim to you, but it is more grim to the **thinking** workers of Italy, who are between the devil and the deep sea (the deep sea being the revolution without a corresponding repercussion in other capitalist countries and the devil being the bankrupt and stupid capitalist class).

It is more absurd to believe that the I. W. W. will bring about the revolution and that it solely will direct the destinies of this immense country. We must once for ever settle this in our minds—no revolution has ever been "run" according to platforms or preambles, constitutions of parties or organizations. It is too great a force, a dynamic cataclysm and cannot be confined in the tenets of one group of workers. In other words, we need the co-operation of other powerful and responsible organizations, in order to give a semblance of a conscious effort to this volcanic eruption. The sooner this penetrates into our minds the better: it will save us much hesitation and aimless adventures. We must learn to be practical. i. e. to **see things as they are**, and not as we **wish** them to be. This lesson, given to us by a no lesser authority than Aristotle, the greatest thinker of the ages.

The situation today is not ideal. It has never been and, I venture to say, it will never be, because the elemental forces that make history are not under human control, and besides no human being is perfect anyway.

We must take things as they come. They have been coming rather fast upon the heads of the I. W. W. It must learn to leap and jump, rather than follow the path and pace it had set up for itself on the outset: It must see the Red Torch from Russia and guide its next step according to the greatest lesson in the class struggle the Proletarian Revolution, which has been in a death grapple with the monster of Capitalism in the last 3 years.

The world situation is such that we are confronted with a dilemma like this: to join an organization that was not created by ourselves neither by our fellow workers in Western Europe, who think and act in the same terms as we do.

The Third International has been destined to become the rallying post of all the labor forces scattered by the war and national hatred; at least those who have the courage to do what they preach.

It is not our fault that most of this group are **political** rather than **Industrial**. The unions are always slower in their choice of weapons and propitious moments for action.

The great **Spanish Syndicalist Confederation of Labor**, which is almost an exact replica of the I. W. W. with its **sindicados unicos**, last fall joined the Third International. The Italian counterpart of the I. W. W.—**L'Unions Sindacale Italiana**, joined unanimously the same fighting organism. **The Shop-Stewards and Workers' Committees** of Great Britain also have joined and sent five delegates to the last congress of the Third. The Bulgarian General Syndical Union, comprising over 40,000 revolutionary workers, unanimously joined the Third.

The I. W. W. has nothing else to do but follow the example of its sister organizations in Europe. No one has illusions about parliamentary action. We condemned it many years ago; we condemn it again with resolution No. 3 in the referendum now before our rank and file. We will not enter the Third International if we have to abdicate our principles and listen to dictation from outside groups or even the International itself. **We will enter the great fighting army of workers whose interest is not to dominate each other, but to overthrow capitalist domination and dictatorship.** Jealousy and mutual suspicion destroyed the great First International. Marx and Bakounin, who have otherwise done a great service to the working class, could have been restrained from the fratricidal work that brought about the death of the first revolutionary effort of the advanced guard of the proletariat of the two continents. In these critical times which we must utilize in order to bring about the downfall of capitalism, we are a little bit closer to the crisis that preceded the death of the First International.

Honest but overjealous of their past traditions and present leading position revolutionary workers in all movements (Merrheim being their leader) not excluding our own, have denounced the Third International in a criminal and stupid manner, disregarding the historic significance of that body, denying it even a right to exist altogether.

Strange as it may seem, we who claim to be scientific socialists and practical workers, have gone so far in our blind fury against leaders of the Third, that one would think that Lenin, Zinoviev, Boukharin and Radek are the absolute dictators of that organization and that there is no room for discussion or even correction. If all of us were present at the second congress of the Third, we would have heard many a harsh word against all the above mentioned individuals from our Fellow Workers Gallacher, Tanner, Clarke, Beech from the Shop Stewards and the delegates of the German Communist Labor Party (Wolfheim and others).

We can join and *we must* join the Third without any injury to our dominant position in this country. We have nothing to lose but all to gain from a fellowship like that of our Russian fellow workers propose to us.

Moreover, when the proposed Economic International is put on firm basis, we can devote all our energies to it. That will be the International of action, the Third remaining the propaganda and educational agency.

When the 4 million Russian workers, organized on industrial lines, like the I. W. W., joined the Third International this year, they set an example for all of us. Nevertheless, they issued the call for an Economic International that would unite all revolutionary bodies of the world, knowing that it will be the backbone of the building up of the Commonwealth of Producers.

If 4 million industrial unionists of Russia endorsed the Third, why not we from America? Our entrance in the Third would give us not only prestige and standing, but actual power over a militant section of the working class in the two Americas, thus creating a revolutionary alliance of action for this continent.

Fellow workers, we must either go to Moscow with the reds, or to Amsterdam with the yellows. For my part, when I joined the I. W. W. I knew it was a red blooded militant organization. Its place is in the Red Third International.

# What "The Industrial Worker" Thinks About International Affiliation

*Editorial in "Industrial Worker" of Sept.* 11, 1920

WE OPPOSE POLITICAL AFFILIATION

During the fifteen years since the inception of the Industrial Workers of the World the organization has had its share of troubles with politicians—both within and without its ranks. The fact that it took an early stand as to political tactics has undoubtedly saved it a great deal more trouble. The organization is again menaced by the efforts of those within our ranks who would commit us as a body to the support of a political group.

The Industrial Worker, which is owned by members of the I. W. W. of the Northwest, reiterates the declaration of the Industrial Workers of the World as to political parties or groups and declares its intention to unhesitatingly stand by that declaration as a matter of principle. It follows:

*"Whereas, The primary object of the Industrial Workers of the World is to unite the workers on the industrial battlefield; and*

*"Whereas, Organization in any sense implies discipline through the subordination of parts to the whole and of the individual member to the body of which he is a part; therefore, be it*

*"Resolved, That to the end of promoting industrial unity and of securing necessary discipline within the organization, the I. W. W. refuses all alliances, direct and indirect, with existing political parties or anti-political sects, and disclaims responsibility for any individual opinion or act which may be at variance with the purposes herein expressed."*

That declaration which is a part of the very structure of our organization, needs reaffirmation today.

The work of the I. W. W. lies upon the economic field. Its duty is to build up an organization of the workers that will grasp economic power and use it to take over the industries and administer them for the workers—"to carry on production when capitalism shall have been overthrown". Every battle of the past and every battle of the future for better conditions and more of the product of labor is only a means to the great end we constantly hold before the working class. That goal looms up ahead clearer now than ever before. Our propaganda and our battles as an organization have very powerfully impressed the toilers of all nations. Let us continue our task, unimpressed by the glitter of Marxian catch phrases or the utterances of politicians of so-called revolutionary countries.

We hold out to the workers of all lands the right hand of fellowship, and we note with pleasure the spread of working class propaganda and working class economic organization. But we refuse to permit the I. W. W. to become the tail of the kite of any political organization, so far as we can use our efforts to prevent it.

# Where Do We Belong?

By E. W. Latchem (A. W. I. U. No. 110)

The "Appeal of the 3rd International to the I. W. W." and "The Communist Party and Industrial Unionism" both by G. Zinoviev, President of the 3rd International, both of them printed in the September issue of the One Big Union Monthly, are of interest to all, who are working for the emancipation of the world's workers from wage slavery for the reason that they show a sincere desire for closer International affiliation between the various radical groups in all countries, and should be thoroughly discussed pro and con thru our press.

A close study of the above mentioned articles fails to reveal anything that has been overlooked by the I. W. W., but it does show the need of a better understanding of International labor problems so as to avoid waste of time and energy in unnecessary criticism.

True that: "Now is no time to talk of 'building the new society within the shell of the old'." and that is the reason why the I. W. W. has been actively trying to build this new society, instead of merely talking of it, as do some pretended Socialists, who confine their activities to talk and dreams of the grand and glorious times the working class will have when "the new society" has been established, but who take no active part in the work of putting the material at hand into shape so that it can be used in the future society.

By comparing the Structure of the "Workers State" of Russia with that of the I. W. W. we find the following differences and similarities: (These comparisons are made with the soviet form as outlined in the appeal of 3rd Int.)

The I. W. W. unit is the job (or factory) branch which is composed of all members on that particular job, and is directly affiliated with the Industrial Union of that Industry and incidentally with the Industrial District Council or General District Council.

The "Workers State" unit is composed of workers in local factory, red army unit or local peasants soviet, which is directly affiliated with the local city or township soviet; but which has no direct contact with the other workers employed in the same industry.

The General Convention of the I. W. W. (which will be the Workers Legislature of the future) is composed of delegates elected from the different Industrial Unions, who represent the workers of that industry in the most effective way possible under modern Industrial conditions.

The "All Russian Congress of Soviets" is composed of delegates from the City and Provincial Soviets, who represent whatever conglomeration of workers' units that happen to be represented in that soviet. Delegates elected in this manner may be able to function properly in Russia, but if this were to be tried in any country that has highly developed industries it would mean the disruption of the various Industries, which would be a severe blow to workers attempting to run the Industries in their own interests.

The Industrial District Council of the I. W. W. is composed of delegates from all job branches of an Industry in any City or District and enables the workers of that Industry to properly handle matters pertaining to that City or District but has no other authority. The Russian "Workers State" has no counterpart similar to this.

The General District Council of the I. W. W. is composed of delegates from all job branches of all Industries in any City or District and functions to adjust matters between the various Industries of that City or District, but can not interfere in matters concerning the management of individual industries because modern Industrial efficiency makes every part of an industry a cog of the whole machine and any local interference would derange the whole industry. This Council is similar to the City soviet of the "Workers State", but has no direct connection with the General Legislative body.

In the matter of Centralization the I. W. W. has gone the "Workers State" one better. The workers in an industry are in direct touch with each other thru one central office. This is made possible by the job branch and delegate system which functions thru city branch and district offices and makes it possible to get unity in all parts of industry when needed. All matters of importance, such as settlement of strikes, etc., is handled by the workers most concerned and officials have no authority, except that which is necessary for the proper performance of their duties.

In regard to "politics" the I. W. W. stands for "workingclass politics" but has failed to find any that is effective except that which is to be found in the Union Hall where the workers can legislate in regard to matters pertaining to their particular industry. In the face of modern Industrial development any other form of politics tends to mislead the workers.

Our experience with so-called "political actionists both "red" and "yellow" has been that they all, with very few exceptions, want to use the workers to their own ends. In fact the I. W. W. at one time tried to be "broad enough" to take in all who pretended to be revolutionary industrial unionists, but was forced to dump the whole bunch of political actionists overboard to escape disruption from the wrangles of our "good comrades" who were continually using the I. W. W. as the "battle ground" to determine which So-So-socialist P-P-party was the most R-R-R-Revolutionary and which therefore should be entitled to election to act as executives of the master class state on the presumption that they with their wonderful "intellects" could per-

form wonders for the social revolution.

Ever since the I. W. W. rid its preamble of the "political action" clause, we have been able to make headway in organizing a Revolutionary Industrial Union which has been able to strike some mighty blows in behalf of ourselves as workers and which has caused the masterclass of this country to retaliate with the "iron heel" of the last few years. We organized and educated our fellow slaves where ever we were at, in the most effective manner possible for the betterment of working conditions under which we were forced to work. This was done with the full knowledge that it was a necessary part of the struggle which means the final overthrow and removal of Capitalism as a system of society.

While doing this we were vilified and lied about by most of our former revolutionary "friends" some of whom, were of the "safe and sane" variety and could not conceive of any intelligence among the down-trodden migratory workers of the west, and when these workers began to organize and write songs of sarcasm about the jobs and conditions under which they were forced to work and live, this bunch of so-called "educated r-r-revolutionists" were quick to side with the master class in trying to down us with slander and abuse. They made use of their knowledge of workingclass economics, not as an aid to us, but for the base purpose of coining obnoxious and vile phrases to throw at downtrodden workers who were doing all they could to better their working conditions so as to put themselves in a better position for the final struggles with an outworn system that can only exist by keeping the masses in degradation. Of course this was all done in name of the "intelligent revolutionists" who were to have a "safe and sane" revolution.

We could go on indefinitely enumerating the "good work" in behalf of the "revolution", which has been done by our friends of the "intellectual" variety, but it is sufficient to say that in spite of the combined attacks of our "friends" and "enemies" we are still alive and actively working to attain our ends.

The I. W. W. is not only willing but glad to grasp the hands of any body of workers anywhere in the world who have similar aims and objects; but are forced to look with suspicion on all those who but yesterday were stooping lower than the lackeys of the Capitalist class to find material with which to discredit us with the masses as well as with the working class organizations all over the world.

Some of those who attacked us may have done so thru stupidity and ignorance but that is no excuse or reason for exoneration. We have not seen any evidence as yet that our "friends" have done anything but "change clothes" and until the time comes, that they show us symptoms of transformation we can not be expected to have faith in their sincerity even tho they be given the O. K. by all other labor movements.

Those who in the past have contented themselves with the "intellectual attainments" of reciting the writings of Marx and other writers backwards and forwards, without in the least understanding them and dreaming of the "grand and glorious" society of the future and who confined their activities to vilification of those who differed with their pet "hobby", cannot expect the respect of the workers until such time as they "come down out of the skies", roll up their sleeves, and tackle everyday industrial problems as they are and not as they in their dreams imagine that they should be. This applies to politicians in all organizations mentioned in 3rd International Appeal.

It is true that the I. W. W. has made use of all methods at hand to get publicity for the rotten conditions under which the workers are forced to exist and to explain our remedy for these evils, which is to build up a strong powerful Industrial Organization as the best method whereby the workers can get better conditions now and at the same time be building the structure of the future society.

Have searched all official literature and fail to find anything to justify the following conclusions in the "Appeal of the 3rd International":

"Capitalism is breaking down, the social revolution is upon us and HISTORY WILL NOT WAIT UNTIL THE MAJORITY OF WORKERS ARE ORGANIZED 100% ACCORDING TO THE PROGRAM OF THE I. W. W. OR ANY OTHER ORGANIZATION. There is no longer before us the prospect of normal industrial development which would alone allow the carrying out of such a plan. The war has hurled the peoples of the world into the great Cataclysm and they must plan for IMMEDIATE ACTION—not for the working out of schemes which would take years to accomplish.

"The new society is not to be built, as we thought within the shell of the Capitalist system. We cannot wait for that. THE SOCIAL REVOLUTION IS HERE. And when the workers have overthrown Capitalism and have crushed all attempts to reestablish it, then, at their leisure, thru their soviet state, they can build the new society in freedom."

No serious minded person, who understands the nature of Capitalism, would think it possible to organize the workers 100 per cent under capitalism as is here stated as the I. W. W. object and only lack of knowledge of I. W. W. propaganda and literature could make such conclusions possible.

The very nature of Capitalism will force it to collapse before the workers have become even 50 per cent organized into a union that is in the least aggressive for the workers interests. This weakness of Capitalism is one of the reasons why the I. W. W. has selected the industrial field as the most logical place for the waging of the class war. It is the weakest spot of capitalism and the place where the workers can use their strength to the most effect. As proof of the utter helplessness of capitalism in the face of aggressive unionism of any kind we have only to refer to the recent "outlaw" railroad strikes which disrupted some of the largest railroad terminals in the country for several months

although only a very small per cent of the railroad workers were out on strike.

If we were to take the advice of the 3rd International and use their method to destroy capitalism, then attempt to set up the "soviet state" as outlined by them, we would find our industries disrupted so badly that a famine with all its horrors would be upon us, all because of trying to use a system of government that did not fit in with modern industrial development.

In Russia the small industrial populations are nearly all recently from the farms and can easily go back and find some way to live in a primitive manner; but imagine the calamity that would result if a large industrial population, the majority of whom had never seen a farm were to try the experiment. Hundreds of thousands of our City populations have never seen a farm and thousands have never seen a shade tree, but spend their lives between the tenement house and factory where they are busy piling up profits for the capitalist class.

To clarify matters the following questions should be answered by the 3rd International.

IS THE INDUSTRIAL STRUCTURE AS OUTLINED BY THE I. W. W. THE CORRECT FORM OF ORGANIZATION FOR A SOCIETY THAT IS BASED ON HIGHLY DEVELOPED AND CENTRALIZED INDUSTRY? IF NOT, WHY?

CAN MODERN HIGHLY DEVELOPED AND CENTRALIZED INDUSTRIES BE EFFICIENTLY MANAGED ACCORDING TO THE SOVIET PLAN AS OUTLINED IN THE APPEAL OF THE 3RD INTERNATIONAL? IF SO, EXPLAIN HOW?

IF THE PRINCIPLES OF THE I. W. W. WHICH WE HAVE BEEN PROPAGATING FOR 15 YEARS ARE WRONG, WE WANT TO KNOW IT.

---

# Solving the Social Problem Through Economic Direct Action

BY JOHN SANDGREN

A resolution, numbered 43, and adopted at the 12th annual convention of the I. W. W., in the year 1920, reads as follows:

....**Resolved, that we always preach and practice our only weapon—Economic Direct Action—in order to abolish the present system of exploitation.**

In this connection let us quote the last two passages from our preamble, as follows:

**It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with the capitalists, but also to carry on production when capitalism shall have been overthrown.**

**By organizing industrially we are forming the structure of the new society within the shell of the old.**

The above is a picture in words of what the I. W. W. tries to accomplish.

To make it more plain we are accompanying this article with a sketch of a chart designed to give a total view of the structure of the new society which we are building.

**Industrial Communism Illustrated**

The society that the I. W. W. is building is a society of Industrial Communism.

We propose that the people of the whole world should get together on industrial lines, in order to create the organs that are needed for the running of a communist society.

The organs we need are of two kinds, namely, first, organs of production and distribution, and secondly, organs of local and regional administration.

The I. W. W., having for its aim to establish industrial democracy and to anchor for all time all power within the useful layers of society and to make social parasitism impossible, establishes a new basic unit of the social structure.

The basic unit of our new society is **The Shop or Job Branch.** Every human being of working age, no matter what his occupation, is referred to some shop or job branch, even where the occupation is not properly speaking industrial in the commonly accepted sense of the term. Our chart includes them all.

These shop and job branches are on our chart illustrated by means of the ring of radial lines, which form so to speak the rim of the wheel-like structure.

From these basic units, or basic organs, all the other organs are derived.

The spokes in the wheel, so to speak, are the Industrial Unions, which are formed by uniting all the shop and job branches of every industry or occupation, whether it be shoemaking or the teaching of sciences at the universities.

The hub of the wheel is formed by the Industrial Union Administration, Departmental Administration and the General Administration.

All these together, however, are only part of the structure of Industrial Communism. They form only the productive and distributive machine. The purpose of these organs is to produce what mankind needs and to distribute it.

The old I. W. W. chart did not go any further. It depicted only the organs of productions and distribution, for the simple reason that the need for other organs was not apparent while the organization was small and purely in an agitational stage.

As the organization developed it became apparent that we must add to it organs for local and regional administration if we wanted to cover the whole field of human activity.

We have had these organs in an embryonic shape for many years in our City Central Committees, and Councils of different kinds, but they never got beyond the experimental stage.

However, as the overthrow or the collapse of capitalism approaches and comes dangerously near, we realize the absolute necessity of new organs of local and regional administration as well.

These we have depicted on our chart as the iron tire, so to speak, which holds the wheel of production and distribution together. The two organs supplement each other and are equally necessary. And both of them are drawn from the shop, or the job branches. Through a system of industrial representation, that is, through representatives elected from the job branches, organs of administration will be formed which will replace the present organs of local and regional administration, when these no longer function, due to the fact that the whole system on which they rest has collapsed.

By drawing the productive and distributive organs as well as our administrative organs from the shop and job branches, by vesting ownership and control direct with the industrially organized masses we secure both industrial communism and industrial democracy.

This chart, which could very likely be improved upon in many different ways, depicts quite clearly how the I. W. W. proposes to solve the social problem through **Economic Direct Action,** as the 12th annual convention puts it.

### No Room for a Political Party

As will be seen this plan leaves no room for a political party, city, state or national.

The City administration will consist of the City Central Council. As for state administration, as in U. S. or provincial administration such as in Canada or in Europe, the justification for them is disappearing.

The provinces in various countries may have a historical, or an ethnographic or political explanation in most cases, but the state lines on this continent are nearly all artificial boundaries.

The chief surveyor of a century ago seems to have taken a large U. S. map and a big ruler and laid out the country in squares with the exception of the places where mountains or big rivers made good physical boundary lines, without any consideration whatsoever for the natural economic boundary lines. In fact, how else could it have been done, being that the state lines were drawn up before the country was developed.

The states as political units are a nuisance like any artificial social arrangement. The nonsensical division into states is causing us to have over fifty different complete sets of regional administration without any natural basis for it, and is a tremendous expense to the American people and causes no end of confusion in our public life. It causes regions which should naturally be joined together to be split in several parts with separate administration, while it joins together pieces of regions which have little or nothing in common. Not to speak of the absurdity of having 50 sets of different laws, courts and lawyers. It almost looks as if the whole plan was devised by the lawyers. For the usefully employed men and women of these regions are only meagerly represented.

Instead of state lines a rational form of society would draw industrial boundary lines for purposes of administration according to the economic life of the country.

Thus the Pacific Coast country up to the mountains could very well be one region, while the intermountain states formed a second region, the gulf country a third region, the prairie states a fourth, the mine and forest states of the north a fifth. The tobacco and cotton states a sixth, the coal states a seventh, the factory states of the North East an eighth region, etc.

Thus the people who have most in common would be brought together under one regional administration for common welfare.

The regional Central Council would be composed of representatives selected by the shop and job branches, thus securing complete industrial democracy even on this stage.

In the same manner the shop and job branches would select the departmental and the general administration, the latter being composed of a general executive board and a general secretary-treasurer. We may not need the treasurer in the new society, but we need him at present.

The general administration would be the central exchange both for the productive and distributive machine and the machine of local and regional administration.

Where is there room for, or need for a political party in this plan? It covers the whole field. Every kind of human activity that is desirable and useful will find a place in this plan and every legitimate human interest will be safeguarded.

On the other hand this plan of society leaves no room, no opening for those who want to live the lives of parasites on humanity. All the "half-world", the caterers to vice, the criminals, and the professional politicians and the parasitical capitalist class will here be brought back to their proper place in the system of production and distribution, with no chance to get out of it. Nor would they have any chance to get on top as rulers except by formal election from the shop and job branches which would supply all the administrative forces.

Nearly all people with a socialist or near-socialist training as well as any practical minded worker will see and admit that Industrial Communism as thus proposed by the I. W. W. and many sister organizations in other countries is the proper way to solve the whole social question.

The Bolsheviki of Russia have partly built their new society according to our map. They have the industrial unions, except in agriculture, and they have the local and regional and national adminis-

(FOR KEY TO NUMBERS SEE PAGE 36)

# CHART OF
# Industrial Communism

(*Pertains to the article "Solving the Social Problem through Economic Direct Action, pages* 30-36)

This chart is **Industrial Communism** reduced to its simplest form. It provides for all organs of production, distribution and administration.

For the sake of convenience we shall consider the chart as a wheel consisting of **HUB, SPOKES, RIM and TIRE.**

The **RIM,** depicted with short, radial lines close together is made up of the **Shop or Job Branches** which are the foundation of **Industrial Communism.** This is the big masses of the people organized in branches in each locality for the carrying on of production and distribution.

The **SPOKES** are the Industrial Unions and the Industrial Departments, both of them organs of production and distribution.

The **HUB** depicted with a black ring "Departmental Administration" and a center or axle, corresponding to the General Administration, here indicated with the well known I. W. W. label.

Another ring outside the Departmental ring could conveniently have been added to indicate "Industrial Union Administration," and the hub would have been more complete.

Other improvements may suggest themselves and are solicited.

Finishing off the structure of the wheel of production and distribution is the iron **TIRE,** so to speak, of Central Councils for local and regional **administration.** This tire holds the structure of production and distribution together and serves as a means of contact between all the job branches direct while at the same time organically connected with the General Administration.

As indicated on the chart both the Central Councils and the Industrial Union and Departmental and General administration are built up by means of a system of INDUSTRIAL REPRESENTATION, in as much as all officials or servants are elected from and by the Shop and Job Branches.

Please note that this plan leaves no room for a political party which specializes in governing and ruling other people.

All power rests with the people organized in branches of the Industrial Unions.

From production and distribution standpoint this means INDUSTRIAL COMMUNISM.

From administration standpoint it means INDUSTRIAL DEMOCRACY.

**Such is the program of the I. W. W.**

## SOLVING THE SOCIAL PROBELM THROUGH ECONOMIC DIRECT ACTION

(Continued from page 31)

tration in embryo. But instead of having complete democracy, they have actually the dictatorship of a party which calls itself communist. The leaders of this party, however, declare that it is their intention to maintain the rule of this party only until such time as the industrial unions can themselves take the responsibility for production and distribution and until the soviets can be recruited from the industrial union branches exclusively.

The Central administration of the All Russian Trade Union movement, which most nearly corresponds to our general administration, is now subordinated to the rule of a political party, which has general direction not only of local and regional administration but also of production and distribution, even to the single factories and places of work.

There may have been many good reasons for this sort of an arrangement, this sort of tentative state communism, in Russia, where people were so unprepared for the task of taking over the country and all responsibilities, and where the mass of the people were unable to read print. It was an almost impossible task to transmit the plan of industrial communism on the spot to a couple of hundred million people who were either utterly illiterate or else entirely strange to industrial conceptions and ideas, such as can grow into the popular mind only in a country like America.

To the same extent that the people of the various countries have in advance propagated the idea of organizing the people into shop and job branches for the purpose of taking over all public activities, to the same extent that they have already organized such shop and job branches and industrial unions and industrial departments and central councils for local and regional administration, to the same extent will they be able to take over their respective countries without calling to their aid the political parties.

### The Politicians

The politicians are looking upon such teachings with dismay. If the workers are going to take possession of the factories direct, without governmental proclanations, as they seem to be doing in Italy; if the workers continue to organize their camere del lavoro, as in Italy, or their labor exchanges as in other countries, or their local samorganizations as in Scandinavia, or their councils as in America and in England, what becomes of the political parties, the political machines and the politicians?

They will find themselves misfits and the politicians will face the necessity of earning their living by labor recognized as useful, instead of living by monopolizing the administrative jobs from top to bottom.

There is a tendency in all political parties to organize into something we would call "The Political Workers Industrial Union". This union of each party desires the chance to govern all the rest of the people. To govern is the business of a politician.

The republican and democratic parties, the Socialist parties, the Labor parties, the Communist parties, are all "Industrial Unions" of that kind.

As far as the communists of America are concerned some of them seem to wish to have their party, much as an industrial union, incorporated into the I. W. W. plan of Industrial Communism. They want a place for their "industrial union" on the I. W. W. chart. And the chief function of the members of this union would be to fill all the more important office chairs of the new society.

This is, of course, repugnant to all friends of real democracy or self-government.

The communist parties being composed to a large extent of people outside the working class proper, of artists, literateurs and boheme, of professional men without a footing in the bourgeois world and of parliamentarians as in Sweden, Norway and other countries, hate to see the world made over in such a manner that their conspiracy to govern the world comes to naught.

Feeling and knowing that they have no prospects of getting into the office chairs by the old methods of parliamentarian elections, they want the working masses to make a revolution and lift them into power as their rulers. That is what they call the dictatorship of the proletariat. They are not very anxious that the workers should give too much of their attention to building according to the I. W. W. blueprint, for these wily politicians and desperadoes realize, that if the workers build that way, they will not need the "communist" politicians.

Consequently we find that when the members of the communist parties join the I. W. W. or the syndicalist organizations of other countries, it is not so much for the purpose of building up those organizations, as for the purpose of changing their activities so they will fall in with the current of communist political activities. They do not join for the purpose of taking a bundle of our papers or magazines or books under their arm, as a rule, in order to sell them and to spread I. W. W. information. They do not join in order to fill our treasuries or build up our unions. No, they join us, apparently, mostly for the same purpose as the saloonkeeper or the doctor or grocer joins the Elks or the Eagles, that is for business.

And in the same manner as they join the I. W. W. they join the A. F. of L. and the co-operative movement or any other movement, that is for the purpose of propaganda, or in order to break them up if they do not yield to the propaganda.

And what is their propaganda?

They want us to change our program as outlined in the beginning of this article. They want us to abandon the attempt to build the new society within the shell of the old as being useless, and to gather our forces and join with other bodies that they are trying to convert, in an attempt to capture the capitalist state through "mass action".

They openly state that they mean armed insurrection.

They are an impatient element thirsting for power. They want a political revolution by force in order to get on top and tell us what to do.

But as we have outlined above, in word and in illustration, we already have made up our mind what to do. We have made up our mind to do without them. We propose to solve the whole social problem without political action, without the aid of politicians. We propose to solve it through Economic Direct Action, and we are winning the world over to our program slowly but surely. Fifteen years ago we were nothing, and now the workers of every country are taking up our program, where they have not temporarily been carried off their feet by the desperate, last-chance agitation of the left wingers from the socialist parties.

Somebody might say that our Central Councils are nothing but political institutions, as well as the general administration, in so far as it serves as center for these councils, and that we, consequently, have a political program as well as an economic, the latter being embodied in our Industrial Unions. This hairsplitting is frequently resorted to by the cornered politician, who is loth to admit that we could do without him and his politics. Such argument is insincere.

"Polis" is a Greek word which means town or city. We have it in Constantino**polis** and Adriano**polis**. From that "polis" is derived the word politics and political and politician. Politics means about the same as "city business," "city affairs," or in short, "public business." Political is that which has to do with public business, and a politician is one who devotes himself to public business or public affairs.

As a matter of fact the I. W. W. is trying to make public business of most human functions. It is going to make production and distribution public business, and it is going to make city and regional and national administration public business also, instead of the private business of a political party.

From that point of view a hairsplitter might say, with the benign judge up in Bellingham, Wash., that the I. W. W. is nothing but a political party.

The confusion comes from using "politics", "political" and "politician" in a double sense.

If we take these words in their original, respectable sense of "public business", then the I. W. W. is a political organization, through and through. But the word politics, political and politician have long ago lost that sense and have gotten a new meaning that we use when we repudiate politics, political action and the meddling in our work by politicians.

The degeneration of our vocabulary has kept even pace with the degeneration of public affairs and public men during the reign of capitalism.

Politicians, instead of being public spirited men with the welfare of the people at heart, are commonly known in every country as conscienceless villains who steal and take bribes and sell out the people and their interests to the highest bidder. Politics, instead of being an honorable occupation for which honorable men compete, has become a cess-pool from which decent and self-respecting men shrink in impotent sorrow.

Politics is a cut-throat game in which only the basest participate and in which the biggest villain frequently is the victor. When the innocent working class goes into politics it quickly degenerates and falls into corrupt political machines.

The politician is after power. He wants to get that power, because it leads to everything else that he wants.

The Republican, Democrat, Farmer Labor, Socialist, and Communist politicians are all after the same thing. They all want to get possession of the government buildings in order to rule us from there. It is the same in all countries. But we do not want to be ruled. We want to "govern" ourselves.

All of them propose to "get there" by the use of the ballot except the communist politician. He proposes to get there by the use of the bullet. The Republicans and Democrats and all the other ballot politicians work their game with promises of reform within the confines of the capitalist state and a millenium in the future, perhaps, but the communist politician works his game by promising us all we ask for on the spot if we will help him into the government buildings so he can "smash the capitalist state."

This change has come over the communist politicians during the last 24 months and they are still constantly changing "attitudes", "positions", "planks" and "principles." This rapid-fire evolution from parliamentarians to insurrectionists they arrogantly call "keeping abreast of the times". We call it trimming.

We refuse to see in it anything but the fury of a handful of intellectual or quasi-intellectual leaders outside the ranks of the regular wage workers who have lost their footing and are staking all on one card, the card of political revolution.

It is to further such ends and for no other reason that some of the "communist" leaders have taken up the I. W. W. as a platform plank. Some of them are issuing literature declaring open war against us.

The I. W. W. has no use for their politics nor for the politics of any other party. We are enough to ourselves. We need no political help to solve the social problem. We will not reach our final goal one minute faster by deviating from our straight course of economic direct action.

The very presence of social organs like the ones we are building will in the final crisis be sufficient to make a desperate people turn to the solution we offer. If people keep their self control and adopt our program, no political revolution such as contemplated by the "communists," is needed. Any set of fools can make a bloody revolution, but it takes sensible men like the I. W. W. to attempt a complete economic revolution without bloodshed.

The Italian workers, in taking possession of the factories, have given wings to the expression "a bloodless revolution". The I. W. W. program makes such a revolution possible.

May every individual retain his political faith as well as his religious faith, if he wants to, but we hold that with increasing enlightenment all religious and political denominations shall disappear and every man and woman become a "politician" in the original and proper sense of the word, that is a public spirited person who seeks nothing but the common welfare.

But until that time we shall draw a sharp line of demarcation between political action and economic action. We will leave the name "politician" as a Cain's mark on the forehead of those who are now dragging men, women and children down in a sea of foul corruption and into bloody adventures. Our own activities we shall continue to characterize as Economic Direct Action, as per decision of our last convention, and we shall do our best to keep politicians out of it.

In the "appeal to the I. W. W." from the Third International we recognize the soft Jacob-voice of international solidarity, but in the out-stretched hand we recognize the hairy Esau-hand of wily politicians. We cannot and will not grasp that hand.

Besides, what benefit could we derive from joining a few hundred thousand politicians? We do not count certain economic bodies as their adhesion is largely sentimental and brought about in an unguarded moment by crafty politicians.

As pointed out in another article in this issue, the workers of every country are calling for an **Industrial International.** That will be a real, big international of tens of millions of workers with a practical, international working program.

That is where the I. W. W. belongs, and not among politicians.

## Industrial Unoins Re-Numbered by General Executive Board

**Old Numbers Discarded to Make Way for up to Date Decimal System. Members are Urged to Study the Chart Carefully**

A systematic revision of the Industrial Union numbers has been needed for a long time. It has been generaly recognized that the present system of numbering was long ago outgrown. No matter how perfect the One Big Union plan of organization might be it will always be imperfect if the numbers of the various Industrial Unions are meaningless. An efficient organization requires efficient order and arrangement in its industrial groupings as well as in its fundamental plan. The last convention decided to rectify the old system and the present General Executive Board, carried out these instruc-

tions. The changes will go into effect as soon as the General Office can issue formal instructions to the various Industrial Unions.

Numbers that have been issued to the various Unions run from 8 to 1500. These numbers, while they have served their purpose in the past, are at present arbitrary and meaningless. First of all it is easy to misconstrue the I. W. W. One Big Union Chart unless a scientific system of numbering is used. For instance: No. 620, Boot and Shoe Workers Industrial Union is a misnomer. There should be a Leather Workers Industrial Union charter for a branch organization. The same thing applies to 470, Rubber Workers Industrial Union, which should by right be a branch of the Chemical Workers Industrial Union.

Numbers, in these days, are used to convey the idea of relationship. All big business concerns have their departments keyed with certain numbers to help simplify the intricacies of business management and control. In the I. W. W., however, the number "400" has been spread over three separate and distinct Departments--not to mention industries: 400, Agriculture. 450, Mining and 470 and 480 in Manufacture. This is hopelessly misleading and confusing.

The Decimal system, by Melwill Dewey, is used largely by big corporations in organizing the various units of their business. It is also used in every library in the land. It is so simple that a child can understand it at a glance. This system permits of ten classes, ten sections and ten divisions. But since there are only six logical divisions for the Departments of modern industry we need only six of the decimals for our Industrial Departments. The industrial Unions follow in their natural order—each one being branched off from its Department. The number will show the exact relationship at a glance. In due time it is possible to number the branches in the same manner. In this way each number MEANS SOMETHING—it shows the Department the Industrial Union, and, if necessary the Branch. The confusion of the old system of numbering is done away with and Delegates are no longer in doubt as to just how to make out cards for new members. We are indebted to Fellow Worker Robert Russel of Minneapolis for this adaptation of the Decimal System to fit the needs of the I. W. W.

Members are urged to study the chart carefully and to be guided by it in the future. A list of the Industrial Unions as they appear in the light of this scientific system of numbering appears below:

List of Industrial Unions to be used for the information of Delegates in lining up new members:

**Department of Agriculture—100**

Agricultural Workers Industrial Union No. 110

Lumber Workers Industrial Union No. 120

Fishermen's Industrial Union No. 130

Floricultural and Horticultural Workers' Industrial Union No. 140

**Department of Mining—200**

Metal Mine Workers Industrial Union No. 210

Coal Miners and Coke Oven Workers Industrial Union No. 220

Oil, Gas, and Petroleum Workers Industrial Union No. 230

**Department of Construction—300**

Railroad, Road, Canal, Tunnel and Bridge Construction Workers' Industrial Union No. 310

Ship Builders Industrial Union No. 320

House and Building Construction Workers Industrial Union No. 330

**Department of Manufacture and General Production—400**

Textile and Clothing Workers Industrial Union No. 410

Woodworkers Industrial Union No. 420

Chemical Workers Industrial Union No. 430

Metal and Machinery Workers Industrial Union No. 440

Printing and Publishing House Workers Industrial Union No. 450

Foodstuff Workers Industrial Union No. 460

Leather Workers Industrial Union No. 470

Glass and Pottery Workers Industrial Union No. 480

**Department of Transportation—500**

Marine Transportation Workers Industrial Union No. 510

Railroad Workers Industrial Union No. 520

Telegraph, Telephone and Wireless Workers Industrial Union No. 530

Municipal Transportation Workers Industrial Union No. 540

Aerial Navigation Workers Industrial Union No. 550

**Department of Public Service—600**

Health and Sanitation Workers Industrial Union No. 610.

Park and Highway Maintainance Workers Industrial Union No. 620.

Educational Workers Industrial Union No. 630.

General Distribution Workers Industrial Union No. 640.

Public Utility Workers Industrial Union No. 650.

Amusement Workers Industrial Union No. 660.

Initiating new members be sure and place members in the Industrial Union to which they belong.

# As To Some Present Time Controversies

BY D. D. DIETZ

The 12th General Convention, it seems to us, took very logical action leading to Industrial Solidarity of the Workers of all groups. The Convention declared, among other recommendations, an unqualified desire to align with an International Industrial Conference. With such an International, of Working Class representation of course, there can be no question as to energetic militant support by the I. W. W. Thus was laid down the base for General Executive Board action, also editorial policy.

We read the Russian Appeal to the American I. W. W. received in this country eight months late. In these days conditions and group psychologies change more in eight months than in eight years a decade back. It is well to keep the point of rapid change in mind. The change is rapid towards the past and present position of the I. W. W. which is, Economic Direct Action, meaning action on the job by the workers. The change is not alone because the I. W. W. thus teaches; but, also, because it is a correct fundamental of a just social instinct of the workers. Hundreds of thousands of workers arrive at that mental position intuitively, aided by their sufferings consequent of local conditions. Both the action resulting from the propaganda and the intuitive action have their roots in natural law. It is vain to question natural law. The point is, seek to understand it.

There is one point in the Appeal which the writer deems important, and will try to analyze. Its general trend is an appeal that all kindred groups or organizations strive together that a more solid front may be presented to the enemy. That is something that does not become out of date. Its importance grows more manifested each day. If by "kindred" is meant groups, emphatically, aiming at the total elimination of capitalism with its consequent destruction of industrial lordism and militarism, then we see no reason why such organizations cannot work on lines that are parallel so far as it involves only action against the enemy. Education, organization necessary to action is the paramount concern today. Other questions may become more important tomorrow.

What appealed to the Russians as highly important a year ago may not so appeal today. The same may be true here. There is a world of evidence found in the publication "Soviet Russia," that the Russians are more and more keen for Industrial Representation, which is I. W. Wism. If it were possible to execute a quick communication between here and Russia today, there would be found, no doubt, a great common understanding and unity of intent, not necessitating any change in the I. W. W. program.

Some are questioning the militancy of the I. W. W. When members are dying every day for the cause, there need be no question about the militancy of the organization. If we, Industrial Workers of the World, cannot create a power by educating the workers on the job to the necessity of industrial organization, it is a cinch we cannot create efficiency of action by wild-eyed hellata larup action with no pitch hot. Cool, methodical organization first; then, we should worry.

In the case of loading munitions at Philadelphia, the I. W. W. does not try to hide chagrin; but, proceeds at once to discipline or correct the cause. No other philosophy teaches frankness as the I. W. W. Frankness is a great element of creative power, in the sense of growth. It begets the trust and confidence of the Working Class. Solidaric action on this matter of refusing to load munitions will aid the Russians more than a dozen Internationals just now. It is quick, direct. Events move rapidly now, tomorrow it will be more so. Very soon it will be action first, records afterwards. The action will be on the job, in the industries, by the workers. Many workers do not realize it now, but they will act when the time comes. To prepare for that sudden and profound change is the main line drive of the I. W. W. at this time. All that will be needed at that time is just a little common horse sense organizing ability. The place to look for it is on the job. There is where sufficient power will manifest itself.

Controversies over matters past and something that is for the future to adjust seems out of place. If the workers can, and they will, rise to the occasion, that is take control, other matters will be easy of adjustment. There is a world of evidence that events are compelling a common understanding on the right line. The line is, all national or continental groups against capitalism and its bastard parliaments.

The Working Class needs no International to tell them not to load ammunition for the Allies. Strike against allied munitions is the first effective way to help Soviet Russia. The International is not the immediate concern. That will come about later, naturally so. Then it will be an Industrial International, all opposing that to the contrary, notwithstanding.

# The Inside Story Of American Bolshevism

By John Sandgren

The writer has been attacked from several directions for his exposure in the July number of this magazine of Louis C. Fraina and for reprinting from the New York Call an article containing accusations against said Fraina of being an agent of the Department of Justice.

We should never have paid any attention to this person if it were not for the fact that he is justly to be considered the father and the philosopher of American Bolshevism, which latter we have right along characterized as fake bolshevism or the ass in the lion's skin.

We have been accused of dragging in personalities instead of principles. This is, however, in our opinion only a poor disguise for a desire to save the face of American Bolshevism or "communism" as they also style it. If in the course of the criticisms of principles one runs across a stool pigeon, what can one do except to expose. In fact it would be a betrayal of the trust placed in an editor if he kept quiet about his discovery or suppressed it.

At first the accusation against Fraina aroused some indignation in quarters where it was considered impossible that a man could be so sly or go so wrong. Now, however, the "communists" themselves seem to have gotten over the worst agony of the disclosure and are directly or indirectly admitting the correctness of the charges referred to.

We draw this conclusion from the fact that the following Federated Press notice is found published without comment in the labor press. In fact, not having the original English text at hand, I am translating it back into English from a paper which endorses the program of the "communists."

Here is the notice:

"**Fraina exposed as a spy in Europe.**

.....Louis C. Fraina, who took a leading part in the forming of the "Communist Party" last year and later was exposed as a police spy has extended his activity to the role of international traitor and spy according to the Paris paper "La Vie Ouvriere." Said paper stakes its reputation on the charge that it was Fraina who furnished the French government with data, etc., on which it based its persecution against Loriot and other prominent men in the French Labor movement. The legal attacks against the General Confederation of Labor seem to be largely based on the accusations of Fraina.

"La Vie Ouvriere" further says that by presenting himself as the most radical among radicals he was one of the most deciding causes of the split between the Third International and the Communist Bureau in Amsterdam. Fraina appeared at the meetings of the said organization as a duly credentialed international secretary from the United States. Suspicions against him were aroused, however, when it was found that he had company with a certain Dr. Rodowisky, known in America as a police spy. The suspicions were later verified when a letter delivered to Fraina from the Dutch communist leader, Rutgers, landed in the hands of the federal police in America."

These are disgusting items to spread upon the pages of our magazine, we admit, but seeing that the followers of this philosopher are taking a rather high tone towards the I. W. W. it is nothing but right that the truth should be known.

We have in our hand a copy of the now well known "Appeal to the I. W. W." by G. Zinoviev, published by the "Central Executive Committee of the Communist Party of America." (There are now two such parties. The other calls itself the United Communist Party) The Central Executive Committee in question has written an introduction to the said appeal which breathes a refreshing hostility towards the I. W. W. Although claiming to be part of the Third International, this Central Executive Committee repudiates for its part, the invitation by Zinoviev to the I. W. W. to enter into co-operation with the communists of America.

Allow us to quote from the said introduction:

"Can there be any co-operation between the Communist Party and the I. W. W. under the circumstances?

"Contrary to the belief of our comrades in Russia we most unhesitatingly answer NO.

"Between the two organizations there cannot even be a sort of an approachment. The Communist Party must direct its propaganda and communist teaching to criticize mercilessly the leaders, spokesmen and theoreticians of the I. W. W., expose the fallacy of their principles and tactics, and in general try to separate the rank and file from their opportunist leaders. In other words, we must carry on the same policy towards the I. W. W. as towards any other trade or industrial union which does not accept the basic principles of the communist international, namely revolutionary mass action, dictatorship of the proletariat and soviet power.

"We must direct our propaganda over the heads of the leaders, to the rank and file of the I. W. W. who are class conscious and revolutionary but confused, with the objective of inoculating and crystallizing communist understanding among them—that will lead to the ousting of their old leaders and changing the policy of their organization to accord with the principles of the communist international.

"This can best be done, not by declaring a truce with the I. W. W. (which means a truce with their opportunist leaders) but by a ruthless criticism of their principles, tactics and leaders.

"Nothing can better illustrate the fear and trepidation of these opportunist leaders than the recent decision of the convention of the I. W. W. to cease their attacks upon the communist party. Theirs is the policy of "friendliness" towards the communists which is not the result of a change of heart or understanding, but of a desire to retain their grip on the I. W.

> W. by keeping the membership of that organization confused. A policy of "friendliness" on our part would only serve to play their game and would be, therefore, betrayal of the rank and file.
>
> "The Communist Party rejects a policy of 'co-operation' with the I. W. W. and will conduct a policy of strict, pitiless criticism directed against the principles, tactics and leaders of the I. W. W. The communist party recognizes that the membership of the I. W. W. is revolutionary and will strive to give it communist understanding and compel them to relegate their opportunist leaders to the discard and change the policy of the organization to accord with the principles of the Third International. Only then will co-operation be possible between the communists and the I. W. W."

It is on this bunch that it is tried to force the affections of the I. W. W. by an endorsement of the Third International.

These intellectuals or quasi-intellectuals who always have been politicians and still are—they are going to save the rank and file of the I. W. W. from their leaders. Leaders in the I. W. W. where no man holds office longer than a year, with the exception of editors, who may, but seldom do hold office a year or more!

How do you like them, fellow worker?

We are told that this arrogant, preposterous crowd are the direct descendants, philosophically, of Mr. Fraina, the Palmer agent. The others, the so-called United Communists, are more to be considered the intellectual children of another philosopher, Mr. John Reed.

And thereby hangs a tale.

It is commonly known in this country that of all American politicians thirsting for power none is thirstier than John Reed, now a member of the Executive Committee of the Third International and very likely the real author of Zinoviev appeal to the I. W. W. He is supposed to have been released by the White Terror authorities in Finland, through which country he was attempting, according to the capitalist press, to smuggle some bolshevik diamonds with which to stimulate the communist movement in this country.

The story of the "communist" movement in America is largely the story of the struggle between two men for power and supremacy, a struggle for leadership between Fraina, the agent provocateur and Reed, the man with ambition, who thus jointly became the parents of the "communist" movement in this country, with Fraina always leading, until h› was unmasked and left his competitor in control, although in exile.

It is a wellknown fact that in revolutionary times it is the most radical ones that get to the front. If you want to become a leader these days you have got to be awfully radical and r-r-r-revolutionary. Fraina and Reed found this out by experience.

Fraina having the backing of the secret police was playing a safe game and he went the limit. He went as far as he dared, cautiously and gradually, in order not to arouse suspicion against his provocateur program.

It began with a gradual discrediting of parliamentarian action ending with a complete repudiation when they failed to capture the socialist party. Now mass action came to the front as the main point of the program. Also tentative endorsement of the I. W. W. Gradually it drifted into the only logical conclusion—armed insurrection. Fraina was always a neck ahead in the race, because there was no limit to his daring. Reed had to follow or lose his leadership chances to Fraina.

When Fraina said "Down with parliaments"—Reed repeated "down with parliaments." When Fraina began to develop the theory of mass action, Reed was also mass action, and finally when Fraina said "armed insurrection," Reed had to repeat it or be left behind. And what the leaders said, their followers faithfully repeated. If Fraina had advised suicide, we believe Reed would have done the same thing, in order not to be outdone, and their followers would probably have jumped off the Brooklyn Bridge or some other high point, for if there ever was abject submission by the rank and file to outside leadership, it is to be found in the American bolshevik movement.

Advising armed insurrection, however, is dangerous business, and it is significant that both leaders were out of sight when that program was promulgated.

Fraina and Reed were very much like the smart shepherd boy and the bad giant in the nursery tale. We do not exactly remember it, but it runs something as follows:

The giant terrorized the neighborhood, so the shepherd boy decided to take his life. Small as he was, he could not think of using force so he had to use stratagem. He came upon the giant as he was eating his gruel of meal and water, so the giant, being hospitable, asked the boy to sit down. The boy sat down and ate and greatly surprised the giant by eating as many bowls of gruel as himself. But the boy was throwing the gruel into a big leather pouch he had under his girdle, which the clumsy old giant did not see.

At the seventh bowl the giant had to give up, saying he was all filled up. "But how can you who are so small eat as much gruel as I," he asked the boy.

This was the question that the boy had expected. In anticipation of it he had filled the leather pouch with gruel.

"That is very simple," he answered. "When I get too full, I take my big knife and slit my stomach." And as the boy said so, he slit the leather pouch so the gruel ran out.

Now, the stupid old giant did not want to be outdone and put to shame by a little shepherd boy, so he, too, pulled out his knife and slit his own stomach. That was the end of that bad giant.

Fraina was the shepherd boy. Reed the envious old giant. Reed nearly busted himself with the gruel of r-r-r-r-revolutionary phrases in order not to be outdone by the boy Fraina. But Fraina had

the secret service pouch to rely on. Finally, the boy in the case slit the pouch with the knife of "armed insurrection," and Reed not to be outdone took the same knife and slit himself open. That was the end of both Fraina and Reed as agitators working in the open. That trick sent them by opposite route to Hades or underground.

Their followers, repeating every act of their leaders, just as in the game "follow the leader", also slit their stomachs and went underground, and there they are to this day, barking at the I. W. W. and trying to sow dissension in our ranks by attacking the so-called "leaders".

As said above, the American bolshevik movement is largely a personal affair. The rank and file are standing underground and holding the sack for their leaders who are somewhere else, waiting for them to come back.

Not being able to think for themselves they are like hypnotized by their own stupid provocateur program, invented by the smart secret police agent. They would like to let go of it, but they can't. They have got themselves into a logical trap, from which there is no escape except by a full and open confession of the innermost motives of their politician souls and a complete recantation. To do that requires more moral courage than most of them possess, and in that manner they are being dragged down to their own destruction by the invisible leaden weights of a false, mercenary philosophy which stultifies the American labor movement.

The Ass In The Lion's Skin or "All Dressed Up and No Place to Go."

IMMENSE CROWDS WITH THOUSANDS OF RED FLAGS ATTENDING THE CEREMONY OF LAYING THE CORNERSTONE FOR THE BUILDING OF THE SOCIALIST PAPER "AVANTI" IN MILAN

# RED ITALY

By G. CANNATA

There are so many agencies interested in suppressing the truth about the momentous events occuring on the continent of Europe that our erstwhile close neighbor becomes daily more and more enveloped in an impenetrable smoke-screen of falsehood and secrecy. The performances of the American press in relation to Russian news have already reached the apex of perversion and imbecility; as to Italy, these performances are only beginning. The Italian situation must be indeed clouded in mystery to the ordinary worker who gets his news from the prominent capitalist newspapers. Occasionally he reads of interviews with amiable American gentlemen returning from business trips to Italy; the amiable gentlemen are invariably optimistic; according to them the "Italian people are getting down to hard work," "their industry and thrift, their innate common sense will carry them thru their present difficulties. But unfortunately, some sensational event occurs to disturb the impression thus created—we have widespread hunger riots; we have general strikes; we have civil disorder and commotion. At this point the Italian Embassy intervenes with the stereotyped official statement "that the whole affair has been greatly exaggerated by the enemy propaganda agencies, always busy discrediting Italy abroad in order to prevent her economic rehabilitation."

The recent remarkable achievement of the Italian Metal and Machinery Workers in "locking out" their capitalist masters moves me to present to the American workers a general picture of the Italian situation, brief and therefore necessarily incomplete as to details. My impressions in the matter are developed from a knowledge of the psychology, temperament, traditions and working class movements of Italy; from direct correspondence and personal contact with recent immigrants or sailors from there.

### The Economics of Italy

No single factor exerts such a great influence on events past and present in the labor movement of Italy as the economic status of the country in general. Italy is next to Belgium, the most densely populated country on the face of the earth; today its approximately 125,000 square miles of territory embrace a population of forty million. The density of its population is practically twice that of France. A thickly populated country may have a sound, economic basis if (like England and Belgium) it has available in its own soil or from its colonies, within convenient transportation distance, the prerequisites to intensive modern industry—coal, oil, iron, cotton, etc. Curiously enough, Italy with its immense population is essentially an agricultural country—it has little iron, practically no coal and no petroleum. Because of the insufficient area, and despite a fairly efficient agriculture, it cannot raise its own requirements of wheat, corn, meat and other primary essential foods. Its exports consisted almost entirely of luxuries and non-essentials (silks, art, glass-ware, olive oil, marble, sulphur, citrus fruits, dried fruits, cotton goods etc., etc.) and never served to cover more than a fraction of the imports. The resulting adverse trade balance was offset before the war by two special sources of national income, which served to make possible a rather precarious financial existence:

1. The tourist industry.
2. The exportation of man-power (emigration)

resulting in income through money sent from abroad. Italian emigration before the war had assumed colossal proportions, the high birth rate making it a permanent national practice. No less than seven million natives of Italy are today spread over the face of the earth in search of a chance to make a living.

The effect of the great war on the Italian economic and financial structure can be easily imagined. The special sources of income were greatly diminished; exports ceased while the imports of raw materials and finished products for the orgy of destruction reached unheard of proportions.

The entire economic life was thrown out of gear; immense munition and metallurgical plants sprang up in Northern Italy, depending on England and America for their raw material. Foreign loans succeeded each other rapidly and five national loans aggregating over fifty billion lire were floated. Italy emerged from the war with a total indebtedness amounting to seventy-five per cent of her national wealth; with a debauched currency (present exchange rate 23 lire to a dollar; pre-war rate 5.17 lire to a dollar) and with immense tracts of ruined territory on her hands.

Last December the financial statement of Minister of the Treasury Schanzer showed a deficit of two milliards 800 million lire. Six months later Meda's statement showed the deficit to be twelve milliards. Neither statement includes any interest payments on the foreign debt; the Allies have been obliged to remit them. Meda's budget as estimated for the year 1920-21 is summarized as follows (in millions of lire):

| | |
|---|---|
| Ordinary receipts | 10,000 |
| Extraordinary receipts (sale of war stocks, etc.) | 1,500 |
| | 11,500 |
| Ordinary expenses | 12,050 |
| Extraordinary expenses: | |
| 1. Cereals | 6,300 |
| 2. War, Marine, Colonies | 2,850 |
| 3. Liberated and redeemed areas | 2,000 |
| 4. Maritime traffic | 500 |
| Total expenses | 23,700 |
| Less total receipts | 11,500 |
| Deficit | 12,200 |

A national economic situation which was always a source of misery and poverty to the vast masses of industrial and agricultural laborers and small peasants, has now reached a stage in which life to the worker has become a nightmare of suffering and privation.

Italy is on bread rations; the spectable of a people burning wood in locomotives and industrial plants is not unique with blockaded and beset Soviet Russia. Capitalist Italy has been reduced to the same extreme by a coal-price amounting to 18 times the pre-war charge. The government flour monopoly, which creates a state deficit of six billion lire yearly in order to sell bread at a moderate fixed price, does not place the means of subsistence within the average worker's wage. To such a pass has capitalism and imperialistic war brought the Italian proletariat!

### Revolutionary Traditions and Working-class Movements

The modern Italian worker has no horror of the word "revolution"; the wars for national unity, which had a very popular character, are barely half a century old. The economic misery of the country, due partly to its natural deficiencies and partly to an indolent and unenterprising bourgeoisie and a corrupt and thieving governmental officialdom, has several times forced the workers to surge blindly forward into bloody insurrectionary movements under the lash of impellent necessity. The years 1893 in Sicily and 1898 in Northern and Central Italy are written in the memory of the Italian workers in letters of blood. They were hopeless unorganized struggles, throttled by the military with the utmost ferocity. There followed the phase of economic organization and socialist political activity, then the inevitable turn to economic action beginning with the remarkable general strike of 1904 and the ascendancy of the syndicalist criterion of direct action in the years immediately preceding 1914. This period witnessed a wonderful series of

MALATESTA ADDRESSING ITALIAN WORKERS FROM A BALCONY

industrial and general strikes. The bourgeois press accused the workers of having gone strike-mad. The hanging of eight socialists in Japan in 1908 provoked a strike of 150,000 workers in the City of Milan) which witnessed five general strikes from 1912 to 1914. The killing of three workers caused the economic paralysis of the entire nation. Many of these "protest-strikes," called for 24 hours, continued for days and days thru the sheer will of the workers to advance further and further in their "revolutionary gymnastics." On one occasion the entire city of Milan, the Italian Petrograd of the coming revolution, was in the hands of the workers for three days. To go one step further would have meant revolution; the workers retired of their own volition; the time was not yet ripe. Just previous to the world-war, and following the disastrous economic consequences of the Tripolitan war, there occured the highly successful semi-insurrectionary movement known as the Red Week of 1914. In such a temper and with such recent memories did the Italian workers enter the period of military terror and oppression that characterizes war. Conscription shattered the ranks of organized labor; the Italian Syndicalist Union, with a pre-war strength of about 125,000 members, was only able to maintain thru the war a membership of 30,000; its leaders were interned in concentration camps; its activities hampered.

Italian labor rebounded from the oppression of the regime of war and militarism with remarkable vigor. The ranks of all radical organizations filled rapidly; the Russian revolution seems to have caused a veritable psychological landslide. Amnesty for political prisoners was speedily obtained. One hundred and fifty-six socialists were elected to the chamber of deputies; the Italian Syndicalist Union reached a membership of 350,000, entering even the cities of undeveloped Sicily.

The Union of the Toilers of the Sea achieved practically one hundred per cent organization, and with the General Confederation of Labor, the Syndicat of Railway Workers and other minor labor bodies gave Italy an organized workers' army of about 2,500,000 men.

The Italian Syndicalist Union is a revolutionary Industrial Union; it is probably more closely related to the I.W.W. in its several characteristics than any other organization in the world. The independent unions of raliway workers and marine transport workers are syndicalistic rather than socialistic in their activities.

The General Confederation of Labor and the Socialist Party, numerically the strongest organized force in Italy, work hand in hand and with the Moscow Third International. All Italian labor is thus formally lined up to the extreme left; "moderate" socialist opinion is represented exclusively by a section of the socialist parliamentary group and part of the officialdom of the General Confederation of Labor. It is superfluous to state that their influence with the proletarian rank and file is not very great.

### Exercising Absolute Job Control

The enormous increase in organized strength of the workers and the prevalence of almost unanimous revolutionary intent in their ranks has given rise to a new tactic in the class-struggle which is highly significant and instructive. It is a tactic characterized by calm assurance and the sensation of limitless power; it is deliberately and systematically efficient and invariably successful. It is the exercise on the part of the workers of absolute job control.

It is not exaggerating to state that the Italian labor movement today is a state within a state. It is a state with its own international foreign policy which the workers, thru the exercise of their economic strength, carry out against the wishes of capitalists and government. The main tenet of this proletarian foreign policy at present is the defense of Soviet Russia against foreign aggression. The activities of the transport workers in this connection have been positively brilliant. Seamen have repeatedly forced the unloading of munitions at Genoa, Naples and Trieste; one shipload of munitions was seized by the crew and carried to Fiume; 56 Italian sailors on the British steamer Calabria struck in the port of New York when they discovered that the steamer was to carry Polish reservists to Danzig recently.

The railway workers regularly and methodically inspect all freight and side-track all war material. In effect, it may be said that the Italian industries still belong to the capitalists, but the workers operate them for their own particular interests, at least in part.

In the vicissitudes of the internal struggle, the workers are also using their newly-found power to daily humiliate the capitalists and accustom them to the bitterness of defeat. It has become a struggle in many cases over trivialities and for pure moral prestige. The workers in various shipyards have actually by job action forced the employers to fly the red flag on every ship launched! In the arsenal of Leghorn within the last two weeks a government torpedo boat destroyer took the water ablaze with red flags. After a nationalist mob had wrecked the offices of "Avanti" the socialist daily in Rome recently, the railway men retaliated by refusing to carry the bourgeois papers out of the city for distribution.

### The Last Phase: Locking-out the Capitalist.

Before taking up the recent events in the metallurgical industry of Italy, which have attracted world-wide attention, it may not be amiss to state that the principle of seizure on the part of the workers has already been applied in several cases. In the agricultural field, the seizure and working of unused land has been legalized by the Visocchi decree; what the government of Giolitti was unable to prevent, it sagaciously sanctioned. The first example of the seizure and operation of an industrial plant on the part of the workers occurred in February of this year at Sestri Ponenti, Italy, during

an agitation led by Angelo Faggi, formerly editor of "Il Proletario," the Italian organ of the I. W. W. The workers held and operated this factory efficiently till driven out in a bloody encounter with the Royal Guards (Guardie Regie), the newly recruited force of highly paid mercenaries, which Nitti organized as the potential White Guard of the Italian bourgeoisie in the coming revolution.

The present controversy in the metallurgical industry arose from the workers' demands, embodied in a memorandum asking for an advance of approximately 35 per cent in wages and the satisfactory adjustment of various matters affecting workers' control in the factories. The Italian Syndicalist Union has over 50,000 members in this industry and considerable influence on the 400,000 members of the Italian Federation of Metal Workers, affiliated with the General Confederation of Labor, and the other minor bodies of organized workers. It is particularly strong in Milan, Sestri Ponenti, Piombino, Terni and Bologna. In Turin it exercises considerable influence because it has consistently countenanced a "shop-steward" movement, highly popular with the rank and file of the Federation of Metal Workers, and somewhat disagreeable to the leadership of the Socialist Party and the General Confederation of Labor. In fact, it may be said that the sole bone of contention between Syndicalists and Communists anarchists on one hand and maximalist socialists on the other is the insistence on the part of the former that the Socialist Party, with its heterogeneous leadership held in unnatural unity thru the vision of coming power, shall not extend its hegemony over the workers into the revolutionary period by the organization of politically dominated soviets, as has happened in Russia under a different set of conditions. The Italian shop-steward (Consigli di fabbrica) movement is a highly intelligent rank and file attempt to place the destinies of the Italian revolution directly in the hands of the producers.

The refusal of the National Federation of Employers in the Mechanical and Metallurgical Industry to accede to the demands of the workers caused a general "slow-down" strike to be initiated on Aug. the 20th, over one half million metal workers participating in the movement.

Production was reduced practically 50 per cent for a period of almost two weeks. The employers retaliated against this effective measure by declaring a general lock-out and the workers responded by effecting a counter lock-out of the capitalists! The workers seized over 500 plants in various parts of the country, barricaded themselves in, hoisted the red flag on the roofs and mounted machine-guns for defense against possible attack. Production was continued as in normal times, in some factories with the collaboration of the office and technical staffs, and in other factories without.

A curious factor in the situation has been the strictly neutral and pacific attitude of the Italian government. Personally I believe that the extremely crafty Signor Giolitti, the old fox of Dronero, ele-

**SOLVING THE PROBLEM OF CARRYING THE TIRED CHILD AND THE RED FLAG AT THE SAME TIME, COMING BACK FROM THE DEMONSTRATION**

vated again to the rank of premier by a dying and impotent bourgeoisie, is still trying to make good his old boast of having been able "to relegate Carl Marx to the attic," by his policy of corruptive conciliation towards the political socialists. The desire for power for its own sake, appears to be strong enough in Giolitti that he may even attempt to disprove Marx, by cutting loose from the sinking ship of capitalism, and perpetuating his political state thru a policy of pliancy and adaptation to new economic forms of social life. It must be remembered that Signor Giolitti has already legalized the expropriation of unused lands, recognized and established commercial relations with Soviet Russia, declared openly the neutrality of the government in all industrial disputes, threatened the confiscation of all war-profits and in other ways flown straight against the drift of bourgeois good usance and custom. Meanwhile the Royal Guards are active as ever maintaining intact the authority and prestige of his government. Signor Giolitti is indeed a 20th Century Macchiavelli and a statesman of resourcefulness; but the Italian workers have a keen enough intelligence and know so precisely what they want and how they are going to conquer it, that the stratagems of this latter-day Moses will prove absolutely futile.

With the Italian workers in complete possession of the splendidly equipped and excellently organized metallurgical industry, which includes all plants

manufacturing munitions of war, two roads only are open to them—they will either extend the movement and gradually force the seizure of all industry which means revolution and the proletarian dictatorship, or they will of their own free decision, compromise once more with capitalism to renew the struggle at a more opportune time. The present situation precludes stagnation; in order to function, the metallurgical plants must secure raw materials and dispose of finished products. At this date of writing (Sept. 12) the railway-workers have begun delivering raw materials without authorization; over two hundred plants in the textile, shoe, rubber, chemical and lignite mining industry have been seized. It is to be foreseen that certain elements in the Socialist Party and the General Confederation of Labor will advocate renunciation and moderation, basing their thesis on the economic insufficiency of the country in case of revolution and consequent blockade. It is also to be foreseen that the Syndicalist and Communist Anarchists will advocate to the rank and file the immediate expropriation of capitalism and the proletarian assumption of power. As to the result, the next few days will tell.

Whatever the outcome of the present struggle, it will remain a milestone in the proletarian advance to power. The action of the metallurgical workers in Italy blazes a new trail for the world-proletariat. It is a road which the I. W. W. has for years recognized and advocated amid universal doubt and unbelief. The Italian lockout of capitalism has shown at least the possibility of a preponderantly powerful economic organization, with unanimous revolutionary intent, ignoring all the agencies of capitalist authority and resistance, and thru its sheer irresistible might taking possession of industry in the name of the producers. If impotent raging capitalism should then attempt violence, the blood of the victims would be upon its own head. Contrast the austere good sense, the serious moderation and sense of responsibility of the common worker, Eduardo Gili, today "commissar" of the Fiat automobile works in Turin, employing 40,000 men, with the violent ravings of capitalist reactionaries and white guardists:

Gili is quoted by the Chicago Tribune of Sept. 12, as having answered as follows to the correspondent's question: "If the government stops playing neutral, or if the owners send armed men to occupy their plants what will you do?"

"Two can play at that game," said the commissar, "but we won't use violence unless it is forced upon us. We have machine guns, grenades, and armored trucks, and, moreover, we are friendly with the soldiers, who are our conscripted brothers.

"But we don't want any more war, nor do they. I believe everything will progress peacefully."

"We've learned this much already, that men will work in good spirits without superintendents. When the business end of buying and selling has been arranged, Italian labor will own the industries. This will come some time soon, even if we don't succeed now."

The words of Gili are prophetic, the proletarian revolution in Italy is inevitable; it is imminent.

The nationalist intellectual apologists of bourgeois Italy refer to the modern phase of her national existence as the "realization of the Third Italy," presumably the legitimate successor in greatness to Ancient Rome and the Medieval Republics of Venice, Genoa and Milan. Capitalist Italy, in a world dominated by brutal overbearing ambition and unbridled speculation and struggle, which make small psychological appeal to her people, has achieved but a meagre estate. She is politically, economically and culturally a vassal of the lords of coal and iron. To her people, as to all the oppressed of the earth, there is approaching an era in which constructive, creative and artistic genius shall have full opportunity for development, and the labor of brawn and brain shall be the noblest enterprise of man. It is for the achievement of the Fourth Italy, the Italy of the coming Industrial Communist Civilization, that our proletarian brothers across the seas are delivering their final and mightiest blows.

MONSTER MASS MEETING OF 150,000 WORKERS IN "THE ARENA," IN MILAN, TO SHOW SYMPATHY WITH STRIKING RAILROAD WORKERS

# Is the I. W. W. Going Into Politics?

**Nomination Speech Delivered Before National Convention Of The Intellectual Elite Of America, Assembled At The House Of Blazes, In Chicago On September 16th, 1920.**

BY QUASIMODO VON BELVEDERE
*Candidate for the Presidency of U. S. of America and the Deestrict of Lake Michigan*

**Running on the more or less progressive ticket of the independent superman element.**

(Copyrighted 1920 by Vincene Noga)

Ladies and Gentlemen:

The lady obstetrician, who was summoned to officiate upon the occasion of my advent into this world, could not swim—hence she could not cross the creek which intersected the path leading to our hut; the bridge having been carried away by the flood. When the time was overdue and no other means were employed to facilitate my birth than lamenting and praying I lost patience and I elbowed my own way towards the light. The above history is faithfully recorded in the family Bible. Now, if Mr. Cox or Mr. Harding had arrived into this world unassisted by the goose-lard-mongers, would they not have told about it in their nominating speeches? Of the three of us, there is no doubt, I am the fittest to play poker in the White House. However, the nomination cannot be imposed upon me unless I am given a running mate of my own choosing. I demand that William Gibbs McAdoo be nominated for Vice-President; Herbert Hotstuff Hoover is my second choice, but McAdoo is a much better worker —he would save me the expenses of keeping a janitor, a butler and a few other expensive servitors.

The honors which are to be bestowed upon me this evening have been vaguely foretold thirty-five years ago. When I was three days old, a small circus was passing our village and encamped at a nearby caravansary. Among its curiosities was a blind gypsy girl phrenologist, who could estimate the intellectual caliber of any human creature by passing her fingers over his pate. Hearing about these miraculous traits of this prodigy of a gypsy, my father hurried to the circus tent and fetched her to my cradle. "This is the brat", he said to her,—"If you can tell me that he is good for anything, I will pay you a dollar." The girl gropped my head all over and found there wonderful bumps. She readily asserted that I was destined for brave intellectual exploits. As she accepted the dollar from my father and was turning to go she murmured to herself: "If this child lives long enough to use his head for mischievous purposes, some people will be glad and some will be sorry." This prophecy shall come true tomorrow. Surely, Mr. McAdoo shall become wild with joy when he will read our chairman's telegram, conveying to him these glad tidings that I choose him as my running mate—On the other hand—upon their perusing of my speech in the morning papers—Cox and Harding —and even Christensen shall become sorry that I ever was born.

Comrade Debs is a serious rival. Were he turned loose, the country would witness a mighty contest. I am afraid of him. Fortunately, he still has to serve more than eight years for the crime the Government committed upon him, so he can make no speeches. I am in favor of his being set free—but not until after the election.

General Wood was an intrepid candidate; he was my choice; my bet of $5 was placed upon him. The odds were 8 to 5; so certain I was of his victory in the Coliseum that I made plans in advance to place the whole stake of $13 upon McAdoo. The nomination of Harding prevented me from collecting it and my finances became demoralized. I needed fresh air, so I went on North Clark street for a promenade. As I passed the Radical Book Shop and was about to turn to Trotzky Square, I was accosted by a beautiful girl. "How do you do," she whispered aloud, at the same time bestowing upon me a tantalizing smile; and the look she gave me was violently eloquent. I gallantly offered her my arm, and, as we proceeded toward Chicago Avenue, the direction for which she appeared to be bent, I recounted to her the sad story how I had risked my last $5 bill upon General Wood, and how Harding had robbed him of the nomination; and how there were still two days until my pay day. The girl jerked her arm loose from mine and contemptuously pushed me away from her. Women are constituted upon so practical a plane that they are capable of sympathizing only with the man who wins; and this is the reason why I joined in the Presidential race and why I would promise the people almost anything in order to win. Personal grievances toward Gov. Cox I had none—I did not bet on the success of Mr. Mc.Adoo. I could not bring myself to believe that the attainment of justice was possible in the Democratic Convention any more than in the Republican. These two old parties are so foul with corruption that a good man has no chance in their camps. I hope that Mr. McAdoo will fare better in the House of Blazes. He trusted in our fair play so explicitly that he did not deem it necessary to attend our convention and personally guard his interests. His absence shows that he is becoming modest. My own presence in this Convention is not due as much to the lack of modesty as to the inchoate consciousness of my political importance, which impelled me to come.

More than a year ago a hungry dog strayed to Mr. Harding's front porch. Mr. Harding came out of the house with a sandwich and offered it to the dog, and **THE DOG DID NOT TAKE IT.** Dogs are more cautious than men. They no longer trust the candidates of the old parties. Many virtues have been hurled upon my rivals since their nomination. Assiduously as they are learning to wear these new moral appendages, they feel in them uncomfortable and unnatural. "They are family men" is being trumpeted by the kept press. Perhaps they are—What of it? The assertion that they do love their wives is also ridiculously extraneous. If they did not love them someone else would. Women may be capable of preserving vacuum in their heads, but not in their hearts. Many a mediocre husband with his vitality already vaned, still desperately strives to pander to the ravenous erotic appetite of his wife with no other motive than the unchristian and egotistic wish to keep her from becoming enamoured in some musician, a poet or any other poor devil of an artist, who, although performing the noblest mission in the world, are too poor to afford to keep a wife of their own. Artists are instilling harmony into life and arraying even its most homely features in rhyme and rythm of superlative grace.

No family man professing the sublime love rinciples of Jesus Christ would boast of his monopolizing a source of temporal blessing which he himself is no longer capable of enjoying, and for the want of which the souls of his fellowmen are perishing. Considering all these circumstances seriously, I am for absolute and unconditional practical morality such as was advocated in the indignant ululations of Jezabuku, Shoumonshna and Harlipook. All the illicit pagan traffic which is so efficiently exposed by the aforementioned Shoumonshna; and who, for lack of a better word, terms it Kumiar-jaka-kuti, is being carried on to this very day—boys and girls meet in the dark for this unauthorized purpose. Neither Mr. Harding nor Mr. Cox do propose to put a stop to these things, whereas I am toiling for the past five years already upon a scientific book in which I strive to prove by the very words of the Scripture, that a generous lady never counts the kisses she bestows upon her lover —and that a fat bone will always precipitate a fierce conflict among hungry dogs.

The Non-Partisan—Social-Democratic plank in my platform reads as follows: "I am for public ownership of all the debts that my generous Administration may incur. To capture the votes of the I. W. W."s and the Communists I shall yet amend this plank so cleverly as to give my definite, and unconditional pledge that the red stripes shall not be expunged from our national emblem during my administration—if I can prevent it.

To offer a practical inducement to Big Business I planed out the ensuing little 2 by 4 plank: I stand for single taxation and double gross misrepresentation of the good American people.

The women of the whole country are being solidly lined up in my cause. It was a curious incident through which I won their support: A friend told me that in Lincoln Park there was being held in captivity a baboon whose blessed buttock was resplendent with all the gorgeous colors of the perihelion of a rainbow. "That's the kind of a baboon I want to see." I said to myself, and forthwith I went to have a look at this strange animal. When I arrived at the spot, the baboon was exhibiting his hind part to a middle aged, pale-faced lady. She was contemplating this pulchritudinous symphony of colors with profound interest. As I joined her in admiring this eighth wonder of the world she slyly backed out to a corner, where she gave her face a calisthenic treatment with a puff which was sprayed with red powder on one side and purple on the other. When she reappeared at my side at the rail I looked upon her and noticed that she had succeeded in embellishing her faded physiognomy with imitations of two of the colors exhibited by the baboon, and she appeared to be happier and more hopeful than she was before. Obviously, she was endeavoring to excite my aesthetic senses. I appreciated the adversity which her matrimonial ambition must have been encountering in this present commercialized society. My sympathy was readily aroused and I resolved right there to say to her a kind word of encouragement. Having introduced myself as the Uebermensch party's candidate for an independent President of the United States, I declared that every woman was entitled to a husband, according to my Christian and humane platform. That she will get one when I become elected; and that she won't have to make her face as beautiful as that either, I said, pointing with earnest emphasis to the vari-colored back of the ape.

This straightforward declaration of fundamental democratic principles produced a deep effect upon this honest woman. With tears in her eyes she thanked me for my righteous attitude toward her oppressed sex. Forthwith she slid her hand into her stocking and produced therefrom a two dollar bill and contributed it to my campaign fund. She confided to me that she had considerable influence over Miss Alice Paul and that she hoped to enlist her in my cause to tour the country in my behalf. But it was this two dollars which enabled me to stay at home one day and compose this great nomination speech—every word of which was deliberately intended to inflict a merciless lash upon the knavish back of the plutocratic henchmen who want to fool the people, and who don't know how. Scoundrels and hypocrites! Only yesterday they considered me to be harmless, but tomorrow they will behold my righteous wrath portentously hovering over their nefarious domineering ambitions. Like a Gibraltar, a philosopher equipped with so sublime a gift of pre-science as I am, shall always be towering high above the seas of a charlatanic herd. The most their mad waves can accomplish is to splash my feet. The new order we are approaching is a reign of ochlocracy. Like infuriated

meteorological elements, massed for a catastrophic play, the awakening power of the enslaved strata of society shall prove irresistible. These new forces will not suffer to be directed by a "family man" or any other cheap receptacle of conventional respectability. To render the soul of the masses articulate, Providence has fashioned a special criterion of political sapience. Does not every pulse of your blood make you conscious of this fact that I am the new prophet whom God sent to this world in His final desperate effort to save civilization? Let Hon. A. Mitchell Palmer lay his iniquitous hand upon this prophet and the earth shall be shaken in its foundation; and the sun shall become dark.

I challenge the Senate Investigating Committee to examine my campaign finances and prove that my fund to date exceeds the sum of two dollars, which I voluntarily admitted. My rivals of the two corrupt old parties are said to have a campaign fund of $14,000,000, and they have not as yet made a better speech than any inmate of any of our Asylums for Feeble Minded would, if he were brought under the influence of a quart of 60 per cent virulent moonshine concoction—While I produced a masterpiece of epochal oratorial importance. Such noble logemachical achievement can be attained only with such campaign fund as comes from above. Should I become victorious in this Presidential race—will not this be a positive proof that God is with me?

I favor the immediate settlement of all financial obligations of Europe towards the United States. Our debtors cannot pay in Cash, BUT THEY HAVE IN THEIR CELLARS GOOD STUFF TO DRINK! Hence, upon my assumption of the executive power, my first official act shall be to despatch the entire American Navy to the shores of Europe, and to collect from our debtors $12,000,000,000 worth of champagne, cognac, beer, brandy, whiskey and gin, and perhaps, some of the old, seasoned German schnaps. When the navy brings the cargo to our ports by the Act of Congress, the cheaper brands of the liquors shall be distributed among the people, while the noble ambrosial liquids shall be reserved for the servants of the people. By a presidential proclamation a month shall then be set apart for the purpose of drinking these liquors, and for celebrating our regained liberties.

Any Leagues of Nations to enforce peace should have been created before the war commenced. To organize a League of Nations to enforce peace after the forces of destruction had spent themselves, is as idiotic an effort, and its success as impossible as that of attempting to have one's house insured after it had burned down. Batiushka Woodrow Wilson was in office more than a year while the war was being prepared. He witnessed the setting in motion of the massacring machine, and he did not throw into its gear as much as a single one of his fourteen points. Never before had the American people had so genuine an occasion to be ashamed of their Government as they have today.

Tradition of the country requires that the president be a married man. You need not worry about that. There is a peach of a girl in my neighborhood upon whom I keep a hungry eye. I shall continue shining around her, and, if you nominate me, I may easily win her for my wife. The only objection she advances against me now is that I am lazy —that I am not earning enough to support her. This objection will vanish when I become elected President of the United States. A clever president can easily earn one million dollars a year—no matter how lazy he might be. Now, this girl is possessed of many charms; I would not attempt to enumerate or describe them on this occasion, because Beauty has no place in politics—nevertheless, I can assure you that she has more influence over me than the church. All men are threadbare creatures, enduring a despairing existence until they receive the blessed sacrament of life which is administered in the form of the first kiss from a loving girl. Likewise, a woman deprived of the influence of a loving man feels most wretched, and she is most happy when in his impassioned embrace. So noble a creature is my girl that my soul is craving much more violently for her than for the presidency, for the salary and the contraband backsheesh that's connected with the office. Should this exalted maiden consent to become the first lady of the land, I shall become the happiest of all presidents that ever existed. Caressing her and writing lyrics upon her lofty traits shall become the principal mission of my life. This sacred mission shall keep me continually so preoccupied that I shall never find time to introduce any new reforms, or to devise new encroachments upon your liberties. The legislative branch of the government shall be busy drinking the cognac and the champagne for several years to come. Hence, I can honestly assure the people of the United States that, during my occupancy of the White House, they shall be as free and as happy as if they had no president at all.

I thank you for your intelligent attention.

# Why is Capitalism an Absurdity

**By John Sandgren**

We have repeatedly stated that capitalism is being overthrown by its inherent contradictions and the mathematically absurd principles on which it is built.

One way to prove this would be to write a high-brow treatise, using the terms arithmetic ratio and geometric ratio and many other expressions understandable only to the professors in mathematics and economics or their equals. This magazine, however, is read by workers who only have a public school education, if they even have that. We will therefore try to prove our contention by a simple method which will be understood by all.

In 1889 Rockefeller's wealth was estimated at 100 million dollars. Let us say that the financiers are satisfied if their wealth doubles in 15 years. (As for Rockefeller this does not hold good, for in 1905 his annual income, not his wealth, was estimated at from 72 to 100 million dollars). From 1889 to 1919 are 30 years. In that time Rockefellers wealth would normally have increased to 200 millions in 1904 and to 400 millions in 1919, and in 1936 it would be 800 millions in 1951 it would be 1600 millions, and so on. In fact Rockefeller's wealth is much bigger than this, but we use it only as an example.

To use another example: The Astor wealth increased from 6 millions to 300 millions from 1854 to 1889. Let us make the conservative assumption that, from that year on, it increased in the same ratio as in the first example, that is, doubled in 15 years. In 1904 it would be 600 millions. In 1919 1200 millions. The Astor family may not pay taxes at that rate, but very likely they should.

So it is with most every fortune. On an average they double in 15 years, with compound interest at current rate.

Taking the country as a whole, in 1900 the total national wealth was 106 billions. In 1920, as was to be expected, it is far above 200 billions. It has more than doubled in the last 20 years. A very insignificant amount of this wealth is of such a nature that it does not draw interest. On practically the whole sum of 200 billion dollars, or more, the capitalist wishes to collect an increment in the shape of rent, interest and profit, aggregating an immense sum. Should capitalism be allowed to continue, we have reason to expect that in, say, 1935 the capitalist class would expect to collect interest etc. on a capitalization of 400 billion dollars, in 1950 on 800 billions, etc.

To make the absurdity of capitalism more palpable we will construct the following table, based upon doubling the total capitalization every 15 years:

| | |
|---|---|
| Year 1920—Capitalization .....$ | 200,000,000,000 |
| Year 1935—Capitalization ..... | 400,000,000,000 |
| Year 1950—Capitalization ..... | 800,000,000,000 |
| Year 1965—Capitalization ..... | 1,600,000,000,000 |
| Year 1980—Capitalization ..... | 3,200,000,000,000 |
| Year 1995—Capitalization ..... | 6,400,000,000,000 |
| Year 2010—Capitalization ....., | 12,800,000,000,000 |

You can extend this table as far as you please.

You will see that with compound interest the wealth of the capitalist class is growing into such figures as to soon require some method of counting comparable to the method used in describing the distance to the stars, which is not counted in miles but in light years. Marking it down in miles would require more paper than we can afford in these hard times.

While the capitalization rose to 100 million dollars as in 1900, the people were able to carry the burden, although it was terrible and nearly crushed the workers. By gradually adding to the burden we were able to carry a capitalization of 100 billions more in 1920. But do you think you will be able to stand an addition of 200 billions in the next 15 years, an addition of 600 billions in the next 30 years and an addition of 1400 billions in the next 45 years. Of course you ridicule the idea.

If you were playing poker, and the bid started with a penny, you would not pay any attention to it. No excitement for you. If it were doubled to 2 cents you would merely shrug your shoulders. You would still yawn uninterestedly at 4 cents and 8 and 16 cents. You would perhaps wake up at 32, get eager at 64, nervous at $1.28, uneasy at $2.56, anxious at $5.12, desperate at $10.24, faint at $20.48, take whiskey at $40.96, get palpitation of the heart at $81.92 and finally collapse at $163.84.

The figure is becoming absurdly high for you.

You get the same feeling as Napoleon had when he looked at the compound interest tables, "These collectors of interest would crush mankind, if it were not for occasional revolutions," he said.

Another example: This editor had a farmer relative in the old country who once got a beautiful calf that he was awfully fond and proud of. When he came down to the barn he picked the calf up in his arms and said to his friends, that he would pick him up that way every day, and in this manner he thought he would be able to keep it up until the calf had grown into a big bull. And he lifted the calf every day in his arms and fed him gloriously. The calf got used to it and could hardly eat before he had been lifted. The plan seemed fairly on the way to succeed. But, finally, one day our relative had to acknowledge defeat. His calculation was basically wrong. It was as absurd as the principles underlying capitalism. The workers have fed up the capitalist bull and carried it in their arms until it now is so big that they can no longer lift it.

Capitalism is a mathematical absurdity. Like a house built on quicksand, it is bound to collapse.

A social engineer charged with the task of devising a system of society that will stand through the

ages, would with necessity have to reject capitalism as unscientific and absurd.

As a matter of fact we have, for various reasons already come to a stage in the doubling up process where capitalism is untenable and crumbles.

Not only is capitalism trying to collect rent, interest and profit as before, in spite of the fact that mankind is physically and spiritually worn out from a long war, but it has added another terrible item which will probably be the straw that breaks the camel's back. We refer to the national debts of the various countries which has about quintupled in the last six years.

On this question we reprint from the daily press some figures which will explain why capitalist governments are collapsing.

**The National Debts**

At the beginning of the World War the combined national debts of the world aggregated $44,000,000,000, bearing interest in the amount of $1,750,000,000 annually.

Today these national debts amount to the inconceivable sum of $265,000,000,000, while the interest charge thereon has increased to $9,000,000,000.

In 1913 the existing national debts, distributed per capita among the inhabitants of the countries concerned, worked out an indebtedness of $27 per capita, with interest charges to the amount of $1 per capita per annum.

Today the inhabitants of these same countries owe for principal $150 per capita, with annual interest charges of $6 per capita.

At the beginning of the Napoleonic Wars the national debt of the world was $2,500,000,000, and at the close of these wars in 1816, the civilized nations owed $7,000,000,000.

Since then the growth of national indebtedness has been slow, but steady.

When the Crimean War broke out in 1854 the world's debt stood at $8,500,000,000. During the next two decades, which comprehended the Crimean War, our Civil War and the Franco-Prussian War, besides minor wars and disturbances, the national indebtedness jumped to $22,000,000,000.

This huge sum, as has been seen, was doubled during the next twenty years, bringing the world's debt in 1914, as already stated, to $44,000,000,000.

Then came the World War with an increase of some $220,000,000,000 in the short space of six years.

This appalling increase in national indebtedness occurred chiefly in the dozen countries and colonies which participated in the war.

For example, the aggregate debts of the European participants increased from $32,000,000,000 at the outbreak of hostilities, to $184,000,000,000 when the armistice was signed, and since then the sum total of the indebtedness of these countries has grown to the inconceivable sum of $223,000,000,000.

The indebtedness of North America, including the United States and Canada, aggregated at the date of the armistice $27,800,000,000, but has since been reduced to $26,946,000,000.

When it is remembered that of the total increase in national indebtedness, occasioned by the world-war, more than nine-tenths thereof was created by the great countries participating, viz, Great Britain, France, Italy, the United States, Russia, Germany and Austria-Hungary, and that North America's part of this total indebtedness is $25,000,000,000 only, out of more than $200,000,000,000, the serious question may well be asked whether financial rebahilitation of some of these European countries is either possible, or indeed, conceivable.

The mathematical absurdities thus inherent in capitalism are beginning to tell at this stage of the game.

Not only have they taken possession of nearly all wealth but the dispossessed are in debt to them to the amount of 260 billion dollars.

Mankind rises from the skin game with capitalism absolutely broke and hopelessly in debt for ages.

It is a theoretical and practical impossibility for mankind to double the wealth of the capitalist class in the next 15 years. It has reached the limit.

We have proven our case.

CAPITALISM IS AN ABSURDITY.

The capitalist class itself seems largely to be unare essentially hogs by nature whose only object is aware of the impending danger. The capitalists economic gluttony. What does the hog in its pen aboard a sinking ship care. It has no sense of danger or responsibility. While the water is slowly covering the floor of the pen and rising on its legs, it will drain the trough, stepping with all four into it, to get the last drop, and finally lying down it it to snore and perish.

In the past men have drifted more or less unconsciously on the social sea, allowing the strongest to direct the course, irrespective of consequences.

But now that men are beoming socially conscious and the social sea is all mapped out, it is possible to design a rational system of society which will stand for ages to come and serve as a means of bringing happiness to mankind instead of dragging it down to destruction.

Such a system of society is Industrial Communism.

---

"Political prisoners will be set free and political refugees will be permitted to return," says a dispatch in the N. Y. Slimes. Oh, no, not in the "land of the free," but in uncivilized, barbarous Guatemala.

---

"Food Profiteers Face Prosecution," announces a headline in the same newspaper. One would think they must be tired standing so long in that position, trying to keep their faces straight.

# The Wobbly Baiting Industry

That the Wobbly baiting industry is getting to be a lucrative graft we may conclude from the fact that these establishments are growing up like mushrooms.

They have them in every state almost and some of them aspire to be national enterprises.

We have previously exposed "The National Security League," showing how they extort money from the rich with fanciful tales about bloodshed planned by the I. W. W. and promising them security for a consideration.

Here below we reproduce the blackmail letter sent out by "American Defense Society," asking for $50.00 and holding out the prospect of protection against us.

These are the 100-percenters who claim to be americanizing people.

Poor America if it had no better grade of citizens to rely upon for her future!

Gentlemen -

Do you know that the radical's battle cry is "To Hell with the government, to Hell with the law, to Hell with the Churches, to Hell with the right of any person to be possessed of any property?" Hundreds of thousands of Reds in the United States, all Comrades, no matter under which banner they march - Anarchists, Bolshevists, I. W. W.'s - all the same. Perhaps you think you are in no danger from them or that the danger if any is remote. In reality we are sitting on a powder keg.

Stop - Think - Review the past year.

The Red's next weapon is the general strike, the first one they win spells the beginning of the end. Professional criminals will cooperate with them. The Reds are arguing, preaching, teaching; always proselyting, organizing the unsuccessful, the dissatisfied. Every day they gain converts, they are a tireless, sleepless, constant menace to law and order.

The American Defense Society has been steadily contending against the disloyal, wherever and in whatever manner is the most effective, and as you know has accomplished results.

The Society needs resources to carry on its work this year. Mr. R. M. Hurd of the Lawyers Mortgage Co., recently wrote and asked you to subscribe $50.00 to our work. We look confidently for your financial support and trust you will make your contribution as large as your circumstances at this time will permit.

Please send your check to Robert Appleton, Treasurer.

Yours very truly,

Charles Stewart Davison

Chairman, Board of Trustees.

# An International Appeal

We are in receipt of the following appeal with request to publish:

**THE INTERNATIONAL ANTI-MILITARIST OFFICE**

**TO THE WORKERS OF ALL COUNTRIES**

The political and military powerful ones of England and France have met in order to make a decisiv criminal attempt on the new social life which in Russia is trying to make itself real, and which yet after two years, strongly resists the most cruel attacks of the reaction.

Already, in the Rhine regions, war materials and provisions are accumulated and troops are concentrated.

The German Labor Movement, forseeing a disrespect for German neutrality, already sent out into the world a call, directed to the German, French and English workers to make that impossible by means of a strike.

The International Anti-militarist Office, in session on the 9th of August, 1920, in Holland, urges the head and hand workers in Belgium, Denmark, Germany, France, England, Holland and in all countries which in any way can be implicated in the attack, to be conscious of their response, to themselves, to their fellowmen and to their posterity.

It addresses itself to all revolutionary people with the instigation to continue to resist, with extreme vigor, the intention of the ruling powers.

The International Anti-militarist Office also calls on the so-called colored races, which are exploited by European Imperialism for the suppression of new social and cultural possibilities, no further to serve the white rulers but prepare to place themselves on the side of the workers, to which they belong.

Workers and soldiers of all countries, make yourselves ready for a mass-refusal to do military service and for the GENERAL STRIKE.

The Hague, Holland, August, 1920.

Translated from the Esperanto.

# INTERNATIONAL RELATIONS

*A letter from the Syndicalists of Sweden*

As our readers have seen reported, some members of the I. W. W. have tried to organize branches of the I. W. W. in foreign countries. In the case of Sweden this attempt has gotten us in conflict with the Syndicalist organization of Sweden.

The General Executive Board of the I. W. W. recently made a ruling not to issue I. W. W. charters in countries where there is already in existence an organization similar to the I. W. W., and under this heading comes Sweden.

An article on the Syndicalist movement of Sweden in another part of this issue, as well as the following letter from the Executive Committee of the Central Organization of Workers of Sweden shed more interesting light on this question.

Here the letter follows:

Box 51, Orebro, Sweden, July 15, 1920.

To the General Executive Board, I. W. W.

As there has some friction arisen between the I. W. W. and the S. A. C. (Central Organization of Swedish Workers) due to an attempt to organize branches of the I. W. W. in Sweden, the Executive Committee of our organization has taken the matter up and decided to write to you in order to bring this friction to an end.

We fully agree with you concerning the importance of the workers organizing internationally and we hope to be able to carry on successful work for this purpose together with you. Our organizations stand in the main on the same foundation of principles concerning object and means and the difference in the form of organization is more apparent than real. Just like you, we consider that the workers ought to gather in an organization comprising the whole class. In building this organization we have, however, for the present, laid the most stress on local organizations which are intended to include all the workers of a locality. The central organization is the joint body of all local Samorganizations. The local organizations, however, are divided into industrial sections which co-operate mutually thru an industrial organ covering the whole country—an organ which for each industry is selected by the workers of that industry.

Concerning the international organization we, however, hold the opinion that it should properly be a superstructure on the national organizations already existing. We need hardly point out that this opinion does not rest on patriotic reasons but on reasons of expediency from an organizing standpoint. In the first place, the conditions vary under which the organizations are built up, due to tradition, the spirit of the people, and the economic structure in different countries, which is so materially different in the various parts of the earth that it may be considered impossible to press the daily life of the smaller organization parts in under the Central leadership of a World Organization. In the second place, it would, in our opinion, be difficult for a World Central to maintain that close relationship with each local or industrial unit which is desirable for successful work. The National Central is surely in this case superior because there is always greater knowledge of the economic conditions, which in a National organization always show a certain uniformity as well as of the thoughts and sentiments of the outer parts of the organization and last, but not least, on account of the difference in language. Besides, organizing on an International scale is not apt to be successful unless it is undertaken with the co-operation of the National organizations as in a way there would be two competing organizations in each country, for instance, the I. W. W. and S. A. C. in Sweden of which, naturally, the organization of domestic origin would have the greatest chances. It would in our opinion create a confusion of organizations if the different national organizations generally should attempt to expand beyond the boundaries of their own countries. We should here be apt to get local or industrial organizations affiliated to the I. W. W. of America, the C. G. T. of France, the F. A. U. D. of Germany, etc., and the same would be the case in other countries.

However, we are of the opinion that International co-operation between the organizations for different countries is going to be of great importance, the greater the more extensive the organizations become. We have also been active for the arranging of an International Syndicalist Congress but so far have been prevented by the minions of the Capitalist state. In our opinion this co-operation should be established by means of a jointly elected International Secretariat. Should International co-operation in certain industries be required, the way should of course be open for the industrial organs of the respective National Central organizations to initiate and organize such co-operation. In this manner we believe the greatest results of International organizing will be obtained.

As it however seems uncertain when an International Syndicalist Congress can be held, we consider that permanent relations between the S. A. C. and the I. W. W. easily can be established per correspondence. Thru exchange of materials and by maintaining relationships of other kinds, the two organizations may be able to get in fairly intimate touch to the advantage of both.

We have wished to make this communication in order that no misunderstandings between our organizations should arise, especially as the Syndicalist movement has so much resistance to overcome that our energies should not be split in internal conflicts.

Hoping that our viewpoints will be understood we remain, with Syndicalist greeting.

(Seal)

CENTRAL ORGANIZATION OF WORKERS OF SWEDEN.
Per FRANS SEVERIN,
JOHN ANDERSSON.

# THE INDUSTRIAL INTERNATIONAL

## *WHEN SHALL IT TAKE PLACE?*

From all corners of the world the demand comes for an industrial international. We have repeatedly referred to the call for such an international from the Russian unions. We all know of the efforts in that direction made by the Syndicalists of Scandinavia and Holland. The approachment between the I. W. W. and the English Shop Stewards is recent history.

Here follows a letter from a Spanish Worker, dated Barcelona, June 2, 1920:

"We are planning to intensify international relations, so much neglected heretofore. Very soon and upon the initiation of the organization of Barcelona, there will be formed in Western Europe a formidable Latin Confederation, composed of the revolutionary organization of Portugal, Italy, France and Spain. When our idea of such a plan was communicated to these countries, they accepted it without any reservations, and, as we said before, it shall soon be a reality.

"The social movement in Spain, and particularly in Barcelona, advances vigorously toward the definite conquest.

"Today the National Confederation of Labor of Spain, an organization which as you already know is eminently revolutionary, constitutes a serious menace to the bourgeoisie as well as to the State. Our enemies have hastened to place themselves on the defensive and they endeavor by every possible means to do away with our young and powerful Confederation, which now comprises nearly a million and a half of members.

"The *Union General de Trabajadores* (General Union of Workers)—directed and controlled by Socialists—is rapidly disintegrating and its forces are being added to our own. Imagine the importance of our organization when, during the past 20 months, with the suspension of guarantees, with the union halls closed, with the terrible persecution of our most active fellow workers, and without allowing our papers to be published, and, considering that since the beginning of the long period of repression we have had more than 50000 workers pass through the jails of Barcelona alone,—and yet, in spite of all this and more, our organization still maintains itself. And if given a brief period of return to normal conditions or respite from repression, we believe we could soon prepare the workers both in a normal and in a material way, to be ready for the final day.

It is plain to everybody that the time is rotten ripe. If we only stick to our desire for an *Industrial* International and keep out all political issues, there is no reason why this new International should not become a reality in the very near future.

A preliminary conference is in order. Who will take the initiative?

---

## Turkey on the One Big Union Map

The following letter from Constantinople to the I. W. W. General Office speaks for itself:

"INTERNATIONAL WORKERS' UNION
Galata, Rue St. Nicolas, Cafe "Aurore" No. 4.
Constantinople, Turkey, Aug. 20, 1920.

Comrades:—

We hasten to inform you that the class conscious workers of Constantinople have founded in the month of May (May 17, 1920) an organization

THE INTERNATIONAL WORKERS' UNION.

This union organizes the workers as a class in accordance with what they produce, and is divided into six major branches which in their turn are subdivided into as many unions as are deemed necessary.

The aim of the I. W. U. is the abolition of the wage systeem and socialization of the productive forces and distribution. The tactics of the I. W. U. are the same as those of all the new revolutionary organizations in all lands.

International solidarity permits us to rely on your assistance.

With revolutionary greetings, we are,
(Seal) S. Maximo,
Secretary Executive Committee."

## The Scandinavian Socialist Federation Endorses the I.W.W.

At the recent convention in Chicago of The Scandinavian Socialist Federation of the U. S. A., held in Chicago Sept. 3-6 the following resolution was adopted on *industrial organization.*

The Convention wishes to emphasize the necissity of a militant economic organization on the basis of the class struggle and of the organizing of the workers of America into One Big Union. Until this takes place the convention endorses the Industrial Workers of the World as being the expression of the One Big Union idea in America and wishes to express its recognition for the untiring pioneer work the I. W. W. has done as a propaganda organization for this idea, and do we expect from the I. W. W. that they at the right moment either take the initiative to, or co-operate in an eventual attempt to bring the workers of America together in an organization on the economic field which is able to carry on the battle."

For the rest the Federation remains an independent educational body which has for its purpose to organize among the Scandinavians in America to gain increased power in the agitation for Socialism.

# Do We Need an International Language?

We are in receipt of a letter from an Esperantist subscriber together with a translation of an Esperanto proclamation which reproaches us with sinning against the fundamental principles of internationalism.

Here we quote parts of the letter:

Horace, Kansas, Aug. 29, 1920.

The time has arrived, it seems to me, when every Emancipator if he does his full duty, must work for the One Language actively, not of course to take the place of one's own language, but to be the common means of communication with all the peoples of the world.

The workers of the world must talk understandingly together, if they ever unite understandingly.

I took a trip recently to Salt Lake and on my return home I came in contact with many passengers from the coast scared out by the earthquake, and the topic of conversation among some of them, next to the earthquake, was the "Jap menace" and I remarked incidentally to a fellow traveller that here was the next war in the making. On arriving home I found in my correspondence a beautiful letter from a Japanese student, written in Esperanto, of course, breathing the spirit of good will and love to all his brothers the world over, and I said as I read it, "If only Japan has many such sons her future is secure."

Fraternally yours,
Lillian K. Bullard.

## ESPERANTIST MANIFESTO

(Translated from "The American Esperantist" by Lillian K. Bullard.)

**"Comrades of All Countries!**

Behold the emblem of our new association—The Liberated Star. (Literally the Star Set Free. The star is the emblem of the Esperanto Association. Note by translator.)

It seems to us a superfluity to show the necessity of a Workers' International. Certainly all advanced Esperantists feel the need of this organization which more than any other will help to the triumph of our dear Ideal. However, one point from our statement requires explanation.

The organization fundamentally is unlike the present International. All Workers' Internationals, past and present, sin in the structure's self. Each stands on an illogical basis, namely: the nation as a cell or unit. The thorough nationalism of each national section poisons the whole association. Each section strives—possibly unconsciously—only for itself, only for its selfish nationalism. Very evidently then the concord exists on paper only, and at the congress each section mutually promises certain international assistance. However, when the acid test comes, this unity, this mutual aim disappears, and in spite of the endeavor of some faithful ones the place is taken by nationalism, even imperialism, which pushes the friends of today one against the other. Then no more internationalism, no more mutual help, no more fraternity but distrust, even hate.

Actually the Workers' International does not exist! Each National section is a separate autonomous association: for behold! at each International, for the sake of the various languages, the separate sections are really obligatory, at least the language section, but we Esperantists know not this barrier. Why conserve this form-system which shows itself thus fatally at every Workers' International Institution?

Put away the ancient and dangerous concept which suffocates the International feeling's self. We can and must found a NATIONLESS INTERNATIONAL on the basis of a common language.

All Communists, Co-operatives, Syndicalists, Socialists, Labor Unions, members from every land, no matter to what party you belong, must all come to the same aim, namely: the leadership and independence of the workers all united together in only one SUPER-NATIONAL INTERNATIONAL.

Put away these artificial forms which now divide and embarrass and substitute instead this device: REVOLUTION.

Comrades! Spread the knowledge abroad, print our call and join our organization. We need everyone's strength. If every forward looking worker understands his duty our International will be powerful and will be a bulwark to the Working Class and from it the true Internationalism will be established which is so much needed.

Our Country and our Fatherland must be: Humanity.

Our aim will be: The establishment of the Workers' Universal Republic.

La Centra Komitata L. S.
23 Rue Boyer, Paris, France."

---

We have published the above not in order to shift the attention of our readers from the all important question of creating new organs of production and distribution and administration, but in order to give the viewpoint of the world language enthusiasts.

Do we deserve the reproach of sinning against internationalism by not forcing the question of an international language?

We do not think that we deserve it

If all of us could talk Esperanto or Ido or English or French or Chinese, it would unquestionably greatly simplify international co-operation.

But the difference in language is not an unsurmountable barrier for international relations. We know one another pretty well. It is simply remarkable how quickly we get in touch with one another. And if we are brought together by travel, it is also surprising how quickly we size one another up. Because there are a few in each country who know a foreign language or two every movement soon becomes known to similar movements in other countries.

When it comes to international congresses it would, of course, make it easier if all delegates could speak one language.

But there is this drawback to this idea. To learn a language, even as simple a language as Esperanto or Ido, is a task too big for 90 per cent of the workers under the present conditions. If we were to make knowledge of a world language a condition for delegateship to international congresses, the make-up of those congresses would be entirely different from now. The men and women at the top of the labor movement are the ones mostly elected as delegates because they are the most representative. But if we were to draw the Esperanto line most of them would fall down.

Somehow or other the delegates manage to get a knowledge of the proceedings, though it is naturally incomplete.

As a matter of fact, among the men and women who have fought themselves to the top of the labor movement, there are very few that would submit to the ordeal of learning a new language sufficiently to understand it spoken or to speak it themselves. These powerful men and women will force the world to understand them. The languages of the bigger nations, English, German, French are used, and the other, smaller nationalities are expected to know one or several of these languages.

The workers of smaller nations are therefore quicker to appreciate the advantages of Esperanto than the big bullies whose language is spoken at the congresses.

You simply cannot ram the international language down the throat of the internationally organized workers. It takes too much time and energy for the average worker to learn in these times of terrible stress. His whole leisure time is taken up in studying the daily press, the labor press, the books in sociology, attending meetings and tending to his recreation program. Besides, the big nations do not see the necessity of it.

As much as we wish it were possible we realize the futility, at present, of taking this matter in earnest. It will have to be left to private initiative.

Some day, when we have abolished all economic and political boundaries, when we get plenty of leisure, and when nearly all of us shall have an education like a college professor, we shall take up the question again and solve it.

Just now, with the roof of the temple of capitalism threatening to come down upon our head, we cannot deviate from our course sufficiently to learn a new language, however ingenious.

By the time we, as a mass, are proficient enough in the world language to make a speech in it, or to understand it when spoken, we would be buried in the debris of capitalism with no organs ready with which to produce food, clothing and shelter. What good would it do us then to be able to make a fluent speech in the soft and sonorous vernacular of our friends the Esperantists or the Idoists?

The world language is an improvement of great value upon the present linguistic anarchy, which much resembles the lack of sense and system in bourgeois production, but it is not a sine-qua-non of the creating of a new society.

# New Defense Secretary

**In accordance with the recommendation of the General Executive Board, William D. Haywood has now relinquished his post as Sec'y-Treas. of the General Defense Committee in Chicago, in order to take up other work for the defense.**

**The new Sec'-Treas. of the General Defense Commitee is Fellow Worker JOHN MARTIN, who some time ago was released on bail from Leavenworth.**

**In the future address all communications and remittances for the defense to**

**JOHN MARTIN**
**1001 W. Madison St., Chicago, Ill.**

**KEEP THE FUNDS FLOWING !**

# The "Industrial Unionist" Takes the Field

Box 79, Station D, New York, N. Y.
September 18, 1920.

Editor of the O. B. U. Monthly:—

This is to inform your readers that the "Industrial Unionist," organ of the eastern branches of the I. W. W. will issue its first number about October 15.

The paper will come out twice a month and will not miss any issue as did its predecessor, "The Fellow Worker". The New York members have adopted a financing scheme which will guarantee continuous publication.

The "Industrial Unionist" will be invaluable for all students of our movement, for it will concentrate its attack on the eastern industrial situation. No one can deny that the capitalist power has its strength in the East, for here are located the most gigantic industries and here is the most numerous population. Therefore what happens in the East is of greatest importance in the revolutionary world.

Our paper will not merely tell about the labor revolt, it will not merely be industrial unionist but it will also be industrial as well. It will give the scientific data about our property, now in control of the enemy.

A staff of able writers will make bright and varied the columns of the paper. There will be humorists who see the ridiculous in the doddering power of capitalism and there will be correspondents fresh from Latin America and Europe, and there will be scientific men talking about industry in an impersonal way.

It is a paper that you can't afford to miss. So watch for the first number.

Yours for ours,
Card 455,306 of the
Industrial Unionist Committee.

**DETROIT, ATTENTION !**

C. W. I. U. No. 310 of Detroit, Mich., will move into their new hall on Sept. 15. Our address will be 278 Michigan Ave. This place is a store with two good-sized display windows. We are painting and papering it and expect to have one of the most attractive book stores in the United States. We have been trying to get a place in the part of town for some time. It is the only place for the I. W. W. in Detroit. It is the center of the floating population and most of the Federation halls are in this locality.

Yours for the O. B. U.,
Joseph H. Donner,
278 Michigan Ave.
Secretary No. 1.

# The Case of Jim Larkin

We are in receipt of the following appeal from *The James Larkin Defense Committee*, 254 West 34th St., New York, N. Y.

As Jim Larkin is personally acquainted with thousands of I. W. W. men and known by name to all others, our readers will, undoubtedly, listen with great interest to what his nearest friends have to say in his behalf.

Here follows the appeal:

..JAMES LARKIN, General Secretary of the Irish Transport and General Workers' Union and accredited representative of the Irish Labor Movement in the United States, was convicted on a charge of criminal anarchy in the crminial branch of the Supreme Court of the State of New York, on April 27, 1920, after a trial lasting three weeks. He was sentenced to a term of from five to ten years at hard labor and confined in Sing Sing Penitentiary, from which he was afterwards removed to Clinton State Prison, Dannemora, New York. He is now debarred from seeing visitors with the exception of his counsel. Though forty-four years of age, he is consigned to the dirtiest, most unhealthy and most laborious work, the prison cotton shop. This is how the defender of the rights of the workers is treated in a land which was once the asylum of the oppressed of all lands. Larkin is an exile from Ireland—barred by the British government from entering any territory over which the British Empire holds its robber sway. He has been separated from his wife and children for almost six years. The American Government refused his 15-year old son permission to enter this country to visit his father. Could inhumanity go farther than that?

A short story of Jim Larkin's work in Ireland will dispel any suspicion that he is a criminal or an anarchist. Returning to Ireland in 1908 after traveling over the world earning his bread, he proceeded to organize the unskilled workers of Ireland into an industrial Union whose motto was "an injury to one is the concern of all." He found the Irish workers the worst paid slaves in Europe with a standard of living far below that to be found in any English city. The housing conditions in Dublin were such that according to the report of a government investigation, 21,000 families, averaging five to each family, were living in single rooms in that city. Larkin brought the workers together, taught them the value of temperance, clean living and a love for the beautiful. The union which he founded bought Liberty Hall and Croydon Park, where the workers could go and rest and where the women of the workers could bring the children to get the fresh air and the sunlight of heaven. The Dublin employers massed their forces against Larkin in the great lockout of 1912-13 in order to break the union and drive Larkinism out of the country. They failed after a struggle lasting eighteen months, and today the union numbers 140,000 and functions on the political as well as on the industrial field. The Transport Union is not confined to any one group, but includes dockers, farm laborers, domestic servants, cattle drovers, clerks and workers in every field of industry. The aim of the transport workers is to take over the land and industries of Ireland and operate them in the interest of the people.

James Larkin was born in Newry, the north of Ireland, but his family went over to England to work there while he was still a child. His father was a workingman, a Fenian, and a comrade of Michael Davitt's. His return to Ireland in his manhood's days meant a new factor in Irish affairs, a new turn in Irish history. . . Every student in Irish affairs now recognizes the fact that without "Larkinism" the movement for an Irish republic would have been one-sided and powerless. It was "Larkinism" that stirred deeply the workers in Ireland and gave them a hope in the republic—"Larkinism" with James Connolly's force and direction added."

The SINN FEINER of New York, July 24, devotes a page to the Larkin case under the heading "Inhumanity to Jim Larkin." It tells how the American Government refused Jim Larkin's son permission to visit his father in this country. "When has the United States become a new Siberia?" asks the Sinn Feiner. "Whoever dreamed that the time would come in our republic when a Dumont, an American consul in Dublin, and a Colby, a Secretary of State in Washington, would dare refuse to vise a passport of the son of an Irish father convicted in an American court of a political offense?" The Irish World of May 29 has the following to say of Larkin: "Jim Larkin is in jail because the English Government fears and hates him, because the big business allies of the English Government fear and hate him. Jim Larkin is not in jail because he has broken a law. He is in jail because our masters, who, with tongue in cheek call themselves our servants, despise and condemn the law, make a mockery of the law, repudiate the most sacred guarantees of free speech and free publication and individual freedom.

Twenty-eight public bodies besides all the trades and labor bodies in Ireland have passed resolutions for the release of James Larkin. We feel that he is a victim of as foul a conspiracy as was ever hatched against a member of our race by the hidden hand of the British Government. It is your fight as well as ours. Today it is Larkin who lies in jail on a trumped up charge of "criminal anarchy." Tomorrow it may be De Valera. Irishmen and Irishwomen and lovers of human freedom! Your attitude toward Larkin in this critical hour will be the acid test of your professed devotion to the cause of the Gael. Larkin today is in a felon's cell but remember that in the Irish history it was no disgrace to be a felon. Larkin is in jail because he was fighting your battle. Help to get him released so that he can continue the fight. Money is needed to appeal the case. SEND YOUR CONTRIBUTION AT ONCE TO EMMET O'REILLY, Treasurer of the James Larkin Defense Fund at 254 West 34th Street, New York City. You sympathize with the victims of the British Government in Ireland, so why not show the same sympathy with their victims here. Let our motto be *"an injury to one is an injury to all."* LONG LIVE FREEDOM!

Fraternally yours,

*James Larkin Defense Committee.*

# Forward March

By J. A. Stromquist

This poor old World is sore beset
With wars and strikes and insurrections.
Whole nations starve
And die, like flies,
At the first touch of frost.
Men, Women, Babes are languishing
In dire poverty and want;
And preyed upon by hopelessness
And black despair.
Covered with filth, vermin infested,
Victims of the plague,
And yet
The worst has not been told.
They cannot see their enemy,
"The class that lives in luxury"
And wanton idleness.
The Mothers, Fathers, Sisters, Brothers,
Who sent their loved ones across the sea
To fight to "save Democracy,"
To lose their lives
And leave their bones
Bleaching upon a far-off shore;
Who toiled and wrought with brain and hand
To feed the World and "save the land,"
Yet lived to see
Plutocracy enthroned, supreme,
In this, "our own United States,"
The erstwhile "land of Liberty"—
Have they not learned their lesson yet?
The number of "our" Millionaires
Has tripled since the war began,
And Gold and Diamonds gorge the land,
While senseless luxury, and waste,
Run riot; and the parasite caste
—now that war's holocaust is done,
And their own rotten bodies safe—
Goes o'er to France to "see the sights"
And dance the fox-trot on the graves
Of unnamed Proletarian victims,
Who bled and died in agony
That these, the rotten parasites,
The excrescence of Human-kind,
The useless, frothy scum of Earth,
Might still prolong their evil sway
And, like the Vampire-breed they are,
Still suck our blood.
And we, meanwhile,
By foolish prejudice divided, and misled
By labor-fakirs; ignorant,
Bound, hand and feet,
In fetters of the stale and outworn form
Of craft dis-unions,
Lie down supine, helpless and bereft
Of hope, or faith in our sacred cause,
And those amongst us who rise up
And dare to voice their protest, those
Who are not wholly fools, or cowards,
Are thrown in jails, deported, lynched,
Manhandled, hung and mutilated
By Capitalists and their hired thugs.
Oh, Workers—Men and Women—wake!
Remain no longer blind and deaf
And hopeless—insensate.
Behold!
The power of Mammon totters
On its pedestal. Thru its vitals
There goes the shudder of approaching death.
The "masters of the bread," the "lords of money,"
"Financial kings," "Barons of industry,"
Yea, one and all,
Now feel the ground tremble
Beneath their feet, and grow alarmed
For fear their filthy gold—
Stained with the sweat and blood of workers,
The tears of Women—slaves,
Cursed with the moans of starveling Babes—
Slip from their shaking hands,
And they, the shirkers,
Perforce may be compelled to toil,
Like unto us, their present slaves.
Behold! The Revolution—dawn of Freedom—
Is near at hand.
Stand up, be Men!
And join the ranks
Of Labors great, onsweeping Army—
The Industrial Workers of the World.
Deathless, invincible, competent
To build a better, fairer, World
Upon the ruins of the old
And rotten, crumbling, class ruled state.
Fellow-Workers, Brothers, Sisters—all—
Come in your millions. Make haste!
Delay not, for the time is ripe—
"Aye, rotten-ripe for change"—
And upon you now waits the choice
Of whether the birth of the new World
Be swathed in a haze of blood
And charged with fierce pains,
Or whether it be peaceful, calm
And glorious,
Like the transition out of night to day.
Behold! A star, a blazing sun,
Has risen in the East.
Our Brothers of Holy Russia lead the way.
The blood-red banner, emblem of our Cause
And Human Brotherhood,
Now flutters proudly o'er the ranks
Of their valiant, Red, batallions.
"Let us go!"—have courage;
Fall in line and Forward March!
To Victory, Peace, Plenty, Joy and Love,
And FREEDOM,
For all the Human Race.

# Nature is Kind But---

By Geo. Sutherland
(Delegate 2056 F.)

I was up at White Bluffs, Wash.,
The other day—beautiful country;
The Columbia flowing peacefully,
The basin dotted with orchard tracts,
Bungalows, neat little houses, HOMES,
And all about were the the ETERNAL HILLS
Set in a gorgeous purple haze
With the precious sunshine
Making EVERYTHING GLORIOUS.

Here was a FARMER repairing machinery;
Others were pruning trees,
Still others engaged in
PREPARATIONS
Of one kind or another
Getting ready to PRODUCE
A PEOPLES Basic Need—FOOD.

I too had been a PRODUCER,
Raising garden truck, small fruits
And Apples in the Spokane Valley,
To the Glory of God and—
The PROFIT of Spokane COMMISSION MEN.
THEY paid US THEIR price, NOT Ours;
And when we ORGANIZED,
Sold our Apples in the East
That was in 1911—
They put the Railroad people NEXT
WE COULDN'T GET CARS
The Second Season,
Had to DUMP our Apples
In Spokane,
THAT'S Why I'm NOT PRODUCING,
And why MANY OTHERS
Are Not.

THEY are throwing WOBBLIES
Into JAIL
Just because they are
WORKINGMEN Or
Because they belong to
A LABOR UNION.
The U. $. GOVERNMENT
Is DEPORTING Workingmen
For the Arch CRIME(?)
Of trying to improve
WORKING and LIVING CONDITIONS,
And the Industrial Barons
Are KILLING Our Fellow Workers,
Still the Mighty Ones holler
"PRODUCE."

I looked again
At the Hills in the Purple Haze;
Stock peacefully grazing,
MEN and WOMEN
Engaged at USEFUL Work,

And I mused thus:
NATURE IS BEAUTIFUL AND KIND,
The INTENT and PURPOSES
Of Mankind are BENEVOLENT,
NOT EVIL
Mankind is Geared to
ACTIVITY, CO-OPERATION and
SERVICE,
Needs No GODS—NOR KINGS
NOR BENEVOLENT TRUSTEES
To Guide Him,
And Would LIVE and WORK
In HARMONY WITH ALL
BUT—A VICIOUS INDUSTRIAL SYSTEM
Makes of HUMAN SOCIETY
A Veritable JUNGLE
Where the LAW of TOOTH and FANG
PREVAILS.

---

# The Case of Willie Cibber

(Editor's note: The less said about the meter in the following "poem," the better. To us it seems it is neither prose nor poetry. But the story of Willie Cibber is brief and to the point, so here it goes.)

Willie was born at Camden town, Camden town,
near Delaware Bay.
And there he lived and went to school, a youngster
bright and gay.
Little he then thought, that his life would fail,
And some day he would rot in a Kansas jail.

When a boy, he had oft looked in wonder at the sea,
And the world he longed to see, like other heroes,
famed in history.
When Willie he was about nineteen, he kissed his
mother one summer day,
Saying, that he was going to see the world far away.

When a letter from him to his mother came,
He told how he was "picking potatoes up in Maine,"
Where he had earned some money too, which he was
careful to send home
To show he was not foolish, even if he longed to
roam.

Next from the Southland, his letters came,
To him "Dixie's Land" did not look so grand, but
there was much that caused him shame.
So the winter over, found him northward bound,
To take in the harvest, where rovers are always to
be found.

Having worked awhile in Kansas, and made a little
stake,
He came into town one night when it was rather
late.

So having got a lodging, he soon was fast asleep,
From which he was rudely awakened to find himself tied up in a sheet.

A blow on the head, and Willie's struggles were soon at an end,
And he knew no more until he found himself lying on the ground
Stiff in his limbs, with his head feeling sore from the cruel blow.
Gone were his clothes and his little stake; wrapped in a sheet where could he go?

Gone are the pirates of the Spanish Main,
But here in Kansas it is much the same.
A victim does not walk the plank into the sea,
But the marshall orders a LYNCHING BEE.

Having with a struggle got on his feet, he gave a look around.
Just as he did so he heard a scream, and he saw a boy running off with a bound.
Dazed, faint and weary, he knew not what to do,
When a bullet whizzed and a voice called, "I'll get you."

With gun in hand and a red flush on his sagave face
A marshall came running up to the place.
On the head Willie got anotheer cruel blow and the blood ran over his golden hair.
As on the ground he lay, the marshall tore something from his breast, saying, "T's the keerd, he had it there."

Great fame for the marshall, his name in the city papers did appear,
And of his prowess the governor would surely hear.
A mock trial, a demented boy, with a sad pale face.
So ends this tale,
For now he rots in a Kansas jail.

D. J. T.

---

# The Man with the Hoe

How will it be with kingdoms and with kings—
With those who shaped him to the thing he is—
When this dumb terror shall reply to God
After the silence of the centuries?

—Edwin Markham.

Many sweating, ploughing, treshing, and then the chaff for payment receiving;
A few idly owning, and they the wheat continually claiming.

—Walt Whitman, "Song of Myself."

One is free in proportions as one is strong;
There is no real liberty save that which one takes for one's self.

—Stirner.

Ignorance is the root of all evil.
Self Government is better than good government.

—Campbell Bannerman.

# The Poisoners of the Wells

**Dedicated to the American Sup-Press.**

**By Attila**

Sweet is the warfare in the miry trench
To that which our corrupted pressmen wage
To wreck the minds of men and spread a stench
Through this wild climax of a frenzied age.
With draff they feed the hungry mob, and lies,
And all that lives grows bloated and obscene
When these ghouls mumble it. And all that dies,
Dies doubly in their obsequies unclean.
War is not such an evil as the curse
Of paltry minds in power that diatil
Venom into the people and asperse
Courage and Truth and Chivalry. They spill
Their ink on that poor spark that still retains
Its dim, precarious fire amidst the blast—
The ray that struggles in a myriad brains
With sulphur and with pitch they overcast.

You crowds that writhe and gabble in the gloom,
Drugged and besotted with a toxin dire,
You that are smitten by a darker doom
Than War's red mace or Havoc's flail of fire—
O sorry helots to the basest breed
Of wretches that defile the printed page,
Whose slimy tentacles twice daily bleed
Your brains and souls—how mocks the huckster age
Your puerile talk of "liberty," who wallow
In the black marshes of a noisome press—
You serfs of dead Democracy who swallow
The monsters' spawn, yet starve in emptiness—
Long have you heard their shrieks of "liberty!"
When Law against their dens of evil treads—
"Their liberty of speech!" What leprosy
Is on you that your heels should spare their heads?

Once more the stark Black Ages seize the Earth;
Its soil was ripe for madness and the dance
Of giant Superstitions that had birth
From that great womb of Lies and Ignorance—
The felon Press. The boon becomes a bane;
The Liberator hounds his million slaves;
The Source of Knowledge is old Night again,
And Truth sits weeping by her countless graves.
Upon those starless plains where nations teem,
I saw the welter of the eyeless herds
And slaughtered minds, and heard the ceaseless scream
Of ink-stained jackals and of carrion birds,
And knew it for a more abhorrent sight
Than mangled armies shrieking to the night.
London, 1915.

# One Big Union Monthly

*Issued by*

Industrial Workers of the World
to promote the solidarity of labor

New Series: Vol. I—No. 1

Price: 15 cents

# *We Issue This Magazine - -*

because it is time for One Big Union.

It is time that workers stuck solidly together in the great fight of us all for more of the good things of life.

While the enemies of organized labor are bombarding Madrid, it is no jest to say: "We hang together or we hang separately."

While workers are battling for the common cause as they have on many an industrial front this year, it is not honest to say: "Workers will not stick together."

Now as never is the time to build the mighty power of One Big Union of All Labor.

With that power we can make earth a paradise for all.

Without that power we are moved about as puppets for the destruction of everything we hold dear.

To build this invincible solidarity of labor is the one big idea behind this magazine. We launch it confident that it will become a big magazine, and a mighty weapon in the struggle for the emancipation of our class.

Are you with us?

# The BRIDGE

**An unusual story of the San Francisco-Oakland Bay Bridge, to build which twenty-two workers died.**

*By* **GEFION**

Jackhammer McCarthy had just been told by the penny-snatcher on the corner that a dollar and a half wasn't any too much for a pair of Long Stride overalls. Jackhammer went to the door of the joint and reflectively spat a gill of Horseshoe juice across the sidewalk into the gutter. He turned and in utter disgust let the cockroach know that he was getting damn sick and tired of seeing wages going to hell from day to day while a pair of lousy overalls went sky rocketing to a buck and a half.

"Ah, but, my fren', when the bridge starts then things will get better—everybody will be working, see?"

Jackhammer didn't see. "Christ almity," he retorted, "that's all a stiff can hear around this burg—'the bridge', 'the bridge'. You're all bow-wowing like a bunch of old parrots. Well, anyway, ya ain't gonna get no plunk and four bits outta me for a crummy pair of scab overalls. And as for your damn old bridge, I don't think it will ever start. They usta peddle the same chin-whiskered old bull to my grandfather when he was a kid."

Jackhammer McCarthy drifted south. He rustled the Azusa job and got on. He swung muck for a week—enough for a road stake, said to hell with this, and blew into L. A. The rain was pelting the streets as if the Special Providence that is supposed to watch over the City of Angels had undertaken the tough job of washing away the burg's sins of the preceding summer.

Anyway, it was wet enough to float a battleship, so Jackhammer slushed his way to a flopjoint. The rain was trickling down his shivering legs into his shoes in cascades of icy pricks. He shook the snoring clerk behind the counter and forked over four bits for a room and made a bee-line for the stove. Its heat made warmth and comfort creep over him. He stood with his back turned to its glowing pot-belly and steamed like a plum pudding on an English farm table Christmas night. He eyed indifferently the reading and smoking stiffs around the tables. Their droning conversations came to him through the tobacco fog like the mumblings of a short wave set in need of new tubes. He became drowsy and leaving the dry kiln, he climbed the dilapidated stairs to his four bits flop and crawled between the clammy quilts.

It was a tough winter on Jackhammer McCarthy —damnably tough, both climatically and in regard to economics. A few odd jobs now and then —washing windows for old dames with mugs so full of wrinkles that it would take a wheelbarrow of talcum to fill 'em—and they called one "my good man" and thought that 35 cents an hour was sufficient to start birds like Jackhammer on the road to become second John D's. A few hours in the warehouses at four bits an hour—pushing trucks that a mule would have turned over to the elephants. Then back on the stem again with the old song and dance: "How's chances for the price of a feed?" Soggy shoes. Rain-sloppy overalls. Hat dripping like a roof. Empty guts. A lousy flop or a box car—enough to make Jackhammer declare loud and vehemently that the much touted L. A. winter climate and milk-and-honey blah-blah was just so much Chamber of Commerce bull.

* * *

But Spring came to the land again. From the Pacific, the warm wind came riding in on its high horse. Yo, ho, here I come! It tickled the birds in Griffith Park under their beaks and made them sing a symphony of chirping glee. And in the high heavens, the sun shone and reduced the Los Angeles River to its usual pint and a half. On the park benches, wenches snuggled close to boy friends and languidly stroked their shellaced domes in the latest Hollywood style. Yes, no mistake—it was Spring once again.

But no hormones stirred in Jackhammer McCarthy's metabolism. He wasn't even noticing the janes. Nix on 'em. His feet were itchy. He was thinking of where in the hell to land a job. He was deeply meditating the gut-tickling possibility of a decent can of java in the jungles—he wouldn't mind getting boiled up. He was so damn sick and tired of L. A. and all its crummy joints that he was ready to puke. Well, anyway, tomorrow he would blow north.

A guy on the other end of the bench was reading the scandal sheet:

"What's new, Bill?"

"Oh, not a helluva lot—I see where they finally started the bridge up north."

"Ya don't say so—my grandfather will turn over in his blooming grave when he hears that. Well, I s'pose they will look a stiff over in the seams pretty close before he gets on there—registered voter and all that bunk."

"Mebbe."

* * *

Out of the green waters of the Bay, there arose giant piers of cement and iron. Day by day they grew from their foundations deep below the rolling waves until they reared their concrete and steel crowns hundreds of feet into the air. From pier to pier, a catwalk hung upon which men performed the task of spinning 70,815 miles of wire into the 28 inches thick cables from which the spans would be suspended.

From the decks of the ferries, the men on the catwalk looked like specks in the infinite. Passengers craned their necks gazing at these fly-sized humans up there hundreds of feet above the bay —moiling and toiling, straining and pushing, to the end that the gigantic task of linking the two shores might be completed.

In great headlines, the newspapers spoke of modern enterprise and progress. In small news items, they now and again mentioned where Structural Iron Worker Bill Smith had fallen from the bridge and met a watery death in the bay. Or where Common Laborer Nick Polosky had been picked up on one of the pier foundations, a mangled mass of human flesh and bones. Twenty-two such little, insignificant items, they printed.

But from day to day, men struggled. Day by day, the monumental job grew into a whole. And at night when the moon hung framed by the vertical suspension robes, the bridge took on an awesome beauty.

* * *

Jackhammer McCarthy got on. He had spun the bozo that did the hiring a 1001 night tale and had made the grade. The job was union and Jackhammer was O.K. on that score. So now he slaved on the catwalk hundreds of feet above the waters of the bay. Now and again he spat a gill of Horseshoe juice into the foamcapped waves below. And on Saturday nights there would be a T-bone and French fried at Duffy's on Third Street and a show and a night with Jenny afterwards. She was all right, that jane. She was a working plug like Jackhammer himself and didn't give a damn whether the world was round or flat—union, too. She was O.K., no mistake.

And, from day to day, men struggled. Day by day, Jackhammer with others of his kind toiled onward so that the dream of the Chamber of Commerce might come true.

* * *

Jackhammer McCarthy had met a lot of nuts in his ramblings. Christ, yes—bushels of goofs. There was the bird in L. A. who was damn sure that the whole solar system of the universe was inside the earth, and that everything would be honky-donk as soon as he took time off to convince the numskulls on Mount Wilson. He hadn't forgotten the freak back in Baltimore who thought that Bill Hayes was the second coming of Christ and that Bill was going to pay all the dentist bills for any ex-railroad man that had his grinders fixed. And, lord almity, the loon who got up in the jungles one day and told the rest of the buzzards that he knew a man

who had a horse by the name of Olson. Jackhammer got dizzy when he remembered the whole pack of 'em. What a gang of saps.

But for a few days, Jackhammer was sure that Gunnar Krass was the screwiest Turk of the lot. This guy was a Swede and one of the engineers on the bridge—took care of the brain-twisting details, not one of the real big shots, but a white collar stiff just the same—only the damn fool wore no collar—shirt wide open—and no open shop pants, either. And he didn't suck an underslung pipe.

This nutty Skoovie would hike the catwalk in overalls, old shoes and a shirt as faded as a gay nineties bathing beauty—pockets full of blue prints and pencils. He would grunt a grouchy h'lo when he met one of the stiffs and look as blank as a carp when he ran into one of the big mugs. And Jackhammer thought they could've hired a saner guy outta the bughouse.

But what made Jackhammer think that the fish eater was really shy a few marbles was when he, Jackhammer, one day asked: "Hey, Boss, how d'ya want this done?"

The Swede blew up. He yelled that, goddamnit, Jackhammer wasn't working for him, but with him. And that the whole damn gang of sonsabitches had better get the idea outta their thick skulls that he was trying to boss anybody. That he and they, and all the rest of the work oxen, were in the same boat. And that, for Christ sake, to take it easy. And to be damn careful not to bounce over board—and never mind the big shots.

So Jackhammer told one of the other blue print artists that he had a hunch the Swede was about ripe for a ride in the jing-jong wagon. But this bird shook his bean and said that while Gunnar Krass might be nuts in some respects he knew his onions when it came to blue prints and f'gers.

"Mebbe."

And Gunnar Krass hiked the catwalk in overalls and old shoes with his prints and pencils. And Jackhammer McCarthy and his kind moiled and toiled so that the dream of the Chamber of Commerce might come true. And now and anon a little insignificant item appeared in the newspapers.

* * *

Jackhammer McCarthy was hitting it for the Humboldt on the Front for a scoop and a pot of beans. On the corner, he rammed into Gunnar Krass reading a book in the middle of the sidewalk. Gunnar looked up:

"H'lo, McCarthy—Where to?"

"Gonna get a gutfull of frijoles."

"D'you mind if I come along?"

"What ya want t' do—go slumming?"

The Swede didn't have any such intentions and he told Jackhammer that per'aps he had seen plenty of tough joints in his young life. Jackhammer eyed him and said c'mon.

They were seated at a table in the corner, chewing their beans in silence. Jackhammer was sizing the Swede up on the q.t., expecting him to heave a beer mug through the window or to get up and yell bloody murder. But Gunnar Krass paid no attention to his surroundings until he had put the beans and beer under his belt. He looked up and asked Jackhammer for the makings, lighted his cigarette and sat smoking for awhile. Then he said:

"You're a union man, aren't you?"

"Sure thing—packed a card for quite a stretch."

"And yet the other day you thot I was nuts because I told you and the gang that I didn't want to be called 'boss' and that you worked with me and not for me."

Jackhammer assented that he thought the Swede as bughouse as a March hare.

"When I tell you what to do, I do so because that is part of my work—the part I'm trained for. Not because I want to be a boss, but because I am an engineer—a worker just as you are a worker—only I do a different kind of work than yours. I'm being paid wages just as you're being paid wages. When the job is thru, I very likely will be on the bum with you and the rest of 'em.

"I'm a union man, too. Only a different kind of union man. I belong to that part of the workers who realize the need of class solidarity—who understand that an injury to one is an injury to all. I belong to that part of the union men who realize the need of class solidarity—who understand that an injury to one is an injury to all. I belong to that part of the union men who have made a study of how society is formed—why it is that there are bosses and workers—and how to change the picture. I belong to that part that realize that upon the shoulders of the workers the world rests—in our hands lies the future—the liberation of the human race. That's why I blew up the other day when you called me 'boss'."

The Swede stopped and ordered two more beers. Jackhammer sat silent and eyed him. And somehow the thought photographed itself upon his brain that this queer Turk might not be entirely nuts, and that he might be a pretty good gun when a guy got better acquainted with him. Yes, mebbe.

* * *

And day by day men struggled. And after months and years, the dream of the Chamber of Commerce came true. The Bridge was finished. The job is done. It is now a whole. It spans two shores and humans come from far and near to view modern enterprise and progress. By moiling and toiling, Jackhammer McCarthy and his kind and Gunnar Krass and other blue print stiffs made a whole

out of 162,000 tons of structural iron, 18,550 tons of cable wire, 30,000 tons of reinforcing steel, 1,000,000 cubic yards of concrete, 1,300,000 barrels of cement, 30,000,000 feet of timber and 200,000 gallons of paint. And in the newspapers there appeared twenty-two little, insignificant items.

* * *

It is night. On the hills of the two cities linked by the bridge, lights gleam as if the Goddess of Night had strewn the dark sea of her domain with glittering jewels.

The job is done. Jackhammer McCarthy is hitting it south in a box car. The light of his cigarette gleams like a lone glow worm in the blackened, swaying car. The thought strikes him that the Swede was not so nutty after all—a pretty good gun—an injury to one is an injury to all—Wonder when I shall see Jenny again?

Maria Polosky sits in her room. On a couch a child is sleeping. Perhaps in its slumber it is walking hand in hand with the Ugly Duckling. Maria sits silent. Perhaps she is thinking of the days when she felt Nick's warm kisses upon her mouth. On a table under the light lies a newspaper in which is printed a little, insignificant item.

Gunnar Krass is going to pull out tomorrow. He sits reading in his room. Before him lies a book by another Scandinavian. It is in the original and Gunnar is struggling with rendering into English the exact meaning of the ending of a chapter. He reads and re-reads. Then he takes one of his many pencils and words begin to flow out onto the pad:

"It was the pride of the old world that it could analyze the sun and the stars and give their weight within the accuracy of a pound. But bread it could not weigh out to the hungry mouths.

"The revolution means that the worker turns everything upside down and places things in their correct rotation. He begins by weighing bread, and with that as his starting point, he shall some day reach to the stars."

* * *

On the sands of Egypt sprawl the pyramids—crypts of ancient kings—monuments to the toil and thralldom of ancient slaves.

Out of the green waters of the Bay, there arouse giant piers of cement and iron. Day by day they grew from their foundations deep below the rolling waves until they reared their concrete and steel crowns hundreds of feet into the air. Now they are linked by cables and spans into a whole, and humans come from far and near to view modern enterprise and progress. The Bridge is finished. It spans two shores. It stands as an eloquent epitaph to the collective genius and toil of Labor. It stands as a colossal monument to the exploitation of the Industrial Slave.

*There is never a mine blown skyward now*
*But we're buried alive for you.*
*There's never a wreck drifts shoreward now*
*But we are its ghastly crew.*
*Go reckon our dead by the forges red*
*And the factories where we spin.*
*If blood be the prize of your cursed wealth*
*Good God! We have bought it in.*

# The News Guild—Will It Make Papers Report Honestly On Labor News?

**Newspaper reporters, after witnessing bloody police attacks on workers for many years and putting in reports that, as they appeared were little to the liking of labor, organized themselves, and received such beatings as this ANG member did in the strike at the Wisconsin News.**

**Their union has won in many places. "It will make for honest reporting of labor news," says this member of the ANG, "but it will take One Big Union to see to it that these honest reports are published."**

It must be admitted out of hand that any consideration of the question whether or not the American Newspaper Guild can make for honest reporting of labor news must at this time be based, to a considerable extent, on speculation—on describing the road ahead by the signs that are now visible.

Among perennial liberals and other incurable optimists, there is a tendency to hail the Guild as the savior of the labor movement and to shout that at last brass check journalism has been given a nice coating of pure gold leaf. To make such an assumption, however, is blandly to ignore the purpose, to say nothing of the power, of this movement.

During recent months, these predictions have found sturdy champions among the newspaper publishers. This cry was taken up with gusto as the result of the Seattle Newspaper Guild's strike against the Hearst owned Seattle Post-Intelligencer, resulting in the suspension of that sheet for fifteen weeks. The nation's press, for the most part, grew quite panicky at this threat to their purses and bellowed in alarm that the "freedom of the press" was being jeopardized.

One cannot state too bluntly that the pretended fears of the publishers, as well as the rosy hopes of the liberals, are based on a misconception of unionization as it is now practiced within an industrial plant (and a newspaper is an industry) does not mean the control of the type, size or color of the product. True, it may mean a step toward worker control, but at best only a step and we are doing ourselves a disservice if we describe it as a hop, skip and a jump.

While the Guild follows the I. W. W. in allowing for complete rank and file control, it has no revolutionary aims. Let us go to the constitution of the union for a statement of purpose.

"The purpose of the American Newspaper Guild," says this document, "shall be to advance the economic well being of its members, to guarantee as far as it is able, constant honesty in the

(Continued on page 33)

# *Capitalist Democracy— Why It Must Fail*

**In Spain the C.N.T. has fought out the struggle against Fascism on the line that the capitalism that generated it must go. Their associates are coming to the same conclusion.**

**"We cannot keep in capitalism, and at the same time keep out Fascism," says Tor Cedervall in this analysis.**

By

TOR CEDERVALL

In the world today we hear a great amount of talk and also some degree of organization about and around the issue dubbed "Democracy versus Fascism". Many liberal and humane-minded persons, as well as self-styled radicals, the world over are huddling under the banner of "Democracy" in horrified opposition to Fascism.

In the United States these people supported Roosevelt in the recent elections, side with the "Republic" of Spain, feel a dependent fondness for Great Britain as the fairy godmother of Democracy while she steps designedly into every "situation" with her celebrated "diplomacy", give varying degrees of appoval of Soviet Russia, and reserve the hate their simple souls can generate for the black fascist regimes of Italy and Germany.

The philosophy of the out and out liberals of this conglomerate group is that while Fascism is a surly horrible thing, Capitalism as such is very desirable and should be preserved, albeit improved from time to time.

The "radicals" of this democratic movement are in their hearts not content with Capitalism, but are so frightened by the prospects of Fascism that they are hysterically choosing the fatal Germanic policy of the "lesser evil". Throwing all pretense of radicalism to the winds, these people have crawled out of the dread and darkness of their social cyclone cellars to become the blatant champions of Capitalist Democracy.

The slogan of each group resolves itself into—keep Capitalism, but keep out Fascism!

This slogan, however, is historically incorrect, we cannot keep in Capitalism and at the same time keep out Fascism. Fascism is but the logical development, the irresistible outcome of the class antagonism of Capitalism.

Recent history is bearing this out inexorably. Several nations are already frankly fascist, many more are tending toward that direction. It is a steady albeit uneven, petrification of international capitalist society into the hardened forms of fascist death.

Why does fascism everywhere appear as the fated affinity of Capitalism? Why is it that capitalist "Democracy" cannot withstand the attacks of this monster?

One of the reasons why bourgeois forces have joined in the fight against Fascism—Hitler, last March, declaring the Locarno and Versailles treaties scraps of paper as his Nazi troops invaded the Rhineland.

Lebrun, President of France, whose People's Front Government gave little aid to Spain.

Hitler who rules over a land of concentration camps and prisons.

Benito the Mad to whom "Democracy is a putrid carcass".

Edward VIII, former British Emperor, more lately famed as Mrs. Simpson's fiance.

***Are we to put our fate in the hands of these people, or shall we organize in One Big Union and settle our fate to suit ourselves? That is the big question of the age.***

It is because Democracy cannot be the theoretically ideal form of government under Capitalism and was not so conceived. The class nature of capitalist society makes this impossible. "Democracy" was the slogan and weapon for the overthrow of feudalism. It cannot be the slogan or the weapon for the frustration of fascism.

At the time of the classic overthrow of feudalism there was no thought of the "Capitalism" of today. All classes subject to the authority and parasitism of the aristocracy and its church—the budding bourgeois, the equally budding "worker", and the peasant were united in a "people's front" against feudalism.

Because of the authoritative and caste character of feudalism and the intellectual repressiveness of its church, the intellectual and cultural chanticleers of the new day declared the invigorating doctrines of democracy. The "freedom of man" became the inspired rallying cry of the new social order. This, combined with the confused and muddled class interests of the various groups in the "people's front", none of which had formulated a clearly-defined political and economic policy for itself (and which would have been too weak alone to have imposed it if it had) made democracy the logical pattern of the new political forms.

However, that democracy is not the innate mate of Capitalism is clearly seen by the methods employed by Capitalism everywhere in its development. Where was democracy in the colonial policies and piracies of the democratic nations? Where was democracy in the United States which countenanced chattel slavery naked and unashamed until 1863? Where is democracy up until this day in the industries of Capitalism? Symptomatically defined, Fascism is force and violence. Has not Capitalism always practiced an incipient fascism at the point where its profits are produced?

As for the general domestic democratic forms of government, however, how has Capitalism managed? Ideally unsuited for it, Capitalism has nonethe-less in some respects turned democracy into a very powerful aid for itself. Democracy has been of incalculable benefit to Capitalism in its development by serving as a smoke screen for its autocratic exploitation. It has with surprising efficiency served as a social control to combat the rebellion against the concentration process whereby the overwhelming majority of the populace has been reduced to "wage-slavery". Political freedom has obscured industrial serfdom.

In view of this very positive gain from democracy, the capitalist class has with more or less grace subjected itself to the expenses and inconveniences of democracy. Any dangers that might

arise through it have been neatly evaded heretofore by outlay to politicians and political parties who have proved themselves very willing to safeguard the interests of the capitalist class and do its bidding with fawning servility.

However, as the relationships of Capitalism are becoming more thoroughly understood, as a pauperized proletariate (actually or relatively) is beginning to stand up in open defiance of its exploiting masters, as strikes and union organizations become larger, as the ballot box becomes fore-doomed to partial control and eventual capture by the numerically largest group in society—the workingclass, Democracy must go in order for Capitalism to continue to exist. The bed-rock principle of Capitalism is the exploitation of the workingclass, and no group conscious of its subjection and determined to end it can be restrained except by large-scale force. Fascism supplies that force,—"Democracy" cannot, particularly when its political forms threaten to pass into the hands of the exploited through a "people's front". When the latter happens, or threatens to occur, or when faced by widespread labor unionism, Fascism will make its supreme bid for power, as in Germany and Spain, as it is preparing to do in France.

The phenomenon of Fascism is not always simple and uniform in its development. There is a great uneveness throughout the world that may serve to mislead the unwary into the belief that Capitalist Democracy can be preserved and a fascist coup d' etat prevented. President Roosevelt, for example, is regarded in America as bulwark against Fascism. But, Fascism is still out of the saddle in Washington because Democracy is still under the control of the capitalist class. The "radical" reputation of the President has aroused the hopes of the yet confused American proletariat and its members thus remain at least temporarily quiescent under the rule of their capitalist masters. It may be, too, that the "people's front" in France, timid and largely unwilling to introduce drastic changes, yet holding the confidence of a trusting proletariat, may still continue to serve largely the class interests of the employers without the necessity of a fascist coup for some time.

Is this the kind of democracy we want? A democracy that is suffered because it presides over an exploited and deluded people unaware of their real interests? Fascism will remain submerged only as long as "democracy" remains workable for the capitalist class; that is, as long as the workers remain content as a submerged and exploited class. 'Tis small glory in such democracy or the victories achieved in its name.

The Roman Holiday of Fascism can be thwarted not by hurling the pitiful shafts of a sham capitalist democracy against its iron legions. Only the grimly alert, courageous advance of an organization resolutely determined to root out Capitalism can be expected to "mop up" Fascism. Alternatives are few in dangerous situations. The working class has positively no "stake" in Capitalism; but, even if you fancy that you have, the world cannot eat its cake yet have it too. Preserve Capitalism, invite Fascism; build a cooperative commonwealth and smash Fascism. Out of this a new democracy shall arise—the industrial democracy of cooperative labor.

## *A Worker's Education* — *An I. W. W. Library*

What is the I. W. W. plan of One Big Union? How is it constructed? How does it work? There is a wealth of enlightenment in a little five cent pamphlet "One Big Union of All the Workers" that will answer these questions.

What has labor encountered in its years of bitter struggle? In the 172 illustrated pages of the Blood Stained Trail—A History of Militant Labor in the United States—you will find many a thrilling story about the struggles of labor— and it's only fifty cents.

What has the I. W. W. done since 1905 when it was started? You can get the answer up to 1930 for a dime in an 80 page pamphlet "Twenty-five Years of Industrial Unionism".

What shall we do about unemployment? Why does it afflict us? For a dime you can have a scholarly and pointed analysis of this question "Unemployment and the Machine".

Two books on special subjects, now a little out of date, "The Lumber Industry and Its Workers" and "Coal Mines and Coal Miners" can now each be had for a dime too.

And where does the I. W. W. get its fighting spirit? Buy a little red song book for another dime, and you will have a fighting spirit tooo, fellow worker.

All these publications may be had from branch offices or from

# *The Canadian Labor Situation*

*By* WILLIAM MACPHEE

**Secretary, Canadian Administration of the I. W. W.**

Canadian labor is paying the penalty today for its years of bitter internal strife and failure to fight for the advancement of its interests. The trade union movement not only failed to hold the gains from the struggles of former years, but is helpless in the face of the present onslaught on the standard of living. It is menaced too by a Fascism which is a reality here.

National unions formed to oppose international craft unions with headquarters in the United States, Fascist-clerical unions organized to give the church absolute control over the Catholic workers, and political party domination and disruption have emasculated the labor movement. Independent Labor Party members, Communists and Co-operative Commonwealth Federationists have made of it a battle ground for their conflicting political theories. The only call for solidarity and a militant struggle is heard from the I. W. W., the only industrial union movement. John L. Lewis and the CIO are not, as yet, an issue with the workers of Canada.

Trade unions show a steady decline in membership since 1929. A slight increase during the past year reported by the international craft unions was more than offset by the dissolving into the A. F. of L. of the unions affiliated with the Communist controlled Workers Unity League. A.F. of L. unions claim 179,000 of the 280,000 organized workers. The A.C.C. of L. (All Canadian Congress of Labor) and the Federation of Catholic Workers of Canada are the only other trade union bodies with a numerical strength.

Labor in Canada occupies a strategic position by having nearly one-third of its organized workers in the key transportation industry. But, despite the vital importance of transportation in the economy of the country, the moribund railroad unions are stupidly unaware of the potential power their position gives them. Public service, coal mining, building construction, and the garment trades are the other departments of industry that report a large percentage of organized workers. With the exception of coal the extractive industries and the so-called mass production industries are for the most part unorganized.

It was enough for trade unionism in Canada to divide itself because of national and religious interests but it had to resort to despicable scabbing tactics to maintain these divisions within itself. This has been particularly so since 1927 when major national unions affiliated to form a central trade union body, the A.C.C. of L. Despite the apparent logic of the reason given for the organization of national unions, to abolish the racketeering practices and the bureaucratic officialdom of the international unions, there was no justification for a national trade union movement. The national unions failed to accomplish the purpose they were ostensibly organized for and have fostered union racketeering and a bureaucracy surpassing that of the A.F. of L. at its worst. Besides, national unions are an anachronism in Canada where the ramifications of international capitalism are more obvious than elsewhere. This may explain why they have made such slight headway despite their readiness to break the strikes of the international unions.

One affiliate of the A.C.C. of L., the O.B.U. (One Big Union), deserves mention. Organized in 1919 as a revolutionary economic movement, it has existed for many years on the glory of its one militant act, participation in the Winnipeg general strike of 1919. During the present dispute in the A.C.C. of L. officials of the O.B.U. aligned themselves with the red-baiting faction. Thus we find the once revolutionary union to the extreme right of an ultra reactionary labor body.

This comparative passiveness of the dominant labor organizations in Canada and the absence of even the most elemental form of solidarity enabled the employers successfully to combat labor without extensive use of those menaces of the American labor movement, company unionism and professional spying and strike-breaking agencies. However, it is all too evident that their use is increasing. Powerful corporations like the International Nickel and the Abitibi Power and Paper use both of these methods to prevent the organization of their employees, and company unionism recently made its appearance in the textile field, an important industry in Canada. It is also certain the present weak-kneed and vacillating policy of trade unionism cannot prevent their growth.

A far greater danger to labor in Canada than company unionism or stool-pigeons in industry is to be found in the alarming growth of Fascism. In the Province of Quebec you cannot now say, "It Can't Happen Here." You need not attempt to prove it can happen, it is happening here. Deep-rooted conservative traditions, religious fervor and a militant nationalism have made the people of

# *"Aw, Sit Down!"*

Notes
On A New Era
Of Direct Action

By MELVIN W. JACKSON

**"A fantastic situation!" exclaims one weekly voice of American employers about sit-down strikes.**

**"We are tired of having to get passes to enter our own factories," many French capitalists protest.**

**Employers become powerless in the face of stay-in or sit-down strikes. The iron hand that holds the economic life of thousands becomes putty when confronted by these aroused workers.**

**The sacred property rights of the industrial tyrant are being questioned, and the absentee owner trembles lest sit-down strikes become more popular.**

**A new era of working-class solidarity is dawning. The slumbering giant is stirring and testing his chains.**

**Orthodox unionism is finding itself swept on in the rising tide of solidarity. Workers are spontaneously realizing they have a weapon more powerful than any ever dreamed.**

Totally unorganized workers are arising in protest against deplorable conditions and are awakening to the advantages of industrial unionism. The stay-in strikes in June in France were spontaneous and took the trade unions by surprise. French trade unions are said to be enjoying an unprecedented growth due to the overwhelming success of these strikes. One observer writes, "It can be said roughly that the number of trade unionists has gone up from 600,000 to 4,400,000 since June. Some instances: The number of office employees passed from 25,000 to 825,000, the food workers' union from 20,000 to 50,000, the Galeries La Fayette, which had not one single organized worker, now numbers 2,000 of them. Even the employees of the Banque de France begin to draw up their demands."

Two thousand British and Welsh coal miners recently preferred to remain underground in the mines until their demands were met.

Miners at Pecs, Hungary, likewise declared a "stay-down" strike to wring concessions from the owners.

Poland, Czechoslovakia, Silesia, India, Argentina, Brazil, Mexico—all of these countries have witnessed within the past year the solidarity of workers united in economic direct action. Sit-down strikes, stay-in strikes, hunger strikes—all these echo a grim determination of militant workers. Workers who refuse to leave underground mines or who remain at their factory benches or in their stores and restaurants and offices while striking —this is the new type of class struggle confronting capitalism.

Last June these French workers decided to take it easy. They won big gains.

Even in Fascist Germany, police and Nazi Storm Troops become powerless in the fact of sit-down strikes, which have occurred in protest against further wage cuts. The D. K. W. Motor Works at Spandau, and the Motor Works of Bauer and

At South Bend, Ind., 4,300 workers adopt the same tactic to fight discrimination and win their point. Their wives and girl friends brought them their provisions through the windows.

Schauberte in the Rhineland both witnessed successful stay-in strikes recently.

American rubber and tire companies, Bendix Aviation, General Electric, R.C.A., WPA workers in New York, Pennsylvania, Illinois, and elsewhere, Reading Maid Hosiery, Aluminum Co. of America, New York Shipbuilding Co., and many other corporations can testify to the efficiency of sit-down strikes by their lessened profits—and the workers of many of these places can hold up fatter pay envelopes as mute testimony of their success.

Violence, rioting, and bloodshed: for years and years these have been the pet bogeys of union haters. "Terrorism, destruction, and gore" meant the same thing as "strike" to labor baiters. They dragged these skeletons out to dangle before the horrified eyes of scissorbills whenever anyone even whispered "strike" or "solidarity". "See what will happen," employers have exclaimed as they reached for the telephone to call their tin soldiers or "private detectives" to come and do some rioting and terrorising for them.

Now, alas and alack, these myths which were so conveniently used by the bosses are being dispelled.

"Business Week" complains, "Sit-downs were so frequent that the union set up a system that placed the striking workers in charge of the plant during disturbances. Men were told off beforehand to guard doors, round up supervisors 'for safekeeping in case of trouble' and generally take over the plant."

Order, self-discipline, and responsibility have universally characterized all sit-down strikes. The employers, alone, have been directly responsible for any bloodshed or destruction of property—because the workers realized that it is not by these tactics that their strikes are won.

In the recent French sit-down strikes which involved so many industries it is said the machines were preciously taken care of. The furnaces which must never go out were kept going; in the tanyards the skins remained bathed, and every morning the masons wet the stones of the houses they were building. In short all work that could not be stopped without actual damage to valuable materials or machines was kept going by the strikers.

The workers here demonstrated they can take over and run industries without the parasitic control by a master-class, and that they can run them in an orderly and intelligent fashion. This is one thing capitalism has found itself unable to do: run industry in an orderly and intelligent fashion.

Where workers have not given politicians control of their strike, the sit-down strike has been uniformly and universally successful since the first one—the IWW strike of 3,000 General Electric employees in 1906.

The fact that the ownership of an industry belongs to the workers in that industry, just as the toothbrush he uses should belong to him; the fact that a worker has just as definite a right to the job upon which his economic life depends as he has upon his hair; the fact that the rights of the parasitic class should not include the ownership of tools they never use but upon which others' lives depends—these facts are all understood by a sit-down striker, though he may not recognize them as such.

The worker at his machine which he refuses either to leave or to operate until his demands are granted, and the factory which continues to be operated by strikers, declare the worker's right to his machine, and his ability to run it when the shackles of capitalist ownership are shaken off, though at the time it be only temporary.

Where economic direct action and working class solidarity are used in struggles against the master class, the workers will never lose.

"Freedom cannot be gained through intermediaries."

## *"An Injury To One Is An Injury To All"*

These children went out to play in the streets of Madrid.

These German and Italian bombs came down from German and Italian airplanes and killed these children.

There is no war between Germany, Italy and Spain.

Instead there is a war by General Franco who set out to overthrow the government elected there last February and to smash all the labor unions, and establish Fascism where labor had established democracy.

If Franco wins, there will be a new base from which the fascist gangsters of the employing class can wreak vengeance on labor in other countries as today they do in Spain. And someday your children may go out to play—and it most certainly can happen here.

Ship no materials to Cadiz or any other Fascist port. Instead send whatever you can in the line of clothes or anything else that may be useful to our fellow workers in Spain. Buy a few more C.N.T. stamps from the I.W.W. for your union book or as souvenirs.

And don't let your neighbors and fellow workers be bamboozled by any capitalist press nonsense about labor's aims in Spain.

# Francisco Ascaso

## *The Life, Troubles, and Death of a Spanish Worker*

**As told in the C.N.T. "Boletin de Informacion"**

At every turning point in history supermen appear—fighting leaders and heroes. Francisco Ascaso was the stormy petrel, the fighting leader and hero of the present Spanish Revolution. The admiration with which the world looks today at the Spanish people, their self-sacrifice, their undaunted courage and determination, their valiant struggle for human ideals, must be attributed, to a great extent, to the example set by Ascaso.

Who was Francisco Ascaso? The third son of humble baker, Francisco was born in 1901 in the small market town of Almudevar, in the province of Huesca, which is at present witnessing severe fighting. While still a youth he displayed unusual observation and was endowed with a talent for drawing which caused the village schoolmaster to entertain hopes of making an artist of the baker's son.

When Francisco was eleven years old his father died and the family were to compelled to give up their business and move to Saragossa. The two eldest sons, Domingo and Alejandre, helped their mother and young sister Marie, but Francisco became and odd-job boy in a bar, where he spent four years working from 16 to 18 hours a day. Here in the hard and practical school of life the young man learned to understand social evils and injustices, and the needs and misery of his own people.

At the age of fifteen, Francisco was apprenticed to a baker, with the intention of following in his fathers footsteps. He had just started his apprenticeship when a baker's strike broke out in Saragossa. The fifteen year old boy had already so much class knowledge that he immediately joined the strikers. One day, meeting a strike breaker in the street carrying bread, the lad urged him to quit work. The strike-breaker refused and in no time the bread basket was rolling in the middle of the road and the loaves in a nearby brook. As a result of this "political act" Francisco spent two weeks in jail.

After his release he found he was finished with the baking trade as no baker in Saragossa would employ this "rebel". He obtained work as a waiter, however, and spent his leisure hours studying the writings of the great social and revolutionary thinkers.

In 1920, the editor of the Herald De Aragon was killed by an avenging bullet. This man was said to have been responsible for the shooting of seven soldiers during a military uprising in Saragossa. The Government accused the Ascaso brothers of this killing of the editor. His two brothers escaped, but Francisco fell into the hands of the police. Although all the accused could furnish undeniable proof of their innocence, the reactionaries wanted their heads, and the death sentence was pronounced. In view of the energetic protests of the mass of the people, the authorities did not dare to carry out the verdict but contented themselves with condemning Francisco to four years imprisonment, thinking to cure him of his revolutionary ideas.

Ascaso came out of jail bearing on his body the evidence of wounds, blows and lashes. The reactionaries had shown him what was customary in the days of Torquemada. All those tortures to which can be added thirst and hunger had weakened Francisco's body but strengthened his mind and fighting spirit. As soon as he recovered his liberty, Ascaso became active in a circle called VOLUNTAD (will) which was also the name of a weekly newspaper published by this circle in defense of the first International.

In 1922, Ascaso went to Barcelona, where he got in touch with Juan Garcia Oliver, Rafols, Boix, Vidal, Montserrat, Durruti and others. He was working as a waiter and his spare time was devoted to the movement. He founded the CNT Waiters Syndicate.

Ascaso later left the Catalan Capital to go to La Coruna where he intended embarking for Bolivia, There he hoped to realize the dream of his youth—to go around wandering as Jack London had done. But in Galacia, Francisco, remembering his true mission and the sad situation of the Spanish proletariat, returned to Saragossa. Here he met again his old friends and opponents of the "Free Syndicates." In Saragossa, the church, in the person of the Cardinal Soldevile intrigued against the proletariat. The Cardinal was executed by some despairing workers, and again Ascaso along with a few other comrades was put in jail. He remained here from June to December 8th, 1923, when he escaped with 23 friends. Only Ascaso and one of his companions reached France, the other 21 were caught and punished for an offence they had never committed.

Acaso found new friends, comrades and fighters in Paris. There also he made the acquaintance of his wife Berta. In June, 1924, he embarked with Durruti for Buenos Aires and spread his ideas

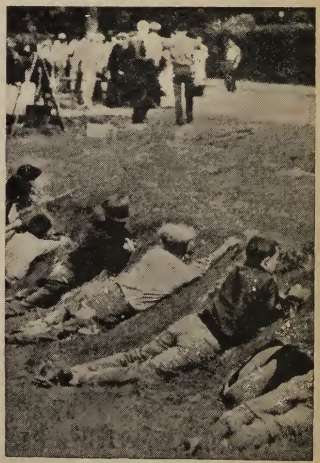
# LABOR IS ON THE MOVE

## An Analysis of the Labor Struggles of 1936

By CHARLES VELSEK,
Chairman, General Executive Board of the I.W.W.

**The American labor movement throughout 1936 has been characterized by increasing militancy, an extensive use of newer tactics and strategy, and a greater desire than ever shown before "to stick together." This has been shown both in strike policy, and in such substitutes for real industrial unionism as the numerous federations, and semi-industrial unions formed, and in the launching of the C.I.O. It has also been shown by the extent to which white collar groups and others who don't usually organize, have joined in the common battle of their class.**



**Is labor ready for industrial unionism and the One Big Union idea? Is it possible to achieve the desired solidarity by means of the old unions? Will some new leadership lead to victory, or will it be necessary for workers themselves to organize and determine the policies of their own unions?**

That labor is willing to fight is shown by such instances as the battle in Kent, Ohio, against strike breakers brought in for Black & Decker, makers of electrical equipment, or by the strike against Northwestern Barbed Wire, where C.I.O. leaders contracted for peace while gas bombs were being hurled at the picket line, or by either the militant tactics in the present strike against the Celanese Corporation of Cumberland, Md., or even in the passive resistance methods of the knit hosiery workers at Berkshire Mills, Pa., despite vomitting gas, police and even zoological skunks.

All too often this year workers have been stopped by their unions from fighting effectively. The RCA strike at Camden is a sorry instance of workers being needlessly subjected to police brutalities and deprived of the completeness of victory that could have been theirs. Out under the C.I.O. leadership of Mr. Lewis, after Mr. Green had decided that the idea of a semi-industrial union for radio and electrical workers was highly improper, the strike was put off while the company prepared. Finks were escorted through the plant while the finger was put on the most active union men. When the surprise strike was to be called at noon of June 21, the union informed the police ahead of time—and the police were there with their clubs and remained throughout the strike. Beatings and jailings became the order of the day. The strike ended with many of the best unionists out, despite the splendid support given them by the Shipbuilders Union.

### White Collar Workers

Of the newcomers to the labor movement, the reporters and editorial workers have by far been the most energetic. The American Newspaper Guild went on strike against Hearst's Wisconsin News while the printing trades walked daily through the picket line. While the strike was on, it affiliated itself with the A. F. of L., only to be rebuffed by having the printing trades (of which

Gun battle in Kent, Ohio, strike against thugs imported for Black & Decker, makers of electrical equipment. It was an armed fort until cops and A. F. of L. leaders escorted the thugs to the local jail.

Here a Camden RCA striker is held by a cop while a plain clothes fink, who was given the opportunity to pick him out before the strike, is twisting his arm.

Mr. Howard, by the way, was a leading exponent of the C.I.O.) sabotage their campaign to stop advertising in the struck sheet when these union placed ads of fulsome praise for Mr. Hearst in the scab newspaper. The vast difference between their Milwaukee and Seattle strikes is entirely accounted for by the greater measure of solidarity shown by the west coast unions—for which the I.W.W. by the way is vociferously blamed by west coast reactionaries. There the printers did not walk through their picket line despite their contracts. When Hearst was brought to terms over the Seattle P-I, Mr. Green, much to the injury of the Guild, and over their strenuous objections, stuck his nose in to make a settlement and to deprive them of the labor support that would have made a better settlement possible. Despite the dirty deal given them, the Newspaper Guild still believes in solidarity, and in the current strike of the printers in Flushing, N. Y., the reporters and editorial workers are not walking through the printers' picket line. It is a good omen of the times.

Not very long ago, it was considered below the dignity of office workers and other white collar help to resort to a strike to get their demands. Even a year ago the I.W.W. members in Cleveland felt well in advance of the rest of the world when their organized production workers in metal plants struck to support the demands of the office workers in the same plants. White collar workers were considered something apart from the rest of the working people, but experience has shown them that they too are exploited, and that if they are to get more of the good things of life, they must band together and use their economic power to good advantage. A considerable number of strikes this last year was conducted by workers of this type.

In March, school teachers in Jessup, Pa., struck for their back pay.

Music arrangers, copyists and proof readers struck in New York City against 31 concerns on March 31, and by the first of May the strike spread to 52 concerns. Band leaders gave them good support. An agreement was signed May 6.

Employes of the May Store in New York City were out for many months, and Norman Thomas got arrested for aiding their picket line. Other department stores had shorter strikes. An independent union of the clerks of the A & P stores in Cleveland won big gains for themselves and wanted to establish solidarity with the warehouse employes in the A. F. of L. who went on strike to have their picket line shattered by the police and the A. F. of L. teamsters acting in unison. Philadelphia was also the scene of a prolonged strike of store clerks.

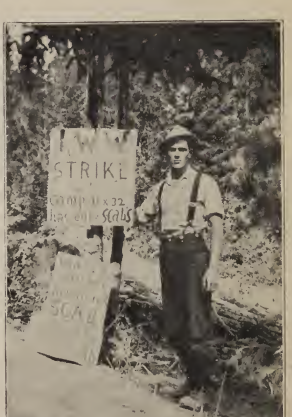
**This occulist with an M.D. degree in an optician's strike was only one of many white collar workers to strike this year: hospital workers, beauticians, the cartoonists' guild, as well as school teachers, music arrangers, and editorial staffs, all joined in the fray.**

Hospital workers for the New York City Polyclinic came out against wage cuts. Thirty-five pickets were arrested on May 16, and 15 more on May 26. Even the cartoonists' guild struck to raise their rates on College Humor and other magazines on June 7. White collar workers have surely been on the move.

### Agriculture

Arkansas witnessed an upheaval of tenant farmers, better known as sharecroppers, against the

landowners. These Arkansas tenant farmers, in contrast to those found in the North, are folks who have only their labor power to sell, and having no other market for it, do it by sharecropping. This practice grew out of the liberation of the Negroes during the Civil War. Hundreds of thousands of Negroes were proclaimed no longer slaves, but that did not solve their economic problems. They still had to eat and clothe themselves. The landowners devised the system of sharecropping and the Negroes were forced to accept their terms. In most southern states it is little better than chattel slavery. Long ago it ceased to be a Negro question, for white sharecropping families of the South exceed the colored families by 400,000.



In Arkansas conditions became unbearable. The Sharecroppers Union was started, uniting labor regardless of race. Floggings, suspected murder, a return to actual slavery, and the deporting of militant unionists have characterized their struggle of this year. That their fight will improve conditions is beyond doubt.

In California, agricultural workers and especially fruit and vegetable packers have put up a struggle. The packers had previously made heavy gains by well-timed job action—for lettuce, etc., must be kept iced and shipped promptly. The heavy arrests of striking fruit pickers in Santa Ana in July, and the battle against gas and clubs in Salinas later in the year, adequately attest the willingness of these workers to fight, and likewise their need for an aggressive job action type of industrial union. The plan of the A. F. of L. to secure redress of their grievances by lobbying and by securing sympathy for injured pickets is not likely to get the desired results. The General Convention of the I.W.W. seriously considered this entire situation in planning its campaign there for this coming spring.

In North Dakota and Minnesota we find farmers working on W.P.A. projects (and now talking of a fight to keep from getting laid off) at wages higher than those they offered for their heavy work during threshing and harvesting. In several communities business men and townspeople denied water even to transients who refused to take jobs at $20 per month, while farmers were doing W.P.A. work which these transients weren't allowed to touch.

### Lumber

Working and living conditions for lumber workers of the Northwest were unbearable prior to 1917. However, these conditions were improved immensely by the Lumber Workers Industrial Union of the I.W.W. Wages were raised to a level never before dreamed of in the industry. In general, conditions were so vastly improved that telling of them almost sounded like fairy tales to the listeners. These conditions were maintained for some years, but with the lessening of organization in the industry, these conditions began to disappear and slowly but surely, step by step, pre-I.W.W. conditions began to appear. Wages came down to a minimum. Discontent among lumber workers grew stronger. Attempts to organize them were made by various labor organizations, but

A picket in the I. W. W. lumber strike in Idaho.

lumber workers, remembering their experiences of years ago, knew that only one organization could do anything for them and that organization was the I.W.W.

In 1935, a campaign among them was started by the I.W.W. The response received by the organizers was gratifying. Old-timers, who have been dormant for several years insofar as organization was concerned, were again imbued with the spirit of the I.W.W. and began to induce their fellow workers to join Lumber Workers Industrial Union No. 120. The younger lumber jacks followed suit and before long the I.W.W. was again a power in the woods, especially in the eastern Washington and Idaho districts.

The organization made itself felt and conditions, which were on the down grade, began to get better as the organization grew. The first strike in this latest organization drive amongst the lumber

workers of the Northwest occurred in Idaho on March 23, against Weyerhaeuser and the Unted Artist Movie Corporation. The Movie Company hired men from Headquarters camp of the Potlatch Forests Inc. to take shots of a log drive for the film, "Come and Get It." The men were hired for $3.00 and board for 8 hours work. This was changed to $4.00 and board for a ten hour day on the job. The men struck and after 26 hours were granted $4.00 and board for an 8 hour day, camp to camp, and time and a half for overtime.

The second strike occurred at Camp L at Swamp Creek. Fluming of logs had just started. Water was at its peak. Wages were from $3.80 to $4.40 with $1.20 taken out for board. Loggers presented demands to the company for $5.00 and board. The company refused to grant the demands and a strike was called. The strikers won out after four days and in addition received time and a half for overtime.

On April 30, a log drive was about to start down the North Fork River of the Clearwater. Drivers struck against Potlatch and won a raise from $5.00 and board to $6.00 and board after being out 48 hours.

Workers of the Winton Lumber Company near Enaville made demands of $5.00 per day. The company gave in without a struggle, but as soon as the loggers found out that $6.00 was won at North Fork, they demanded $6.00 for themselves. The demands were not granted, so the lumber jacks struck and won.

Encouraged by the earlier victories and determined to improve the lot of lumber workers, members of the I.W.W., walked out on strike on June 29, and tied up the entire Clearwater district 100 per cent. Later the strike spread and before long 2,000 loggers were out. Demands included $5.00 per day minimum wages, a $25.00 a month raise for all monthly men, no gyppoing in cook houses, time and a half for overtime, free meals for men seeking work at camps, board not to exceed $1.20 per day, no discrimination against union men, single bunks and a change of sheets and pillow cases at least once each week.

On July 16, several non-Weyerhaeuser lumber interest camps, in the St. Maries district, granted the demands of the strikers. The Weyerhaeuser interests were determined not to give in. A reign of terrorism was instituted. Pickets were arrested without cause. On August 2, gunmen shot into a group of pickets 10 miles from Pierce, Idaho, on the old Orofino road. Mike Stetz, D. L. Gentry, Conrad Hill, Arnold Brinker and Lloyd Gustafson, pickets, were wounded. Stetz and Gentry are not expected to get well. The gunmen and the remaining pickets were arrested. Bonds of $1500 each were placed against the pickets, while the gunmen were released on bonds of only $750. Two of the injured pickets were sent by the union to recuperate at Work Peoples College in Duluth, Minn., and increase their usefulness to the labor movement.

The shooting proved a wonderful opportunity for Governor Ross to declare Martial Law in the strike zone. Troops were moved in on August 3. An edict that all strikers would be deported out of the state was issued but was later rescinded by the Governor because of presure brought to bear against him and Senator Borah. Although the deportation order was dropped, Evert Anderson, General Executive Board member of the I.W.W., was deported to the State of Washington two times. Many more arrests besides those mentioned were made and finally on August 22 the strike ended with considerable gains. Not all points were won, but the loggers were determined that before long the entire lumber industry of the Northwest would be organized under the banner of the I.W.W. They have made good progress along these lines and we shall hear more from them later.

### Metal Mining

The bloodiest strike of 1936 in the metal mining industry was in Birmingham, Alabama, called on June 1, against the Tennessee Coal, Iron & R. R. Co. Iron and Coal arc mined practically in the same field and hauled to a blast furnace. The iron is taken out of shafts on the side of a hill by

Scabs leave Alabama Mine of the Tennessee Coal, Iron and R. R. Co.

the river. On the very first day of the strike 5 scabs were wounded by gunshot as they emerged from one of the shafts. Again on July 13, more violence occurred. The strike was finally called off by the International Mine, Mill & Smelter Workers on August 20, on an agreement to try out a new tonnage payment plan.

On July 25, a strike of the same Union against the Junea Gold Mining Company for a closed shop was upheld by the National Labor Relations Board.

In Utah, a strike of 3,000 metal miners was declared in October. The strike is still in progress at the time of writing.

### Quarry Workers

At Philadelphia, Pa., a strike conducted by the Building Workers Industrial Unian No. 330 of the I.W.W. against three quarries where stone for building purposes was being quarried, was won in a very short time. Increased wages, recognition and the 8-hour-day was granted.

Another quarry strike of over seven month duration ended in July when a settlement offered by the Vermont Marble Co., was accepted by the men.

### Coal Mining

Employment in the coal mining industry has dropped from 160,000 in 1924 to less than 100,000 today. Whole towns have been ruined and their populations left to exist on relief or bootleg coal. Bootlegging coal, especially in Pennsylvania, became quite an industry among unemployed miners. Miners would dig coal in places where companies found it unprofitable to do so, and the coal would be sold directly to consumers. This the coal companies resented and in April the first blood was spilt when two miners were shot by company guards. The company for whom the guards worked did not explain the presence of these guards in violation of a recent act of the legislature abolishing coal and iron police in Pennsylvania.

In the Anthracite coal fields several strikes occurred prior to the signing of an agreement which is to last until April 30th, 1938, despite rising prices. The agreement calls for a seven-hour day and five-day week with the same rate of pay as formerly paid for 8 hours; complete check-off and complete responsibility on UMWA officers to prevent strikes in violation of agreement. However, strikes had to be called against 15 companies on August 27 in order to get them to live up to the agreement.

In Illinois, a jurisdictional strike was called in Saline county, by the Progressive Miners of America on March 4th, over the opening of Peabody mines 43 and 47 under UMWA contract. In Saline County, 4,000 of the 5,000 miners belong to the PMA.

### Building Trades

Strikes concerning wages and other questions were numerous in the building industry. On Jan. 10, the electrical workers brought the Board of Education of New York City to terms in building the Sam Gompers High School. The demands of the union were for the hiring of at least 50% Union workers and the balance to be hired from relief rolls. On July 26, in Detroit, Michigan, 250 members of the Lathers, Plasterers & Laborers Association, an independent union, returned to work after a one-day strike, which resulted in a temporary agreement to hire none but union men on all lathing jobs and arbitration of a new wage scale to be guaranteed by an agreement expiring May 15, 1937. On August 27, 12,000 painters of New York City struck for the enforcement of the contract and for the elimination of the "kick back," and for the hiring of 50% of the men from union rolls. The strike spread to Brooklyn on September 2nd and was settled on September 5, the union gaining its point. Seven painters were held for violence during this strike. Other strikes were conducted in this industry, most of which were settled immediately.

### Garment and Textile Workers

Troops were brought to Albany, Indiana, on January 21, to quell a strike which was in progress since September 1935, against M. Fine & Sons, makers of shirts. The strike was for the restoration of NRA rate of wages.

Contracts which are to last two years were signed by the I.L.G.W., and the five employer groups in the dress industry, covering 150,000 workers. Negotiations were in progress from January 7, when the first strike threat was made until February 21. Furriers also made agreements on January 31, but not until after concurrent strikes were planned.

Strutwear Hosiery workers in Minneapolis struck for several months, during which time Governor Olson threatened to close the plant, but was enjoined from doing so by order of a Federal Court. The strike ended April 5 with some demands granted the workers.

Knit good workers struck in four plants in New York City on July 18, and threatened to picket the U. S. Re-Employment Service for acting as a strike-breaking agency. Five mills were called out on July 26. On August 25, 4,000 returned to work as the strike was settled in some places, continuing in others.

The large strike against the Berkshire Mills of Wyomissing, Pa., has resulted in severe injuries to many workers, over 200 being injured on Oct. 2 alone. The strike continues with the use of passive resistance methods.

Following the dress good workers strike, the pattern makers struck March 3. Fair solidarity was shown by refusing to cut from "hot" patterns.

### The Metal Industries

In January recognition of the I.W.W. shop committee was granted by the American Brass Company of Cleveland. A wage increase which was to take effect on July 1, did not materialize, so on July 8 the plant was struck. The strike ended on September 14 when a 5 per cent wage increase was granted. The management when the strike first broke out was adamant and refused to consider any proposals submitted by the strike committee. Encouraged by the Associated Industries, they tried turning public sentiment against the strikers by having police stationed before the plant and using the time worn anti-union bomb scare.

Another strike in the Brass & Copper Industry was that of the Phelps Dodge Copper & Brass Products, of Elizabeth, N. J. 200 walked out on August 27. The strike was settled September 1, with wage increases, 48-hour week and time and a half for overtime.

On May 22, a strike was called at Portsmouth, Ohio, by 5,000 workers against the Wheeling Steel Company. The strike was finally ended on July 13, when an understanding was reached that terms would be made 14 days later. Several strikers were injured and one guard killed during the strike. On July 29, six unionists were indicted for the death of the guard.

Other minor strikes occurred in steel and for a while it seemed as though the whole industry would be involved when Lewis and his C.I.O. made an attempt to organize the industry. But like other much advertised general moves by the A. F. of L., it did not materialize and steel workers, while they await better organization, content themselves with the slender bonuses paid by these corporations that have paid big bonuses to stock holders.

In the auto industry labor has certainly shown a willingness to go further than its C.I.O. leadership permits. Sit down strikes have been frequent from the sit-down in the Toledo Dura Manufacturing Co., makers of auto hardware, in March to the Case, Bendix and Midland Steel sit downs of recent weeks. It has been a busy year for the industry, and lack of an organization to unite all workers in body, parts, and assembly plants to take advantage of the favorable opportunity will no doubt later be regretted.

That the A. F. of L. is no better able to handle these big metal working moguls than the new C. I. O. is apparent from the long drawn out fight against Remington-Rand. Here with their plants scattered across a great area, the need for industrial organization to tie up all plants is so obvious, it need scarcely be mentioned.

### Other Manufacturing

The wave of militancy characteristic of labor this year has shown itself in manufacturing strikes too numerous for the scope of this summary. Rubber workers in Akron and Toledo by frequent sit downs (severely frowned upon by the officials of their unions) have won many points, and built up strong union sentiment among all workers in their communities. Toledo has become a militant labor town as a whole, gas, match and metal workers all joining in the common cause.

This community union sentiment, a splendid omen for the growth of One Big Union, has appeared elsewhere. In Pekin, Ill., after the workers at the American Distillery Co. had been out for six months, a general strike declared by all 31 unions in the town brought it to a settlement on February 8. Minneapolis is a similar instance, where flour mill strikes, grain elevator strikes, truck drivers' strikes, jewelry workers strikes, all synchronized to make it one striking town in the first part of September.

In recent months, the flat glass workers, largely engaged in supplying glass to the auto industry, have shown increasing militancy. They have refused to work on orders sent from a struck plant to another, and auto workers have refused to work with scab glasses. This is as it should be.

### Railway Industry

Generally speaking, labor trouble was at a minimum in the railroad industry in 1936. The most important issue fought over between the railroad companies and workers was whether or not two men should be employed on Diesel engines. The companies contend that only one man is necessary because of the newly invented dead-man's throttle which if released by the engineer will stop a train immediately. Workers on the other hand contend that rigor mortis may cause him to hold it and besides it is absolutely necessary for two men to be on the alert at all times to guarantee a higher degree of safety. However, in most cases where this issue was fought, the workers got their way. This was mostly due to strike threats and public sentiment.

Strike votes were taken by the employes of the Mobile & Ohio and by the engineers of the Western Pacific, January 29 and May 22, respectively. These strikes did not materialize. A strike that did materialize and which was splendidly fought with the aid of women, was the strike of the train crews of the Louisiana & Arkansas and the Louisiana, Arkansas and Texas. The women played an important part, turning hoses upon scab dwellings, routing their foul inhabitants, boarding trains and persuading the crews to wire in their resignations and many other things which induced the

Governor of Louisiana to intercede. The strike ended in a victory for the workers. Wages were improved and the unions recognized.

A good deal of time and energy was spent by the Railway Unions in promoting legislation which would be of benefit to railroad workers, or at least intended to be so. Most important was the Railway Employes Pension Act. This act is hoped to make room for more workers on railroads through the process of providing for and eliminating the older heads. A better way to create more jobs would be by shortening hours. This railroad workers realize but somehow they do not have enough confidence in themselves or their unions to demand this. The 26 varieties of unions among railroad workers do not give them the necessary feeling of solidarity. Their solution lies in the One Big Union.

### Marine Transport

The Marine Transport Industry has far too complicated a story to be put in this summary. A detailed summary of union trends in the industry

The May East Coast Strike—Clubs, teargas and motorcycles were used by N. Y. cops to smash this "outlaw" strike as the S. S. Virginia comes in with a scab crew.

is promised by a specialist in an early issue of this magazine. The idea of the federation to give greater solidarity among marine workers has taken a firm hold. Its greater growth on the west coast than in the east is indicated by the difference in wage rates paid. On the east coast the process of getting rid of the old men of the sea who have ridden on the backs of marine transport workers these many years has unfortunately been accompanied by replacing them by labor politicians to such an alarming degree that seamen are wondering if they are better off. In all these battles for rank and file control and industrial solidarity, the Marine Transport Workers of the I.W.W. have taken a leading part, which may perhaps be measured somewhat by the I.L.A. gangster murder of Fellow Worker Ross in San Pedro last year, the shooting of Fellow Worker Haiman in Philadelphia as he stopped finks from kidnaping a picket, or the shooting of Fellow Worker Kane in Houston as he stopped the racketeer ousted agent of Firemen and Oilers Union from walking off with the union records.

The importance of a militant industrial unionism in this industry cannot be over-emphasized. When there is the right sort of solidarity between workers, scab products will not be moved, materials will not be sent for scabs to work with, hot cargo will never be touched, the instruments of death sent against labor will never reach their destination. In putting such solidarity into practice, the unity of all transportation workers, as provided for by the Transportation Department of the I.W.W. will be essential. The effort of the Marine Transport Workers of the I.W.W. to stop the shipment of war materials to the Fascist forces of Spain, is an augury of what can be done when this developing One Big Union idea among transport workers is fully realized.

### Conclusion

No summary can indicate the splendid fighting spirit that has animated American labor. Neither can any summary such as this adequately show the interference with this fighting spirit and sense of solidarity that faultily constructed unionism imposes. The new spirit of American labor is shown not only by these strikes and by the fight of W.P.A. workers and relief workers that lack of space has forced us to omit, but also by the way in which American labor, despite the Pontius Pilate stand taken by the convention of the American Federation of Labor has rallied to the support of our fellow workers in Spain.

A new era is in the making. A new spirit is in the hearts of labor. A determination to get more of the increasing product of our labor is shown daily. There is no way for this new attitude to find fitting expression except in the I.W.W. plan of industrial unions, controlled by the members, militant in spirit, working toward a new social order, uniting all on the same job in the same union, all in the same industry in the same industrial union, and uniting all workers in One Big Union of the entire working class.

# Johnny Comes Home

## By John Lind

Johnny was an intelligent boy. That is, if one listened to his pa and ma, and looked at his report card, one was apt to be convinced that he really was smart. Besides, he was the best local all around athlete.

His father was a well-to-do farmer, right on the edge of a small Minnesota town. Pa belonged to the Moose lodge, and was one of the pillars of the church . . . in fact when a local woman was sent to convert the heathen of Africa, he was known to donate fifty dollars all at one time. And his mother, good pious soul, brought up her six children in the fear of God and the nether regions.

When the war broke out in Europe, Johnny had just finished high school. When the United States entered the war, he was just finishing his third year in college. He volunteered. He had ideals about fair play and decency, and this was the thing to do about them. It was expected of him, not only by his parent, but by his younger sisters and brothers. He was the eldest and had an example to set.

* * *

As a private he saw eight months of horror over there, and came back. He was discharged and went home.

The eight months must have changed him. He didn't fit. Just what is was, he wasn't quite sure . . . but he couldn't quite bear the blokes that asked him what it was like over there . . . when the local parson told the congregation "we won the war," he got up and walked right out in the middle of the sermon. He knew it was an unpardonable sin, and wasn't quite sure why he did it.

Life wasn't what he had counted on, even though he had had only counted on it vaguely. His buddies wrote him. One wrote that he had been in New York out of a job ever since he was discharged, while his girl friend kept him with enough to live on. Another wrote about being on the stem in Frisco. Of the dozen he kept in touch with only one managed to get his old job back. Several asked for loans.

Even Alice . . . he had "gone for her" in their high school days . . . even she stirred him to a strange discontent contrary to all his expectations. When she sat eating chocolates and reading Eddie Guest to him, he couldn't help but think that the chocolates were making her far too fat . . . and there was something about this Eddie Guest that reminded him of the chocolates.

* * *

He decided that it would be more comfortable moving . . . going somewhere . . . west. He told Alice. She was unaware that there was anything in this discontent for her to fathom, and wanted to know what was to happen to their engagement. He said he'd be back in a few months. She cried on his shoulder, and said good-bye . . . and he wished he had written from Fargo, instead.

His father was rather taken aback, and angry. He could not see why Johnny should want to leave a good home. They had done what they could for him. He could stay there. He could go to college. But if he was just to go rambling and rambling out west, never should he ask for any help from home, no matter what the need. But Johnny insisted he was going on a freight train, to find something or other to do that he wanted to do. The one thing he was sure of was that he didn't want to stay there.

* * *

Next morning he took the local freight into Minneapolis and looked in the yards for something

bound west. The stories he had heard while in the trenches now served him in good stead, and he was able to find his way about quite easily, always of course, relying on his ability to pick the right persons to ask questions of.

It was early spring yet. The snow was all gone, but the frost was not all out of the ground, and nights were cold. He was glad that he had had the foresight to take his heavy coat along with him. He found it useful now.

Several days later he hopped off of a freight train in Billings, Montana. Still having a few dollars left, he made his way to a restaurant, but not before he had asked a newly found friend of the road to eat with him. Johnny had taken a sudden liking to this young man, not much older than himself, but infinitely wiser. The young man had admitted that he had not gone to France, because, in his opinion the war was not "fought for democracy" but for world markets and war profits. True, he had been drafted just before the Armistice and had gone to the training camp, but, he admitted that he had very seriously considered refusing to shoulder a rifle and pleading conscientious objection. He was very glad that all that was not necessary, and that the war was over, for it saved him from declaring himself and probably from an army prison or concentration camp.

While eating they continued their discussion, and Johnny was glad that he had run into Tom. For one thing, he was conscious of finding something that he had missed ever since he was discharged from the army. For all this while he hadn't quite know what it was that he had missed; but during Tom's recital of some little episode in his own life he mentioned the term "fellow workers", which sent Johnny's thoughts back to his buddies and then he understood. He had missed the comradeship, that closest of all ties, that is born of a common cause. They had been sent thre (to France) together, so "let's see it through together," had been their attitude. And especially in their contact with officers had the spirit of solidarity among the privates manifested itself. Many were the times when it seemed as if their worst enemy was, not the Boche, but "that damned tarheel non-com." They would lie, steal and fight for each other, but for the non-com and for the officers they had nothing, but invective, for most of them had not earned their stripes, and their ignorance of their own position usually made them take it out on the men.

This spirit of comradeship asserted itself now, too, and for months after that Johnny and Tommy were like Siamese twins; where one was, the other one was bound to be. They found a few day's work now and then, with which to replenish their roadstake, but not often. As it was, they had eight dollars between them upon arrival in Spokane.

Meanwhile Johnny had found that Tommy was a "Wobbly," one of them "I Won't Works," that so many dirty cracks had been made about in his hearing, even in the army. Johnny soon completely changed his ideas about the Wobblies. True, his ideas had been rather vague. But every day in Tommy's company brought more enlightenment, and the many leaflets and booklets Tommy carried in his packsack soon created an understanding of the "movement," as Tommy called it, which would have been impossible to secure in any other way.

Among the booklets creating the deepest impression on him were Justus Ebert's "The I. W. W. In Theory and Practice" and Vincent St. John's "I. W. W.—Its History, Structure and Methods." Besides these he found in the I. W. W. Song Book a constant source of delight. Many were the hours they whiled away either in jungles or in the yards waiting for trains, just singing.

"If you all will shut your trap,
I will tell you 'bout a chap,
That was broke and up against it, too,
for fair;
He was not the kind that shirk,
He was looking hard for work,
But he heard the same old story everywhere."

Songs were not the only thing he learned. When Tommy first talked of "surplus value" in one of his intermittant monologues on Marxian economics, Johnny had to ask that he explain what he meant. His study of economics in high school and college had seemingly not had included that term, although he did remember that Marx had been mentioned somewhere, along with Ricardo and Adam Smith.

When Tommy got through exlaining, it seemed that Johnny's education had indeed been neglected, and the funniest part of it was that from a man on the road, from one who had barely finished an eighth grade schooling, he, with three years of college to his credit, was able to learn more than from all his teachers combined.

When he questioned Tommy where he had got his knowledge, Tommy raised his hand and drew it in a semicircle from the North to the East and South, then Southwest, and added as an explanation: "Experience, speakers and books." Johnny had to be satisfied with that.

* * *

They pulled into Spokane rather late one night, got a room and went to bed. When Johnny opened his eyes in the morning, Tommy was not in bed, and his clothes were gone, but his packsack was still thrown in the corner, so Johnny did not worry. He went out, ate breakfast and came back to wait for him. Tommy explained he had been to the I.W.W. Hall and to the Public Library.

That afternoon Johnny for the first time entered an I.W.W. hall. There was quite a group of workers there, seemingly all loggers, from the looks of their clothes. Several there knew Tommy, and a round of introductions followed, but there were so many that it was impossible for Johnny to remember their names. Anyway, they all took it for granted that Johnny was also a member, and almost everyone immediately addressed him as "fellow worker." It felt rather odd to be addressed so, but the greetings and the handclasps were sincere. Here was real comradeship. He felt at home. This must have been what he left Minnesota for.

* * *

They got in Seattle and headed first for the I.W.W. From there Johnny wrote his first letter home. In all this time he had sent but one postcard home and another one to Alice, but as he had sent them no address, he had no letters waiting for him anywhere.

Tommy was now at home. This was his country, as he explained it. He was rather proud of the fact that he worked in the "long logs". It was also his intention to show Johnny what made the "long logger" the man that he was.

First of all Tommy went to the hotel where he had checked his outfit earlier in the year, before going to Chi. Then an inventory was made of the necessities to outfit Johnny. To Johnny's dismay he found that their money would not buy even the one pair of caulk shoes he needed. But Tommy knew the ropes.

He left Johnny in the hotel for about an hour, and came back with a well-worn pair of caulk shoes. They weren't quite comfortable, but would do for a few days, until one could go to the camp commissary for new ones.

With that they left for the skidroad, scanning the employment office signs. Finally Tommy's eyes lit on one sign. What he saw there that interested him, Johnny found out a minute later at the counter.

"Where's the choker's job at?" asked Tommy.

"Up at Darrington. Got your docket?" was the answer.

"Sure." After a few more questions the two took the jobs and parted with part of their meager funds. As the camps were 100 per cent union, it was up to Johnny to take his card out now, before leaving for the camp. This was easy, but it also put a crimp on their pocketbooks and Tommy had to take a loan from a friend to pay their way out to camp.

So Johnny was initiated into the intricacies of high leads, skidders, main lines, haul-backs, chokers, blocks, "guylines," falling, bucking, loading tongs, slings and spar trees. He got to know buckers, fallers, hookers, rigging slingers, choker-men, whistle punks, hook-on-men and donkey punchers. There was a fellow ship among them that made him feel—he belonged.

Johnny stayed West. He wrote home seldom, and when he did it was to his mother. It seemed a long time since that he had got a letter from his father. The last one told him either to come home at once, or stay away altogether. He had got that one in jail. He and several hundred others had been rounded up at a street meeting. The firemen had soaked them with water, and knocked them down with the irresistible pressure from their hose, and the police had finished up with their clubs. But that the boys felt it had been a pretty good fight. There were several bulls and firemen in the hospital.

All the forces of hell seemed turned loose on the loggers now. The lumber barons had raised the price of spruce during the war from $16 a thousand feet to over $160. When peace broke out the demand dropped off. To keep profits up to the level to which the war had made them accustomed, they tried to cut wages. But everywhere a well-organized body of loggers resisted their wage cuts, and resisted successfully. They set out to break the I.W.W. that held the loggers together.

In Centralia on the first anniversary of the

armistice they arranged for the parade to raid the Wobbly hall. The loggers inside put up a fight. Wesley Everest, another returned soldier, kept them at bay with his gun, down as far as the river. Then they got him, rammed a rifle butt down his throat, took him to jail, threw him bleeding on the floor, took him out at night, cut out his male organs and lynched him. The rest of the loggers who had defended their hall were on trial for murder.

With super-patriotic fervor, all hell was turned loose on the loggers and the I.W.W., whether they were returned heroes or not. Some were tarred and feathered. Others rode the rail. Others went to the big house for long years.

Somehow Johnny and Tommy got out as often as they got in, and they and their fellow workers found they had a purpose in life, something they held to more doggedly than he had ever carried on before, in football or in killing the Kaiser. It was something to which they dedicated their days and their nights.

Johnny found himself growing. He could write and speak his thoughts clearly for all to understand. He found that the long loggers to whom he had looked with awe a little while before, now looked to him. Life was full. There was comradeship with men who knew what they wanted. There were women whom he couldn't imagine munching chocolates and reading Eddie Guest. They liked to make him eat big hearty meals, and they could talk too about the endless struggle that had become his life.

It was more than a fight for more of the world's riches. It was a fight to maintain the conditions in industry that made these loggers feel they were men. It was a fight to resist the aggressions of robber barons, and the stealing of more of what was theirs. And since the lumber barons could keep profits up only by cutting wages down, and could cut wages down only by breaking the I.W.W. up, it was a fight to hold these men together in the bonds of solidarity. That word "solidarity" of all the new words that Johnny had picked up, was the one he liked the best. When he sometimes thought back about what had set him wandering, it struck him that he had set out on a quest for this combination of fellowship and purpose that he called solidarity.

Where men stuck together against their employers, they were looked upon as men and treated each other accordingly. Where they didn't stick together, their bosses treated them like cattle, and they treated each other like pigs at a trough. It was this battle for the union, as well as for the higher pay and shorter hours that could mean a fuller life.

Every little step forward in the struggle filled him with satisfaction. Every little effort that failed found him looking for the cause of the failure. He and his fellows were determined enough in their fight to take criticism without breaking the bonds of fellowship. The going was tough, tougher than even the bitterly fought I.W.W. had ever found it before in all its stormy life, and he found a keen zest in the battle.

* * *

Johnny and Tommy were both tempered men. Young in years, they lived through a few months which made them old in experience. Tommy of the two was the more stable. If Johnny was able to do more, it was because of the able adviser he had in Tommy.

It was the spring of 1922. Johnny had been away from home not quite three years. He received a letter from his mother, asking that he come home. He answered it, but failed to answer her plea. In writing his answer he kept thinking of his father. He knew full well that in that quarter there was no understanding of the niche he had found for himself. What was more, it was probable that no effort would be made to understand it.

His mother. That was another matter. She would welcome him with open arms, no matter what he had done. In her opinion he was her oldest son, no more, no less. In thinking of her, he said to himself: "Yes, I'll go home for a short visit this spring."

Tommy, Johnny and several others completed plans at this time to break in new territory for organization work. All were young and ambitious and when an opening offered itself, none of them hesitated.

At a mill town not far from the Puget Sound country an opportunity offered itself. A Wobbly had settled down there. He wrote to Tommy, telling him of the lack of organization there, of the poor working conditions, of the low pay and the overtime worked without extra pay. The sentiment is good, he said, "come on down."

Four of them went. After looking over things for several days, it was seen advisable to settle down, too. They all looked for work, and they all found something or other to do.

Johnny went to work in a mill. The work was hard. Not like woods word. He was put on a planer, feeding lumber into it. The unaccustomed posture he had to work in, the lack of space for moving around to handle the heavy boards, and the air filled with fine dust, tired him out.

That evening, they gathered together to compare notes. Yes, all of them had noted the dissatisfaction among the workers. The speed-up on the job was terrific, the pay was small and the work-day was too long for that kind of work. This was indeed good territory for organization. But it was advisable to work some time before coming

out into the open. A better impression could be created even among those most hostile to organization and organizers, if they had worked together for some time. They were all tired, set the date for another meeting and left early to go to bed.

About four o'clock one afternoon the planning mill was stopped at the mill. Whistles blew. Men scurried about and a call was sent for an ambulance and a doctor.

But the victim was out of reach of all human help. It was Johnny. One of his fellow workers had seen the "accident." With the regularity of a clock Johnny had been pushing lumber into the planer. No doubt, he had been a trifle tired. There was no guard on that planer, as there should have been, to stop any piece from flying back that the planer would not take. There had been a big knot on the board. The knot had broken and the planer rolls had spit back the board with such a force that it went straight through Johnny's abdomen.

One of the Wobblies grabbed the man by the arm. "Did he say anything before he died?"

"Yes, but I didn't quite get the meaning of what he said."

"What was it?"

"It was something about: 'Carry on, fellow worker, carry on."

* * *

Fourteen years later in a picket camp that the Wobbly lumber jacks had established in a mountain pass in Idaho in the 1936 strike for decent conditions, Tom—a bit grey now—was talking over the old times with some old-timers by their jungle tire.

Several of them had known Johnny. Yes, they agreed, Johnny would feel very much at home to be with them now.

# *The Canadian Labor Situation*

(continued from page 11)

this province very susceptible to Fascist movements. A recently elected provincial government shows definite Fascist tendencies, and avowed Fascist organizations like the Federation of Labor clubs and the National Social party have tens of thousands of adherents. They have adopted all the tactics of the Nazis: suppressions of labor organizations, anti-semitism, violent opposition to all progressive ideas, and teaching that trusts and chain-stores are responsible for all our economic ills. An idea of the potential strength of the Fascist movement can be formed when we hear of anti-radical demonstrations in the city of Montreal with over one hundred thousand people participating. Of course, Fascism is not confined to any one province. It shows surprising growth over all of Canada, but in Quebec has reached a more advanced stage than elsewhere. And we cannot consider this movement lightly when we remember that one-fourth of the total population of Canada are in the Province of Quebec.

The trade union movement cannot check the spread of Fascism any more than it did the growth of company unionism or protected the interests of the working class.

Apart from its conflicting factions and political entanglements, craft unionism shows a decided weakness in its lack of militancy and failure to struggle when faced with a situation which demands these things. Arbitration, boards of conciliation and parliamentary lobbying have been substituted for economic action. Trade unionism has placed more confidence in industrial codes and the investigations of Royal Commissions than in its organized power. This inevitably resulted in a worsening of conditions for the workers. In a country with an immense per capita wealth and unlimited natural resources a large section of the working class has the standard of living of a coolie. Bondholders and financiers of industry have it all.

The industrial codes are going the way of the NIRA codes, the Royal Commissions' reports are pigeon-holed somewhere in Ottawa and the impotence of the trade union movement is clear; therefore, the workers of Canada are faced with the choice of taking a further reduction of an already low standard of living and eventually having Fascism, or of accepting the only alternative—revolutionary industrial unionism.

# SHALL AMERICA GO HUNGRY?

The fear of hunger again looms large in these United States. Throughout the year the passing of the buck from Federal to State and local agencies has gone on. Workers, driven by the needs of their families, have occupied the legislative buildings of Wisconsin and New Jersey. Demonstrations for more relief, for more W.P.A. projects, for higher rates and against no pay for lost time on these projects have been many. In some instances it is said by those who should know that certain politicians for their own personal purposes, and not out of any liberal leanings toward the aims of labor, have encouraged these demonstrations. And now there are to be more—and a big pink slip parade to Washington.

Many feel they have been "done wrong" by those whom they ecstatically voted into office.

Such papers as the New York Post and the Philadelphia Record run an editorial: WHO WON THE ELECTION? In it they ask:

"Suppose you had been knocked unconscious in an auto accident on the day before the election.

"And suppose you regained consciousness only yesterday, picked up the newspapers and read these headlines:

"Pennsylvania to Cut 33,000 Off WPA.

"8,000 Being Dropped from WPA in New Jersey.

"WPA Artists Fight Police in New York; 219 Ejected, Many Clubbed; Protest Dismissals."

"Hundreds of WPA Workers Laid Off in Capital.

"Lying in a hospital bed with nothing to guide you but these headlines, who would you think had won the election? Roosevelt? Or Landon?"

* * *

Our question is not what should the government do about unemployment, relief cut-offs, and WPA dismissals? Our question is: What should we do about them?

That an election promise is not carried out, quite fails to astonish us. A political plank is like a streetcar step—something you go in on, not something you ride along on. This has been the way of politics for many years. We can even recall a once popular song: "I Didn't Raise My Boy To Be A Soldier," that became a campaign song for another "great liberal"—and we can recall the lynching bees to which it led subsequently.

* * *

In practice the question what to do resolves itself into the choice whether to do something for

ourselves, or ask somebody to do something for us.

There is the view that this is a democratic society where all are equal before the law and the government; that the government is the collective means established by us all to take such concerted action as is necessary for us all on questions of public concern. Those holding to this view are wont to continue that the increasing productivity of labor and the increased use of machinery has made it necessary for the government to regulate industry to some extent, at least to the point where it sees that industry continues to operate, and that it either provides work for the working class or taxes with which to give them relief or to make public work for them. If these assumptions are correct, it would seem very plausible to dissipate the growing fear of hunger in the face of potential abundance by legislative enactment taxing production and business for the purpose.

But there are those who seriously question these premises in the light alike of history, law, practice and everyday experience. They cite the most eminent historians on the constitution to show that it was devised by a wealthy and militant minority of our forefathers to make sure that democracy would not despoil them nor their heirs of their privileges. They point to the 14th Amendment with its provisions that no man's property shall be taken from him except by due process of law, and ask how can economic equity, or even square or oblong meals be furnished to the growing army of industrial discards by legislative enactment? They can point to many a learned jurist's explanation that such socialism can't be done by law. They can point to a long and bitter struggle between the haves and have-nots, and to many a barracks far removed from where any foreign enemy might come, and to the role of army, courts and government in general in this long and bitter struggle to cast extreme doubts upon the assumption that this is a government of the people and by the people and for the people with due powers to see that all eat. To such students of law and history and to such observors of what goes on daily before our noses, the teaching of Thorstein Veblen that this government is a "Soviet of Business Men's Delegates" seems much more accurate than the famous address at Gettysburg. Those accepting such views must find it strange to demand that such a Soviet recognize any general right to eat, especially in these days when business men complain alike of taxes, and the need for more unemployed to keep wages lower, and of the tendency of relief rates and WPA rates to stop them from the full and hearty exploitation of women and children to which they are so thoroughly attached.

* * *

Apart from the theories, let's examine the facts. It would take a production level at least 30 per cent higher than that of 1929 with present wage rates and hours to reduce unemployment to the few millions of jobless that we had with us in that year. There is no prospect of such a level of production, because there is no market for it, because most people don't have the money to buy much. Of course, if wages went up enough, and hours came down enough, a solution would be possible, and there certainly is nothing unconstitutional about us organizing One Big Union and refusing to work more than six hours for for less than $6.00 for any man, woman or child.

**Children sleeping on the stairs of the Legislative Assembly of New Jersey as their parents occupied it in a relief demonstration last April**

But again, we face the sad fact that WPA layoffs proceed faster than the growth of the I.W.W. What are we going to do meanwhile? Petition the government? Without going into the conflicting views on the nature of this institution, we believe that those getting the pink slips will substantially agree with us, that even if Veblen wasn't right, then some well dressed villain has surely corrupted the dear Democracy of whom Lincoln spoke at Gettysburg, and that petitions won't do much

(Continued on page 33)

# *The Roots of Spanish Labor*

Though the C.N.T. which is aggressively carrying on the struggle for a new social order in the fight against Fascism, dates back only to 1910, the popular struggle finds its roots much deeper. Perhaps it may be said to date back to the dawn of the modern era when new social concepts tended to cloak themselves in the form of theological heresy, and consequently the rigor with which heresy was stamped out corresponded to the intensity of the social struggles that reflected itself in these new ideas and beliefs. Nowhere was the repression of such heresy more vigorously carried out than in Spain. But in its modern form, as an open effort for better economic conditions and freedom from political oppression, the struggle may be said to date from the popular uprising in 1808 against the despotism of Napoleon.

Despite the general economic backwardness of Spain in the past century, Spanish labor was well to the front in the building of labor organizations. From 1840 on, many workers' associations were established. In their early formative period these unions were heavily influenced by the anarchist thought of Michael Bakunin and his associates. Bakunin was a staunch advocate of a direct action type of unionism as well as of the international solidarity of labor. When Karl Marx and others sponsored the idea of an International Association of Working Men, and successfully launched such a body (generally referred to as the First International in writings of our own time) in 1868, Bakunin worked assiduously for its growth in Spain. As a result in 1870 the Spanish Federation was founded.

In 1876 the International, whose headquarters had been moved to America, officially went out of existence. Many factors were responsible for its unfortunate end. The political history of Europe had much to do with it. Since 1851 the second "little" Napoleon had virtually dictated as Emperor in France. Unions were forbidden during most of the regime, but persisting as beneficiary societies they had forced a place for themselves, and were among those first to receive aid in their strikes from the newly formed International of Labor. Largely to replace a growing popular revolt with patriotic fervor, war was cultivated with Prussia. At the battle of Sedan on September 4, 1870, the Emperor's forces were routed. A Republic was declared once more in France. Once again there was popular support for a war that had now become a war of defense. It was sabotaged by the politicians and their business associates who looked upon it chiefly as a splendid opportunity for graft. The Prussian army defeated everyone but the armed working class of Paris. The resentment of these workers against the bourgeois politicians grew, and, when they attempted to disarm the Parisian workers, revolt broke out, and with the Prussian and French ruling class at the gates of Paris in alliance against French labor, a Commune was set up in March of 1871.

The International was outspoken in the cause of their French fellow workers. Horrible atrocity stories were peddled by the capitalist press much like the stories told of the Russian revolution in 1917 or of the present struggle of labor in Spain. Most workers grew alarmed at what their Parisian fellow workers were doing. The Commune was crushed and a vindictive leisure class murdered thousands of workers. The very word "International" became one at which all but the most radical workers shuddered. In consequence support for the International dwindled in England, America and other countries. Labor unionism for a brief while grew ultra conservative expending far too much of its effort in an attempt to establish its respectability. That labor does move forward, is shown by the vast difference in the reaction of world labor to the similar situations of France in 1871, Russia in 1917, and Spain in 1936.

During these troubled years a dispute as to policy, teaching and structure broke out in the International Association of Workingmen. Marx as International Secretary stood for the continuation of its policies; Bakunin with the backing of the affiliated organizations in Spain and Switzerland headed the opposition. The two men became such deadly enemies that often the death of the First International is attributed to their quarrels. Significant likewise in the Spanish struggle of today is that the Marx-Bakunin Battalion of Catalonia has served as the shock troops of the present struggle. The name Bakunin is there, because the C.N.T. has his teachings so largely as their own body of tradition. The name Marx is there, because of the militant cooperation given by the P.U.O.M. or the "Marxists," a direct action political group who split from the Communists to follow Trotzkq and who later split from Trotzky to follow the class struggle concepts of Marxism as they themselves saw fit to interpret it to fit the conditions of their own struggle.

Despite the fact that the First International officially disbanded itself in convention assembled in Philadelphia in 1876, its Spanish Federation persisted more or less intact to 1881, and was a part of the brief-lived International Working Peoples Association that Bakunin formed of the portions of the old International adhering to his program.

Though organization was not always maintained, the ideas of solidarity, direct action, and a new social order in which labor, free from all coercion, would enjoy the full product of its toil, remained. A Socialist or Second International had been founded in 1890, and socialism had prospered in Spain since the days when Paul Lafargue in the early seventies had attemped to transplant it there. An International Federation of Trade Unions had been formed largely as an offspring of this Socialist International, a sort of world letter box for the unions that relied on contracts and legislative lobbying as the chief means for redressing the grievances of labor. But when the C.N.T. (the National Confederation of Iabor) was launched in 1910, it was virtually a continuation of the old International, and the old Spanish Federation of Bakunin and his associates.

Meanwhile, largely under Socialist auspices, another set of unions, connected with the I.F.T.U., had been established, and federated as the U.G.T. or General Labor Union. Both sets of unions had their ups and downs and suffered their periods of bitter political oppression. The U.G.T. got the support of the larger section of Asturian coal miners and of the workers of Madrid; the C.N.T. drew its support largely from the workers in Catalonia, with the workers in the marine industry of Barcelona and the manufacturing plants there taking the lead. Up until the present struggle the U.G.T. outnumbered the C.N.T., but by its aggressive action in this year the C.N.T. has reached at least a parity with the U.G.T.. if it has not outnmbered it.

In 1927 the anarchists of Spain and Portugal formed the F.A.I. (Federation Anarquista Iberica) largely as a group within the C.N.T. and have provided most of the functionaries for this federation of trade and industrial syndicates. The two are substantially inseparable. In their revolutionary struggle much of the old federalist, local autonomy, individual responsibility and initiative beliefs of the anarchists have been found inapplicable to the conditions at hand. The C.N.T. in this year's convention, before the Fascist coup, decided among other matters on a stronger degree of industrial centralization in their unions, and also that revolutionary struggles should be attempted only with the approval of the C.N.T. as a whole, and not on the initiative of any local group. The abortive and costly struggles of recent years had convinced them of the necessity of such a program. Even their bitter anti-parliamentarism was left aside in the February elections that brought in the People's Front government to the tune of direct action jail releases. Their direct action philosophy was well adapted to the needs of July 19, when the Fascists who had been tolerated by the liberal politicians started their long planned coup. Barcelona labor disarmed the fascists completely, and had it been better armed would have driven them out of Saragossa, too. The struggle against the imported army of Moors, Germans, and Italians that back up Franco's murderous effort to exterminate all labor organizations in Spain, has brought by now substantially all anti-fascist forces in Spain to the position of the C.N.T.—that this is a labor struggle against international capital and against the capitalist system itself, and that the business class and their professional politicians are not to be entrusted with carrying the struggle on. The exigencies of the same struggle has required the C.N.T. and the F.A.I. to adopt two policies that probably would have shocked many an anarchist a year ago: 1) the adoption of military discipline in the struggle, 2) participation by representatives of the C.N.T. and F.A.I. in the highest government posts.

Out of it all is growing a new social order, in which older theories may seem as much lost as oxygen is when it has combined to form water. But the oxygen is there in the water, and the old motivation toward a free social order, without gendarmes to enforce socialist policy, and the policy of direct action by the workers for the workers, is still there in Spain, and neither success nor defeat is likely to exterminate these germs of the new social life that is to be.

## Francisco Ascaso

(Continued from page 15)

over almost the whole of South America, at the same time broadening his horizon and acquiring a knowledge of human nature.

Thirteen months later, in July 1925, we see our fighter again in Paris. Here he remained until April 14, 1931, when the monarchy fell. Ascaso's first thought was to return from his banishment though he realized that the king had gone but the generals remained. Back again in Barcelona, he found fertile soil for his ideas. Spain was now a kind of camouflaged democracy, so long as the church and the army retained their old privileges. But July 19th was to be the hour of liberation for Spain. At the head of his fellow comrades and workers, by the side of his dear friend Durreti, Ascaso fought at the barricades. He had already conquered half of Barcelona, by July 20th he would have liberated the whole city. In Atarazanas, in the proximity of the harbor, Ascaso advanced in spite of the fascist machine guns. A rebel bullet struck him.

Comrade Ascaso is dead. But his work still lives and like lava has spread over Spain. The war front is the place where the fire of his lava burns most fiercely, the front of civil-war and social Revolution fed by the living soul and spirit of this man of action—Ascaso!

# The Dishwasher

*By* **JIM SEYMOUR**

Alone in the kitchen, in grease-laden steam,
I pause for a moment, a moment to dream,
For even a dishwasher thinks of a day
Wherein will be leisure for rest and for play;
And now that I pause o'er the transom there floats
A stream of the Träumerei's soul-stirring notes,
Engulft in a blending of sorrow and glee
I wonder that music can reach even me.
For now I am thinking, my brain has been stirred,
The voice of a master the lowly has heard,
The heart-breaking sob of the sad violin
Arouses the thoughts of the sweet "might have been";
Had men been born equal the use of the brain
Would shield them from poverty, free them from pain,
Nor would I have sunk in the black social mire
Because of a poor judgment in choosing a sire.
But now I am only a slave of the mill
That plies and remodels me just as it will,
That makes me a dullard in brain-burning heat
That looks at rich viands, not daring to eat;
That lives with its red, blistered hands ever stuck
Down deep in the foul indescribable muck
Where dishes are plunged, seventeen at a time,
And washt—in a tubful of sickening slime!
But on with the clatter, no more must I shirk,
The world is to me but a nightmare of work;
For me not the music and laughter and song,
No toiler is welcomed amid the gay throng;
For me not the smiles of the ladies who dine,
No warm, clinging kisses begotten of wine;
For me but the venting of low, sweated groans,
That twelve hours a night have installed in my bones.
The music has ceased, but the havoc it wrought
Within the poor brain it awakened to thought
Shall cease not at all, but continue to spread
Till all of my fellows are thinking or dead.
The havoc it wrought? 'Twill be havoc to those
Whose joys would be nil were it not for my woes.
Keep on with your gorging, your laughter and jest,
But never forget that the last laugh is best.
You leeches who live on the fat of the land,
You over-fed parasites, look at my hand;
You laugh at it now, it is blistered and coarse,
But such are the hands quite familiar with force;
And such are the hands that have furnished your drink,
The hands of the slaves who are learning to think,
And hands that have fed you can crush you as well
And cast your damned carcasses clear into hell!
Go on with the arrogance born of your gold,
As now are your hearts will your bodies be cold;
Go on with your airs, you creators of hates,
Eat well, while the dishwasher spits on the plates;
But while at your feast let the orchestra play

The life-giving strains of the dear Marseillaise
That red revolution be placed on the throne
Till those who produce have come into their own.
But scorn me tonight, on the morn you shall learn,
That those whom you loath can despise you in turn,
The dishwasher vows that his fellows shall know
That only their ignorance keeps them below.
Your music was potent, your music hath charms,
It hardened the muscles that strengthen my arms,
It painted a vision of freedom, of life—
Tomorrow I strive for an ending of strife.

# SHALL AMERICA GO HUNGRY?

(Continued from page 29)

good. Anyway, the boys down at Washington knew it already that times are tough, and that the jobs don't go round. They really don't need a reminder.

Perhaps we can rely on the growing realization that society must take care of those locked out by industry or these will have no alternative but to starve or take the industries themselves. Many assure us that this can be relied upon, and there may be something to it—not that the well fed have much more than an aesthetic objection to the unemployed starving, but that they certainly don't like the idea that they might take the industries and run them for their own use under the planned economy of One Big Union of Labor.

* * *

At any rate, we are sure of this. The folks who make the appropriations know of the needs of the jobless already. They won't do much about these needs except under further stimulus than this mere knowledge. They won't be stimulated to much by the kicks, whines and complaints of a bunch who don't stick together, who are mere harmless individuals. The more they see labor organized, the more they will do. The more they see labor aggressively demanding part of what it has produced, still the more they will do. And if they see labor organizing "to carry on production when capitalism shall have been overthrown," there may even be provisions for turkey and cranberry sauce.

We do not wish to discourage any pink slip parades, even though our confidence is not great in them. We do wish to discourage the idea that workers should starve slowly and quietly. And we do insist that no rights of theirs are going to receive much respect in industry or in the legislative bodies of the land unless they have enough respect for themselves and each other to organize, and to insist that these industries built by labor belong to labor, and that they are building the power to take back what has been filched from them.

# The American Newspaper Guild

(Continued from page 7)

news, to raise the standards of journalism and ethics of the industry, to foster friendly cooperation with all other workers, and to promote industrial unionism in the newspaper industry."

You will note two passages—"to guarantee as far as it is able constant honesty in the news" and "to raise the standards of journalism and ethics of the industry." These were pounced upon by the publishers, during the outcry against the Seattle and previous strikes to lend weight to the charge that the Guild was attempting to direct the editorial policies of the nation's press.

While many Guild members believe that their union will be able to make significant contributions to the labor movement, they have been forced to discount these charges by emphatically pointing out that the control of the publication rests with the publisher and that the sole aim of their organization is to see that the editorial workers come in for a measure of economic security.

The publisher well knows this, of course, but it does nothing to endear him to the ANG. The unionization of editorial workers is detested by

these gentlemen for reasons other than the increases in pay and shorter hours that are bound to come, albeit they surely are not eager to make even these concessions.

It would perhaps be well to point out to those unfamiliar with the city rooms of the daily press, that reporters are not usually "told" how a story should be written or what should be left out of the paper and what should be played up. It is an old saying in the craft that any reporter who is too dumb to discover "policy" is too stupid to stay on the pay roll. In other words, all reporters know that the boss is interested in strikes only to lend what assistance he can to the employer and it therefore is wise to waste no energy giving the strikers' position in the controversy.

One of the characteristics of American journalism, as it affects labor troubles, is that much can be written but under no consideration is one to present a fair, impartial account of what the workers want. Usually strikes are "covered" by picking up hand-outs from the Chamber of Commerce or some Industrial Association. Seldom does a reporter get his information direct from the union and when he does, it is either thrown away by the editor, garbled by a re-write man, stressing an "angle" favorable to the employer, or buried in the market section.

The hostility of the publisher towards organized labor is the principal reason for the prostitution of the word "news" in labor troubles, but there is still another—ignorance of the newspaperman. For the most part, a knowledge of the labor movement is not considered an asset on a newspaper. In fact, the stupidity of some newspapermen on the question of unionism is amazing and while unions are not likely to believe it, I personally know of instances where some blows below the belt were due solely to the lack of knowledge on the part of a reporter who was, in fact, sympathetic to the striking workers.

It must also be remembered that the working newspaperman is up against the economic question the same as other wage slaves. No matter how independent he may wish to feel, his insecurity is inclined to make him adopt a "protective coloration." Because it is the safe thing to do, many unconsciously accept the ideas and prejudices of the publisher. These are the last to admit that their attitude has anything to do with holding their jobs.

Here is where the Guild has entered the picture. By giving him some security, the working newspaperman can and has adopted an independent attitude once foreign to all but a few venturesome souls. Then their active participation in the labor movement rapidly conditions their thinking —they sooner or later realize their own status in the economic scheme of things. In brief, they receive a valuable education previously missed. This educating could be better understood, if the reader could see a young reporter attending his first Guild meeting and worrying about the boss —then a few weeks later see him enthusiastically voting a strike and going at this new activity in a deadly serious manner.

No union understands better than the I. W. W. the importance of taking one's case to the public. In the past many unions could do little to counteract the boss propaganda in the daily press. They were unfamiliar with journalistic tricks and practices and, consequently, they were practically mute at a time when speech was essential.

Whatever else may be laid at the Guild's door, none can say that it has not been militant. True the fights were forced upon it, but it did fight. As the result, there are today in the United States thousands of labor-conscious newspapermen who will and have lent their services to unions when the time comes for doing what the publishers call "influencing public opinion."

As this is written, I glance at a stack of newspapers. There are ninety of them. They are the issues of the "Guild Daily," published in Seattle during the Post-Intelligencer strike. As far as I can determine, this is the first time in the history of the United States that a group of workers went on strike but continued to work at their usual jobs. Here, certainly, is something for publishers to really worry about and here is an eloquent answer to those who condescendly say that workers need a boss to direct and exploit them.

Within a few moments after the management of the Post-Intelligencer announced suspension, these strikers went to work putting out a newspaper. It hit the streets after a hectic night and some 20,000 were sold. Then, each day during the long strike this paper not only appeared but it grew steadily in circulation and importance. Boycotted by the usual wire services, the nation was covered by the Guild Wire Service, made up of union reporters in every large city in the country. Its policy on all questions was determined by a vote of the entire staff and it gave Seattle residents an unusually complete coverage of the city's doings. Then, also, labor news was reported accurately for the first time since the suspension of the Union Record. This is probably wandering a bit afield. This article was to discuss the question of the Guild and honest labor reporting and not necessarily the importance in general to unions of organizing this particular group of white collar workers.

One can sum it up by saying that the Guild, as it stands now, will make for honest reporting of labor news, but it will take One Big Union to see to it that these honest reports are published.

—X304230.

# Preamble of the Industrial Workers of the World

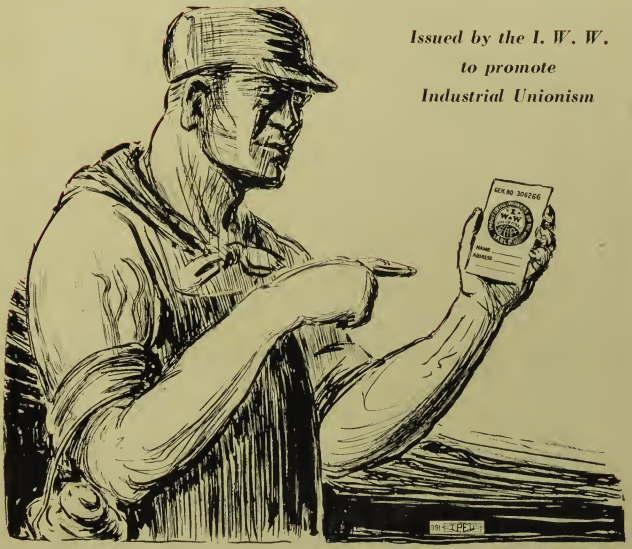
The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."



It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# *More Reasons for One Big Union*

All on the same job in the same union – all in the same industry in one industrial union – and all workers in One Big Union of the entire working class. That's the I. W. W. idea.

# *Direct Action - -*

"Who would be free, himself must strike the blow!"

So said the poet Byron.

"The emancipation of the working class is the work of that class itself."

So said the great economist and social philosopher, Karl Marx.

"Don't ask for rights. Take thim. An' don't let anny wan give thim to ye. A right that is handed to ye f'r nawthin has somethin' the matther with it. It's more than likely it's on'y a wrong turned inside out."

So, according to Peter Finley Dunne, observed that most observant political commentator, Mr. Dooley.

When a poet, an economist, and an Irishman all agree, they surely can't be wrong.

And even if they hadn't said it, we ought to know by now that nothing much is going to be done for the working class.

Yet great things wait to be done by the working class.

So their one chance of being done is direct action of, by, and for the working class.

That is why we strive to build One Big Union that will enable our class to act together for itself, and do the things that we all know need to be done, yet will never be done otherwise.

Are you with us?

# Is Machinery Destroying Organization?

By JUSTUS EBERT

**"NO!" answers this veteran labor editor who knows the answers. The industrial proletariat is growing, and the need of the hour is labor organization with the vision and structure to save society from chaos and ruin.**

With 52 million gainfully employed in the United States, it would appear that there are still many unorganized to organize. All of the statistics of labor organization, whether A. F. of L., or C. I. O., railroad brotherhood, or independent, show less than one-tenth of that number as members of labor unions. So there is still considerable room for more organization, especially in view of the many racketeering and warring tendencies at work among the so-called organized.

There are some among working men and women, however, who regard organization as useless. As they see it, the machine is destroying the need for labor and so will, in the course of time, destroy organization also. This argument, voiced by Stuart Chase and Alfred Bingham, middle class spokesmen with technocratic leanings, is well answered in the January 1937 Marxist Quarterly, by Lewis Corey. Writing on "American Class Relations," tending to show the decline of the middle class and the impossibility of a classless society in America, Corey, who is an economist and statistician of considerable standing, declares:

"Wage workers are now a clear majority of the gainfully occupied. Yet there are some who speak of the 'disappearance' of the proletariat. They say: 'America still has a proletariat, but every automatic process, every battery of photo-electric cells, diminishes its numbers and political importance'. . . . 'During the last generation the tendency to weaken the proletariat has been gaining in every advanced country. Numerically there has been an increasing shift from manual to white collar occupation', emphasized by a decrease of the industrial proletariat in 1919-29.

"The Industrial proletariat did not decrease during the 1920's; it was at least one-tenth larger in 1930 than in 1920. Although the rate of increase was smaller than in former years, the industrial proletariat by 1930 constituted 65 per cent of all wage workers compared with 50 per cent in 1870. The decrease in rate of growth was a result of more intensive mechanization, it is true, but it also was a result of the downward movement in the rate in the growth of American capitalist industry; hence it marks the beginning, not of the disappearance of the proletariat, but of the decline of American capitalism. To assume disappearance of the proletariat is nonsense; it presupposes a development of technical-economic forces that would strangle capitalism in an unprofitable abundance."

So much for Corey. His statements would suggest that, for some time to come at least, there'll be plenty of proletariat around to be organized and that it will be some time yet before the machine will have thoroughly caused the proletariat to disappear.

Further, Corey also suggests the need for organization to anticipate and meet the economic breakdowns that are so marked a feature of capitalist decline in this country. Few workers know what happened in this country in 1929. Unless all signs of the elements of weakness in the present "recovery" fail—the 10 to 14 millions of unemployed, despite 1925-26 output; and the disproportions between profit and wages—another and more severe collapse will be upon us in another year or two! What then? May not the occasion then arise when an industrially organized working class may have to take over and operate industry for the benefit of society, regardless of capitalist profit? Or are we workers, competent producers all, to stand idly by and starve, while society reverts to the wars and savagery of fascism, as manifested today the world over?

Therein will be found another reason for industrial union organization of **the right kind**—to save society from chaos and ruin when capitalism shall again have collapsed.

This is labor organization with vision; with a way out of the modern capitalist hell for the workers. And this is the vision and structure that all other labor organizations than the I.W.W. lack.

We workers need more organization and what is more important, better organization still.

# Red Samson Goes to Work

**By**

**Sugar Pine Whitey**

The long drag of the Western Pacific came to a jerky stop as the snug brake shoes clung to the polished wheels. A jolly shack in striped dashboard over-alls said that the train would stop for at least an hour. The switch men were breaking up the train to put on a few lumber cars and the two "helpers" needed to push the heavy train up the steep grade to Portola, California. Groups of dusty and hungry "passengers" swarmed off all along the yard, some making a bee line for the coffee pots and the fire places in the "Jungle," while others rushed up the tracks to rustle chuck in the none too friendly town of Oroville. The train had pulled out of the yards in Oakland during the cold dark hours of the previous night, stopping at Tracy; changing crew at Stockton, where I got on; then on to Sacramento, but whistling and rattling through the one-horse towns where the manifest had the right-away, side-tracking only twice for passenger trains on the whole run.

Now it was hot in the late afternoon and the weary passengers of the "side door Pullman" variety suffered more from thirst than from hunger. The majority was a motley conglomoration of unemployed that had been dumped off "Relief" subsistence in the California cities by a policy of "curtailment." They were now looking for the elusive "job"—somewhere— because honest and timid workers must work to eat—and eat to work—and they had been told by the relief officials and the Chamber of Commerce that Prosperity was returning to the land of humming industries—in fact, it was here.

A bunch of stiffs were waiting to get on when the train stopped. Some of them were tunnel stiffs and dirt movers out of L. A., going into Nevada or wherever jobs could be found. There were tramp line-men and building mechanics going east to wait for the "boom," A few prospectors going up the Canyon to "snipe" in the banks and gullies along the Feather River. The rest I recognized as "pine cats," a common species of California loggers. But one man among them certainly looked like anything but a woodsman. . . .

I was sure that I knew him—no, it couldn't be! . . . Blackie? Naw, this man had red hair—sort of curly, too . . . then I spotted his fourteen gallon hat and open shop pants tucked into fancy riding boots, and I knew that this cross between a cowboy and a snake oil peddler could not be the "Blackie" I used to know . . . the damn old roughneck and jack of all trades! . . . Knew his stuff, too . . . .

But it was him! . . . "E' lo, Whitey!" he said and stuck out a mitt . . . the same old drawl—but why the make-up? . . . Oh, well, no use being a hoosier and giving a stiff away—after all, this was in California! "Hullo! Bla . . ." . . .

"Samson," he said. "I reckon' you've forgotten, eh?—Bill Samson" . . .

"Yeah, that's right—I remember now!" . . . Jack Baxter, as sure as the color of his hair had been changed! . . . Delegate, organizer in many tough spots . . . What's he up to now? . . . Worked with him on many jobs . . . down south—Louisianna, Texas, Arizona . . . Tampico oil fields—in

our younger days . . . spoke the language like a native . . . Together on the picket line in Washington and Idaho—1917 . . . Campaigned with him in Coos Bay when Westley Everest and other union men were run out by the scabby mob . . . Klamath-Siskiyou . . . Redwoods . . . drove tunnel on the Hetch Hetchy . . . fight with dehorn scabs in Stockton and nearly killed . . . funny how time flies! . . . Stool pigeon Coutts spotted us on the Southern Edison out of Fresno—arrested by company gunmen—months in the bullpen in L. A.—C. S. trial—beat the rap . . . Arrested again in Oakland—tried . . . Oh, well . . . Justice is a blind and drunken harlot in California! . . . Gave us a chance to meet the **best** people in California on both sides of the wall—friends at such a time are friends indeed!—Sancho, Barry, Older, Sonja and her sister—others . . . fine people all, though not members of our organization, hm . . . we parted in Frisco when he went north and I drifted into Chi . . . .

And here we meet again!—"Red Samson," who used to be "Barney Armstrong" down south and "Blackie Larson," with an uncertain Scandinavian accent, on the Puget Sound! . . . He changed his name often, when circumstances made it necessary, but his principles and integrity to his class —never.

The "helpers" were put on and the new train crew was coming through the yard and boarding the "crummy," the brakes were tested with the hiss of an angry rattler—all of which indicated that the engineer was about to give the highball and pull out. The head shack and the conductor, whom I recognized to be boomers, gave Red the once over and winked at me. Wise cracks and jibes were coming from some of the stiffs in the direction of Red, but the latter paid no attention to that.

"This is going to be ah-right," he said, as we climbed into the cleanest of the three empties. Soon we were on our way.

* * *

The air turned cold in the narrow canyon as the day faded into darkness. The floor of the boxcar was covered in sardine fashion with hoboes. Some spread paper on the floor and lay down as in bed. Others huddled like low caste Orientals and shook from cold and the swaying motion. Two young fellows who looked to be twins were sound esleep before the train was five miles out of town. They had come to California from the East, looking for work and had landed in the bread line in Frisco. Now they were "sure to get a job on the East coast" when they got back. Nice boys, too, with hope shining in their eyes, but one coughed continuously in his sleep while the other snored.

Two young Negroes were sitting together, chatting and laughing as if they were home among friends.

"I wish I was one of them Christian Scientists or . . . could go to sleep and dream about a big juicy T-bone steak!—The sandwich I got from the kind ole' lady in Oroville has shook loose from my ribs!" . . . .

"I'se got a lady friend in Ogden—I can sure eat there!"

"But dat's a long, l-o-o-n-g ways from here, black boy!"

Red and I sat in the door way, facing the river. Lights from cabins across the canyon blended with the stars and the Man in the Moon seemed to flit from the tree top to tree top as in a Mickey Mouse comedy. I asked Red where he had the rest of the circus and he answered that I hadn't seen anything yet.

"Wait till tomorrow when we see the bull of the woods—ever heard about the Romans and the customs in Rome? . . . Well! . . .

"This country is not what it used to be when

*When it was rumored about that Prosperity had returned to the land, the soup grew thinner in Los Angeles, and the freight trains were crowded with hungry men looking for the elusive job.*

the I.W.W. was strong in these pine hills! It's overrun with scurvy finks and spineless Scissor Bills who have flocked here to get away from Unionism and the draught. . . . Some of the old-timers who used to be all-right have gone the de-horn route and are useless to themselves and the organization. . . . The Slough camp was pulled two weeks ago but the men were outnumbered by the rats and the strike—if you can call it that—was broken. I'm hitting for there now, and Shorty and Slim over there in the corner will double back from Reno and try to set in later . . . If the Puget Sound fog has dried on your brains, maybe I can drag you along?"

We got off at Quincy and waited for daylight. From his roomy suit case Red dragged out some bizzare rags and dressed with the expert care of an actor. I swore that he would have a better chance for a job on a dude sheep ranch than he would in a logging camp, but he only grinned.

"That's what all the rest of the hoosiers think—but the boss knows better. . . . It didn't do me any good to play hide and seek with 'em—so now I carry the sort of brass band that plays their kind of music." . . . .

He folded a black kerchief around his neck and ran the ends through a transparent dice with green spots. A heavy imitation gold chain stretched across his chest between the pockets of a pink shirt which was generously decorated with useless buttons. A bear carved from redwood burl hung from the watch chain and made a clinking noise against the mystic dice when he walked. A broad metal-studded belt with an engraved round silver buckle kept his leather-lined riding breeches from falling into his Russian boots. A red and white calfskin vest was open in the middle so as not to hide any of the fineries. Over all this he put a long, black claw-hammer coat, with copies of the Sacramento Bee and the Christian Advocate showing above the side pockets. He carried an old bulging suitcase with a rope tied around the middle. . . . He was a heluva looking logger but he looked pretty much like a man at that! With his rugged body, serious mien and Soap Lake complexion—old and young would give him a second look—even in California.*

* * *

Frank Overmann, superintendent for the Slough Lumber Co., was in town looking for men. We met him at the grease joint where Red and I had some kind of a breakfast. Since the strike at the camp, the labor-hating "super" had trusted no one but himself to hire the crew. His mancatcher in Sacramento had been worse than useless. When Overmann had warned him not to send "any Wobblies or other damn union men and radicals," the m. c. had hired "the most useless trash in the valley—hay hands, canned heat maniacs and the sweepings of the soupline . . . who in hell could log with such people? . . . What good was it to have millions of unemployed if you couldn't put the fear of Christ into the damn timber beasts and make 'em snap into it without a lot of squawking and striking? . . . What's needed in this country are stricter laws and strong men to enforce them . . . all this foolishness in the busy season is an outrage—but I'll learn them dirty bums yet! . . . Those dryland farmers from Oklahoma and Arkansas may be loyal and all that but they certainly didn't know how to get out the round stuff—ruined more damn supar pine than they were worth, falling the damn stuff in the rocky ground."

So opined Mr. Overmann.

Red Samson created quite a sensation in the little mountain town. Overmann spied us and gave us the once over.

"How'dy, boys! Looking for work?"

We were. He ran his eyes over us as if he were buying cattle. His patronizing look of amusement changed to suspicion as his eyes rested on my stagged water-repellent pants.

"Northern man, eh?"

"No'th or sou'h," I said. "Worked with Red heah' in South Cah'lina and Louis'anna . . . Can do mos'ly anthing, I recon' you need any cat skinna'hs?"

"Well, yes came to think of it—I can use a couple good cat men." Then he turned to Red: "Ever run a donkey?"

"You all mean just one donkey? He, he, he! I've run as many as twenty of 'em at one time down in Geo'gie—yes, suh, twenty . . . I recon' I can handle the mos' o'nery donkey you all have on the place—why, my ole' pa said befo'h he was kicked in the haid by the meanes' ole' mule you eva'h saw that thar was no better mule boy than me nohow."

Red was putting it on, all right. He was born in the south and he could mix the dialects of many states without half trying.

"All right," said Overmann, contemptuously grinning and meditating to himself. "I've got a good job for you." Then he dogeyed me once more.

"You can come along, too—I'll give you a cat, if you think you can hack 'er."

We drove out with the "super" in his new Packard, going by way of Huck's Ranch. Nobody spoke on the way, but I could see that Overmann was amused and satisfied. We stopped in front of the camp office where we met the timekeeper and

*) Soap Lake, Wash., credited with capacity to cure many ailments, at least does change black hair to red.

foreman. The foreman grunted when he saw Red and he turned to the super.

"What's this fellow going to do?"

"Oh, I just had a bright idea, Daniels—this fellow will make a good helper for the bull cook. . . . Are any of you guys Wobblies?"

I told him that I had "no use for them thar fellahs," but Red was more specific.

"No, suh! I used to be a Baptist when I was a straplin' but I guess I'm not much of anything now —he, he, he!"

"Well, that's fine . . . We gotta be on the lookout for the Wobblies. They are trying to horn in here since the strike . . . they've been here with their damn poison stickers an' unpatriotic propaganda . . . But they didn't stay. And I want you, Buffalo Bill, to be on the lookout, and tear down them damn stickers whenever you find 'em, and report to us. There will be no strikes or meetings in this camp!"

The timekeeper was a vest pocket edition of the super. Superciliously he took down our records. He said "we" and "us" as he referred to the company while giving us the third degree. I told him that I had been fishing in Alaska for several years but that I paid no attention to the names of the fish buyers as by brother tended to all of that.

Red's record was a bit more complicated. By the time the timekeeper had got around to his mother's maiden name, he was that worn out that he gave us each a number and two tags, one to give to the bull cook for a bed and the other to carry on the job.

There was no bed maker and we had to get blankets from the office and make our own bed; and the musty old blankets might have been used by people who were suffering from hydrophobia.

The stiffs made wise cracks and sarcastic jibes and even the prune pickers and the poison oakers snickered when Red and I lined up for supper. The chuck was terrible. Butter was dished out in small chips as in a Japanese restaurant, but the man on Red's left had a dish of it in front of his plate. Red reached over and helped himself to a sizeable chunk.

"Say there you! This is my butter! You'll have to buy your own here if you are not satisfied with what is served on the table."

"Gosh, pard, you don't say! I'm a stranger heah but I reckon I'll learn directly."

"Oh, shucks, stranger; there is no harm done. I don't like to buy my own butter, but my doctor said that I must eat more butter." Questioning Red with a silent stare, he whispered confidentially: "That's one of the reasons why the reds and the floaters struck . . . they told Overmann he'd have to take his pick between them and 'Ole'—he, he! Imagine, calling butter 'Ole'? Funny fellars them radicals!"

We fought bedbugs the first part of the night, but we slept soundly when the gut hammer called us in for breakfast. The latter was a mere routine. After breakfast, I was shown around by "Slim" Daniels, the quiet-spoken foreman. "You better be careful in these steep rocky hills," he warned. "We had to bury one of the skinners last week."

The "cat"* was a new "Seventy-five" with a mammoth arch. After chugging around in the hills for eight hours over rocks, bumps, logs and deep dust banks, I lost all human feelings and appearance and my only interest in life was a cold drink of water in a shady glade. Logging in this camp was done by "cats" and "steam." A "two speed" donkey engine was whizzing and snorting as the "turns" were pulled out of a deep ravine and the steam rose in white rings into the clear air. The rigging crew bounced and ran back to the line as the chokers were skinned back from the spar tree to where the sugar pine lie deep in the bottom of the ravine. It was a "hard show," but the tall and sturdy sugar pine was of good quality in this high altitude. The company could well afford to pay better wages and furnish better food and camp conditions. But the company was organized with the rest of the operators and the majority of the lumber slaves were not.

My back felt as if it was broke and my face was a brittle cake of dust when the day was over. It was Red's time to stare this time. He had taken off all the camouflage but the hat and boots. His chief function beside cutting wood and being a handiman around camp was to tear down I.W.W. stickers wherever he found them and to be on the lookout for "radicals" and "red lit'rature," which seemed to be increasing despite the eager snooping of the "loyal" bull cook, Frick Windgate, who was supposed to be the master stool pigeon in charge of Red. Both worked under the direction of Overmann. The foreman had the reputation of being a good logger who knew how to get the most out of men and machinery, but he seemed to have no interest in being a detective. Despite all warnings of the super, who was in deadly fear of the "radicals," "Slim" Daniels refused to spy on the men. . . . He saw things, but what of it? That had nothing to do with logging. He was young yet and he had a family. The job was not to be sneezed at these days, he thought . . . and if the crew could stand having their underwear inspected by the company stools, why should he squawk? But he lay drunk in his cabin for two days after

*) Skinning a cat is driving a tractor (with caterpillar tread) used for hauling out the logs. The rigging crew handle the cable, which runs through blocks on the top of the tall spar tree, by which the steam donkey engine accomplishes a similar purpose.

the crew walked out for better chuck and a bathhouse.

The crew sat outside the bunk houses at night until bedtime, as is customary in the California pine woods where the air is dry and clear. A bon fire was built when the nights were chilly. This used to be the place to spin yarns and express fellowship, but there was little of that here. Suspicion and mistrust hung over the camp. The decent element with union cards in their pockets trusted only those they knew before, and they were waiting and preparing to take a stand whenever possible. I lay on my bunk nursing my sore back and muscles the first few nights in camp, but the talk drifted up to me about logging, sports, the movies, women and the coming election.

Said the stoop shouldered brush piler who had orders to eat more butter: "Things are bound to pick up after the election, if Marionette is elected Governor. He is for the pension, and besides . . . The sup' told me the other day that if Sinclair is elected it will turn California into a desert,—practically speaking, you know."

". . . So we went up to the hook shop back of the Mission . . . and there we turned over a few . . . the pimp got sassy and we threw him downstairs . . . I smacked the landlady in the puss and my pardner grabbed a pot and heaved it at the piano, but it glanced off and struck the blond angel-face right smack in the mush . . . We was stewed to the eyebrows, see, and the last thing I could remember was that we went down the street and saw some fellah talking radical on a soap box, and we knocked him right in the guts . . . I never had so much fun since grandma was kicked by the old mule."

The "floaters" that had arrived since the "strike" didn't say much as they sat looking out over the peaks and summits of the Sierras across the valley below, beckoning purple and blue in the still summer night . . . beautiful, peaceful, clean — despite human degeneration . . . oh, hum! Tomorrow is another day . . .

Then thing began to happen. One by one the crew go sick and had to lay off from work. Some quit. New men took their places. It was especially the old hands that were stricken. The cook and the water got the blame—and maybe it was. The symptoms were aggravating, to say the least. Even Windgate, who carried written recommendations for being an efficient dependable bull cook, was stricken with the plague; in fact, he had to go to bed. He could hardly drag himself away from the little house back of the camp and he itched and scratched night and day. Red, who showed a stubborn resistance against sickness, offered to do the work for both of them. The super was not feeling so well himself, and he was puzzled. Perhaps there should have been more butter.

Two men were found to have I.W.W. literature in their bunks. They were fired and Overmann warned them never to come back. There was something queer about it, because they had been heard to say they had no use for any union and that hanging was too good for the "Wobblies." But matters went from bad to worse after the men were fired. Not that Red Samson shirked his duties—he had never been so busy in his life! Mr. Overmann told his wife that he wouldn't know what to do but for Red, and Mrs. Overmann agreed that Red was "a very nice looking man," and she found plenty of work for him to do around their place. "Picturesque" was the term she used to describe the camp handyman. He was as popular as the plague with the stiffs and they swore bitterly what they would like to do to the "dirty sonofo." But Red neither heard nor saw anything as he went about pulling stickers right from under the nose of Overmann. But for every one that was torn down there seemed to be two back in the same place the following day.

The silent agitation was very annoying. Here the price of lumber had risen, with hands plenty there was a chance to make up for the lean years —but now these pests were agitating for higher wages and better conditions which amounted to profit sharing. . . . "They should be thankful for having a job! Healthy work, too, though maybe a cat skinner didn't last many years before his back gave out—and if the chuck was not the best, it was better than in the soup line by gosh!" If an employee was injured, he would receive state compensation; if he was killed, he was out of his misery! . . . So they had nothing to worry about —but what about the employers and the stock holders who had their money invested and were taxpayers? Did the damn trouble makers ever think of them? And who would employ them when they went broke? "Ungrateful sons of bitches!" said Overmann, as he tore off another sticker from the bill board in front of the office.

Yes, indeed, those little stickerettes were annoying. Worst of all, they even made a man think! . . . . Colored stickerettes they were, mostly red . . . there was one with the picture of a giant breaking heavy chains and claiming the whole world—that was Awakening Labor. Then there was a hoot owl sitting on a branch and hooting warnings down to a gyppo who was reaching for a doughnut on the end of a long bucking saw . . . there were others—and then there would be showers of leaflets expounding the merits of Industrial Unionism and the need of Solidarity. But the most exasperating of all, the super and the time keeper agreed, was that young sober-faced man looking down at you from a black and white stickerette with a red background, telling all lumber workers to "Line up in the L.W.I.U. 120 of the

I.W.W.!" Overmann would have liked nothing better than to "send that fellow down the road talking to himself."

Mrs. Overmann was a credit to the California climate. She could hold her own anywhere in a state that is justly credited with beautiful women. But it was not her graceful shape and features which struck one at first glance as much as it was that come-hither-please, stop-I-love-you kind of a look. It sort of got you in the weakest spot and made you think that the high altitude was too much for your heart.

It was part of Red's duties to cut wood for Mrs. Overmann. He told me confidentally: "She wants more service than anyone I've ever seen—and I get dizzy to be around her. I've never torn down any fences to get into anybody else's orchard; but when I'm around her the sweat under my arms gets so strong that I feel like a billy goat."

"That ought to be as pleasant as to tear down stickers and put more back in their place!" I remarked.

"Uh-huh . . . but I can't simply stay there and dummy up when she wants to know what I think of Clark Gable or the Prince of Wales. She wants to know what movie actress I like the best and why . . . She wants to know if I'm married and all such stuff. I'd leave tomorrow, if it wasn't for something else—Bill and Tom ought to be here soon from Reno. She is ah-right and all that but, of course, she is bound to be lonesome living with that scabby baboon!"

The following day, after Overmann had left for Sacramento, beautiful Jezabel called Red over to the house. A picture had dropped off the wall in the bed room, nearly killing the cat—and would Red please help her to get it back in place? Of course, he would . . . She was dressed in a blue silk kimona . . . her hair brushed against his face as she helped to straighten the picture in the right angle. They stood looking at it together. Then a thought came to him. Well, maybe the psychology guys would have another name for it.

She told Red before he left: "I'm so darn lonesome that I'll die or go crazy if I don't get away from this place."

The camp had been showered with bulletins and leaflets and nobody seemed to know by whom. The super was getting ferocious and threatened to bring armed guards into camp for night and day service. The timekeeper even suggested the militia. Everybody was talking about it. The old "loyal" crew was thinning out and some of the new arrivals were suspected of being from the north (which meant anywhere north of the California border, but especially where the I.W.W. influence was reported to be stronger). But no one had shown his hand yet.

The super was storming in the office: "I don't like them nor their damn foolish papers, nor their stickers—now nor ever!"

"So I've noticed," drawled the foreman. "But the time may be coming, by gad, when we may have to put up with 'em whether we like 'em or not! . . . . There is something about those people which reminds me of the steam in the boiler or the moving of a glacier . . . I don't understand what they are driving at—and some of them are mostly talk to make impression on people who are asking for more than the chronic growlers—but I know that as long as there is fire under the boilers we may be thankful that there is water in the boilers and a safety valve to keep the whole thing from blowing up beyond repairs of anybody . . . Came to think of it, somebody left a paper on my bunk last night and I read some of it.—Say, there is news and stuff in that paper you can find nowhere else . . ."

"Huh, I suppose you'll be taking out a red card next!"

The camp was short handed and when Bill and Tom arrived from Reno with Bob Ryan, they were put to work. All were fellow workers and active members of L.W.I.U. 120. The organized workers were coming out more in the open now, but the rambunctious super did not feel so lucky as he did with the "loyal" crew. The epidemic had subsided, but the bull cook, Frick Windgate, still had serious relapses and was talking of quitting.

One night Bob Ryan got up at the table and announced that there would be a meeting after supper. "It's an open meeting and you will all be welcome—we only ask that you help to make it an orderly meeting and to allow no interference with our business of organization."

You could have heard the proverbial needle drop. The time had come! Windgate and the timekeeper turned red in the face and were about to explode. But now there seemed to be a new power in the camp, and there was a look of hope in the eyes of some you would least suspect of such extravagance.

Fellow Worker Ryan stood on a stump in front of the cookhouse at the announced time. There was no chairman—that would be tended to later. This was primarily an invitation to organize in the union and to form a grievance committee that would function between meetings.

"Fellow workers," he said, "this is the first job organization meeting held in this Canyon in many years. And this camp is a fair example of the results of having no meetings of this sort. Individually we can do little or nothing about it. Collectively we can.

"Those of you who aren't members know something of what we're after—decent camp conditions, decent chuck, shorter hours, more pay. And

when we get these things by organized action, we get something else with it—self-respect, and respect for and confidence in our fellow workers, and a new spirit on the job and in the bunk-house.

"We want you also to know something of how the I.W.W. and Lumber Workers Industrial Union Number 120 runs its affairs. It is run by the rank and file, by meetings like this on the job, but where every man packs a union card, where you elect your chairman, decide the policies of your organization, and tell your officers what they are to do."

The setting sun turned the green-clad pine hills to purple and gold. The heads nodding assent, the gladness that shone from these men, as they seemed to break an oppressive chain that bound them, all made the speaker grow a bit poetic as he finished his short talk with a picture of how these job organization meetings were slowly but surely building the structure of a new society within the shell of the old.

Then the meeting got down to business, and it was found that more than half of the crew that had arrived since the strike were members. Besides Ryan, there were Tom and Bill with credentials, and they were kept busy writing out membership cards. A committee was formed to interview the crew regarding the walk-out and who was who. Those who were proved to be dyed-in-the-wool scabs were barred from the union. But inasmuch as there had been no regular meeting held and vote taken at the recent "strike," the latter was considered as a walkout, and younger workers without previous experience were not held responsible. Finally a Job Grievance Committee was elected to tend to business between meetings. The chairman of this committee was to be the Job Steward who was to take his orders from the committee and the membership at the regular meeting.

A new era had arrived in the Slough Camp . . . the tide of organization was coming back in the pine woods. Similar meetings were being held in other camps . . . conditions were improving. No longer did the men at Slough's camp furnish their own butter . . . No longer did the men in the Klamath-Lakeview-Siskiyou districts have to furnish their own tools and scab on the saw filers. Unorganized walk-outs were discouraged as futile. Job organization got results through a system of Job meetings—Job Committees—and action according to circumstances. "Pine cats" were learning to walk erect and to have confidence in their organized efforts—and in nothing else.

* * *

Red Samson quit the morning after the meeting. He had been in the background during the meeting. His purpose was accomplished. He belonged to the vanguards that go ahead blazing the trails for the pioneers. He was a builder by his inherent nature . . . but sometimes he found it necessary to tear out rotten planks and timbers in order to build a new healthy structure.

Windgate, the snoopy bull cook, was caught rifling a pack sack. Before the camp committee had a chance to function, he was beaten and thrown out of the bunk-house. He begged for his life and promised never to do it again. But he quit the following day, the same day when Red quit. Overmann brought them both into town in his new Packard. The super was not so cocky now. He was undecided what to do—allow the "damn Wobblies" to organize right under his nose? Or fire the whole crew and comb the country for "Poison oakers" who would be "loyal" to the company until they learnt to be loyal to themselves? So he just pretended to have the situation well in hand and hoped for the best—for him and the company. To Red he offered a written recommendation for his good work against the I.W.W.!

The timekeeper gave the bull cook and the handyman a condescending "s' long," as they were leaving. The foreman was standing on the office steps, stroking his chin. He grinned and sort of winked at Red but said nothing.

Red Samson was dressed again in all his barbaric splendor. He was heading north to a camp in Oregon. There was a hardboiled foreman, a blustering gun man and company sucker—that was Red's meat . . . Now he felt like he should be fumigated and take a germicidal bath after associating with scabs and the scab-herding super. He would "clean their clock" if they gave him half a chance!

None of them saw a woman in a blue kimona who was hiding behind a curtain as the car zipped down the dusty road . . . Red looked at the timber line with a far away look. How tall and straight and clean the sugar pine stood in the sun-swept slopes . . . they too were alive—very much so—but they lacked that spark of consciousness which made for pleasures or pain . . . no philosophers among them to wonder about their purpose in life, or make them feel inferior to their fellows, or strut peacock feathers in a brief moment before they passed on to extinction or a new life.

He looked at Frick Windgate and felt in his roomy side pockets . . . "the dirty fink!" . . . then he brought two colored pieces of paper to his mouth and licked on them—and with his open hand slammed one on the bull pack sack, the other in the side of the car.

*By A. Yourniek*

## *The narrative of a seaman cast upon the white-guard fringes of the Russian Revolution*

In the middle of September, 1917, I got an able-bodied seaman's job on the U. S. Shipping Board ship, the S. S. Oshkosh. She was taking on cargo at the Brooklyn side.

I had just come out of jail where I had served a six month sentence for my I. W. W. activities. Just then the Russian revolution was in full swing. I had made up my mind to go there; and I was glad when I saw that some of the cargo stowed away in her hold was marked with consignments to Russian ports. The cargo consisted of the usual war material and railroad equipment. As soon as the crew were signed on, the ship pulled out in the stream where she took on an additional 200 tons. This last batch was dynamite.

The Oshkosh was one of the many confiscated German ships. In normal times she would have been condemned. She was overaged, rusty, neglected, and we found out later her engines were in very poor condition. She was stalling all the way across. The best speed she could make was about seven knots an hour. It was a hell of a ship to be on in wartime, and after she got under way we began to doubt whether she'd ever make it.

A few days after we left New York, we put in at St. Johns, Newfoundland, for bunkers.

Discontent was brewing among the crew ever since we let go the lines, and by the time we put in at St. John everybody was grumpy. The cook skinned out of her because of a quarrel with the steward. I too had the mind to get to hell ashore, but that yearning to see the "workers' fatherland" for myself kept me on the Oshkosh.

It was a bright Sunday morning when we cast off the coal dock and steamed for the sea. The weather was calm with a heavy swell rolling westward.

During the trip across lookout for submarines was kept on both masts. On the foremast the crow's nest wherein the lookout was kept was a home-made affair, just a common oil-drum riveted up there for that purpose. The lookout was kept by the regular crew.

The mainmast lookout was kept by the gun crew, all of whom were regular navy men. A lieutenant was in charge of them and their specific duty was to man the guns in the event of an emergency. The Oshkosh had two guns. One was mounted on her bow and the other on the stern. It was believed that these two guns were sufficient protection against a submarine attack.

On good weather days we were put through some sort of training. We mustered to our stations and there we were told what to do should a submarine pop up. At times, we'd pitch a barrel overboard and aim at it with our guns. At such times the men off duty had to pass up ammunition. It was tough, hard work, and we strongly resented it. The shells were stored in the forepeak, some decks below our living quarters.

The days on the Atlantic were passed quietly and without any excitement. We sighted nothing all the way across. Only off the Oakney Islands we stumbled across the path of a British patrol ship. She had once been a passenger liner. At the patrol's request we hove to. An officer and some of the crew came aboard. After the usual inspection they released us and we proceeded on our way.

A few days later we dropped the hook in Bodo, Norway, close by a German freighter. We were in a neutral port and our stay here was limited —it wasn't to outlast the night. The Oshkosh and the German were enemy ships. Should we meet out on the open sea, we'd try our damndest to sink one another; but we were in a neutral port, and the captain and the officers, and the naval crew had to be nice.

Early next morning two pilots came aboard. We heaved up anchor and were on our way again wriggling through the fjords.

Later we made Kirkeness. It was our last port in Norway, about 30 kilometers from the Russian border. There we took another pilot and sailed for nearby Petchinga.

One can't really call Petchinga a port. It lies in the embrace of a large bay which resolves into a narrow opening. During the war it was used as a naval base for mine trawlers. From there we picked a Russian convoy to Archangel.

At last on a late afternoon we pulled in Archangel. At once various immigration officials piled aboard. The American consul came aboard too to look things over. That night we were told that no shore leave would be given anybody.

In the morning a barge filled with longshoremen drew along side and they took off the dynamite. We shifted across the way to a place called Bacarítza, where all the war material was discharged and stored. There again we were told that nobody from foreign ships was allowed to go ashore.

Bacaritza was lorded over by a British naval commander with chin whiskers that made him look something like the Tzar. Though still under the nominal control of the Russians, it was overseered by the British because of an alleged mildness on the part of the Russians in dealing with German spies. These spies had already succeeded in blowing up a Norwegian freighter laden with ammunition; and the explosion caused the bigger part of the war material stored on the docks to blow up too.

That morning I had my first look at the inhabitants of revolutionary Russia. They were longshoremen's work. A lot of other people were bouncing about giving orders; they were dressed up in uniforms somewhat similar to those worn by state employes during Tzarist times, brass buttons, high pressure caps and the rest of such paraphernalia.

Among these longshoremen were many Latvians from whom we learned what was actually taking place. The revolution, they said, had given them the right of free speech and of organization, but no bread, and of course that much promised peace had not been realized. It was bread and peace that they had wanted. They had been fooled, they said, hoodwinked by leaders who mouthed workers' phrases to make their hoodwinking effective. But they still had hopes. They talked of a new party coming to the front, the Bolsheviki, a party composed of workers, they said, with a platform of taking over the factories by the unions, the farms by the farmers, the abolition of private property and the ending of the war.

The October revolution took place while we were still lying at Bacaritza. Around Archangel during this time things were surprisingly quiet.

When we had finished discharging, we moved over to Solombala, a suburb of Archangel. There we started at once to take on cargo for the United States, and it was there for the first time since we had arrived in Russia that we were tendered permission to go ashore.

At the announcement that the captain was giving out draws, all of us scrambled midships and put in for as many rubles as we could get. Then we spruced up, got ready and beat it ashore to investigate things for ourselves. I still had a few I. W. W. papers and pamphlets left, stowed away in my locker. I crammed them down in my pockets and left with the rest. We remained ashore having a good time until the Oshkosh got through loading. At that time, although bread and other foods were scarce, if one had the price for it, he could get whatever he liked.

From Solombala we moved down the river to a place where we took on bunkers. We were about to start for home, and we would need plenty. It took two whole days to coal up the ship. The work was done in a very primitive way. The coal was shoveled from a stock pile on the river bank into wheel barrows and trundled thus to the ship.

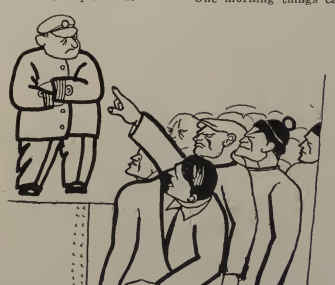
Most of these coal heavers, a lot of women amongst them, were Latvians. Their quarters were by the river. They were long sheds lined on the inside with a double row of shelves which were used for beds. Men, women, and children all lived together.

Monday morning the breakfast dished out to us was positively lousy. This particular breakfast was the occasion for throwing me high and dry to a different world entirely. As soon as the food was brought into the forc's'le, which was also our messroom, the fireworks started. Across the alleyway were the firemen's quarters. We could overhear them growling and cursing too. We called them over to talk things over.

We decided to form a Ship's Committee and have them interview the steward and captain. The result of the first interview was unsatisfactory. We were plainly told that the food was the best that would be given us. The captain made himself quite clear to the committee members that he was running "his" ship, and wasn't taking orders from any deckhands or firemen.

The committee report served like a match to a gasoline tank. We grew defiant, and agreed to lay

off work until adequate and better food was provided.



We knew how much stores we had taken aboard at the beginning of the voyage. It was enough for the round trip, and here we were with only half of the trip over, and run out of grub already. Either the steward had sold the stuff to the longshoremen, and the "old man' had had his finger in the pie, or the shipchandlers had sent short stores aboard. Now the ship was ready for sea. Cargo and bunkers were gotten aboard, and everything on deck was secured.

It was cold, and every hour it was getting colder. Over night the river got thickly caked with ice, so that in the morning the ship couldn't get away without the help of an ice-breaker.

The day we sent our ultimatum to the captain our time was whiled away pleasantly enough. We stayed indoors and played cards with the gun crew, with whom we were on fairly good terms.

Next day the "old man" informed us we had to get up steam and be ready for departure as soon as the ice-breaker made its appearance. We stood pat on our demands. We wouldn't budge. Particularly determined were the firemen. At sea they had the toughest part of the ship's work.

When the captain realized that we wouldn't give in, he began to run the old bluff about mutiny. He roared we were delaying the ship's sailing and that we were interfering with the successful carrying on of the war. But we considered ourselves in the right. We demanded to see the American consul about the matter.

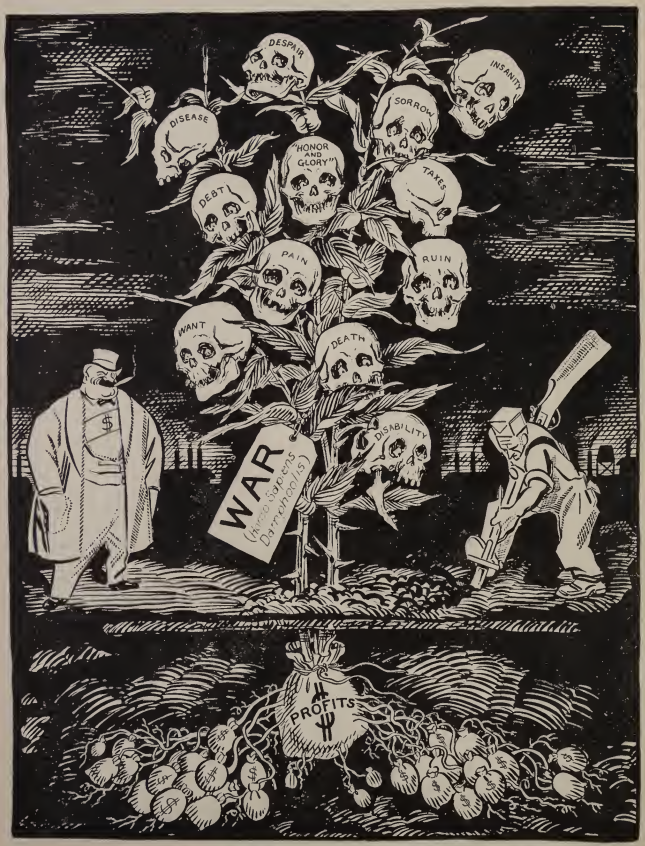
The ship was lying about ten miles from Archangel and the communications not being of the best, and the weather being very cold, we told the "old man" to go an fetch the consul aboard. He went up to Archangel, returned the next day and called everybody amidships. There he laid the law down to us, and recited what the consul had empowered him to do. He said we were to turn to right away and take the ship to Murmansk. There we were to get some stores from a British cruiser.

We returned to the forecastle and held another meeting. "The 'old man' is bluffing, is kidding us again," said the chairman of the committee. "He is just trying to get the ship out at sea, and once there, he'll head straight for home without putting in at Murmansk." We decided not to work until our demands for better food were granted.

When the committee made its report to the captain, the old shell-back ran amuck. He threatened the so-called "ring-leaders" with imprisonment, and called us a "bunch of sea-lawyers and I. W. W.'s" which most of us were. "I can lock most of you guys up right now if I want to. I can put you in irons. I've got navy men aboard, and I can do it. This ship is government property. You're striking against the government."

But the "old man's" threat's notwithstanding, we stuck to our guns.

Of a sudden he changed his tune. He became compromising. "Boys," he said, "this country is in war and in a state of revolution. There is no food to be had here, and if you don't take the ship to sea, we'll freeze here or die of starvation. These people ashore ain't going to feed you. They ain't got a damned thing for themselves even."



But food could be bought in Archangel, and Jack, one of the seamen who could speak Russian well, promised to get all the victuals necessary, provided the captain was ready to foot the bill. But at this the captain only growled.

One morning things came to a head. We were called amidships and were told that the ice breaker would come after us, and we were ordered to "turn to". The captain said these were the orders of the consul at Archangel, and he asked the committee to go with him to the telephone. Jack with another seamen walked across the ice with the captain, called up the consul, Mr. Cole. As it was expected, Mr. Cole sided with the captain and advised us to take the ship to Murmansk.

Again we agreed not to carry out the consul's orders, and demanded that the captain go and fetch Mr. Cole to the ship. The harassed captain made his way across the ice and called up Mr. Cole. He returned with a new proposition.

"You," he said, pointing directly at me, "if it was any other place than this I'd have you in irons long ago. You're the ring leader. You're like these people ashore who are stirring up this revolution business. I'll tell you what I'll do. I'll pay you off right here, and then you can make all the revolution you want. The rest of the men

# A Mad World's Nightmare

## Prologue

A number of Europe's most high powered diplomats gather at a hotel on the Riviera.

"A great war impends Messieurs—Yes, yes, indeed! We are all armed to the hilt!

"Signor, what do you say?"

"Tis the reaction signors—the terrible aftermath! We are billions in debt, all of us and the workers are murmuring—even in my own country! 'Business will never recover this time.' "

All are silent for a time.

"Signors, Signors! I have a most brilliant idea —it will pacify the penurious, satisfy the jingoes—save our several national honors and incidentally enrich our good friends the honorable munitions maker!"

"We listen most eagerly! Go on, go on—"

## „The Children's Hour"

*Broadcast by that eminent European commentator, Mr. Imi Ghoul.*

"Well folks, you shall be thrilled today I promise you. They are assembling and you should see them—French, German, Polish, Austrian, Russian and Italian—and Oh yes, I can just now make them out approaching—the English also—Children of all the great nations of Europe and **not one over ten years of age**—think of it! All dressed in bright military uniforms, and here's something really spectacular, all armed with genuine rifles, swords, lances, bombs, etc.,—small of course, but none the less real as you shall see very soon.

"They are parading now, before marching to the battle-ground, which has been selected by Europe's foremost leaders, and folks! many an eye is wet among the spectators as the brave little fellows march by the saluting posts before massing for the really tremendously inspiring speeches to be delivered in person by Leader Higler of Germany and Mapolini of Italy—and many others.

"The speeches are over folks—the children are now proceeding to the battle-ground—soon you will hear the opening gun—Ah! there it is—Really folks you are missing the thrill of a lifetime—you should be viewing this most amazing spectacle. The youngsters are quite gay about it at first but soon warm up to their work and you should just see how the little German boys cut and slash with their sharp bright little sabers. Huh,—here is little Petro Mussano, small son of the famous Italian fencer—so dexterous with his little lance—neatly spearing a little French boy in the gizzard—how he squirms and wiggles for all the world like a frog on a sharp stick.

"The battle is raging quite merrily now, and soon the ground is thickly spotted with little forms, their bright uniforms now powder stained and muddy. The English boys are quite adept with their rifles and are picking off their opponents as coolly as their bowman grandsires did at Poitiers and Cressy some hundreds of years ago."

## Epilogue

First Vulture—"Ah! This is a feast indeed—such tender flesh—so sweet and juicy, (licks beak) by the way, what is that you are rolling around in your mouth?"

Second Vulture—"Hah—twas a merry brown eye a short time ago—I picked it out of a little Russian boy—it's flavor is wonderful!"

Third Vulture arrives (old and rusty—observes smirking) "Ah! twas not thus in '14 and '15 my dears, nor even in Spain,—such a difference in the pickings. Ugh, how stringy and tough those Australians were and scarcely any meat at all on the Scots—and the Moors, Phew! even as disreputable a picker as myself could not go them! Well, well, are you both rested? Let's return to our work then—"

Squawking raucously they flap away.

# *The Brass Check Buys the Air*

## A STUDY OF RADIO CENSORSHIP

*By*
*Bert Russell*

"Because of this control by the advertisers and employers in general, censorship may and does include anything from the denial of time to a radical group to the deletion of a humorist's reference to roller skates on the protest of an automobile manufacturer that 'roller skates are a form of competition'."

So concludes the author from his experience directing I. W. W. publicity over radio station KMO, Tacoma.

"The censorship bugaboo is a myth from radio's childhood days, kept alive, like all other superstitions, by prejudice and ignorance." So says a former vice-president of two broadcasting stations and a former member of the Federal Radio Commission.

A look at the Federal Radio Act of 1927 would seem to justify this statement. Nothing is forbidden except "obscene, indecent or profane language." In fact in Section 29 the Commission is denied "the power of censorship" and is forbidden "to interfere with the right of free speech by means of radio communication."

But this section of the Act no more guarantees free speech over the radio than the Constitution of the United States guarantees free speech from a soap-box. The essence of the Federal censorship is laid down in Section 11, providing that the Commission may "determine that the public convenience and necessity shall be observed.." Public interest is determined by the Commission, and public interest determines whether or not a thing shall be said over the radio.

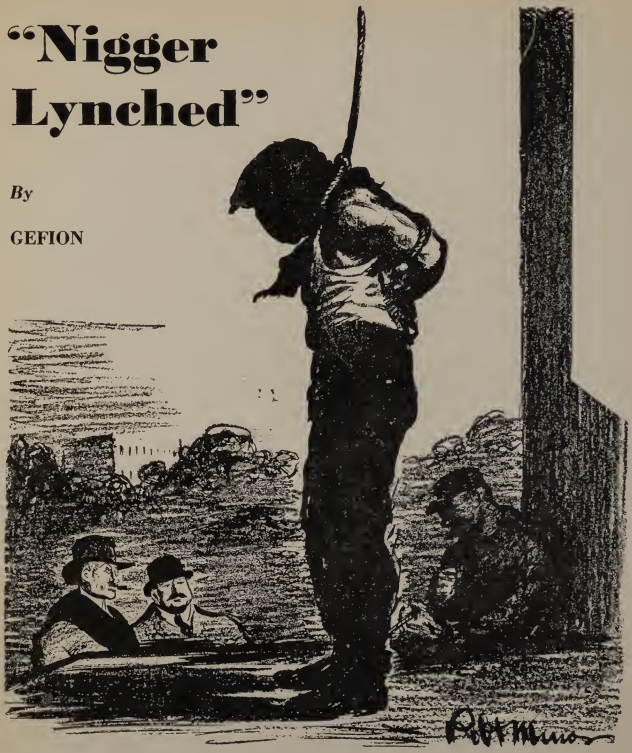
In Washington there is but one state ruling covering the statements of a speaker on the air, and that is merely the extension of the law of criminal libel to cover radio utterances of "false and scandalous matter with intent to injure or defame." The owner of the station is held equally responsible in some states for defamatory remarks made by persons broadcasting over his station.

It is because of the difference in methods of censorship in this country and in other countries where governments own and control the stations, that the restrictions entailed on what may be said, are not well known by the average person. Where public interest in Germany is determined by the Nazis, and in Russia by the Communist Party, in this country it is the echo of the advertisers' interests. Because of this control by the advertisers and employers in general censorship may and does include anything from the denial of time to a radical group to the deletion of a humorist's reference to roller skates on the protest of an automobile manufacturer that "roller skates are a form of competition."

The most pernicious radio censorship is that performed by the radio station operators. Here, despite all laws to the contrary, free speech is entirely restricted to arbitrary wishes of the management. You may speak or you may not speak, and the management is the final arbiter.

Only one federal stipulation limits the arbitrary decisions of the management. It refers only to political candidates. If a radio station permits one candidate for an office to speak, it must permit all other candidates for that office to have time for the same considerations. But it may legally refuse the air to all candidates. This apparent freedom is, at the most, a negative freedom. The tremendous expense of hiring radio facilities during the heat of a campaign far outstrips the meager budget of minority groups. Another contradiction arises. Political speeches are above censorship by the managers, once the time has been let to one politician running for an office, but still the station's license may be revoked for permitting "obscene, indecent or profane language." Knowing the politicians' ascent to Billinsgate, even in moments of sanity, the station management is on an unenviable spot if they wish to keep their license.

In addition to the management's personal opinion, that of advertisers and what is commonly called public opinion is taken in consideration. The advertisers' good opinion means millions of dollars to the stations of this country. Public opinion may be anything from the opinions of the American Legion or of a mob antagonistic to some radical group, to that of a church whose members may have felt slighted by some speaker's reference. On top of all this the station has ever to be on guard to protect itself against any other group that wants the channel the station is enjoying, and will take any chance to acquire it.



The I. W. W. broadcast in Tacoma encounters a censorship that springs from all these sources. Protests have been received by the management from the super "paytriot" groups. There has been a personal visit by the representative of the Packers' Association from Portland with the request for an

# "Nigger Lynched"

*By*

**GEFION**

The stone walls of the ancient hoosegow were oozing slime. It trickled its way in gooey and serpentine brooks down the hewn granite, only to come to rest in a border of stinking beads on the flagstone floor.

And around the bullpen, we hiked the fool's parade—black men, Mexes and whites—natives and damn furriners—working stiffs, thieves, murderers and hiwaymen—the young and the old—the fat, the lean—the scum of Earth. And at night we lay lousy and cursing in our stinking cells. Of a Thursday night there might come to our ears the staccato tempo of hammed beats—and the next morning some guy would be dropped through a hole in a nice new scaffold. And through the bars we would howl impotent ravings

against the guy's being swung. But in the afternoon we would again tread the fool's parade in the filth-spattered bullpen.

Louie and I were nearing the end of a six months' jolt—outside agitators, b'gosh and all that boloney, in a mill strike in Southern City. The bozo that dished out the presents informed us that we didn't have no durn business down thar—so mebbe we didn't. He fixed his judicial lamps on Louie's mobile Neapolitan mug and sternly let him know that furriners who didn't appreciate the particular liberties prevailing on these shores could doggone it well make a one-way excursion back to Ur'p. Louie must have heard the saga before because he kept right on gaping at Mr. Washington crossing the Delaware above Hizzoner's bald dome. Anyway, six months and take 'em away!

Louie was Dago and a fine plug. He could sing Workers of the World Awaken better'n any Wob I ever heard—red card paid up to the last minute—tender and with the savvy of a jane—and he could swing a left hook with the best of 'em. Louie was nobody's mutt and no mebbe about it.

And now we were on the home stretch. Three more days and the crool world would have us to contend with once more. Stone walls do not a prison make. Well, mebbe they don't. Anyway, there was no love lost between us and the granite that separated us from the possibility of an application of ham an'. Three more days.

* * *

It was on the morning of the third day when they heaved the Negro in. He was bruised and battered and the screws yelled at him goddamit to get into that thar cell befoh they kicked his guts out. Outside the mob was howling like hyenas sensing a dying wildebeast on the velt.

The parade in the bullpen had just started. It came to a dead halt. What in t'hell was up? The screws wouldn't let's near the black boy's cell. But from the runners on the galleries we found out that he had croaked a bird by the name of Colonel Barclay—fine citizen, owned a big dump in town and had a barrel of dough. Details didn't flow very freely. But some of the local wise guys grinned and said that mebbe the Kunnel wasn't such a darling pillah of society after all—mebbe not—liked his punks purty well—heh, heh, heh—too bad on the niggah, though. And outside the can, the mob howled like hyenas smelling a dying animal in the bush.

* * *

Louie and I were given the gate—time's up—c'mon, get t'hell outta heah—and get t'hell outta town, too. Oh, yeah? Louie's mug twisted and he said dio carni and bastards in his whiskers. As we passed the Negro, he threw his makin's and matches, as fast as a cat swats a mouse, in to the battered human pacing behind the bars. Louie was Dago and a fine plug—tender and with the savvy of a jane.

They kicked us outta the back gate into the alley among the garbage cans. What in t'hell did we give a damn. Louie's mug twisted and he said dio carni and bastards loud and plenty. And in the front of the stir, we saw the howling mob milling in a maelstrom of lunacy.

* * *

We were lousy. We were gutted hungry and we had three bucks and sixteen cents between us. Louie was for a slug of spaghetti in some grease joint right away. I said hell no—there's no dump with grub enough to fill our guts. Let's get some chuck and make for the great open spaces. The ayes had it. We gathered enough nourishments to feed Armenia. And we got plenty of soap for the municipal varmins, and Louie got himself some fresh makin's.

And on the corners, the kids were hollering with extras telling all about how the Colonel got bumped off. We got one. No mistake, the gent must've been some big shot, all right—plenty of mazuma—old family, never married, somewhat eccentric, never permitted females at his parties, the paper had it.

And in a cell in the hoosegow there paced a battered human—four steps this way and four steps back. And the extras said that he had been the croaked Colonel's houseboy—young, married a few months—had never been in trouble before—queer what had come over him—no motive for the crime—his slanderous ravings about the Colonel's having "made advances" were of course preposterous. Such outrages had to be stopped—justice must be swift and commensurate with the dastardly crime. To the bereaved family of Colonel Barclay, the TIMES extends its most heartfelt sympathy.

And in his cell a battered black boy paced four steps this way and four steps back.

* * *

Lord almity, it was swell to be naked in the moonlight. Louie and I had just had a swim in the river. Our duds were on the bushes steaming before a fire. The river—the lovely, the cool, caressing river—meandered its way toward the sea, carrying with it six months hoosegow filth and a legion of dead varmins.

And on the fire the chuck and java smelt sweeter'n roses. No mistake, we were live guys once more.

* * *

Louie had just lit a smoke when it happened. Like the muffled rumble of a sewer emptying itself over a cliff, the distant howling of the mob came to our ears. Louie began to curse in Dago. We got into our still wet rags and kicked the fire into the river. It sizzled and died and sent a tail of acrid vapor up into the moonlight.

There must've been a thousand of them. They came pushing and milling up over the sand dunes. In the dim moonlight, they looked like miasma taking on the forms of fantastic monstrosities. They came near and their howls would have delighted Nero.

In their midst, they dragged the Negro. A rope was around his shoulders—four of them lugged a broken rail. It was rammed into the hill. Louie cursed a blue streak and was going to make for the bastards on the hill side. I grabbed him and told him we'd only get ourselves bumped off.

And up into the beautiful, moonlit night, the flames of a shrieking human torch flared skyward.

* * *

Living human flesh stinks horribly when it burns. It is sickening to hear the thud-thuds of lead being fired into quivering tortured flesh. And it is sickening and degrading to lie helpless and impotent while a defenseless human gives up his soul in a hell of agony.

Louie's swarthy mug had turned to alabaster. He puked into the river and cursed in a voice I'd never heard before. He cursed me and himself and the goddamned world in general.

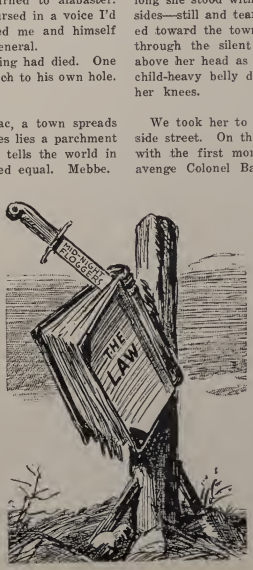
On the sand hill a human being had died. One by one the monsters sneaked each to his own hole. The night became silent again.

* * *

On the banks of the Potomac, a town spreads its streets. In its dusty archives lies a parchment written in beautiful script. It tells the world in general that all men are created equal. Mebbe.

The stars became pale blurs and the morning began to paint the dunes with a golden brush. An eon had passed since a man had been tortured in the moonlight.

We sat silent by the river, each with his own thoughts. Then we sensed the presence of another being. Louie reached over and touched my arm. I looked up. He motioned me to be still.



Up over the dunes came a young Negress. She was a mere kid. She was in a thin house dress and her belly was heavy with child. She walked heavily through the sand. Her tracks were lost among those of the monsters of the night. She looked up. Driven into the hill stood a broken rail. On it hung a few shreds of burnt flesh. A slender column of smoke twirled skyward in the clear morning air.

The woman's body stiffened as if she were an animal at bay. She looked about her in dumb bewilderment and her face began to quiver as if she were a child left alone in some strange place.

Step by step she walked toward the rail. For long she stood with her arms hanging limp at her sides—still and tearless. Then abruptly she turned toward the town and a shriek of horror rung through the silent dunes. She lifted her arms above her head as if to ward off a blow and her child-heavy belly drew her thin dress taut above her knees.

* * *

We took her to a paintless shack in a stinking side street. On the corners the kids were yelling with the first morning extras: "Angry citizens avenge Colonel Barclay! Nigger lynched!"

# Woman of Spain

*By* **SOPHIE FAGIN**

**"When her husband fell beside her she grabbed her gun and went forward into the fight."—From a letter to the author from a friend in Spain.**

*I speak of a woman*
*Who is more than a woman,*
*And yet even more than a man . . .*
*I speak of a mother*
*A sweetheart and lover*
*Who rose when the battle began . . .*

Half in the black of oppression,
Half in the sunlight of life,
Blood soaks deep in the soil of Spain
Blood so that men may live again
Free from their masters, and free from their chains
And free from this deathly strife.

Clenching the hilt of a bayonet
Wearing the garments of war,
She who longs for peace must fight,
Who loves the day must have the night
Who knew but mercy, must use might
In the din of the cannon's roar.

Matron and mother whose humble task
Was that of sweetheart or wife
Must now arise before the sun
To dig a trench and load a gun,
To fight until the fight is done
And the final bullet's shot.

Beautiful maiden whose gentle caress
Was that of sweethetrt or wife
Must march beside her loved one dear,
And when he falls, no time for tears,
Nor time for tenderness, nor fear . . .
She must grab the fallen gun,
Rise until the battle's done,
Fight until the fight is won
Forget her sorrows and her pain—
Is there not a world to gain?
A world, and victory for Spain?

*So I speak of a woman*
*Who is more than a woman,*
*And yet even more than a man*
*I speak of a mother*
*A sweetheart and lover*
*Who rose when the battle began*

*To sing a victory song in a dearth,*
*To bring a free new world to birth*
*And life to man throughout the earth.*

# "Ain't We Free Americans?"

## *Mrs. Pederson Wants to Know*

A Story of Snoopery on the WPA

By I. STEPHENS

The clock above the Old Girl's office door stood at half past three—thirty minutes before quitting time. I slipped a black hood over the typewriter. The Old Girl's office door was wide open. You couldn't see the gilt sign, Project Director's Office. Instead, you saw the project director herself, the Old Girl, with gray hair and eagle beak, bending over her desk in earnest conversation with the woman from the state WPA office. At least, someone on the project had said she was from the state WPA director's office, but some of the others thought she was head of the Woman's Division or the County Supervisor. Only God alone knew what her official title was.

The Old Girl looked up. Our eyes met. I never did like gimlet eyes, set close together in the head. She was probably growing suspicious over my leaving early on Fridays, over my taking only half an hour for lunch, but there was no other way out of it. The women from the other projects got off at 3:30, and we were allowed to have the hall only from three-thirty to four-thirty.

I turned and walked down the aisle, past Miss Donohue who insisted that prayers alone got her on WPA, past Miss Katzoff. Miss Katzoff had nice eyes, clear and honest. We needed her in our union. Somehow, I didn't feel that Miss Katzoff would object to joining an organization along with the women from the sewing and the hospital projects. She seemed a different sort from Dorothy Whitcomb. Dorothy was on our project, too. At one time she had served as assistant society editor on a local newspaper. When I asked her to join our Union she had raised her beautifully arched brows disdainfully and laughed, "Do you think I'm going to belong to the same organization that a lot of cheap, ignorant women belong to?" Then she laughed again. I never bothered Dorothy Whitcomb after that.

It was a five minute walk to the hall. When I reached the place I found the gang from the sewing project clustered around Bessie Heinrich, our secretary—all talking at once, all babbling excitedly. Fat Mrs. Anderson was pounding the table. Her long, green earrings shook, "Ain't we free American citizens?"

No one answered. The women went on talking.

"Let's call the meeting to order," somebody suggested, "we won't get anything done this way." Mrs. Du Plessis, a gaunt woman with a sour smile that seemed to match the puffs under her eyes, called the meeting to order. Always she displayed tact and impartiality, but parliamentary procedure was new to her. Sometimes she forgot to call for a vote. Bessie read the minutes, and I told them there was five dollars in the treasury.

Angry murmurs still flowed along the rows of women sitting before us. I had no chance to ask Bessie what had aroused them, but after we had elected our two delegates to the county conference I discovered the reason. Mrs. Anderson gave the report. She stood up in the front row and began by thumping her broad chest indignantly and asking, "Are we free American citizens or ain't we?"

No one answered.

"Honestly, I never seen anything like it!" Then she told us. Our committee of five had appeared before the Superintendent the morning before. There had really only been four on the committee —Mrs. Du Plessis, Mrs. Anderson, Vera Torkelson, and a girl named Gladys. Minnie Saunders got cold feet the last minute and ran into the toilet. The four women told the Superintendent that the machine operators were not going to make up lost time, that they wanted their pay in full. It wasn't their fault if WPA was so inefficient that five days were required to set up the machines. The Superintendent said he couldn't do a thing about it so he called in a Big Shot from the WPA office. Not only that, he called in the grievance committee, too.

Again, angry whispers among the women. The grievance committee! That was a sore spot. No one on the project trusted the grievance committee. A committee of stool pigeons, a company union outfit, they called it. The committee had been nominated and elected under the protecting wings of WPA officials and foreladies. In one room there were more ballots cast than women present. In another room the forelady pointed to Miss Cannon and said, "There's a good woman for the grievance committee." And so it went.

"Of course, that grievance committee doesn't mean a thing," Sadie Murphy interrupted, "a fancy set-up to make us think we've got something. Nobody turns in any grievances to them, but they go right on meeting in the office just the same. And you know what Alice said that day she went in with a letter—the Superintendent was telling them to watch us girls and not let any papers circulate like the one last winter that someone brought in, telling us to organize."

Mrs. Anderson continued with her story. The Big Shot said they had to make up time or take a deduction in pay. Orders from Washington. The grievance committee just sat there, dumb, saying nothing. Then, in the afternoon, Alice, the Superintendent's stenographer, got word to Mrs. Anderson that the grievance committee was arguing in the Superintendents office. Mrs. Anderson, they said, was a "red." They wanted her and Mrs. Du Plessis thrown off the project. They, the grievance committee, were tired of hearing grumblings about the wage cut. Mrs. Du Plessis and Mrs. Anderson were just agitators—like Miss Peterson who'd been fired in February for protesting against the wage cut and the way the elections were conducted.

"But the worst," Mrs. Anderson added, "happened today." Mrs. Maxwell, from the WPA office, had been interviewing the women, one by one, in the office. She asked questions. How did they like the work? Were they getting along on the $60.50? Did they have any other means of support? Those were the questions Mrs. Maxwell asked, but she had asked other questions, too. Only that morning she had inquired if Mrs. Anderson were a friend of Miss Peterson's.

"Certainly, I'm a friend of Miss Peterson's," Mrs. Anderson retorted, "she's a nice clean woman. She don't drink nor smoke. Is there any reason why I shouldn't be a friend of hers? And is it any of your business?"

"Are you going to refuse to make up lost time?"

Mrs. Anderson never answered.

"If you do refuse," persisted Mrs. Maxwell, "you'll be fired."

Of Mrs. Du Plessis, Mrs. Maxwell asked, "Do you pay dues to any organization?"

The women sitting before us smiled broadly, "They've heard we're organizing. They're going to try to stop it."

Vera Torkelson reported that one of the girls in the millinery department said there was going to be a strike. The forelady, overhearing her remark, answered, "You can't strike. You can't go to meetings. Somebody will follow you and report you to the office."

"She's a free American citizen," Vera had insisted, "she can do what she wants."

"You'd better watch out," warned the forelady, "you'll be fired for agitating, just like Miss Peterson."

"What in hell is agitating?" shouted Gladys.

Mrs. Anderson seemed to be the only one who knew. "It's standing up for your rights—like a free American citizen."

After the meeting I went out to make some house calls. I had a list of names—turned in by our members—of women on the project who might regard organization favorably. I called on four. None of them were opposed to organization, just timid and frightened, and none of them had heard of Bulletin 36.

At dusk I reached Agnes Sherwood's red brick tenement. She lived in the rear end of a flat on the third floor. An odor of burnt cabbage and fried onions dominated the front hall. On the second floor landing two anemic-looking children were quarreling over a bright red rubber ball.

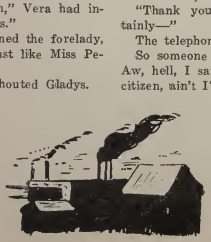
On the third floor a small grave-faced lad in shiny knee pants led me through a pantry, a kitchen, and into a bedroom where his mother, Agnes Sherwood, lay ill with a cold. Everything in that room was very, very worn—rugs, chairs, bedclothing, and the woman, too. She spoke in husky whispers. Sure, she'd like to come to the meetings when she got back on the project, but she didn't believe she would be allowed to go. No, she had never heard of Bulletin 36, but she remembered what the Assistant Superintendent had said the morning after Miss Peterson was fired. She had pointed to Miss Peterson's empty chair, "If there's any more agitating around here, there'll be more empty chairs."

When I reached home it was dark. Street lights gleamed pale yellow along the boulevard. Up in the apartment the telephone was ringing.

"Hello."

"This is Miss Katzoff," I caught a thread of suppressed excitement in her voice. "I'm going to tell you something—you'll keep it confidential?"

"Certainly."



"This afternoon, after you left the office, someone—never mind who—was asked to follow you around, to check up on the places you visited and the people you met." I didn't say anything.

"That person refused—but someone—someone else on the project promised to do the work."

"Thank you, Miss Katzoff," I said, "I certainly—"

The telephone clicked. She had hung up.

So someone was stooling on me! What the—Aw, hell, I said to myself, I'm a free American citizen, ain't I?

# *Direct Action*

**Instances of many ways that the I. W. W. has devised to get results.**

"Lord, send me a chicken." That was the Negro's prayer, we are told, but he got no chicken. "Lord, send me after a chicken," he prayed. He got the chicken.

Getting what we are after by going after it ourselves is the reliable way to gain our ends. Labor has learned this by experiment and at great cost. In learning it, labor has also found that this direct action for ourselves releases a tremendous source of initiative and energy, and discloses many ways to skin labor's troublesome cats.

The I. W. W. was new-born union when the American Steel Foundry in Granite City, Ill., discharged about one half its molders in an effort to stop the I. W. W. from organizing the plant. The I. W. W. actually had only a handful of members, but the men struck. The company police closed the gates and would let no one out. The men broke down the gate and went home. They decided that if men had to be laid off, it was time to cut the hours instead of cutting the force. Next morning all 2,200 employes were there, both those who had been laid off and those who hadn't. They stayed outside until the company agreed to a 16 per cent increase, and a nine instead of a ten hour day.

A bit later they were told to come to work earlier and work ten hours. They came, but remained outside the gate until the starting time that suited them. They did this again the next day. The third day they heard that strike breakers had been imported. That morning they went in early. Later in the week the strike breakers were sent away. They renewed their old tactic of waiting outside the gate, and they held the shorter hours. This was the work of largely unorganized men, their native initiative and sense of solidarity released by the I. W. W. program of direct action.

"The highest point of efficiency for any labor organization was reached by the I. W. W. and Western Federation of Miners in Goldfield, Nevada," wrote Vincent St. John organizer there for the I. W. W. in 1907. "Under the I. W. W. sway the minimum wage for all kinds of labor was $4.50 per day, and the eight hour day was universal. No committees were ever sent to any employers. The unions adopted wage scales and regulated hours. The secretary posted the same on a bulletin board outside the union hall, and it was the LAW. The employers were forced to come and see the union's committees."

It is still the firm belief of the I. W. W. that when good laws are made they will be made in the union meeting, in the hall or on the job, and enforced by the economic power of labor.

The effectiveness of such union hall legislation, as shown by a report of the Boston secretary of the Marine Transport Workers in 1916, should be of interest to marine workers today. He wrote: "A bill of fare for every day in the week is made up in the Union Hall, and signed by the secretary, and stamped with the I. W. W. seal, then posted in every mess hall aboard ship. Stewards are notified to pay strict attention to these bill of fare."

The law made by the union comes in conflict with the law and discipline that employers attempt to enforce through their economic pressure, their private police forces, and the public forces over which they exercise control. In the 1909 strike at McKees Rocks against the pressed Steel Car Co., a U. S. Steel subsidiary, two troops of state constabulary were brought in to intimidate the strikers with their usual wanton bloodshed. On August 12, after eighty had been seriously wounded by these cossaks, Stephen Horvath, a striker, was killed. The strikers sent a note to the cossaks:

"For every striker's life you take, a trooper's life will be taken."

The cossaks killed four strikers all told. The strikers killed three cossaks—and had no more trouble with them. As Secretary Trautman reported the affair: "Then the chief of the cossaks called off his blood-hounds. After that no strikers or deputies were killed. Organized and disciplined 'physical force' checked violence and the wanton destruction of life."

In a strike against the Standard Steel Car Co., in East Hammond, Indiana, the following year, a similar policy, largely the work of the wives of the strikers, converted a strike badly hit by the plugugly work of special police, into a clean-cut victory. These special deputies made the sad mistake of bullying and insulting these women. The women formed their own defense league, and informed Mayor: "Retaliation against the Hessians is proclaimed if outrages continue."

This time the women didn't change their minds. They were out to meet the army of thugs the next morning, some with broom sticks, others with rolling pins, and some most menacingly with teakettles of boiling water. The thugs and special police did not care for this species of warfare.

The company conceded all demands—and the Mayor very hurriedly released all strikers who were in jail.

Discipline among strikers is of course equally necessary for the winning of strikes. I W. W. strikers ordinarily elect their own vigilance committee to see that neither alcohol nor provocative oratory and proposals divert the energies of the strike unto futile channels. The Portland longshore strike in the spring of 1923 showed that direct action by the strikers could close up the blind pigs that the police had been unable to close in many years.

When the strike is won, and the job made into a union job, it is equally necessary, in order to prevent company unions from being established, and to retain organization on the job, to see that all remain members in good standing in the union. Since the I. W. W. relies on the actions of its members, and deals with workers rather then employers, it is averse to any check-off system, and finds, as for instance in the shops organized by the I. W. W. in Cleveland, that the "Chinese strike" of going to work but refusing to work with the fellow who refuses to pay his union dues, a very satisfactory discipline in such cases.

Many strikes of any vigorous union are against discrimination. An efficient means that produced results without any cost to the employes, was introduced in a strike of I. W. W. employes against Lamm and Co., Chicago garment makers, in June of 1910. The scab problem was overcome by the sympathetic action of workers in shops providing material. Somehow the material was so cut that the scabs couldn't make satisfactory garments. The company offered to concede all demands if one man, the fellow who had organized the shop, and whom the company called a "trouble maker", would not have to be re-hired. After extensive discussion it was decided to accept the terms, and win inside the shop instead of outside it. They didn't put much spirit in their work. Asked why, they said the shop didn't feel right without their other fellow worker being with them. As the organized reported: In a few hours "as a result of 'passive resistance methods' the firm found it more expedient to call for a shop committee. The bosses agreed to remove the last cause for 'interrupted operation of the plant' by re-instating this one man, and agreeing to deal with workers as a collective body."

The spirit of direct action is a generous spirit. It fosters solidarity. It recognizes no boundary lines in the struggle of labor. This is seen in the spirit that animates American labor's support for Spain. It is seen this year in the vigilance with which I. W. W. Marine Workers struck the United Fruit S. S. San Jose when they learned that the explosives aboard her were intended for transshipment to the Spanish Fascists. It was with a similar spirit that two I. W. W. armies in 1911 crossed into Mexico to support the revolutionary efforts of Ricardo Flores Magon. One of their temporary achievements was the capture of Tia Juana. As Laura Payne Emerson described the I. W. W. army of occupation, which by the way, contained the as yet songless Joe Hill:

"The first thing they did was to open the jail and never use it any more . . . Many of the rebels are Americans. Many of them I have seen on other fields of battle, the economic field, and as I shook hands with them, while cartridge belts and guns made up a conspicuous part of their apparel, I knew it was the same old battle in a different form."

This action has been criticised largely on the grounds that it was not successful. But the battle of labor has ever been a forward thrust, and a rebound, gaining bit by bit—and the growing achievements of labor in Mexico today, are in no small measure the result of the spirit of direct action that the I. W. W. so carefully, and at the cost of our own blood, nurtured among our fellow workers to the south.

This feeling that an injury to one is the concern of all, and that all ought to do something about it, has resulted in many instances of spontaneous aid that converted difficult strike situation into victory. The building of the Canadian Northern from Hope to Kamloops in British Columbia in the spring of 1912 resulted in the recruiting of scabs in places as far removed Frisco and Minneapolis. Fellow workers tried to check this by publicity at all such points, and when this failed, by shipping out themselves, with suit-cases and gunny sacks full of old newspapers and bricks, either persuading the scabs en route, or breaking up the shipment at the end of the trail. One shipment of scabs made it, so one fellow worker stuck with them, and got the job of cook. The scabs didn't stay any longer than the cook. In the extensive strikes on construction projects conducted by the I. W. W. in the spring of 1923 the scab problem was handled similarly.

The spirit of direct action of course is one that can be evoked only when full power and responsibility is put in the hands of the rank and file. The negotiations in the settlement of the hard won victory at Lawrence against the American Woolen Co., will illustrate the technical advantages of such settlement without the use of legalistic intermediaries. The strike by the way had introduced the endless chain picket line as a new tactic in American labor, and despite the militia brought down from Boston officered by Harvard's mis-educated brats who thought it a lark to stab women in their bellies, it ended in a victory that electrified American labor. As one of the committee reported the famous negotiations:

"On March 12th a conference was held between

representatives of the workers of the American Woolen Co., who were drawn from the ranks and could talk shop much better than any professional labor leader or company attorney could, and the attorneys of the company." A new set of terms much better for all employees than the company's offer of a flat increase of 5 per cent, especially for those in the lower wage brackets, was drawn up, and ratified by a mass meeting of all strikers on Lawrence Commons two days later.

It is little wonder that Harry Emerson Fosdick commented in the Outlook of June 1912: "Wages have been raised, work has been resumed, and the whirring looms suggest industrial peace; but behind all this the most revolutionary organization in the history of American industry is building up an army of volunteers. The I. W. W. leaves behind as hopelessly passe the methods of the American Federation of Labor."

Another instance of how to avoid the run-around in negotiations is given in the settlement of the 1916 strike against the Detroit plant of the Solvay Process Co. It was arranged for Mr. Greene, the manager, to come to a meeting of some 700 of the strikers and deal directly with them himself, instead of with any committee. He told the organizer, Weber, to get the men to go back to work, and he would do what he could for them, but he couldn't give any increase without the consent of the Board of Directors who were all in New York. Some of the strikers favored this course; but the I. W. W. organizer insisted that Mr. Greene reach the directors by long distance and have it settled. Greene got busy and reported that the directors who had been considering a one per cent raise had agreed to the five per cent raise demanded by the strikers. They went back to work when Mr. Greene was convinced that five plus one made a six per cent raise all around.

The depression that preceded the world war led the I. W. W. though modeled primarily for the job, to apply its direct action program to other fields. In 1912 when Kelley's Army of unemployed left San Francisco for Sacramento, the I. W. W. members were in the vanguard. They camped on the sand lots, and were routed by the irresistable pressure of great firehoses. But they resolved not to let the "best people", who were responsible for the injuries to their fellow workers, have so much peace while they went hungry. Dressing one of their number up tolerably well, and pooling their resources, they secured an option on a vacant lot in the Oakridge development where the aristocrats lived. There the army moved in during the night. The "best people" woke up next morning to see the "filthy hoboes" with their boiling-up cans going full blast, and their laundry suspended from the trees. Sherrif Ahrens, who had directed the terrorism on the sand-lots, rushed out to chase them away, to be confronted with the little peice of paper that gave the hoboes their property rights. It is a matter of record that the sheriff suffered such a heart attack that he had to go at once to the hospital.

Or again, in Sioux City, in 1914, there was extensive organization of the unemployed. Among the species of direct action devised by them was a visit to a banquet sponsored by the Chamber of Commerce to consider the problems of the unemployed, by a good-sized group of the unemployed themselves. They solved their immediate problem directly by eating the banquet. Such conduct led to trouble with the police, and one of the numerous I. W. W. free speech fights grew out of it. Large number were arrested, but more I. W. W.'s kept coming in. Those in jail were set to work on a rock pile. As Wallace Short described it in the Survey:

"When the prisoners were led out to work they went as peaceably as a flock of sheep—and sat down passively on the rock pile . . . The fire hose was turned on them, but the rock pile remained untouched." When the police gave in to their demands for free speech and the unemployed struggle that went with free speech, they showed their contempt for the rock-pile by collecting the materials for a stew large enough to feed the couple of hundred men involved, built a fire on top of the pile of rock, and as an expression of their utter contempt for the police, cooked their stew and ate it, without police interference.

The war situation produced some direct action on a large scale. With Bernard Baruch offering 25 cents a pound for copper, copper miners agreed with the I. W. W., that all the profits should not go to the flag-waving profiteers. Direct action brought recruits in large numbers. As Woelhke, very bitterly complained in the Sunset Magazine:

"When the I. W. W. element on the spur of the moment organized a new union in June and called the miners out on strike, the Gompers organization cheered and marched boldly into the camp of the forces commanded by Haywood. Similar desertions took place in Bisbee, Globe, Miami, and Clifton, Arizona. In Butte, the blacksmiths, the machinists, and other crafts twiddled their thumbs at Gompers, and, disregarding their signed agreements, went out on sympathetic strike."

By direct action the copper trust was tied up tight alike in Butte, Utah and Arizona. Flag-waving aided in such offenses against the strikers as the historic deportation from Bisbee. The I. W. W. countered the flag-waving hysteria directed against them with the proposal that the government take over the mines, let the I. W. W. run them on the basis of $8.00 for six hours, and showed it would cost the government only 22 cents a pound for copper instead of the price they were already paying. The government forced a settle-

ment without committing such atrocities against the Anaconda.

The direct action policy of a rank and file union when it became necessary to deal with the government instead of with a private employer, again showed its usefulness on the docks of Philadelphia. The Shipping Board, recognized the Marine Transport Workers of the I. W. W. as the only power to reckon with, and insisted on an agreement that the members of M. T. W. Local No. 8 "individually and collectively agree to abide by any decision or agreement made by the person we elect by general vote of all the members of M. T. W. organization to represent the M. T. W. organization as a member of the local Adjustment Commission of the U. S. Shipping Board, regarding the adjustment of wage disputes etc., at Philadelphia." The local organization wired to the General Executive Board of the I. W. W. to find out if such an agreement would be approved. The G. E. B. wired back:

"Your proposed election of a member of Adjustment Commission to act without consultation with membership of the M. T. W. making his position binding upon the membership, is autocracy and a violation of I. W. W. principles. The only condition under which No. 8 can send a representative to sit on this commission is as follows: That the M. T. W. No. 8 elect a representative to be under instructions and supervision of the membership at all times. He must be subject to recall at all times. His actions upon the commission shall be ratified by the membership before going into effect."

But it was in the lumber industry that direct action probably achieved its most permanent results. The war-time activities of the I. W. W. converted this industry from one where labor was a body of unwashed "timber beasts" to one where labor was respected and self-respecting living in vastly improved conditions that have substantially endured to the present time. In the spring of 1917 a wave of job strikes on the spring drive, called at the most effective moment, resulted in growth and demands granted. One result was that "camp after camp has reported that the Union has moved from the hall to the bunk-house." In the summer the strike became general on the coast and east of the Rockies. Arrests and beatings did not stop the growth of the organization, but slowly a skeleton force of scabs was secured largely by the misrepresentation of scabbing as patriotism by the newspapers, and it was decided "to transfer the strike to the job". The idea of transferring to win by job action methods was explained to the strikers. All branches and picket camps were instructed to call meetings for Sept. 7 to decide on the policy. The result was that strikers went back determined to work eight hours and then quit, whether the boss liked it or not. One job action striker described how it worked:

"In the first camp I was in we loafed on the job three days. The bull of the woods quit because he could not get out the logs. The fourth day we all got fired, and the camp shut down for a new crew. At other camps the whistle would blow when the eight hours was up, and we would all go to camp. There were instances where the job delegate would get fired, and the whole crew would walk out. . . . The 'hoosier' act was played to a finish, and the 'loaf on the job' and other tactics not only hit the lumberman's pocket books, but they got the eight hour day."

With strong I. W. W. sentiment among the loggers, it was easy to arrange for new crew to carry on the policy or a more annoying one, that the discharged crew has adopted. It was this policy that made for continuous improvement in camp accomodations, wages, food and all other job matters of concern to the lumber worker.

The manner in which a spark of direct action can ignite smoldering discontent, convert it from futile grumbling into effective action, and evoke solidarity where it was never thought to exist, was well shown in the very trough of the depression by a series of strikes on construction projects out of Cle Ellum, Wash., starting May 7, 1932.

Wages were low, conditions were bad, and several members passing through getting the "creeps" from the sense of helplessness of the unorganized workers, thought it a job to pass up. It was felt that with so many unemployed around that section, and so many farmers' sons looking for a chance to earn some hard cash even at 30 cents an hour, a strike would be doomed to failure. But a few members set in. They were fired when they showed their hand. But a meeting was called under the surprised boss' nose, demands drawn up and presented, and the strike was on. The citizens of the district were approached to support the strike for higher wages to keep more cash circulating in that stricken country. Their support assured the strikers of plenty to eat. The job-hunters in the jungles pledged that if they went to the job it would be to back up the picket line and not to scab. Three who attempted to scab were captured, put in a cage in a truck, with a sign "Don't feed the scabs peanuts", and driven through the near-by towns, and then released. The strike was won promptly, and followed by other successful efforts.

The Colorado coal strike of 1927 was another instance of the invigorating influence of direct action. The miners were almost entirely unorganized. In the south they were intimidated by the Colorado Fuel and Iron Company. Most people would have said a strike was impossible despite the many grievances of the miners. Yet there was a strike. It started not over their grievances, but over the I. W. W. agitation for a general strike

(Continued on Page 29)

# THE GANDY DANCERS

## By One Of Them

There was a sudden lull in the Seattle Free Employment Office as the door opened to admit a clean-looking, albeit raggedy young fellow coming in out of the rain. He looked around hesitatingly, then shuffled to the low partition where several men were standing. He found from them that all of the miscellaneous assortment at the counter were shipping out to N. P. extra gang No. 5 down at Chehalis, and that there was always room for one more.

Some mental computations absorbed John Gray's thoughts. Eight hours a day at 35 cents an hour was $2.80, and six days a week was $16.80. He reviewed the fact that he had had only a "coffee an" that day, and that he could feel the sloppy sidewalks with his feet, for cardboard over the holes in his shoes had not stopped his socks from giving way to the carresses of the pavement.

His thoughts of what he could do with $16.80 were interrupted by a clerk's "Whadya want?"

"I want to see about going out on that N. P. job."

"Read the contract and sign here."

John didn't give a damn about the white slip of paper, but he read it anyway. It revealed the additional fact that a dollar a day was deducted for board and lodging. That would leave him $9.80 a week clear. It wasn't as cheerful a figure as $16.80. But, hell, nobody would make any profits feeding him.

Down at the freight depot he waited out of the rain with the rest of the stiffs for an hour and a half before they were loaded on the southbound local. He settled down for a nap. The run was ninety miles and they ought to get in about one o'clock.

A hand on his shoulder was shaking hell out of him. It was the agent who had gone along to make sure that none of the suckers took French leave or got a free ride on the cushions for nothing. "Wake up! You get out here," he was told.

With the rest he walked half a mile down the track to where the gandy-dancer's rolling bunkhouses were side-tracked. It was miserable, damp, and cold. They looked for a warm car to get in, but it was no use. So they waited around until six when the cook lit his fire.

The cook rang the chuck call on an iron triangle, and he and the rest filed in to be ogled by the flunkeys lest they merely be 'boes from the neighboring jungles. They sat down to eggs that didn't smell quite right, bacon without a streak of lean meat in it, refrigerated hot cakes, and coffee that had been boiled at least three times. It later delevoped that not even the oldest gandy-dancer on the crew had ever seen any coffee grounds thrown out.

After struggling heroically to swallow what he had put on his plate, John picked up his grip of tattered belongings and his work clothes, and went to look for an empty bunk. He found that the bunks were alive with vermin. His stomach felt queasy. He thought of walking down the track. He thought of his shoes. He thought of $9.80. He decided to stay.

He picked a bunk and started to clean it out. "Well," said a voice from the bunk overhead, "so you're another bird who can't take it."

"No-o-o," said John, "but I need the money so damn bad that I'll try to stay a week if I can get this bunk cleaned up."

The foreman stuck his head in the door to holler: "Hurry, it's late."

"It's going to take all day for me to clean up this bunk fit enough for an animal to sleep in it.

It didn't please the foreman. But husky young fellows were hard to get hold of, so he went on his way.

There wasn't much that he could do to clean the bunk up, so after a noon meal which was worse even than breakfast, he reported for work, and landed on the jack crew. It was their work to jack up the low spots as the foreman sighted along the rail, while the tamping crew came behind to pound the gravel under the ties to hold them there.

The men on the jack crew were encouraged to high-ball by the promise of fifteen minutes rest and time for a couple of smokes while the tamping crew caught up with them. On the tamping crew, which was all the way from a quarter to a half mile behind, was a straw boss telling the men to take the lead out so as to catch up with the jack crew.

At the end of the day the jack crew were sent back to help the tamping crew catch up where they had left off. As no over-time was paid for less

than a half hour, this was gravy for the N. P. So the jack crew not only worked a full day after deducting their fifteen minute rest, but worked it at high-ball speed for 35 cents an hour. Also they were the cause of the tampers, who do the most back-breaking work, putting in a full eight hour day at full speed, and 20 minutes extra time at still higher speed for which they were not paid.

It took three days for Gray to see through it, and then only through the analysis given him free of charge by a fellow workers on the spacers.

That night he lay in his bunk and thought of quitting. He would have five dollars anyway, and that would get him a pair of shoes. He said so to the fellow alongside of him at breakfast next morning.

"You know that you have to pay 20 cents a day extra if you quit before you have a full week in."

"No. My contract said a dollar a day deducted for board."

"Look," and the fellow pointed to a sign on the chuckhouse wall:

> *Those men hired who have not a full week in before leaving our employ, will be charged for meals at the rate of 40 cents apiece.*

Gray swore feelingly at the flunkey for bringing some more cold sweat-pads for hot cakes, and reluctantly figured on staying out the week.

At noon he saw one of the jack crew who had quit the day before.

"What's the matter?" asked Gray, "I thought you had quit."

"Couldn't afford to. After they deducted this, that and the other thing, I had only 72 cents coming."

Gray asked for the details.

"The first day, it seems, took $1.00 for blanket rent for the month, there was $1.20 plus sales tax for meals, 85 cents for hospital assessment, 4½% on the day's earnings for general taxes, 1% for unemployment insurance and 3½% was deducted for railway pensions. And the railway pension won't do us any good, as we're not permanently employed . . . Now the next day was Sunday. I was deducted the $1.20 plus sales tax for meals, and didn't earn anything. That meant that Monday morning the way me and the company stood, was that I owed the company $1.84.

"Monday I earned $2.80 but board and taxes and pensions left the company owing me only 53 cents on Monday night. Tuesday noon I figured on quitting and thought I had about $3.50 or $4.00 coming. But I didn't know all about these other deductions. Started out Tuesday with 53 cents coming to me, I earned $1.40, that makes $1.93, and they took away 80 cents for two meals and another penny for taxes, and that left me only 72 cents coming to me. It took me all yesterday afternoon to figure it out that way, so I stayed."

"And how do you stand now."

"Figure it out for yourself. I had 72 cents coming after dinner yesterday. I ate supper and breakfast. That left me owing the company 8 cents before I started in to work this morning. Yeh, I wanted to work a few days and get enough so I could get over to the Idaho spuds."

By Saturday, when Gray was thinking of quitting, the extra gang had reached Tacoma. They were in the cars as the work train pulled into the yards, in the early evening fixing themselves up as best they could to go up town and see the sights. A lot of people were laughing outside. He opened the door and saw a fellow talking to a group of gandy-dancers. He was making a regular speech about lousy bunks, hitting the ball, sweat pads for hot-cakes, and no money in the jeans.

"Let's go up town and hold a meeting, and do something about it. We'll ask the I. W. W. if they won't let us use their hall."

Gray was going up town anyway, and the fellows he got along with the best, and who found the most colorful words to describe the chuck, were going right along with the fellow who had been doing the talking, so he trailed along too.

Up on Market Street they went into a little hall that must have been a store once upon a time. More kept coming in, and the more that came in the more they felt they were going to do something about it. There was strike talk in the air. Someone called the meeting to order, and talked about how organized action might remedy conditions. Gandy-dancers got oratorial and said their say. Some people who had been in the hall when they came in, and who looked as though they belonged in town, told them that it would be hard for one extra gang on the whole N. P. railroad to do very much about conditions, but that whatever the gandy-dancers decided to do, they would help them out.

Gray decided not to quit but to stay and see what would happen. They ended their meeting with the decision to get the rest of the crew and have another meeting the next day. So more of them gathered in the hall on Market street, and took a strike vote, and elected a committee, and drew up demands for the committee to give to the foreman. The Ten Days That Shook The World had little on the nine days of strike that shook the N. P. management, when a few rather poorly organized but enthusiastic fellows "went to town" on the picket line.

It was something new for John Gray. He found a lot of good people were ready to back them up

in such a fight. In fact they ate much better on strike than they did when they were working. He learned about unions. He learned that with a strong enough union they could win. He learned also that the Brotherhoods that had most of the other railroad workers organized wouldn't help them at all—though their individual members were glad to. There were many speeches in their strike meetings, but he remembered best what one old engineer who didn't sound as though he had ever made a speech before, told them.

"We have it a bit better than you fellows. So does almost everybody else have it a bit better than you fellows. But we're all in the same boat. It takes us all to keep the railroads running. And what we should have is One Big Union for railroad workers—the kind of thing Gene Debs tried to build, the kind of thing railroad men have been looking for all the time, and you can have it right in the I. W. W."

Gray got a picture of something big. If one extra gang found it hard to win, how would it be if all extra gangs quit? How would it be if these fellows who were always quitting anyway, started to quit systematically, and had a system of keeping in touch with each other all over the railroad systems, and had bulletins to put around on each gang about what was going on the other gangs—that would be a step toward One Big Union of Railroad Workers.

He had come into Tacoma swearing that never again would he ship on an extra gang. And here he was with a little red card in his pocket, trying to figure out how many extra gangs he could ship on in three months if he put in a week on each one.

# Direct Action

(Continued from Page 26)

to demand justice for Sacco and Vanzetti. The southern field came out solid. The miners were surprised to find that their fellow workers whom they had so long viewed with distrust were almost all men like themselves, anxious for a chance to stand together. Direct action had brought them a revelation—and it was but a few months after that for the first time in the history of Colorado coal mining, all fields in the state were out in a unified strike that brought them increases of a dollar a day.

Such is direct action. It is not merely the reliable and effective way to win. It is a tonic to workers who feel hopeless. It is vigor for those that feel helpless. It is a revelation to labor of its own mighty powers. It evokes solidarity and fosters initiative and ingenuity. It leads to the invention of new tactics. It releases hidden and undreamt of abilities. It is labor's own key to the life abundant.

# Murmansk

(Continued from Page 13)

will take the ship to Murmansk, and there we'll get provisions from the limey cruiser."

Upon this practically all of the crew announced their intention to be paid off if I was forced off the ship. It was a splendid show of solidarity. But it would have been criminal to leave these men behind in that part of the world, as none of them spoke the language, and there was a shortage of food, and the weather was icy. So I advised the men to remain on the ship, Jack and I and two other men would get paid off, and the rest return to the United States. Then I marched up to the "old man's" quarters, told him what we had decided to do, but with the stipulation that when he got to the U. S. A. he would not press charges against the crew. Six years later I found out that he had lived up to the agreement.

(Continued next month).

# The Mask of Fascism

*By*
**TOR CEDERVALL**

**An analysis of its prospective slogans, and some pertinent questions on the aims of John L. Lewis.**

In discussing the prospects for fascism in the United States, many take inordinate stock in the fact of the uneven development of fascism, that it forms not all over the capitalist world at once but materializes country by country. In other

**Without this, fascism—**

words, it is contended that since we here in America have had many years in which to study the phenomenon of fascism in Italy, have had several years in which to observe the vaporizing promises of Hitler for a fairer and more prosperous Germany, have viewed the ruthless strangulation of all culture and progress in the fascist nations, and have had ample time to sicken of the "purifying" butcheries and brutalities of fascism (in putrid florescence in present-day Spain), we here in America, because of these observations, will be very unlikely to fall prey to the dread plague.

However, the United States is far from being out of danger.

Fascism when it makes its bid here certainly will not come to the fore in its own name. Its slogans will perhaps play upon our fears of fascism, will undoubtedly toy with the wishes of the populace for some sort of socialized industry. Perhaps by the very slogan of "peace" it will combat workingclass radical organizations by accusing them of leading us into an international conflict such as we see threatening in the Spanish situation! We must bear in mind that Hitler rode into power as a national "socialist."

Fascism breeds and feeds upon a confused concept of the class character of capitalist society. Despite the extreme revulsion of the liberals toward being placed in the same bed with fascists, all attempts to deny or obfuscate the class struggle in the modern capitalist world lead but to the pitfalls of fascism.

Capitalist democracy, which fascism everywhere seeks to displace, remains acceptable to the capitalist class only so long as the class concept of society is in the main rejected by the workingclass. Assisted by the feeble freedoms of capitalist democracy, the pressure of industrial facts have created in all democratic nations independent workingclass organizations threatening, actually or potentially, the exploiting rule of the capitalist class. Ultimately, the capitalist class has no alternative to complete capitulation other than to embrace fascism.

The capitalist class is a comparatively small social group, a decided minority of the total population of any country. A small minority can scarcely hope to rule a large majority by abruptly taking up arms and seeking to crush the rest of society into submission. This is the course the Spanish fascists have been forced to adopt, and, even with the aid of Hitler and Mussolini, they have not attained their objectives.

An exploiting minority group can hope to impose successfully its "iron heel" upon the populace only by first "preparing" the people. It must rally large numbers to its banner. Obviously, an exploiting group can do this only by hiding the class character of the society it dominates. The paramount task of any fascist organization is to convince the workers that class-consciousness is an

error, that there is no class struggle but a common struggle of worker and capitalist alike against the evils that beset the country.

These evils may take the form of other nations, making for the extreme nationalism of fascism, or, the sins of the capitalist class may be heaped upon a racial minority, such as the Jews. In the United States low wages and unemployment may be blamed on "the foreigner", or the Negro. The fascists even may enliven their campaign by proposing to put all married women in the home and off the job. It is by such "preparation" that the fascists can safely expect to take power.

It is only after power has been taken, with all strategic positions occupied and bolstered by its propaganda machine in possession of every educational and articulate outlet, that fascism can afford ruthlessly to turn upon every attempt of the workingclass to protest or to better its position in society. All this while, of course, fascism has built up the proper sadistic efficiency in its followers by having them, officially or unofficially, "work out" on the groups earlier isolated as the roots of evil, Jews, "foreigners", Negroes, labor militants, or whatever they may be.

This tremendous ballyhoo for the rejection of the class concept of society, this stupendous camouflage of the authentic source of the ills of society cannot be engineered with capitalist democracy as its political adjunct. For, it is all a mammoth, tragic hoax. Only a fascist dictatorship palsying the nerve centers of all societal life can hope to maintain the fraud for long.

It is in industry that the division of wealth occurs. It is in industry that the mass of the workers toil for a mere existence while the major fruit of their labor maintains their masters in opulence and power. It is in industry that the "freedom" of capitalist democracy becomes less than a sham and autocracy smites the worker full in the face. It is industrial exploitation and industrial autocracy that breed the concept of class consciousness and its material twin, the labor union. And it is toward industry and the labor union that fascism turns its most earnest attention. The first step of fascism in power is the regimentation of labor into the "labor front".

In European countries turned fascist, the fascists experienced the most serious opposition to their schemes from the labor unions (in present-day Spain it is proving wellnigh insuperable). When the successful fascists of Europe strode upon the scene they found the majority of the workers already organized into labor unions. They found that their propaganda could scarcely make an appreciable dent in the idealogy of these organizations as such. Instead, the fascists were forced to rely upon the much less effective method of attempting to convert the individual members of the labor unions.

Here in America we have a workingclass as yet largely untouched by the labor union. It is very logical to suppose that as a clear-cut fascist strategy developes, the promotors and backers of a fascist coup as one of their "preparatory" steps will jump at the chance beforehand to launch their plans for a "labor front" and thus save themselves some of the traditional opposition from the labor union quarter. Without such a move, the workers will continue their present trend toward more and more organization on their own initiative, and thus ultimately stiffen opposition to a fascist adventure.

**—can not achieve this.**

We are told the world is a stage. Though it is true that history is largely written by material forces and there is small room for ad libbing, the lines are yet spoken by groups and individuals. Many a mountebank has knocked upon the stage-door if history and begged for a part. And no matter how rigid the lines to be spoken, some may capture a spot-light role—not by "stealing the show" from some subordinate position in the caste, but by capturing the leading role through careful study of the part. Is John L. Lewis, for instance, an historical thespian? Does he sense this need that fascism has for an industrial base?

It was only when Hitler struck a bargain with the Junkers and industrialists of Germany that he rushed forward to his fascist victory. Is John

L. Lewis under the guise of collective bargaining for the workers preparing to bargain them collectively and trade them off for a fascist berth for himself? In a nation-wide radio address on the night of December 31, last, was it Lewis the mountebank minstrel who spoke these concluding words?

"The stage is set. Industry can go forward with profit to its investors, and with security to our citizenship; or it can elect to destroy itself by blindly following its unreasoning prejudices, and refusing to conform to the modern concept of proper industrial relationships.

"The leaders of industry will decide, and upon them rests the responsibility of deciding wisely."

But isn't it time that we ourselves organized, to make this decision, instead of letting the leaders of industry make it for us?

# The Brass Check Buys the Air

(Continued from Page 16)

apology because of a broadcast that proved the old adage "the truth hurts." The management is presumed to look upon it from a purely business standpoint. If we have money to buy the time, we can have it, providing these groups do not succeed in inciting more imitation public opinion against us. Even then it is purely business. Money is tied up in something that will yield no revenue if the license is revoked. In deference to these protests, each broadcast is preceded and followed by the announcement of the rather self-evident fact that "the time has been leased by the Industrial Workers of the World."

One thing very plain in the management's censorship is the impression that the business men and the American Legion do not like to recall the Centralia massacre. Any mention of the Centralia cases must be stricken out. In our broadcast for the Class War Prisoner's Christmas Fund, a good one-fifth of the manuscript was stricken out. Names of the various beneficiaries of the fund were not allowed, although a general discussion of the nature of the courts and of their working class victims was admitted. As the local censorship follows no particular rule, we are not in a position to anticipate its niceties.

One conclusion that we come to, and a most agreeable one, is that the level of discussion of the two other labor organizations on the same station is free from the personal vituperation and vindictiveness that has in the past characterized far too much the speeches and writings of these parties to an almost complete exclusion of the statements of their fundamental beliefs.

All things taken into consideration, the management of the station, though perhaps possessing liberal and broadminded views in his own right, recognizes that the intelligent people of the northwest are interested in the program of the I. W. W. —X226183.

# NOTES ON BOOKS ABOUT LABOR

## *"Educar Es Redimir"*

*"Mexico, A revolution by Education", by George I. Sanchez, The Viking Press, $2.75.*

There are constant press releases on socialistic education in Mexico. For a long time I could not resolve the contradiction between this and the fact of Mexico's capitalist state.

Most of the bulletins and books on Mexican milieu have been written by reporters who have seldom ventured off paved roads and away from hotel accommodations. This volume under review is by the president of the New Mexico Educational Association, a native of this state and a Catholic. Financed by the Julius Rosenwald Fund, he did not disdain to travel muleback to Mexico's back country.

Although the federal government applies the term Socialistic to its elementary schools, this should be taken in a broader sense. The program is in essence one to create a national consciousness. Mexico's population is 64 per cent rural and in total 70 per cent illiterate. Separated by a score of Indian dialects; torn by bitter religious strife fostered by disgruntled priests and fanatical Cristeros; exploited by native Sacendados and foreign concessionaires, all are in deepest poverty.

Before the people could be made cognizant of proposed government reforms, they first had to develop national pride. Their immediate level had to be raised by self-improvement. To understand the value of hygiene, better housing, handicrafts and improved agricultural methods, these mestizos were given the rudiments of learning. Educar Es Redimir, To Educate is To Redeem.

The foundation of the educational and school movement were the Cultural Missions. These traveling groups of teachers and technicians established schools, trained teachers and other adults. The obstacles to overcome were prejudice engendered by religious hatred, murderous assaults by Cristeros and most pressing of all, lack of finances. All these have been conquered and elementary rural and urban schools are reaching and teaching more and more mestizos.

This revolutionary educational program does not include the National University, the technical and professional colleges. The aim is to raise the cultural level of the lowest masses, without whose cooperation and support social and economic advance is impossible.

The chapter on Education, The Church and The State clears out many popular errors. There is a foreword by Rafael Ramirez co-founder of the Cultural Missions, 30 splendid photographic reproductions, a glossary of Mexican and Indian words and an index.—**James DeWitt.**

## *Literary Illusions About the I. W. W.*

Gilbert Seldes has written criticisms that have endeared him to sophisticated drama lovers. But this does not qualify him to discuss the labor movement. That, unfortunately for the literati, is a subject one has to know something about before discussing it. His new book "Mainland", a study of American life and the future of economic society in America, contains statements that would surprise one as coming from a celebrated critic, were it not the habit of these people to get all twisted and tangled when they write about unions.

"The International Workers of the World," writes this vendor of second-hand myths about labor who doesn't even bother to get his names right, "were far western, violent, loosely organized, democratic, and a new thing in the history of labor, bouyant and humorous."

The I.W.W. has been and is humorous enough to enjoy the strange legends that circulate about its name, and bouyant enough to persist in trying to correct them. One fact is that the I.W.W. was born back east, has organized all over the country, and its strength today is about evenly divided between east and west.

"They took in the hobo harvester, the waterfront workers, the loggers in the lumber camps—outdoor men, not miners or factory workers." So writes Seldes insistent upon keeping up the tradition of the literati who never bother with facts. Tying up the copper trust during the war, defeating the steel trust on the Iron Range, making the Colorado coal operators come across with a dollar more a day in the first strike that united all miners in all Colorado coal fields—just by way of instances—would certainly indicate that the I.W.W. "took in miners." And probably it suits the literatry concept of a nicely pigeon-holed and phrase-worthy labor movement, to picture the Gen-

eral Electric employees, the workers of Paterson and Lawrence, the auto workers of Detroit, the rubber workers of Akron, the metal workers of McKees Rocks, or the very considerable membership that the I.W.W. has today in such places as Cleveland and Detroit, shod as lumberjacks, garbed in a harvester's blut cotton shirt, and carrying a longshoremen's hook.

"Dramatic and picturesque," says Mr. Seldes, "the I.W.W. was always chaotic." Never have there been strikes of the magnitude that the I.W.W. has conducted, conducted with the orderliness and efficiency and co-ordinated purpose that the I. W. W. has achieved alike in strikes and in everyday organization. Observers on the spot have repeatedly said so.

"The I.W.W. withdrew from politics." Someday we hope some one of the villagers will in form the rest of the villagers that the I.W.W. never was in politics.

"The I.W.W. created whatever is American in the tone of the American Communist movement. Whenever American Communism is sardonic and untheoretical and lights on its feet and is un-European, it is the descendant of the Wobblies." So says Mr. Seldes; and we say: Dear Mr. Seldes, don't you know it isn't polite to accuse anyone of fathering such offspring?—**Tabby.**

**John G. Neihardt**

# *The Cry of the People*

Tremble before your chattels,
  Lords of the scheme of things!
Fighters of all earth's battles,
  Ours is the might of kings!
Guided by seers and sages,
  The world's heart-beat for a drum,
Snapping the chains of ages,
  Out of the night we come!

Lend us no ear that pities!
  Offer no almoner's hand!
Alms for the builders of cities!
  When will you understand?
Down with your pride of birth
  And your golden gods of trade!
A man is worth to his mother, Earth,
  All that a man has made!

We are the workers and makers!
  We are no longer dumb!
Tremble, O Shirkers and Takers!
  Sweeping the earth—we come!
Ranked in the world-wide dawn,
  Marching into the day!
*The night is gone, and the sword is drawn*
  *And the scabbard is thrown away!*

# *Circulating a Big Idea - -*

**The biggest and best and healthiest and sanest idea there could be at this time is that of a One Big Union of industrial unions built to put across a program of militant direct action.**

**To circulate this idea, we suggest leaflets like "Why You Should Join the I. W. W." or "Revolutionary Industrial Unionism", which we can let you have at two dollars a thousand to put around where they will do the most good.**

**And stickers of various descriptions—well, now that you have read about Red Samson going to work in this issue, you know what stickers will do.**

**Circulate a few I. W. W. pamphlets among your friends—and where you had mere friends you will soon have colleagues in the struggle for a new social order. For a dime you can have "Unemployment and the Machine", "Twenty-Five Years of Industrial Unionism", "The Lumber Industry and Its Workers", or "Coal Mines and Coal Miners". For a nickle you can have "One Big Union of All the Workers" with a chart showing the structure of the I. W. W. For half a dollar you can have that amazing book "The Blood Stained Trail—A History of Militant Labor in the United States."**

**Keep the idea in circulation!**

# I. W. W. PREAMBLE

*THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.*

*Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.*

*We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever-growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.*

*These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.*

*Instead of the conservative motto, "A fair day's wage for a fair day's work" we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."*

*It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the everyday struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.*

# *What Is The Working Class?*

Unorganized, acting only to carry out the will of others, it has been nothing—a plaything at best for politicians—a cow to be milked —the last interest ever to be considered.

Yet, it has done all the work of the world—laid the railroads, built the homes and factories, manned the ships, dug the ore, grown the food, girdled the globe with copper cables, kept life humming.

The working class does all the sane things necessary for the continuous life of society. It is society. The "ladies and gentlemen" who are not of the working class are a useless excrescence on the body social.

This so-called upper strata that masquerades as "society" is not only a useless growth, but a viciously malignant one. The insane acts of war and waste and destruction committed by the working class are done to carry out the will of this parasitic growth. This parasitic growth must be cut off, or it will destroy society.

Misorganized, acting only for a section of its members here and there, the working class can at best only make society and itself aware of its importance, by ceasing for a while to perform some of its functions. Our men and women go back after their strikes, with some few gains won, with some new sense of power and self-respect, to carry out once more the will of those who rule and rob us, who waste the great heritage of our natural resources, who plot to set us at each other's throat in some great world war.

Organized as One Big Union of the Working Class, we can act as a class for ourselves, carry out our own organized will, establish our own planned economy of abundance, and by making our own class the great constructive force in the world, banish fear and worry and want forever from the life of man.

"It is the historic mission of the working class to do away with capitalism."

**RAYMOND CORDER**

*How the war and waste inherent in capitalism with dust storm and raging flood threaten the heritage that we are to pass on to the coming generation—and how only revolutionary industrial unionism can save this heritage and establish an earthy paradise where otherwise another Gobi Desert will spread its arid waters.*

Ten thousand million dollars were squandered by the capitalist class to make the world safe for democracy. This huge sum, however, does not begin to cover the actual cost of the war. The gross price we workers are paying, and will continue to pay for the bloody saturnalia, if measured in dollars, would be of such mammoth proportions as to baffle the imagination, unless computed in mathematical formulae, comparable to the light year system of astronomy. We are paying even unto and beyond our grandchildren for far more than the mere destruction, terrible thought it was, of a few billions of dollars worth of chemicals, armaments and young manhood. The staggering price is not measurable in dollars. We, in our old age, as well as unborn workers of tomorrow will pay in terms of red-eyed hunger and gaunt famine, while grubbing without hope for something to eat among the barren boulders and shifting sand dunes of an arid desert, unless we quickly organize as a class to abolish the present feudalistic ownership and control of land and industry, and declare another war—a war upon the yellow peril . . . the peril of whirling, stiffling dust, and of raging, murky waters that annually go surging down to the seas.

**Where Angry Waters Roll**

Down by the river, anxious-eyed mothers tread the rough floors of lowland shacks, getting together a few belongings, preparatory to a quick exodus with their broods to higher ground and safety. Their menfolk are out where angry, yellow

waters rush down the river. Angry waters, seeking to escape from the prison of the river's course bite into restraining levees. To the men, feverishly battling the turbulent tide, has come the news that up the river, the levees have broken and that whole cities and thousands of acres of country-side, are deep under water, with death riding the flood. With pick and shovel and bags of sand, they fight the tenacious waters, plugging sand boils, and rivulets that break across and spill over the boggy dike. Free wage slaves, chain-gang prisoners, tenant farmers, black and white, all of them, have forgotten their antipathies against one another, the prejudices engendered by an unbalanced economic system. In common democracy, they battle shoulder to shoulder against a common enemy. The flood is a recurring, annual tragedy to them. Grim-lipped, they battle to save the little they own: small houses upon which many painfully made instalments have been deposited to the enrichment of unscrupulous real estate interests, grubby crops that must be shared with the landlord whose home is safely perched on a hill, or merely a few sticks of furniture in rented, lowland shacks.

At last the river wins! A section of the soggy levee has crumbled and the swollen waters go hissing through the break. With dogged persistence, but with despair in their hearts, the valiant battlers try to stop the flow. But in vain! For even as they work, a huge segment of the levee begins to crumble, and the victorious river, with a rushing roar, surges out over the lowlands of the city and countryside. Streets become raging rivers as the rising flood sweeps through sections given over to factories and working class homes. It is a sight for the gods, and the rich who live upon the highlands. It is an awe-inspiring spectacle for the wellfed and the fashionably attired, and an occasion for sporting the latest styles in colored gum boots and smart jackets. But to the workers whose meagre belongings have been swept away, and who are packed together like sardines in crude shelters beyond the reach of the cold and muddy tide, it is neither amusing nor majestic. It is a sad time of suffering and despair as the murky flood swirls down street after street, reaches the eaves of house after house, and engulfs town after town.

Among hundreds of photographs of flood scenes that the reader may have seen reproduced in the newspapers, how many pictures have there been of baronial estates under water? The Barons of Land and Industry are not flood sufferers. It is the working class who are driven from their homes, who are herded in concentration shelters, who suffer cold and hunger, and the loss of their loved ones, who sicken and die of typhoid and dysentery. It is they who are paying for the wanton destruction of their rich heritage at the hands of predatory capitalism.

Like a sore thumb, the evidence sticks out demanding examination. Let us look it over.

The havoc caused by modern warfare is not limited to battle field and trench, nor to the nation or district under martial conquest. Its ravaging effects, violating and upsetting nature's fine balance, reach around the world, in the wide stretched hand of capitalism, to peaceful areas thousands of miles away from the theatre of carnage. Many people do not know, or it has not occurred to them, that the world war was the culminating folly of a series of abuses that finally brought on the recent, severe droughts, dust storms and floods, nor, paradoxical as it may seem, that droughts and dust storms arise from the same cause as do floods.

While the armies of the world were frenziedly spewing death at one another on the fields of France, the demon of war sneaked through the bountiful fields and forests of our land, sowing seeds of famine and death and laying a foundation, which if not checked, will result in another Gobi Desert over the whole area of the Mississippi Drainage Basin.

When this country was taken from the Indians, the entire East and most of the West was covered with trees and undergrowth in the forests, and with grasses on the plains. Wild life was abundant, and destructive insects were held in check by the birds. The winds blew as hard then as now, and it rained even harder, but little damage was done. Nature was in balance and provided bountifully for the aboriginal inhabitants. The rivers ran clear most of the year, but when they did spread from their courses, it was slowly and with no great violence. The soil was protected against erosion from wind and water and the streams ran through valleys protected by grasses and forest covered slopes, from which the rains ran off slowly, or sank into absorptive soil. The water which was absorbed, formed into subterranean pools, and, seeping gradually through faults and fissures, issued forts as cool springs, where man and beast came to slack their thirst.

Gradually, with the full settlement of the original colonies, seeking to escape the iron heal of exploitation by the historically lauded but tyranical "Fathers of Our Country", pioneer workers began to trek westward. Capitalism followed the blazed trail of these original pioneers. After the settlement of the rich midwestern plains, unscrupulous railway and land financiers, conniving with corrupt political administrators, managed huge mineral and lumber-land steals. Mineral resources were wasted, and the forest cover was stripped from the hills, willy-nilly, for exportation beyond the seas. John Farmer, eternally the ally and al-

ways the goat of bankers and grain pit gamblers, knowing nothing about soil conservation and caring less, plowed under the sod of plain and hillside, with no thought of the morrow. Thus was started the present planless and helter-skelter mode of agricultural exploitation.

Nature is not to blame for floods that have devastated the East or the dust clouds that have choked and laid waste the West. These are consequences of the ruthless misuse of the land. It was known before the war that sooner or later conservation measures would have to be undertaken. Noteworthy in this respect was the creation of National Forestry, under the administration of Theodore Roosevelt. Otherwise, except for isolated experiments in conservation by the U. U. Department of Agriculture operating on niggardly appropriations, very little attention was given the subject. Both politicians and finance capitalists, by their very natures, were too busy playing the game of profit-lifting. The farmers, single mindedly, were trying to reach middle class affluence and respectability; and the men of science, except a negligible few who were as voices crying in the wilderness, were prostituting themselves to the capitalists, seeking new methods for the enrichment of their masters. The working class, just beginning to organize, were fighting for the eight-hour day and union recognition, and the Haymarket Martyrs had been given to the noose in Chicago. Thus the soil was ignored and retribution was piled up against the future.

At this time, there seemed to be no pressing need for action against unplanned and irresponsible exploitation of the terrestial domain. No major dust storms had occurred, and until 1916, when the Mississippi River rose at Memphis to an all high stage of 43.4 ft., no really alarming floods had come to shake the master class and their political henchmen into the realization of imminent disaster. At most, it was a momentary distraction, and they returned with feverish eyes to their ticker tapes. Soil conservation, like free hospitalization, slum clearance, and other socially necessary projects, pays no immediate cash dividends. Therefore it is not only of no interest to profit mongers, but decidedly annoying in that such things cost money which would have to be obtained, under the present system, by taxation of property. Levees had been thrown up as a method to attack floods at their points of greatest strength, the river's edge; in a few places, flood ways had been created; but essential as these and similar engineering projects are for flood control, they do not reach the cause.

Army engineers, in charge of evacuation of

lowlands during this winter's flood, have suggested complete evacuation of the alluvial plains of the Mississippi and its tributaries, that dykes and levees be strengthened and that they and the potential flood areas be forested and be made into national parks. Tut!—tut!—it doesn't take a West Point training to figure out such a simple, though meritorious idea. The big job would be to put it across, against the insurmountable opposition of powerful real estate and rental interests. The working class who can least afford to be left prey to flood hazards, must, under the Capitalist System, live and work down by the river on cheaper but flood-threatened land. Rents, from houses in these zones of danger, is velvet for the landlords and industrial lords who have appropriated the higher and more desirable ground. They would not submit to such a slum-clearance and reforestration program unless bought out at a price unreasonably out of proportion to the value of the properties. And then again, huge profits are derived from the creation of subdivisions and the sales of building lots. Foolish workers, thinking they have jobs, from-now-on, and are all set for life, mortgage themselves to the ears for cheese-box bungalows that one day will float down the river.

The idea of turning the potential flood areas back to the wild, turning them into national parks, or forests, and wild life sanctuaries, would be very desirable. But even if this were done, the real menace, of which the flood is but a symptom, would not be laid. Army engineers, on February 11th of this year, laid before the House Flood Control Committee in Washington, data and estimates for flood control projects, designed to cover a ten-year period, consisting of recommendations for flood control reservoirs on the big rivers' tributaries, floodways, and dykes to protect centres of population. A third of the amount would go to protect river cities against inundation. The estimated cost was placed at one and one half billion dollars. It is notable that the cause of floods will not be tackled except for the construction of retardation reservoirs, which solves nothing, as they would, in time, become filled with silt, or, in other words, the precious topsoil. Army engineers seem utterly unable to comprehend the difference between cause and effect. The cause is soil erosion; floods are the effect.

*No palaces were washed away, but the home into which many a worker had built his hopes, went drifting with the flood.*

Floods are born in the little creeks and brooks, far up on the slopes of hills and mountains and far into the hinterlands of the plains country. They result from stripping away the natural cover of the top soil. This cover would have to be replaced and would cost many more billions of dollars than estimated by the army engineers, a bill which the capitalist class will not pay and which the working class cannot pay.

The damage done by the war was insidious, working like a slow poison, which, when once taken, creeps through the system, undermining the vital organs and destroying tissues, until death steps in to end it all—or like locusts, which, after their eggs have lain in the ground for years, suddenly arise in devastating swarms, to plague and lay waste vast areas of crop lands.

The World War began in 1914 and lasted until the fall of 1918. There were 37 million men under arms in Europe. Who were left to break the soil and harvest crops? Mostly women and children, and they could not till the soil. Fifty million acres of land were dropped from cultivation in Europe. Food became scarce and prices rose to unheard-of levels. Here in the United States, John Farmer chuckled in his whiskers and hastened to get in on the easy pickings, by supplying a large part of the deficiency. The bankers and grain gamblers, sure of the lion's share of the spoils, slapped him on the back and told him what a great fellow he was. It was a gleeful time for profiteers. Marginal and sub-marginal lands, heretofore considered worthless for cultivation, hillsides, briar-patches and even swamps, but nevertheless, the last of the remaining bulwark against drought and flood, were plowed under and planted with wheat, corn and cotton. "Food Will Win the War!" was the slogan of the day, and here at home we ate war bread, that tasted like sawdust loaves baked by the devil,

while millions of tons of foodstuffs were being shipped to the warring nations.

Jawn sweated hell out of his hired hands, for as little as he could get away with, except along the 1000 mile picket line established by Agricultural Workers Organization, No. 400 of the I.W.W. Here, he was made to kick in with a little of his war profits in the form of higher pay and shorter hours. He didn't like such a state of affairs, so as he rolled in wealth and a new Buick he had his representatives in states' assemblies pass criminal syndicalism laws against the gosh-dinged, pesky wobblies.

When the Armistice was signed, the demobilized peasantry of Europe went back to the land and resumed production for their domestic markets. By 1920 John Farmer no longer had a lucrative dumping ground for surplus farm products. He went ahead, however, and had his wage slaves produce another bumper crop, with the result that during the minor depression of 1921, huge quantities of foodstuffs were left unharvested or were dumped into the rivers. The unemployed could not buy this food that they themselves had socially produced, so as usual it was destroyed.

The land that had been plowed up because of the war, more than fifty million acres, and sorely needed as grass and brush land margins of safety against droughts, was no longer of any commercial value, and with its protective cover destroyed was left to the mercy of wind and water. John Farmer, perennial raider of state and national treasuries, and ruthless exploiter of the lowest of all low paid labor, together with his cronies, the bankers and gamblers, has ravished and despoiled the public domain that has been turned over to his private use by our capitalist economy.

These submarginal lands had once held moisture, when they were under grass and brush, or remained undrained swamps. The topsoil, left as it was, dried up and was eventually blown away. New Yorkers awoke to the startled realization one day last summer that the peculiar yellow pall that enveloped the city was the topsoil of Kansas and Iowa, being blown into the Atlantic Ocean. As an illustration of how deserts are made, we will quote from an article from the Conservation Service of the U. S. Department of Agriculture: ". . . Pour water in a cellar door. It dashes off immediately. Spread a rug or mat on the same inclined surface and most of the water is held back and absorbed. Some of it may run off, but it runs in a trickle, not a flood. Apply the simile to millions of acres of sloping land, bared of its rug of vegetation and shorn of its absorptive mat of topsoil. Multiply the run-off from the cellar door into billions of gallons of water rushing across denuded hillsides into streams that have limitations upon their capacity for carrying water.

*Are these flood refugees to be the forerunners of "gaunt and miserable victims of a predatory system" which has left them only an arid waste where once the fertile prairies rolled—or will they avert this horror by manfully building a One Big Union of Labor to take hold of our resources and use them intelligently?*

The cause of floods is clear." Yes, and the cause of deserts. The Nile and the Euphrates were rivers like that. And the deserts of Egypt and Mesopotamia were once fertile and bountiful. Legends from ancient history and the Bible tell of plagues of locusts that once swarmed over the land of the Pharaohs—and dust storms.

As has been stated, droughts and dust storms are of the same parentage. Let us use again the analogy of the cellar door. With the rug on the door, part of the water which had been held back, is absorbed as water vapor by the heat of the sun, and eventually precipitated again on the soil. This process would have been repeated ad infinitum, if Nature had not been artificially thrown off balance. Otherwise, the sun blazes down upon a waterless area which soon becomes dry and cracked. The topsoil, partly vegetable in character by the slow process of centuries and therefore irreplaceable by man, becomes dry powder and

the winds lift it and carry most of it away. Finally, because of shifts in air currents, water vapor drawn from the tropics, or the oceans, is precipitated in torrents on the parched land. As on the cellar door, with no protecting rug to hold it back, the water goes roaring over the hillsides, down to the valleys, gouging out deep gulleys, uprooting the few surviving trees and other vegetation, and carrying, in the form of silt, the last of the food essential to plant life, the top soil. Here, at last, is a desert in fact, fit only to support cactus, coyotes, and rangy jack rabbits.

**Back to the Sea**

Capitalist apologists will scare up any excuse they can lay hands to in order to whitewash their masters and deflect the blame for the plight of the land from the system of private exploitation. The sum total of their bleatings is so much hogwash. On the other hand a school of pessimists, blaming it all on nature with man as her inadvertant helper, sees no hope for posterity. It has not been proven, they contend, that the continent of North America is capable of sustaining a permanent civilization. There is evidence that the continent can exist only by turning it back to the original state in which the white race found it. Further reasoning supports the theory that in cutting down the forests, engaging in unsuitable farming methods and other acts of careless greed, men have helped natural evolution in its destined course.

To quote J. Franklyn in the New York Post of Feb. 9, 1937, "—What we have done is not, as many imagine, a crime against nature. We are simply speeding up nature's solution for North America, which is, quite simply, to wash it all into the ocean. Until we came along, nature's chief agent in this sizable job was the Mississippi River system. Men have simply short circuited a flock of centuries and hastened the day of the inevitable desert. Before the Mississippi Valley meets the fate which has overtaken Mesopotamia and North Africa, nature will cease to require the services of as many men as are now engaged in aiding the dstruction of this continent. The time is in historical sight when our people will bunch like barnacles along the coasts and derive their living from the salt water of the deep blue sea."

We would concede the point, here, had we no faith in the inherent intelligence of the working class. If we of the I.W.W. had no faith in the workers, we would close up shop and quit trying to organize them. But, it is our conviction that we can and will organize them in Revolutionary Industrial Unions, not only to fight now for more pay and shorter hours, but to take over the industries and the land when capitalism is finally compelled to abdicate.

It is then that the real cause of floods will be tackled and nature can and will be harnessed and made to cease playing her pranks upon us. Socialized and controlled agriculture and animal grazing and scientific engineering methods for the retention of moisture where it is most needed will undo the "short circuuit". There should be no need to cluster along the seashores. There is a remote possibility that another Ice Age may descend upon us within the next million years or so, but that is too far off to worry anyone except an incorrigible pessimist. The menace of soil erosion is something to worry about now.

"What have we to do with all this?" some thoughtless worker will ask. "We don't own the disappearing soil, nor the bug-ridden shacks that are swept down the yellow tide." Such an attitude reminds us of the story of the seaman, who when called upon to help man the pumps to keep the ship from sinking, replied, "I don't own the damned ship, let her sink!"

Here is class consciousness perhaps, but without social vision. It is not sufficient merely to be class conscious. The conservative labor movement is full of class conscious workers who go on sit-down strikes and battle valiantly against their common enemy, the master class. It *is* necessary to have a breadth of vision that takes in not only what is immediately apparent and of today, but also what is to be. This is the distinguishing mark of revolutionary class consciousness. It developes a patriotism that transcends the pay-triotism of the master class and their lickspittle lackies.

It is hard for the average worker to visualize the future. His subservience to bourgeois leadership and capitalist domination, and the pressure of immediate need, blunts both imagination and perception, to the extent that despite the evidence, any picture of what lies just ahead is completely obscured. It is not sufficient merely to line him up in the union; it is necessary to awaken in him the social vision that is lying dormant in his subconsciousness. Then he will appreciate the social superiority of the watchword of the I. W. W.: "Abolition of the Wage System", as compared with the motto of the A.F. of L.: "A fair day's wage for a fair day's work."

Members of the I.W.W. know that it is the working class who suffer the most, weakened as they are by low pay, unemployment and bad working and living conditions, from the depredations of wind and water. As the years roll by and floods and dust storms increase in violence, our sufferings will increase apace. In our understanding and transcendant patriotism we know that it is our land; the land of our descendants, which is being ruined by planless and unscrupulous private exploitation. Though we hold title to not an inch

of it now, someday we shall own it all in common, and we don't want to appropriate a desert. We know our heritage is being wasted for the pleasure and profit of the few, and will, unless we prevent it, become another Gobi Desert, across which dusty winds will blow from the Alleghanies to the Rockies. Even now, under the present Rooseveltian planned economy of scarcity, there is not enough to eat, but on such a tomorrow as has been depicted, the workers will be reduced to the status of coolies, roaming, gaunt, and miserable victims of a predatory system which has outraged and violated Nature beyond endurance. Let us get to work and organize.

Basic and mass production industries are fully socialized in this country, except for ownership and management, and are ready to be taken over by the workers. Socialization came about through inexorable evolution in spite of private ownership, and the capitalists could not undo it if they tried. It is their Frankenstein. Evolution of socialized ownership of land lagged behind that of mechanized industry, but due to soil depletion, droughts, top heavy debt loads, and, in this depression, to mortgage foreclosures, the pace of land socialization has been accelerated since 1920. Ownership of land is being centered in the hands of banks and insurance companies, which fits neatly into the scheme and framework of the I.W.W. John Farmer, puzzled and wailing for government help, is falling from his high estate as a member of the property-owning and labor-exploiting middle class and is fast being reduced to the status of tenant and day laborer. In spite of Roosevelt who tries to do a King Kanute against the tides of evolution, this depression will not end in another wave of "prosperity". John Farmer, the individualist, like the bankers and industrialists is doomed to be swept aside to make way for the historic era of socialization.

The founders of the I.W.W. knew this when they framed the preamble. It is a masterpiece of reasoning, based on the ability to see far into the future—a working document of today and a prophecy of the new social order. It gave rise to the Industrial Chart of the I.W.W. Showing the structure of the I.W.W. ,built on a firm, scientific ground-work, many steps ahead of socialized capitalist industry. It is a plan for the day, now almost at hand, when the organized workers will take charge of the industries and the land, and will operate them in the interest of the whole instead of the interest of stockholders and high salaried executives. Emancipated workers, Fellow Worker John Farmer among them, through their Industrial Departments, will tackle the problem of production and distribution; and flood control will be taken up at the source of the flood evil, the point of cause. War will be declared against soil erosion as the true cause of the Yellow Peril.

Let us engage in fancies for awhile and visualize what the Industrial Unions, through their centralized departmental connections, will do about the disease of the soil, in the Industrial Democracy of tomorrow. Practical people look askance upon dreamers, but we are going to dream of the highly practical, of doing the things which the I.W.W. was organized to do.

Let us envision a great agricultural section, above which we are flying in an airplane. The most desirable and productive soil has been planted with corn, or golden wheat. From high in the air, it is likely, the land would look like a giant checker board of green and gold. The gold would be waving wheat, and the green, nothing more than plots of moisture retaining mats of grass and shrubbery. Where the land is inclined, or rolling, the plots would be laid out in leveled terraces. At intervals there would be forested plots, that would serve as wind breaks. In addition they would help in the retention of moisture, and at the same time would be arboreal harbors for wild birds, natural enemies of destructive insects. Brooks, carrying excess runoff of rain water, their channels sufficiently wide and with well dyked banks, would flow through the land on their way to the river. Here and there, gleaming silvery in the sun, haunts of bass and pickerel, are lakes, whose beds were former plowed land, and whose shores are lined with trees. Zooming on overhead, we see, in the distance, a small city of beautiful homes, and workshops for the maintenance and repair of modern farm machinery. Here is the headquarters of the Industrial District Council of Agricultural Workers Industrial Union, No. 110.

We pass over and beyond the town. What is this we see below us? Ah! Animated pork chops and hams, happily wallowing and rooting in the dirt. We fly over an expanse of green that reaches to the horizon. It is a plain of rich buffalo grass, upon which thousands of head of sheep and cattle are grazing. Their number per square mile of grazing land has been scientifically determined, and they are sleek and happy. It is their destiny to furnish an abundance of chops and T-bone steaks to the teeming Industrial Workers of the cities and non-grazing areas.

Hazy in the purple distance are tree clad hills, the foot hills of lofty mountains beyond. Soon we are over them and pass above another small city. It is the regional headquarters of Lumber Workers Industrial Union, No. 120 and perhaps, also, of I.U. No. 140, whose members engage in furnishing seedlings for reforestration and the distribution of floral products.

Passing beyond the foothills we come over the mountains. Here and there are giant dams, some

of them under construction, some of them completed and holding back millions of gallons of melted snow and ice from peaks and glaciers high above timber line. We fly above a modern camp, or perhaps it is a city of palace trailers. Here is the temporary domain of General Construction Workers Union No. 310.

It is a beautiful picture we have envisioned, and it is a picture that must be completed before the flood menace is solved. It is a social pattern that only industrial organization can handle. The craft unions, if forced to take over the industries, would be hopelessly handicapped at the start, because of their jurisdictional and craft separation structures.

We have envisioned the evolution of the I.W.W. from a Revolutionary Industrial Union, into a Workers Regime, an Industrial Democracy, the new society that has evolved from within the shell of the old. This is worth fighting for, despite all ostracism, blacklists, police clubs, bullpens and dungeons—and it is the only sure cure, so far advanced, for the elimination of floods and dust storms. When this picture is completed, flood waters will be back in their natural environment, guaranteeing to the sun his chance to gather moisture for normal cloud making and precipitation. Nature again will be in balance; an abundance of the good things of life will be her reward to an emancipated working class; and severe droughts and floods will be subjects only for historical study.

"By organizing Industrially, we are forming the structure of the new society within the shell of the old."

# Hot Stuff

By IXION

**'Twas only an Irish longshoreman's dream—but they played horseshoes and won anyway.**

The scabs were lining up along the dock to unload a ship under guard. The bulls were there and the yellow-legs were coming. Striking Patrick McGinthy was there, too—and ready for 'em, so he said to himself as he squared his shoulders, belligerently threw out his chest and took a two-fisted heave at his belt, with emphasis on "ready." He, Pat McGinthy, would show 'em how a single man with brains and guts could stop the whole works if properly implemented. "Properly implemented" was a six-bit combination word he had learned from the Great Engineer, you know, 'Erbert 'Oover, the former English President of the United States.

Properly implemented? Patty was that if anybody was. Around his waist under his clothing was strapped the thing that could fix 'em, and would at Pat's command stop all this nonsense of workingmen scabbing working men off the Earth.

Implemented was the good word, all right. It was a machine that Pat had under his clothing, of wonderful construction. Pat's own invention it was, if invention it can be called to so improve an already existing machine that it was a thousand times more powerful and a thousand times more perfectly under control. And that was just what Pat had done to what the medical profession was pleased to call a fever machine. Made in secrecy by Pat himself, only he knew of its existence.

And here he was—if the bulls only knew of its existence, they would be quaking in their boots, mused Pat. Master of the situation? He'd show 'em damned soon that he was.

By slow unobstructive maneuvering he got himself into a position from which he commanded an unobstructed view up and down the dock. Now for a try-out—but on what? Hah! the ship. Indeed, what could be more fitting than it, the largest and most obvious object in sight, less than a block distant.

Pat put his fingers into the watch pocket of his jeans and brought forth a small piece of rubber tubing attached to the end of an electric wire. It looked something like the funnel-shaped thing one sees at the end of a doctor's stethoscope. He shielded it within his hand as he brought it out, aud fingered it while he mused on his own cleverness in bringing it out through there: no bull could at a distance tell whether he was merely playing with his watch or what. Not that it mattered because he could fix any bull any time and in a jiffy.

Pretty clever that and all of it; because by hooking his left hand kind of careless like in his belt, where he had had the good sense to place the control buttons, he could send out and cut off the powerful heat inducing electric waves.

Now for the dirty work. On went the current. And sure, said Pat to himself, the results are pleasing and far exceeding even my very fondest hopes. The very instant the rays hit it, the ship was gone with nothing but the smell of burnt paint to remind one that it had been there. The water in the bay was boiling. A couple of scabs trucking gear up a gangplank fell into the boiling water and died instantly.

A fine sight for sore eyes, said Pat to himself. Now if only the Irish had had a machine like this one in the battle of the Boiling Water, Ireland's history would be different to this day. It was a fine sight for sore eyes sure enough.

The scabs and bulls on the dock hadn't even noticed it yet. It all happened too quick for 'em.

Pat burst out in a big merry laugh. The big fat bull nearest him, thinking he was the object of mirth and resenting it, started for Pat in an angry mood, club in hand. Still laughing, Pat touched the "easy button." He wanted to have a bit of fun with the copper before fixing him for good. So he pointed the little tube at the fat bull's belt buckle. Again the results were surprising. The minute the rays hit him, the bull dropped his club and started yelling blue murder, the while clawing at the belt buckle to keep it from scorching his belly button. Laughing, Pat shut off the current and watched the bull do a two hundred and fifty pound light fantastic. As the bull's hip pockets came into view there were some more great results when Pat turned the rays on again. In one pocket was a gun, in the other handcuffs. Grand sight that. Cartridges exploded by the heat, sent their bullets plowing downward through the bull's sedentarily exercised and overdeveloped rear midship section before the gun and handcuffs got hot enough to burn their way through leather holsters and cloth and fall to the ground. The bull's belt load of tear gas bombs and spare cartridges were popping all over the outside of the up-and-down-stepping, blinded, screaming hunk of blubber.

Pat laughed so hard, the tears were rolling down his cheeks. Through the mist of the tears of joy Pat spied some of the scabs laughing also—they saw the show but didn't know what had

caused the actor to perform, or they might not have stayed to laugh. To see the scabs laughing, was too much for Patty McGinthy. It is one thing to provide amusement for honest folks such as striking longshoremen, their sympathisers and the like—but scabs! Whurra!! The little tube was quickly pointed at them, and this time the high pressure was on.

Most of the scabs were leaning on their empty trucks which instantly became so hot that they burned their way through the dock flooring and fell into the bay dragging the scabs with them. A couple were sitting on a big cast steel hawser bit —down they went bit and all into the drink.

Said Pat to himself: Never a finer bunch of scabs have I seen than the ones now floating in the bay, and may they boil and drown both, and may the only scabbing the likes of them ever do, be for old Dave Jones.

Bulls and scabs were drifting on the boiling tide of the bay. Again Pat's mind wandered back to old Ireland and what Ireland's history might have been had Brian Boru had a machine like he, Patrick McGinthey, had.

A truckload of militia men was just entering the dock. Pat eyed them with cocksure triumphant hatred in his eyes. They'd be easy. Pat pushed the "easy button" and gave them a cursory spray. The first thing to go was the gas tank, in a nice flashy burst. Next went the tires. Of course, being soldiers, a little thing like a big truck blowing up under them didn't stop that bunch. After picking themselves up from various parts of the scenery they started to get together their war paraphernalia. Down the empty dock they came dragging tripods, machine guns, riot guns, cartridge cases and what not.

Damn the counter hopping yellow legs! Don't they know when they are well off? Can't they take a warning and go home instead of staying here helping to starve and club and shoot other working men out of their houses and homes? Well, if they can't, they just can't, that's all. I'll have to fix them proper too, said Pat to himself.

Well in the lead of the rest came a militia man hugging a machine gun to his bosom. Pat gave him the ray. All a sudden he gave out an awful yelp and let go of the machine gun. The almost melting gun fell right across his toes and instantly burned them off back to the instep. Such a lot of yelling until the ambulance came and picked him up, you never heard in your life.

That's one of 'em put out for good without killing him, mused Pat. Why the hell didn't he stay out of the militia? If he had, this would never have happened to him anyway. He's out of the yellow legs for good now though, and it is somewhat doubtful if he'll ever make a good counter jumper again—a man can't very well be on his toes when he ain't got any.

Damn them guys, can't they take a hint a tall? Still coming on, adragging their stuff. And they got some awful bad stuff there for a poor striker. Well, two warnings is all they might get. They've had their chance. If they won't take a hint, they won't. So here goes. On went the ray full blast. Up went handgrenades, poison gas containers, machine and riot gun cartridges by the thousands, big brass shells for field pieces, and yellow legs in one big noisy stinking mess.

Not a militia man left! Not a bit of war material left! Fine work, Pat McGinthy fine work, mused Pat as he surveyed the damage and mentally patted himself on the back, you sure fixed that bunch. But phew! how that poison gas does stink phew! phew!!!

Just then Pat woke up and stared around him bewilderedly. The evil small came from under the old piece of tarpaulin he had thrown over himself to ward off the chill ocean breeze when he flattened out on the plank back of the signboard to take a little snooze while on picket duty. As he took in the situation, and his mind cleared of the dream trance, Pat mumbled to himself, "All is sure quiet on the western front."

The other pickets were playing horseshoes. The clink, clink of the shoes hitting against the pegs reached his ears. Pat threw the tarpaulin back. Phew! the old gut is still rumbling. Beans for breakfast is sure an awful thing. Sitting up, he stretched himself and started to feel his pockets for a smoke. The smoke lit, he eyed the horseshoe players for a while.

The players eyed him back between throws. "Have a good snooze, Pat?" shouted one of them.

"To be sure," said Pat, a bit disgusted with reality, "move over there one you guys and let a man of action get into the game."

# French Labor

**By JOSEPH WAGNER, of the I.W.W. Committee on World Relations**

**What prospect is there of French labor insisting on intervention in Spain?**

**What was the driving force back of last year's sit-down strikes?**

**Why has a country with such a militant working class adopted compulsory arbitration?**

**A recognized authority on European labor movements deals with these important questions.**

The latter part of May, 1936, the world was startled by an epidemic of strikes in all industries all over France. Unexpectedly and spontaneously millions of workers had revolted against unbearable conditions which had been continually and gradually worsening ever since the World War, undermining and demoralizing the spirit of that once proud, militant, and revolutionary French proletariat.

The amazement of the world was due not so much to the suddenness and the extent of the strikes, as to the new methods adopted and employed by the strikers. "Striking on the job" was put into effect on an unprecedently large scale and with telling effect.

The workers came to the decision that the means of production were no longer to be considered as the exclusive property of the masters, but that they by right belonged as much, or even more, to the workers whose lives and well being depended on these instruments of production and distribution; for, without the workers industry could not exist, and, without access to industry, the working class would perish. So the strikers had decided that in that fight, instead of abandoning the struck factories, shops, mines, railroads, department stores, etc., they were going to remain in them, and make themselves at home in them until the termination of the conflict. *"La Greve sur le Tas"* (striking on the job) was maintained throughout their extensive struggle.

To be sure, the "new" method employed by the French strikers, was not altogether new. The I.W.W. has propagated and practiced the principle of "striking on the job" ever since it was first organized. The French syndicalists themselves practised it occasionally even before the birth of the I.W.W. And in America, too, the WPA workers have been indulging in it sporadically for the last few years. But it was the strikes of May-June, 1936, in France, that definitely fixed the "sit-down strike" as a regular weapon in the armory of the working class.

By this departure from the ordinary, the strikes in France became first page news for the capitalist

*A group of victorious sailors celebrating on the docks of Marseilles after their sit-down strike had won them the 40-hour week with an increase in wages in June of last year.*

press of the world. Well known correspondents wrote the strikes up as "foreign news", and the Brass Check press thus unwittingly spread the idea among workers of all lands. The idea was taken up everywhere, even in these United States as we just witnessed in the General Motors strike. This weapon has no legal standing as yet; on the contrary, politicians and jurists seem to be unanimous in outlawing it as a breach of the sacrosanct right of capitalist property. Even the French Popular Front composed of communist, socialist, and radical bourgeois parties, and its government headed by comrade Leon Blum, have declared "sitting strikes" illegal, to be resisted by all the forces of the government.

But, what of it? Have not peaceful strikes and picketing been considered illegal for centuries? They came to be tolerated only when and where the workers were able to muster sufficient force to assert their "rights".

Was the strike a success? The answer depends on who answers it. The strikes did not aim at revolutionary objectives, they were an explosion of the discontent of the masses. The demands have all been granted and these exceeded by far the expectations of the leaders of the labor unions, who, by the way, had no responsibility in starting these strikes. Briefly the gains were:

1.—Collective bargaining and collective contract;

2.—Right of electing shop and job delegates to represent the workers on the job and to adjust grievances and disputes with their employers; the employers not to fire delegates on account of their job delegate activities and the delegates to receive their regular wages for time spent negotiating with the employers or their agents;

3.—The 40-hour work week;

4.—Vacations with full pay;

5.—Increase in wages from 7 per cent to 15 per cent, the lowest paid workers to receive the largest increase.

To American members of the I.W.W. these attainments will not appear very imposing and certainly not revolutionary; old-time French syndicalists appreciate these gains in the same way as the Wobblies would. Furthermore they contend that the enforcement of these gains will depend entirely on the strength of organization and the pressure workers will be able to exert, that otherwise the gains will be lost or forgotten. That these fears are justified will appear later in this article.

These same revolutionary unionists, however, unanimously agree that the strikes were a great victory for the working class, quite apart from the gains enumerated above. The working class of France has re-discovered itself, it has regained its former self-reliance and besides it forged for itself a new, efficient weapon, which it will never relinquish, and therefore it is ready to go places. Not since 1906, when after two years preparation the eight-hour day was won by great struggles, including several general strikes, have the masses of the French workers manifested such militancy.

It should be understood that the strikes of last year were not planned, or called by the unions through their regular channels. Most of the leaders of the unions were at the time engrossed with the political schemes of the Popular Front which had just won out in the elections and was busy forming its own government. Strikes of any magnitude would have embarrassed their political business. Small strikes broke out spontaneously in different parts of the country, and the time being ripe for it—the workers' dissatisfaction having reached its climax—these small strikes spread. The movement got beyond the control of the union leaders—since the bulk of the striking workers were not members of the unions—and it became general. The masses not only took possession of the industrial establishments of France, but of the unions as well. They flocked into the unions so fast that in a few months the membership of the General Confederation of Labor increased from one million to five million members.

* * *

The reason why the masses had kept away from the unions is a long story and we can give only a few brief details. Up to the World War, the French Confederation of Labor (C.G.T.) was the outstanding revolutionary working class organization of the world. It was one of the sources of inspiration for the founders of the I.W.W. It was also actively anti-militarist. It commanded the respect and loyalty of the great majority of workers of France whether union members or not. It was a power of the first magnitude in France.

On the eve of the World War the C.G.T. proposed to the German Trade Unions that a general strike be called in France and Germany to prevent mobilization and war. The proposal was coldly turned down. "When the Fatherland is at war, the German worker is a German first of all" was the answer. As a reaction to this many of the influential leaders of the C.G.T. became favorable to defending their country against invasion and from then on they filled somewhat the same role for the French government that the A.F.L. did for the Wilson administration. The best militants, those who remained true to their anti-war principles were jailed or sent to the front line trenches to be murdered. By the tactics of class collaboration and with the aid of the government the C.G.T. grew numerically, but its principles got diluted and its morale weakened, losing its former militant, revolutionary character. The leaders thereafter no

longer relied on the organized strength and combativeness of the membership, but rather on bickering with politicians, with the government and with the Labour Bureau of the League of Nations.

After the war, communism too, appeared, creating the usual confusion in the ranks, and after a couple of years of bitter internal struggle the C.G.T. split into two separate confederations (C.G.T. and C.G.T.U.), the latter affiliated with the Red International following the well known zig-zag lines laid down by Moscow. The other (affiliated with the I.F.T.U.) became more and more reformistic and closer to the socialist and radical bourgeois political parties and cliques.

For sixteen years the main activity of the two confederations consisted of fighting each other. Strikes under the reformist C.G.T. were generally disrupted by communists, injecting their senseless slogans such as, "Hands of China" etc. and bitterly attacking the people in charge of strikes, thus creating distrust and defeatism in the midst of strikes. After a strike would be lost or ended with doubtful success, as the result, at least in part, of such meddling, the communists would use that as fresh arguments of the treachery of the "social-fascist" leaders.

On the other hand, the communists kept on calling "political general strikes" in rapid succession until their movement became an object of contempt and ridicule with the great mass of workers. The labor world was thus kept constantly irritated and disgusted with these senseless fights and meaningless strikes. That is why workers, in ever increasing numbers, were dropping away from the unions and their activities.

On account of the fight between the two federations, several large industrial union federations pulled out of them and remained autonomous. Besides, the anarcho-syndicalists, feeling at home in neither of the above groupings, formed their own Confederation, the C. G. T. S. R. (Revolutionary Syndicalist General Confederation of Labor) and affiliated with the I.W.M.A.

The membership of the two confederations dwindled and their influence on the working class approached the vanishing point. The employing class thus got a free hand to deal as it liked with its slaves, and used this unscrupulously over the weakened proletariat.

The French workers are akin in mental make-up to Spanish workers; as a rule they are class-conscious and have a high sense of class solidarity. They finally grew tired of their miserable conditions; tired of waiting for the two confederations to be done with their mutually exterminating struggle and to again take the lead, as formerly, in their struggle against the masters. They began to bring pressure from the outside on the unions to quit their foolishness and create a united labor movement. Invited to meetings, non-members were able to exert this pressure. So strong became the pressure that in spite of past bitter struggles, a Unity Convention was held in January, 1936, and the two confederations and the autonomous federations merged into a single body and affiliated with the I.F.T.U. The anarcho-syndicalist C.G.T.S.R. remained out of the merger.

*A follower of fascist Colonel de la Rocque gets it on the chin as a fascist menace is routed by Popular Front supporters in a fight that swept a purportedly radical government into office.*

* * *

With unity accomplished it appeared that a new era would begin for French labor. But another difficulty got in the way. Due to the danger of a fascist coup, an agreement was established between the socialist and communist parties, to drive back the fascist attacks. Later this was enlarged to take in the left-liberal bourgeois parties and establish what is known as the Popular Front. Just before the strikes we are considering, the Popular Front won a majority in the French parliament and proceeded to form a government with the Socialist leader, Leon Blum, as the chief.

Even before the new government could began to function the "sitdown" strikes broke out. Most of the important officials of the C.G.T. are members of either the Socialist or Communist parties

and as they were busy with political scheming and log-rolling, an extensive strike movement was very inconvenient and greatly embarrassed them.

The workers, however, sensed that that was precisely the opportune time to strike. The Popular Front government, just come into power, could have hardly afforded to use the army of the Garde Mobile against the strikers. They were right. Instead, the government stepped in offering its good offices for mediating peace "among all classes," as Blum said. The socialist and communist officials of the unions got busy inside the unions to dampen the spirit of the workers and to persuade them against "unreasonable" demands and to lessen the effects of the strikes. With the aid of the government, compromises were effected, and some temporary agreements drawn up. Details were to be settled later by negotiation and *arbitration.*

Here is where trouble starts anew. *Arbitration* has been in bad repute with the French workers for as far back as we can remember. Traditional direct actionists, they are suspicious even of voluntary arbitration. In the settlement of last year's strike it was tried and it did not work. It appears that the workers accepting it always get the short end. Consequently, sit-down strikes broke out afresh in places where disputes were thought of as settled. The socialist Minister of Interior, Salengro, lost his patience and threatened to throw the striking comrades out of the factories by military force.

Voluntary arbitration systems not filling the bill, the socialist-communist government passed a compulsory arbitration law. As with all laws pertaining to labor relations, this, too, is vague. In effect it says, that if an agreement cannot be reached between the workers and employers, and they cannot agree as to a supreme arbiter, the government shall appoint the arbitrator, and the finding of that gentleman shall be binding on both parties to the dispute. Blum blames the necessity for this law on the stubborness of the employers and wants the workers to think that the law is passed as a favor to them. He also hints that as long as he is the government chief, the arbiter will be a member of the C.G.T. But how about when the communist-socialist government of Blum will be followed by a reactionary government? What kind of arbiters will a conservative government appoint to render binding awards in labor disputes? There is plenty of dissatisfaction and turmoil around this business, and plenty of opposition. Blum will find that the French workers are just as unyielding in the matter as the employers.

* * *

There is also agreat deal of dissatisfaction with the way the government is acting towards the Spanish fight against the fascist invasion. In spite of the merger of the different groups of unions into one, the old fight is continuing just as bitterly as ever before. The masses were able to exert pressure on the two confederations from the outside. They got inside but there they find the fight unequal with the politicians entrenched in strategic functions of the unions. The mass pays its dues but its wishes are defeated by the well oiled machine.

And here we revert to the affiliate of the I.W.M.A., the anarcho-syndicalist C.G.T.S.R. For years past it was a small organization composed mostly of dogmatic anarchists. Before the Unity Convention, syndicalists of different schools could find place for themselves in the two confederations and in the autonomous unions. If dissatisfied with the one, he could transfer his allegiance to the other goup and not have to join with the sectarian anarcho-syndicalists. But since unity was accomplished, the same political clique is ruling the entire outfit. Therefore, it is expected that hereafter large numbers of dissatisfied C.G.T. members will flock to the C.G.T.S.R. whose prestige increased greatly among the French workers on account of its close connection with the C.N.T. of Spain. With new elements entering it, it will soon lose its exclusively anarchist characteristic, and there is a good chance that it will eventually play the same role in France as the C.N.T. in Spain, with the C.G.T. in the role of the U.G.T. for the great body of the French working class will not long allow politicians to rule their economic organization, nor lead it into the rut of parlamentary politics.

# On Labor's Back

## By TOIVO HALONEN

**Will labor permit Largo Caballero and John L. Lewis to develop their careers in the manner of Mussolini and McDonald?**

**Or will labor be able to adopt the policy of Louis Blanqui (who when asked if he was out to overthrow a cabinet of dubious "progressives," said: "No, we want only to lock the door after them!"**

Quite a number of men using labor unions as stepping stones, have raised themselves to positions of prominence in their own country, and to world-wide renown. The careers of many of them deserve painstaking study because in their success stories may, perhaps, be found the answer to the vital question:

Can the workers depend on leaders?

Turning to Spain, we find Francisco Largo Caballero, premier of the loyalist government, who was born in 1870 in the miserable surroundings of the Spanish peasant. Later he ran away to Madrid, where he earned his living as a comman pick and shovel laborer. A union of Building Workers was organized in 1890 with Largo, then a youth of 20, as one of the organizers. It was then that he learned to read and write.

He became a sincere but bureaucratic labor leader. He entered the general strike of 1917 whole-heartedly and was sentenced to jail for life. Because of his popularity, he was soon set free and made a member of the Council of State by Dictator De Rivera.

In the 1931 Spanish Revolution, when King Alfonso left Spain Caballero became the Minister of Labor. It was while in these official positions that he used his influence and power in clamping down on the telephone and port strikes, both of which were initiated by the syndicalists.

At the age of 62 Largo Caballero began reading Marx and Lenin. In the revolt of the workers of Austurias, October 1934, he was arrested and charged with plotting to overthrow the government. Again he was freed, and failing to note that workers are always weakened by any alliance with capitalist elements, he initiated a Peoples' Front.

In February, 1936, the Popular Front came into power, with Francisco Largo Caballero as premier. He has "arrived," but so has General Franco and his fascists. The outcome is still unsettled.

* * *

In England there is Ramsay McDonald, who became anti-labor Prime Minister of England from 1929 to 1935. Born October 12, 1866, he learned his Socialist ideas in London, where he lived very precariously by writing for the local newspapers.

Wearing a conspicuous red tie, McDonald spoke on the street corners of London and took part in many radical debates. He was secretary of the Labour Party from 1900 to 1912, and served in the House of Commons in 1906.

McDonald's star rose rapidly after this, and he was successively chairman of the Independent Labour Party 1906-09, leader of the Labour Party 1911-14. He also was for some time editor of the "Socialist Library" and the "Socialist Review."

During the world war he was far-sighted enough to build up a future reputation as a pacifist, at the cost of a temporary handicap in his political career. Thus in 1922 he became the Labour Party Leader of His Majesty's Opposition, and for a brief while, in 1923-4, was thus shoved up to become Prime Minister. The 1926 General Strike provided a further opportunity to establish his concern for respectability as greater than any solicitude for the working class. Again in 1929 with the victory of the Labour Party at the polls, he became Prime Minister once more. Under his leadership doles were cut, the wages of government employes were cut, and his concern for the workers in British colonies was shown by the shooting down of strikers in India. After August of 1931, though he had lost his labor party support, he continued in office just the same as Prime Minister and Lord of the Treasury. Labor had carried him so far that he could be a politician

in the highest office in the land, even without the support of the workers who had put him there.

* * *

Mussolini, one of the bulwarks of Fascism today, once was a Socialist. Born in 1883 of radical parents, he received a good education. After attending 6 years of Normal school, he went to Switzerland where he became a radical and was expelled from two cantons. Mussolini returned to Italy to serve in the army.

In 1913 he became the editor of the "Avanti," the daily Socialist paper published in Milan. During 1914, at the beginning of the World War, Mussolini was boosting war. For this reason he was expelled from the Socialists. In the same year he created his Fascisti.

In the following years up to 1919, the Socialists gained control of the Italian legislature. There were great railway, telephone and telegraph strikes called by the Syndicalists. Mussolini and his Fascists fought against these strikes and did all in their power to scab and break the strikes. This, of course, put him in high favor with the Italian capitalists.

It should be noted that in 1920 the railway workers refused to move trains carrying soldiers, policemen, and sometimes even the clergy were not allowed to ride the trains. In September of that year the Italian metal workers began occupying factories.

An outgrowth of these strikes was a bloody riot of Fascists in Bologna. In 1921 Mussolini entered the Italian legislative chambers, and in October, 1922, after his blackshirts marched on Rome, King Victor Emanuel III told him to form a ministry. He did so, and made himself Premier of the Council and officer on interior and foreign affairs.

Thus Mussolini received his education in the radical movements of Italy, turned renegade, and within 10 years became the Fascist dictator of Italy.

* * *

In America John L. Lewis enjoys a high degree of prominence, because of his control over the United Mine Workers of America, and more recently over the Committee on Industrial Organization. He first appeared on the mining scene in Panama, Illinois. Here he first gained notoriety when the treasury of the local union was robbed and Lewis was blamed for it.

To get rid of Lewis, John H. Walker, president of District 12, U.M.W.A., told Sam Gompers to give Lewis a job. So he was given a job organizing steel workers, in which he was quite successful. John L. was then taken off the A. F. of L. payroll and given a job as business manager of the U.M.W.A. Journal.

During the World War, White, then president of the U.M.W.A., left for Europe on a commission for the government. Lewis became vice-president and successfully connived to become president of the United Mine Workers in 1917.

The sell-outs of labor by Lewis are numerous. In the coal miners' strike of 1920, the famous Dougherty Injunction was used against the miners, and Lewis piously proclaimed that the union could not fight the government injunction. His greatest betrayal was in 1922 when 600,000 workers were out, and things looked bad for the U.M.W.A.; 50,000 unorganized miners in Western Pennsylvania came out and turned the tide in favor of the union.

John L. Lewis then signed National and District agreements, making no provisions for the loyal miners outside the U.M.W.A. These miners continued to strike for several months without aid and were finally starved and beaten into submission.

During the life of the NRA, Lewis became labor advisor for F. D. R. Sensing the New Deal's need for well-controlled unions of mass production workers, he pretended to fight for Industrial Unionism in the A. F. of L. conventions at San Francisco and Atlantic City. Out of this grew the C.I.O.

The workers of the U.M.W.A. have brought Lewis quite a way from the life of a coal miner. His $12,000 yearly salary attests to that fact. It isn't every miner that has a Cadillac V-12 and a chauffeur to boot!

But John is not yet content, and who knows to what extent he will use the U.M.W.A. and the C.I.O. to satisfy his ego.

* * *

In the case of Caballero, Mussolini, and McDonald, we find that the capitalists greeted their rise with open arms because they exerted a great power over the masses of workers whom capitalists must hold in submission to retain their own power.

Our conclusion may not be entirely justified, but there is some evidence to indicate that not a few of the successful labor leaders, and those still aspiring to attain success, deliberately set out to gain the confidence of working people in order that they may appear before the capitalist rulers with something in their hands that they may offer in trade for a position of power and glory.

We hesitate to believe that John L. Lewis will succeed in reaching the top, but who can doubt that what he has in mind is the control of the workers in the mass production industries, so that he may have something with which to bargain with the barons of American industry, for the greater glory of John L. Lewis.

# *Women in the Labor Movement*

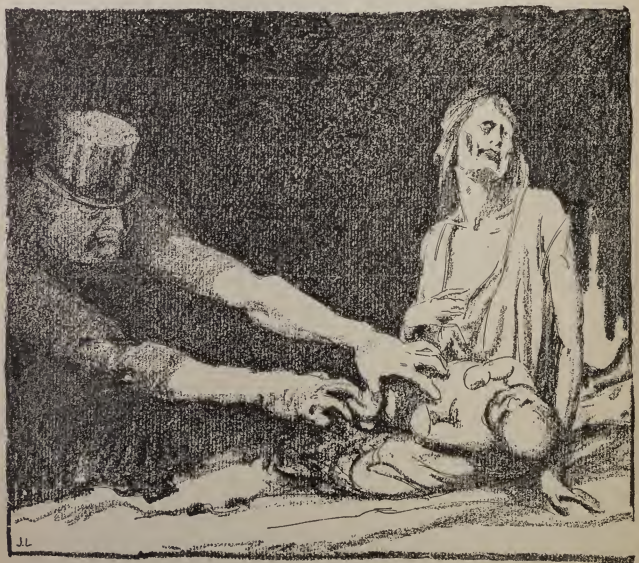
**By S. H. A.**

That the fighting spirit of Mother Jones, best man in many a coal miners' battle, persists in the women of today, is shown by the women's brigade in Flint (shown above) and on many a picket line as well as in the trenches around Madrid.

One of the girls now studying at Work Peoples College to prepare herself for greater usefulness to the labor movement, asks why in the face of the facts the old prejudice about "keeping women in their places" should persist in labor organizations.

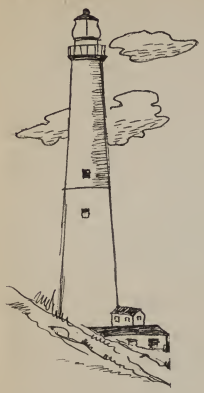
Though from time immemorial every influence has been at work to keep women "in their place," humble and saying little as to what was to be done in this world, women today in the labor movement are showing the same courage as the pioneer women who fought Indians, planted corn and built houses. They are doing this not merely as home builders, but as builders of a new society.

Women have been forced to take their places in the factories, mills, offices, and consequently in the labor movement. When production moved from the home into the factory, women followed the economic trend. Woman's place in the labor movement is steadily growing as her place in society as an individual is beginning to be more clearly recognized.



It is not merely in Spain where women shoulder guns at the sides of their husbands to fight back the fascist invaders, but in all phases of the struggle of labor against capital that women come heroically to the front. The history of labor is filled with instances of the courageous part that women have played, alike in such armed struggles as the Paris Commune, the revolutionary move-

ments in Russia, Finland, Austria, Germany and Hungary of 1904-5 and during and after the World War, and in the great strikes of America —Cripple Creek and Homestead, Pullman, Ludlow, and the 1919 steel strike. Here are a few significant instances from recent years.



The Longwear Manufacturing Company of Philadelphia hired 45 high school girls for $6 per week. Later the company tried to cut even this wage, but it received a rather shocking surprise when the girls went out on strike and the whole factory went out with them. These vicious sweatshop owners were under contract to supply army underwear, so after a three-hour tie-up, they gave in. They agreed to the abolition of piece work, a minimum wage of $10 per week, recognition of workers' shop committees, and no discrimination. The needle women asked for an increase in wages from the $6.00 they were getting to $22.50. The workers who had been on strike offered to go out again if need be, but it wasn't necessary. The company had learned its lesson and granted the increase. Direct action had paid.

In 1933, 1500 miners and their families marched at Taylorville, Ill., in the funeral cortage of Mrs. Emma Cumerlatto, who was shot by special deputies while picketing. Ten state police acted as an unwelcome escort. During the strike among the Progressive Miners who were arrested on the charge of murdering Rodems, a Peabody gunthug, were four women, one of whom was a seventeen year old girl. These women were doing their

(Continued on page 25)

**Women are learning that if their children are not to be strangled by the greed of a system that puts profit before all things, and are not to survive only to become cannon-fodder for the munitions trust, they, too, must join the battle against the exploitation of their class.**

# Murmansk

*By A. Yourniek*

**Last month this seaman described how taking ship to Russia shortly after the March, 1917, revolution, the spirit of revolt ashore led to the formation of a ship's committee aboard their own vessel. As the result of a dispute to make the captain put on enough food for the return trip to America, the American consul at Archangel brought pressure to have him as a ring leader, left ashore with "the rest of these people who are stirring up this revolution business", as the old man put it.**

**This month he continues his vivid narrative of revolution and counter-revolution on the fringes of the Arctic.**

Jack and I and two others came ashore in the Land of the Revolution to start a new chapter in our lives. Some of the crew helped us get our baggage ashore and up to the railroad station. The train was making only two trips a day between Economy and Archangel. In the station there were a few workers and some soldiers on leave going home. The train was long overdue, and everyone was beseiging the station master. Late in the afternoon we were told that there would be no train that day. Something had gone awry with the engine. The ground was covered with new snow, and it was ten miles to Archangel. We could put the night in at the station or walk. So we checked our baggage with the station master and took the road.

The wind bore dead against us. Half way over my chin and nose began to freeze. I wasn't aware of it, but Jack made me understand with signs about it. I rubbed snow on the frozen parts and brought them to life again. From then on I watched Jack's exposed parts and he, mine.

It was dusk when we reached Archangel. We registered at the Local Seaman's Home and took in the night life of the city. Next morning we registered at the proper bureau and were issued the usual food cards. At the American consul's we got what pay we still had coming to us.

We dawdled around town for a couple of days more, and took in a soviet meeting where the election of local officers was taking place. Then Jack and I shipped on the Sawaty, a small Russian passenger ship, erstwhile plying in White Sea ports and the Solvietsky Islands. Now she had been taken over by the customs authorities and was to lie over for the winter in Murmansk.

Though situated on the Arctic Ocean, Murmansk is an open port the year around. It was made into a port only during the war to avoid delays in shipping ammunition when the harbor of Archangel was frozen over.

After a few days Jack got it into his head to quit. He wanted to give his job to another sailor who couldn't talk Russian and who consequently found it pretty tough to get by. Jack got off but the other fellow didn't get the job anyway. With Jack's departure I felt alone. I hated to lose him as a partner, but I couldn't speak the language either, so I stayed.

We took on some stores and bunkers and left with the aid of a couple of ice breakers. It was the last clean up and ships that weren't ready for departure would have to winter it there. Toward evening we reached the open sea. The White Sea was free from ice though it freezes over in January.

All the way down to Murmansk we had easy weather. The days were getting very short. On our arrival I was called to get ready for my watch on deck. It was about eleven in the morning, and still dark. At first I believed that somebody had made a mistake, but I soon found out that in De-

They could return to the Askold if they wished. cember and January there are only a couple of hours of twilight and the rest of the day that part of the world is flung in darkness.

We lay out in the stream for a couple of days until a berth along side the dock could be found, and then the Sawaty was securely moored for the winter. We held a crew meeting and decided to let some of the men go home for a vacation, and that when they returned the others would go. But the first group stayed home awaiting the spring.

Time passed slowly on board. Nothing could be done in the line of the ship's work. There was hardly any place to go in town. The one movie show was in the Seamen's Club, where dances were also held occasionally.

I was picking up Russian fast. Against my wishes I was eventually installed as chairman of the ship's committee. Though the revolution was astir all over the country, most of the crew weren't concerned very much about it. Probably our comparative isolation on this ship tied up in an out of the way town had much to do with this indifference.

One Sunday, though, the news was brought aboard that Admiral Ketlinsky had been shot that afternoon. He was commander on the cruiser Askold. It appears that the shooting was done while the Admiral was leaving a sailor's meeting where he was called to hear the report of demobilization by two delegates from Petrograd. None had seen the deed done, and no one had the slightest idea of how it could have happened. Most of us had never heard of Ketlinsky; the chief engineer, though, seemed to know everything about him. He told us how good a man this admiral had been. He was a liberal and a good patriot even while serving the Tzar. He had served the Kerensky government faithfully and when the Bolsheviki took power he declared himself ready to serve the new Russia. He may have been sincere. At least he was liked by the Bolsheviki and had won the respect of all the Allies. Through his efforts the S. S. Dora was at that time just a few hundred miles from Murmansk laden with foodstuffs secured from America, but now that he had been killed the ship was recalled, and a whole nation was to suffer because of the mad act of some fanatic.

Next morning the local paper announced the tragic assassination of the admiral, and called for the apprehension of the guilty so that justice might take its course. Mass meetings were held where local officials condemned such acts of individual terror. Resolutions were passed to leave no stone unturned. There was much agitation about it for a while, but nothing came of it.

* * *

Later, in the Russian navy, I learned more about Ketlinsky and his ship the Askold. She was built in Germany, and was new when the Russo-Japanese war broke out. Her five funnels gave her a formidable appearance. She was armed with 12 six inch guns and others of lesser calibre. She could then make 32 knots per hour and was regarded as the world's fastest cruiser. During the blockade of Port Arthur she broke through the cordon of Japanese men-of-war all by her lonesome, steaming full ahead and firing all her guns in all directions.

During the World War she was used against the Turks at the Dardanelles. Working in between the two forts during the night she destroyed the cables between them, while the Turks looked on helplessly, for they could not fire on the cruiser for fear of hitting their own fort. So the mission was accomplished without mishap to the Askold.

With the failure of the English military operations at the Dardanelles, the cruiser was sent to France. During her stay there Russian revolutionary exiles of various shades established committees to imbue the crew with their particular revolutionary doctrines. These activities were soon scented by the higher-ups. Wholesale arrests were made. Four of those apprehended were sentenced to be shot, and the rest, some 150, were exiled to Siberia.

It was through this affair that Ketlinsky became commander of the Askold. A special commission headed by him was sent to France to investigate the matter. All he did, however, was to whitewash the commander and the officers and take the command of the cruiser over himself.

After a short stay in France, the Askold left for Glasgow. On her way the crew got rid of one of the stool-pigeons. The helpless lump of bones and flesh was pitched on the seething fire. Soon after the ashes of the pit and the box were blown to destroy all traces of the fink's disappearance long before it was found out that he was missing. Upon the cruiser's arrival in Scotland, another fink, sick with terror, was paid off, a thing very rare in the navies, particularly in wartime.

The cruiser arrived in Russia during the March revolution. The sentences of the original crew were set aside, and the men in exile were free.

A few who came back were received by Ketlinsky himself, who made a speech of welcome. When he finished, someone asked why he, as a liberal, didn't do anything about the death sentences imposed on the four sailors. He replied that he was sorry, but at that time couldn't do anything about it, but of course, had he been a member of the court, things would have been different. The men had their own opinion about the Admiral. To them he was just another untrustworthy liberal. He was killed by a friend of one of the four executed men.

* * *

To the sailors the assasination of Ketlinsky was just a case of one admiral less. They were confronted with a more immediate problem. Orders came from Moscow for the sailors' demobilization. Shortly after sailors began to leave the God-forsaken shores of Murmansk where winter lasts nine months, and no green thing lives except the hardy forest timber. The daily sight of nothing but trees and mountains and water and snow in an utter darkness relieved only by the dim Northern light gets on one's nerves, and the soldiers and sailors were eager to leave.

One day a group of English deportees—all women and children—arrived in Murmansk. They were total strangers in Russia, wholly unacquanted with the language, deported because they were married to men who had once been working in England. They were treated by the Allies with great hostility.

I remember especially one woman with a child of about four years in her arms. Like the others, she had been born in England and her husband had been working there before the revolution. He had come to Russia in March with the intent of sending for the child and woman sometime later. She hadn't heard from him in six months but was sure he had gone to his birthplace, Odessa. That city had now been cut off from Moscow by the White Guards and the Germans. I warned her that she would never reach her destination. But the woman was beside herself. She had lost all her belongings. She had left them either on the ship or on the flat car where the heaviest baggage is piled, or perhaps they had been stolen by the longshoremen. She and the child were left with nothing but the few scant things they had on. Her screams attracted the attention of a British officer who was in charge of the immigrants. His name was Leonard and he spoke Russian well. He came up and gruffly told her that it was her fault, to fall in with the rest and go to the station. When she insisted upon still looking for her things, he motioned to a soldier who pushed her in the line. I watched her as she moved on in the queue with the chilled child clinging close to her.

About that time I and five others of the crew decided to quit the Sawaty and join the Russian navy. The First of May we came over to report for duty on the cruiser Askold.

It was Labor's holiday and we too took part in the celebration. At one point the parade stopped and we were addressed by a sailor from the Askold who talked about the International and other things, but it had snown, and the ground was slushy, and hard for a foothold, so we were glad when the after noon came, and we were treated to a good dinner at the Sailor's Club. In the evening we piled in a tugboat which took us to the cruiser.

Time on the Askold was passed pleasantly enough. There was a lot of fun for us in the usual daily military training because it was something new. We'd exert ourselves trying to outdo each other, and evening would find us pretty well tired out. But after the usual steambath, which the Russians had installed even on their ships, we'd feel all right again.

* * *

After three weeks some of the boys who had gone on an expedition to Petchinga reported that there was a large British cruiser the Cochrane there. She was armed with nine inch guns, and had orders to use them against the Finns and Germans if they came too close. When our men had landed in Petchinga they walked up to a nearby monastery about which the Finns were supposed to be concentrating. This monastery was one of the largest in the far north, though there was one larger on the Solvietsky Islands, now used by the Soviet government as a prison camp. There they met some fifty Red Guards and border patrols, and went with them to various lookout posts on the front. They didn't have to wait long. After a couple of days the news came to the camp that the Finns were coming. Immediately they were sent after them. The Cochrane was notified, and when the Finns came close, she fired a few shots. The Finns didn't expect anything like that, and took it on the run with our men after them. It turned out to be a foot race, but it seems the Finns were the best runners. They

flung guns and supplies away, which our men gathered up. When the rumpus was over our men had captured ten prisoners, one of whom was a German officer, whom the British took aboard the cruiser.

The Finn attackers had been led by a monk. The monks had feared the confiscation of their property, and had sent him to Finland to get aid to hold their property against the revolutionary government. He came back with a force adequate to take it had it not been for the preparations made by the Reds during his absence. After this skirmish the Finns never came back again.

With the latter part of May, the valley snow commenced to thaw. Military operations were hindered. The Allies in Murmansk were landing more soldiers daily. Our forces were enlarged and ordered back to the ship, where we started practicing now with heavier guns. We got a new commander also, Ziloff. Officers wore no marks except a plain uniform and cap, but we did call him commander.

There was a small Russian steamer plying between Murmansk and the Vardo Islands, which belong to Norway. At that time she was the only Russian ship still on foreign trade. One Sunday the Coast Guard stations received an urgent call. This ship had sighted a submarine. There was a shore battery where she had anchored, but nobody could handle the guns. Murmansk was some distance away, and the best that could be done was to send a pair of trawlers. But they could knock out only 10 to 11 knots per hour, and a few hours would be required to reach the hounded ship. Meanwhile the submarine came in and sank the ship where she was lying at anchor. By the time the trawlers got there the submarine had gone leaving its wrecked victims behind. It would be useless for the trawlers to go prowling the Arctic Ocean for the submarine. They salvaged what cargo they could, took the dead aboard, and those who were still alive, and steamed back to Murmansk. Seven were dead, others had broken arms and legs, and still other had minor injuries.

It was a sad day for Murmansk when the trawlers returned with their dead. Everybody, including us sailors, turned out for the funeral. The priest conducted the service at the foot of the hill. When he had finished we carried them to the top of the hill and buried them.

All kinds of rumors circulated regarding the submarine incident. The official report was that it was a German submarine. But Germany was supposed to be at peace with Russia, and the sinking of the only Russian vessel on the foreign trade would be of no benefit to Germany and a loss to Russia. The unofficial explanation was that the submarine was British.

Next Sunday evening when some of our men had gone ashore to take in a motion picture at the Sailor's Club, they were accosted by a representative from headquarters who informed them that a seditious meeting was taking place, and urged all sailors present to report for duty at once. The men rushed back to the ship, took rifles and hand grenades, and with all those who were off duty, we hurried ashore. By the time we arrived the main speakers had already been arrested, and when the crowd had a good look at us coming, they dispersed quietly. The arrested ones were railroad engineers, and they were sent later on to central Russia.

We were told that these men were openly calling for a Constitutional Assembly such as the one that the Bolsheviki had dispersed at Petrograd in January. The same workers who had marched in mud and cold on the First of May, applauding the names of Lenin and Trotsky, and shouting "Long Live the World Revolution!" were now, only six weeks later, boosting for a Constitutional Assembly. No doubt the British were gleeful about it.

The drive for the division of the Russian people was on. Sailors patrolled the town for a couple of nights, but nothing happened. The shore patrol was quit as no sign of disturbance could be detected.

News of the sinking of the little ship had got to Moscow, and orders were given that the destroyers take provisions aboard at once. There were several of these boats moored to their dock with no crews. Three were immediately commissioned, and sailors from our ship and from the battleship Chesma took them over until the regular crew would come aboard.

One day all of us were ordered to a mass meeting ashore. The speaker was General Poole. Talking in English, he said:

"I have the honor of coming before you as the representative of the Allied high commander. All of you know the unfortunate situation of your country. We haven't forgotten what you people did for us in 1914. It was the activity of your army that compelled the Germans to withdraw large forces from the Western front, which gave us a breathing spell and virtually saved Paris from the Huns. Your country is now prostrate and helpless, and we take it that it's our turn to repay you . . .

"We must first organize an Anglo-Russian division, for the opening of the Riga front. The men in that division will be paid in English money. All equipment will be furnished by us."

The men were dumfounded by Poole's speech. They had been promised peace, but now all sorts of schemes were drawn up behind the lines to hurl them back into the war on the side of the Allies.

According to the peace treaty with Germany no foreign troops were to be permitted to remain on Russian territory. In Murmansk alone there were about 5,000 Allied soldiers and three battle cruisers rode at anchor in the bay. Germany was demanding that Russia live up to its agreement. But the Russian forces were too small to drive the Allies out, and they weren't inclined to do so anyway.

It was a double-dealing, two-faced policy. One telegram from Moscow would publicly demand the withdrawn of the Allied troops, and another at the same time request their close co-operation.

Next Sunday morning our ship's committee was invited to a meeting ashore, where the matter of breaking with the central government in Moscow would be taken up. Things were coming to a head. When the committee returned and gave its report to the crew, the chief engineer offered a resolution against breaking with Moscow. With this resolution our delegates went ashore and presented their instructions to the delegates of the other ships, and the workers delegates.

A mass meeting for all the people of Murmansk was called to be held at the house of the Soviets. It was opened by Youryev who favored breaking with Moscow. He stressed the weak military position of our ships and our shore defenses. He pointed to the Finn and German danger that constantly menaced the workers' homes. General Poole made much the same speech as he had before, but he now added promises to the civilian population that fishing boats and nets and other things would be given them. Next was a Frenchman who talked on how France loved Russia for the help they had given, but said not a word about the thousands of Russian soldiers dying in the African jungles for refusing to fight any longer. An American Martin spoke too in the name of the American consul at Archangel. Stankevite, the local militia commissar took the floor in favor of the Allied proposals. When Youryev put the question it carried with a large majority. Only the sailors of the Askold voted against it.

At that same time in Kem the Allies were putting three revolutionists, members of the Soviets, against the wall to be shot by Serbian soldiers under British officers. But of course we in Murmansk knew nothing about that or that all the towns along the Murmansk railway had been taken by Allied troops without any opposition. The same way as they took the towns around Murmansk, they tried to take Kem too. But there they met opposition from the local soviets which were made up of Bolsheviki.

We got back on the Askold longing for reinforcements from Petrograd.

(To be continued next month).

## Women in the Labor Movement

(Continued from page 20)

share to win the strike in which their menfolk were engaged.

In Pittsburg, California, fishermen went on strike against the fish barons. Women did their duty on the picket line. The companies offered to buy fish direct from the strikers; women went to the cannery to investigate and found that the price offered was 2½ cents, on the grounds that the fish had been standing. The women began throwing stones at the fish barons and at the cannery windows. They were told to go home and behave themselves, but this only brought on a new assault of stones. The fish was paid for at 5 cents, and the strike was over.

During the iron miners strike of 1916 in Minnesota, women were on the picket lines with the men. Many were beaten and brutally treated.

Gunmen entered the home of Pete Masonovich to arrest the men gathered there. The group resisted the arrest and the gunmen knocked over Mrs. Masonovich and opened fire at the men. One gunman killed his fellow gunman, but the workers were blamed for it. Mrs. Masonovich and thirteen men were arrested. Her husband and three other strikers, Nickich, Cernogorovich, and Orlandich, were convicted and sentenced to one to six years. Mrs. Masonovich, it appears, was the first woman ever tried for murder in connection with a labor case.

During this Iron Range strike there were many women who were beaten and who spent time in jail and refused to be bailed out. One woman in Gilbert, Minn., was beaten and afterwards kept in jail without medical aid. She was pregnant, and as a result of the brutal treatment, she died.

Women of the working class are the same the world over. In Spain today they are proving their mettle. They are out in the trenches beside their husbands, brothers and sweethearts, valiantly aiding their men in the battle against fascist forces, that Spain may be free for future generations.

Women in America will do the same if need arises. They have shown this by many an heroic battle on the picket line. They cannot sit back and wait for peace while the lives of their beloved ones are in danger.

Let women do their share in the labor movement. All too often they have to fight the same prejudice about "keeping women in their place" in the unions as they have had to fight in other phases of life these many years. Educate workingclass women and they will set out gladly on the road to emancipation. In the growing ranks of women workers the I.W.W. will find new sources of energy and of intelligent enthusiasm for its mighty program of world reconstruction.

# *The Hobo*

***By L. P. EMERSON***

The sun hung low o'er the mountains
Tinting each rugged crest,
And painting in golden glory
The bending skies of the West;
When dark, like a speck on the landscape,
With his blankets across his back
Came a worn and weary hobo
Down the dusty railroad track.

By the curve of the road at nightfall
Where the stars above glimmer and peep,
Through a curtain of leaves and grasses,
He laid him down to sleep;
And he thought as the song of the night bird
Soothed his tired and troubled mind,
There's room in this world and plenty
For all except me and my kind.

He slept and lived in dreamland
Where love spread her splendid wings,
And bore him from old surroundings
To a better scheme of things.
He dwelt in a rosy cottage
With flowers blooming 'round the door
Where all was wealth and gladness . . .
There were no tramps, no poor.

A sweetheart wife beside him
Made him of all men blest,
While the wee curly head of their darling
Nestled close to his manly breast;
And there were great things to be doing . .
The best that was in him he gave
To a world with no soldiers, no shackles,
No prisons, no master or slave.

O, woe! to a world whose workers
Are cast like chaff to the wind
When the lords cannot use them for profit
Must go seeking, but cannot find.
O! cursed be the system forever
That robs human life of a home,
And sends young and old to the highway
In quest of a living to roam.

But why will you die, ye toilers?
You have the power and the might
To wrest from the cravens who hold them
Your bread, your freedom, your right.
O rise, in your infinite numbers,
Unite on the sea and the land,
Let tyrants implore you for mercy,
Take the reins of the world in your hand.

# Who Is It That Gets the Relief?

*By* **EVERT ANDERSON**

**A WPA worker wonders, if it weren't for the graft, wouldn't it be cheaper for the government to send us a check each month with instructions not to work for anybody?**

"The sooner we get this job done the better it will be for all of us", said one well fed Village Babbit to another equally obese.

The two of them were discussing the forthcoming blessings of two roads now under construction under WPA management—the Wolf Creek road and the Wilson River—both in Oregon. The writer has worked on both of these but is now temporarily laid up to boost the hospital business, due to an accident which was beyond the control of the lord as well as your reporter.

"Yeah, what we need on these roads is more machinery and somebody with a little git-up-and-git to make them lazy bums work instead of leaning on their shovels all day long." "You bet", said Babbit No. 2 "Now when I was a young—."

By this time I had finished my frugal repast consisting of a cheese sandwich — Tillamook Cheese — and a bum cup of coffee; whereupon I, seeking the fresh air without, left the Babbit conversation to a more appreciative audience.

However, it is the nature of "relief work" that I wish to comment on now. How does it relieve? A common laborer gets $55.00 per month to support himself and family. A jackhammer man $65.00; a faller $85.00. Even at the rate of $85.00 per month, a family man has to scrape to make both ends meet. He and his family have to eat poor food, wear poor clothes, live in a poor house in a poor district, breathing poor air. Finally when the bread winner passes on—the way of all flesh, rich or poor—he is tucked into a poor casket, and his poor survivors hear a poor preacher make a poor sermon—something on the order of "rich and poor must dwell together in harmony"—case No. 810372901 is closed.

Sometime ago I read some figures on how much money it takes to keep alive. I have forgotten the exact amount. But when I tell you that I am mathematically dead from having received too little of too much, you will forgive me for this weakness of memory. This is my budget for 1936: Received in wages from the WPA: $344.04. From other sources $160.00. Total income for 1936—$504.04. Had I worked the whole year at the rate of $55.00 per month, it would have given me $660.00. Agreed that $55.00 per month is the lowest hand out we can possibly give ourself and still perculate, it can be seen that I was at the end of the year $155.96 below the perculating level. This is how I was relieved in 1936.

"ONLY GOD CAN MAKE A TREE." Yeah, but we sure can knock 'em over quickly enough. The Wilson River and the Wolf Creek roads will be short cuts to the sea from Portland. They are chartered through heavy timber. Big, tall, straight firs such as only grow here on the coast. Thousands of acres of timber land are destroyed yearly by forest fires, but we must aid in the destruction even on the WPA. To do otherwise would interfere with the sacred rights of business. And so we go to work with saws, axes, dynamite, peavies. We pile up the brush and the good timber together, pour some oil on it, strike a match to it—fire! As the fire rapidly consumes the logs and brush, the foreman glows in satisfaction: "It will damned near all be burned up before night."

In Portland fuel companies are taking advantage of the present cold spell—and influenza—to sell inferior wood at exorbitant prices. We could easily have made wood out of the logs we burned and supplied the needy with fuel free of charge.

but that would interfere with private business. While our good timber is thus going up in smoke people in other parts of "this great country of ours" are burning twigs, straw; yes and some are drying cow manure for fuel.

Much of the timber that we deliberately destroy would make excellent houses for those who live in "tumble down shacks" along Tobacco Road. But it would "interfere with private business" were we to give to each other what we need free of charge. Private business demands destruction. It's been doing it so long that occasionally members of our class help to hang a guy that advocates the opposite because it is argued that "what was good enough for father is good enough for me."

"The more oil and gas you waste around here the better they like it", said one of the initiated WPA slaves, as he seemed to enjoy pouring as much oil and gas on the ground as into the engine. Of course, the oil companies will like it very much. They are in business for the money and do not care whether oil is used for anybody's good or not.

Crews are hauled to jobs over fifty miles from Portland in huge uncomfortable busses. Camps could easily be built, but that would "interfere with private business." It would be cheaper by far, and the money would certainly last a lot longer if the government sent us a check of $55.00 every month with instructions not to work for anybody, But— there is no end to BUTS— that would "break down the morale of our free-born American wage earners", according to the best Babbit authorities on this subject.

Who the hell is on relief anyway? Answer: The oil companies are on relief; the politicians are on relief; equipment companies are on relief; Babbits and braintrusts are on relief. The half-starved unemployed in whose name huge sums of money are being appropriated is only the sucker in the game.

Next fall the short cut to the sea will be open for traffic. This will mean that less gas will be consumed since the distance is shortened. Less tires worn—for the same reason. Less wear and tear of the old tin can. This in turn will mean less business in oil, tires, gas, tin cans. Again it will mean less employment for those engaged in oil, tires, tin cans etc. Catch on? There is the vicious cycle of private business. Yet, and still I want to see the road built.

What's the nature of direct relief? This is it: The capitalists give us a handout in the manner that a stick-up artist returns to his victim enough for car fare after having thoroughly RELIEVED him of all valuables including his watch and jack-knife. Relief Work is the same thing only you have to work for it. Now let's give the scissorbill the floor: "Well, somebody is gotta be the head of things."

The scissorbill has given me one good reason for which I want to see a short cut to the sea. Any worker who has convinced himself that he has neither the intelligence nor the courage to organize for a fight against the bunch of organized gangsters who now control the land in the interest of "private business" had better use the short cut to the sea, jump in, and join the fishes and the slime from whence first came our life-bearing ancestors. But we will and shall organize because we must.

While we are at it, we may as well organize for something more than a mere hand out. Let us organize industrially, not only for the every day struggle to keep the capitalist from robbing us too much, but also to carry on production and serve each other after we shall have completely stopped this destruction by the robbing class in the name of "private business".

"The sooner we get this job done the better it will be for all of us."

# Can Capitalism House Its Workers?

*An analysis of New York's slum clearance program showing that the profit motive condemns millions to squalor.*

**By PEO MONOLDI**

*General Organization Committee, Construction Workers' Industrial Union No. 310-330 of the I.W.W.*

**This crowded street is playground, laundry, dry-room, library and den for thousands of New York City's proletariat.**

Once more housing and slum clearance are drawing great attention in the New York Metropolis. The great shortage of homes and the unrest among the millions of slum dwellers are forcing the powers that be to take notice of the unbearable living conditions that the working class must put up with. But instead of starting to tear down the nearly 100,000 vermin infested and dilapidated slum tenements in the great city, they are giving up more investigating committees and framing more long and short term public-housing programs.

A law is now in force in the state of New York which sets minimum standards of sanitation and fire protection for tenement houses and which, if enforced, would not mean the tearing down of these dismal unsanitary firetraps but simply a face-lifting process, such as installing a toilet for each apartment, fire escapes and semi-fire proofing of halls and stairways.

These small repairs and improvements however do not succeed in destroying the accumulation of filth and vermin within the walls and partitions of these buildings. A person not accustomed to the stench this creates would easily require the use of a gas mask to enter these rat-infested traps. As even these minor changes would cost an average of $3,500.00 for a five story tenement, the bankers and realtors are refusing to comply with these laws and threaten to issue eviction notices to 300,000 families living in 40,000 or more of these buildings, rather then to supply their minimum needs. A sitdown strike of these slum dwellers has already taken place. Unable to pay the high rent demanded in other buildings, and not willing to stay out on the street, they are ready to fight even to hold what little they have.

While the great city is modernizing itself in every direction with subways, new bridges, new highways, new skyscrapers with every modern equipment, just around the corner old-law tenements with their dark rooms and unwholesome dangerous construction still stand. Built in the decade following the Civil War, to meet the rising tide of immigration, today the increasing deterioration of these tenements endangers the life and health of the workers.

In 1937 in the so-called greatest city in the world over 387,000 families are living without central heat in their homes, over 244,000 families have no hot water in their homes; over 235,000 families must do without tub or shower, and over 189,

*Don't blame the woman overmuch—this sort of home is the product of a system far more slovenly and wasteful than she. This sort of home—typical of thousands more in our great metropolis—soon trains its tenants to keep house in the style to which the neighbors are accustomed.*

families lack private indoor water closets. Of the 1,750,000 families, over 500,000 live in tenements that were built previous to 1900 and most of them built in the sixties and seventies are with a series of dark windowless rooms, "dumbbell" tenements covering 90 per cent of the lot and providing slits from 2 to 4 feet wide and some 40 feet long between buildings as the sole source of light and air for rooms that do not face the street or yard. This is only a conservative estimate of the actual conditions existing among over 2,000,000 New York cliff dwellers.

What has or is being done to alleviate the housing conditions of these workers? Of course there has been much talk and many commissions have been appointed in the past hundred years or more, and many laws have been passed for the betterment of housing but even with all the talking, newspaper headline commissions and laws, conditions are getting worse instead of better and today we have over seventeen square miles of slums scattered in every borough of greater New York.

During the boom days of the twenties a law was passed for state supervision and providing assistance for large scale private limited dividend operations. Several large apartment buildings were constructed under this new law, which allowed the builder tax exemption for a period of years. The buildings of the Amalgamated Clothing Workers at Mosholu Parkway were erected in this way. These apartments were let out and sold at an initial cost of $500.00 per room and a $11.50 per room per month thereafter. Only the most prosperous workers could afford to benefit by this type of project. This still applies even though rents have been reduced to $9.50 per room per month in this building.

But with the ending of the so-called prosperity days even the construction of these buildings came to an end. To make matters worse for the increasing numbers of workers who required housing accomodation hundreds of buildings have been torn down, not for the purpose of rebuilding modern homes in their places but to construct such enterprises as the Tri-Borough Bridge, Rockefeller Center, Railroad terminals, etc., with

the result that the occupant either had to double up with other families or go into smaller quarters if they could be found. As though this was not bad enough nearly 3,000 buildings on the verge of collapse have been boarded up and considered too dangerous for people to live in. As yet no attempts have been made to tear them down and replace them with habitable homes.

With the advent of the New Deal with its P. W. A., C. W. A., and W. P. A., a new hope seemed to appear to alleviate the housing misery. After the first ballyhoo an announcement came that a loan had been made by the P. W. A. for a slum clearing project which would house 1600 families. To the disgust of even the bourgoies the deal turned out to be nothing more or less then the payment of a political debt.

The project was to be out in the Bronx, a location entirely unsuited to the transportation needs of the average worker. The rents were to be $11.50 per room per month. There was such protest from all sources interested in slum clearance that the loan was withdrawn. However, politics being more powerful than these protests, the loan was once more granted and the Hillside outfit went ahead with its building operation.

But at long last the slum district has finally been reached by the P. W. A. One project is now completed in the east side of Manhattan. Another is under construction in Harlem which will house 570 colored families and another is under way in the Williamsburg section of Brooklyn which covers 12 blocks and will house 1,600 families when completed. The first was constructed by relief workers but the next two are being done by contractors. These aparatments will be modern and will rent at $6.00 per room or over but how many of the slum workers will be able to live in these buildings is a question as those applying for the apartments must have a job, a bank account and must prove that they have a steady income. This means that nearly half a million wage workers on relief who need these buildings will not qualify as tenants and must keep on living as they do. The municipality will not take chances with workers who cannot guarantee the continuous payment of their rent.

Much repair and alteration work is going on in the old buildings but as this is being done up goes the rent and workers must move to other buildings which will be the same as the ones they have just left.

Housing or Slum clearance, like every other industry, is based on profit. Whenever there are profits to be made there will be finances to invest.

Much noise is being made today as in the past that the reason financiers refuse to build is because labor is too high. I have before me the cost of Knickerbocker Village, a large apartment house, which cost $6,216,899 to build. Of this, they claim that $2,019,838 went to labor for the actual construction of the building. Anyone not

(Continued on page 34)

*The PWA workers who put up these apartments at 153rd Street and the Harlem river, designed for low income groups to solve New York City's housing problem, will not live in them—for prospective tenants must show a bank account and have a job.*

# Has a Substitute for the I.W.W. Been Found?

*By*
**TOR CEDERVALL**

Or is the trend toward Fascism expressing itself in the employer cultivation of a One Big Union without class-consciousness, and no rank-and-file control, as a necessary element of the "corporative state"?

It is about time that someone wrote another "One Hundred Million Guinea Pigs". In place of horrifying details of sandpaper on your tooth-brush, this book should deal with the one hundred million workingclass guinea pigs who in America, past and present, have been dished out an infinite variety of adulterated remedies to keep them sick but satisfied,—all substitutes for the real thing.

The material to select from is wide and varied, for in no realm of human relations are there to be found more substitutes, fake claims, and harmful products than in the field of sociology. For every measure that could possibly aid in the thorough housecleaning of our society, a spurious substitute is offered and pushed before the public. The phenomenon of Fascism alone affords a vast field for fertile study, for Fascism is the grand devil of them all in the black art of adulterated substitution. Its sample wares include such choice items as "national socialism" for socialism, "labor front" for independent labor unionism, race or national struggle for class struggle, to mention a few of the more important ones.

However, since we only suggested the book and are not writing it, let us confine ourselves to one instance in current America that might provide a significant chapter for the proposed volume. We have reference to the current attempt to substitute the C.I.O. for an industrial union movement long championed by the I.W.W.

The C.I.O. emerged upon the scene a little more than a year ago. Why? Back in the "horse and buggy" days the mighty onsurge of solidarity on the part of the workers through the Knights of Labor was stopped by the appearance of the A. F. of L. "The sins of the fathers are visited upon the children." Is the C.I.O., the child of the A. F. of L., coming to the fore to run bona fide industrial unionism into the ground?

The employers' art of spurious substitution in the labor commodity market was at first exercised entirely on their own initiative in America by those pariahs of the people, the John D. Rockefellers, as an outgrowth of the terrible and magnificient strike of the Colorado coal miners in 1913-14. The Rockefellers, after witnessing fifteen months of heroic struggle on the part of the miners that even wholesale murder of their women and children at Ludlow could not stifle, brought in W. L. MacKenzie King, later premier of Canada, to form the first "company union" in the United States, the Rockefeller Industrial Representation Plan. In subsequent years the "company union" has served with varying success as a substitute for labor unionism in countless industrial establishments of America.

However, since the gaping dent put into Capitalism by the "crash" of '29, a general awakening of the American working class has occurred. After an interim of stunned stumbling, the workers commenced to organize in earnest.

The unemployed, no longer pleading recipients of charity, organized and clamored for more bread and shelter. Several plants in the mass production industries went out on unorganized but bitterly contested strikes, notably the Briggs body plants in Detroit. The craft-bound A. F. of L. witnessed a large influx of members into its unworkable federal unions. The I.W.W. made some serious inroads into the automobile industry during and immediately following the Briggs strike. The latter organization also conducted a large agricultural strike for higher wages in the martial law-patrolled Yakima Valley of Washington, as well as conducting a construction workers' strike at Boulder Dam, a seamen's strike on the Gulf, building strikes in Philadelphia, etc. In addition, several independent unions of a bona fide working class nature were springing up everywhere, such as the M.E.S.A., the Wisconsin Industrial Union, the Union of All Workers in Minnesota, and others.

Against such an arousing working class the employers were beginning to find the camouflage of "company unionism" rather thin.

With the introduction of the NRA, the Government started playing around with the A.F. of L., but found that the rock-ribbed craft structure of the A. F. of L. was so utterly outmoded as to be unfit for the Judas role of old. The piratical prerogatives of the international craft unions upon the federal locals were causing the new recruits to go through the A. F. of L. like a green light. The distressing spectacle of the lumber workers in

the West deserting the safe haven of the A. F. of L. for the industrial unionism of the I.W.W., clearly proved the impotence of even "doctored" craft unionism to embrace the aroused workers of America and run them into the "safe and sane" channels of the A. F. of L. Such experiences early led Generalissimo Johnson of the NRA to declare for industrial unionism. Today this blustery strike-buster is the blatant advocate of the C.I.O., much to the distress and protestation of weary Willy Green. Shocked and offended Mr. Green may not be able to understand why the good General is taking such an attitude, but the General does.

The laissez faire capitalism of old is day by day being pushed into the background. The day of unrestricted "individual enterprise" is fast disappearing. Through governmental pressure the days of suicidal, unplanned production with its disastrous "booms" and "over-production" (as well as rather amateurish handling of labor problems) are diminishing. More and more, despite temporary setbacks, "monopoly", "regulations", "standards", are being introduced into American economic life. A very real "One Big Union" of capital is being evolved in this country in an effort to 'stabilize" capitalism and secure to the present beneficiaries of capitalism their powers and privileges at the expense of the working class as heretofore. The capitalist system in America is steadily tending towards one gigantic corporation to displace the present big and little corporations.

With the "corporate" trend of capitalism, and its sometimes startling changes in governmental and business procedure from the days of "laissez faire", it readily can be seen that an industrial union movement growing out from this can be merely a corresponding change in the form of "company unionism". For the individual "representation plan" of the individual corporation must be substituted a nation-wide "representation plan" to serve the interests of the newly evolving "corporate state". A One Big Company Union of labor to match the new One Big Corporation of capital!

Is the C.I.O. being groomed as this "One Big Company Union"?

That the C.I.O. may be bitterly fought by some employers does not in the least contradict this question. These employers are still confident that they can go on in the old laissez faire way. They are yet opposed to merging into the "One Big Corporation of Capital". But, eventually they will see the arrangement as of benefit to them and as their lone salvation, much as an individual worker in a factory being organized by the I.W.W. may at first resist attempts to organize him, only finally to see the point. These employers are conservatives of the old school. Their ranks will continue to diminish, much as their political expression, the Republican Party, is rapidly decaying and is even now practically moribund as far as national politics is concerned.

Another element accounting for the misleading antagonism of some employers to the C.I.O. may well be the ambition of some of the leaders of this latter movement. Capitalism is not in a precisely enviable position at present. It is endangered on the one hand by the stupidity of some of its sections and on the other by the threat of genuine organization on the part of the working class. In order to get personal considerations, would ambitious "labor leaders" be averse to holding the working class for ransom? As it were, blackmailing the capitalist class into assuring them worthy rewards in power and privilege? After all, both Mussolini and Hitler were pretty blustery and did not strike a bargain until they were assured of their perogatives.

For these reasons, and because the substitute must be plausible, the C.I.O. certainly will not fall into the unimaginative routine of a "company union" or a fascist "labor front" until a full-fledged bargain is struck. Furthermore, rank and file impetuosity will provide from time to time certain flare and color to the whole procedure. However, this rank and file activity will become increasingly rare as Mr. Lewis and his lieutenants come to understandings with the various industrial concerns.

Already the chief outcome of the General Motors strike* is the agreement on the part of the union to outlaw any job action until all avenues of negotiation have been exhausted, meaning conferences between Lewis and the management. When the time comes that Mr. Lewis wins the checkoff and the right to bargain for all the workers in a company's employ, the rank and file will be caught between the two mill-stones of Mr. Lewis and the employer. The worker, individually and collectively, will find himself helpless in fighting both the employer and the union. A double chain will be around his neck.

Universally organized into the C.I.O., will the American worker find himself bound hand and foot to the system that exploits him? Freedom a myth, will he be an industrial serf forever in his place and receiving such fruits of labor as his masters may in their benevolence choose to bestow upon him?

The socio-economic basis of fascism is the cor-

*NOTE: The conduct and the settlement of the General Motors Strike indicates that the General Motors Corporation represents an employer group that is taking a watchful "on the fence" attitude to the "corporate" tendencies of American capitalism. Despite the heroic determination of the gallant Flint sit-downers, the small percentage of union organization in the G. M. plants would not have prevented the company from engaging in physical efforts to break the strike unless a question of broad social policy were not in the background of the affair. In an ordinary economic struggle the organization of the strikers was much too weak to seriously intimidate the Company, particularly with the support of the Flint Alliance and the old-line A. F. of L. on the side of the corporation.—T. C.

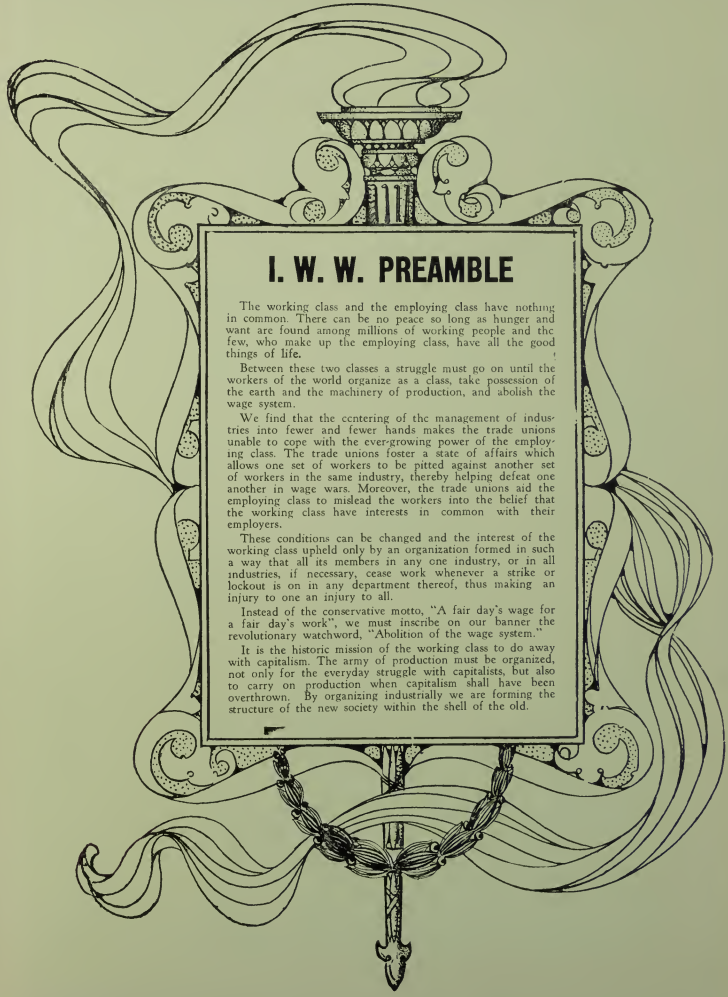
porate or totalitarian state—one hundred per cent organized industry and parallel industrial organization of the workers. Industrial unionism lends itself very easily to the corporate plans of fascism. Mussolini, the founder of fascism, was guided in his formulation of the fascist state by his experience with the wide-spread "syndicalism" of Italy. He discovered that industrial unionism can be turned upon its head and become industrial bondage.

An industrial union movement can be an instrument of social advancement and happiness for mankind and a bulwark against fascism only if it is thoroughly saturated with a rank and file spirit and adhere in form and practice to democratic control. What is more, it must be based four-square on the principle of irreconcilable economic antagonism between the employing class and the working class, for only class-consciousness can counteract the totalitarian appeal of fascism. How does the C.I.O. measure up to any of these requirements? Is it a suitable substitute for the I. W. W.?

Will the members of the American working class offer themselves as "One Hundred Million Guinea Pigs"?

# Can Capitalism House Its Workers?

(Continued from page 31)



acquainted with actual building costs would take this estimate for granted. However of these $2,000.000 there is much that went for profit as to sub-contractors such as the plumber contractor, the electrical contractor, the plaster, the lather, the sheet metal contractor, and so on. All of these contractors or sub-contractors received a cut of these $2,000,000. Of the other millions the General Contractor received $1,560,882 dollars for drawing plans and other engineering required as preparation and for supervising the construction of the building. $2,636,176 went for material. But even with the material a large amount goes to the non-worker as profits, to the material dealers, in transportation, and to the manufacturers of lumber, bricks, lime, cement, steel, copper and an endless chain of profit takers. If the true facts could be obtained of those who received this 6 million, without a doubt they would show that not more then half this amount actually went to labor.

Of course the pressure is getting stronger each day for more and better housing. All kinds of schemes are brought forth, such as subsidy to the builders, or that the municipality, state or federal government do the building; but none of these schemes is going to do away with the slums or produce enough houses for the workers.

England, Germany, Austria, and other nations have had so-called slum clearing projects for years and each country did build a house here and there but all have failed so far as providing livable accomodations for the working class is concerned. Such projects will be a failure so long as the profit system is allowed to continue.

Capitalism cannot supply the needed homes for the comfort of the workers. All their schemes and all their planning is based not upon the needs of these workers but upon finding methods that will furnish the necessary profits for their undertakings. The state of New York in the past few years has paid a subsidy to the extent of $190,000,000 in the form of tax exemption but all that has been accomplished is the erection of a few buildings whose rentals are beyond the means of the mass of workers desperately in need of homes.

The only way that we will be able to destroy the 250,000 windowless rooms that were built previous to 1879 and the many thousands of others that are still standing, is by the unified efforts of all the workers organized to remove the prevailing system and to institute one that will have as its chief motive not profits, but to supply the needs of the workers—a system that will cater to the health, comfort, security and enjoyment of the working class.

# I. W. W. PREAMBLE

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever-growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries, if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work", we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the everyday struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# The ONE BIG UNION Monthly

In This Issue Read: "THE ECONOMICS OF FASCISM"

# *LET'S HAVE PLENTY!*

Each family can have a modernly equipped six-room home if it wants it—one that would rent for at least $2000 today.

Each family can have an income equivalent to $4000 or better to buy the goods of modern mass production industry.

It can have an additional income of some $300 to put into the more fanciful odds and ends that modern industry does not provide.

In addition to all this, it can have the necessary medical, dental, educational and recreational facilities in full that most families either have to dispense with today or at best use very niggardly.

Over and above, though inestimably more important than these, it can have a decent community where everybody else can have the same standard of life, and the security that they will have this without saving and insurance and worry.

The National Survey of Potential Product Capacity establishes the possibility of these figures as the STARTING POINT of a new era of plenty.

But statisticians can't bring these figures to life. Workers organized in One Big Union of Industrial Unions, resolved to use industry to carry out such a Planned Economy of Abundance, doing what their union decides and telling the boss to go to hell, will find it very simple to achieve all this and more. But nothing short of One Big Union can hope to accomplish this.

Are you with us?

# The I.W.W. in Theory and Practice

*By* JUSTUS EBERT

*Justus Ebert, author of "The I.W.W. in Theory and Practice" has again undertaken to revise the booklet and bring it to date. Announcement will be made when it it available. Here is the new introduction to the sixth edition of this well-known work on the I.W.W.*

This is the fifth revised and abridged edition of this booklet. First published in 1920, to date over 50,000 copies of it have been sold. It has been translated into eight languages. Chapters have appeared in weekly labor papers in many parts of the world.

In as simple language as possible, it aims to tell just what the Industrial Workers of the World, better known as the I.W.W., is.

Briefly stated, the I.W.W. believes that the workers should organize according to industry, instead of trade or craft. In this way they will be better able to secure more wages, less hours and improved conditions wherever employed. Having first organized to this end in 1905, the I.W.W. anticipated the Committee on Industrial Organization by just thirty years.

Unlike the C.I.O., however, the I.W.W. urges industrial unionism so that, as the workers run the industries, they may also own and operate them as well. Especially so that they may, through industrial union organization, be prepared to take over and operate the industries for the good of all, when capitalism shall either be broken down, or been overthrown. This capitalism gives every indication of doing, either under the stress of depression, or war, in all the advanced industrial nations.

In brief, while the C.I.O. would tolerate and perpetuate capitalism for the profit of capitalists, the I.W.W. aims to organize the means by which it can be transformed into a social system for the benefit of all; and that with the least possible violence and disaster to all.

Recent history has proved the soundness of I.W.W. industrial unionism as the economic basis for successful social change. In Russia, the revolution would not have lasted two weeks, in the words of Lenin, were it not for the social reconstruction made possible by the Russian labor unions. They, despite their numerical weakness and the backwardness of Russian development, performed many municipal and state functions, while carrying on industry to the best of their ability and the success of the revolution.

More recently in the fascist rebellion in Spain, in Catalonia particularly, the organized workers, via their unions, took over and operated for the common good, factories, mines, transportation systems, department stores, banks and other basic functions necessary to the smooth performance of community life; all of which had been abandoned by the corporation owners and would have, con-

sequently, been detrimental to the loyalist success and the social welfare, had not the unions stepped in and made the resumption of daily activity possible.

Can we in the U.S.A., with our more highly technological-industrial development, survive a capitalist breakdown, come in whatever way it may—depression, war, revolution—without an industrially organized working class ready to take over all economic functions and exercise them for the benefit of society as a whole? Viewed in the light of recent events, including our own depression, the answer is obviously, no; we can't. Why wait, then? Why not organize industrially, now?

Others in America than the I. W. W. have glimpsed the truth of the I.W.W. theory. For instance, the Plumb plan, with its part management of the railroads by the railroad unions. Then there is Thorsten Veblen's plan of industry controlled by a council of technicians, co-operating with organized labor; a plan born of this great American thinkers' I.W.W. contacts during the world war period.

Even the enemies of labor recognize the soundness of industrial unionism. Accordingly, they rob it of its social intent and pervert it to anti-social capitalist ends. We've all heard of the "corporative state", a political machine organized allegedly, on the basis of corporations representing all of the industrial divisions. In Italy, "the corporative state" is defined as "industrial unionism without its revolutionary implications", that is, without its changes for the good of all. "The corporative state" aims to perpetuate, — to "freeze" — the status quo. The NRA was said to be an embryonic "corporative state" with liberal labor features.

This country also has other perversions of I.W.W. theory. They exist in company unions, employee representation and employee participation in stock ownership plans, works councils and labor fronts not in labor union control. The corporations of America know how to turn a good labor idea to their own advantage. American labor should, therefore, be eternally vigilant, lest it be the victim of fake industrial unionism, detrimental to the social good.

William Cullen Bryant

# The Antiquity of Freedom

O Freedom! Thou art not, as poets dream,
A fair young girl with light and delicate limbs,
And wavy tresses gushing from the cap
With which the Roman master crowned his slave
When he took off the gyves. A bearded man,
Armed to the teeth, art thou; one mailed hand
Grasps the broad shield, and one the sword; thy brow
Glorious in beauty though it be, is scarred
With tokens of old war; the massive limbs
Are strong with struggling. Power at thee has launched
His bolts, and with his lightnings smitten thee;
They could not quench the life thou hast from heaven.
Merciless power has dug thy dungeon deep,
And his swart armorers, by a dozen fires
Have forged thy chain; yet, while he deems thee bound
The links are shivered, and the prison walls
Fall outward; terribly thou springest forth,
As springs the flame above a burning pile,
And shoutest to the nations, who return
Thy shoutings, while the pale oppressor flies.

# So You Need A Maid!

*A Skit in Two Scenes for Six Women*

CHARACTERS

Helen Brown, clerk in the Ace Employment Agency.

Miss Carver
Mrs. Swenson
Miss Schmidt
Miss Fiorelli
Miss Letitia Bascom

} The Unemployed

**N. B.—This skit is based on real experience of a group of unemployed women.—Author.**

## SCENE I

TIME:

An early spring morning during the depression.

SETTING:

The Ace Employment Agency. There is a door at left and one at right. Near door at left is desk with a chair behind it and one before it. On desk are telephone, pencil, pad, file. Along wall at back of stage is a row of 5 chairs. Four of them nearest desk are occupied by women. Above chairs on wall is a placard: ACE EMPLOYMENT AGENCY—SUPERIOR JOBS FOR SUPERIOR PEOPLE. Telephone rings as Miss Brown, a young woman with a serious yet childlike air, enters from door at right. Evidently this is a somewhat new job for her.

BROWN: Good morning! *(Crosses room, bows to 4 women. They respond with forlorn smiles. She sits down at desk, picks up receiver):* Ace Employment Agency, Miss Brown speaking . . . . What is the name? . . . Mrs. Sweetwater? *(writes on pad)* You want someone for housework? . . . Well, Mrs. Sweetwater, I'm certain that I'll be able to get someone suitable—we have so many capable and refined girls . . . Oh! *(faint amazement creeps into her voice)* You don't want anyone refined! . . . Someone with muscle? *(4 women along wall listen attentively)* . . . I see . . . I'll do my best, Mrs. Sweetwater. Thank you. *(hangs up receiver, tears slip off pad, places it in file, with a slightly bewildered expression on her face).*

CARVER: *(Young woman with worried air, carrying a suitbox, rises from 1st chair, approaches desk)* I'd like to register with your agency if I may. My name is Carver.

BROWN: Sit down, please. *(Miss Carver takes chair before desk.)* Just what type of work were you looking for?

CARVER: I'm a library school graduate. *(Hesitates.)* I thought there might be an opening in one of the department stores—that is, in one of the book departments *(watches Miss Brown's face eagerly.)*

BROWN: I'm sorry, we haven't anything like that just now, but if you'll leave your name and address— *(breaks off, eyes Miss Carver curiously, for Miss Carver turns her head away).*

CARVER: *(speaking to herself)* Address? My address? *(looks down at suitbox. Miss Brown and women along wall stare at her. Finally, she turns toward Miss Brown):* I have no address. I was forced to give up my room this morning. The landlady wouldn't allow me to keep it unless I paid something on my back rent. *(Speaks with quiet desperation):* Isn't there something I could do? I've tried so long to secure a library position—but all the libraries are closing or cutting their staffs.

BROWN: Would you do housework?

CARVER: I'll do any work for my room and board.

BROWN: *(searching through file and pulls out card)* Why, I believe I have something right here that might help you, Miss Carver. Mrs. Norton wants a mother's helper to assist with housework. $2.00 a week. I'll write down the name and address and you can apply at once. *(Writes on pad. Miss Carver rises with a smile of relief. Miss Brown hands her the slip.)*

CARVER: Thonk you so much, Miss Brown. I hope I'll make good.

BROWN: *(smiles)* I know you will. *(Miss Carver goes out through door at left).* Next, please. *(A middle-aged woman, shabbily dressed, rises from 2nd chair)* Oh, good morning, Mrs. Swenson!

SWENSON: *(standing before desk)* I come for yob.

BROWN: I'm sorry, Mrs. Swenson, but I don't believe that I have a thing for you. That position in the dressmaking shop didn't materialize. Mrs. Miller said business was so quiet she couldn't think of hiring another woman in the alteration department.

SWENSON *(lowering head)* I mus hev someting.

BROWN: *(searches through file)* Would you take a housework job?

SWENSON: *(clasping hands together)* Oh, ya, anyting, Mrs. Brown.

BROWN: *(takes card from file and purses lips thoughtfully)* Well, I have something here *(looks up at Mrs. Swenson)*. Have you ever done any cleaning, Mrs. Swenson, any heavy cleaning?

SWENSON: Oh, ya, Mrs. Brown, I always do my own cleaning after work. Den after they depression I hev many yobs—cleaning office buildings, cleaning homes.

BROWN: Well, this woman, a Mrs. Sweetwater, wants a husky woman for cleaning. It's permanent, and besides that, Mrs. Swenson, it pays more than anything I have listed today— $3.00 a week, and our fee is low for housework jobs.

SWENSON: *(smiles cheerfully)* Det is fine, Mrs. Brown. Den I hev no expense—my kids, dey stay vit my sister.

BROWN: *(writes on pad, tears off slip, hands it to Mrs Swenson)* Here's the name and address. *(Mrs. Swenson goes out.)* Next, please. *(Telephone rings. She picks up receiver):* Ace Employment Agency, Miss Brown speaking . . . You need a maid? . . . Mrs. Henry Cotton, Jr., 6050 Country Club Drive? *(writes on pad)* . . . A nurse maid? Two children? *(writes on pad)* No experience necessary? . . . Fifty cents a week . . . Thank you, Mrs. Cotton, I'll do my best *(hangs up receiver as a woman with a prim, spinterish air comes through door at left and sits down in 5th chair from desk. Mrs. Brown tears slip from pad, places it in file while a young girl, with her hat set at a jaunty angle, rises from 3rd chair, sits down before desk. She crosses her legs, assumes a nonchalant air, yet underneath it all, she is uneasy.*

SCHMIDT: I s'pose it's useless askin' for an office job?

BROWN: Well, yes, it really is, Miss—

SCHMIDT: Schmidt's the name.

BROWN: What kind of wark do you do, Miss Schmidt? How much experience have you had? You see, we don't bother to register people with less than two years' experience in office work.

SCHMIDT: *(leaning forward eagerly, resting elbow on desk)* Oh, gee, Miss Brown! I've had 4 years' experience—typing and switchboard. For 2 years I was with the Pure White Laundry Company. I did typing, filing, and switchboard work. Then, I had a chance to do just switchboard work at the Giltmore Hotel. I took it. *(Looks down at her purse.)* That was my last job.

BROWN: Why did you leave?

SCHMIDT: *(shrugging)* I had to. The hotel was half empty. Mr. Gardner said two could handle the switchboard.

BROWN: He was your superior?

SCHMIDT: I guess, you'd call him that. But he wasn't so superior if you ask me, let me go without notice. That was 6 months ago. I'd like to see that big stiff now. I shoulda slapped his face—

BROWN: Why, Miss Schmidt!

SCHMIDT: Well, you would, too. When I told him I didn't have any money an' didn't know where I was goin', he says to me, "What's the matter, ain'tcha got a boy friend?"

BROWN: Why—

SCHMIDT: An' I says to him, "Yes, I have but he's in the same boat I am. He's a truck driver—only he ain't got a truck to drive. I'm a switchboard operator—only I ain't got a board to operate."

BROWN: How have you managed these last six months?

SCHMIDT: Sponged on relatives. *(Miss Brown searches through file. Miss Schmidt eyes file dubiously)* I s'pose it 'll have to be housework.

BROWN: I'm sorry—there's nothing else just now. *(pulls card from file)*. Do you like children, Miss Schmidt?

SCHMIDT: Sure, I like kids.

BROWN: Mrs. Cotton wants a girl, no experience necessary, to look after her two children. No heavy work.

SCHMIDT: Can I go out and apply now? *(rises)*

BROWN: *(nods as she fills out slip)* I'll send you out right now. *(hands slip to Miss Schmidt with slightly embarrassed air)* The pay is only fifty cents a week, but if she likes you she'll pay more later—is that all right?

SCHMIDT: Sure. *(hesitates)* You know, I've always detested the idea of hayin' to take housework, but gee, in these days a girl ought to be willing to do anythin' so she won't have to sponge on relatives or go on relief. Don't you think so?

BROWN: Yes, I do. *(Miss Schmidt turns to go)* Good luck! *(at door Miss Schmidt pauses to give a salute, then goes out. The 4th women in row rises during this interval and seats self before Miss Brown's desk. She is a young Italian, wears gold ear rings, carries a large purse, and every now and then an animated smile, revealing a naturally sunny disposition, breaks through her mood of depression.)*

FIORELLI: Mees Fiorelli—I am embroidery wark-

er *(pauses to look at Miss Brown)* But you no have embroidery wark?

BROWN: *(shakes her head)* Only housework—would you do that?

FIORELLI: *(with a droll air picks up purse from lap, opens it, turns it upside down, and shakes it)* Sure, lady, I take housewark. *(leans back in chair and waits for Miss Brown to speak).*

BROWN: *(suppresses smile)* I'll see what I can do. *(earches file).*

FIORELLI: *(no longer able to repress her feelings)* Oh, lady, I do sooch lofelee embroidery wark—so beautiful—de ladies dey lofe eet *(sinks down in chair with disconsolate air)* but they no can pay. *(Miss Brown looks up from file, with card in her hand. Miss Fiorelli revives)* I mek flowers, all kine a flowers—so beautiful—roses, daisies—oh, every kine, but de ladies dey no can pay when depression come. I mek leetle leafs outa da green, I mek da fancy steetches, every kine a fancy steetch—

BROWN: *(gently)* Yes, I know. *(looks at card)* Now here is a place—they will pay seventy-five cents a week, no cooking, just assist with housework, and she doesn't care for an experienced girl. It's permanent, too.

FIORELLI: *(rising)* I go.

BROWN: *(writes on pad, tears off slip, hands it to Miss Fiorelli)* All right, Miss Fiorelli, and the best of luck to you. *(Miss Fiorelli smiles and hurries through door at left. The office is now empty save for the 5th woman in the last chair who still remains seated).* Won't you take this chair, please? *(Miss Brown indicates chair before desk. Fifth woman, with chin high, comes forward quickly, sits down before desk).*

BASCOM: My name is Letitia Bascom. *(She is prim, unsmiling, full of pride.)*

BROWN: Yes, Miss Bascom, and what type of work were you looking for?

BASCOM: Bookkeeping. I've had 25 years' experience. I can furnish the best of references.

BROWN: I don't doubt it, Miss Bascom.

BASCOM: I was never discharged from a position in my life. I held my last one for 12 years. When I was let go because of poor business, my employer complimented me upon my faithfulness and loyalty to the firm.

BROWN: That's a splendid record, Miss Bascom. How long have you been unemployed?

BASCOM: A year and one-half.

BROWN: That's a long time.

BASCOM: *(with considerable feeling)* I lost twelve hundred dollars of my life's savings. I had it invested in a firm that's been doing business for years and years.

BROWN: Yes?

BASCOM: Wattard, Wattard, and Wattard—you've probably heard of them—stocks and bonds.

BROWN: Yes, indeed.

BASCOM: I never dreamed they'd ever go under.

BROWN: *(searches through file)* Would you be willing to do housework?

BASCOM: Of course, I'll do housework. Five generations of my family have lived in this country. My great-great-grandfather was a Minute Man in the American Revolution. No Bascom has ever had to accept a penny of charity. And, certainly, nobody shall ever say that Letitia Bascom was so indifferent to her country's welfare that she was willing to place an added burden upon it by going on relief. *(takes a deep breath at close of this speech. Miss Brown regards her with mingled awe and surprise) Of course,* I'll do housework.

BROWN: Your spirit is—is certainly amazing, Miss Bascom. *(Both women are silent for a moment. Miss Brown draws card from file).* Now, then, I have something here I believe you can fill nicely. I have a request from two maiden ladies—they're around 70 years of age—they want a refined woman to assist with housework in exchange for board, room. There'll be no fee for this, of course. They want someone who will appreciate a good home.

BASCOM: *(softens slightly)* Well, that's very nice of them.

BROWN: *(writes on pad, hands slip to Miss Bascom)* I think you'll fit in there very well. That's the address.

BASCOM: Thank you, good morning. *(She goes out through door at left. Telephone rings).*

BROWN: *(picks up receiver)* Ace Employment Agency . . . Oh, yes, Mary, how are you? . . . I've been quite rushed this morning. So many housewives are looking for maids and so many girls want work . . . I've sent a number out already, but I'm really ashamed the pay is so low . . . Yes, we charge a small fee . . . Exploiting them? . . . Oh, I don't know . . . the girls are desperate, it's either housework or relief . . . All right, then, I'll see you at lunch. Goodbye. *(hangs up receiver).*

## SCENE II

TIME:
One week later.

SETTING:
Same as Scene I.

BROWN: *(Seated at desk with chin cupped in hands, stares thoughtfully ahead of her. Finally, she picks up receiver)* Central 5577 . . . This is Helen, Mary . . . I feel terrible about this whole business, but I think I understand again? . . . 25 South Main street. *(Through door at left a noise of scraping feet and murmuring voices is heard)* . . . All right, Mary, I think some of them are coming now . . . I'll see you later . . . Good bye. *(Door at left open. Miss Fiorelli, Miss Carver,*

*with suitbox under arm, daubing eyes with handkerchief, Mrs. Swenson, walking as though her feet and back hurt, and Miss Schmidt, looking tired and worn, troop into office. Silence prevails, Miss Brown rises from her seat while women arrange themselves in the chairs. Mrs. Swenson drops into first chair against wall and rubs her ankles. Miss Schmidt drops into second chair, leans head against its back, closes her eye. Miss Carver takes seat before desk, sniffing and daubing her eye with handkerchief, while Miss Fiorelli, who seems less fatigued and more cheerful than any of them perches herself on corner of desk farthest from audience. Miss Brown leans forward, palms of hands resting on desk's edge. She speaks with earnestness)* Oh, girls, I don't know what to say. I feel terrible about this whole business, I feel responsible for all your horrible experiences —

FIORELLI: *(consolingly)* Nev' mine, Mees Brown, you no can help.

BROWN: Please believe me when I say I never dreamed —

SCHMIDT: *(opening eyes and sighing)* That's all right, Miss Brown, how was you to know?

BROWN: When some of you called me on the telephone I was amazed. *(sits down)* I want you to tell me all about it.

CARVER: *(begins to cry)* I was never so humiliated in my life — never. *(Miss Fiorelli pats her shoulder. Everyone waits for Miss Carver to speak. She stops crying)* That morning you sent me out I was so hopeful, Miss Brown. Mrs. Morton was leaving just as I came. She was going out to a meeting of the Association for the Alleviation of the Pangs of Poverty—it sounded so kind-hearted. I thought she was going to be nice—and I was so happy.

SCHMIDT: *(rubs her eyes)* That was the way with the dame I worked for—*(in an affected voice)* simply love-lee, girls—but, oh, boy, after the second day! *(pauses to yawn)* I'll never get caught up on sleep!

BROWN: Go on, Miss Carver.

CARVER: She was housecleaning, she said, and I was to start with the attic. Later, when she came home from the all-day meeting of the Association for the Alleviation of the Pangs of Poverty, I found out why. The attic was to be my room.

SWENSON: *(looks up from ankle she has been nursing)* You was lucky, Miss Carver, I slep in de basement vit an ashcan at my head. *(Miss Brown shakes her head)*

CARVER: *(vehemently)* Don't you think people should treat their employees decently?

BROWN: I've just begun to realize that you have to force them to do that.

CARVER: *(looks at Miss Brown)* There are so many things—I don't know where to begin.

BROWN: Go ahead, Miss Carver.

CARVER: Well, I cleaned her house from attic to basement. It was hard work, too. Everything was in a frightful mess. And she was so stingy. Tuesday she scolded me for using cream in my coffee. The cream, she said, was for her husband, her two children, and herself. And then, she had the nastiest habit of counting everything that was left over after dinner—the number of chops or potatoes. In the morning she'd check again. I was so embarrassed by it.

BROWN: Is there anything else, Miss Carver?

CARVER: *(looks embarrassed)* Well — yes, *(The other women appear much interested)*

BROWN: *(gently)* What is it?

CARVER: Her husband — he made passes at me all the time — *(pauses)* That's why she turned me out last night. *(looks down at suitbox in her lap)* I simply couldn't discuss it when I telephoned this morning.

BROWN: And she turned you out?

SCHMIDT: Where'd you stay?

CARVER: *(begins to cry softly)* In the railroad station.

SWENSON: *(shakes head)* Tch — tch — tch —

BROWN: Tell me about it.

CARVER: *(controlling herself)* Last evening Mrs. Morton went to a meeting of the Ways and Means Committee of the Association for the Alleviation of the Pangs of Poverty, and the children went to their scout meetings—Boy Scouts and Girl Scouts, you know. Mr. Morton and I were home alone.

SCHMIDT: Go on, Carver, this sounds good.

CARVER: *(with an effort)* I was cleaning the kitchen. It was about 9 o'clock. Mr. Norton was in the living room playing the radio. Finally, he came out into the kitchen and teased me to dance with him. Of course, I refused, but he was so insistent—grabbed my wrists, kissed me, tried to pull me into the living room—*(stops)* The kitchen door leading into the front hall was open, and anyone standing on the front porch could see us scuffling in the kitchen—well, someone was standing on the front porch, and it was Mrs. Norton. *(looks down at suitbox)*

BROWN: What happened then, Miss Carver?

CARVER: She threw this suitbox out on the front lawn and ordered me out of the house. *(Overwhelmed by emotion again)* Oh, Miss Brown, she talked dreadfully. She said poor people were such ungrateful wretches and that if anyone didn't have a job these days it was his own fault. She said she had spent a lifetime working for the poor in the Association for the Alleviation of the Pangs of Poverty and she was through forever. *(chokes back tears)* Then she said something about a serpent in her nest. After that she slammed the door.

BROWN: And you slept in the railroad station. *(Miss Carver nods her head, cries softly)* Try to calm yourself a little, dear, sit over there in one of the chairs until I hear from the rest of the girls. *(Miss Carver rises, takes third chair against wall. Miss Brown glances at Mrs. Swenson who is rubbing her back)* Never mind, Mrs. Swenson, just sit still. Don't get up. You can talk just as well from where you are.

SWENSON: *(sighs)* Dere's noting to tell—Yust verk. Mrs. Sveetvater's relation is coming, an' she vant da huse cleaned. All da time I sleep on a cot in de basement— de ashcan was nearby. *(rubs back)* Ven I vas tru vit da huse cleaning she say I can go—dat vas las' night.

BROWN: Did she pay you your —

SWENSON: Ya, Mrs. Brown, she pay de tree dollar, but she say dere is anoder agency vere she can get da verk done sheeper. *(pauses as door at left opens and a very weak and pale Miss Bascom staggers into office. Miss Fiorelli, Miss Carver. Miss Brown rush to her assistance, lead her to a chair. Miss Bascom, seated in chair, rests her head against its back. Everyone in room stares at her)*

BROWN: Miss Bascom—what's the trouble?

BASCOM: *(waits a long time before replying, then looks up at Miss Brown)* I guess I'm just hungry.

BROWN: Hungry! Why, Miss Bascom—*(walks over to desk and opens her purse. Miss Bascom lowers her eyes as Miss Brown turns toward Miss Carver)* Miss Carver, will you run across the street to the restaurant and bring back some milk and a sandwich?

CARVER: *(rises from chair)* Certainly! *(takes money and leaves through door at left)*

BROWN: Won't you tell me what's happened, Miss Bascom?

BASCOM: I'd rather—*(chokes)*—rather eat first.

BROWN: *(softly)* I'm sorry, Miss Bascom. *(addresses Miss Schmidt as she sits down at desk)* Will you tell me about your expriences? You went out on that nursemaid position with Mrs. Henry Cotton, Jr., didn't you?

SCHMIDT: *(rolls her eyes)* Nursemaid? Say, that woman needs a perpetual motion machine. I never got any rest. I started out as a nursemaid the first day, but after that I was maid-of-all-work, wash-woman, and cook. I brought her breakfast to bed, did her spring cleaning, her washing, and some of her sewing, too.

BROWN: A regular mother's helper.

SCHMIDT: That's it—she never seemed to like to see anybody getting any rest except herself. She stayed in bed until noon every day. Then, she'd get outa bed, call her friends, and talk about her new maid. I guess she never had one before.

SWENSON: Dem is dere virst kind. *(Door at left opens. Miss Carver enters with milk and sandwich. Everyone casts furtive glances at Miss Bascom who begins to eat greedily.)*

SCHMIDT: Last night she was goin' out to a dance and she wanted me to manicure her nails. I wouldn't do it. We had a big row. I told her what us girls doin' housework needed was a union. *(The women stare at Miss Schmidt. Alert expressions leap into their faces at this suggestion)*

CARVER: *(thoughtfully)* Union. *(A faint smile hovers around Miss Brown's lips)*

FIORELLI: *(raises forefinger of right hand)* Union—alla time dat ees what my pop talk about when I am leetle—union, one beeg one.

SCHMIDT: When I mentioned union, Mr. Cotton called me an agitator and said I should be deported. God's knows where—I was born here—and this morning I got my walking papers—and my fifty cents.

FIORELLI: I get da same, Mees Schmidt, las' night *(shrugs)* only I get da seven'y five cen's.

BROWN: *(with despairing sigh)* And that was supposed to be permanent, too?

FIORELLI: Oh, no Mees Brown, on'y da spreeng house clean, she say las' night—she no want girl after da house clean is done.

SCHMIDT: What we need is a union. *(Mrs. Swenson nods her head. Miss Brown regards Miss Schmidt thoughtfully)*

FIORELLI: Alla time dat is what my pop say when I am leetle. He say warkers should have da union. My pop say da union ees like da shield, but da bosses an' da papers dey lie. Alla time dey mek da buzzing in da warkers' ear—da union no good. Alla time dey mek da buzzing in da workers' ear so da warkers no listen when you talk da union.

SCHMIDT: An' the unemployed need some kinda union, too.

SWENSON: Dere is trut in dat verd.

CARVER: I guess people can't get anywhere without organization. *(For a moment silence prevails. Miss Bascom has finished lunch).*

BROWN: How do you feel, Miss Bascom?

BASCOM: Stronger, thank you.

BROWN: It is dreadful—anyone going hungry in this rich land of ours.

SCHMIDT: Ain't it, though?

BASCOM: *(clearing her throat)* When I went out there, Miss Brown, I was certain that I was going to like it. The Misses Talbot were extremely refined ladies. They treated me fairly well—I can't complain there, but—*(her voice drops to a whisper)* they ate like two birds.

BROWN: Just what do you mean?

BASCOM: I've always prided myself on being a delicate eater, but I could not live and keep up my strength on what those two ladies ate—I

# Is Your Job 100% I. W. W.?

On the opposite page is a picture of some of our members working at the Draper barrel plant in Cleveland. Only about half of them managed to crowd on the stage, and of course the children don't work there. Neither does the woman up front. She's Mrs. Mike Lindway; Mike is still in the penitentiary at Columbus, Ohio. While he was on strike at the National Screw plant to make that company live up to its promise of a general wage increase, the "vandal squad" went into his home and proceeded—without any witnesses of course, and without any search warrant—to "find" dynamite bombs in his cellar. His lawyer quite properly told him that according to all precedent such evidence could not be accepted in any court; and considering this, when members of the police force told him that should he take the stand to deny that the bombs were his, they would kill him, he said nothing at the trial except "not guilty". But contrary to all legal rulings, the evidence was admitted, the jury convicted Mike, and despite the finding of the Appellate Court of Ohio that this was all contrary to proper legal procedure, both the Supreme Court of Ohio and the "nine old men" in Washington have decided that Mike must stay in jail. This picture was taken at an affair that the Draper shop branch of Metal and Machinery Workers Industrial Union No. 440 of the I.W.W. recently arranged to raise more funds for new efforts by the General Defense Committee to win freedom for Lindway.

All this goes to show that these good union men in the picture believe in solidarity; and while they are organized to make their job as good a job as they can, they are mindful of the fact that a union has concerns outside the walls of the factory. Incidentally this shop is organized 100 per cent; it has been that way ever since a twelve-week strike in the summer of 1934 convinced the management, and those of the workers who hesitated about joining the I.W.W., that that was the only way barrels would be turned out. Now all in the shop are enthusiastic about their union which has won them substantial improvements in wages and conditions. A nickle raise per hour last week brought them to a 60 cent minimum.

One hundred per cent organization, or close to it, has been achieved in a considerable number of other metal working plants in Cleveland by our go-getting fellow workers there. In the Ohio Foundry in Cleveland, also 100 per cent organized, a ten per cent increase all around has just been negotiated. In the American Stove plants, the management has agreed to time all piece work to a minimum of 65 cents per hour. The Republic Brass workers, another 100 per cent I.W.W. shop, are asking now for a 20 per cent increase, and Cochrane Brass for ten per cent.

In these and other metal working shops wholly or partly organized by Metal and Machinery Workers Industrial Union No. 440, the I.W.W. brand of industrial unionism has proved very effective in doing for workers what they want a union to do.

Is your shop or job organized as well as these? With some of the enthusiastic effort that produced these results, it can be repeated where you work . . . and now is not the proper time to go to sleep about organizing it 100 per cent either.

How to do it? Arouse some interest in the I.W.W. program of real industrial unionism perhaps by a few stickers, or any other means that may be handy. Talk to a few of your fellow workers in whom you have confidence; explain to them the superiority of the I.W.W. over all other organizations. Get their applications, and form a committee to organize the job. They will know of others in whom they can put confidence, just as you knew them. Make arrangements for the message of the I.W.W. to be given to all on the job, by literature or otherwise. Arrange for a meeting where those talking will know what is what on that job, what improvemenlts can be made by organizing in the I.W.W. Get your fellow workers to join, and to elect a job committee, and to instruct this committee what to tell the management.

These are days of high speed in all things, even in organizing your job. To keep up with the pace we must ask every member to be an organizer as well as a member—and the job you work on is probably the best place in the world to organize.

# MR. SCISSORBILL OBJECTS

*By* EVERT ANDERSON

**A scissorbill is one of those unfortunate hybrids — a worker from the ears down, but a capitalist from the ears up.**

Mr. Scissorbill is raising his objections to the I.W.W. Quote: "But my gorsh, gee whizz, there's got to be some head to things." Unquote.

Right, there needs to be some head to things. There needs to be some direction to human endeavor.

What we need is planned economy. Our main objection to capitalism is that it has no plan for human welfare except in a few cases where the "private profit" plan happens to coincide with the welfare of the community. The capitalist head to things is where their feet ought to be, and their feet are where their head ought to be—and it's a cloven hoof at that.

The devastating effects of capitalist direction can be seen in our destroyed forests (and what little is left is being destroyed as fast as capitalist direction and means of destruction will allow). About $75,000,000 worth of forest is destroyed yearly by fire. Much of this destruction is preventable but not under "private business" management. The two billion or so board feet of timber destroyed every year would make a lot of nice homes for people to live in. But even here on the coast where fine trees grow thick and tall, lumber jacks have to live in ramshackle houses.

The I.W.W. objects to these things. The problem is surely not settled by informing the speakers, "If you don't like this country, why don't you go back where you came from?" In the majority of cases the I.W.W. speaker comes from here—America. It is not the country we of the I.W.W. object to. It is the capitalist destruction of our resources for profit's sake, causing untold misery to millions of our class, that we object to. Production for profit must go. "Production for use" is the coming and most logical system of human relationship.

There is probably no department in American production where destruction is more glaring than in the fields of agriculture. Thousands of farms in the middle west have been carried away by storms. Thousands of others have gone with the river to the ocean. These disasters have been termed "acts of God", which is only one way of misplacing the blame. No wonder the old man turns a deaf ear when you pray for rain.

The real cause is to be found in the present capitalist method of farming. Too much land broken up by the plow all at once. Too many wheat crops on the same fields for too many years in succession. The same may be said of corn, cotton, tobacco. Too many trees cut from the hillsides so that when it rains, the water runs off too fast, taking part of the farm along with it to the river—there being nothing to check it. When the expropriated business farmer finally joins the WPA, he may blame the Lord, Communism, or the I.W.W. for his troubles; but that won't replace the dust that once was his farm.

A few feeble attempts to heal some of the wounds in agricultural fields have been undertaken by the government, but private business interests will not allow a complete solution of the problem. What to do about it: Make the land along with all of American industry the property of the working class of America. Start planning on a large scale for the service of mankind—"production for use." Production for profit must go!

In the manufacturing industries (machinofacture is really a more descriptive word now than manufacture), thousands of items are made and later forced on the public by high-pressure sales methods that any sane socio-economic organization would consider a crime. You buy hair tonics that do not tonc; antiseptics in which bacteria reproduce; tin cans with no tin in them; leather shoes soled with cardboard boxes; woolen garments made of cotton shoddy; chewing gum that no one save the worst criminal should be sentenced to chew on; and oak wood furniture made of any kind of wood plus deceptive paints.

There is one industry, however, where the utmost care is taken to turn out the real article—the armament industry. The government has summoned the learned men of science—chemists, physiologists, bacteriologists, technologists—to make sure that the poison gas they make will really choke you; their shells wreck your home; their bacteria poison your drinking water. Death and destruction are the objects of capitalist warfare and they want to be sure that they have the very best in the world to do the job with. It seems to be the sole purpose of capitalism to have a lot produced so that they will have lots to destroy.

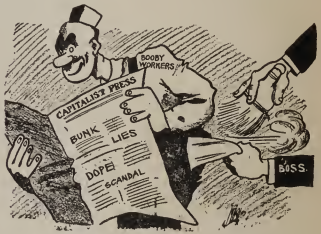
Mr. Scissorbill speaking: "But my gawd, we gotta have some kind of government to keep people from fighting all the time, ain't we?" No comment on Mr. Scissorbill's speech just yet.

The American economy is most certainly divided into two distinct classes—the Roosevelt victory to the contrary notwithstanding—the working class and the employing class. When the American state was organized, the working people were too busy making a living for themselves and for the capitalist loafers to pay any attention to government. While the workers were thus busying themselves clearing land, building fences, making huts for themselves, and good houses for the loafers, the employing class went ahead and organized the "slugging committee of the ruling class"—the American government. The loafers were, of course, too fond of leisure to become active in the government themselves; so they hired some lazy mugs with strong arms and weak brains to do the slugging for them. They hired older men for judges and politicians who did not have much brains either; but they differed from the strong arm sluggers in that they insisted on using their brains every now and then which proved both disastrous and costly every time they did so. Of course the rich loafers didn't mind much because in the end all damage was paid for by the working people anyway. But just the same what they like the best is to have presidents similar to "Sir 'Erbert 'Oover" and "Silent Cal", who leave everything to the good Lord and the policeman's club. There is some talk about Roosevelt being a communist since for good business reasons he became a friend of the Soviet Union; but don't let 'em kid you—he isn't.

*Mr. Scissorbill wants to know how the capitalist can afford to rob us less.*

Essentially, the purpose of the capitalist government is to keep the working people down—to make good use of the club whenever a group of workers get a notion to get up. The government doesn't keep people from fighting. On the contrary it maintains schools where sons of working people may learn how to ram a bayonet into each others guts and to give it a half turn so as to do the most good. Indeed, it is the government that officially declares wars, during which millions of working stiffs succeed in eliminating each other. It is considered very manly to die in such wars. Lately they have started wars without declaring them, but the munition companies furnish moral support and ammunition in either case without any argument.

Scissorbill, commenting on the strike situation: "My goodness gracious, why don't these strikers get together with the boss and find out what he wants—like Father Hagen says they ought—so as they'll get somewhere?" Let us restate the fact that present-day society is divided into classes—the working class and the employing class. It would be far more descriptive and to the point to call the latter, the robber class; but their robbing game has been legalized by themselves for which reason a great many working people feel a deep founded respect for this system. Every now and then workers go on strike, protesting the rate at which they are being robbed. When the victim of a stick-up artist starts protesting, he is unceremoniously shot. It wouldn't do to attract a big crowd; and, anyway, the thief isn't going to stand for any arbitration unless he absolutely has to. However, as a rule, when a sucker is rubbed out, he can't be robbed any more; so you can readily see that a much better policy is to keep him alive and break the sucker into the habit of being robbed so that the stick-up can be repeated. That is why in time of strikes, the employer hires some gunthug to KILL A FEW WORKERS ONLY so that the others will get scared and go to work. It doesn't always work however, and that's when the employer starts scheming for more subtle methods. "Let's get together," he says to his worker victims. "Let's talk these things over. No reason, John, why you and I can't come to some kind of understanding. Sit down, John," he says, "And let my book-keeper and this lawyer of mine prove to you with figures cold and sober that I am really losing money on the business right now." (He's got nerve, trying to tell us that he is losing money robbing us—what do you think?) Should Johnny still persist in his demand for higher wages—even after the boss's lawyer has told why he should be content with his lot—the employer calls upon his government to "get rid of these un-American reds,



anarchists, and I.W.W. foreigners." Thus the nature of the relationship between boss and bossed is such that it is rather difficult and, indeed, quite ridiculous for the worker to try to get together with the boss. Quite as foolish as it would be for a hold-up victim to try to arbitrate the issue of the stick-up with his 45 caliber opponent. The right thing to do would be to gang up on him (organize) and then take away his gun. Of course he would object to this direct action method very much on the ground that it would "destroy all of our most sacred American institutions." He would appeal to the public that "it is about time it took a hand in this matter that concerns the welfare of the community so much." That unless something is done pretty soon we'll sure have Communism in this country if not something still worse —IWWism. "And then what will become of your home, your wives, children, religion, and the right to work for whomsoever you choose?"

Scissorbill: "Well anyway, it's always been this way; and it will always be the same. Pop's grandpop said it's human nature, and you can't change it."

Institutions, human behavior, and habits are always changing. The institutions change very slowly compared with methods of production, and this causes a helluva lot of trouble from time to time. But nevertheless we are subject to change. People used to eat each other—cannibalism—and they kept it up for some time until it finally gave 'em such a belly-ache they had to cut it out. In the meantime they had discovered better stuff to stew up on. People used to have so many gods that they simply couldn't keep track of 'em—rain gods, mountain gods, valley gods, uphill gods, downhill gods, snow gods, harvest gods, thunder gods, silent gods; and god knows how many more. But the god business has concentrated into fewer and fewer hands so that now it is a highly centralized affair run by only a handful of gods, one might say. Even some of these are in the process of elimination. People used to live in caves. Now they live in steamheated apartments. Of course, many sleep in box cars and under bridges, but it's a change just the same. People use to have to scratch the soil with a crooked stick from sun-up until dark to make a poor living. Now machinery does the work, and we can produce much more than we need. Of course, it's true that we stand there like a bunch of dummies and "starve in the midst of plenty"; but the world is changing though; and some day we'll have spunk enough to help ourselves and not wait for the boss to pay us off with soup.

Scissorbill: "I don't believe in any kind of union; but if you fellahs have to fool around, why don't you join in with the boss so as he will give you a chance to get somewhere. My gracious! You don't think he will let you join the I.W.W., do you?"

It is not what the boss wants you to do; it is what you need to do. The boss doesn't want you to join anything. What he likes the best is to have you stick up your hands and close your eyes while he plucks you. But if you must join something, just for the sake of joining, he would rather have you join a company union, or the A. F. of L., or the C.I.O. and help him promote the stick-up game. In order to discourage working people from joining anything detrimental to his business, he has passed a law called the "Criminal Syndicalist Law". Criminal Syndicalism means criminal unionism. In other words, in the eyes of the boss, anybody that tries to stop his racket or get the best out of his "slugging committee' is

*Mr. Scissorbill dashes to the commissary for the Evening Crimes.*

a criminal. The boss will not permit any working class scissorbill to join with him in the Chamber of Commerce. Occasionally he admits a hard-working farmer with plenty of money to join him, but only long enough to fleece him of his dough.

Scissorbill: "Well, that's more than you fellahs will do. You won't even let a poor farmer join the I.W.W." The American farmer is a business man. He differs from his more well to do "Babbits" in the city only in that he is a poor business man. He thinks in terms of buy-cheap and sell-dear; and even when his farm is traveling east, in a sandstorm at the rate of 80 miles per hour, he still thinks this system is O.K., if only wage-labor were cheaper, freight rates lower, and the price of wheat higher at the time he has some for sale. During harvest, he turns the town-clowns on Wobblies, who fight for higher wages; so you can see why we don't want such goofs in our union. You see, the I.W.W. organizes only those whose economic interests are identical—the wage working class. Fortunately, for the ultimate program of the I.W.W., the wage labor class is the most numerous. Its ranks are being augmented yearly by those whose buy-cheap and sell-dear game did

(Continued on page 32)

# John Farmer Is All Washed Up

*By*
**RAYMOND CORDER**

**America today, like England 90 years ago, finds its foreign market for steel and autos and money itself, dependent on the sale of agricultural products to America, and the politician faces restricted production and imported meat while out to catch the farmer's vote.**

**Thus financial imperialism undermines "the dirt farmer" and makes the industrial organization of agricultural wage labor all the more necessary to cope with the powerful Farm Corporation.**

The American farmer as a rugged individualist, combining the characteristics of business man, land baron and employer of labor, is being compelled through inexorable economic forces, to step aside and make way for a new system of agriculture. The coming of larger units of agricultural production is as inevitable as taxes and death. Until 1920 agriculture lagged behind the heavy industries in this respect, but since then, due to various causes, such as the loss of export markets, the shutting off of immigration, a declining birth rate, the crash of land values that left the farmers staggering under a top-heavy debt load, and the foreclosures of this depression, the centering of lands into the hands of the banks and insurance companies has brought agriculture into step with the heavy industries and hastened the day of agricultural monopoly and eventually of socialization.

The individual farmer is doomed. He cannot continue as a business man, and though he may pound with futile fury and bleeding knuckles against the economic barrier that wall him off the land, he must go, not only because his methods are obsolete, but because he as a type is of a day now past. Corporate farming under capitalism, and under fascism should our folly compel us to go through that too, will replace individual farming practices.

The Farm Corporation, a great holding, composed of many farms and ranches, is following the trend of capitalism to concentrate wealth and production into the hands of financial oligarchies. Industrialization of the land will be the result and its erstwhile owners will be reduced to the status of industrial workers and tenants. We are not dealing here with subsistence farming, but with business farming. The stump rancher and the hillside farmer, who raises some corn and turnips on which to subsist, may resist and resent any progress that would bulge him from his manure pile, and be with us for some time, even in a new society; but the business farmer is doomed.

The trend toward the oligarchial ownership of land is inevitable as was the ravishing of small business and manufacture by the trusts that grew up first in the capital and durable goods industries. And just as the trustification of the heavy industries, throwing the ownership for the production and distribution of durable goods into the hands of financial oligarchy, paves the way for social ownership and management, so is the Farm Corporation fulfilling a like historic destiny.

With the centering of ownership and management of all industry, including agriculture, into the hands of the financial oligarchy, the next step is socialization. It is inevitable because capitalism is not static, must keep moving, can't move backward, and must move forward. This forward drive

was little impeded when there were new frontiers to be conquered and settled; but by now the habitable portions of the earth have been so well populated, and the investment in capital goods, as factories, railroads, mines, steam ships, rental properties, etc. have been so extensive, that today the world's capitalists fight like cats and dogs for the excusive right to sell their goods in the few remaining exploitable areas. There is left one of two things to do: plunge into the holocaust of war that may well wipe out so-called civilization, or bow to socialization. They will never accept socialization, and as we workers do not want to be exterminated in any such useless and painful manner, it is up to us to organize for the overthrow of capitalism, and to take over and socialize these industries that have been brought, all unconsciously, to the threshold of socialization.

But to get back to John Farmer. To understand the economic shift of agricultural production as a big business, we must review it historically in both its national and international settings. Before the world war the United States was a debtor nation—foreign investments here exceeded the investments of American capital abroad. "From 1850 the country was slowly being transformed from a basically agricultural into a basically industrial economy." As the country expanded industrially an ever expanding market was needed. Congress passed the Homestead Act in 1862, throwing open the public lands for free settlement. The greatest spur to the settlement of the West however was the repeal, back in 1846, of England's protective corn laws. (The political influence of British manufacturers had excelled the influence of the landowners, and by free trade cheaper foodstuff was to be secured to add to the exploitability of industry's wage workers even though it meant less income for the landholding aristocracy.) London, Manchester, Liverpool, were to be opened to American agricultural products. "The existence of great agricultural surpluses permitted American capitalism to grow to maturity . . . for our export of foodstuffs made possible the importation of the raw materials and capital needed for the development of American industry.*"

*) Louis M. Hacker, "The Farmer Is Doomed," John Day Pamphlet.

The expansion of both industry and agriculture in the United States was made possible partly by buying the needed equipment and materials with agricultural products, partly by borrowing and paying the interest with these same products. "We fed England while *she* engaged in the industrial exploitation of Europe , , , To make possible the mass production of industrial articles with which the world could be flooded, cheap foodstuffs were necessary . . . English agriculture was weighed down with an agrarian economy already in its decline . . . high rents . . . and impoverished soil needing renewal . . . Its abandonment was necessary. This is what the rising industrial capitalists of England effected when they decided to put an end to those tariff duties and import restrictions which had been protecting the English growers since the days of the Tudors" (Hacker.)

It was a grim political fight in England to accomplish this. It meant the dominance of the business class instead of the dominance of the aristocracy. It meant a transfer of income from the aristocracy to the business class effected through lower prices for grain. lower rents for agricultural land, lower wages for labor, higher profits for capital. It also meant that countries supplying England with foodstuff could buy equipment and materials, could

## *Where Are The Agricultural Surpluses?*

The following figures from the United States Department of Agriculture show the percentage of increase required to furnish the men, women and children of America with an adequate diet:

| | Present production or supply | Required for an adequate diet | Percentage increase required |
|---|---|---|---|
| Dairy cattle | 23,100,000 | 40,800,000 | 76 |
| Beef cattle | 11,200,000 | 16,100,000 | 43 |
| Veal cattle | 8,800,000 | 14,800,000 | 68 |
| Hogs | 69,400,000 | 84,900,000 | 22 |
| Sheep and lambs | 21,000,000 | 29,900,000 | 42 |
| Poultry, stock | 458,900,000 | 627,300,000 | 36 |
| Vegetable and truck acres | 2,320,000 | 7,091,000 | 204 |
| Citrus fruits, acres | 565,000 | 854,000 | 51 |
| Other tree crops, acres | 4,605,000 | 9,799,000 | 112 |

pay interest on investments, could become debtor nations and provide a market alike for British goods and British surplus capital accumulating as it did from the wealth that British industrial workers turned out in excess of their wages.

Today the shoe is on the other foot. The world war made the United States a creditor nation. It turns out a surplus of production goods. Its investments and loans abroad exceed the foreign investments here. American capitalists, grown to a maturity undreamed of by the English repealers of the corn laws, have repealed wheat and little pigs by plowing them under, and we eat Argentine beef and Australian grain, in order that American automobiles and other manufactured commodities may be shipped abroad. *Our* agrarian economy is in its decline, and *our* depleted soils are being blown and washed away.

Politicians are bad economists, and the farm business is based on false economy. The government has tried, and continues to try, to plug up the holes with alphabetical formulas in order not to lose the farm vote: but bad economics is unworkable, especially so in the hands of vote gatherers, and all their efforts at remedying the situation are foredoomed to failure.

One of the most misleading words in the dictionary is "*Surplus*". Politicians believe that if the farm surplus is wiped out, everything will be hotsy-totsy, and prosperity will come out from her hiding around the corner. But there is no surplus of any of the basic commodities. There is not enough corn, or cotton, or hogs. If every man, woman, and child in this country were put on an adequate diet, nothing fancy, but of well balanced meals necessary to keep them healthy and vigorous, more food stuffs would have to be raised, not plowed under. The percentage of increase needed for this is shown in the accompanying table. Look it over. Where are the surpluses?

Search among the fumblings and gropings of the conservative and liberal economists reveals no remedy for this situation were with food production far below what is needed for an adequate diet, even this is plowed under to remove alleged "surpluses". They readily admit that the economic structure is out of plumb, that it will collapse in time, and that they are fearfully uncertain of results: but their theories and tables of statistics all end with question marks.

One thing is certain. John Farmer as a business man is all washed up. His inefficient methods, his individualism, his spirit of "me first and the devil take the hindmost", are outmoded in the face of lost export markets and the necessity of efficient methods of production to prevent soil erosion. These bar him as a competent provider of foodstuffs for the domestic market. The general tightening up has made mass production of food stuffs necessary, so here is where farm corporations, many of them subsidiaries of canning and

food packing interests, come into the picture. They are in the logic of the trend of things whether we like them or not. John Farmer will become a wage worker, and it is to be hoped that no rugged individualism on his part will make him a troublesome scab in the economic battles between the organized farm workers and the farm corporations.

Here also is the reason why agricultural workers must organize industrially. To fight an agricultural monopoly for more pay and better conditions is a very different matter from fighting John Farmer, the erstwhile landbaron. The opposition is better organized. Another reason why workers must organize industrially is that the historic role of the monopolists is to organize industry to the point where it becomes socialized in function and thus ready for socialization in management and in ownership. It will be up to the workers to run the industries, and they must be organized in such a way that they can run the workers efficiently. Agricultural Workers Industrial Union No. 110 of the I.W.W. is such an organization. It will have to fight monopoly farming for a living, and eventually take it over. The little business man, John Farmer, is all washed up.

Such conflicts as this of the Salinas, California, lettuce strikers last September may be expected more frequently as large corporations take control of the distribution and production of agricultural products. It will take a fighting industrial union to win.

# The Economics of Fascism

I.

In the days before fascism was heard of, the question whether socialism was inevitable was sometimes approached from this viewpoint: May not the contradictions of capitalism which make its indefinite continuation impossible, be dissolved by the more complete organization of the employing class, or even by the trend toward the concentration of wealth into the hands of some oligarchy small enough to apply an intelligent paternalism to modern productive forces?

The contradictions were there and were real enough. The swing of the business cycle regularly proclaimed that the growing order and planning inside the factory was not balanced by any such planning in the economy as a whole, and thus the best regulated of plants must periodically close its gates for the lack of market. The market was not there because the growing productivity of labor, which had increased several thousand per cent in the great advance of mechanization since the end of the 18th century, was not balanced by any such increase in the capacity of the proletarized mass of the population to get and use this wealth, for their living standard at the best times reflected only about twice the purchasing power they had before the industrial revolution.

This disparity was kept within workable limits only by the increasing internal wastefulness of capitalists economy, which often enough spends more to market a product than it does to make it, and by the re-investment of the surplus in new industries at home, or imperialistically, abroad. But every rational growth in capitalism, its trusts and cartels, lessened this easing wastefulness, and the accumulation of capital either enhanced the productivity of labor at home or exploited cheaper labor at the far ends of the earth. The one substantial release on this growing and unused productivity was the military aspect of imperialism which often spent more to gain some object by war that it would have cost to buy it outright.

The function of industry was social, doing in a large collective way what previously had been done in a small way in men's homes, but there was little or no social control. Mild-minded professors were fully aware of this, and likewise aware that much more of the unpleasant disturbance of life, all the way from increasing nervous disorders to crime waves, was the result of the contradiction between the social function of the productive equipment and its private control. They reasoned optimistically that regulation by commission of democrative governments would be found increasingly necessary, and would step by step establish the needed balance, thus subordinating socially functioning industry to the public interest and re-establishing the supremacy of human intelligence over the industrial Frankenstein it had created.

To such liberals, the efforts of labor alike in its strikes or in its building of a philosophy of class struggle, were viewed as just so much more unpleasant disturbance—something that eventually would be regulated or ironed out by a commission appointed in the public interest. The efforts of labor to remedy the great disparity between production and earnings was discussed by such professors under the head of "The Labor Problem." That there were such workers as the I.W.W. deliberately "fanning the flames of discontent and preaching the doctrine of an irreconcilable struggle between capital and labor", appeared to such thinkers as a most lamentable thing, as an unintelligent disregard for their text books and their liberal teachings to be excused only by comparison with such other monstrous things as the plug-ugly labor policy of U.S. Steel. To them this class struggle appeared only as another factor holding back their Utopia of social regulation by commission in the public interest.

Today this dream of the liberals is fulfilled so far as it can be, in fascism. Now that the omelette is cooked, it is not to their taste, and, still mild-mannerdly as befits them, they ask that the eggs be put back in the shell. The public interest that is being served isn't their public, and their whole scheme of democracy is squashed. The standard of living under fascism goes down instead of up. Its regulated economy instead of furthering world peace as they had thought a regulated and rationalized economy would surely do, promotes world armament on an unprecedented scale. And man's intelligence, instead of becoming supreme, is almost completely removed as a disturbing factor in fascist society by being outlawed and sent to a concentration camp.

So there must have been an error somewhere in the reasoning. Were the stresses and strains, the impacts and blows, the ups and downs of unregulated capitalism due merely to the contradiction between the social function of the productive equipment and its private control? Or did they result from a quite separate contradiction between productivity and earnings? Could the social regula-

tion of the business cycle, even with the most complete restrictions on boom speculation and the best planned postponement of public works to slack times, and the most complete of codes to restrict the insane modern editions of competition, erase the fact that labor does not own what it produces, and that a surplus is produced regardless of whether it be produced evenly or unevenly? And didn't this contradiction between expanding production and limited earnings only express some still more basic contradiction — that those whose tremendous productive power could undertake the most gigantic tasks of linking oceans, or digging tunnels, or girdling the globe with copper cables, were still powerless to say whether their children should eat or not? Was the labor movement with its persistent demand for "more and more and more" and its philosophy of class struggle, just another unpleasant disturbance of capitalism, a problem to be solved by some commission, or was this labor movement, considered as an element in the historic process, by its continuous struggle for power over production, power over the means of life, the one agent that could dissolve the contradictions of capitalism?

That the answer is yes, is confirmed by an examination of the question: Why doesn't fascism work?

## II.

An examination of the economy of fascism should disclose many things. One very useful bit of information it should yield is what and where this fascism is that we are fighting.

First it should be understood that fascism is not just political dictatorship, not just militant reaction, not just the abridgement of civil liberties, not just the old rough and ready way of trampling on labor, and not just a process of Jew-baiting either. We have had all these things with us before. None of them needed the corporative state; none of them tried to take the whole life in tow and regulate it to a plan; none of them sought to invent a new type of society. Neither should fascism be understood as the social realization of a philosophy. Back in 1921 Mussolini said: "During the two months which remain before us, I should like to see us create the philosophy of Italian Fascism." It was created voluminously within those two months as trimmings for a far more substantial reality.

Fascism is this militant reaction detested by liberals set to the task of realizing the liberal's regulation of economy in a public interest—the public in fascism as in any other phase of capitalism, being those who pay the regulators.

An examination of who pays to keep fascism going and to get it started will readily disclose that it is not a phenomena confined within the boundaries of Italy, Germany, or any other nation. Back in 1934 in the "Fortune" article that led to so many disclosures of the internationalism of the armament makers, Adolf Hitler was disclosed as a champion promoter of arms sales on behalf of all the armament makers. Fritz Thyssen, "King of the Ruhr" provided a large part of the fund to get him started. The directors of the large Skoda works controlled by Schneider of France, but in which Vickers-Armstrong of England is also interested, also contributed. And in 1933 before his coup, Adolf paid a most peculiar fine for contempt of court; he had brought suit against a German journalist for stating that he had been financed directly by Schneider-Creusot, French armament makers; in court he was asked the question direct; he refused to answer, and paid 1000 marks fine for contempt of court rather than answer. The French press, controlled by the armament makers, welcomed Hitler with a shriek for further defense, and the investment in Hitler paid well, as France became the leader among nations of the world both for armament and for the export of arms.

Hitler is not only an excellent arms salesman, but quite willing to reciprocate in mustering up adequate means for other nations to participate properly in our mutual extermination. As Willson Woodside observes in the February Harper's alongside of idle textile mills, margarine factories and packing plants, idle for the lack of a market, the metal industries of Germany are working overtime, and are far behind in deliveries. They are not only arming Germany, but busy making equipment for England as well; and of 668,000 tons of construction underway in German shipyards, 104,000 tons are for Britain. This fascism is an international undertaking and not confined to the internationalism of the armament makers. Fascist economy, for various reasons to be explained later, runs on a deficit; it is not up to non-fascist capitalism in efficiency; it is kept going by the support of world capitalism. There have been direct loans, unpaid. In 1927 Mussolini was saved from a crisis by a $100,000,000 loan floated in the United States. Last year he had Italian interests sell their control of Mosul Oil Fields Ltd., to the British Iraq Petroleum Co. Last September he floated another $236,000,000 loan purchasable only in foreign currency, not officially floated here because under the recent Johnson Act those governments defaulting on war debts cannot borrow here. Such deals, and the complaisant way in which the government of the "democratic nations" have financed exports to Germany and Italy, and the credits directly extended by such exporters, should all set at rest any notion that non-fascist capitalism desires to check the advance of fascism, and may ally itself with labor in order to do so.

The internationalism of fascism has shown itself in many ways apart from these financial transactions. Class conscious capitalists (and despite their professional patriotism they are all by the nature of their investments good internationalists) saw that their press from 1922 on welcomed Mussolini?; and the feature writers who howled over the Bolshevik atrocities presented Benito as a rather jovial administrator of castor oil. The international solidarity of capitalist nations and their labor politicians in aiding Franco in the fascist invasion of Spain, should puzzle only those who forget that in 1934 it was Italian aid in arms and money that upset the liberal government in Austria and drove Vienna's socialism underground. Hitler states quite openly his willingness to perform a like service for international investors in Czechoslovakia. That this can be done agreeably to all capitalist concerned, is shown by the fascist seizure of the Rio Tinto copper mines in Spain, with the result that shipments previously delivered to Britain are now delivered to Germany; yet there has been no complaint lodged by the British owners. Fascism enters the world at a time when capitalism is well developed as a world economy, years after a world war in which allied soldiers were killed with equipment obligingly furnished by their own nations, and long after the typical business unit had become the corporation selling its stocks and bonds and debentures on all the exchange of the world to any buyer who wished to buy. It is most decidedly an international venture, maintained by international support rendered alike morally, politically, and financially.

Why does international capital support these ventures in "deficit economies?" The answer is largely why capital supports government in the first place. To the investor in stock in the proper German enterprises, fascism is not a deficit economy at all. Since 1929 the profits of German employers have risen six-fold, from 500,000,000 to 3,000,000,000 marks. This has come from a cut in wages by over one half. The employers did not get the full advantage of this extra exploitation of labor; a very substantial part of it as of everything has gone to the official racketeers; but even so a six-fold increase in profits is tempting. Wages are down to an average of 25 marks (about $10) per week; but to pay for this service of smashing up unions, stopping all strikes, and restricting civil liberties as must be done to achieve such wage levels, the taxes run to 9,000,000,000 marks or three times the profits. Even this pays only one half the current budget . . . And beside the taxes there is a tremendous amount of outright graft and forced donations to the Nazis. Incidentally the resources for future exploitation are being ruined. The shortsightedness of Fascist planning is shown by the depletion of the forests that since the days of Bismarck have been nursed with the utmost of care. Says Herr Goering: "The say I am using up too much of Germany's forests . . . but if I have struck too deep into them so far, I shall strike two or three times as deep, for I had better destroy the forests than the nation." The physique of the working class deteriorates in a manner that will undermine eventually their productivity and their military usefulness. In relation to world economy, a most necessary element for successful exploitation is the inventiveness to keep technique on a competitive par with the rest of the world; the deterioration of German science and learning in general undermines this perhaps most important resource of all; the inventions made in concentration camps do not usually come under the head of the productive arts. But fascism by its very nature does not look far to the future.

Why is fascism economically a failure? Why can't the complete regulation of capitalist enterprise result in a more efficient use of resources and equipment than the unplanned and chaotic capitalism of the rest of the world? The answer to this question also answers another: Why, if fascism is internationally endowed, is it so intensely nationalistic?

A planned economy must be a relatively self-contained economy. Thus Mussolini's famous, though unsuccessful "Battle for Wheat", his draining of marsh-land, and his latest supreme effort to colonize Italy and Ethiopia alike in the style of the emperors from Constantine on, his adscription of agricultural labor as serfs to the soil. He calls this serfdom "deproletarization", but frankly says that Italy must have "genuine peasants, attached to the soil, who do not ask the impossible, who know how to content themselves." It is a form of sharecropping but with payment in kind that takes Italian agriculture back many centuries and results in some 6,000,000 rural workers, according to an official survey made in 1934, living either in caves or hovels, or in houses, as the report put it "almost absolutely uninhabitable." The same fact is back of Hitler's battle for "Rohstoffreiheit" —to need no foreign imports of raw materials. You can't plan capitalism, and keep it a part of a chaotic world capitalism. At the same time to step out of world economy is most uneconomical. With the free interchange of the products of various parts of the earth in an unbridled competition, goods are normally produced where they can be produced cheapest. Germany pays for "freedom in raw materials" by using ore of 35 per cent iron content which costs four times as much to smelt as Swedish 65 per cent ore—and now she is mining 5 and 7 per cent deposits in the Hartz Mountains! On the first steps along the old "Berlin to Bagdad" route lie bauxite for

making aluminum and oil, and these may explain much of the internal politics of this region, as Germany lacks both.

But if the failure of fascist economy is the result of an attempt to replace the use of the world's resources with the uneconomic spoilation of the fascist nation's own, then would not fascism succeed should it blossom out, as it threatens to, in a world fascist economy, or even in some region, as these United States, where nature has endowed the land with most of the resources needed? As to the latter, even the United States could not maintain its present population long without imports; there is scarcely any industrial process in which we engage that does not absolutely require some import. But perhaps world fascism is possible. To capitalists it is not a desirable state of affairs; it means that all but a handful of capitalists would be reduced to the universal serfdom; and the regulation of a world would be most costly. Though the bourgeois historians write of the latter days of the Roman empire as a time when the hand of the state was everywhere regulating all things, the modern business man reading such history understands that this hand of the state was everywhere grabbing things too.

World economy could readily enough be co-ordinated on the basis of a community of interests to effect the highest possible standard of living for all—if run by producers for producers; but to co-ordinate world economy under an iron heel, on the basis of discordant interests, where every petty official of the supreme oligarchy was looking for his graft for doing this dirty work, where everyone was discontent, where the military command was incessantly needed to maintain order and thus made mindful of its own opportunity to become the supreme oligarchy, is to enter a period of even greater chaos and waste than we suffer from now.

Fascism is not a forward looking plan; it is not even to be explained in terms of a far-sighted rationalism on the part of those who support it; it is the blind retreat from the threshold of new order that offers abundance to all, and thus privilege, prestige, and the sundry other perverted desiderata of a class society to none. It rallies its support with an irrational appeal, and is not to be fought by any other means than power. The road to fascism is paved with liberal good intentions. Its means of operation is the regulation of the disturbances of capitalism in an alleged public interest. All planned control of economy not vested in labor, and not run by workers for workers, is grist for its mill. Every regulation over workers, either by union officials or by public bodies on which such union officials sit, is another brick for its world-wide jailhouse. And the

materials are being accumulated rapidly the world over.

Against this drift to Mussolini's serfdom there are tremendous forces that can be rallied—the great dynamic power that has brought the world forward to this alternative of going back to serfdom and famine or forward to a greater freedom and plenty. Capital establishes fascism, albeit reluctantly, for the same reason that it establishes and supports any form of government, hollering the while for "more business in government and less government in business. It is done to "police the poor." It is done on an ever increasing and more costly scale because capitalism is ever the breeder of a profounder discontent. Capitalism requires and produces a working class schooled and trained and brought into the contacts requisite for building revolutionary class organization; the most able class that ever in history submitted to exploitation by a class of idlers. It creates abilities that it cannot use; and unused ability is the great disturbing factor that fascism cannot put down.

The contradictions of capitalism—the great basic ones that are involved in the working class struggle for power over the means of life—can not be ironed out even by an iron heel. They persist as a driving force toward a new society, but as a force that can build this new society only if organized as a class force, on the basis of class struggle, by workers vigilantly avoiding every restriction to their own activity, whether from inside their organization or outside it. Therein lies the greater historic role of the I.W.W., more readily visualized today than ever before—by the planned economy of plenty that can be effected by One Big Union of labor, to complete man's conquest of nature through the establishment of the supremacy of human intelligence over the industrial Frankenstein it has created.

# Pioneers in Solidarity

"Workingmen should stick together."

This is the idea back of the I.W.W. It isn't an idea that the I.W.W. invented, but one that workingmen have had in mind these many years. During these years they have persistently pushed the boundaries within which they applied it further and further as the growth of industry has made it plainer and plainer that more and more workers must stick together to get the results at which this solidarity is aimed.

In these days when people are still claiming that our worthy president gave us the right to organize, it is well to look back to those pioneer years of the labor movement when workers first claimed and established this right. The business class supreme, the Law Le Chepelier was enacted forbidding all organization of workers, as a vestige of the guilds of the old order they were destroying, as an interference with the free play of the economic forces that had become their new deities; but this law expressly provided however that the chambers of commerce were not to be forbidden. That was in 1794. But the unions persisted. Often they had to disguise themselves as mutual benefit societies for certain crafts, providing homes for their members as they traveled about the country, their major officials strangely enough being the old ladies put in charge of these places, but nevertheless they performed the functions of a union in regulating wages and working conditions. It was the persistence of the unions, ever performing their functions more openly that even in the second empire, in 1869, substantially established the legal right of the workers to stick together. Out of it in the 1890's grew the General Confederation of Labor, achieving new levels in the solidarity of labor.

It was the same story in England. With the invention of power driven textile machinery new industrial cities such as Manchester were being built, and the workers in them were learning that it was necessary for workers to stick together. From 1799 to 1824 unions were forbidden. Workers were arrested. Some were sent to Australia, then a penal colony, for persisting in "sticking together"—but their persistence resulted in the repeal of the law. It wasn't long before British workers pioneered in a truly amazing forecast of modern ideas of what solidarity should aim at. In 1835—a year by the way when workers in all industrial nations were "kicking over the traces" wiinning the ten-hour day by a general waves of strikes in the New England states, while the silk weavers of Lyons made a social revolution on a small scale—the Grand National Consolidated Union was founded in Great Britain. It was a true forerunner of the I.W.W. not only in attempting a One Big Union of the working class, but in visualizing a great historic function for itself—that its organization of workers should supplant the august parliament of Great Britain, replacing the government of men with an administration of things, truly attempting to "build the structure of a new society within the shell of the old."

In America too, as in the history of all modern nations, there was the same attempt to outlaw unionism. Had American workers quietly submitted and given up unionism when their members were convicted of conspiring to raise wages in 1804 to 1814, perhaps we would have needed a Roosevelt to tell us we could organize—though without unions in which to organize already existing it is certainly to be doubted if the superfluous permission would ever have been granted. American labor answered the conspiracy indictments by going ahead with the building of unions.

The developments of the union movement in America as elsewhere is as irregular and planless on its surface as are all the other historic adjustments of man's relations to the environment that he is always changing. But there is a logic to its structural development. First there were local bodies of men engaged in the same craft. That served well enough in the days when transportation was so inadequate that craftsmen of one town could not readily compete with their fellows elsewhere. To provide some local means of general working class solidarity the first city central labor body was formed in Philadelphia in 1827. Next in the logic of the evolution of the labor movement was the craft union that would unite craftsmen in different cities, and check their competition with each other. The printers in 1835 pioneered in this direction, and were followed as railroads and canals brought workers of other trades into competition with each other by a rapid growth of national trade unions particularly in the twenty years of 1850 to 1870.

But the problems confronting labor were more than trade problems; they were class problems. To face them, the ever-shifting and largely non-proletarian political programs that were offered workers were found inadequate. A union of the working class was needed, and the new departures

in American labor from 1866 when the National Labor Union was founded, were efforts to fill this need. The National Labor Union lasted a mere six years, confining its efforts mostly to eastern textile fields. From 1873 to 1875 Industrial Congresses were held, accomplishing little, but making the question clear: How should American labor organizations build one organization to combine them? Should labor organize locally on a craft basis, combine the local craft unions into city central bodies, and these into state federations, and on the basis of these more local efforts at working class solidarity by a federation of city central unions build a general federation of labor? Or should the local craft bodies constitute national craft unions, and some federation aligning these craft bodies provide the general means for the working class to act as a class? In the Industrial Congresses an effort was made along the former line, the one that eventually was adopted successfully by the French General Confederation of Labor. But practical unionists rejected this procedure for they noted that the city central bodies and state federations were concerned far more with political issues than with the organization of the working class and these men quite logically feared that a general organization of American labor consisting of representatives taking their instructions from such local bodies would degenerate into a futile political conflab. Thus American labor was destine for some time, largely as a reaction against non-worker intellectuals, who wished labor well, to accept craft unionism in a world of growing industry.

But American labor wanted more than this, and for some time it seemed that the Knights of Labor, formed as a secret body of garment cutters on Christmas Day, 1869, would give American workers an effective form of solidarity. In 1875 it came out in the open, and by 1886 more workers had flocked into its various local unions, craft and industrial so-called "districts", than had ever been organized in one organization before. Officers of the international trade unions (so-called because of their locals in Canada) were as worried about the losses of their members to the Knights of Labor as they appear to be today over the secessions to the C.I.O. In 1881 these craft bodies had established the forerunner of the A. F. of L. as the Federation of Organized Trade and Labor Unions of the United States and Canada, and in 1886, in the tense moment of hesitation and reaction that followed the eight-hour strikes and the Haymarket tragedy, they met to concert their forces as the American Federation of Labor to do battle with the Knights and put them out of business. Craft unionism won the battle, largely because the Knights refused to do battle with them, and were far from certain what they wanted to do—whether to organize the working class, fight landlords in Ireland, or preach temperance.

But industry went ruthlessly on while the A. F. of L. fought down all efforts of workers to achieve a larger measure of organized solidarity. Within it the demand for industrial organization grew. When various organizations of coal miners merged together in 1890 to found the United Mine Workers they insisted on jurisdiction over all workers in and about coal mines, and got it over the protests of carpenters, engineers and the various other crafts that objected. In the three years 1893-96 that the Western Federation of Miners belonged to the A. F. of L. the same battle for industrial jurisdiction for metal miners was fought as it has had occasions to put up since its return to the A. F. of L. in 1913.

Outside of the Federation the need for industrial organization was apparent. Railroad workers from 1863 when the engineers organized faced a truly modern industry requiring industrial organization. The Trainmen's Union that in the great strikes of 1877 sought to unite all running trades in one organization was one answer. The American Railway Union that Gene Debs formed in 1893, five years after his plan of railroad federation had been rejected, was another glorious though short-lived attempt at solidarity. Out of the Harriman strike of 1911 to 1915, and again out of the "outlaw switchmen's strike" of 1920, it seemed that one big union of railroad workers might eventuate. But persistent as the demand is for greater solidarity, defeat has met these efforts.

Throughout the years since 1905 when the I.W.W. was established to give labor its One Big Union, the other efforts to achieve some advance toward solidarity by a less radical departure than that of the I.W.W. have been enough to fill a book. The departments and federations within the American Federation, such secessions as that to start the Amalgamated Clothing Workers in 1914, and the innumerable outlaw strikes, and "illegal councils" that included alleged "dual unions" even to the short-lived "soviets" formed in various cities in 1919, have all expressed the felt need of a greater measure of organized solidarity than the traditional labor movement permitted. The wave of strikes since the days of the new deal have all shown a strong sense of community and industrial solidarity that has been frustrated by the structual limitations of the unions in which these workers were organized. The C.I.O. today attempts to exploit this demand for a great measure of solidarity to build another organization in which its members can expect to experience the same frustration of the impulse to stick together that miners

# *A New Age Begins in Spain*

## *By* PIERRE BESNARD

*Secretary, International Workingmen's Association*

**Translated by Onofre Dallas**

Preceding the French Syndicalist delegation composed of members of the C.G.T.S.R., and the C.G.T.[1], I went to Puigcerda on December 10, together with some comrades from the Local Federation of Barcelona and the Regional Confederation of Catalonia. The welcome organized by our friends in Puigcerda was most cordial.

The following day we visited the dairy, a magnificent plant established last August, which is producing at present nearly 10,000 cans a day of condensed milk for the front, the hospitals and the babies.

This enterprise, collectively at the beginning of the civil war, is run by the workers. Though the technicians left the factory, production is orderly and methodical, from the making of the cans to the packing of the finished product. Production has increased by a good third; the wages, which are the same for everybody—men and women—have been raised 30 per cent, yet the "profits" amount to 30,000 pesetas per week. The working week is forty hours.

Barber shops, tailor shops, everything has been collectivised and is running under workers' control. In general Puigcerda is a center where the intense effort of all makes a little of the past disappear everyday, and everyday makes the real figure of the new order appear more distinctly. We returned late at night to Barcelona by way of Ribas and Vich.

The following day in the morning, guided by our Catalonian friends, we visited the artillery barracks in San Andres, the first barracks captured by our comrades of the CNT-FAI. It was there that they found the arms to put down the fascist uprising quickly. Though the walls show the marks of the fight that took place then, they are still in excellent condition. Everything is in order; the recruits and those on leave are taken care of and are given abundant meals[2], and we often had lunch with our comrades there.

In the afternoon we visited the Portland Cement plant in Moncada. This establishment, of Europe-wide importance, has been collectivized and runs under union control. Although the technicians with the exception of an engineer who has been won to our ideas, left the factory, its operation is perfect. The output has increased by 25 per cent, and the salaries by 30 per cent. Everybody works with joy for the revolution, and the workers put in an hour a day extra for their peasant comrades.

In Mollet we visited the largest Spanish leather factory. Production there is also intense; stocks representing nine months work by 800 workers now await export to France, England, Holland. Here in this accumulation of leather there are millions of pesetas temporarily idle, but they will be exported shortly and turned to use. In the same locality we visited a factory that makes both natural and artificial silk, employing 650 workers. Modern equipment, full sunlight, cleanliness and order as everywhere else, and of course, collectivization and union control.

On the 13th, we left for the Aragon front to visit the agricultural towns. We passed through Lerida, capital of one of the four provinces of Catalonia, and the frontier between full libertarian communism and collectivization, for Lerida is the last locality on the way to Aragon where money still circulates.

From Lerida we went to Fraga, a city of 7,500 inhabitants, where we were received by our comrades of the local committee. They explained to us how from the very beginning they have socialized the lands, organized the work and the distribution of goods, and done away with the use of money. They showed us their consumers' books, their work cards, and explained the operation of the practical organization of work by groups.

All the able-bodied men and women work without exception. The sick, the old, and the children have all their needs fulfilled.

The next day in Bujaraloz, former general headquarters of our unfortunate Durruti[3], we found the

1. The C.G.T. is the General Confederation of Labor, the major union organization in France; the C.G.T.S.R. is the left-wing Social Revolutionary General Confederation which split from the foregoing when it grew conservative and patriotic during the war.

2. According to later reports the war has reduced the food supply to a dangerous low since that time.

3. Durruti, an outstanding anarcho-syndicalist military leader, was shot from ambush while in the defense of Madrid.

same evidence of libertarian communism. Consumers' books and work cards were shown to us there. We took some specimens for documentation, while they explained to us how the interchanges work. The interchange of products is arranged in kind, as no money is used. With towns where money still circulates the interchange is made on the basis of the current exchanges and the supply is made through purchases made direct on the spot. The articles and products are immediately sent on to the towns which distribute them among the inhabitants against the presentation of the consumer's books. In short, the interchanges take place in the same manner as they would between two countries one of which had suppressed money and the other had not. This system gives full satisfaction to all those involved. This winter for the first time, we are told, the women of Aragon don't cry. Formerly the product of the harvest was not enough to pay the debts to the political bosses and the clergy. The Aragonese will defend their conquests and give their lives if necessary, but they can not turn back. The past for them is dead, forever.

Irrigation on the Aragonese plains by demanding the Ebro will increase productivety considerably, and material well-being will soon be a fact in these poor lands inhabited by men hardened by labor.

Returning to Barcelona we went across a section both rich and rough, where the efforts of man mark his conquests step by step over a difficult terrain, sparsely inhabited regions, towns that yesterday lived in fear but that today breathe freely the air of the libertarian revolution.

In Barcelona we again saw the immense beehive teeming with activity, with its transportation, its ports, its factories, its shipyards. We went to visit all that. One after the other we saw the surface transportation system, the underground system, the marine transportation, the moving pictures, the water, gas, and electricity, the collectivized shops from barber shops to soda water plants. All were running under union control. Everywhere men were active working to win the war and consolidate the revolution.

That the technicians left? It makes no difference! They are replaced. The mind discovers something new; new applications are made, new realizations, new co-ordinations, and without masters, without parasites, and the new social order is being created, developed day by day, hour after hour. The average working week is 40 hours. There are no unemployed, and more hours will be worked if it is necessary in order to crush fascism and establish a new social order.

Actors who earned 2000 francs per night, moving picture stars who earned as high as 100,000 francs per month in the Paramount studios are now working here for 15 pesetas a day, and they work with joy. They create real art, freely for the people who will no longer be forbidden from the full enjoyment of the spirit.

I have also seen the jails. To safeguard the revolution jails unfortunately still have to be maintained. They will be abolished later when the fascist enemy is crushed, when nothing opposes any longer the application of our philosophy, and our comrades can begin to prevent crime, and to care for and re-educate those who are deficient, dishonest, and dangerous, instead of condemning them and locking them up.

For the present it is necessary first of all to assure the safety of the revolution, to watch over it, and make sure that no harm can be done by those who conspire to make it fail. I have visited the old Montjuitch prison and the Model Jail. In Montjuitch, an old fortress that threatens with its enormous mass the red Barcelona, in Montjuitch where Francisco Ferrer[4] was executed, we found fascists of all kinds, some of them accused, others already condemned. They all live in common, they smoke, play cards and dominoes. We questioned them. None complain of the prison regime. The meals, they say, are acceptable; the cells are clean; their families visit them every day if they care to, and can bring them in anything they want from the outside. Everything is delivered to them twice a day.

In Montjuitch there are practically none but fascist elements; old officers, old functionaries, former priests, merchants, members of the so-called liberal professions who have participated in the movements against the working class. All have been able to secure adequate legal defense. I found only one Frenchman, a militiaman who had left the front and had not returned to his column. His case is not grave and it will be examined and decided shortly.

In the Model Jail there are several divisions. I was particularly interested in visiting the foreign divisions, where there were approximately 100 prisoners, belonging to all nationalities. As in Montjuitch they live in common; none complained of mistreatment, or of the meals. I was assured that their cases would be taken up immediately; that the carrying out of justice would be done in a normal way, and that all guarantees of defense would always be afforded the prisoners.

There is under consideration a project to give the prisoners held and those sentenced, the benefits of modern comforts, and above all, the possibility of re-education. I want to add that I have

4. Ferrer, noted libertarian educator and exponent of doctrines that are more and more accepted in educational technique, was executed in 1909 chiefly because he had aroused the animosity of the clergy who sought to retain a monopoly on teaching, and did not welcome the spreading of education in working class circles.

had the satisfaction of not finding in jail a single anarchist or anarcho-syndicalist!

On leaving Spanish soil for a while I want to take this opportunity of thanking all comrades for the facilities allowed me in fulfilling my purpose. I leave under the impression that since my last visit in October, the revolution has taken an enormous step forward. Tasks which are hardly outlined at that time are now fully realized. The socialization of the land is almost complete, the collectivization of the industrial enterprise is being carried out rapidly, and the union control of production is more and more pronounced.

Of course there is much yet to be done . . . much to be done! The food industry appeared to me particularly behind the others, especially as regards the habits of waiters in a great number of restaurants, cafes and hotels. Some have remained obsequious and servile; others show themselves arrogant with the humble and submissive towards those whom they think rich or powerful. But I am sure that the CNT will know what to do about this.

The Spanish revolution represents more than an immense hope. It is already a living, concrete, indisputable reality. It is our revolution, the revolution of all the workers of the world, to be defended by us in all our strength, and by every effort possible to compel the governments of the world to do their duty with regard to anti-fascist and revolutionary Spain.

# So You Need A Maid!

(Continued from page 9)

could not. The noon I reached the Misses Talbot's home we had tea and toast and lettuce. For supper we had tea and toast and a little cold meat. *(pauses)* Later I found an old grocery bill—it was seven dollars and fifty cents for the whole month. *(the others gasp)*

BROWN: Seven-fifty!

BASCOM: They looked like two skeletons. *(Silence. The women look inquiringly toward Miss Brown)*

CARVER: *(leaning forward, looking more cheerful)* We must have some kind of an organization to help us and to protect ourselves.

BROWN: Yes, whether you're employed or unemployed, you need an organization of some kind.

BASCOM: I'm putting my pride away—I'm taking relief. I will not starve.

SCHMIDT: We gotta organize and get other girls not to go out and work for these women for such low wages. I got too much pride to scab like that. I'll take relief any time.

SWENSON: And we vill hev to fight for decent relief, too.

FIORELLI: Alla time we gotta organize and fight. *The women's faces as they sit there grow more hopeful)*

BROWN: That's it, you've got to fight. *(picks up slip of paper from desk)*

CARVER: If there isn't an organization for us, we'll have to build our own. *(shakes her head)* We've certainly learned a lot.

BROWN: So have I—and there is an organization already in existence. A friend of mine has been telling me about it—she's joined herself.

FIORELLI Eees eet da place wid da sign—wan beeg union?

SWENSON: Everyvun shude stick togedder —

BASCOM: I guess we can't do anything for ourselves alone. *(There is a slight pause)*

SCHMIDT: *(rising)* Well, I'm going down to that place. *(turning to others)* How about the rest of you dames? *(Women rise)*

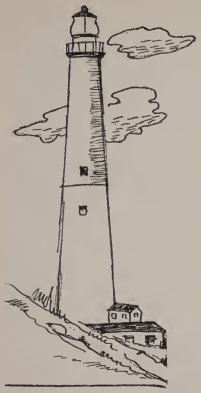
TOGETHER: *(voices mingling)* We'll go—of course, we'll go—What's the number?

SCHMIDT: Yes, what's their address, Miss Brown?

BROWN: It's 25 South Main Street. *(Women move toward door at left)*

CARVER: 25 South Main? *(Miss Brown nods)* We'll go down right away.

SWENSON: Ve'll see you again, Mrs. Brown. *(Miss Brown goes to door, stands near it as they leave)*



SCHMIDT: Goodbye.

BASCOM: Goodbye, Miss Brown.

FIORELLI: Goodbye, Mees Brown.

BROWN: Goodbye, everybody. *(Women leave through door at left. Miss Brown resumes seat. With chin cupped in hands, she stares thoughtfully into space. Finally, she gets up, crosses room, and disappears through door at right. A second later she reappears with her coat and hat in her hand. For a moment she pauses in center of room, looking about her. Then, spying the placard on the wall, ACE EMPLOYMENT AGENCY—SUPERIOR JOBS FOR SUPERIOR PEOPLE, she walks over to it, turns its face to wall, and goes out quietly through door at left)*

# Murmansk

## *By A. Yourniek*

**This Wobbly sailor has previously described how a dispute over food for the crew with the captain of his ship had led to him and other members of the ship's committee being left in Russia during the Kerensky stages of the revolution. Last month he told of how the Allies cultivated a base for themselves for a fight against the Soviets by various promises to the people.**

**It led to a mass meeting in Murmansk where the only opposition to this plan came from the crew of the Russian cruiser Askold, which he had joined meanwhile. After this mass meeting conducted by the British General Poole, the crew returned to the Askold wishing for reinforcements.**

As usual, next morning our boat went ashore to fetch those members of our crew whose homes were nearby and who were staying home for the night. It was a hazy, chilly morning.

We were eating our breakfast when somebody called our attention to a boat adrift on the stream. We rushed to the gun ports. It looked like one of our own boats, bobbing apparently empty; but still, oddly enough, the oars were cocked up in readiness to be dipped.

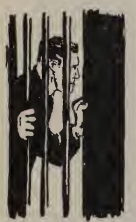
We stood there for a while watching, our breakfast going cold, when suddenly a head popped up over the gunwales. Just as suddenly it was followed by another, and the men resumed their position and commenced to row toward us.

When she pulled alongside, the body of a sailor was stretched out lifeless on the bottom of the boat.

A man slung the dead man on his back, brought him on the cruiser, and laid him on the gangway. All that the men could tell us was that they had been fired upon by a machine gun.

The chief deck officer ordered the motor launch ashore to ascertain the cause of the shooting. Arrais, a friend of mine, was captain of the launch. It shoved off, but as soon as it came within firing distance from ashore, it too was fired upon by a machine gun. Arrais, at the helm, straight away swung the boat around and headed for the Commercial Wharf, but bullets were swishing from that direction also. He again swung around and managed to get behind the battleship Chesma. The firing ceased, and the launch returned to the ship perforated by bullets but with everybody luckily unharmed.

We suspected that something was lopsided ashore and that we hadn't been otified about it. Signals were hoisted for the cruiser Glory. After a while a launch drew alongside with General Poole's adjutant, a young Scotchman who spoke Russian well. Quietly he informed us that the Allies had taken over the defenses of Murmansk, and that all our representatives ashore had been held in their homes under arrest—but of course this would last only until matters were cleared up. He expressed his regrets for the killing of the sailor and blamed it on some overzealous officers at the post. "Maybe they were a little excited and fired too soon."



We used to get bread for the Askold from ashore. We told him that we had to get some pretty soon. He assured us that if we attempted to go ashore we would be fired upon, but he would go to the Glory, inform them of what happened, and reprt back with the permission for bread.

When he shoved off machine gun fire was immediately opened on his boat too, but nary a bullet struck his Excellency's launch. "You see," he exclaimed brightly when he came back, "even my launch was shot at." We paid no attention to him. We knew who was responsible for our

mate's death, and that Mr. Poole was just trying to make a good fellow of himself by shifting the blame to some poor soldier down in the ranks.

With the permission from the Glory, we left for shore. I was one of those in the launch who was to carry the bread. Along with us came our commander who had just come aboard. He was living ashore and had missed all the excitement. The chief engineer was with us also. We marched up town to the bakery.

We returned to the launch, but it was gone. At the same time we noticed a trawler alongside of the Askold. She pulled away with a bunch of our own men, and put them on the landing pier. We couldn't quite understand what had really taken place, but the chief did. He became quite excited. He told us the Allies were taking the crew ashore, that they were going to take up the gun keys, and that we were to be made prisoners. We decided to walk over to the landing pier.

The landing was about a mile or so away. Half way over the Chief's excitement subsided. It was an opportune time for me to fathom this man out. I started by talking about the political situation in England and America. He had listened to my stories before, when in the recreation room I would tell the boys about the free speech fights the I.W.W. has put up in Spokane, Fresno and San Diego, or about the strikes at McKees Rocks, or Ludlow or Lawrence. This time I drew the chief out.

"Well, I'll tell you,' he said. "I'm a Social Revolutionist. I took you and Arrais for nothing more than a couple of Bolshevick propagandists, and though I liked your stories and found your ideas very interesting, I never did believe a word of what you said. But the things that have happened these last few days have opened my eyes. Now I realize that our Allies aren't what they're supposed to be. We can't trust them any longer."

After a couple of hours we were taken back on the ship. And what a sight met our eyes there! Everything in our quarters was topsy-turvy. The worthy defenders of private property, the prize crew, made up of Englishmen, Americans and French, had not only picked the gun's locks but had taken with them every big and little thing that was portable. Razors, watches and money were gone. I had my money on me, but I lost my fountain pen, watch, scarf pin and razor, and also the gun that I had bought with my own money before I went on the ship.

We had left aboard only a small skeleton crew to keep up steam and look after the dynamo. When we came aboard this skeleton crew was locked up. All the room doors were smashed with fire axes. The old Askold looked as though she had weathered a violent hurriance or had just come out of a naval battle.

We signaled for the Glory again. She answered by sending us the young Scotch adjutant. We showed him the mess his underlings had made. He said he was sorry, that some of the Americans had got out of control, and that if we would make a list of our losses, he would report the matter personally to General Poole.

Next day our ship's committee was summoned to the general's headquarters. Poole was presented with a list of our lost belongings. Casually he promised that he would take care of the matter and that's the last we heard about it. Then with a change in his old, ready-to-please face he gave us an ultimatum. "You can either enlist in the Anglo-Russian battalion—if you do so everything will be forgotten—or you can remain in Murmansk and do longshore work. If you don't accept either of my offers I am going to deport you inland."

On the Askold we tried to come to some understanding what would be the best thing to do.

One suggested, that—as we don't recognize Poole as the representative of our government—we ask him to permit us to take the Askold to Archangel, where still the Soviets were established. This plan was rejected as impractical. It was unthinkable that Poole would grant such request. Another suggestion was that we take the ship and get out at sea without bothering our heads about permissions. But this plan too had to be rejected. Had the ship been anchored close to the entrance in the lower part of the bay, we would then hazard a getaway. But we were actually anchored ahead of the American and British war ships and in a getaway we would have to sail down close by them, and we hadn't full complements of crew and guns. Her full crew was supposed to be 700 but we only had 200. A getaway undertaken under such circumstances would be suicidal.

At last we decided to accept the offer to be sent to central Russia. We took a survey of the many new uniforms and other brand new clothing that was aboard. Clothing at that time was very scarce in Russia. We split equally among ourselves, and packed up ready for the departure.

Late in the evening the orders were sent aboard for the first 100 men. The ship's committee made up a list of the first batch that was to go. Among them I chanced to be one. Shortly after we were taken ashore in a trawler.

At the landing we were met by a detachment of British soldiers. We were escorted to a nearby railroad track where we were piled in an empty box car. In the back and front cars were our guards armed with machine guns and rifles. Few of the townspeople came to see us off; even the few were mostly women who were kept at some distance by the guards. Rations were passed out for the trip, and we were on our way.

At Kandalashka the guard was changed, and Serbians substituted for British. When we pulled in at Kem the new guard ordered us to unload. The guard was increased and we were ordered to string out all along the cars in which we rode. British soldiers jumped in the cars that we had evacuated and threw our things out while a captain, dressed in a Scotch uniform, told us that the new clothes which we were carrying into Soviet territory were to be confiscated as they needed them for the new navy. Everything that looked new was piled on one side, and the older but still good clothes were thrown under the train where the Serbians picked them up. Most of us had civilian apparel but this went to the Serbians too. The woolen sweater that I had paid $5.00 for in New York, my woolen underwear and my sea boots all went the same way. When I called the attention of an officer to that he said: "Oh! I've been looking for you all this time." He called on some nearby English soldiers and I was marched out of the line and taken to an empty box car out of the way. There I was told to strip off all my clothing.

Kem is the place where the three Soviet representatives were shot. In Murmansk I had become acquainted with some Latvian soldiers who had been against the Cossacks; they had told me that neither side took prisoners; all captured were shot; that first the victims were stripped of their clothing as to shoot them clothed would smear the clothing with blood, so they were shot stark naked.

I took this stripping as preliminary to being shot, and looked desperately around for a possible way of escape. The box car door was ajar; but two armed guards stood by it on its either side with drawn bayonets. Should I make a dash through this door I'd surely be shot on the run. I was trapped. I wished I'd the gun with me and then, at least, I would try to shoot my way out. None can imagine that feeling of helplessness. One must come under the same conditions to feel it.

As I was taking off my clothes two soldiers and a sergeant would gather them up one by one and go through them, searching, as if looking for something very important. They ran their fingers all along the seams, turned the pockets inside out, examining them very carefully. Then to my surprise and relief they handed them back and told me to put them on again. I was taken back to where my shipmates were and I was ordered to pack up.

I remembered the argument between the sailor Andreyef when packing and the local railroad engineer. The engineer was shrieking to Andreyef: "We got you sailors now and pretty soon we'll get Lenin and Trotski, too. And when we get them we'll put them where they belong."

As soon as I packed up I was ordered to march. I picked up my bag and with two armed soldiers I was escorted to a box car in the end of our train. There I found six or more sailors and among them my friend Evsenko. He and I had been together on the Sawaty. One more sailor from the Askold was there, but the others were total stranges to me. They were from a nearby station, and from these men I learned a lot of what had taken place.

It appeared that the armored train that had been constructed in Murmansk for spring use against the Germans was instead being used against the Russians. It ran over the country, and where it met opposition, the local commissars were put under arrest. At Kem it had met the most vigorous opposition. The local people and soldiers did not accept the honeyed promises. A group of soldiers under the command of the brother of Maria Spiradonova had blown up the bridge there, and with a handful of men from the other side of the canyon made

it impossible for the British to repair the bridge. So at two in the morning the train went back leaving us prisoners in the box car.

In the morning I was questioned first by the Scotch and then by the French, and taken back to the box car. A Serbian colonel came over and whined how it was downright lousy of the British to make the Serbians guard the Russians . . . that all Serbians and Russians were brothers, and . . . At last he left us alone and we were glad of it.

In the afternoon the Scotch captain came over to the box car to say that General Poole wanted to see Evsenko and me at his Murmansk headquarters, and that we should get ready to go on the next train. During the trip to Musmansk the guards photographed us. They said they wanted the pictures simply as souveniers.

Next day General Poole came and greeted me with his usual politeness and asked how I was getting along. I asked what the hell he wanted of me. Without a word he walked away and I never saw him again. A couple of days later with many others, I was marched down to the docks where we were put to work unloading a freighter.

There I had a chance to talk with some of the men working with me. They too were prisoners, picked up from different towns in the Murmansk region, uncertain where they were to be despatched next. They told me that a prison camp was being established, just where they did not know; but rumor had it that a batch of prisoners a few days ago had been consigned to Petchora, the northernmost point of the state of Archangel . . . A couple of days later we were on a trawler wondering what kind of a damned spot this Petchora might be.

But when the trawler got out of the harbor she swung to a southerly course. We were glad of that. None of us wanted to go to Petchora. There was a little swell running and the trawler rolled a bit. Most of the prisoners and the guard grew sea sick. Evsenko and I considered the possibilities of taking the trawler over, running it to Norway, and being interned there. But we had to discard the plan. Next day we pulled alongside of the Cochrane in Petchinga, and we were taken aboard and thrown in her brig.

Later we were taken ashore and marched under a Serbian guard to a two-story house where we saw men carrying bricks. In the evening when these men came in they appeared happy, and greeted each other as old acquaintances. That night we all stretched out on the floor and slept.

The building had been started by the monks during more peaceful times, as a shelter for pilgrims, but the war broke out and left the building unfinished. We were put to work putting in floors and building stoves from bricks. There I became acquainted with an anarchist bricklayer, Parahin, who had served two terms in Siberia, one of ten years, and one of four. He had Kropotkin's "Conquest of Bread" with him, and always carried it along. Many were the arguments stirred up by that book.

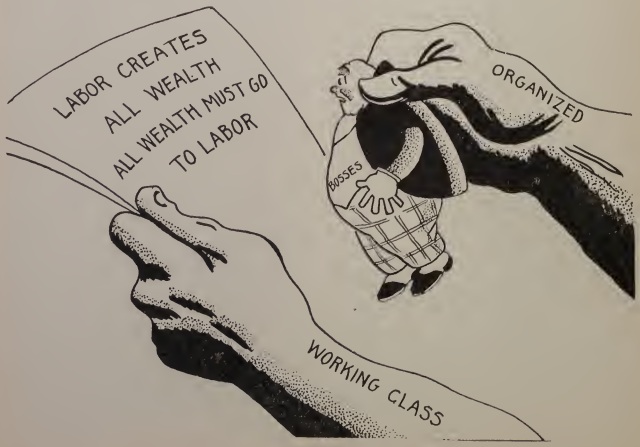
Our camp was under the command of Colonel Elliot, a Britisher. All our complaints and other business had to be given to a sergeant Dearlove, who would relay it to the higher ups and bring us back their decisions. Some of the men had been there a month before us. At first there had been only nine prisoners, guarded by young Russian junkers, deadly enemies of the Bolsheviki. These nine had been so maltreated that they sent in a petition requesting that they be shot. The petition bore fruit. The junkers were transferred to the front, and Serbians were sent in their place.

This did not stop maltreatment. We prisoners were divided in three groups, and not allowed to talk to one another. Sailor Borison had a friend in the other barrack. He sent a note by another prisoner named Chokash who was to give it to another prisoner and thus reach Borison's friend. They were caught while this note passing was in progress, and punished by the Serbian guard officer. With their hands tied behind their backs, they were hoisted from the ground and left hanging by their arms until they fainted. This torture lasted for from twenty minutes to half an hour. After that cold water was dumped on them, and when they came to they were left in that condition on the ground until strength enough was revived in them to drag themselves away.

This brutal method of punishment by the Serbian officer aroused all the prisoners. Sergeant Dearlove was summoned. We gave him a note of protest. He came back and told us that the officer would be taken off guard and such punishments not permitted. Soon, but chiefly it seemed because of fear over spies among the Serbians, English soldiers were substituted as guards.

New prisoners arrived from Murmansk—sailors who had been the shore representatives of the various navy craft, and who refused the Allies' offer to join with them. Another new arrival was Stankevich, the former commissar of the militia in Murmansk, the same who had spoken at the mass meeting in favor of breaking with Moscow. As proof of his sincerity he had enlisted in the Anglo-Russian regiment under General Poole, and had been made a sergeant. A couple of months later though he and six others were exiled to Petchinga. They weren't supposed to be under arrest, still wore the English uniform, and received the regular soldiers' rations and their pay. But just the same, prisoners they were. He protested and asked the Allies to live up to their promises. They answered by politely sending him to our camp where he

could talk about the united front to his heart's content. We prisoners included not only the Bolsheviki and their supporters but also their opponents, some white guard Finns that our men had captured in the spring German prisoners of war, and six Hungarians. The revolution had freed these war prisoners, and they had decided to make their homes in Russia. In fact the Murmansk railroad had largely been built by prisoners of war. Many had perished from the cold and the vicious treatment that they had, received from the Russians. Hundreds had contrived to escape to Norway, but they had either frozen or starved on the way in that sparsely inhabited country.



We were busy building barracks for the soldiers who were to arrive there soon. The monks had a sawmill and a brick yard. We had to carry the construction material from there. It was cold. That we lived through this harsh treatment was due only to our good health. Later on I was taken into the confidence of some of the prisoners who were devising ways for a jail break. Our plan was to escape on some evening when we were taken out into the woods to gather firewood for the camp. On such evenings about 40 of us were taken, with only four Serbian guards to watch over us.

## Scissorbill Objects

(Continued from page 14)

not piggly wiggly right. Thus the wage working class is constantly increasing, but the competition for jobs is growing proportionally worse at the same time. When the capitalists have plucked the working class for all it is worth, they begin to eliminate each other, almost like the gangsters in Chicago, only with more finesse—"freeze out" schemes, "mergers", "consolidations", etc. And that accounts for the fact that wealth is concentrating into fewer and fewer hands. It has gotten so now that a handfull of tricksters have control of the whole caboodle. Wherefore I say that it is about time all of you guys lined up (Scissorbill: "I think I'll go to the commissary and see if the Sunday funny paper has come in yet") with the Industrial Workers of the World. The purpose of organization is to render united defense against the wage-cutting and work-day lengthening onslaughts of the employers; to cut the hours of labor so as to make room for the unemployed; to raise the wages at every possible opportunity—thus cutting down the boss's altogether too big profit swag; finally to challenge the existing order of capitalist gangsterism and to introduce into human relationship the "planned economy of plenty", intelligently directed by an industrially organized democracy of labor.

# *What's the Difference?*

## A. F. of L.

**structure**

"Not an organization," said Gompers, "but a federation of organizations." Originally composed of craft unions, a number of semi-industrial unions grew in it despite craft resistance. Federal locals have been tried for the mass of workers. Loosely held together by city central bodies, state federations, etc. whose functions are mostly political.

**methods**

The A. F. of L. itself has no industrial methods, merely a political policy of rewarding friends and a general policy of cultivating the good will of employers. Its unions' methods range from selling labels to the boss, prefering to deal with him than with workers to the well-known methods of the teamsters. When unavoidable, actual organizing of workers has been resorted to.

**who runs it?**

The officers of the stronger international unions run it. They last for life in many cases. In very few of the internationals is there any rank and file rule.

**purposes**

It hasn't any unless "A fair day's wage for a fair day's work" and the perpetuation of capitalism can be called a purpose.

## C. I. O.

**structure**

Not an organization, but a self-appointed committee for industrial organization. Has no structure yet, but is building one much like the A. F. of L. to unite the semi-industrial and craft organizations that despite their own structure and their regional and district agreements have rallied to the support of this mis-named committee.

**methods**

To date preliminary behind-the-scenery conversations between John L. Lewis and the industrial magnates seem to constitute the chief method; also large scale publicity in papers normally very hostile to labor helps to gather in the members. The direct action methods used in strikes have been the strikers' own methods disclaimed by C.I.O. organizers.

**who runs it?**

The self-appointed committee runs it, when Lewis' health permits. Detail is carried out by organizers appointed by the self-appointed committee. There has been no convention, and there is no constitution; officers of unions affiliating with it make contracts with it.

**purposes**

Like the A. F. of L. it is content with capitalism, though it wants a few trimmings like six more judges for the Supreme Court, and perhaps John L. Lewis for president.

## I. W. W.

**structure**

One Big Union composed of industrial departments and industrial unions. These in turn comprise job branches, industrial union branches, district industrial councils and such other structures as different industries require to effect the solidarity of all workers within them. Free universal transfer from one industrial union to another.

**methods**

Direct industrial action by the workers themselves in whatever manner they deem most advisable —sit-downs, slow-downs, walk-outs, boycotts, or the direct enforcement of union decision on the job. All negotiations are made by the workers themselves with their employers; no agreements that obligate members to scab are permitted. Workers are organized instead of the bosses.

**who runs it?**

Absolutely the members themselves, in their job and union meetings and by vote on referendums; constitution requires this.

**purposes**

To gain every concession possible from the employers, and to "organize as a class, take possession of the earth and the machinery of production, and abolish the wage system . . . By organizing industrially we are forming the structure of a new society within the shell of the old."

# Pioneers in Solidarity

(Continued from page 24)

and others organized in the so-called "industrial unions" forming it have painfully felt these many years.

If labor is to stick together it requires an organization designed for that purpose. The substitutes for such organization down, through the years have only interfered with the effective practice of solidarity. The organization whose structure is in line with the logical development of the labor movement is the one established in 1905 to provide labor with the maximum effective solidarity.

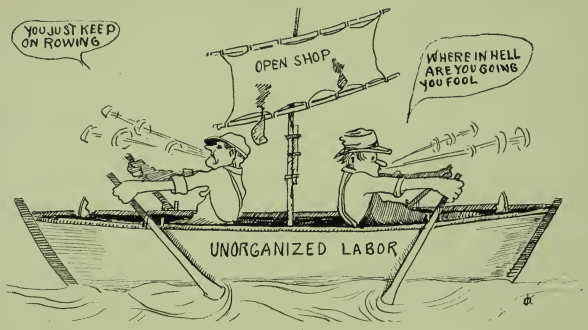
The changing structures of unionism are adaptations to the conditions of the struggle in which these unions are engaged. In this change of course the lag resulting from the sundry influences of existing bodies stops the new structures from being exact adaptations to the conditions at hand. When the development gets started along a line that is contrary to the general development of industrial conditions, progress can not be made by uniting the structures developed along that line. The experience with federations of crafts, even with departments and federations within the federation to group allied crafts, has clearly shown that the unity of labor is not to be reached by traveling in that direction. Not only do the vestiges of craft structure interfere with the complete unity of action needed, but the fact that many crafts cut across a number of industries makes such a structure awkward and unwieldy.

The general structural program of this C.I.O. that is now offered to meet this demand for a greater solidarity, is one of industrial organization for mass production workers, craft organization for craftsmen. Such a structure is preparation for indefinite internal bickering in regard to negotiations- a device in which craftsmen can be played against "production workers" and vice versa. Even if the crafts were completely absorbed in the industrial unions covering the industries in which they are employed, and a federation of industrial unions was offered, would this meet the demand for a convenient and adaptable structure by which workers could express their solidarity? Even this would not work. There are no clear lines definitely demarking one industry from another. The structure of modern capitalism is so complex that frequently one industry appears as a composite of sections of various other industries — for instance the steel industry includes sections of the metal and coal mining, the railroad and marine transport, lime quarrying, as well as blast furnaces, rolling mills and the direct fabrication in which the steel companies engage. It is necessary to back these workers up, and they would find a mere federation of industrial unions as inadequate as a federation of crafts.

The structure that will suffice is a One Big Union of Labor subdivided in departments and industrial unions, none of which can make agreements which would oblige their members to scab upon any group of workers by working with their products or furnishing goods or service to help break their strikes. Such a structure must allow the utmost freedom of action to its component parts. Its job branches and other local structures should be free as the joints of one's fingers; its industrial unions should be free as the fingers of one's hand; but these job branches and industrial unions, should be likewise free to come together into the formation of the mightly clenched fist of all labor in one solid fighting body. That is the structure of the I.W.W.

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.



Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

We're not sure who these fellows are. They may be the two fellows who said, "We never belonged to nothin' and we never will." Or they may be members of two craft unions in a jurisdictional dispute. One may be a staunch supporter of the A. F. of L. and the other of the C. I. O. They may be almost any workers outside of the One Big Union.

No matter which the case is, we have hopes for the fellow who asks "Where in hell are you going?"

If he's persistent enough he'll land in the right place. He won't accept the answer that Mr. Baer the coal magnate gave on behalf of the capitalist class that "The rights and interests of the laboring man will be protected and cared for not by the labor agitator but by the Christian men to whom God in his infinite wisdom has given control of the propertied interests of the country." Neither will he be satisfied with the answer that Mr. Van A. Bittner gave on behalf of our "labor leaders": "The acts of our local unions are guided by me and the other officers of our organization."

He'll much prefer the answer of the I. W. W., that we're organizing the working class so that it can decide what it wants, and do what it decides. And with the power that comes from organization in One Big Union, we're ready to gamble it will decide on plenty—and take the earth to make sure of having plenty.
